The olive crop of Corfu and Paxos is reported to be a failure for the year 1916-1917. These two islands usually export in full-crop years some 3,000,000 gallons of olive oil, chiefly to Italy. The present crop is estimated at only some 130,000 gallons. The Agrinion olive crop is also reported to be practically a failure. While no official estimates are available, interested dealers state that the crop will be from 20 to 40 per cent. of last year's yield, and of medium quality. The Amphissa crop is large, according to official forecasts. The quality is reported good.

TRADE IN THE PERSIAN GULF.

Two Trade Commissioners have been appointed to inquire into the trade of the Persian Gulf. They are Mr. John Wilson, formerly of Messrs. Gray, Mackenzie and Co., of Busreh, and Mr. R. E. Holland, I.C.S., of the Indian Political Department. The inquiry will be wide in its scope, and will deal with the general question of openings for British trade after the war.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds,
Broadcloths, Coatings, Hosiery, Rugs,
Puttees, Uniforms, &c., &c. . . .

Sole Manufacturers of the Famous . .

Dhariwal

Long Life Wool Wear

Costume and Suiting Materials, Blankets, Rugs,
Lohis, Hosiery, Puttees, Uniforms, Liveries, &c., &c.

CONTRACTORS TO GOVERNMENT.

THE FORESTS OF BULGARIA.

State Protection of a Great Industry.

Turkey had played havoc with the forests of Bulgaria, and when the latter was separated from the Ottoman Empire in 1878 the dense forests which formerly had covered the country had almost entirely disappeared.

Soon after the Bulgars had established themselves as a separate principality the new Government issued conservation regulations and the appointment of overseers and keepers charged with the duty of protecting the forests. Other regulations followed, prohibiting the export of wood, declaring all forest lands taxable, and providing for reforestation. Still later the sections to be felled were prescribed, monopolies and destructive exploitation were forbidden, and instructions published as to the best methods of preventing and combating forest fires.

Forestry Laws.

In 1884 the Bulgarian National Assembly enacted the first law for the protection of the forests. It provided for the division of the country's forests into classes—i.e., State, parish, and private, general control being placed in the hands of the Minister of Finance, and made provision for the appointment of inspectors, foresters, and keepers, who were charged to preserve the woods from injury and to divide them into districts, so that felling and thinning could be done rationally and in such manner as to provide sufficient wood for building, fuel, and charcoal.

Another law was passed in 1889, which, among other things, contained provisions for much-needed reforestation. Nurseries were established, which in a short time had millions of young trees ready for planting, and special courses of study were arranged for foresters and keepers to equip them better for the work of conservation. The latest forest legislation was enacted in 1904.

Extensive Forest Areas.

In the year 1908, the latest year for which statistics are available, the United States Consul-General at Sofia writes in an interesting despatch, the forest area of Bulgaria comprised 7,086,232 acres, of which 3,333,596 belonged to the various parishes, 1,611,423 to the State, 1,096,785 to private owners, and the remainder, 1,044,428 acres, to churches, monasteries, mosques, schools, the Bulgarian National Bank, and the Bulgarian Agricultural Bank. The forests then comprised about 50 per cent. of the total area of the country, were valued at \$25,000,000, and it was claimed that Bulgaria had two and a half acres of forest to every inhabitant. Bulgaria, therefore, was at that time richer in forests than Germany, Italy, Roumania, Switzerland, France, Spain, Portugal, or Greece, and vastly better off than Hungary, while it had but 3 per cent. less forests than Austria, Sweden, or Norway. During the Balkan wars in 1912 and 1913 whole sections of forests were destroyed.

The State forests, numbering about 440, all now well cared for and in excellent condition, are located in the districts of Varna, Provadia, Aitos, and Burgas, in the eastern section of Bulgaria; at Samokov, and in the Stara Planina, Rhodope, and Rilo Mountain districts. The parish forests, mainly in the south and west, number about 2,970. Private forests, small and scattered, averaging about four and a quarter acres in size, are for the most part situated on the plains. The Government forests, as well as many of the parish forests, seem to be well cared for. The private forests, on the contrary, are being exploited for profit.

Varieties of Timber.

Deciduous trees, oak, beech, willow, and poplar largely predominate in Bulgarian forests, especially in the region of the Stara Planina (Balkan Mountains). Of the coniferous varieties, the pine and the fir flourish particularly in the Rilo and Rhodope mountain districts. In certain sections, notably in the vicinity of Varna, Burgas, Peshtera, Anhiolo, and Provadia, the forests are dense and in fine condition.

Fortunately, many of the best preserved Bulgarian forests are in such out-of-the-way places that they cannot be conveniently exploited. When the country opens after the

war, and Bulgarian railway communication is more highly developed, they will undoubtedly be most profitably utilised.

So far as climate and vegetation are concerned, Bulgaria may be divided into four zones. In the warm zone, on the plains and up to about 1,300 feet above sea level, the characteristic trees are the oak, elm, and ash. In the moderate zone, higher than and parallel to the warm zone, up to a height of about 2,600 feet, tall and well-grown oaks predominate, and in the higher section of this zone the beech is also found. The cold zone extends from where the beeches begin to flourish to an altitude of about 4,300 feet above sea-level, and contains large and beautiful forests of beech. Because of difficulties of access, these extensive reserves have not yet been utilised. The pine zone, from 4,300 to 6,600 feet above sea-level, chiefly contains splendid forests of pine.

Of these Bulgarian forests, 43 per cent. are found in the warm zone, 32.7 per cent. in the moderate zone, and 24.3 per cent. in the upper zones.

THE BLACK SEA PORTS.

The *Financier and Bullionist*, discussing Russian ports in an article in its Russian supplement, writes:—

The Black Sea ports may almost be summed up in the word Odessa. But the coast line is too long to be served entirely by one port. Odessa is a progressive town of over 600,000 inhabitants, and communicates with the great grain-growing and the coal and metallurgical areas of South Russia. Its not very distant neighbour Nikolaieff, too, helps to drain and to supply practically the same area. Further east we have the Azoff Sea and its less pretentious, but still important, ports; then, on the north-south-east line of the Black Sea eastern shore we have Novorossisk—a good port for petroleum exploitation equipment inwards and vegetable oils and petroleum derivatives outwards. Further south, the port of Touapsé, with its recently-created rail connections inland, affords a good entry into the Caucasus; and, besides, there is Batoum for access to the Baku district, and Poti for the famous manganese deposits. There is an important progressive copper industry in the Caucasus, the agricultural and forest industries of which area in process of development afford great opportunities for an exchange of profitable commercial amenities. Perhaps it would be worth while to mention also the port of Mariupol—the port through which the coal producers hope to export Donetz coal to the Mediterranean markets.

Regarding Odessa, there was, it will be remembered, a scheme for a direct steamship service between that port and a port in England (which port was a matter for later decision, though the choice seemed to lie between Hull and London)—a scheme that had made considerable progress towards completion when the war broke out. The demand that prompted that project, though denied satisfaction, still exists, and can be reckoned on to persist and to prevail to the extent of fruition in the form of a regular and prosperous line of steamships connecting South Russia and England.

EGYPTIAN COTTON IN THE U.S.

It is reported that the cotton experts connected with the United States Department of Agriculture have recently developed a new variety of Egyptian cotton, which is stated to be superior to the variety already grown in Arizona. Further experiments are to be made with the new seed, which is to be known as the Pima type in the Salt River Valley, in Arizona, during the course of the present year. The Pima seed originates from that known as the Yuma type, but is claimed to be more uniform and truer to type than the latter.

A British survey party has been organised to carry out survey work in Mesopotamia and will be known as the Busreh Survey Party. The party, which left India in October, 1916, consists of Lieutenant-Colonel F. W. Pirrie, I.A., and Major Beazeley, R.E., Deputy Superintendents, and Captain W. E. Perry, R.E., Assistant Superintendent, with Messrs. J. MacCracken, W. H. Strong, A. J. Booth and J. C. Pollett, Extra Assistant Superintendents.

TOBACCO IN CYPRUS.

Promising Outlook for a New Industry.

(FROM A CORRESPONDENT.)

CYPRUS, February 1.

Cyprus will export within the next two months about 3,000 bales of tobacco (300,000 kilos) of a quality approaching that of Latakiah. Cyprus has not previously cultivated tobacco since 1899; but since the outbreak of hostilities with Turkey, thanks to the initiative of some wealthy Syrian merchants who have been obliged to take refuge in the island, tobacco has been planted on a large scale.

The yield has been most satisfactory and the leaf is being cured in the Latakiah way under the supervision of Latakiah experts. The quality is believed to be equal to that of Latakiah, although there are some doubts. The Cypriots themselves are now making arrangements to plant a large area of irrigated land, and it is estimated that next year more than a million kilogrammes of tobacco will be produced.

With Government aid tobacco ought to become soon one of our principal articles of export.

Situation in Alexandria.

As a result of a rumour in the Tobacco Stores at the Alexandria Customs, that the Government intended to increase the tax imposed on the stock and new tobacco imports, many merchants have withdrawn huge quantities of tobacco during the last three days from the Customs Stores, wrote the *Egyptian Gazette* on February 10. Yesterday, being the end of the month, there was a remarkable rush on the stock. An inquiry in official quarters elicited the statement that the rumour was untrue. No increase in the tax can be effected without an official decree, and no decree has been or is expected to be issued to this effect.

IMITATION WOOL.

Tootal Broadhurst Lee Company, Ltd., and Mr. J. H. Lester have patented a combination of known processes resulting in the production of a cotton yarn or fabric having the appearance and handle of yarn or fabric consisting wholly or partially of wool. Imitation wool effects have hitherto been obtained on cotton goods by shrinkage with caustic soda or sulphuric acid, or by similar processes causing the cotton fibres to curl, and by this means the characteristic handle of wool is to some extent imitated. They have also been obtained by spinning together cotton dyed with different colours, but these goods lack the characteristic handle of wool.

The improved method of imitating wool effects consists essentially of a combination of these processes, and the resulting yarn or fabric possesses handle as well as the appearance of wool. Any kind of undyed unspun cotton is mixed with dyed unspun cotton, or with different shades or colours of dyed unspun cotton, and the mixture is spun into yarn; or dyed unspun cotton of different colours is mixed. For example, black dyed unspun cotton may be mixed with blue dyed unspun cotton, or undyed cotton of different shades—for example, brown Egyptian cotton—may be mixed with white Peruvian cotton and spun into yarn, and then shrunk by means of caustic soda or sulphuric acid. Experiments have shown that the best results are obtained with Peruvian cotton alone. This yarn, treated as above, may then be manufactured by weaving or knitting to produce fabrics or goods having the appearance and handle of wool goods throughout or only in parts by using other yarns in combination. For example, threads of yarn, treated as described above, may be combined with any other kind of yarn to produce a compounded yarn suitable for use in the manufacture of fabrics of any kind.

ENGINEERING NOTES.

South Russian Railways and Canals.

It is evident that Russia, after the war, will be an important field for big industrial and commercial enterprises. Proof of this is the keenness with which the Americans are, at the present time, cultivating the Russian markets, and their efforts to secure concessions and other commercial advantages before the war ends, and while the field is apparently clear of other competitors. According to recent reports, the Russian Ministry of Ways and Communications has drawn up a scheme for railway construction on a large scale. This is to be carried into effect after the war, but it appears that the whole matter has assumed a more urgent character owing to the application of a group of American capitalists for a concession to build a railway from Moscow to an important district of the coalfields. It is well known that the idea of railway concessions to foreigners is strongly opposed by Russian economists on the ground that it might involve the raising of freights and fares, and would subject Russian railway policy to the vicissitudes of the money market, as opposed to the existing system of purely Government railways which, with its rule of low profits, provides the only sure guarantee of economic development. It is a question, however, whether, with the huge financial obligations which will face Russia after the war, such opposition, or economic policy, is maintainable. According to a recent statement of Professor Manniloff in the Committee of the Zemstvo Unions, the Russian National Debt after the war will amount to £4,000,000,000, which will involve a huge annual interest. This means in effect that the annual Russian Budget will nearly

be doubled. Of these facts American capitalists are, of course, cognisant, and their efforts and hopes for success are based on them, as well as on the unique opportunities which the present political situation and the inactivity of British enterprise afford.

The Caspian and Black Seas Link.

With the increasing production of mineral oil and coal in Southern Russia, and the great inconvenience experienced at present in the transport of produce, the question of the construction of a navigable canal to unite the Caspian Sea and the Black Sea has again been brought forward. The union of the two seas would secure great advantages not only for Russian commerce, but also for the commerce of the Near and Middle East. There is already a scheme for the construction of a canal from Astrakan, Port Serevriacoff, to the rivers Manytch and Don, with a branch to Taganrog. This scheme is considered the best; it is short and more economical in construction. Goods going from Astrakan to Warsaw will travel 1,853 versts, but by the canal and via Odessa they would travel only 1,123 versts. Other benefits offered are the irrigation of a great area of very fertile land by the canal water, and the prevention of the overflowing of the river Terek.

The Baltic to the Black Sea.

It is strange that, with the much-talked-of German scheme of a great waterway via the Rhine-Danube to the Black Sea, a description of which we have given in previous notes, nothing has yet been heard of the great project for a canal from the Baltic to the Black Sea, although, according to reliable information, the Russian authorities have not laid the matter aside. It was only a few years before the Balkan War that the Russian Minister of Finance obtained the Tsar's sanction for the appointment of a special commission to examine the question of con-

structing the canal. Among the most complete schemes ready for consideration at the time was one elaborated by a Belgian engineer, Comte Gustave Defoesse, in which Mr. Innes Baillie, of the United States, and, if the writer's memory is not mistaken, Messrs. J. King and Co., of London, were interested. Under this scheme the rivers Dvina, Beresina, and Dnieper would be utilised, and the termini of the canal would be at Riga and Kher-son. The length of such a canal would be about 1,000 miles, and it would have a breadth on the surface of about 212 ft., and at the bottom of 114 ft., with a uniform depth of 27 ft. 6 in. Its construction would probably occupy six years. At a speed of eight knots, as has been found practicable in the case of the Suez Canal, the passage of ships would occupy five days. It is a pity that such an important project was interrupted at the time, for if the canal was in existence before the war began the Germans would not boast to-day of achievements in that direction.

Fuel Blocks.

With the scarcity and consequent high price of coal here, as well as in the East, any suggestion which tends to relieve the situation is of present interest. According to a recent patent, a composition fuel is prepared from a mixture of small coal and soot with water. Cinders, flour, or washing-soda may be added to the mixture. As an example, 16 lbs. of fine coal are mixed with 8 lbs. of soot, $\frac{1}{4}$ lb. of flour, and 3 pints of water containing 1 oz. of soda in solution, and shaped under considerable pressure into spheres of from two to four inches diameter.

The total Bulgarian expenditure for 1917 is estimated at 455,606,663 leva, the revenue is estimated at 431,948,000 leva, which leaves a deficit of 23,658,663 leva. These are official figures and, therefore, not necessarily true.

NEWS FROM ALL SOURCES

The Egyptian Government propose to spend £150,000 on irrigation works.

The Sudan Government has given orders to allot more lands to the cultivation of wheat and barley in the Sudan.

Restriction on the shipment of fresh fruit to Holland other than oranges, lemons, and tangerines have been removed.

Telegrams may now be forwarded to Abadan (Persia) at 2s. 7d. a word, and to Koweit (Persian Gulf) at 2s. 3d. a word.

The Paris, Lyons and Mediterranean Railway Company announce the discontinuance of certain express trains on the Riviera line, commencing on March 5.

An Alexandria message of February 22 states that the cotton-seed market is irregular, with spot quoted at 121p. equivalent to £10 16s. 9½d., and April, 120.6p., equal to £10 16s. 1½d.

The Daylight Saving Act comes into operation in Malta at midnight on March 10, and will remain in force until October 31. This arrangement will continue every year while the Act remains on the Statute Book.

When the report regarding the British offer to Greek shipowners reached India, prices in the Calcutta jute cloth market which has been affected adversely by lack of tonnage, advanced a rupee (1s. 4d.) all round.

It is reported that this season's cotton crop of the Protectorate of Uganda will be over 60 per cent. greater than that for last season. During the crop year of 1915-16, 92,127 acres were devoted to cotton, and the production amounted to 99,341 cwt., valued at £238,870.

In order to relieve the more pressing necessities of the Greek population, the Allies, as an act of grace, are (Reuter's Agency learns) permitting certain cargoes of grain to enter Greek Royalist ports. Until more complete measures have been taken by the Greek Government to carry out the demands of the Allies, and so to place the flank of the Salonika Army in complete security, however, the blockade will not be raised.

The supplement to the *Board of Trade Journal* of March 1 contains complete lists of articles which, according to the latest information received by the Board of Trade, are prohibited to be exported from Denmark, France (including Algeria), Italy, Japan, and the Netherlands. The supplement also contains a list of articles (complete to date) which are prohibited to be exported from the United Kingdom.

The Italian Consular Court at Alexandria has sentenced Mr. Carlo Salinas, stock and share broker, of Alexandria, and formerly a member of the firm of Mortera and Salinas, to three months and ten days' imprisonment and to pay a fine of 27 fr. and the costs of the case. He was charged with the misappropriation of 350 fr. in connection with a transaction in shares of the *Société des Pressages et des Dépôts*.

It is reported (writes the *Electrical Review*) that German electrical engineering concerns are looking forward to an important trade in electrical material in Turkey and Asia Minor. One important scheme that is being developed is a plant to utilise certain waterfalls near El Scheab, in Syria. It is stated that about 9,000 h.p. will be available, and that the current generated will be utilised for the Damascus-Jerusalem Railway, and for lighting and power purposes in the villages and towns in the district.

CROPS IN EGYPT.

Official Report on Conditions in January, 1917.

We take the following from the Bulletin concerning the condition of certain crops in Egypt in January, issued by the Egyptian Ministry of Agriculture, at Cairo, on February 1, 1917:—

Wheat.

The weather was favourable on the whole; the heavy rainfall early in the month had a beneficial effect on the crop in view of the closing of canals for clearance, although it caused at first some damage to the previously watered wheat. This damage, however, did not prove to be so great, as the affected plants easily recovered from the check they had suffered, thanks to the timely warm weather. Application of manure, and watering from artesian wells, where available, are proceeding. The crop is generally immune from pests, save for some slight local attacks of cut worm in Upper Egypt, with no damage worth reporting. The general condition of the crop is good and plants are healthy, except in Minia, where they look weak.

Beans.

Weather favourable on the whole; the crop, however, suffered to a slight extent from cold, rains, and strong winds. Thus, it was noticed that flowers were a little affected by winds and plants, on lands watered immediately before the rains set in, were somewhat damaged. The beans are free from pests everywhere, except in Assiut and the provinces lying south, where a broom-rape attack is reported. The crop is so far satisfactory and healthy in appearance. Formation of pods is taking place in the early crop and flowering is general in the main crop.

Sugar Cane.

Weather favourable. Cutting and transport to factories is general. Cane plantations have continued to suffer attacks from stalk borer in the northern part of Middle Egypt. The crop, in general, is in good condition and the yield slightly above average.

"Bersim."

Weather generally favourable. The rainfall had a distinctly beneficial effect on the growth of *bersim*, except where the rainstorm was heavy and a certain amount of damage resulted. The affected crops, however, recovered soon after. Second cutting and grazing are general, and where the crop has been sown early, the third cutting is being taken. In Daqahlia, a start has even been made in the preparation of *dries*. The condition of the crop has improved considerably on last month, and the yield is expected to be slightly above average.

GREEK SEAMEN AFRAID OF U-BOATS.

Three Greek seamen, named Nicholas Zacharion, Nicolai Valsamas, and Nicolos Mathiodis, were charged at Cupar Sheriff's Court on February 22 with having landed from a Norwegian steamer at Methil Dock on February 21 last without the permission of the Secretary of State. Zacharion was the only one who could speak English, and he tendered a plea of guilty. The prosecuting solicitor said the three accused deserted the ship. They would not go on board because of the risk they would run from attack by German U-boats. Sheriff Wark said it was a serious offence for a person who was not a native of that country to land at a prohibited port without proper permission. He passed sentence of a fine of £3 3s., or twenty-one days' imprisonment. An attempt was made to get Zacharion to act as interpreter for the other two accused, but he stated he did not know what an oath meant. The case against the other two men was adjourned.

COMPANY NOTES.

United Egyptian Lands.

Holders of shares are requested to communicate with Mr. H. W. Cable, Secretary to the Shareholders' Committee, 16, Gracechurch Street, E.C., giving name and address and number of shares held.

Oil Outputs.

Black Sea.—329 tons.

Maikop Combine.—255 tons.

Spies.—2,969 tons.

New Schibaieff.—3,879 tons.

Anglo-Egyptian Oilfields.—Gemsah, 26 tons and 20 tons; Hurgada, 1,365 tons and 1,325 tons.

Dividends, Payments, Etc.

It is notified that the National Bank of Greece dividend for the second half of the year 1916, amounting to Dr.125 per share, will be paid on and after February 26, 1917, against surrender of Coupon No. 8, at the offices of the Bank of Athens, 22, Fenchurch Street, E.C.

RUSSO-PERSIAN EXCHANGE.

According to a Russian correspondent, in the *Financier and Bullionist*, who is estimating the business possibilities between Russia and Persia and the chances of extending trade relations between the two countries, the great fall in the value of the rouble discourages the Persian merchants from selling their goods at Russian exchange, while among the Russian merchants the standard Persian coin, the kran, is very scarce.

The export of Russian goods into Persia has almost entirely ceased. The cottons now available in the country do not suffice for Russia's wants. For exportation into Persia previous to the war 5,500,000 poods of sugar a year were authorised, but in the 1915-16 campaign the authorised quantity was only 2,500,000 poods, and in the current—1916-17—campaign this quantity has been further reduced to 1,500,000 poods. This is our only resource for obtaining Persian goods, and it is a valuable one, for the price of sugar has risen on the Persian bazaars to 2 roubles 50 copecks per funt—that is, 100 roubles per pood. With a modest stock, say, of 1,500,000 poods of sugar, we could obtain 150,000,000 roubles in Persia, which is quite sufficient to pay for what we want in Persian goods.

Another resource we have is silver. Out of one pood of silver 3,700 krans can be minted. A pood of silver is now worth 700 roubles. If we spent 20,000,000 roubles in buying silver of which to make krans, we should obtain 100,000,000 krans, which sum would be sufficient to make the necessary purchases in Persia and to pay the expenses of the Russian Army in that country.

ALEXANDRIA PROPERTY SALE.

At the Mixed Court at Alexandria the house and gardens belonging to Mr. Emin Karam, at the Carlton Halt, Ramleh, which at the last sitting of the Court were bought by Mr. Jacques Karam, were resold *sur enchere* for £E15,550, plus the expenses, to Messrs. Gabriel and Edward Karam. A large shoonah, on the banks of the Mahmoudieh Canal, at Alexandria, which belonged to a native lady named Om Shams Hanem bint Reda Bey and her partners, was sold to Mr. Kaniskieri for £E7,200 plus the expenses amounting to £E36,370 mills. Half a plot of land (*par indivis*), of a superficies of 6,050 square pica, situated at San Stefano, Ramleh, belonging to Zarouki, Halfaian, and Company, was purchased by the Commercial and Estates Company of Egypt, Limited, for £E300 plus the taxed costs, £E81.

NOTES OF THE WEEK.

The Salonika Expedition has recently come in for a good deal of attention in Parliament. We have never sought to disguise our dissatisfaction with the Allies' policy in regard to the operations in Macedonia; but we should be sorry to associate ourselves with all that has been said on the subject in the House of Commons. Mr. Bonar Law was entirely right in maintaining that the House must feel that it was quite impossible for the Government to give any indication at all as to what their intentions are in regard to the Salonika force. On the other hand, it is obvious—and Mr. Bonar Law admitted as much—that the expedition, or rather the Macedonian problem, has been mismanaged. "Nothing has exercised us more than the whole subject of Salonika," he said. "It has been difficult because the Allies who are interested in Greece and the Balkan Peninsula have not always taken the same view as to the right policy to adopt." No more lamentable confession could be made. The interests of all the Powers concerned in the maintenance of the Grand Alliance at its maximum efficiency are so compelling that it only required statesmanship on the part of one of the Governments to bring the others into line on the Salonika question. This was not done, because no statesmanship was shown in the Allied Councils until the recent change in the British Government took place. Mr. Bonar Law now believes that some ground has been gained in the matter of a common policy in the Near East. That is all to the good. In any case, it ill becomes individual members who were so largely responsible for the perpetuation of the old régime of *laissez-faire* to throw stones at the muddle into which the Allies' Balkan policy was allowed to drift.

One thing is certain, that our strategy in this war cannot be made or unmade in Parliament. If a nation has the Government it deserves, it may be presumed that a similar measure of justice is meted out to it in regard to its military authorities. At this stage of the proceedings, however, the latter are with us for better or for worse. If it be true, as alleged, that the policy of sending an expedition to Salonika was acquiesced in and that then the force was deliberately starved, in order that it should not be able to advance, those responsible have a very serious charge to answer, and they cannot hope to avoid for all time the consequences of their action. Apart from the criminal folly of such a course, it would deliberately stultify their military repu-

tation, for some explanation will have to be given for the violation of the most elementary military rule in immobilising such a large force as that at Salonika for the greater period of the war. Unless a very cogent reason can be adduced, it must needs go hard with the authorities concerned. We prefer, therefore, to suppose that an adequate explanation will in due course be forthcoming. Meanwhile, against scaremongering regarding a withdrawal we may set Mr. Bonar Law's very clear statement: "Let me point out the obvious fact to the House. If by any chance this expedition were taken away, the first thing that would happen would be that Greece would be overrun, that the whole Balkan Peninsula without exception would be in the hands of our enemies, and that . . . those who have helped us from the beginning would be at the mercy of our enemies." Finally, so long as there are members of Parliament who consider it a patriotic course to adopt to evade the censorship in order to promote a peace-at-any-price campaign and to champion others who do the same, there ought to be no question of a "secret" session.

While our "Western" *quidnuncs* are at pains to point out that the Mesopotamia Expedition ought to follow the example of the Salonika force and remain immobilized at Kut, so as to give the enemy time to recover from his defeat, to receive reinforcements and return to the attack, General Maude is following hard on the heels of the retreating Turks, and British troops are within twenty-seven miles of Baghdad. The pursuit has already extended over eighty miles of country, which have been covered in eight days. A number of rear-guard actions have been fought; but thanks to our river craft and to the cavalry the enemy has so far been unable to make any effective stand. Not the least picturesque feature in the operations is the reappearance of the gunboats in the van of the British advance. So long as the Turks held the Sanna-i-Yat lines they were unable to co-operate with the army; but with the successful turning of this position their opportunity came. By February 26, three days after the successful crossing of the river at Shumran, three of these gunboats had caught up and passed the Turkish army in its retreat, inflicting heavy losses upon it.

According to the latest report the British troops have reached Lajj, which is nine miles in a direct line from Ctesiphon. Short of Baghdad, therefore, the only positions lending themselves to defence on which the enemy can fall back are Ctesiphon and the Diala River, which

enters the Tigris at the town of the same name, situated ten miles to the south-east of the city of the Khalifs. It will be difficult for General Maude, having come so far, to refrain from following up his success to its logical conclusion, and we may at least hope that he will be allowed to take full advantage of the military position which he has so brilliantly created. The news of his promotion to the rank of lieutenant-general "in recognition of his distinguished service in the field" will be received with much satisfaction in this country. Even still more popular would be an announcement that he had been promised all the support he requires to gain and to maintain the further success on which the King expressed the hope, when Kut was about to fall, that he would be able to congratulate the Expedition. It may be noted in passing that the pursuit of the Turks has become appreciably slower during the last week—a fact which suggests that General Maude is not being hurried out of a systematic consolidation of the ground won.

With the change in the fortunes of the Mesopotamian Force there has been a simultaneous recovery on the part of the Russians in Persia. Shortly after General Townshend's surrender at Kut last April the Turks resumed the offensive on the Persian frontier north-east of Baghdad, and drove back the Russians in successive stages, until they had penetrated nearly two hundred miles into Persia. The enemy's inroad spent itself after Hamadan was reached, but some months elapsed before our Allies could operate effectively against the invaders. Bijar, two-thirds of the distance from Tabriz to Hamadan, was reoccupied before the end of the year. On March 2 Russian troops entered Hamadan, and now something in the nature of a general advance towards the frontier is taking place. We shall do well not to be misled at present by the expression "in the direction of Baghdad." That city must be the ultimate objective for any Russian force operating in this region, but it is still some two hundred and fifty miles away. In the event of British troops occupying Baghdad, however, we may expect a complete collapse of all resistance on the enemy's part in Persia. He would at once be cut off from his immediate base, on which he is now falling back, and a hurried retreat in a north-westerly direction would be necessary if he wished to avoid the danger of being caught between two fires.

The negotiations between the Entente Powers and the Greek Government appear to the British public, and no doubt to the Greek population as well, to be unduly protracted. It may, however, be pointed out that it was originally anticipated that the transfer of war material would take two months. There are still two or three weeks of this period to run, and we have Mr. Balfour's assurance that the evacuation of troops and artillery from the north is proceeding satisfactorily. He admitted, however, that there yet remained certain demands which were unfulfilled. The reference is primarily to the surrender of rifles over and above those in the hands of uniformed troops, but would seem to include new developments in the situation. Fortunately the Entente Powers are adopting a firm attitude in their dealings with Greece, and the inconvenience of the blockade, provided it be maintained long enough, will ultimately force the Greek Government to act up to the spirit of its undertakings. It has already abandoned the pretence that it knows nothing about any rifles other than those in the hands of the mobilized troops. Urgent orders have been dispatched to the gendarmerie and the police authorities requiring them to expedite the surrender of all arms in private possession.

Almost simultaneously with the announcement that the Entente Powers have arranged for the arrival of a wheat ship to relieve the worst effects of the blockade of Greece comes the report that the Greek Government is understood to be hoarding cereals and other provisions in various parts of the country. If it be true that King Constantine is making it a basis of his policy that stores sufficient for a three months' campaign of an army of

100,000 men must be kept intact in the military store-houses, it is evident that he is far from meeting the Entente in the spirit of the undertakings extracted from him. His action points to the belief that there may yet be a swing in the pendulum which would make the co-operation of his army with the Central Powers a useful factor in the general military situation. So long as the King or his advisers entertain this idea the position in Greece is fraught with some danger, and the Allied Powers have to decide whether they are going to allow such a situation to continue indefinitely.

The revolt of the Hejaz is without doubt an event of grave importance to the Moslem world, which has to choose between its instinctive allegiance to the Khalif at Constantinople and the veneration for the Holy Places inseparable from the religion of Islam. Little wonder, therefore, that the minds of good Moslems are exercised, and that they require time to take in the full significance of recent events. The reasonableness of this attitude is recognised by the Hejaz authorities, who are well content to see their action judged on its merits. With this end in view they have adopted special measures to submit their case to their co-religionists, and one of these takes the form of a Proclamation to the Faithful issued by the Ulema of Mecca, of which a translation appeared last Wednesday in *The Times*. The document is a stinging indictment of the Turkish Committee of Union and Progress. "We have discerned the hearts of the usurpers of Osman's Empire. We have learned their evil purpose with regard to our Faith, we have beheld their crimes and wickedness in this our Holy Land." The Ulema are absolutely certain that the secret Committee of the Young Turk party has notoriously disobeyed God. There stand the facts and events which every man by inquiry can ascertain for himself, and they instance the employment by Government of Moslem women exposed in public places unveiled before men of strange nations. But this, it is pointed out, is the least of their crimes against Islam and Moslems.

An interesting passage in the Proclamation is the statement that "every Moslem heart in the Ottoman Empire, even among the Turks in Anatolia and among the members of the Turkish Royal Family in the palaces, prays God for our success." The Ulema declares that if the inhabitants of those countries which the Unionists have lost through their alliance with Germany in this war had revolted against those oppressors, they would not have been regarded (by the Entente Powers) as belligerents, and would thus have saved their countries for themselves. The Proclamation then deals with the question of the Khalifate, and makes the declaration that the revolt of the Hejaz is not a rising "against a legitimate Khalifa fulfilling all the legal, or at least some of the conditions qualifying him to be such." It asks what the Mohammedan world has to say of the Beni Osman pretending to be Khalifas of Islam when they allow themselves to be puppets in the hands of Janissaries. But "in spite of all that is known of the deplorable condition in which the Khalifate is situated at the present moment" the Ulema announce that they have not interfered with it at all, and that it will remain as it is pending the final decision of the whole Mohammedan world.

Events in Mesopotamia, and still more the successes of the British troops over the frontier of the Sinai Peninsula, where the enemy have abandoned further defences, ought to prove of considerable assistance to the King of the Hejaz in his struggle with the Turks. Time, however, must be allowed the Arab world as a whole to decide upon its attitude towards the ruler whom all Islam agreed in recognising as the Grand Shereef and the Guardian of the Holy Places. The Arabs have never been conspicuous for cohesion, and their traditional clannishness is not likely to be changed at a moment's notice, especially at a time when the whole world is in a ferment and great things are happening all around them.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 14.

The Health of the Sultan.

The news with regard to the health of the Sultan is excellent, and the latest bulletin states that his Highness is fast regaining strength, and will very soon have recovered completely. It is understood that his doctors will issue only one more bulletin.

The War Loan.

To-morrow is the last day for the acceptance in Egypt of subscriptions to the War Loan, and no little curiosity is being evinced as to the total figure, which will stand in the Imperial list against the name of this dependency. Most of the publicity given in this country to the issue of the loan has been due to the patriotic initiative of the British Chamber of Commerce, which has daily taken up prominent space on one of the pages of your Alexandria contemporary with an appeal to every British subject in Egypt to do his or her duty and subscribe. What reply has been made to that appeal will not be known for some days, but there is every reason to believe that the figure will be quite a satisfactory one. Those who may wish to compare it with the total subscriptions from other parts of the Empire must, however, bear in mind the fact that the Anglo-Egyptian community is not exactly what one would call a rich one. The incomes of most of its members are fixed, and do not permit of much saving in the course of the year—especially in present circumstances, when prices are rising all round—whilst those Anglo-Egyptians who are able to put by anything out of their unearned income, have their accounts at home, and consequently their subscriptions will not appear in the "Egypt" contingent.

As regards the purely Egyptian element, albeit "Commentator" is perfectly correct in his statement in THE NEAR EAST of the 13th ult., that there is plenty of gold still in Egypt—the other day a contractor paid up his deposit due to a Government department entirely in gold, and this in spite of the fact that gold coins have been withdrawn from circulation for over two years now—nevertheless, it must be remembered that it is exceedingly difficult to get the local population to bring out its hoards, unless hard times exist, which is certainly not the case to-day. The Egyptians are essentially a self-centred and agricultural race; they have not been touched by the war, except in so far as it has brought them unheard-of profits, and consequently they cannot realise the necessity to bring it to a speedy and successful end. They are prepared—and indeed have done so in the recent past—to show their loyalty to Great Britain and sympathy for the Allied soldiers by subscribing to the Red Cross and any other war charity calling for funds; but the War Loans, however attractive their terms may appear to us, do not in the least appeal to the Egyptians, either from the point of view of investment or of loyalty, and so we must not expect to find that the indigenous population has subscribed to them to any great extent; nor, indeed, in the circumstances ought we exactly to blame it for this attitude.

The element which certainly ought to subscribe heavily is the Levantine and neutral community. The latter has made enormous profits out of cotton, and Army and other contracts. Sad to relate its members cannot be touched by any form of direct taxation, in war-time or out of it; but since they contribute not one penny towards either the defence of this country or the maintenance of the Allied Fleets, which, by keeping the seas open, have enabled them to make their extravagant profits, the least surely that these gentry could do would be to contribute, either as a thank-offering or a good investment, some parts of those profits to the "Victory Loan." From what I hear, however, this is far from their thoughts. Certain that without any voluntary contribution, either financially or otherwise, on their part, their security in Egypt will be assured, they prefer to invest the money they have made out of the Allies in enterprises which will enable them to make still further profits out of the same clients. It is a regrettable attitude for which there is at present no remedy, but it is to

be hoped that when, after peace has been declared, steps are taken to regularise the local political situation, some means will be found whereby the element in question can be forced to pay for the benefit of living and trading under British protection.

The Siwa Victory.

The defeat inflicted on the Senussi at Siwa should materially weaken whatever influence Sayed Ahmed still has with the tribes of the Western Desert. The coup carried out by armoured cars was a brilliant one, and fully in keeping with the excellent work this new arm of the Service has done in Egypt. I understand that we have not effectively occupied Siwa, as there are certain difficulties about keeping a permanent garrison regularly and satisfactorily supplied under present conditions; but there is little fear of the Senussi returning to that oasis after the proof he has received of the mobility of our forces. By the by, I hear that on our eastern front there is a surprise in store for the Turks, who will certainly not find it to their taste. The surprise, I understand, will be sprung upon them in the course of the next forward movement.

The Pension Law.

A decree published on Monday contained alterations in the Pension Law in favour of Ministers and their families. Under the law the maximum pension, £E800, was raised to £E1,200 in the case of any official who had held the post of Minister for at least two years, but Ministers whose pay is £E3,000 per annum were only called upon to contribute to the Pension Fund an annual sum calculated on four-fifths of their pay, i.e., £E2,400. Under the new decree the condition of two years' service as a Minister in order to secure a pension between £E800 and £E1,200 per annum is abolished; Ministers will have to pay towards the Pension Fund on their full salary; and the maximum pension of £E300 payable to the widows and children of officials is declared inapplicable to the families of Ministers and ex-Ministers. It is hoped that this decree foreshadows further alterations in the pension regulations for the ordinary officials, for in some respects the Pension Law, as it stands at present, is somewhat inconsistent and also not sufficiently generous where European officials are concerned.

The National Mission.

The friends of Dean Storrs in England will, I am sure, be sorry to hear that he has been laid up with a sharp attack of influenza. After the opening of the Mission in Cairo the Dean went down to Alexandria to conduct services there, but fell ill almost immediately, and was quite unable to carry on. He is much better now, and is staying at Mena House, but it will be some days before he will be able to resume work. Fortunately for the Mission, at about the time Dean Storrs became ill the Bishop of Buckingham arrived out here in order to assist Bishop MacInnes with confirmations, and he has been able to step into the breach and hold the Mission services which the Dean should have conducted. The Rev. E. A. Burroughs is carrying on the Mission in the Sudan, and on his return it is hoped that he and Dean Storrs will continue the movement in Egypt. Meanwhile Bishop MacInnes has gone to El Arish to conduct confirmations there, and I understand that on his way back to the Canal he will visit each post and camp in the Sinai Peninsula.

The Al Azhar Ulema.

The ulema of Al Azhar University are active again, but this time it would appear that justice is on their side. They complain that the teachers are being paid derisory salaries which are far below the minimum accorded by the regulations, and that the bread rations are inadequate. A petition has been submitted to the Prime Minister, who has promised to give the matter

**THE WORLD-FAMOUS
YAGHOURT**

may be obtained in 6d. and 1s. jars, of
MANOLI-CORBETTL,
22, Great Chapel Street, Oxford Street.

Also **LEVANT PRODUCE:**
Tomato Paste, Black Olives, Locomes, Matwa,
Bamias, &c.

Recommended by Mrs. Frank Barker.

his earnest attention. From what I have been able to gather, the majority of the teachers receive £E3 *per mensem*, which is about half the minimum laid down when the University was reorganised some few years ago, and which would certainly in any case appear an inadequate remuneration. Further, the bread ration, which is distributed equally to the higher paid as well as to the small officials, is provided out of funds contributed by the Government, the Wakfs Ministry, and certain private endowments, which funds, although adequate before the war to purchase the requisite number of loaves, to-day suffice for the supply of but 75 per cent. of the required quantity. For once in a way the Al Azhar *ulema* would appear to be justified in their complaints, and it is to be hoped that speedy satisfaction will be accorded them.

CAIRO, February 20.

Egypt and the War Loan.

The subscription made by Egypt to the new British War Loan amounts approximately to £5,000,000, of which at least £3,700,000 is new money. This brings the total subscribed by this country to all the British loans or invested by it in the various other forms of raising money employed by the British Treasury, such as Exchequer Bonds and War Savings Certificates, to a figure which is estimated at not less than £35,000,000. These figures include the investment made by the Egyptian Government, but not those of the London offices of "Egyptian" banks, companies, and business houses, or residents who have been able to dispose of funds outside this country. It should also be pointed out that in addition to the subscription to the British, Egypt has contributed to the French and Italian loans, all of which have been very well supported from here. The country's cash subscription to the Allied cause is, therefore, considerably more than £35,000,000, and when one considers that in normal times the Egyptians do not, as a rule, invest money in European securities, and that the Levantine and neutral element, to whose huge profits out of cotton and local war contracts I referred last week, have shone by their absence from the list of subscribers, I think it will be admitted that this is a notable effort on the part of Egypt and of those of her inhabitants who have the Allied cause at heart. In conclusion, I should like to draw attention to the fact that this figure of £35,000,000, increased by the contributions to the French and Italian loans, does not by any means represent the full financial assistance rendered by Egypt to the Allies since the outbreak of war. There are many other ways in which this country has helped, and is still helping, the cause, and which, although they have their financial value, cannot so easily be translated into terms of £. s. d. Indeed, when the war is over and the assistance rendered to the Allies by the various dependencies is assessed, the share taken by Egypt will, I am certain, be found by comparison to be very considerable, and will come as a great surprise to many people.

THE DANCE OF THE JERBOA.

As the last rays of the sun's aftermath usher in the brief Eastern twilight, he leaves his lair to keep tryst with the evening star. Inebriate with the ambient air, or obedient to a lutany inaudible to human ears, he abandons himself to cepuscular revelries across the desert's face. Wild aerial essays suggest that in other æons he was germane to the bat rather than the mole, and would fain renounce his terrestrial habitat to cleave the clear skies in cousinly companionship. Here, there, and everywhere the keenest eyesight only may follow his phantasmal journeyings. A will-o'-the-wisp, he wheels away in mad career and is lost to sight, to materialize momentarily and finally in the gathering gloom.

Against the skyline, Bedouin women, vague and nebulous, flit in and out their tented dwellings, whilst far away a pariah is greeting the moon.

Over the lake a pale blue vapour rises slowly.

A telegram from Sofia received in Rome states that an epidemic of smallpox has broken out throughout the country. Many Bulgarian soldiers in Macedonia are infected.

Approval was recently given to the statutes of the National Council of Czechs and Slovaks in Russia, which aims at uniting all Czechs and Slovaks resident in Russia.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

Experiences of a Cypriot Prisoner.

About a year ago a sailing vessel, the *Evangelistria*, belonging to a Kyrenia merchant named Savas Kharalamboou, respecting which there were suspicions that she was engaged in contraband trade, was sunk off the Papho coast by a French man-of-war, and the captain, one Michail Savas, was arrested and taken on board the warship. This skipper, who was recently released and has now returned to Cyprus, has given an account of his year's experiences to a Nicosia paper, the *Voice of Cyprus*. He went through many hardships and vicissitudes in a variety of places, but all his trials have, he says, been forgotten from the moment when, in the beginning of November, he was sent a prisoner to Alexandria. Here thousands of prisoners, Germans, Turks, and others, were interned, and here, he says, all enjoyed a life almost of freedom, and one which was in all respects a happy one. Their food was on a liberal and varied scale, the clothing excellent, and the beds and sleeping arrangements all that could be desired. A full breakfast, with eggs, butter, and milk; a sumptuous dinner, with two or three courses of meat; and a most liberal supper of a similar kind were supplemented by an abundance of cigarettes and plenty of sweets. But what impressed the prisoners most of all, and exalted the honoured name of England in their minds, was the excessive kindness and magnanimity which was shown towards them by the British authorities. All the prisoners speak with enthusiasm of the English, and especially the Germans, who said that they were ashamed that their country should be at war with the noble English people, from whom, although they were prisoners and in hostility, they received such protection, honour, and kindness as did not fall to their lot in their own country.

One can quite understand how the consideration shown to helpless prisoners by the British strikes the imagination of people whose treatment, in analogous circumstances, by others would bear little resemblance to that which the Kyrenia skipper is able to describe. And it is satisfactory to know that it has been appreciated. In the early days of the Occupation the treatment of prisoners convicted of offences in Cyprus, who had been accustomed to Eastern methods, was a revelation, and they returned to their villages with glowing accounts of the good fare, the gratuitous shaving, and other experiences which they had enjoyed. That generation is passing away, and the present one knows little of what their ancestors experienced.

General News.

Mild, spring-like weather prevailed during the week ending February 10.

A Government notice of February 6 informs the public that permission to travel to the United Kingdom or other places beyond the seas will not be given to women and children unless proceeding to take up duties as nurses or some other war work, or for urgent reasons of health, or of a private character. The regulations relating to Egypt now in force are not affected.

The price of charcoal, so much used in Cyprus for cooking and other purposes, has risen to a height never before experienced. The cause is said to be that all camels, mules, and other beasts of burden have been requisitioned for the transport of carobs, purchased by the British Government, to Famagusta.

New regulations in respect of the Nicosia Poor House being now in force, all begging is strictly forbidden within the municipal limits from February 26, and notices have been issued to that effect.

The election of a Bishop of Kyrenia is approaching. The process is very similar to that observed in the case of the Archbishop. A large body of electors has been chosen, and these are now proceeding to choose the "general electors" who meet and appoint the Prelate.

ESCAPED MONTENEGRIN PRISONERS.

After enduring terrible privations, fourteen Montenegrins have arrived in London via Holland, escaping from Sennelager, Holzminden, Dattel, etc. Most of them were fired at soon after they had left their place of internment, and two were hit badly and had to be abandoned by their companions. They all arrived in Holland in a state of physical collapse, having walked the soles of their shoes entirely from their feet. One man had to crawl in the snow for eight hours.

Arriving in London, they were taken over by the Montenegrin Relief Fund and fed, clothed, and housed. Acting under instructions from his Government, Sir J. Roper Parkington, the Consul-General for Montenegro, is despatching the men to Paris, where they will be equipped and sent to join the Montenegrin unit at Salonika.

TURK, GERMAN, AND ARAB.

(FROM A CORRESPONDENT.)

CAIRO, February 3.

Methods of Propaganda.

Reference was made in recent notes to the delegation of Syrian journalists sent by Jemal Pasha to Constantinople and the Turkish deputation that the Unionists, to return the compliment, sent to Syria, accompanied by a few German publicists. This deputation has just completed its tour, after travelling as far south as Medina, and, on the occasion of its return to Constantinople, the secretary of the *Tanin* and the editor of the *Turco-German Lloyd Ottoman* (the mouthpiece of the German Embassy) lavished praise on Jemal for having so "effectually" re-established peace and order in Syria. According to Turkish papers, one of the notable achievements of this deputation was the founding of three important Arabic papers, the first in Damascus, called *Al Sharq*, the second in Medina, called, with unconscious irony, *Al Hejaz*, and the third in Beyrout. A series of fêtes was got up at the principal stations in honour of the members of this deputation, and, under the reign of terror that prevails, the inhabitants were everywhere compelled to feign enthusiastic welcome. An address and exhortation was delivered by one of the members in the Ommeyad mosque at Damascus, after the Friday prayer, on December 8 last.

Turco-German "Friendship."

Up to the end of last year the number of Ottoman students sent by the Institute of Turco-German Friendship at Constantinople to Germany was 233. Of these, 157 pay their own expenses, while the Institute defrays the total expenditure of 28 and part of the expenses of 48 others. According to news from Berlin, when this Institute was founded a special committee left Constantinople for the German capital to found a similar institution there; and it is said that preparations are on foot for laying the foundation-stone of the building. The importance attached by the Germans to this work of increasing the understanding between the two peoples may be gathered from the fact that the wife of the Kronprinz invited the members of this committee, together with Hakkı Pasha, the Turkish Ambassador, and two high German officials, to a tea party at Potsdam.

An illustration of the rapid spread of the Turkish "national" spirit is afforded by the fact that all the Greek names of streets in Smyrna have been replaced by Turkish ones. Efforts are being made to create in that town a large square similar to "Jemal Pasha Square" in Damascus.

EXTERMINATING THE SERBS.

Under date of March 4, Reuter's Corfu correspondent telegraphs that the Serbian official Press Bureau has issued the following statement:—

"The Serbian Red Cross Society, being anxious to help its Serbian fellow-subjects interned in Austria, addressed a request for a list of these to the Austrian Red Cross Society, which replied that it must defer compliance owing to the fact that the Serbian Red Cross Society, having left Serbia, and its functions having been entrusted to another institution, was not invested with any official status. We have no idea what this institution may be, and the only information in our possession is that it has been formed in Belgrade under the control and regis of the Austrian military authorities.

"It is ridiculous to maintain that the functions of the Serbian Red Cross Society, which is a branch of the Serbian State Medical Service, and for the work of which the Serbian Royal Government is responsible, can have passed into the hands of a society created in the invaded territories and controlled by the Austrian military authorities. The Royal Serbian Government alone is competent to say what society is invested with an official character. The Austrian Red Cross Society, even after the formation of the Red Cross at Belgrade, remained in communication with the official Serbian Red Cross Society for a period of six months, and the Austrian authorities broke off relations only when a list of our interned subjects was requested of them.

"The Austrian officials do not wish to furnish such a list, as it would disclose the enormous death-rate among our unfortunate people who have been interned, and that in these Austrian concentration camps steps are being taken for the complete and systematic annihilation of the civil population of Serbia."

Reporting an interview which the Greek Prime Minister, M. Lambros, had with the French Minister at Athens, the *Times* correspondent says:—"When the payment of damages for the affair on December 1 (in which many outrages were committed on Allied subjects) was discussed, M. Lambros declared that Greece also had losses of her own to make good, instancing the injury to the Observatory, which is close to the Philopappos Hill. The French Minister asked for particulars. When the Prime Minister advanced a claim for damage done to the roof of the powder magazine which was occupied by seamen and marines from the Allied fleet, the French Minister was unable to adopt M. Lambros's point of view."

THE STATE OF SYRIA.

(FROM A CORRESPONDENT.)

CAIRO, February 15.

A singular fatality seems to hang over the question of relief for Syria. Just as Syrians abroad, after months of fruitless negotiations, which had made them all but despair of finding the means to send the outcome of their combined charitable efforts to their starving countrymen, were rejoicing over the arrival of the American relief ship *Cæsar* at Alexandria, en route for Beyrout, diplomatic relations between America and Germany became strained, and finally a rupture took place; and we can now account for the past delay of the ship at Alexandria. It would seem that, before her arrival at that port, and before there was any public announcement of the German Government's intention to declare a ruthless and indiscriminate submarine warfare on belligerents and neutrals alike, the U.S. Government foresaw the impending crisis, and the captain of the *Cæsar* received instructions accordingly. If, as it is feared, an actual state of war follows, it is more than likely that Turkey will, willy-nilly, be dragged into war with America, and the anticipation of such an eventuality has led so far to the indefinite holding up of the ship at Alexandria.

To crown the ill-luck of the Syrians, about 300 tons of flour and some packages of clothing have been damaged by seawater during the voyage, and had to be discharged at Alexandria and sold after survey by Lloyd's agents. It is indeed tantalizing to see such a profusion of footstuffs lying afloat, almost within a day's journey of Syria, while the poor people there are in a state of starvation, aggravated by the cold of winter, and each day's delay may mean further loss of hundreds of lives.

Plunder on Prisoners.

Among the prisoners of war captured in Rafah is a Syrian officer, belonging to a well-known Moslem family, and in a position to know the real situation in Syria. He confirms the accounts hitherto published. It is said that a great deal of money and jewellery has been found on Turkish prisoners, who could have only come by this booty during the massacres of Armenians, or the attacks on those villages round Damascus which were wrongly accused of harbouring deserters. One of these prisoners stubbornly refused to undress and take the regulation bath; and, when finally he was told that his own religion imposed on him the sacred duty of ablution, and was made to undress, belts filled with gold and jewels were found wound round his body and limbs.

"He feedeth

the hungry."

FAMINE IN THE HOLY LAND

VISCOUNT BRYCE, speaking at the Mansion House, said:—"I think that, in some ways, the condition of the unfortunate subjects of the Turkish Empire, in Syria and Palestine, is worse than that of those who have suffered in other countries, because the cruelties have been perpetrated by the Government of the country whose innocent subjects these people are. The storm broke first upon the Christians, next upon the Jews, and then descended upon the Arabs."

This striking testimony amply justifies the Fund now being raised for the Relief of the Starving People in Syria and Palestine.

As soon as the Allied operations permit, food and materials must be poured into the country. Free storage has been given at Port Said until the goods can be taken to Jaffa (12 hours), Haifa and Beyrout. The Fund will be economically administered by those who know the country and people best. The sole qualification for the receipt of help will be that of proved need, irrespective of race or creed. The Fund started by Bishop MacInnes (Bishop in Jerusalem) and Missionary Societies of all Denominations for

RELIEF in SYRIA and PALESTINE requires £50,000 to start with

ROUMANIA'S PEASANT SOLDIERS.

(FROM OUR CORRESPONDENT FORMERLY IN BUCHAREST.)

Those who have had much to do with the Roumanian wounded are frequently struck with the extreme simplicity of the peasant mind. "You want to nurse them to know them," said an English lady, who is giving up all her time to the meritorious work. "I have lived so much among them, but it is only now that I begin to understand them. They are a splendid lot of fellows, so patient, so thankful for what is done for them, and, above all, so brave; very different from the town-bred soldier, who is often rather inclined to give himself airs, and not infrequently discontented.

"It was only a few days after the disaster at Tutrakan that some of the wounded from there were beginning to recover consciousness. 'Oh, Sister,' said one of them, a big peasant from the Yalomitza district, with his arms and chest covered with proofs of Bulgarian devilry, 'I have had a most beautiful dream. Let me tell you of it. I thought I saw the battlefield of Tutrakan, and it was all wild flowers; wild flowers of every colour, as far as I could see. I never thought there could be so many and such beautiful flowers. And the scent of them—! I walked on and on, with the sun shining and the bees humming all round me. And then I began to see that the flowers were all red, yellow, and blue—the Roumanian colours.

" 'Now, do you know what that means, Sister?' he continued. 'It means victory, and that we shall win the war; that Tutrakan was nothing but a beginning. And it means that I shall soon get well and help to beat the Bulgars, and take my revenge for these,' motioning with his bandaged hands to his wounded chest."

The wounded in the neighbouring beds, my informant tells me, all regarded the narrator of this dream steadfastly. "Yes," they said, "it must be so. That is the meaning." Surely a mind that can conjure up such a dream, and so interpret it, must possess a deep strain of poetical feeling. And such feeling there generally is, when one can get down deep enough into these rugged minds to discover it.

Another peasant had had the first two fingers of his right hand shot off. He was terribly concerned when he found nothing was left of them. "How can I cross myself, now, *Doamnasora*?" The English lady showed how the "trinity" might still be formed with the two remaining fingers. "But will God not be offended if I use other fingers?" "Not if your arm were off," replied the English lady. But it took her ten minutes' talk to convince the peasant boy, a fair Român from the mountains, that form was after all nothing at all.

"What! England is so small," said a peasant of forty, as he studied a map of Europe. "I can't think how it is the water does not run over it."

They are all terribly interested in the war, and fully understand what would be the fate of the little countries should Germany ultimately prevail; but their knowledge of geography is small indeed. "Is Verdun in England?" asked one soldier, with a bullet through his left hand (here as elsewhere so many wounds, either from bayonet or bullet are in the left hand or arm); and this was the occasion of the map being brought to the hospital next day. One thing, however, seems too marvellous even for their simple minds. That England is fighting only for a promise made long ago to Belgium is to them a theme of general discussion; and since they learnt this their English nurse has become nearly a goddess to them.

They are very quick in clever replies and repartee. "Is there anything else you would like?" asked Queen Marie one day of a wounded man whilst visiting a hospital. "Yes, Majesty. To see you Empress," replied the soldier. He had, no doubt, heard the subject of Great Roumania becoming an Empire after the war discussed. Whether the Queen had or not I do not know, but those present seemed much impressed with the reply.

The one thing that worries the wounded peasant is his inactivity. He is so anxious to be back at the front

again. Revenge for the frightful cruelties of Tutrakan is his whole thought. One soldier had been shot in one of his toes. "It will have to come off," said the doctor. "Off with the whole lot if I can only get back quicker!" said the peasant.

One man was to have a large strip of flesh taken off his arm, where a shell fragment had "touched it up." "We will give you morphia," said the doctor. "Oh, never mind," laughed the *tzeran*. Do you think that the chaps that fired the shell gave me it first?"

There is one other incident to relate which shows better than ever the finer strain of feeling which the Roumanian peasant preserves; but in this case it is not connected with wounded. In the fighting for the Temesh Pass thirty men were shot in one regiment, a regiment recruited among the peasants of northern Moldavia. They were buried by their comrades on a mountain slope, the only crosses being such as could be cut from branches with bayonet blades. A little while later this regiment was replaced by a fresh one, and was sent back to enjoy a well-earned rest. Now, on the lower slopes of the Carpathians and the plains of Transylvania grow wildflowers beautiful and numerous. As this regiment tramped back over the ground so hardly won every man carried a big bunch of flowers plucked on the plains below, and added to on the way. When they came to where their comrades were sleeping the sleep of heroes they deposited their nosegays, each in his turn, till each of the thirty graves became a monument, a monument of Transylvanian wild flowers, and culled from the land which the dead have given their lives to free, with its Roumanian inhabitants, from the yoke of the Hungarian oppressor.

LADY PAGET'S HOSPITAL IN SERBIA.

On March 4 Mr. C. R. Cooke-Taylor, Hon. Secretary of the Irish Literary Society, recounted his adventures in Serbia to members of that body, the occasion being a luncheon given in his honour at the *Hôtel des Etrangers*, Gerrard Street, Soho. At the beginning of 1915 he joined the staff of Lady Paget's Hospital, which arrived at Skoplje early in March. The unit was allotted four blocks of derelict buildings, about half a mile from the little town, and after several weeks' incessant labour converted them into a perfectly equipped hospital, capable of dealing with 300 surgical cases. It soon filled to overflowing with sufferers from typhus fever, which had been imported into Serbia by Austrian prisoners. Infection spread to the staff, and a complete breakdown was averted only by the arrival of a vast supply of stores from England, together with twenty trained nurses, to whose courage and self-devotion Mr. Cooke-Taylor paid a well-merited tribute. Typhus is a seasonal disease, and the mortality slackened on the approach of summer. But now a more dangerous foe made his appearance. The treacherous Coburger, with an overwhelming Bulgar army, took Belgrade, and drove the war-worn Serbians southwards. The invaders soon reached Skoplje, and Mr. Cooke-Taylor witnessed a stubborn battle in its vicinity. When shells began to drop around him he thought discretion the better part of valour, and retired somewhat hastily to the hospital, but returned to the scene of action on meeting Lady Paget's disapproving eye! The issue of the battle was unfavourable to the Serbians, who were greatly outnumbered, and outclassed in artillery. Failing to obtain the expected succour from their Allies' base at Salonika, they were forced to evacuate Skoplje. It was a question whether the hospital staff should or should not accompany them in a retreat on Priština. Fearing that the additional demand for transport would embarrass the retreating army, Lady Paget decided to remain at Skoplje. She did so with some trepidation, but, luckily for her unit, the Bulgarian general who captured the town was that *rara avis* among King Ferdinand's subjects—a gentleman. He respected the Red Cross, and allowed the English staff to continue its ministrations. Hitherto the rough work had been very efficiently performed by Austrian prisoners. The rôles were now reversed; orderlies became free men, and their erstwhile superiors passed into captivity. Thanks to the commandant's intervention, the *status quo* remained almost intact: the Austrians continued to obey orders, and great numbers of wounded belonging to both sides were effectually dealt with. Mr. Cooke-Taylor had ample opportunity of observing the relations which existed among the conquering host. There was no love lost between Germans and Austro-Hungarians, while Bulgars regarded the latter with a deadly hatred. For several anxious weeks the unit stood in peril of being sent to Germany for internment, but it was averted by Lady Paget's diplomacy. They were despatched, bag and baggage, to England by way of Bulgaria, Roumania, Russia, Sweden, and Norway. In every country they received considerate treatment—nay, were welcomed as guests—and reached our shores with all their possessions. Mr. Cooke-Taylor rendered full justice to Lady Paget's tact and the wonderful organising power which she brought to bear in a very difficult situation. He concluded with an eloquent appeal on behalf of the little Serbian nation. F. H. S.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

CONDITIONS IN CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Your correspondent, in your issue of January 12, hits the nail on the head. He asserts that the prosperity described in official reports is only nominal, not real; that the revenue is maintained at a high level because the Government tithe grain is sold at a high price; and that the only persons who benefit are certain merchants and some of the well-to-do farmers. The greater number of agriculturists are in the hands of usurers.

The report on the Blue Book of Cyprus for the year 1915-1916 affords complete evidence of the truth of your correspondent's statement. The report says that the surplus on the year's transactions was £26,574. The local revenue was the highest on record: the increase is mainly attributable to the high prices obtained by the sale of the Government tithe grain and to an increase in the sale of forest produce. The tithe wheat in the Government stores was retailed at regulated prices for the purpose of maintaining a 3-c.p. loaf. In February and March barley reached the enormous price of 6s. per kilo. The local expenditure shows a decrease of £22,086, mainly due to decreased expenditure on Vote 29. The cost of living has gone up; people with too small holdings are selling. Although the wheat and barley crops were exceptionally small, the high prices in vogue more than compensated farmers for the short fall in quantity.

This represents the official view. I agree, however, with your correspondent. I sum up thus:—A credit balance of £26,000 is obtained by raising the price of bread and by not expending all the money voted for the service of the island; the small farmers being heavily in debt, the high price of grain does not benefit them; the cheap loaf promised by the Government disappeared long ago; the labouring population in general feel the pinch of hard times.

I enclose my card, and am, etc.,
Kyrenia, February 19, 1917.

GREEK "FLAG-WAGGING" IN CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—The paragraph in the Cyprus Notes in last Friday's NEAR EAST seems to me to be of extraordinary interest. It shows how the "Hellenic spirit" has been, and is, fostered in the island. Put in other words, it shows how a handful of agitators—professional politicians and long-winded legal gentlemen as a rule—persist in one way or another in endeavouring to keep alive the idea of "union with Greece." It is, indeed, a pity that "this custom of carrying the Hellenic flag has been allowed to grow up" in Cyprus, as your correspondent reports; and since "it has been, for many years past, carried to an absurd extreme, and, in fact, abused" (to quote your correspondent again), it seems to be high time for the agitating, petitioning, vapouring "Hellenists" of Cyprus to be put firmly, and not too gently, in their right place. Whether that place would be a prison it is not for me to suggest, though I have my views on the subject.

What do these people really want? To hand over Cyprus to Greece, and to become themselves subjects of King Constantine? Where is their sense of proportion, to say nothing of their common sense? Cyprus is now a part of the British Empire, which is a far greater thing than even "the glory that was Greece"; and the agitators ought really to be proud and thankful that such is the case. If they are not, they should, of course, be at liberty to withdraw to Greece ("Royalist" Greece, I presume!). If they fail to avail themselves of that liberty, let them either hold their peace or be deported. Other British subjects are more than tired of their frothy agitation. And Britain, one feels sure, will not be in a hurry to offer Cyprus to Greece again after the experience gained in this war. The Hellenic flag-waggers are, therefore, wasting their time.—I am, etc.,

Wimbledon, March 7, 1917.

UNION JACK.

THE "GENTLEMANLY" AND "CLEAN FIGHTING" TURK.

TO THE EDITOR OF "THE NEAR EAST."

SIR.—Some people who have lived in Turkey, or associated with the Turks in an official or social intercourse, have endeavoured now and again, through the Press, to influence public opinion in favour of the Turks, on the

plea that they know them to be gentlemanly and clean fighters. They base their assertions on arguments which, although probably meant in good faith, are very misleading. While the Turk, true to his own warring nature and the secular traditions of his race, is a keen and hard fighter, as a ruler he is the most dastardly and merciless tyrant that the world has seen. This has been luminously proved by undeniable and documented atrocities, which admirers of the Turks, while endeavouring to mitigate, are unable to deny.

The thorough knowledge of the Turk claimed by certain writers, although extending over a long period, is obviously very superficial. Relations with mellifluous Turkish officials in the gorgeous divans of a selamlık or in heavily carpeted Government offices over a cup of coffee and perfumed Turkish cigarettes, have rarely ever guided casual travellers or even diplomatic agents to an intimate knowledge of the Turk as an administrator. The capitulations protected foreigners in Turkey from the vexations and persecutions which the Ottoman subjects had to endure.

No one has ever denied that the Turk is a "tough fighter"; but between this and his being a "clean fighter" there is an immense difference. If we grant that he has not used poisonous gas or liquid fire, and that he does not ill-treat our prisoners (although their fate is shrouded in mystery), and also that he does not fire on hospitals (although we know that one Russian hospital ship was torpedoed in the Black Sea), it is certain he is not restrained from such acts by any consideration for humanity. It is only because he has met his match in the British soldier and is guileful enough not to deprive himself in advance of some saving grace in the day of possible defeat and reckoning. The bandits who did not hesitate to murder in cold blood hundreds of thousands of their own subjects, to violate young girls and disembowel pregnant women, to slaughter children and throw them in the sea, would not shrink from such paltry offences as the use of poison gas and liquid fire. The responsibility for the former atrocities they might easily transfer to roving bands of Kurds and outlaws, but they are well aware they would be personally called to account for the practice of illegitimate warfare.

It is not right that people in our midst should seek to champion the Turk and spread a veil over his barbarism in memory of past associations, however pleasant, with Turkish officialdom. Surely it is time that this morbid sympathy for a "gentlemanly" and "clean fighting" Turk should give place to a sense of justice and duty towards millions of innocent sufferers.—I am, etc.,

ONE WHO REALLY KNOWS THE TURK.

DR. PEMBER REEVES ON ABDUL HAMID.

Last Wednesday, at the London School of Economics, Dr. Pember Reeves detailed the course of events in the Near East during the nineteenth century. He described the more or less sincere attempts at reform in Turkey which were frustrated by the two wars, of the Treaties of San Stefano and Berlin, the setting up of principalities and kingdoms in what had been Turkish territory, and so forth. Of Abdul Hamid he said that he came to the throne after what he considered the failure of the era of reform. He knew what had happened to his reforming predecessor, Abdul Aziz, who had been dethroned and had committed suicide. He had seen that reform had not saved Turkey from partial dismemberment in 1879. Whether he had any thorough policy thought out, or whether he went on from hand to mouth, with the one idea of staving off the evil day of collapse, people must judge for themselves, but he (Dr. Reeves) thought Abdul Hamid's policy was largely made up of both these elements. Probably, seeing that reforms and the infiltration of Western ideas had failed to save Turkey, he thought the best thing to do was to appeal to the Old Turk—the ignorant, stubborn, brave, conservative Mohammedan—and throughout his reign he tried to stir up religious enthusiasm for Islam, and to create religious animosity between Turk and Christian. He was not a good financier. He was not a reforming Sultan in any sense: in the Civil Service he tried to make things worse; for at one period he endeavoured to turn all the Christians out of it. The one thing he kept up with any sort of efficiency was the army. Living in a semi-bankrupt state for thirty years, he yet managed to keep that going. The soldiers were often in rags, and were miserably fed; but they had rifles, gunpowder, and artillery, and they could fight then, as they can fight now.

TANGIER TO TEHERAN.

A Reuter's telegram from Athens announces that "the Proconnisos, a Greek ship recently requisitioned by the Royalist Government to go to the United States to bring a cargo of 5,000 tons of grain for the assistance of the Royalist population of Old Greece, has been torpedoed and sunk by a German submarine." This really looks like a bit of sheer carelessness on the part of the Huns. If the unfortunate vessel had been chartered to take grain to the Venizelists we might have understood the reason for her being sunk by the Kaiser's water-rats. But to endeavour to starve such ardent Germanophiles as the "Royalists" of Old Greece is a strange thing for even a U-boat commander to do. Think what a nasty position it places Tino in, too! Doubtless the latter feels annoyed about it; but how is he to mark his annoyance? The only thing that his dear brother-in-law asks him (now) to do is to hang on to his Throne. Therefore, one supposes, the only thing he could do to annoy the said dear brother-in-law would be to abandon his Throne. And somehow it strikes me as unlikely that he will do that, voluntarily, even to get even with dear Wilhelm. He will, I presume, tighten his belt and just sit tight himself.

In his feeling references to the climate of Salonika, THE NEAR EAST's correspondent, in his letter published last week, did not refer specifically to what are known—if my memory serves me aright—as the "Vardar gales." These particular trials are experienced all the year round, I understand, but are more common in the winter than in the summer. The "Vardar gale" is a strong wind that blows down the Vardar valley and across the open country round Salonika. It lasts from one day to four or five; and its peculiarity is that while it is bitterly cold in the winter, it is terribly hot in the summer. In short, it makes itself as unpleasant as it possibly can, and the people of Salonika naturally detest it. But it is not only Salonika that suffers from this kind of thing. A few days ago a friend received a letter written by an officer stationed on an island in the Eastern Mediterranean. In this letter the officer wrote: "We are suffering from a lazy wind," and a little further on he defined "a lazy wind" as "one that does not trouble to go round, but goes right through you." The warm and sunny East seems to be getting weather almost as objectionable as that which we are now having to put up with.

The Constantinople papers announce that the Turks purpose building a mausoleum over the tombs of Othman and Orkhan at Brusa, after the style of Napoleon's Tomb at the Invalides. The Geneva correspondent of *Al Mous-takbal* says that it is proposed to open a national fund for this purpose, and that the monument is to cost three hundred thousand pounds (Turkish). The correspondent adds that this appears to be the only sensible thing that the Turks have done of late, as it is in the nature of preparing for the beautification of their new capital. This criticism is certainly sound, up to a point. But: (1) Is there any prospect of the money being forthcoming at the present time? (2) If so, what proportion of it is likely to be spent on the object for which it is subscribed? (3) What guarantee is there that the monument will not be designed by a German architect—and, therefore, not national in feeling?

Whatever may be thought about some of the opinions he professed, it cannot be denied that the late B. L. Moseley, to whom reference was made in last week's NEAR EAST, was an extremely interesting character. For this reason I venture to refer to a letter written by one who knew him well and was, in fact, on terms of intimate friendship with him, which I have been allowed to read this week. The writer of the letter, it seems, "once endeavoured to formulate all the grievances he [B. L. M.] thought the Egyptians had to bear. In all they did not amount to much: chiefly that the *fellaheen* collecting salt in the western desert were chased by the police; that the villagers drank foul water from the *birkets*, and so forth." Then he proceeds to throw some light on the way in which certain Members of Parliament gather together material for their "questions" to luckless Secretaries and Under-Secretaries, and for enabling them to pose as authorities. For, it seems, whenever B. L. M. detected, or fancied he detected, any errors of administration under Lord Cromer, he at once communicated them to one of these restless—not to use a more offensive adjec-

tive—politicians, who proceeded to make great play with them in the House. I used to wonder where this particular M.P. got his information from!

According to the letter from which I quote, the plot of a much-boomed novel on Egypt, written by an excitable gentleman with more heart than head, was actually B. L. Moseley's. This fact may perhaps be widely known already, but to me it was new. Whether the plot was a good one or not I am unable to say; for I never could bring myself to wade through the novel in question. I am not, I trust, particularly captious in such matters; but I hate to see fools rushing in where wise men fear to tread.

The late Mr. Moseley was, I gather, not altogether happy in his choice of hobbies, so to say, and was rather badly let down more than once by his *protégés*. His idea for an Egyptian university, for instance, came to an inglorious end owing to certain unfortunate financial "mistakes" on the part of some of those whom he trusted. In the circumstances it is not surprising to find his friend writing: "During the last ten years his ideas of Young Egypt changed. He had befriended and helped so many *protégés*, and they had failed him. I remember all he did for H— Effendi—got him a post when he was deservedly 'down,' and set him up for life. Yet when he wanted him to spend a few hours twice a week to introduce Mr. — to things Moslem, he (H. Effendi) broke every appointment." And the writer gives other cases of similar failure, and a little later adds: "B. L. M. recognised that really great 'Egyptians' were not really Egyptians, but Armenians, or half-Greeks, or Albanians."

If this be so, the recognition must have been a bitter blow for B. L. M. Yet he certainly had the knack of winning warm liking from many people whom he met. The writer of this letter, for instance, declares: "I not only liked him, I loved him . . . I never shall forget his horror when I took him to see the last agony of the poor horses and mules in the quarries behind the Citadel." And again: "He was so trustful of others. With all his legal knowledge a scoundrel robbed him of thousands by a fraudulent lease for some land at Mariout!" In those sentences perhaps lies the key to a strangely complicated character: his sympathy with suffering, which sometimes ran away with the sense of proportion (though I do not suggest that such was the case in regard to the poor quadrupeds in the quarries), and the too great readiness to place confidence in anyone who could pitch a plausible tale.

Apropos of my recent remarks about the survival of the belief in witchcraft in this country as well as in the East, I was much interested to read in Monday's *Times* of "an old woman who practised witchcraft in London as late as 1908." Her speciality, I gather, was the preparation of charms for breaking the spell of a "black witch," and she "learned the secret from her grandmother in South Devon, where it was popular with farmers. The black witches were supposed to bring about the death of sheep and cows by casting a spell over them, or by surreptitiously introducing the poisonous leaves of the yew tree into their food. By taking the heart of a sheep which had fallen victim to these machinations, piercing it with pins and nails, and hanging it up in the chimney, the spell was supposed to be broken." I should not have thought that London offered a favourable field for the exercise of this particular "white magic"; but it is curious to see the old idea of the piercing of a heart with pins employed for a "good" purpose rather than an "evil" one.

CORSAIR.

Reuter's special correspondent at the Serbian Headquarters, telegraphing by way of Salonika on March 4, says:—According to official returns, the number of enemy shells fired into the open town of Monastir and the outskirts (including bombs from aeroplanes on two occasions) during the last three months amounted to 2,627, while the number of victims among the civil population was as follows:—Men killed, 32; injured, 57; women and children killed, 45; injured, 85. Forty-three houses were destroyed and over 300 damaged.

NEAR EAST BOOKSHELF.

TURKEY IN ASIA.*

Recent events on the Tigris and in western Persia have made us all turn once more to a study of the geography of that region. "Philips' Strategical Map of Mesopotamia and Asia Minor" will provide all the information that most people are likely to require, and, issued at a popular price, it is likely to have a large sale. It is extremely well printed, easy to read, and embodies most of the information available up to date. It is satisfactory, for instance, to note that the new course that the Euphrates is cutting for itself between Suk-es-Sheyukh and Garmat Ali is indicated, as are other changes taking place in the same river further north. The Baghdad Railway, too, is shown as completed beyond Harran and between Baghdad and Samara; and though it is almost certain that it has been actually carried well beyond both these points, the lack of trustworthy information justifies the editor's reserve in this matter.

The capitals of the vilayets are clearly indicated, but the boundaries and area of each vilayet might with advantage have been shown, we think, by some system of colour. As it is, we are left in doubt whether certain broken lines actually represent these boundaries, no explanation of them being given in the reference. Another improvement that we should like to see introduced would be some means of differentiating between the sites of (1) ruins, (2) modern towns and villages, and (3) those semi-permanent settlements that are so numerous in this region, especially in the south. Thus, Niffer (or Niffar), Yokkah, Affej and Rawa are all shown in precisely the same way, and their names are printed in the same type; yet the first two are nothing but ruin-mounds, and the last is little more than a tumble-down castle, now used as a barracks; while Affej (or Suk-el-Affej) is a growing Arab market village; and many of the names shown in Irak Arabi are unknown to the present reviewer, though he has travelled much in that region.

These things are, however, of little importance to the average map student of to-day, who will find the sheet full of interest and in most essentials a very serviceable guide. The principal towns, those in which the Englishman has lately learned to take an interest, are clearly shown, and that is what he chiefly requires. By studying this map he will be able to estimate better the difficulties that our Mesopotamia Expeditionary Force has had to encounter, and those that have confronted the Russians across the Persian border. He will also realise the importance that Baghdad derives from its position—at the point where the twin rivers approach one another most closely, and on the important Khanikin-Kermanshah trade route. If he prolongs his studies he may be led to ask himself whether it will be possible to halt at Baghdad (if we get there this time, as we all believe we shall), or whether we may not have to press on to the hills in the north. And, finally, if his tastes lie in that direction, he may spend several hours in the fascinating task of splitting up this Asiatic portion of the Turkish Empire on the lines that have been laid down by many self-appointed "authorities." In any case, he will find the map will repay careful study, and will not regret the few shillings he spends upon its purchase.

REMINISCENCES.†

In a "Foreword" contributed to Mr. Oliver Bainbridge's work, General Sir Alfred Turner remarks that the author has done well in recording the life-story of John Strange Winter, "even at this tremendous crisis in the world's history." We go further than this. Straightforward and unassuming records of the lives of our famous men and women are even more valuable now than they would be if bereft of the hideous background of war. John Strange Winter stood for a type of that healthy, charitable womanhood which is amongst our most cherished possessions; it is the feminine counterpart of the masculine virility which drives our bravest and our best into the British Services at the first breath of war. And Mr. Bainbridge has done his work well. He has paid his tribute to "a great woman and her influence," as he set out to do, and the result is an eminently readable volume. It contains many excellent photographs, including an autograph portrait of John Strange Winter.

BOOK NOTES.

Mr. Humphrey Milford will publish in this country for the Harvard University Press, "A Selected Bibliography of Slavic Europe in the Western European Languages, comprising History, Languages, and Literatures," by R. J. Kerner.

A new book by Professor Hurgonje is announced by Messrs. Putnam. It is entitled "Revolt in Arabia," and deals with the movement of the Arabs, headed by the Emir of Mecca, against Turkish oppression.

We understand that Mr. Algernon Blackwood's "Day and Night Stories" (published by Cassell, at 6s.) contains several Egyptian tales.

SERBIAN LIFE AS SHOWN IN THE BALLADS.

In the course of a paper which she read before the Anglo-Russian Literary Society last Tuesday at the Imperial Institute, Miss M. Edith Durham said that every nation had its collection of popular ballads and folk tales. But in Western Europe, for the most part, they had been long dead, for printing had a fatal effect upon them. When once they had ceased to pass from mouth to mouth, varied by each reciter, they died, and thenceforth were pickled in printing ink. We must go to the East of Europe to find ballads that still lived—to lands, in fact, that had but lately taken to printing and popular education. It would be hard to find a completer set of ballads than those possessed by the Serbs. Some came from the days of the great Serbian empire, others belonged to Turkish times, and there were others as late as the nineteenth century. Even to-day, in outlying parts, the peasant would seize his *guzla*, string together roughly metrical lines on passing events, and yowl them to the buzzing accompaniment of his single-stringed instrument. The whole series of ballads formed a mirror in which the past life of the Serbian people was reflected. The picture might not be correct in historical detail, but the version of events which was presented was that which had moulded the people. From these ballads we might learn how the chieftain lived, what he ate and drank, with what weapons he fought, what was his code of honour. We saw the life of the herdsman on the hills and of the brigand on the mountains. We saw the quarrels of the Balkan peoples one with another. We lived in the Middle Ages, and saw with mediæval eyes. From the laws of Stefan Dushan we learned that the peasants on a noble's land were bound to remain there, and that only those to whom the lord gave liberty might go free. They had to give him two days' work a week and do extra work in the vineyards and the hay. They also paid taxes, whereas the noble paid no tax but the dime. He gave military service and supplied troops, which he conscripted from the peasantry he ruled over. Every noble was practically independent, and they continually quarrelled with one another.

It was this fact which so greatly facilitated the Turkish conquest, for the united and disciplined army of the Turks met a nation divided against itself. At Kossovo, so little control had Tsar Lazar over his nobles that, as a ballad described, not one of the nine Yagovitchs would obey his order to remain at Krushevo to protect the Tsaritsa. One ballad describes the nobles as each leading his own army. Probably there was little or no concerted action among them. One of them, Vuk Brankovitch, went over to the enemy.

Of the celebrated hero of Serb ballads, Marco Kraljevitch, Miss Durham said that never, perhaps, had a stranger national hero been selected. The ballads represented him as quarrelling with his father when the latter murdered young Urosh, the rightful heir, and usurped the throne of Stefan Dushan. Marco early took service with the Sultan, and it seemed certain that he took no part in the fight at Kossovo. In spite of his loyalty to the Turks, the Serbian singers bestowed upon him all the qualities they most admired, and so fashioned a sort of superman. He was represented as bloodthirsty, cruel, and revengeful to an amazing degree; as cunning, and apt to win by treachery rather than by strength, as drunken and violent. Unfortunately he had been held up for centuries as a model for youth. Miss Durham said she had many times discussed him with young Montenegrins, who could not bear to hear him criticised. Drunkenness, for instance, they would say, could not be wrong, for Marco got drunk. His example had been used to condone many crimes. He had some compensating virtues. It was best not to inquire too closely how he came by his money; but, having got it, he gave it away by handfuls. He was merciful to the poor, always hastened to the help of his friends in distress, and was most consistently loyal to the Sultan.

Miss Durham read some English renderings of Serbian ballads of different periods. One thing, she said, they showed clearly—that Balkan troubles had always been the result of Balkan want of unity.

Viscount Milner had the honour of being received by the King at Buckingham Palace on Monday, upon his return from Russia.

On Saturday Lieutenant-General the Hon. Sir Julian Byng had the honour of being received by the King at Buckingham Palace, when His Majesty invested him with the insignia of a Knight Commander of the Order of the Bath (Military Division).

The King has been pleased to approve of the promotion of Major-General (temporary Lieutenant-General) Sir Frederick Stanley Maude, K.C.B., C.M.G., D.S.O., to the rank of Lieutenant-General, with effect from March 1, 1917, inclusive, in recognition of his distinguished service in the field, as Commander-in-Chief of the Forces in Mesopotamia.

The Roumanian Minister and Madame Misu regret that they are unable at present to return thanks for the many expressions of sympathy which they have received on the death of their eldest daughter. They are especially touched by the personal references to her, and hope to reply in time to each correspondent.

A Reuter's message from Jassy, dated the 2nd inst., reports: The Roumanian *Official Gazette* announces that the King has conferred the Star of Roumania, of the rank of Commander, with swords, upon Colonel Sir Norton Griffiths, in recognition of the good services rendered by him to the Roumanian Army and of the energy which he displayed on the field of battle. Colonel Norton Griffiths, it is stated, directed the difficult operations in connection with the destruction of borings in the Roumanian oilfields.

M. Michel B. Boeresco, Secretary to the Roumanian Legation, is confined to his room through indisposition.

The Earl of Bessborough has returned to London from Birmingham.

Captain C. E. Binns, R.M., was mentioned in despatches for services rendered in the course of the war. The notification appeared in *The Times* of February 26.

The King has been pleased to confer the honour of a C.B. on Mr. Alwyn Parker, of the Foreign Office.

It is officially announced that the King has been pleased to confer the Military Cross upon Temporary Second Lieutenant Kenneth Archbold, Rifle Brigade, who "organised a bombing post under heavy fire, thereby protecting his flank at a critical time. Later, he carried out several daring patrols." Lieutenant Archbold, who is a son of Mr. F. P. Archbold, of Braila, Roumania, was recently gazetted as temporary captain while in command of a company.

M. Caclamanos, who will represent the Provisional Government of M. Venizelos at Petrograd, has left London for Russia, to enter on his duties.

Captain Arion, the chief delegate of the Roumanian Military Mission in London, has been promoted major.

Sir Thomas Lipton has given fifty thousand cigarettes to Serbian soldiers.

The marriage of Major T. B. Pritchett, R.F.A., to Irene, daughter of Mr. and Mrs. John Ross, of Alexandria, which was to have taken place at St. Peter's, Eaton Square, on Wednesday last, has been postponed owing to Miss Ross's sudden indisposition. It is hoped that the ceremony may take place in a fortnight's time.

The Serbian military commission that has been working in this country for some days examining Serbian subjects has finished its work. It has examined all Serbs liable to military service, and has returned to Salonika.

Mr. William Watson, of the firm of Messrs. Watson and Youell, Braila and Galatz, arrived in London with his wife and family this week from Galatz, after a journey occupying two months.

It is announced that the King of Roumania has conferred the Third Class of the Order of Mihai Viteazul upon Flight Lieut. Arthur F. F. Jacob, R.N.A.S.

The Sultan of Egypt has conferred the Third Class Order of the Nile on Mr. McCorquodale, late Director-General in the Gharbieh Drainage Scheme, and Mr. Walsh, late Inspector of the Third Circle of Irrigation; the Fourth Class of the same Order on Mr. Mark, late Inspector Tewfikieh Secondary School; the rank of Bey, First Class, on Ahmed Kenal Bey, late of the Antiquities Service; and the rank of Bey, Second Class, on Aly Sherif Bey and Gawhar Loutfi Bey, late Chief Engineer in the Irrigation Service.

A correspondent writes from Egypt:—On September 7, 1916, an accident, which might easily have ended fatally, occurred at the ladies' bathing place of San Stefano Hotel, near Alexandria. Two Egyptian ladies who were not good swimmers had the temerity to venture out of the large bath into the open sea. They rapidly became exhausted, and found to their horror that the current was carrying them further and further from the bath. There were many ladies bathing at the time, of many nationalities, and some of these screamed loudly for assistance. Before other help could come, Mrs. Alfred Tubby, who is a good swimmer and was fortunately in the sea not far away, swam to the rescue of the two ladies, brought in one of them and returned without delay for the second, who was already in a state of collapse. The General Officer Commanding soon heard this story, furnished himself with documentary evidence from two English eye-witnesses, and forwarded it to the Royal Humane Society for its consideration. After due inquiry had been made, the bronze medal and certificate of the Society reached the General. Dr. Granville, C.M.G., gave a dinner of private friends to celebrate the occasion, and it was at the Sultan Hussein Club that Mrs. Tubby, to her surprise and delight, received the honour at the hands of the General Officer in Command. The General, in his eulogistic speech, remarked that it can have seldom happened that the mother of a grown-up daughter has received this coveted reward for saving life from drowning. He also took occasion to speak in complimentary terms of the valuable services to troops in the Mediterranean of Colonel Tubby, C.M.G., the consulting surgeon.

As announced in our issue of last week, the first part of the funeral service for Mlle. Marie Marguerite Misu, the eldest daughter of H.E. the Roumanian Minister and Madame Misu, was held at the Greek Church, Moscow Road, Bayswater, on the 1st inst. The Great Archimandrite, Dr. Pagonis, officiated, assisted by the Archimandrite, the Rev. Agathangelos Moschovakis. The principal mourners were

the Roumanian Minister and Madame Misu, accompanied by M. Michel B. Boeresco, Prince Antoine Bibesco, M. George Boncesco, the *personnel* of the Legation, General Georgesco (Chief of the Roumanian Headquarter Staff), Madame Georgesco, and Lieutenant Georgesco, and Major Arion. Among others present were the Hon. Sir Arthur Walsh (representing the King), Mr. Dormer (representing Mr. Balfour), the French Ambassador, the Italian Ambassador and the Marquessa Imperiali, the Japanese Ambassador and Viscountess Chinda, the Swiss Minister, the Swedish Minister, the Norwegian Minister and Madame Vogt, M. and Madame Gennadius, and Madame Edwards, the Portuguese Minister, the Danish Minister and Countess Reventlow, the Netherlands Minister, the Serbian Minister and Madame Yovanovitch, Count de Lalaing (formerly Belgian Minister), Rear-Admiral N. Wolkoff (Naval Attaché to the Russian Embassy) and Madame Wolkoff, Colonel Milivoj J. Nicolaievitch, M. Pavle Karovitch, Mary Lady Lawrence, the Hon. Anna Lawrence, Lady Muriel Paget, Sir Maurice de Bunsen, Miss de Bunsen, Mrs. A. Carrington Wilde, Mr. Harry Knight Stephens (representing the Roumanian Red Cross Society), Mr. A. J. Cocks (representing Sir Albert K. Rollit, Consul-General for Roumania), and Dr. and Mrs. Seton Watson.

The funeral of Miss Caroline Lucy Hutchison, the last surviving daughter of Alexander Hutchison, late of Peterhead, and a cousin of the late Lord Kitchener, took place at Brompton Cemetery on the 1st inst. At the service at St. Mary Abbot's, Kensington, Princess Louise (Duchess of Argyll) was represented by Colonel V. Chater, and among those present were Mr. H. T. Kitchener, Miss Kitchener, and Lady Broome.

The Indian papers received by the last mail announce that Talib Bey, ex-Governor of Busreh, who resides at Torquiltstone, Infantry Road, Bangalore, was recently returning from a visit to the countryside, through the village of Yeavanthpur, when his chauffeur accidentally knocked down an old woman, killing her. The villagers mobbed the car, and refused to allow the woman to be taken to hospital in it till the police arrived.

The bestowal of British decorations on Marshal Mishitch, General Bogovitch, and Colonel Peshitch has given some satisfaction to all ranks in the Serbian Army, writes a Salonika correspondent. Senior in age, as in rank, of the three officers who have been thus honoured is the Voyvode (Marshal), Sir Jhivoin Mishitch, to whom has been awarded the Grand Cross of St. Michael and St. George. Born in 1855, he was for several years before the first Balkan War known as one of the most capable and promising members of the Serbian General Staff. In the wars of 1912 and 1913 he served as Adjutant to the Chief of the Headquarters Staff. The beginning of the Austro-Serbian campaign of 1914 found him at the elbow of that great commander the aged Marshal Putnik. But in November of that year he obtained his first independent command, that of the First Army. Upon General Mishitch it devolved to reorganise it and restore its impaired moral, and in this double task he was so successful that the First Army was soon able to lead the Serbian counter-offensive that resulted in the utter rout of the Austrians in Serbia.

General Boyovitch, now Sir Peter Boyovitch, K.C.M.G., Chief of the Headquarters Staff of the Serbian Army, is three years younger than Marshal Mishitch. He first came into prominence during the Serbo-Turkish Campaign of 1912, when, as Chief of the Staff of the First Army, he shared in the victories of Koumanovo, Prilep, and Monastir, the first of which procured him the rank of General.

Colonel Peter Peshitch, who has been made a C.M.G., is a military strategist and tactician of no small reputation. As a delegate of the Serbian General Staff with the Montenegrin Army in the Austro-Serbian campaign of 1914 his wide knowledge and experience led to his being asked to assume the entire direction of the Staff of that Army, and his decisions guided the operations of the Montenegrins throughout that campaign.

APPOINTMENTS, PROMOTIONS, ETC.

Under date of February 26, the Rome correspondent of the *Morning Post* writes:—It is considered in Greek circles here as probable that M. Metaxas will accept the post of Greek Minister in London as King Constantine's representative. M. Metaxas was for many years Minister there, and subsequently, from 1908 to 1910, Minister in Rome. He has had personal experience of German submarines, having been torpedoed by the Huns on his way to kiss hands at Athens on his appointment as Minister to Washington. In politics he is a friend of M. Gounaris.

The Acting Governor-General of the Sudan has approved of the appointment of Major S. K. Flint, District Judge of the 1st grade Halfa Province, as Province Judge; Bimbashi James Keith, as District Judge, Semmar Province, and Bimbashi R. W. Hutton, Inspector Nuba Mountains Province, and J. L. Garstin, Inspector Blue Nile Province, as Magistrates of the 1st Class under the Code of Criminal Procedure.

Captain Geoffrey C. Gowland, Royal Engineers, Captain A. H. Kent Lemon, York and Lancaster Regiment, and Captain J. P. Shelley, Royal Lancaster Regiment, have been taken on the strength of the Egyptian Army as special service officers with the rank of Bimbashi. The first has been posted to the Department of Military Works, the second to the Sobat-Pibor district and the third to the 11th Sudanese.

The following appointments are announced in the Egyptian and Sudan papers:—Bimbashi (temporary Kaimakam) C. Cassidy, M.C., M.B., Recruiting Department, has been promoted to the rank of Kaimakam and appointed Assistant Adjutant General, Recruiting Department.

Miralai R. G. Anderson Bey, Assistant Adjutant General, Recruiting Department, has been struck off the strength of the Egyptian Army.

Bimbashi A. C. B. Critchley Salmonson, D.S.O., 11th Sudanese, has been transferred to Nuba Territorials.

El Bimbashi (temporary) H. L. R. Watt, 3rd Battalion, has been transferred to Eastern Arab Corps.

Bimbashi A. J. Matthew, transferred to the Sudan Government, is appointed 2nd Inspector, Kassala Province, to date December 1, 1916.

Captain W. G. Cowley, Essex Regiment, has been attached to the Egyptian Army as a Special Service Officer with the temporary rank of Bimbashi and attached to the 11th Sudanese for duty.

Lieutenant G. Donne, 9th Reserve Regiment of Cavalry has been attached to the Egyptian Army as a special service officer with the temporary rank of Bimbashi, and his services have been placed at the disposal of the Sudan Government.

Miralai P. C. Joyce Bey, Officer Commanding 3rd Battalion, has been struck off the strength of the Egyptian Army.

A telegram from the Hague says that Greece will in future be represented diplomatically at the Hague by a Minister Resident. M. Rangabe, who has assumed this post, was received last Friday morning by Queen Wilhelmina.

The following decorations have been conferred by the King of Serbia:—

ORDER OF KARA GEORGE.

Fourth Class (with Swords).—Commander James O. Hatcher, D.S.O., R.N.

ORDER OF THE WHITE EAGLE.

Fourth Class (with Swords).—Lieut.-Cdr. Morris E. Cochran, D.S.O., R.N.

Fifth Class (with Swords).—Lieut. Harry C. Fry, D.S.C., R.N.R.; Lieut. Edward M. Rae, D.S.C., R.N.R.; Lieut. Francis Wells, R.N.R.; Lieut. James Soanes, R.N.R.; Lieut. Alfred James, R.N.R.; Lieut. Arnaud Adams, D.S.C., R.N.R.; Lieut. Robert Baunton, R.N.R.; Lieut. William P. Parker, R.N.R. (since died); Sub-Lieut. Richard L. Stowell, R.N.R.

DISTINGUISHED SERVICE MEDAL.

Asst. Payr. Hugh N. Page, R.N.R.

OBITUARY.

The *Times* reports that indirect information from Belgrade to Geneva announces the death, in circumstances of the greatest misery, of M. Yovan Avakumovitch, former chief of the Serbian Liberal Party, several times Prime Minister and Secretary of State for Foreign Affairs of Serbia.

Owing to his great age—he was 76—M. Avakumovitch did not leave Serbia at the time of the enemy invasion of 1915. He was dragged barefoot for 125 miles as far as Belgrade by Hungarian soldiers, with about 30 former Serbian dignitaries who, like him, had remained at the watering place of Vrnjatchka Banya, and was then sent a captive with them to Hungary. There he died at the internment camp at Nezsider.

M. Avakumovitch enjoyed a widespread reputation as a lawyer and jurist. An intimate friend of Yovan Ristitch, who was the Serbian Regent during the minority of Kings Milan and Alexander, and with whom he shared the same views on foreign policy, M. Avakumovitch played a great part in the history of Serbia in bringing about the fusion of the National and Conservative elements of the country under the name of the "Liberal Party." He had also fought against the Radicalism of the great and popular party of M. Pashitch, then in Opposition, and also the Austrophilism of the reactionists with which King Milan almost exclusively governed the country. His Ministerial career was always marked by a clear tendency to seek the friendship of Russia and of the great Western Powers.

He returned to public life in June, 1903, in order to preside over the Coalition Cabinet under which the Skupstina and the Senate elected Prince Peter Karageorgevitch King of Serbia. It was he who welcomed the new King on his arrival on Serbian territory on June 23, 1903. He also formed the first Cabinet of King Peter.

Mr. A. Séfi writes: "The unexpected and premature death of Mr. H. J. Cust on Friday last, after a short illness, is, I have reason to know, a serious loss to the Syrians, as he leaves them at a time when they most needed his help in framing Syrian policy and helping them in their present martyrdom under the Young Turks, subjects which aroused in him a sympathy and zeal second to none. . . . Long before the Syrians claimed his attention I was able to appreciate his sympathetic views upon Egypt, his sincere pleasure at the creation of the new Sultanate, and his admiration of Sultan Hussein.

Lieutenant-Colonel A. D. Eden, late of the Cameronians, died at Bournemouth last week at the age of 76. He took part in the Abyssinian Expedition of 1868, receiving the medal.

Colonel Granville R. F. Smith, C.V.O., C.B., late Coldstream Guards, of Duffield Hall, Derby, who died at Tunbridge Wells as the result of services in the present war, served in the South African War, and was thrice mentioned in despatches. Subsequently he was in Command of his Battalion in Egypt till 1910.

In connection with the death at Salonika of Lieutenant Matthews, Royal Flying Corps, a letter has been sent to the widow at Cottingham enclosing the copy of a message dropped from a German aeroplane on a British aerodrome: "The English aviators had been fighting very bravely, but after five minutes their aeroplane dropped, and they were killed. They died heroes. Their bodies will be buried with all military honours."

A correspondent writes that news has reached London of the death of Mr. Henry Richard Daston, as the result of the ill-treatment and cruelty of the Turks, at Chorum, where he had been deported as a measure of reprisal for the detention of Kiazim Effendi. Deceased was a grandson of Philip Daston, Barrack Master-General at Sta. Maura and Ithaca, and of Major John Macphail, Resident and Inspector of Militia at the same islands during the British occupation. At the time of his death he was in his sixtieth year. He leaves, in Constantinople, a wife and children.

DOMESTIC ANNOUNCEMENT.**DEATH.**

PREECE.—On February 25, at 46, Bullingham Mansions, Kensington, John Richard Preece, C.M.G., late H.B.M. Consul-General, Ipahan, Persia, beloved husband of Mary Isobel Preece, youngest son of the late Richard Matthias Preece, of Carnarvon. Funeral at Highgate Cemetery, noon, Thursday, March 1. No flowers by request.

WHERE TO STAY.**Cairo's Hotels de Luxe.****SHEPHERD'S HOTEL.**

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach.

Open all the Year. Bathing Cabins.

FRIDAY, MARCH 9, 1917.

THE MESOPOTAMIAN ADVANCE

The Mesopotamia Expedition has once more come into its own, and there is no need to flog a lagging interest in order that its fortunes should be adequately followed by the British public. As the pursuit of the Turks in the direction of Baghdad continues, the victory at Kut acquires increasing importance. The greater the distance the enemy has to cover before he is in a position to make a fresh stand the more evident is it that he cherished a belief in the impregnability of the positions at Kut. In the light of his confidence we are able to appreciate the more fully the measure of General Maude's achievement. For eight months the Turks had been left in undisputed possession of the town and of the formidable lines lower down the river which protected it. They had selected this point as the most suitable position for the defence of Baghdad, and all the careful thought and scientific ingenuity of which their German masters are capable were devoted to the task of strengthening it. At the time of the original advance of the Expeditionary Force up the Tigris the Turks were taken more or less by surprise. They had to rely almost entirely on their own resources, and were no match for British troops in warfare of an open character. Since that date the Germans have realized the importance of developing the fighting strength of their Allies. The Turkish forces were placed under German control, the various fronts in Nearer Asia received the full benefit of Germany's preparations for the war, and the whole character of the campaign in Mesopotamia was altered. An earnest of what the Turks could accomplish under German leadership was given in the short time that elapsed between General Townshend's withdrawal from Ctesiphon and the first attempt to advance to the relief of Kut. They were given practically a year for the further consolidation of the same positions, and we may be certain that the Germans had left nothing to chance in their determination to keep the British troops at bay on this front. General Maude's diagnosis of the situation would seem to have been singularly accurate. He realized that against such opposition no rapid success could be achieved, and he settled down to the systematic investment of the Turkish lines. Something is known of the methods he adopted, but the full story of the preparations for the further advance up the Tigris, when it can be told, will, we believe, prove as interesting as almost any similar chapter in the history of this war. The results have splendidly justified the measures taken. Trench by trench, position by position, along a front of nearly thirty miles between Shumran and Sanna-i-Yat the enemy yielded to the resistless pressure brought to bear upon him, and at the end of ten weeks the whole army broke into incontinent flight.

Mesopotamia is not the Western front, and we have no intention of overrating the significance of this success at Kut. But just as the Central Powers have appreciated the necessity of keeping every part of their fighting line as strong as possible, so we can only appraise the real value of the present course of events along the Tigris by bearing in mind the relationship of this front to the other theatres of war. One of the first points to attract attention is the fact that, in spite of the deliberate nature of General Maude's investment of Kut and the long warning consequently given to the enemy of the danger threatening from this quarter, the Turco-

German authorities have not been able to dispatch reinforcements to the Sixth Army Corps in time to stem its flight at any considerable distance from Baghdad. This feature in itself is an eloquent commentary upon the enemy's general position. The importance of the Mesopotamian theatre lies not in the occupation of this or that line, but in the need for maintaining among the native population of this part of the Ottoman Empire—and, indeed, among the Turks themselves—the belief in the invincibility of the Turco-German alliance and in its early achievement of complete victory over its enemies. We may feel certain, therefore, that, if it had been possible to prevent it, the Turkish troops at Kut would not have been allowed to continue their precipitate flight until there could no longer be any question of disguising the completeness of the defeat from the Arab world. When on the top of Turkey's discomfiture south of Baghdad comes the news of the capture on March 2 of Hamadan by Russian troops, it may be presumed with some degree of certainty that the strain of a long war has at last told not only on Turkish resources, but also on Germany's capacity to supplement the shortcomings of her Allies. Although help has not yet reached the retreating Turks, it does not follow, however, that a special effort will not be made to reverse the decision on the Tigris. The obvious value of Turkey's assistance to Germany during the war and the great store set upon her acquiescence in German designs after the war will almost inevitably compel Marshal von Hindenburg to make some sacrifice to meet the new developments in Asia Minor. If, as is likely, the menace to Kut has been appreciated for some weeks past, then we may expect to find that the process of denuding some other front to make good the deficiencies of Baghdad has already taken place, and a systematic probing of the enemy's line by the Allied Powers will sooner or later reveal the fact.

For the moment, however, in view of the course of the war in Mesopotamia since the arrival of Expeditionary Force D at Busreh, interest centres in the immediate developments arising from the victory at Kut. Already the pessimists of the "Western" school are rendered unhappy by General Maude's success, and talk unctuously of the path of military rectitude and the temptation of political aims. The era of reckless adventures, we like to think, is over; but we know of no canon of military law which forbids the hammering of a defeated foe so long as he offers a safe and easy mark. The question of an advance on Baghdad ought to be settled in a large measure by the actual military position in Mesopotamia and not by any preconceived ideas regarding the relative merits of the Western and the Eastern front. If General Maude can keep in touch with the retreating Turks, it is to be hoped that he will do so to Baghdad or beyond, if necessary, so long as he can protect himself against surprises and safeguard his communications. The position at Kut has no special strategic or tactical value against an enemy approaching from the north, and higher up the river one place is as good or as bad as another for a defensive line, as any position must rely upon entrenchments. On the other hand, there are sound military reasons—if we can only bring ourselves to regard the war in the light of a single front—why a great effort should be made to carry through the Kut success to its logical conclusion and consolidate once and for all time the British position in this region. No doubt shipping resources and other matters have to be taken into consideration; but the pusillanimous argument that we could do no more than we were doing was advanced to justify the circumstances which have had to be investigated by the Mesopotamia Commission. As it was possible to improve upon the half-hearted efforts of 1915-16, so, given the good will, it will be easy to supply General Maude with all that he requires for the occupation of the whole country as far as Baghdad. There can be no question of British prestige having been vindicated in the Middle East, until that city is taken and held. The attempt formerly made to capture it failed, and that failure will not have been atoned for until British troops have proved their ability to reach the objective they tried to gain in the autumn of 1915.

SUPPLY WORK IN EGYPT.

THE CAMEL TRANSPORT CORPS.

(FROM A CORRESPONDENT.)

It is just two years—January 29, 1915, was the precise date—since a round dozen Cairo Britons found themselves detraining at the little station of Abu Sheir—a dozen or so miles from Ismailia—where a heterogeneous mass of some 1,300 camels and their drivers were awaiting them. That was the beginning of the Egyptian Camel Transport Corps, a unit which to-day numbers over 20,000 camels, and does the major portion of the supply work for the troops engaged on the eastern and western frontiers in Egypt.

At that time the Turks were advancing on the first of their ill-fated attempts upon the Suez Canal. The mule transport the Canal troops then possessed was not deemed sufficient for their needs, and so the C.T.C. came into being. The original method of formation was simple. Camels and their masters were commandeered from the Delta, though most of them came from the Cairo district, and packed off to the Canal zone. Miralai Whittingham Bey, Director-General of Egyptian Prisons, an old Guardsman who won a commission in the Boer War and later made a big name for himself as Chief of the Slave Trade Repression Department in the Sudan, was given the command, and he had as his staff Major Worsley, of the A.S.C., attached Egyptian Army (who won a D.S.O. in Gallipoli); Captain Stanley Flower, Director of the Cairo Zoo, as Adjutant; and Major Roland Pillinger, late 10th Hussars, as Quartermaster. The inspectors, as the British section commanders were first known, were recruited in Cairo at twenty-four hours' notice; briefly, they were anyone who could get off at such short intimation, and included two Government vets., a forage contractor, a surveyor, two schoolmasters, a journalist, three engineers, an accountant, and a Government storekeeper. Later, they were reinforced by a contingent from Alexandria. They wore no uniform, but were given a red brassard "to prevent their being shot at sight by over-zealous sentries."

It was, then, a motley crowd that Whittingham Bey had under his command. But if the inspectors were mixed, what of the camels and their drivers? Among the latter were halt, blind, deaf, dumb—in fact, men possessing every one of the conceivable—and many of the inconceivable—ills to which the Egyptian peasant is heir. And yet, five days later, the camels had all been organised into sections, their old and generally useless equipment discarded, new saddles, ropes, nets, and headstalls served out to them—and Whittingham Bey was able to lead his unit out across the desert to Ismailia, marching in column of sections sixty deep, and keeping a tolerably straight line at that!

Naturally, a lot of hard work had had to be performed to accomplish this result, but then Whittingham Bey is the man for hard work. A big, broad-shouldered man well over six feet, he never spares himself and never spares others. He rarely praised, but often blamed, and yet there was not one of his men who did not like him.

At first there were, naturally, many difficulties to overcome, and a good many of these were made by the camelmen themselves. An Egyptian camel is not a nice person to deal with, but his driver is more often than not a good deal worse. The original idea was that each section should consist of camels coming from the same district, but this often had to be disregarded owing to several of the men apparently not knowing where they did come from! One individual had a whole section to himself for some time, as he said he came from "Gebel." He was the only one who claimed such a residence, and I don't know what would have happened to him if a linguist among the inspectors had not happened to remember that "gebel" is the Arabic for "desert," and that it was merely the peasant's mode of expressing that he was a nomad.

It was all really very good fun in those early days of the C.T.C. Of what they did when they were first

formed I need not write now. It is enough to say (I am quoting the *Times'* History of the War from memory) that they earned much praise from even the experienced Anglo-Indian officers under whose supervision they came.

Now the Egyptian Camel Transport Corps is an accepted unit of the British Forces in Egypt. Its officers are all given commissions, and their names duly appear in the *Gazette*. They include many troopers from Australian and Yeomanry units, who have already seen some service in Egypt, as well as many Government officials and civilians. Each company has a captain and four subalterns as well as a number of N.C.O.s; these latter may later on take commissions if their work has been satisfactory.

The work the corps has done in supplying the various troops scattered about the outlying districts, and also in acting as supply columns to reconnoitring expeditions, has earned general admiration from all quarters. Moberly Bey, of the Egyptian Prisons, has already won the D.S.O. for good work on the Western Frontier, while there was another story in Cairo a while back of a schoolmaster-subaltern who displayed great courage and presence of mind when the troops to whom he was acting as supply column were suddenly attacked by the Turks. Fully one-half of his native drivers bolted at the first shot, but he rallied the rest, and succeeded in saving not only most of his camels, but also most of the stores and ammunition they were carrying.

The C.T.C. is one of the minor—and lesser known—units that have come into being owing to the war. But it is assuredly one that has come to stay, and after the war will undoubtedly continue to form an important branch of the British troops in Egypt.

KUT: CONGRATULATORY TELEGRAMS.

The Secretary of State for India telegraphed last week as follows to General Maude, the General Officer Commanding in Mesopotamia:

"Kut.—Since control of these operations passed to the C.I.G.S. I have refrained from telegraphing to you for obvious reasons, but I must offer my hearty congratulations on your brilliant success and express my profound admiration for gallantry and endurance of troops under your command, which, under your guidance, have overcome all difficulties."

General Maude replied as follows:—

"On behalf of Army in Mesopotamia wish to offer you our warmest thanks for your kind message, which is immensely appreciated by us all. Devotion to duty, dash, and gallantry of troops, both British and Indian, have been matchless."

"GENERAL MAUDE."

The following telegram has been sent by General Nivelle, Commander-in-Chief of the Armies of the North and North-East, to General Robertson, Chief of the Imperial General Staff, War Office:—

"I beg your Excellency to accept my warm and sincere congratulations on the capture of Kut-el-Amara by the gallant troops under General Maude. This splendid feat of arms and the important successes just secured by the British Armies on the banks of the Ancre have opened brilliantly the campaign of 1917."

A Reuter's message from Jassy, dated February 21, and delayed in transmission, says: M. Bratiano, returning from Russia, has resumed his duties as Premier and Minister of Foreign Affairs, and has reported at Headquarters the results of his visit to Petrograd. In well-informed quarters it is declared that M. Bratiano does not conceal his satisfaction in regard to the promises he has obtained of generous assistance and perfect harmony on all points among the Allies, particularly from Russia, the effect of which will soon be seen.

The Serbian population under the Bulgarian régime is not permitted to have any communication with Serbs living abroad. Correspondence with neutral countries is rigorously prohibited. Latterly the Bulgarian authorities have carried barbarity so far as to forbid the consignment of money from abroad for the maintenance of families suffering from starvation in its acutest form. Is this a new kind of revenge? Is it a plan for exterminating the entire innocent population—the women and children—by letting them die of hunger? Nevertheless all foodstuffs have been taken from the public. Everywhere is the cry of famine.

Students of Arabic in France have hitherto been able to submit themselves for examination for the B.A. degree only at the University of Lyons, or else have had to go to that of Algiers. But now, says *Al Moustakbal* (Paris), the Ministry of Education has rendered it possible for such students to undergo examination in Paris or Bordeaux in July and October of each year. This step is obviously calculated to encourage the study of Arabic.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Dardanelles Report.

March 7.

Earl LOREBURN asked what was the reason of the delay in presenting to Parliament the report of the Dardanelles Commission; whether it was true that the report would not be presented to Parliament in its complete form; and whether copies of the report in its complete form had been already shown to certain political leaders other than members of the present Government and also to certain newspaper editors or representatives.

Earl CURZON said there had been no delay in presenting the report. It became necessary to refer a few passages—not more than two or three—in the report, before publication, to the Governments of France and Russia solely for the reason that they related to the views or proceedings of those Governments, and one of which consisted of a letter from a Minister of one of the Allied States. The result of these representations was that in the case to which he had referred the Foreign Government asked that the letter of their Minister should not be printed in the report as circulated. At the same time, he could not remember that any other alteration made at the request of a Foreign Government was either substantial or vital. The report was also submitted to the War Office and to the Admiralty in order that those Departments might make certain that nothing was made public that would be of real assistance to the enemy. The Departments in one or two cases suggested the omission of a sentence or phrase. Those were the only two respects in which omissions had been made. The places where words had been omitted would be indicated by asterisks or spaces. He deprecated the use of the word mutilation. There had only been the omission of a few sentences or a few phrases here and there.

HOUSE OF COMMONS.

Cleaner Packing of Dates.

Feb. 28.

Colonel YATE asked the Secretary of State for India whether, considering the value of dates as an article of food, he would initiate steps to institute cleaner and more sanitary methods of packing this fruit for export from Mesopotamia as soon as the war conditions should permit of such action being taken, so as to encourage a larger import of the fruit into the United Kingdom.

Mr. CHAMBERLAIN: My hon. and gallant friend's suggestion will be borne in mind.

The Dardanelles Commission.

March 1.

Sir H. DALZIEL asked when the Dardanelles Commission report would be in the hands of members, and whether it would be published without any omissions.

Mr. BONAR LAW: The report will be laid in dummy on the Table of the House to-day. It is in the hands of the printers, and I hope it will be circulated to members early next week. Some references affecting foreign relations have been omitted, but the Government have thought it right to send the report, without alteration, confidentially to the Speaker and to the Leaders of each of the political parties in the House.

Sir H. DALZIEL: Were the Government themselves responsible for the omissions, or did they take place as the result of any representations made by any foreign Government?

Mr. BONAR LAW: We had to communicate with foreign Governments in regard to some of them, and it was at their request that some of the alterations were made.

Mr. L. JONES asked the Speaker whether the document to be laid on the Table was in fact the report of the Commission at all. If the report was laid on the Table, was not any member entitled to see it, and not merely an edited copy?

The SPEAKER: The report which is laid on the Table of the House is, of course, open to members of the House.

The Mesopotamia Operations.

Mr. H. W. FORSTER, speaking on the Army Estimates, said that, before he came to general observations, he could not omit a reference to the loss of Lord Kitchener—a great soldier whose name would ever be remembered when the story of the war was told. As to the military situation, since Mr. Bonar Law gave a survey earlier in the session nothing of great public interest had occurred either in Salonika or East Africa, but that was not the case with regard to France or Mesopotamia. In Mesopotamia important results had been obtained by General Maude's operations. General Maude stated that enemy forces were badly shattered and would reach Baghdad as a disorderly mob. Over 2,500 prisoners had been secured since the 24th of February, and the Turkish losses in killed and wounded had been very heavy. Full details had not yet been received as to the number of captured guns. Since December 13 last over 5,000 Turkish prisoners had been taken, and the Turkish losses were estimated at considerably over 20,000. These results would not have been possible but for the energy and foresight displayed in our arrangements, especially in regard to railway and river communication. General Maude spoke in the highest terms of the stubborn determination and endurance of all ranks. The dash shown by the troops and the skill of General Maude were worthy of all praise. We might face the future with ever-growing strength and confidence. While in no way underrating the power and purpose of the enemy full faith could be placed in our ability to meet them. The troops trusted their leaders, the leaders trusted their men, and the country trusted both. As to the medical service in Mesopotamia, a special Sanitary Committee had made an exhaustive examination, and the general conditions might be regarded as fully satisfactory.

The Bushire-Shiraz Road.

March 5.

Mr. BALFOUR, replying to Sir J. D. REES, said that the Bushire-Shiraz route had not yet been reopened to traffic as a result of General Sir Percy Sykes's operations.

The Salonika Expedition.

Mr. G. LAMBERT, speaking of the shortage of agricultural labour, and the withdrawal of men from the front, asked whether instead of withdrawing ten thousand men from the Army, it would not be better to withdraw ten thousand men from Salonika, where they were fully trained.

Mr. PRINGLE asked whether the Salonika Expedition had ever seriously threatened the German communications with Constantinople or Baghdad? It was said that this Expedition had been systematically starved by the War Office against the will of the late Cabinet. The responsibility for indecision, however, must rest with the Government. But there had been indecision even since the new Government came into office. Unless the Expedition could be reinforced it could be of no military value. The Expedition had also to be considered from the point of view of our tonnage resources. Sea-power to us was of more consequence than man-power.

Mr. CHURCHILL agreed that the Salonika Expedition affected the problems of food and man-power to a marked degree. All enterprises in the Balkans and the Turkish theatre of war were limited by the carrying power of our mercantile marine. In 1915 a decisive result could have been obtained in those theatres by armies whose size was not beyond the limit of our available carrying power; but those opportunities had been lost. From the moment that Bulgaria had entered the war and the Germans had obtained a thorough route to Constantinople it had been obvious that the size of the army needed to achieve a decisive result exceeded our carrying power and a revision of plans became necessary. It ought to have been recognised that the hour for successful amphibious intervention in this theatre on a great scale had passed. The problem involved considerations of honour as well as military and diplomatic considerations. M. Venizelos had claims which the Allies could never be unmindful of. Four great Powers, of which this country was but one, and three minor Powers were involved in the operations. Therefore the question was not one which could be swept aside by a few bold and decided gestures. But he thought the House would do well to consider this and all the other great questions connected with the war, and also the general policy of the country in regard to the war, more fully than it had done in the past.

Sir H. DALZIEL thought the Government ought to make a declaration of policy regarding Salonika. The House had never had a full statement of that policy. He estimated that we had lost as many men there as in the whole of the Boer war. If the information could not be given in public let them have a secret session. The situation was serious.

Mr. DILLON thought the Government ought to make a frank statement. Was it or was it not a fact that we made promises to Roumania if she came into this war which we were unable to redeem? Was it not a fact also that for months before Roumania came in General Sarraill was telling his Government and ours that, owing to the way his Expedition was being starved, he was not in a position to make an offensive in Macedonia? Further, he was informed that the Generals in command of the Russian armies on the Roumanian frontier warned their Government and ours that it would be a mistake for Roumania to come in. Who overruled them? He was firmly convinced that if the Allies had kept their pledges to Roumania or if they had kept Roumania out of the war we should have been in sight of the end at this moment, whereas the war had been prolonged by a year at least. According to his information the position of the Allied troops at Salonika was still one of grave danger, while M. Venizelos and his friends were at the mercy of a camarilla inspired and controlled by Germany.

Mr. R. McNEILL urged the Government to reply with regard to Salonika. It would be very undesirable for the idea to get about that the view that the expedition should be abandoned was shared by the independent members of the House. If we were to withdraw from Salonika it would not only be to the despair of our friends, but it would give the Germans a prospect of permanent domination in the Balkans and the Turkish Empire.

Mr. BONAR LAW: I have heard this subject debated before, and I have more than once hesitated as to whether I should rise to say anything about it. I have always refrained for the simple reason that I do not believe it is possible for me to say anything to the House which it would be the least interesting for the House to hear. This is obviously a question, not so much of the past as of the present and of the future, and I think the House must feel that it is quite impossible for the Government to give any indication at all as to what their intentions are in regard to the Salonika force. I have heard in previous debates an hon. member ask the simple question: "Is the force at Salonika intended to be offensive or defensive?" It is precisely to that kind of question that it is impossible to give any answer. There is one section of members who, in talking on this subject, have definitely taken the view that we ought not to have a Salonika expedition. There is another section who think it is one of the vital operations in the war. I am not going into the merits of the expedition at all, but I do wish to point out to the House that we are engaged in a war with many Allies. The policy as a whole cannot be the policy of this Government alone, and therefore even if we took the view of those who think this expedition is a mistake it does not follow that it would be possible for us to act in any other way. But I am very far from admitting that that view is correct. Let me point out the obvious facts to the House. If by any chance this expedition were taken away, the first thing that would happen would be that Greece would be overrun, that the whole Balkan peninsula without exception would be in the hands

of our enemies, and that those who have helped us from the beginning would be at the mercy of our enemies; and we know precisely how they would be treated. It is quite natural that the House should wish to have a free and frank discussion of this subject. I do not think it is possible. We cannot possibly discuss policy if there is any doubt as to the use which you are going to make of a force in any particular theatre of war. I recognise as strongly as anyone the disadvantages to us now, especially when tonnage has become so important, of such an expedition. All these considerations are as fully in the mind of the Government as they are of any member of the House. Nothing has exercised us more than the whole subject of Salonika. It has been difficult because the Allies who are interested in Greece and the Balkans have not always taken the same view as to the right policy to adopt. I believe in this respect we have recently gained some ground. We are carrying out a common policy. The main object of that policy for the moment is to make sure that if our German enemies choose to advance against us there we shall not run the risk which we would have run a few months ago of being attacked from behind. That is a great advantage. There was some discussion about Roumania. Again it would be impossible to deal with that subject. All I can say with regard to Roumania is that, deplorable as the result has been, there were no threats of any kind used towards Roumania to induce her to come in, and I do not think that because her coming in has proved so disastrous to her and has inflicted suffering upon her, which the Allies would have done anything to prevent, that is reason for condemning the Allies because they welcomed her assistance.

Feeding Serbia.

Mr. BALFOUR, answering Mr. LYNCH, said: We are quite willing to consider the importation of foodstuffs into Serbia, provided that a practical scheme, guaranteeing the neutral control of their distribution and other essential precautions, can be advised. No such scheme, however, has as yet been presented to us, and the attitude of the Austrian authorities forbids much hope that matters will improve in the future.

The Dardanelles Report.

March 6.

Mr. BONAR LAW, replying to Mr. RENDALL and Sir WALTER ESSEX, said that the leaders of parties to whom he had sent a full copy of the Dardanelles Report were Mr. Asquith, Mr. Redmond, and Mr. Wardle.

Mr. SWIFT MACNEILL: Is the right hon. gentleman aware that never in the whole history of Parliament has a proposal been made to give special information by the Government to certain members of the House in reference to a public document that will come before the House as the Grand Inquest of the nation?

Mr. BONAR LAW: If I had not been aware, I was informed of it the other day. I do not myself think there was any insult to the House, and certainly none was intended.

Sir C. HOBHOUSE, a little later, asked the Speaker whether it was in order to lay on the Table as the report of the Dardanelles Commission that which was confessedly a incomplete report, and whether if in debate Ministers quoted from the report they would not be compelled by Standing Order and by the practice of the House to produce the whole report.

The SPEAKER: I think the Government must take the responsibility for any report that they lay on the Table. I cannot go behind the report which is laid on the Table. If a quotation is made from a document which is not produced, then the rule of the House that the whole of the document should be produced will no doubt be enforced.

Sir C. HOBHOUSE asked leave to move the adjournment of the House for the purpose of calling attention, as an urgent matter of definite public importance, to the proposal of the Government to lay on the Table of the House for the first time in its history a report which was confessedly not the complete report of the Committee. Ultimately, after some little discussion, Sir C. Hobhouse announced that he would put down a motion asking for the production of the report, and hoped that it would receive early consideration.

Greece and the Allies.

March 7.

Mr. DILLON asked the Foreign Secretary whether the Royalist Government at Athens had officially announced that up to February 19, 15,849 soldiers had been transported to the Peloponnese; whether the Entente Ministers were satisfied that this figure fulfilled the demands of their Note; and how many troops still remained at the disposal of King Constantine north of the Peloponnese.

Mr. BALFOUR: The answer to the first part of the question is in the affirmative. As regards the second part, although the evacuation of troops and artillery is proceeding satisfactorily there remain certain demands, such as the surrender of rifles, which are still unfulfilled. As regards the last part of the question, it is estimated that the total Greek force remaining in Northern Greece is about 6,000 regulars and about 3,000 gendarmerie.

Mr. DILLON asked whether King Constantine's Government promised to grant a complete amnesty to the followers of M. Venizelos whom they had arrested; whether they had now officially announced that the scheme for releasing prisoners, by granting an amnesty to all except those convicted of the gravest offences, had been abandoned in favour of a reduction of penalties on a certain scale; and whether his Majesty's Government were content that the Royalist Government at Athens should modify their acceptance of the Allied Note as soon as the Allied Fleet had been induced to modify the pressure of the blockade.

Mr. BALFOUR: The answer to the first part of the question is in the negative. The Greek Government promised to release the partisans of M. Venizelos whom they had arrested, and they have given an official assurance that all proceedings against them have been absolutely and finally abandoned. The answer to the latter part of the question is in the negative.

THE PRESS ON THE NEAR EAST

Talaat through Dutch Eyes.

The Dutch *Handelsblad*, in its weekly review, as quoted by the *Gazette de Hollande*, gives a picture of the new Grand Vizier of Turkey which strikes us as rather quaint. The last active representative, it says, of the old mysterious Orient has yielded his place to a younger man, who represents modern, sober, plain Turkey of to-day.

The place of the Egyptian pince, with the famous name, is taken by an erstwhile telegraphic official; one of the oldest families of Turkey has had to give way to one of the men who *veulent être des ancêtres eux-mêmes*; one of the ancient traditions as to the status of the Grand Vizier has been abandoned. Young merit is ousting hereditary traditions. Talaat Bey has been appointed Grand Vizier of Turkey in the place of Prince Said Halim Pasha. It is one of the most important changes in the Government of the country since the Young Turks first took action. It means the appointment to the rulership of a man of the people in a country that hitherto has been under the sway of priests and princes. . . . The strength that is to be brought to bear by the new Turkish Cabinet must come in the first place from Talaat Pasha. If Turkey is to count for anything in the future, she must rely on such men as this Minister, who, besides a clear brain, possesses great knowledge, great energy for getting things done, and diplomatic ability. The end of the Turkish Empire, the death of the "Sick Man," has been too often foreshadowed for us to believe that it is in the last throes of agony. There is in the Turkish statesmen of the new school a vital *elan*, a creative force, that may enable them, if circumstances are favourable, to achieve great things. When the deadly, crushing, traditional rut has been abandoned, when the Asiatic or Egyptian habits of laxity have been replaced by the energetic action of pushing and intelligent young men, who keep pace with the times, add honesty to their energy and know how to act against corrupted bureaucracy by the only argument likely to impress it—i.e., immediate dismissal—then there is, perhaps, still a future for Turkey. Such a task is in store for Talaat Pasha if he has the good fortune and opportunity to bring his will-power, his clear insight, his clever brains, and his indomitable courage to bear on the future of his fatherland, for which undoubtedly a difficult period is in prospect.

The Salonika Expedition.

M. André Chéradame's opinions upon the problems of the Near East are always of value, and an article ("The Will to Victory and 'the Single Front'") that he contributes to the *New Europe* (March 1) merits careful consideration. It deals, as may be inferred from its title, with the advisability or otherwise of abandoning Salonika. This idea has been much to the fore again of late, and the "Westerners"—the advocates of a concentration of all our efforts upon the Western front, and of the abandonment of our foothold in the Balkans—have shown much activity in pressing their views. M. Chéradame, it is hardly necessary to say, opposes the proposal vigorously. The Allies' great mistake, he urges, was in allowing Germany to link up with the East. Bulgaria and Turkish help alone have enabled Germany to prolong the war. And, unfortunately, our operations at Salonika have never been carried on vigorously; they have suffered from "passive resistance" on the part of those who ought to have done everything possible to help them forward.

The dispatch of troops to Salonika and Belgrade, which had been advocated in France since early in 1915, would have radically prevented the loss of the Danube front, so essential to the Allied cause and so easy to defend. But the very idea of such an expedition met with furious opposition in France and England from a few men who were unhappily in a position to influence the supreme decision. Their opposition placed repeated obstacles in the way of the Salonika Expedition, even after it had been undertaken. Now it was, above all, the inadequate means placed at General Sarrail's disposal which prevented him from giving to the Serbs that succour which it was our duty as Allies to furnish to them, quite apart from the fact that it coincided with the purely selfish interests of France and Britain to do so. It was, again, the opposition to Salonika which throughout 1916 led to the Eastern front being regarded as of secondary importance. The result was that our Balkan Army did not receive the material and the reinforcements necessary for a powerful offensive. Thus, when it began to move in April-May, 1916, it could not do what it might have done if even a quarter of the Franco-British effectives which have since then been sacrificed on the West, without any strategic result, had been sent to it in good time. The most recent consequence of this absence of any offensive from Salonika has been the crushing of Roumania, the fatal effects of which upon the development of the war as a whole cannot be disputed.

"How can we expect a defeat west of the Rhine so great as to force Germany to renounce for ever her Hamburg-Persian Gulf design?" asks M. Chéradame. On the Western front the Germans are better organized

than anywhere else to meet the shock of the Allies. The latter have not only to force the Germans to evacuate territory occupied in the west, but also to destroy Pangermania.

Everything goes to show that the cutting of the Hamburg-Baghdad route, which means the complete defeat of Germany, involves military action by the Allies in the Balkans. The constant efforts of William II. to induce his brother-in-law Constantine to paralyse, so far as lies in his power, the action of the Allies in the East surely proves that at Berlin they have always been afraid of the Balkan front of the Allies assuming that importance which might and ought to have been assigned to it.

We have space for only one more quotation:—

If we desire "integral victory," the struggle must be pursued in the Balkans, as elsewhere, by suitable offensive means. We are certain of making no mistake, if we maintain, organise, and reinforce the Balkan front. If the Allies gain a great victory on the West, the moral of the Turko-Bulgaro-German troops in the Balkans is sure to be profoundly affected; and in that case an offensive northwards from Monastir, combined with a Russo-Roumanian attack on the Sereth, might have rapid and important developments. If, on the other hand, our Western offensive should not yield all the results expected, our presence in the Balkans in a position not easily assailable would diminish the moral effect of any possible check, and would always prevent the enemy from concentrating all his effectives on the West.

M. Chéradame concludes by urging that the three fronts, Western, Eastern, and Balkan, must all be unified and organized for a simultaneous offensive. Pangermania must be destroyed: so only can the Allies be saved from ruin and enslavement.

The Armenian Atrocities.

Dr. Clarence D. Ussher contributes to the *New Armenia* (New York) of February 1 an article entitled "The Armenian Atrocities and the Jihad." He estimates that in all probability more than a million unarmed and offenceless people have lost their lives in these latest massacres, and that hundreds of thousands of women and girls have suffered things worse than death. As to the responsibility for the crimes—

The extermination of the Christian population of Turkey was determined long before Turkey decided to enter the war. Religious fanaticism had apparently nothing to do with the project, though its aid was much invoked, and occasionally it played a part after the massacres began. Those who, as heads of the Young Turk Party or of the Committee of Union and Progress, ordered the Jihad, or "Holy War," were notoriously spoken of by the Moslems as infidels. While their natural tendencies and hereditary propensities would tend to estrange them from the Christians, it cannot with any justice be said that their decree of Jihad was induced by religious fanaticism. The Jihad has been a failure. In spite of every possible effort on the part of the Young Turk leaders, Persian, Indian, Egyptian, African, and Russian Mohammedans refused to participate.

It is conceivable that the suggestion of deportation came from a foreign source, and that the execution and details of barbarity are purely Ottoman. That Germany has had a share in it is proven by the fact that German officers have been seen herding the women and children along the road. The instructions of German officers to their Turkish students have been, "Injure the enemy in every possible way, and spare nothing to trouble and horrify them." That the German people are cognisant of and party to these atrocities I cannot believe, but that the German military are I cannot doubt.

Gruesome details of the massacres and atrocities are given. Thus:—

In Agantz, the chief city of Ardjesh district, the local Governor (*Kaimakam*) was beloved and trusted by the Armenian population, who had no reason to suspect him of sinister motives. He and all the officers of the province had the same instructions—viz., the Moslems might choose the women and girls they desired for their harems, but the men and boys and the rest of the women must be exterminated. "Any Moslem known to protect a Christian was to have his house burned first, the Christian slaughtered before his eyes, then his family and himself, and we were informed by Moslem refugees in the American Mission in Van that the first house burned by the Turkish soldiers in Van was the house of a Moslem who protected a Christian.

The *Kaimakam* of Ardjesh summoned all the men, sending gendarmes for those who were tardy. They gathered at the Government building without suspicion. Two thousand five hundred were taken out in groups of fifty and shot down by the soldiers. One of the leading men, known as *Prote* (Protestant) Harotun Aga, wounded in five places, crawled out at night from under the mass of corpses and escaped to his home. There he hid for five days in a straw bin, when the Turks discovered him, dragged him out, and shot him in the street before his family. Only three men escaped from the entire town, two of them natives of Bitlis. This was undoubtedly the most merciful massacre in the province. In the villages smaller bands of soldiers and gendarmes were located, but did not work so systematically. The villagers, who could, defended themselves till their ammunition was exhausted, and enabled many women and children to escape to the mountains, where some of them, wounded and naked, subsisted for twenty days with only snow to eat.

One redeeming feature about the dreadful business is that in spite of lying reports as to atrocities committed

by Armenians on Moslems, "the Moslem population of the cities could not be induced generally to attack their neighbours, and the Government was compelled to use soldiers and gendarmes and Kurds from other districts."

Serbia or Bulgaria.

The current *Asiatic Review* contains an article with the above title, contributed by M. V. R. Savitch, late director of the Serbian Press Bureau at Belgrade. The writer begins by saying:—

The future solution of Balkan questions offers to the British statesman a fine opportunity for insight and wisdom, as upon it will depend the peace in the Balkans and the security of the British position in the Mediterranean. After the expulsion of the Turks from Europe, the durable settlement in that part will depend mainly upon the mutual position and relative strength of Serbia and Bulgaria, as it depended in the centuries preceding the arrival of the Turks.

Great Britain's paramount interest in the Balkans is undoubtedly the realization of the principle, "The Balkans for the Balkan nations, a durable peace, and protection from conquest by any Great Power."

How can that be achieved? The principle of our artificial equilibrium in the Balkans must, says the writer, be abandoned and give place to a plan for the creation of a really strong national State. And he then proceeds to consider "the scheme of creating a strong Serbia or Bulgaria." The proposal to make Bulgaria into this strong State "would mean," the writer declares, "in a mere access of folly, to sacrifice friends and Allies to benefit an unscrupulous enemy"; and he very rightly dismisses the proposal as "offensive to common sense and to every moral conception." Again, "to leave Bulgaria in her pre-war frontiers could satisfy neither Serbia nor Roumania," and it would leave conditions in the Balkans still in a quite unsettled state. The third solution put forward—the compensation of Serbia at the expense of Bulgaria—offers Europe many advantages, in M. Savitch's opinion. The "mission of Serbia to be a bulwark of peace could be strengthened by adding to Serbia those territories in what is now Bulgaria, which are inhabited by a population even now neither Serbian nor Bulgarian in character." The article concludes:—

Every student of Balkan history knows that Slav tribes, all of whom spoke one language and had the same standards of life, settled in the Balkans in the sixth century of our era. But the Mongolian tribe of the Volgars, penetrating over the Danube at the end of the seventh century, conquered the Slav tribes, which lived between the Isker, the Danube, the Black Sea, and the Rhodope Mountains, and upon this territory, by the mixture of the Mongols with the Slavs, was created a new Bulgarian nation. Only later on, after the amalgamation of the Slavs with the Mongols was consummated, the Bulgarians crossed the Isker and the Rhodope, and for a certain time asserted their dominion over the Slavs who inhabited Macedonia or the territories between the Isker and the present Serbo-Bulgarian frontier. The Slavs of these territories form an intermediary link between the Serbs and the Bulgars, having some characteristics in common with both of them. Thus, until now the Bulgars never called the Slavs that lived to the west of the Isker "Bulgars," but the "Shops," and their language the "Shopski" language, which is more akin to the Serbian than to the Bulgarian tongue. These "Shops," having no Mongolian blood in them, as is proved by their fair Slav type, manifested, until the Congress of Berlin, Serbian sympathies, and expressed their desire to be united with the Serbs.

Justice, as well as expediency, which in this case do not diverge from each other by a hair's-breadth, would be best served by compensating Serbia with the territories to the west of the River Isker and the Rhodope Mountains. Thus, Serbia would be enabled to fulfil her mission of being a bulwark for peace in the Balkans. Bulgaria would be deprived of her powers for doing evil, be purged from German influences, and might be sooner cured from her insane Teutonic ambitions, and eventually find rest and prosperity in a union with the Serbs. Of course, this can only be achieved later on, as the Serbs, still bleeding from the wounds inflicted upon themselves by Bulgaria's foul action, will not for a long time be in a mood to entertain any proposal for reconciliation with the Bulgars. We say to-day: "Rather Hell than Paradise shared with the Bulgars." When the Bulgarian nation has thrown off her present masters for ever, the Serbs will not persist in their present mood, and an admission of the Bulgars in the Southern Slav union may then be expected.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

An interesting letter has reached me from a British officer who has recently returned to this country from Mesopotamia, in which he dissents from my suggestion that the number of Indian rupees current in the country of the blessed name is comparatively small. "I should like to say," he writes, "that my experience, such as it is, points rather the other way. I served at Nasiriyeh on the Euphrates for more than six months last year, and during that time came across very little coinage except Indian. Persian krans are in circulation, but they are by no means so common as the corresponding Indian coins."

"Commentator" does not seem to realise that not only the Indian soldiers are paid in rupees but the British troops also, and all the hired Arab labourers who work in large numbers on embankments, and so on. Seeing that the Arabs are now getting so very much more money, both by direct earning and by selling goods to the troops, than they had any chance of doing before, I should say there must be a much greater amount of Indian coinage in circulation than any other kind. I should, therefore, agree with "Commentator" that Indian coinage is likely to be the principal currency in Mesopotamia in the future. Indeed, whether it remains under the control of the Indian Government or no, there is so much Indian money in circulation now that it is bound to be a long time before it is exhausted."

Cotton-goods dealers in Egypt will have observed with interest the striking development which has occurred in the trade in India, where the Government, by increasing the import duty on cotton textiles, has by one fell swoop destroyed the protection which the Lancashire industry enjoyed against the Indian mills. I know India very well, and can speak of the bitter resentment which the countervailing Excise duty of 3½ per cent. on Indian cotton manufacturers has always aroused. Meanwhile, in an interesting letter, Mr. Algernon E. Aspinall, of the West India Committee, raises an appropriate point. "I recall," he writes, "that the Lancashire so-called 'Free Traders' who are now agitating for a countervailing Excise duty on Indian cotton goods are the self-same people who protested vehemently against the proposal that countervailing duties should be imposed on bounty-fed sugar, which was ruining our sugar-producing colonies fifteen years ago."

Personally, I do not care two piastres about politics, so called, and as for discussing the respective merits of Free Trade or Protection this is not a suitable time. Let us win the war first, and all things else will follow; but I admit that I rejoice at the action taken by the Government of India. There is no reason in the world why India should continue to be penalised in favour of people who have always displayed a selfish preference for the interests of number one, as Lancashire

has always done. My readers in Egypt will remember that that country had a grievance of the same sort; she has no grievance now, because her cotton mills were killed—murdered would, perhaps, be the word to use. Congratulations are due to the Government of India generally, and to Sir William Meyer in particular, for the courageous step, which is to help the Mother Country financially on the one hand and to assist Indian millowners on the other.

It is looking a long way ahead, perhaps, but there certainly seems to me to be no reason why Egypt and India should not "do a deal" in this matter. Egypt wants piecegoods and India can make them; both countries have the nucleus of a mercantile marine, and there is a good deal of produce which could be exchanged between the two countries. India, of course, is better off for shipping; but there is the Khedivial Mail Steamship Company, which, after the war, might be glad to find new seas on which to trade. The matter is worth some consideration, and I hope the possibilities of commerce and shipping will not be forgotten on the banks of the Canal and in Hindustan.

I hear that the Austro-Hungarian banks continue to prey vigorously on the Serbians. All seems to be grist that comes to their mill; but talking of mills, one recalls with satisfaction that "the mills of God grind slowly, but they grind exceeding small." That is a point for the future. Meanwhile, my latest information is that, in defiance of the rules of the moratorium, and while Serbian men-folk are with the Colours, a central office has been established in Belgrade "for the protection of creditors." This, it is said, has been established for the purpose of reclaiming all sums owed by Serbian business men to Germans, Austrians, or Hungarians, and its object is being carried out by absolutely illegal means.

The trade in Serbian currency—another means of impoverishing the population—has been carried on without scruple. After having fixed the rate of exchange for the Serbian dinar at 50 heller, the Military Government permitted both banks and private individuals to "corner" Serbian currency—which is covered, as everybody knows, up to more than 70 per cent.—for the absurd sum of half a krone per dinar. The population opposed a passive resistance to this measure, with the result that, in proportion as the value of the krone dropped, that of the Serbian dinar recovered its true nominal value.

The comments of the paper *Az Ujsag* on this subject are interesting—and frank. "The question of the rate of the Serbian dinar," says the paper, "has been much debated both from the political and financial point of view. The value of the dinar, which was rated at 50 per cent., has both here (in Hungary) and in neutral countries abroad risen to 104-105. Our thousands of banks have explained that it was preferable by far to pay in dinars in Serbia, although the dinar commands a high price here. At the same time, the import of dinars from Serbia is forbidden, which has resulted in a further rise in the value of the dinar, as it was becoming

scarce over here. The *Belgrade Hires* publishes interesting returns concerning the circulation of the dinar in conquered Serbia. This paper avers that payments are usually made in Austro-Hungarian currency. The dinar has almost disappeared. This disappearance is due to an erroneous interpretation, on the part of the population, of certain regulations concerning the value of the dinar. Certainly it is a very difficult question to decide. The fact that latterly the dinar has not been kept to the compulsory rate of exchange, but has been allowed to take its chance, testifies to the great perspicacity of the authorities."

Poor hoodwinked Turkey! Enemy though she be, it would be harsh not to regret the apparent ease with which the Hun has been able to exploit her and her people. All the world realises that the Turk is a belligerent because it suited the German book to include her in the Central Europe Alliance; either to prevent her from being on the other side and so free the Dardanelles to the Entente, or to make use of her army and whatever poor resources for making war which she possessed. We know all about the loans and the financial window-dressing in which Berlin has taken a hand on behalf of the Ottomans. We know, too, how great are the difficulties which the manipulation will cause when the time comes for adjustment. This is all so evident that discussion would be a futility. It is worth recording, however, that Hun promises are still being made and put forward in Constantinople as a bait to the suffering population. The latest is that Germany has undertaken to send every year to Turkey £T3,000,000 in gold, in order that Turkey may be able to withdraw its paper money from circulation, even though the number of notes to be withdrawn is covered by commercial transactions. After the war the merchandise of Turkey's allies will be favourably treated as regards importations into Turkey.

The latter seems to be the *quid pro quo*; in reality it is another shackle forged round the feet of an already heavily ironed people. One may ask, too, which Turkey? It would seem at the moment that the Ottoman Empire is crumbling. In Mesopotamia the British are at last forcing their way to the heart of things, in the Caucasus Russia has a grip which she is not likely to relax, the music has begun to play in Syria to which the Turk will presently be called on to dance, while in Europe the Turkish hold depends entirely on whether her precious Allies can win the war. Germany knows all this with great certainty, and the Germans are not likely to throw away £T3,000,000—or 3 marks for the matter of that—a year if no return is likely to be forthcoming. I referred on a previous occasion to the lament of Djavid Bey that Turkish paper money had sadly depreciated in Constantinople, and we may take it for granted that his last speech, in which he also emphasised the "financial assistance which Germany is giving in not requiring the payment of interest on her advances until Turkey's paper currency has been entirely withdrawn from circulation—that is to say, for eleven years," was just another attempt to bolster up a broken exchequer—in a word, more window-dressing.

COMMENTATOR.

The Sudan and Its Economic Advance.

No. 4.—The Dongola Province.

By Percy F. Martin, F.R.G.S.

Dongola is the province of the Sudan that is best known, with the exception, of course, of Khartoum, to the "man in the street" by reason of the important military operations that occurred there during the different British military expeditions conducted in that country. Superficially, it is also the largest of the fifteen political divisions, but by no means is it the most densely populated. The official figures show this to amount, as nearly as possible, to one person to the square mile; that is to say that with a total area of 141,200 square miles the province claims a population of no more than 141,170 individuals.

The province of Dongola was the last of all the Egyptian Khedive's possessions in the Sudan to be evacuated in the sorrowful days of June, 1885, when the Nile Expeditionary Force was broken up. Later, in 1892, before the Sudan had been finally rescued from the bane of Mahdism, it was also here that the late Lord Kitchener commenced once more to throw out the Egyptian frontier. For the Khaliifa at that period being engaged in fighting the Italians at Kassala, the time was deemed propitious for the British to advance upon Dongola; notwithstanding official advice to the contrary, the necessary steps were taken, and, as we know, they proved completely successful. It was on the 25th September, 1896, that Dongola again became a part of the Khedivial possessions, an achievement which marked more than anything that had up till then occurred, the commencement of the Khaliifa's final collapse.

The Usual Route.

The usual route to Dongola from Khartoum is by train to Abu Hamed and Kareima, and thence by regular steamboats to Merowé, and so down the river as far as Kerma, a small village practically at the extreme end of the province where the cataracts (of Bahr-el-Haggar) commence. One day, when money becomes more plentiful, the Government may determine to continue the rails from Kareima to Kerma. At one time, indeed, there existed a small, badly constructed and even worse equipped line from Kerma to Wadi Halfa—actually the first railway line to be laid in the Sudan—a track which was used by the late General Kitchener in his memorable campaign of 1885. That line, however, has long since been torn up, the usable portion of the material being employed elsewhere. For nothing in the Sudan is wasted under its provident administration.

With the conquest of Dongola commenced its regeneration, and the province has always been looked upon as the model department of the Sudan, claiming the services of a Governor who had been longer in office than any other official of the Administration. For many years the seat of government was located at the old town of Dongola, situated some 200 miles further down the Nile than the present town of Merowé, which was selected during the spring of 1903, when the then Governor-General of the Sudan, Sir F. Reginald Wingate, was visiting the province upon one of his periodical tours of inspection.

The Town.

Under the personal care and supervision of the Governor, Colonel H. W. Jackson, C.B., a well-designed, well-constructed and even attractive little town has grown up. Long, straight avenues have been laid out and planted with handsome evergreen lebbek trees, imported from India; although only now in their ninth year, these trees have already become tall, stately and intensely umbrageous. Broad pathways, well gravelled, and separated from the houses by brilliantly green, neatly trimmed hedgerows; range upon range of square, or oblong, brick and plaster edifices, tinted a pleasing rose-colour (an effect obtained from a natural earth pigment found locally); and houses designed in semi-Moorish style of architecture, with broad, sloping, or flat roofs and protruding eaves, approached by wide porticoes and

mostly surrounded by well-tended beds of brilliantly-coloured flowers and lofty date-trees, afford an impression at once pleasing and effective. Undoubtedly modern Merowé may be regarded as a pleasant little town, and since it has abundantly justified the time, trouble and outlay which have been devoted to its construction, it may well serve as a type for other new towns, or help to suggest improvements to be introduced into old ones, in the gradually-expanding Sudan.

Important Points.

While Merowé ranks as the principal town in the province, there are several others of some importance—such as Argo, Debba, Kerma, Khandak and Korti, all of which, in addition to that of Dongola, are officially regarded as *memurias* of the province. At times of low Nile, and other similar natural misfortunes, the Argo natives generally seem to suffer more severely than others, and this is mainly due to their thriftlessness and innate laziness. All the efforts of the Government—continued over a period of years with remarkable patience—to instil a little enterprise and endeavour into these people have failed, and in times of stress they have to be fed like so many helpless animals.

Some of the best land in the district has been given to them, but it is mostly either wholly neglected, or the surface is merely scratched. Naturally, the people are abjectly poor. A persistently unfortunate state of affairs existed until lately, when a change seemed to manifest itself in the large district of Debba, whence fully 20 per cent. of the males had left in order to seek a livelihood elsewhere. The town of Debba is still maintained as the district headquarters, for, at one time, the place was regarded as an important trade centre. There it was that caravans, carrying gum, ivory, slaves, etc., first touched on their way from Omdurman to Kordofan, *en route* for Egypt. To the mind of most Englishmen who have visited Debba within the past few years the most interesting object to be seen there is the tree planted by the late Lord Kitchener to commemorate his long sojourn in 1884-5 in the native garb of an Arab, and when he was so wonderfully disguised, and spoke the language so admirably, as to be able to pass for months together as a tribesman. The famous tree was planted in December, 1912.

Tangassi.

Not far from Kareima there are several interesting small towns and villages, such as Tangassi, still one of the more important markets in the Sudan, accommodating an immense gathering of native buyers and sellers every Sunday; Hetani, the site of the camp of the 1st Brigade, which occupied it just before the withdrawal of the British troops from the country in 1885; Karad, also the site of a British camp—that of the 2nd Brigade; Letti, a new irrigation basin, measuring some 8,000 feddans; Old Dongola, the former capital of the Christian kingdom existing in the sixth century A.D.; Labab Island, some ten miles south of Dongola-el-Ordi, and locally known as Geziret-el-Ashraf, (since it was here that had been born the Mahdi Mohammed Ahmed, son of a humble boat-builder, and the cause of all the trouble that fell upon the Sudan between 1882 and 1898); Argo Island, whereon, at a place called Hag Zumar, there repose two colossal stone statues, now in a recumbent position (fallen, no doubt, from the upright), and resembling in some respects the colossi of Thebes, together with a headless statue of great antiquity, attributed to 2,300 B.C.; and, also, Artigasha Island, some five miles north of Argo, where, for years, a certain Sherif Sayed Mohammed-el-Idrisi-el-Yamani occasioned the Ottoman and Egyptian Governments much serious trouble.

Kerma, as above mentioned, was formerly on the railway line from Halfa, situated a distance of 203 miles from that town. It

had been the dream of the Khedive Ismail Pasha to open up the whole of this part of the conquered country by means of an iron track, and in 1877 he was particularly busy in his Sudanese dominions. The Dervishes, however, in 1885, destroyed every yard of line which had been so patiently and expensively built. The British-Egyptian troops relaid the track in 1896 to afford means of transport for the Dongola Expeditionary Force, which was then operating against the Mahdists. Finally, it was completed only to be abandoned.

Improvidence.

Were the people of Dongola of an industrious and more intelligent nature the undoubted economic resources of the province would be better appreciated and put to greater use. The soil is capable of producing richly when properly cultivated and artificially irrigated. Although in the months of November and December wheat and barley should be sown, and reaped in the following months of April and May, there seemed to be but little attention devoted to the pursuit of this industry when I was in the province some two or three years ago. I have little reason to suppose that since then the character of the people has in any way changed for the better. Under ordinary circumstances the crops of the Dongola Province should produce about 4½ ardebs (an ardeb equals 5.44 bushels, or, say, 297.15 lbs.) per feddan (equals 1 acre) of wheat, and 5 ardebs (say, about 25 bushels) per feddan of barley. Other crops grown in this province comprise maize, sown in July and garnered in September or October, and dura, sown in June and September and garnered in the following months of September and December, yielding two crops annually. The produce should ordinarily amount to 6 ardebs (say, about 32½ bushels) per feddan. The date-growing industry is also of some moment in Dongola, and with more care on the part of the growers and further assistance upon the part of the authorities, the industry might well become a very remunerative one. Already a considerable trade has been built up between Dongola and other parts of the country, while samples of the dates have been sent to London for the purpose of interesting wholesale fruit importers in Sudan produce.

Large as is its area, the province of Dongola is economically governed. In addition to the Governor, Colonel H. W. Jackson, C.B., who, as stated, has been longer in the Administration, by about seven months, than any other official (actually exceeding the lengthy term of service filled by the late Governor-General, Sir F. Reginald Wingate), there are one Senior Inspector, Mr. W. R. G. Bond, and two Second Inspectors, Mr. A. W. Skrine and Mr. F. T. C. Young. While Colonel Jackson and Mr. Young are at Merowé, Mr. Bond (who succeeded Captain Jackson as Senior Inspector) and Mr. Skrine are located at Dongola.

MESOPOTAMIA.

In shipping circles (writes a correspondent in the *Yorkshire Post*), the progress of operations in Mesopotamia is being closely followed. Before the war, the German steamship lines were beginning to get a substantial share of the Persian Gulf trade, which, at one time, was monopolised by British owners. Indeed, if she had not precipitated hostilities, Germany, through the Deutsche Bank, the chief promoter of the Baghdad Railway, and by means of the agreement with British interests for the navigation of the Tigris and the Euphrates, might by now have occupied a position of supreme importance in the Middle East.

Not only had the Hamburg-American Line been steadily increasing its direct connections with Muscat, Bunder Abbas, Busreh, and other parts, but, a few months before the war, it had also concluded an agreement with a Liverpool concern for a joint service between the United Kingdom and the Persian Gulf. The worst, however, was that considerable shipments of materials for the British Government were being made by German steamers, notwithstanding the fact that British vessels were always kept open for them.

It may be safely assumed that the situation in this respect will be entirely altered with the restoration of peace, and that the big improvements to be carried out will not be for the benefit of enemy countries.

GREEK MACEDONIA.

Filler leaf tobacco, unstemmed, is the chief article of export from Greek Macedonia, the value of this product purchased by American firms alone amounting to about £1,200,000 in a normal year. According to general reports of purchasing agents from various points in this region, the 1916 crop is far better in quality than that of the preceding year, and the quantity is greater than that of a normal year.

Meteorological conditions have been favourable to this year's crop, but it has been difficult to gather and manipulate it. As the more important producing centres—Cavalla, Drama, Serres, etc.—are in the war zone, the export of a large part of the Greek Macedonian tobacco crop is impossible, and no information is available as to its condition or quantity. The quantity of tobacco raised in the districts near Salonika is relatively small.

The prices of filler leaf tobacco, unstemmed, in districts not cut off from commerce, in the middle of November last were 250 per cent. above normal. In some instances prices were 600 per cent. above last year's quotations. There was then only a very small quantity of inferior tobacco on sale in Salonika.

The Opium Market.

Favoured by dry and warm weather, the eastern Macedonian opium crop, harvested during June and July, 1916, was gathered under advantageous conditions. Its quality was much better than usual, the morphine contents being one per cent. higher than in normal years. As regards quantity, local opium cultivators estimate that about 100 cases (each weighing 150 pounds) were produced in Greek and Serbian Macedonia during 1916. Of this amount one-half was taken to the Salonika market, while the other half remained in Serbian territory occupied by the Central Powers.

In November Greek Macedonian crude opium in the natural moist state, containing from 14 to 15 per cent. of morphine, was selling at 132 drachmas per oke. As that price was 20 per cent. lower than the New York, London, and Paris prices, local crude opium exporters were holding their goods for a further advance in price.

BRITISH PETROLEUM COMPANY.

Mr. G. H. Roberts answering Mr. Joynton-Hicks in the House of Commons, on behalf of the Board of Trade, said:—"The shares of the British Petroleum Company and of its allied companies were some months ago vested in the Public Trustee and the companies are controlled by directors nominated by the Board of Trade. The shares were previously registered in the name of the Europaishe Petroleum Company, a German company, but of whose shares the Russians, French, and Belgians claimed to own 49½ per cent. His Majesty's Government consider that it is to the national advantage that the organisation of the British Petroleum Company should be kept alive and that it should remain permanently under British control, and they have taken steps to ensure this object. The arrangement with the Anglo-American Company was made with the knowledge of the Board of Trade, the reason being that only by such an arrangement could the British Petroleum Company preserve its valuable petrol distributing goodwill until such a time as the company could erect its own petrol distributing installations. I understand that shares have been sold."

The Egyptian wheat crop is estimated to be above the normal in Lower Egypt and normal in Upper Egypt.

According to a Constantinople telegram, the Turkish Government has submitted to the Chamber a Bill for an extraordinary war credit of £115,000,000. The Bill was sent to Committee.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The absorbing subject for discussion in the market during the past week has been the decision of the Indian Government, with the consent of the Home Government, to increase the import duty on cotton goods without a corresponding increase in the countervailing Excise duty. The announcement came as a great surprise to Lancashire, and no time has been lost in organising opposition to the proposal. The agitation has been quite spontaneous, and Mr. Austen Chamberlain, the Secretary of State for India, at the deputation which he is to receive on Monday next, will find that Lancashire is determined at all costs to resist the imposition of the duty.

Trading in all quarters of the market has been on small lines. There seems to be a general lack of confidence in the outlook at the present time.

An indifferent demand has been reported in piece-goods for Egypt, but advices from the other side with regard to clearances are not discouraging.

Some relief has been felt at the decision of the Food Controller not to prohibit the use of flour for sizing until the situation makes it absolutely necessary.

Cloth business for India has been under a cloud, and there is not likely to be any improvement in the turnover until more is known as to the intentions of the Government with regard to the import duty. Offers from Calcutta, Bombay, and Madras have been decidedly scarce.

Some fair miscellaneous sales have been put through for China, not only in bleaching cloths, but also in the lower qualities of grey shirtings. The prospects for manufacturers as a body remain very uncertain. Some merchants state that it is useless to purchase goods which cannot be finished, printed, and dyed for many months ahead. Then traders do not know from one day to another what facilities will be available for shipping goods abroad.

Depressing conditions have prevailed throughout the yarn market. American qualities for home use have been sluggish, and wretched prices have been taken from time to time by needy sellers.

Some producers of Bolton spinnings are more inclined to seek orders, but fine counts are still deeply under contract.

SHIPPING IN EGYPTIAN PORTS.

The Ports and Lights Administration have issued a statistical report for shipping, cargo, and passenger traffic during the fourth quarter of 1916. One hundred and forty-two steamers arrived in Alexandria; out of that number 83 were British, 179,084 tons of cargo was discharged and 1,692 passengers landed. The departures from this port included 159 steamers, 248,872 tons of cargo and 2,646 passengers.

The arrivals in Port Said (not transiting the Suez Canal) numbered 40 steamers, 8,942 tons of cargo discharged, and 314 passengers landed, the departures from this port were 39 steamers, 1,548 tons of cargo, and 98 passengers. The Suez Basin arrivals were 78 steamers, 48,205 tons of cargo, and 478 passengers. Apart from the number of ordinary passengers, 1,892 pilgrims landed at this port.

During the three months 90,684 tons of cargo and 1,784 passengers were landed or shipped at Port Said by vessels transiting the canal, and 6,190 tons of cargo and 361 passengers at Suez Road. The total number of vessels transiting the Suez Canal for the three months was 289.

INCONSTANT CONSTANTINE.

The following, says Reuter's Agency, are extracts from a communication received from a French source in Athens, dated February 12:

The Royalist Government is jealously guarding all cereals and is beginning again at Athens the comedy played at Drama and Kavala, where the people were allowed to die of starvation, while the enemy found reserves of 60,000 tons of grain. Enormous supplies of provisions are also being kept in Thessaly and at Thebes, and the Government is keeping in military storehouses quantities sufficient for a three months' campaign of an army of 100,000 men, which King Constantine boasted some weeks ago before the Entente Ministers that he could mobilise in a fortnight.

TRADE NOTES.

Algerian Cork-wood.

The Consul-General at Algiers has forwarded particulars of the quantities of cork-wood of the 1914, 1915 and 1916 harvests, cut from certain areas in the State forests in the Province of Constantine, which will be put up for sale at Constantine on March 30 and following days. Firms desirous of taking part in the sale should communicate with the "Conservateur des Eaux et Forêts," Constantine. The particulars (in French) above referred to may be consulted by British firms at the Department of Commercial Intelligence, 73, Basinghall Street, London.

Prohibitions.

A Beylical Decree, dated January 16, is published in the *Journal Officiel Tunisien* for January 27, which prohibits the exportation and re-exportation of made-up articles of linen tissue from Tunis. Exceptions from this prohibition may, however, be allowed under conditions laid down by the Tunisian Director-General of France.

A *Government Gazette* contains a copy of a Proclamation, dated December 18, 1916, prohibiting the export from the Sudan of gold, whether in coin or bullion, except with the permission of the Financial Secretary, Sudan Government, or an officer appointed by him in that behalf.

Sale of Enemy Property.

Mr. R. E. Moore, Savoy Chambers, Cairo, Receiver of the Gasmotoren Fabrick Dentz, has called for tenders for the purchase of the book debts due to the firm.

Licences to Trade.

The following have been granted licences to trade in Egypt, with the British Empire and with Allies of Great Britain: Djanga-zoff, Rachko Ivan, 81, Rue Attarine, Alexandria; Ankimoff, Nicholas Vassileff, 13, Rue Sobqui, Alexandria.

AMERICAN RELIEF FOR SERBIANS.

CORFU, March 7.

The official Serbian Press Bureau has issued the following statement:—

"Mr. Stuart, the delegate of the American Red Cross, declared in Paris that the Bulgarian Government had refused to allow him to distribute relief to the Serbian inhabitants of the invaded territories. In connection with Mr. Stuart's allegation, the Bulgarian Official Telegraph Agency issued, under date of February 27, a statement to the effect that Bulgarian official circles were unaware of the steps taken by certain American circles, and maintained that Mr. Stuart's declaration was a slander. In contradiction of this Bulgarian denial, we affirm that at the end of 1915 Mr. Stuart personally and officially made application to the Bulgarian Government, but his request was refused. Subsequently Mr. Stuart made several further attempts, but each time without any success.

The Bulgarian Government, which has refused to recognise our Red Cross Society, and which has also interrupted postal communication between the inhabitants of the invaded territories and their relatives abroad, remains true to its principles in refusing even to allow the American Red Cross to distribute relief to our unhappy fellow-countrymen. Such is the Bulgarian system."—Reuter.

LONDON TO KARACHI IN SEVEN DAYS

Speaking of overland routes, in the course of a lecture on "Mesopotamia: The Key to the Future," at Bristol on Sunday, Canon Parfit, M.A., said it would be possible in the future to travel from London to Karachi, via Persia, in seven days, and from London to Port Darwin, in Australia, in fourteen days, and, as Lord Montagu said, by aerial navigation for mails in three days. Mr. Parfit paid a high tribute to General Townshend and his brave comrades in their heroic stand at Kut. General Maude had made good that misfortune, and interesting events might be expected hourly of still further British successes. General Sir Percy Skyes, in co-operation with the Russians, was driving the Turks out of Western Persia, and would soon join the British Expeditionary Force in Mesopotamia. Pictures were thrown on the screen of many places in the region under consideration—public buildings, waterways, irrigation schemes, railways, the great oilfields, the natives, their costumes, customs, etc.

PRODUCE REPORT.**Currants.**

LONDON, March 8.

The market has been very active, with large business done in all available quantities at continuously advancing prices. The apparent reason was given in last week's report. There are no Provincials in the market, and Amalias are quoted 88s. to 92s., against 44s. to 48s. last year; Patras 90s. to 94s., against 45s. to 47s.; Gulf 90s. to 96s., against 45s. to 50s.; Vostizza 90s. to 98s., against 45s. to 49s.; Islands 90s. to 95s., against 44s. to 46s.; Smalls 78s. to 90s., against 42s. to 50s. In the Liverpool market there is a scarcity of all qualities, and what is available is changing hands at very high prices. There is, of course, no prospect of any arrivals at present, and prices undoubtedly will continue to advance.

Sultanas.

There has been a fair demand, with some business done at advanced prices, especially in Afghanistan fruit, which holders believe will have a further advance.

Figs.

There is a good demand only for the lowest qualities and out-of-condition fruit, which are used for manufacturing purposes or cattle-feeding.

Dates.

A good demand has prevailed this week, with business done at considerably advanced prices. Persians sell at 42s. to 44s., against 16s. to 28s. last year, the same period.

Seeds.

Linseed is quiet, but steady at about late rates; Calcutta-to-London, afloat, February-March and March-April, 112s.; with Bombay, February-March and March-April, at 114s. Bombay to Hull, spot and afloat, 112s. is asked. Rape seed is firm on scanty offerings. To London from Cawnpore, prompt, 95s. is asked. Cotton seed is quiet and easier to Hull. Egyptian to London, f.a.q., spot and prompt, £20, and Sakelarides, spot, £19 5s.; to Hull, f.a.q., afloat, £19 10s.; and prompt was sold also at £19 10s., with Sakelarides, afloat, at £18 10s. Bombay, afloat, £19 is offered by buyers, whilst sellers ask £19 10s. Rangoon Beans are steady; spot is quoted at £68; new crop, March, was sold at £54; March-April quoted £52 10s.; April-May, £51 10s.; and May-June, £49 10s., c.i.f.

Oils.

Linseed oil is quiet, spot pipes selling at £51 15s., and spot, barrels, at £52; March-April, £53; and May-August, £54 15s. Rape oil is firm; refined, English, in barrels, spot, sells at £65. Cotton oil is steady; crude, pipes, spot, £49 15s.; refined, pale, pipes, £53 10s.; and sweet, barrels, £59 to £61, as

to make. Olive Oil: There are no supplies on the market, and quotations are unavailable.

Oilcakes.

Linseed cakes are rather dull, and with the exception of some very small business passing nothing is going on, which may be attributed to the probable restrictions likely to be imposed by the Controller, as was mentioned in our report last week. London makes sell quietly at £19 10s. to £20, with prime American at £18 to £18 5s.

Cotton Cakes.

There is a marked scarcity of Egyptian, and prices are fully 2s. 6d. to 5s. per ton dearer, spot parcels making £15 10s. 6d. to £15 15s.

EGYPTIAN DELTA LIGHT RAILWAYS.

CONTRACTORS TO GOVERNMENT.

The Financial Prosperity of Egypt.

Surplus Revenue of £E2,290,448 in the Nine Months to December, 1916.

CAIRO, Feb. 13.

The State accounts for December show that the public Exchequer is in a most satisfactory situation. During the month the revenue came to £E1,817,634 and the expenditure to £E1,116,565, as compared with £E1,829,547 and £E888,575 respectively in December, 1915, but the general position has so improved that there is a surplus of revenue of £E2,290,448 as a result of the nine months' administration against one of £E1,405,228 a year ago. The total figures for the period are actually:—Revenue, £E15,266,367; expenditure, £E12,975,919.

Practically every head of revenue shares in the improvement. Direct taxes are £E93,250 up, Customs have increased by £E36,203, tobacco dues by £E76,824, legal fees by £E62,077, railway receipts by £E782,199, Post Office by £E21,673, Domains by £E132,877, and sale of land by £E26,082. As before, the only important decrease is port dues, which have fallen off by £E26,847.

Record Year in View.

It is interesting to note that with three months still to run Customs dues have exceeded the estimate for the year, £E1,850,000, by over £E200,000; Domains sales, their estimate, £E492,000, by £E128,000; and that fees from the Mah-kamas, rents and sale of land are all slightly in excess of the budgetary figures for the whole year, whilst railway receipts are but £E58,000 below their total of £E3,394,000.

It looks very much as if we shall have a record year, and that not only the revenue will be within measurable distance of £E20,000,000, but the surplus will be high on £E3,000,000, if, indeed, it does not actually exceed that figure. Neither of these limits has ever been reached before, the previous records, taking into account the operations on the reserve, which used to be shown separately, being, as regards revenue, the year 1912, when the total receipts were £E17,848,352, and as regards surplus, the year 1915, when the net balance in favour of the State was £E2,435,159.

Expenditure is being kept down with a vigorous hand, and despite the claims, very rightly recognised, of the railways and of the Public Works, the total for the nine months is only a million more than at the end of December, 1915. The final figures will very probably prove to have been kept within budgetary limits.

The Customs' Returns.

CAIRO, February 21.

The Customs returns published last night show that the turn of the year has not interfered with the progress of the country's foreign trade. During January imports amounted to £E2,594,045 and exports to £E5,362,438 as against £E1,695,054 and £E3,248,369 respectively a year ago. Both these figures are in excess of the corresponding ones in 1913 and 1912, the exports considerably so.

The chief imports during the month were Preserved Meat £E129,798 (from England and Australia), Skins £E16,869 (equally from England and America), Boots £E16,801 (from England and Switzerland), Rice £E245,087 (from India), Flour £E33,623 (from the British Empire), Dried Fruits £E20,279, Raw Sugar £E147,081 (from Java), Coffee £E23,436 (one third from India), Pepper £E19,813 (nearly all from the British Empire), Mineral Oils £E40,617 (mostly from the United States), Stationery £E61,715 (30 per cent. from England, 25 per cent. from Italy and the balance from Holland and Scandinavia), Furniture £E45,482 (80 per cent. from England), Coal £E201,332 (80 per cent. from England and the rest from the United States), Natural Indigo £E47,298 (from India), Matches £E18,846 (from Sweden and Italy), Drugs £E37,425 (of which one third from England), Chemical Manures £E126,341

(practically all from Chili), Textiles £E700,579 (of which 70 per cent. from the British Empire and 16 per cent. from Italy), Worked Iron and Steel £E102,747 (80 per cent. from England), and Machinery £E63,968.

Increases.

The chief increases were in Preserved Meat £E117,649, Rice £E244,982, Raw Sugar £E147,075, Mineral Oils £E32,559, Stationery £E40,359, Furniture £E41,494, Coal £E33,150 (but the quantity fell off by 1,000 tons), Natural Indigo £E27,424, Chemical Manures £E118,997, Cotton Threads £E23,387, Cotton Tissues £E108,804, Worked Iron and Steel £E37,075, and Machinery £E42,653. Decreases were recorded in Flour £E27,241 (the quantity was 1,655 tons less), Construction Wood £E98,861, and Sacks £E46,614; again no Petroleum was imported.

Exports.

Exports of importance during the month were Eggs £E95,904, Cotton Seed £E285,239, Cotton Cake £E88,301, Wool £E3,821, Gold and Silver Bar £E10,544 (practically all of which went to England), Tanned and Raw Skins £E53,997, Cereals £E35,303, Sugar £E18,997, Cotton Seed Oil £E8,374 (all of which went to France), Cotton £E4,685,701 (of which England took 45 per cent., the States 30 per cent., and Italy and Switzerland each 5 per cent.). Cereals fell off all along the line, owing to the prohibition of export of all foodstuffs; there will in all probability be a very marked diminution in this category this year as there is little prospect of the local production increasing to such an extent as to permit any export on any useful scale. Eggs also fell off by £E54,000 in value and about three millions in quantity; Cotton, although the value improved by £E2,154,450 or nearly 80 per cent, decreased by 55,796 cantars. Cigarettes were exported to the extent of £E21,583, an improvement of £E3,695 in value and 4,618 kilos in weight.

Trade Distribution.

England sent £E970,814 of the imports, somewhat less in proportion than last year; the United States £E134,531, and Italy £E192,384, in each case more in proportion than before. On the other hand the rest of the Empire just about trebled its sales to this country, whilst Russia and France fell off considerably. As the major part of the exports consisted of cotton, the proportion of that commodity taken by the principal countries represents very approximately their share in the total export.

Trade with the Sudan underwent considerable improvement, the total turnover during the month amounting to £E221,869, as against £E144,495, the previous year; of this £E137,669 was import from the Sudan and the balance export to that country. The principal imports were Livestock £E38,480, Maize £E44,725, Sesame £E24,921, and Senna £E4,430; the chief exports were Sugar £E11,125, Cotton Tissues £E21,421, Butter £E5,480, Flour £E2,321 and Tobacco £E10,058.

A recent telegram announced that the Proconnisos, a Greek ship recently requisitioned by the Royalist Government to go to the United States to bring a cargo of 5,000 tons of grain for the assistance of the Royalist population of Old Greece, had been torpedoed and sunk by a German submarine. The Proconnisos was a steel screw steamer of 2,769 tons, which was built at Sunderland in 1902, and is shown by Lloyd's Register to have been renamed Verdun and to have a French registry. No owner's name is given. As the Proconnisos the ship was owned by N. J. Eustathiadis and registered at Andros, Greece.

HUN METHODS IN MOROCCO.

A Timely Exposure of Sharp Trade Practices.

The Department of Commercial Intelligence of the Board of Trade has received a copy of a pamphlet, which has been issued by the Economic Service of the Residence-General in Morocco, containing advice to French merchants and traders wishing to do business in Morocco. The following is a free translation of a portion of the pamphlet, which describes the methods adopted by German and Austrian firms in carrying on business in that country:—

The success obtained by German importers in Morocco was chiefly due to the following reasons: (1) the activity of their commercial representatives and local agents, who frequently and regularly visited their customers (native and European); (2) the cheapness of the articles offered (generally of very poor quality); and (3) the favourable conditions of despatch and packing, combined with facilities for payment, including long credits.

Subsidies.

German firms endeavoured to persuade their customers that they could give a much more expeditious delivery of goods than their competitors in other countries. As a result of the organisation of the transit of goods and postal parcels, German and Austrian merchandise was, as a matter of fact, delivered speedily, and these deliveries compared advantageously with those from other European countries. Freight by one shipping company were generally low, and were automatically diminished by rebates.

The Moors, like native races in other parts of the world, willingly sacrifice quality in goods to appearance, and seek cheapness before all things. Their wants were appreciated and catered for by the Austro-German manufacturers and commission agents who engaged in the "muck and truck" trade, and by this means the goodwill of a clientele with primitive tastes and always susceptible to low prices was secured.

Credit.

With regard to facilities for payment, German business houses in Morocco would not protest a bill when the customer furnished a sufficient guarantee for its eventual settlement; the minimum interest for deferred payment was at the rate of 6 per cent. per annum, whilst the German firm was able to obtain advances from German banks at from 4 to 5 per cent.

Most of the Austro-German houses in Morocco engaged in the import trade were agents for either German or Austro-Hungarian manufacturers, but, more frequently, for large commission houses located in Hamburg. These shipping houses endeavoured to keep their customers in ignorance of the name of the maker and of the place of manufacture of the goods they sold. Frequently, those articles bore only the label of a commission agent of Hamburg or some other town, who worked in connection with German firms in Morocco, and it was therefore impossible to tell the name of the manufacturer of the goods. The price was generally an inclusive one for delivery in the roadstead of a Moroccan port.

Orange merchants of Murcia (Spain) have held a meeting at which it was decided to ask the Government to obtain the free exportation of oranges for all countries.

Judge W. Thorrie, Judge of First Instance on the Mixed Tribunals at Alexandria, has been appointed British representative on the International Finance Commission at Athens.

ENGINEERING NOTES.

Pump Windmills.

We had occasion in previous Engineering Notes to allude to the large demand for windmills—especially for pumping purposes—in the Near East, where, owing to the prolongation of dry seasons, droves of cattle are often entirely destroyed owing to the want of water. Where dug-out wells exist the means to raise water are generally inadequate, being, as a rule, of primitive designs; where such wells do not exist the sinking of new modern wells has become an emergent necessity. In many cases even the local government boring machines have been called in use to supply cattle with the water necessary to sustain life. As usual, German and American firms have done their best to secure control of the market, and a number of boring sets and windmills with pumps have been successfully introduced by them. There is still, however, a large field in the Near and Middle East for work in that line, and British manufacturers should be prepared to grasp the opportunities which remain after the war.

Two kinds of pumping windmill sets are saleable: a light one, for pumping water for cattle, and a heavier one, to pump for irrigation purposes. The main points considered in purchasing such sets are lightness, combined with great capacity, facility in transport, and ability to be set in motion by the lightest breeze. Windmills answering these conditions will meet with a ready sale. Up to now American-built windmills have been preferred, as partly answering these requirements. As we know, there are British-built windmills which can entirely answer such requirements, and there is no doubt that, without particularly great efforts, the market could be secured. Care should be given to the packing and shipment of goods. Duplicate parts must be at hand, so that broken machinery can be repaired at short notice. This is a point to which German, as well as American, manufacturers give special attention, and which, it must be admitted, we, as a rule, neglect.

New Farm Tractor Factory.

The news that Messrs. Henry Ford and Son have received permission from the Government to build works in Cork to make low-priced farm tractors at the rate of 50,000 a year has not, apparently, caused any comments in British motor manufacturers' circles, nor in those other circles which, undoubtedly, will be affected if the permission is also given—as indeed it is reported—that materials will be brought from America both for the works and for their product! In the meantime it is reported that the Ministry of Munitions have authorised Mr. S. F. Edge to call British motor manufacturers together to ascertain if they will organise an enterprise at least commensurate with that of the Ford Company, so that they can supply the British market, both at Home and Overseas, with British-made tractors.

Substitute for Acetylene.

The use of acetylene in the Near East has, in recent years, been continuously increasing. Apart from all sizes of plants for its production and accessories for lighting purposes, which are imported mostly from the Continent of Europe and America, there are in some of the larger towns native manufacturers who, in their small workshops, can turn out annually a number of cheap "home-made" lamps which are often seen in out-of-the-way villages, lighting humble cottages, vineyards, store-sheds, etc. The fear of explosion and the higher price of calcium carbide, however, restrict in some way a wide use which otherwise this illuminant would enjoy. With the newly-invented thermalene gas, such restrictions may disappear, and the acetylene light will become more popular in

the East. This new gas, which is recommended as a substitute for acetylene, and is described as an acetylene, is, in its generation, impregnated with oil gas, and thereby rendered less explosive than acetylene and more suitable for lighting. Thermalene is generated "packed" in closed tin cases or cartridges, which are charged with alternating layers of calcium carbide and sawdust, the latter being soaked in oil. When water penetrates into the cartridge from below—the cartridge having been pushed into the generator—acetylene is liberated with the evolution of heat, the oil is heated, and the acetylene becomes impregnated with the oil gas as it forces its way through the sawdust.

Precautions.

As the resulting lime expands considerably, and as oil and carbide must not come in direct contact with each other, the layers of carbide and of oil are separated by two discs of cardboard, between which spaces metal spirals are interposed. The lime and impurities in the carbide remain in the cartridge, and are ejected with it. It is also claimed that the carbide in a cartridge need not all be decomposed at the same time. The cartridges, 8 in. high, 4½ in. diameter, weigh 5 lbs. each. The largest cartridge weighs 40 lbs.

Heavier than Air.

Thermalene gas is described as heavier than air, density 1.1, and as being less explosive than acetylene. Liquefied thermalene is not explosive at all. The gas requires less oxygen than acetylene for burning, and its specific heat is only an eighth of that of acetylene. It mixes better with oxygen, when it is said to give a better flame. Thermalene is also credited with having a sweet, not unpleasant, smell, and with not being poisonous. It is also recommended for welding, as its flame does absorb carbon from the iron in welding, so that a soft weld is obtained, especially with cast-iron. The weld is made with the aid of a torch, which is specially designed against flashing back.

British Magnetos.

For the benefit of the uninitiated, it may be explained that magneto is a compact and specialised form of dynamo fitted on car engines, and so designed that when driven by the engine it shall supply electricity for the ignition of the charges in the cylinders, and ensure that the sparking for this purpose is passed between the points of the sparking plug in the cylinder at the right moment. It is strange to say that until the war broke out we were practically entirely dependent on one German factory for our supply of these necessary adjuncts to all motors. The peril was grave, because in spite of all hurried efforts at the time, no more than 100 magnetos per week could be produced here. This was, of course, a very small quantity, considering the great number of the machines wanted for aeroplanes, seaplanes, airships, motor lorries, motor ambulances, motor cycles, motor boats, heavy gun tractors, wireless sets, searchlight sets, and other mechanisms dependent on the internal combustion engine.

British Advance.

With remarkable rapidity and adaptability, however, the British magneto industry has been built up in the face of great technical difficulties, and there are now more than a dozen firms making magnetos sufficient for war purposes and private use; and these British-made machines have been proved to be more efficient and reliable than any that has yet been produced, even in Germany.

Work in Mesopotamia.

The despatch from Sir Percy Lake, K.C.B., issued recently, indicates that a considerable amount of engineering work is in progress in Mesopotamia, although necessarily few details are given. Two new railways are under construction, water communications are being

dredged and generally improved, and at Basrah extensive engineering works have been made, and wharves have been built at which ocean-going steamers will be able to unload. General Lake specially mentions the able assistance given by Mr. W. Grant, Admiralty Overseer at Abadan, in preparing river craft for service. The work of the Indian Marine comes in for prominent notice. It is stated that the rapid growth of its duties may be gathered from the fact that whereas in January, 1916, there were nineteen permanent and twenty-one temporary officers and 525 other ranks employed, by July the number had risen to forty permanent and 163 temporary officers and 3,981 other ranks, besides native labourers. "The necessity for assimilating this large influx of newly appointed officers and men threw a heavy strain on the permanent cadres who were also faced with many unforeseen demands. That under these conditions its duties have been carried out with a considerable measure of success is distinctly creditable to the service." We quote further regarding the preparation of the port of Basrah, as follows:—"The appointment of Sir G. C. Buchanan to the Force as Director-General of Port Administration and River Conservancy, has been of undoubted value. Owing to the difficulty experienced in obtaining certain stores and equipment from India and Burma, and to sickness among the supervising staff, the work of developing the port of Basrah, and of dredging and improving water communications generally, was at first delayed. It is now, however, well in hand, and the results already achieved are sufficient to show that the projected measures will have a far-reaching effect on the business of the port and our all-important river communications. Sir G. Buchanan especially desires to mention the assistance he has received from Lieutenant J. G. Grant, R.E."

THE WORLD'S TRADE.

Sir Albert Stanley, the President of the Board of Trade, has issued figures relating to the trade and commerce of foreign countries and British possessions.

How to Solve the Light Railways Problem.

A Contractor's Sound Advice to British Manufacturers and Shippers of Plant and Material.

Mr. J. W. Williamson, the well-known contractor, of Cairo and Ismailia, writes as follows to THE NEAR EAST on the subject of light railway material:—

I see in your issue of January 6, 1917, under the heading of "Light Railways Problems," that a company (Light Railways Limited) has been formed to deal with the export of light railway materials, with the special object to supplant the Germans in Eastern and Colonial centres.

Being a buyer of light railway material and spare parts on a fairly large scale, I am pleased to hear of the formation of this company, and perhaps the following information may be of use to Light Railways Limited, or any other firm that may intend trying to obtain a footing in the Egyptian market:—

Watch the Huns.

In the first place it must be accepted as a fact that the German firms which hitherto had practically a monopoly of light railway material in Egypt will make strenuous efforts as soon as the war is over to recover the trade; in fact, if I am not mistaken, they have already begun operations, for I notice that several of their late employees who are neutral subjects have started business in this line in their own names and are sending circulars to clients of their former employers touting for business. I attach one of these circulars, from which you will note that at least two of the names composing the firm issuing the circular look very like German. I also know of two other late employees of a former German firm who have jointly started a similar business, selling second-hand German material, which they buy, repair, and renew. It is possible that these are both genuine efforts to start a business for themselves independent of their late employers; but, knowing the German as we now do, and his methods of doing business, it is probable that ejected firms will use any means that are available to reinstate their hold on the trade until the war is over, when they will be able to import German material, either direct from Germany or through neutral countries, such as Holland or Switzerland.

Another important point—perhaps the most important—to keep in view is the manner in which the German firms conducted their business in Egypt before the war. Doubtless the same system was adopted in other Eastern countries, though I only speak from personal knowledge of Egypt. These firms kept a very large stock of light railway material in Egypt, consisting of rails of different section and weight, sleepers, trucks and locomotives, with all spare parts, so that they could supply any demand immediately and deliver at any place in Egypt within forty-eight hours of the receipt of an order.

German Methods.

This is a very important point, as the largest buyers of this light railway material are earthwork contractors; nearly all contracts are put up to public adjudication, and until the day of opening the tenders no contractor knows if his tender will be accepted. If he is successful he has a month, and often less time, allowed to begin work, and should his material be employed on another job, he has immediately to purchase rails and rolling stock and get them on the site, fixed, and ready to start on due date.

The German firms, besides their principal depot, where they kept their stock, had large showrooms in Cairo and Alexandria, with agents in all other principal towns and a whole staff of travellers, doubtless paid by results if we may judge by the energy and perseverance they displayed in the booking of orders.

Whenever and wherever public tenders for any earthwork or engineering contracts were opened their agents or travellers were present taking notes of the names and addresses of the competing contractors, the rates of their tender, the value of the con-

tract, and conditions of payment. All the contractors, and especially the successful one, would be visited on the same day, and offers to supply light railway material on favourable terms of payment would be made.

Terms.

These terms, generally, were as follows:—A contractor, having secured an earthwork contract, say, of a gross value of £10,000, which he has to finish in a period of six months, with monthly payments for work done, requires to purchase £500 worth of material and spare parts. The German firm offers to let him have this material on condition that he signs five bills each of £100 falling due at intervals of one month between each bill. Should any of these bills be unpaid on due date, the courts could be moved immediately to issue an order to the Government department, company, or private individual who has given out the contract to make no further payments to the contractor until the case is tried. This brings the contractor immediately to book because he cannot afford to have his encashments stopped—he has to pay his workmen and other expenses week by week.

This system was adopted with the innumerable small contractors. With the more important contracting firms that take up works of greater magnitude the Germans gave either very large discounts for cash or six, nine, and twelve months' credit, as might be required. Any British firm wishing to secure the Egyptian market for light railway material will have to adopt a similar system; otherwise it is bound to fail to do business except with firms that can pay cash, even if it can undercut the Germans both in price and quality.

An Essential Condition.

Mr. Williamson writes in a subsequent letter:—"I omitted to mention one very essential condition to which any British firm striving to capture the Egyptian market must conform, that is, that all gauges sections and sizes of material must be manufactured to the metric system of measurements and quoted for on that system in Egyptian currency."

"The sizes in general use are rails weighing 5, 7, 9, and 12 kilos per metre run fixed in pairs with 5 to 7 steel sleepers to gauges of 50 to 60 and 75 centimetres; tipping trucks are made of $\frac{1}{2}$ — $\frac{3}{4}$ and 1 metre cubic capacity and so on all through. The metric system is in general use in Egypt and at least 99 per cent. of the buyers of this class of material understand no other measurement and will not bother to learn the English system. If the British public could be brought to see the amount of valuable time they waste working with our complicated system and our manufacturers and merchant the volume of trade which is annually lost to them for the same reason, there would be some hope that advantage would be taken of the general upheaval brought about by the war to alter the same to the metric system as the Germans did after their successful war against France in 1870-1."

COLOMBO TRADE WITH THE NEAR EAST.

The following exports were registered at Colombo and Galle from Egypt between January 1 and February 5, 1917:—Black tea, 292,850 lb.; Cinnamon quills, 60 lb.; Cocoanuts 496,223 lb.

Levant Base:—Black tea, 89,500 lb.

The Spanish Cabinet has decided to prohibit the transmission of telegrams containing information of the movements of shipping in Spanish ports.

It was alleged in the Australian House of Representatives recently that the British Imperial Oil Company had secured "a considerable business interest owing to its name, but it was one of fourteen so-called companies all working together," and that the managing director, who had a large German interest, lived in Holland, near the German border.

COMPANY NOTES.

Meeting.

An ordinary general meeting of the shareholders of the National Bank of Egypt will be held on Saturday, April 7, 1917, at 4 p.m., at the head office of the bank in Cairo for the purpose of receiving the directors' report, receiving the auditors' report, submitting the accounts for the year ended December 31, 1916, declaring a dividend, electing directors, and electing auditors for the year 1917 and fixing their remuneration.

Oil Outputs.

Bibi Eibat Oil.—Week ended February 25, 49,000 poods.

Bibi Eibat.—Week ended March 4, 801 tons.

Black Sea Amalgamated Oilfields.—Week ended February 17, 20,495 poods; February 24, 20,502 poods.

British Mailkop Oil.—Week ended February 17, 1,866 poods.

Cheleken.—Fortnight ended February 24, 484 tons.

European.—Week ended February 25, 84,400 poods; March 4, 85,600 poods.

Mailkop Combine.—Week ended February 17, 15,039 poods; February 24, 14,867 poods.

North Caucasian Oil Fields.—Week ended February 7-20, 696,250 poods.

Russian Petroleum.—Week ended February 17, 50,900 poods.

Dividends, Payments, Etc.

Sudan Goldfield Company.—Dividend for the year 1916 of 1s. per share, less tax, payable on March 28, the same as for 1915.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

The purchase of all the carobs of the Kyrenia district has been concluded, the price being £4 10s. the ton. Tithe and weighing fees are paid by the vendors. As all the carobs are to be exported from the Famagusta district, the loss of weighing fees taken on shipment would fall on the municipalities of three ports in the Kyrenia district, and it is hoped that some arrangement may be made to provide that they shall not be thus deprived of an important source of revenue.

There seems to be good hope that the question, so long in abeyance, whether the growth of tobacco would be profitable in Cyprus, should soon be solved. At one period, before the occupation, a very fair tobacco was grown in some of the higher lands. If it is found that a leaf grown at lower altitudes, and in the plains, can compete successfully with tobacco from other countries which now supply the Empire, there should unquestionably be a great future for this branch of agriculture.

A considerable stimulus to the enterprise has been given by the experiments of last year, and encouragement is being given in several new directions. For example, an expert from Smyrna advertises in local papers offering his services to those who desire to make a start, both as regards the methods of cultivation and curing, and in advising as to soils and localities in which it would be expedient to make trials. Should the results of the forthcoming shipments of last season's crops be favourable, there can be no doubt that many Cypriot agriculturists will take up the cultivation of the plant.

A RAILWAY APPOINTMENT.

Mr. J. B. Ball, the present engineer-in-chief of the Great Central Railway, has been offered, and accepted, the appointment of chief engineer to the London, Brighton, and South Coast Railway Company, in succession to Mr. Morgan, who is retiring and joining the board of that company.

During Mr. Ball's tenure of office on the Great Central Railway he has been responsible for many heavy development works covering an expenditure of several millions, amongst these being the equipment of the Immingham Dock, the removal of two heavy tunnels at Sheffield, and the widening of the lines consequent thereon; the important widenings between Doncaster and Thorne and Wrawby Junction and Brocklesby; and the new Keadby Deviation Railway, with its combined railway and roadway bridge, with a lifting span of 165 ft.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON AVENUE, E.C., Thursday.

Our market has been very quiet this week. Some National Banks have been done at about 13½, and a few hundred Agriculturals have been bought on local account up to 5 3-16. In Anglo-Egyptian Banks there have also been some transactions at the slightly lower level of about 11½. A small lot of Béheras changed hands at 6½, and a few thousand United Egyptian Lands at between 5d. and 6d.

Egyptian Markets have been a firmer spot, and some business has been done up to 25s. 6d. On the other hand, Salt and Sodas are rather quieter round 20s.

Khedivial Mails, after dropping about 1s. 6d. to 25s. 6d., are closing firmer at 26s.

There has been some business in Egyptian Unified round 78½, but Egyptian 3½ per cents. are sought for at 67, without finding sellers.

In Greek securities the market continues very firm, with some business to-day in Larissa and Monopoly.

Oil Shares.

No improvement is to be reported to-day in this market, but, generally speaking, the tone has been firm. The market, as a matter of fact, is not too well supplied with shares, which, of course, has had an effect on prices.

Spies have improved to 14s. 6d., and North Caucasians, Ural Caspians, and other well-known Russian lines are firm, if quiet. International Russians remained dull, with business done between 6d. and 8d., while Anglo-Maikops were inquired for, and rose to 6s. 3d.

The Paris Bourse.

The general business on the Parquet has again been unimportant in character.

Suez Canal shares have been firmer, and at the close stand at 42.36. Turkish Unified stock has been quoted a point higher at 65.25. For the rest there is little to report.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, March 8.

Considerable discussion is afoot as I report regarding the prospect of the Bank-rate being reduced this afternoon, and the view is expressed that it ought to be possible to bring the official value of money in closer touch with open market rates without leading to a withdrawal of foreign balances from this market. It is thought, too, that the authorities may find it desirable to bring about a lower standard of rates in anticipation of a resumption of the sale of Treasury bills. The decline in market rates during the past few days is in itself an indication that in the money market the view is held that there is at least a possibility of the rate being reduced to 5 per cent.

The general rate for weekly loans is in the vicinity of 4½ per cent., though a few of the clearing banks stand out for 5. Day-to-day loans are being arranged at 4½ per cent. to 4 per cent.

The latest quotation for exchange on Alexandria, sight, is 97½.

NOTICES.

NATIONAL BANK OF EGYPT.

Notice is hereby given that an ORDINARY GENERAL MEETING of the Shareholders of the National Bank of Egypt will be held on Saturday, the 7th April, 1917, at 4 p.m., at the Head Office of the Bank in Cairo, for the purpose of:—

- Receiving the Directors' Report.
- Receiving the Auditors' Report.
- Submitting the Accounts for the year ended 31st December, 1916.
- Declaring a dividend.
- Electing Directors.
- Electing Auditors for the year 1917 and fixing their remuneration.

All shareholders holding a minimum of 20 shares have the right to take part in the General Meeting, providing the Shares be deposited under the following conditions at one of the following places, where cards of admission or proxy forms will be delivered:

In Egypt, at the latest, the 2nd April, 1917.

At the Head Office, Cairo.

At the Branch of Alexandria.

At the Agencies of the Bank at Assiout, Assouan, Benha, Beni-Suef, Chibin-el-Kom, Dammanhour, Fayoum, Kench, Luxor, Mansourah, Minieh, Port Said, Rod el Farag, Sohag, Tanta, Zagazig, and Mousky (Cairo).

At the Office of the Anglo-Egyptian Bank.

Bank of Athens,
Banque Belge pour l'Etranger,
Imperial Ottoman Bank,
Banque d'Orient,
Banco di Roma,
Cassa di Sconto e di Risparmio,
Comptoir National d'Escompte de Paris,
Crédit Lyonnais.

In the Soudan, at the latest, the 28th March, 1917, at the Agencies of the National Bank of Egypt, at Khartoum, Port Sudan, and Suakim.

In Europe, at the latest, the 16th March, 1917. In Paris, at the Offices of the Société Marseillaise.

In Italy, at the Offices of the Banca Commerciale Italiana.

In London, at the Agency of the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, Governor.

Cairo, the 27th February, 1917.

IMPORTANT EXTENSION OF TIME.
IN LIQUIDATION, by ORDER of the OFFICER
COMMANDING in CHIEF H.M. FORCES in
EGYPT.

EGYPTISCHE EGRENIE FABRIKEN A.G.
(Egyptian Cotton-Ginning Factory Company.)

NOTICE OF SALE

of a large and important COTTON-GINNING FACTORY of 90 cotton gins (including 10 for extra cotton) at Wasta (Bani Suef Province), Upper Egypt, situated on the Nile, and directly connected with the Egyptian State Railway, and 1½ hours by train from Cairo.

OFFERS for the PURCHASE of this Valuable PROPERTY will be received by Mr. H. Bridson, the Receiver of the above-mentioned Enemy Company (appointed the 30th day of May, 1916, by the C.-in-C. of H.M. Forces in Egypt), at his office at 6, Old Bourse Street, Alexandria, Egypt, on or before the 15th day of March, 1917, to which date the time has been extended.

Offers should be made on the form attached to the printed Conditions of Sale, and must be accompanied by a deposit in cash equal to one-tenth of the price offered. Deposits accompanying offers which are refused will be returned to the owners at their risk.

The said Receiver reserves the right to refuse any offer without giving the reasons for such refusal, and shall not be bound to accept the highest offer.

The property will be sold subject to the conditions contained in the printed Conditions of Sale ("Cahier des Charges").

The property consists of 12 feddans, 23 kirates, and 4 ashmes, or thereabouts (approximately 54,560 square metres or thereabouts), and the large cotton-ginning factory built in 1913 and of the latest type, with Manager's and Employees' Dwelling Houses, Offices, Oil Reservoir, and Stores, and other Buildings erected thereon, and the Gins, Diesel Oil Engines, (Dynamoes, Presses, and other Machinery, Tools, Implements, Office Furniture, Fittings, and Effects therein and thereon.

The buildings cover 5,408 square metres or thereabouts.

Particulars and Conditions of Sale and copies of the general plan of the property can be obtained of Frederick Leveaux, of 6, Old Bourse Street, Alexandria, Advocate, or of Messrs. Field, Roscoe, and Co., of 36, Lincoln's Inn Fields, London, Solicitors, or of Messrs. Oliver Jones, Bilton, and Co., of 5, Cook Street, Liverpool, Solicitors.

The deeds and documents of title can be inspected at the aforesaid office of Mr. Frederick Leveaux, the advocate of the said Receiver, any weekday between the hours of 9 a.m. and 12 noon.

The property can be inspected on application to the said Receiver.

No. 306.—Vol. XII.

FRIDAY, MARCH 16, 1917.

NOTES OF THE WEEK.

The capture of Baghdad is the logical sequel of the victory at Kut—logical both from the military and from the political point of view. When, after two months of almost ceaseless hammering by artillery fire and of systematic attack by infantry, the British troops finally turned the Turkish position the enemy found himself hopelessly broken. Thanks to the careful and thorough nature of his preparations and to the support he received from the General Staff at home, General Maude was able not only to pursue the Turks with his cavalry, but also to keep up with them with practically his whole force. At no point did the enemy have time to re-form his shattered army. The first attempt at a stand was made at Lajj, some twenty-seven miles from Baghdad; but its speedy collapse led to the abandonment of the Ctesiphon position and shortened the time at the enemy's disposal for the preparation of the Diala lines. Here again General Maude's resources, which enabled him to throw a force across the Tigris with little loss of time, left the Turks completely outmanœuvred, and the pursuit had now reached the outskirts of Baghdad itself. The battle for the town lasted three days; details of the fighting are not yet known, but by March 11 the city was in the hands of the British.

The pursuit of the enemy has not ceased with the entry into Baghdad. Two days later General Maude was able to announce that his advanced detachments had reached a point thirty miles farther up-stream, and, more important still, that steps had been taken to prevent the flooding of the city during the coming rise in the river. Some idea of the completeness of the Turkish *débâcle* can be formed from the fact that the British troops found in Baghdad a small arms factory in good repair, serviceable machinery uninjured in the railway workshops, together with five locomotives and some rolling stock. Even the British guns captured at the surrender of Kut in April, 1916, have also been recovered in Baghdad. General Maude's reference to the steps taken to prevent the flooding of the city are a welcome indication of the attention now being paid to the details of the occupation. Both military and economic considerations enter into the permanent success of Great Britain's presence in Mesopotamia. Not only will it be necessary to have a frontier which lends itself to defence, but the territory actually under British influence must be extended far enough to the north to enable the irrigation schemes necessary for the development of the region between Baghdad and the Persian

Gulf to be elaborated without fear of international complications in the catchment area.

The success of the Mesopotamian Expeditionary Force is a triumph of organisation, supported by sound and, it may well prove, brilliant generalship. When we read of "the fierce gales, the blinding dust-storms, lack of water away from the river, and the vigour of the pursuit," we know, too, that without the splendid qualities shown by the troops under his command, Indian as well as British—their dash and staying powers—General Maude could not have reaped the fruits of the long months of painstaking preparation. But when all this is admitted, we shall do well not to make the mistake of over-rating the exploit. For those leaders of public opinion who were fain to see yet another expedition condemned to soul-deadening inactivity, with Kut as the farthest point occupied, it is perhaps not unnatural to celebrate the capture of Baghdad with excessive pæans. Others who have held that the City of the Khalifs was the only possible goal of the British troops after the failure of 1915 will regard its occupation with no less satisfaction, but with more *sang froid*.

The nation has had a long time to wait for the rehabilitation of British prestige in Nearer Asia. But though it comes late, we must admit that, owing to the way in which General Maude and his army have carried out their task, it has now been achieved most handsomely. The political effects of the capture of Baghdad will be in one direction almost unlimited. Probably no other event at this stage could appeal more powerfully to the public mind throughout the bazaars of the Eastern world. The Turkish *communiqués* may avoid all reference to the actual capture, but the story of the long retreat culminating in the immediate fall of the city will be told with all the wealth of imagination of which the Oriental is capable, and will be cited as conclusive proof of the length of Great Britain's arm. So be it. The obligation which this result imposes on the British Empire is to complete and to consolidate our possession of Mesopotamia. In this connection not the least satisfactory feature of the success is that it represents no mere hurried leap into the dark on the heels of a demoralised enemy. General Maude's advance, there is reason to believe, has been supported by the most approved methods of securing his communications, and it is no idle boast when he reports that he is satisfied that he can provide for the necessities of his army in Baghdad.

While, then, the political significance of the success is really great, we need not fall into the error of over-rating its military importance. Apart from the necessity imposed upon the Turks of adjusting their military resources to meet the altered situation in Mesopotamia, the immediate influence of the capture of Baghdad will be restricted to the operations in progress in Western Persia. One portion of the Turkish forces which had invaded Persia was based on Baghdad; the other, or northern column, was more probably despatched from Mosul. Both are retreating before the Russians, and as the southern force can no longer fall back on Baghdad, it will have to find another route, if it wishes to make good its escape. For the rest, distances in the Ottoman Empire are too great for a defeat in one theatre necessarily to react at once in the others. But inasmuch as the disaster to Turkish arms in Mesopotamia implies a shortage of man-power and equipment, so we may look for the same symptoms on the remaining fronts.

From the military point of view the chief significance of General Maude's sweeping victory lies in the tendencies which it reflects. Foremost among these, of course, is the evidence it affords of the capabilities of the British General Staff under the new regime. What has been accomplished in Mesopotamia can be reproduced in every other theatre of the war, and the nation can look forward with the greater degree of confidence to seeing similar results achieved elsewhere. In these circumstances it is impossible to refrain from instituting a comparison with the Salonika Expedition. It was under the old order that this force was condemned to its long spell of inactivity, and the policy was not one that could be hurriedly reversed. But neither along the Western Front nor in Mesopotamia is a marked predilection on the part of the Allied armies for inaction to be observed any longer; and it may be legitimate to hope that a belated effort will now be made to bring the Macedonian Force within the orbit of a general offensive. Certainly if the measure of success gained in Mesopotamia had been secured in Macedonia the military results would have been far-reaching and instantaneous. Relatively, the capture of Baghdad loses some of the importance it would otherwise have from its remoteness from the main theatres of war. In this respect German commentators are right in maintaining that its political influence is greater than its military effect. What they have not realised, however, is all that the victory stands for, nor can they accustom themselves to the idea that it must necessarily entail a permanent occupation of this portion of Turkish territory.

An interesting subject of speculation is the effect of the capture of Baghdad on the situation in Constantinople. If Talaat Pasha is at all superstitious, he may have some misgivings in regard to his capacity to break the tradition of brief Vizirates which has given Young Turkey more than a dozen occupants of that post in eight years. That the Porte will resent the presence of Turkish armies as far afield as Galicia, while large portions of the Empire are being lopped off by their enemies may be taken for granted. But it is equally certain that it will be powerless to do more than enter a mild protest. Possibly by this time the question of money carries more weight with the powers that be on the Bosphorus than such a trifle as the loss of a little more Ottoman territory. German advances amounting to £142,000,000 cannot lightly be lost sight of, however serious the reverse to Turkish arms in a distant vilayet. We may, therefore, expect to find that for the present the ordered policy of subservience to Germany which has held good for so long in Constantinople will be maintained unimpaired, at least on the surface.

The recrudescence of activity in the Caucasus would seem to challenge the statement that the effects of the Turkish reverse in Mesopotamia are not to be looked for so far away. But both here and in part of Persia Russian successes are probably based upon causes which antedate at least the fall of Kut. On the other hand,

it must be remembered that the attack on Kut began as long ago as last December, and it is hardly possible that the Turks should have failed to realise its seriousness before many weeks had elapsed. If neither the Persian nor the Armenian front was weakened in order to send fresh drafts to the Tigris, it is safe to infer that both were denied the reinforcements they had counted upon. To this extent all theatres of war are interdependent, and the fact points to the necessity of synchronising as far as possible the Allied offensive on every front. In Persia the Russian recovery is taking effect along the whole front from Lake Urmiah to Hamadan. Between Sakiz and Sehna, 160 and 80 miles north-west of Hamadan respectively, our Allies are rapidly nearing the frontier. The country does not lend itself to rapid movement; but any considerable measure of success in this neighbourhood must inevitably threaten the line of retreat of the Turkish force farther south, which is retreating from Hamadan. The forces engaged in this theatre are not great; but if the Russians could once more advance in the region of Rowandiz, they would, with the timely help of part of General Maude's army, have a good opportunity of bringing off a minor Sedan.

The sad death of Mrs. Harley, who was engaged in relief work in Monastir, will bring home the precarious nature of the Allies' occupation of that town. Its capture, it will be remembered, was due to a brilliant piece of work on the part of the Serbians and Italians, and in many quarters it has been maintained that, if General Sarrail had been in a position to co-operate with the movement by ordering a general advance all along the line, the success on the left wing would have been even more pronounced. As things are, the Allies were only able to eject the enemy from Monastir; they failed to drive them from the heights commanding the town. Consequently Monastir has remained more or less at the mercy of any guns of moderate range which the Germans could contrive to send to the Bulgarians. Recently the town has suffered from a furious bombardment, which has taken a heavy toll of civilian life. The enemy's position would seem to be too strong to be challenged successfully by a local engagement. Monastir's immunity must be won by a general action in this theatre.

The anomalous situation in Greece continues. In one direction the familiar *komitajs* have made their appearance under regular officers of the Greek army, and have succeeded in ambushing and killing a French patrol. At Patras a somewhat obscure episode, which involved the firing of some shots by Greeks at a French boat, took place in the harbour. Meanwhile, a protest against the blockade addressed to the British Prime Minister by the President of the Athens Bar gave Mr. Lloyd George an opportunity of telling the Greek people some home truths. He pointed out in his reply that the raising of the blockade depends upon the fulfilment of the demands contained in the Ultimatum and the two subsequent Notes addressed by the Entente Powers to the Greek Government. The blockade, Mr. Lloyd George added, would already have been raised had it not been for incidents such as the mining of the Corinth Canal and the continued activity of the Reservists, which give rise to suspicion. Wonderful to relate, the Athens newspapers have allowed themselves to be impressed by this answer—a sure sign that the blockade is having a salutary effect. King Constantine's vocal contributions to current history bear a marked relationship to the music of the German Emperor's legions. Both seem to be launched upon a *pianissimo* movement.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsgatherers who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 20.

The Nile Irrigation Projects.

Sir Murdoch Macdonald, the Under-Secretary of State for Public Works, who, as reported at the time, went last month on a tour of inspection in the Sudan with Sir Ismail Sirri Pasha, the Minister for Public Works, returned to Cairo last week. I understand that this visit has been most satisfactory. It is highly probable that as an outcome of the study of the conditions on the spot the original projects drawn up for the White and Blue Niles may undergo some alteration, or, to be more correct, some extension. The works resulting from this adjustment will be such as to afford Egypt that complete protection from the dangers of high floods of which she stands in such great need, and to ensure her water requirements now and in the distant future, the while they will provide the Gezira with all the water necessary to its development as a cereal and cotton producing area. The modification in the original projects is still under consideration, but I hope to be able to give you some interesting details within the next week or so, if, as I trust, a definite decision is reached by then.

The New Year Honours.

I gather that the list of New Year Honours conferred on Anglo-Egyptian officials, as cabled out by Reuter, is by no means to the satisfaction of the community. By this I do not mean to infer that it is considered that the recipients have not deserved the distinctions bestowed on them; on the contrary, it is recognised that long service or special work done since the outbreak of war has entitled them to these honours. It is, indeed, not the names recorded in the list, but the omissions therefrom that have again evoked comment. It is pointed out that there are several men, officials and others—to mention their names would serve us no useful purpose; nor would they thank me for so doing—who have done most excellent work, both before and since the war, but whose services appear for some mysterious reason to have been entirely overlooked. It is contended that if at this date it is considered opportune to reward men who in a civilian capacity have distinguished themselves by their service to their country, then it is surely invidious to bestow honours on some and persist in passing over others who, by reason of the length or the nature of their services, have just as great, if not greater, claims to recognition.

I pass now to another point, the honour conferred on Judge Bond. When that distinguished lawyer retired from the vice-presidency of the Native Court of Appeal considerable surprise was expressed that no public notice had been taken by the British Government of the eminent services which he had rendered, and the omission was much commented on, not only in British, but also in Egyptian circles. The bestowal of a K.C.M.G. on Judge Bond to-day, in itself a welcome sign that the authorities at home are after all not unmindful of the great work he did during his thirty years' service under the Ministry of Justice, has been hailed with delight by his ex-colleagues and his friends, who, however, sincerely regret that the honour was not conferred on him whilst he was still in office. It is held in many quarters—and very rightly so—that if a man's services with the Egyptian Government entitle him to some mark of recognition from his King, then it is a great mistake for the British authorities to wait until he has retired in order to confer an honour on him. The act savours too much of an afterthought; which is all the more regrettable when as in a case like this one the honour is so greatly merited; and at the same time it does not make the impression on the Egyptian community which it is certainly desirable that the bestowal of distinctions by H.M. the King should create. This is not the first time that an honour for services rendered under the Egyptian Government has been conferred on an English official after his retirement, and the hope is expressed that the practice will not recur.

The Census of Egypt.

A most interesting and instructive lecture on the coming Census of Egypt was delivered on Friday evening last at the Sultania Society of Political Economy by Mr. J. T. Craig, Controller of State Statistics, to whom the work of "numbering the people" has been entrusted. To many it may appear surprising that at the present juncture, when all efforts should be concentrated on winning the great war, the Egyptian Government should decide to undertake such a gigantic and cumbersome task as the taking of a census which one might think could well be put off until more peaceful times had set in. Mr. Craig, however, proved to the satisfaction of his audience the great desirability, in fact the absolute necessity, for the taking of the census next month. In the first place, the war has not stopped the Customs, the Ports and Lights, the Railway, and the Public Health and Agricultural authorities from compiling and recording their usual statistics; and since the census of the people, with all the additional data it gives as to their social and economic condition, fits all these statistics into their places of relative importance and alone enables useful and necessary deductions to be made from them, it follows that there is no logical reason why the census of the people should likewise not be taken. In fact, the omission to take it would seriously affect the utility of these statistics, and would render the proper study of the economic problems created by the war quite impossible. Secondly, it is usual in other countries to take a census at least once every ten years; if more than that interval is allowed to elapse difficulty in comparing statistics is experienced, and in the meantime deductions based on the old figures may lead to serious mistakes. Since the census was taken in Egypt in 1897 and 1907, it follows that it should also be taken in 1917. Thirdly, no effort otherwise available for the conduct of the war is devoted to the work. About 70,000 enumerators have been engaged; almost all of these are Egyptians, and the very few Europeans engaged are either temporarily lent from other Government administrations, or have been exempted from military service, or are in a few cases subjects of neutral countries.

Mr. Craig drew attention to the peculiar difficulties attending the taking of a census in a country like Egypt, amongst them the strong suspicion with which the Government's action is regarded. The people got it into their heads, mainly because they did not understand its real object, that the census was intended as the first measure of a system of new taxation, and that it was preparatory to a general conscription for the purposes of the war. It is absolutely untrue that either of these objects is at the back of the taking of the census. In any case, that it has nothing whatever to do with the war is proved by the fact that the decision to take a census in 1917 was come to as far back as 1913, when Mr. Craig was transferred to the Statistical Department. The illiteracy of the people is also a great obstacle to the

execution of the work, but to overcome that, and at the same time to allay the popular suspicions, special meetings of omdas, sarrafs, and the villagers have been held throughout the country under the direction of the provincial authorities, who have thoroughly explained the situation and the objects of the census to the people. In addition, a propaganda has been carried out in the schools, where every pupil has been given a short pamphlet on the subject, and the masters have explained during school-hours the utility of the census and what is expected of the people. Mr. Craig gave a most lucid exposition of the work which has to be carried out in connection with a census in this country and of the information which has to be collected; and the impression everyone took away with him from this lecture was that everything humanly possible had been and is being done to ensure the success of the numbering of the people, which will take place at midnight on March 6 and 7.

CAIRO, February 27.

The Health of the Sultan.

An improvement has been marked in the health of the Sultan, and his doctors have allowed him to go out for drives. One of the first acts of his Highness after this permission was given him was to drive over to the Residency, in order to thank the High Commissioner and Lady Wingate for the many inquiries they had made as to his progress. Although the Sultan is now receiving people again, it is evident that he is as yet not in a fit state of health to stand the strain of receptions and ceremonies such as he was accustomed to hold before he fell ill. The fever threatens to set in again at the slightest extra exertion or excitement, and his doctors have to watch him very carefully in order to prevent any further relapse.

The Financial Adviser.

Lord Edward Cecil, the Financial Adviser, has proceeded home on leave, and the Council of Ministers has appointed the Hon. Ronald Lindsay, Under-Secretary of State for Finance, to act for him during his absence. As usual, there are all manner of rumours flying around as to the reason for his departure and the date of his return. The facts are that Lord Edward, who has thoroughly earned long leave, is taking it at a juncture when it is extremely desirable that there should be someone at home fully acquainted with local conditions, and qualified to watch over and promote the interests of this country. During his stay in England he will, in addition, endeavour to secure a satisfactory solution to various questions which vitally concern this country's economic future.

At the same Council of Ministers as that at which the appointment of the Acting Financial Adviser was ratified the promotion of Sir Murdoch Macdonald to the post of Adviser to the Ministry of Public Works was approved. Sir Murdoch will still retain the Under-Secretaryship of that Ministry. The promotion will carry with it no increase in pay, as he was already in receipt of an Adviser's salary, but, of course, it gives him precedence over all the other Under-Secretaries. This is but as it should be, seeing that Sir Murdoch, although Under-Secretary in name and therefore, theoretically speaking, only responsible for the executive side of the administration, was at the same time Technical Adviser to the Ministry of Public Works. The decision to grant him the higher title and precedence to which his duties entitled him may be regarded as further recognition of the good work he has done during the past few years.

The Maharajah of Bikanir at the Residency.

The Maharajah of Bikanir, Sir James Meston, and Sir Satyendra Sinha arrived in Egypt this week on their way to London to attend the Imperial Conference. H.H. the Sultan has placed two of his river steamers at the disposal of the Maharajah. The latter is a guest of the High Commissioner at the Residency, where a banquet was given in his honour and that of his fellow-delegates on Friday evening, the guests including T.H. Prince Fuad and Kamel-ed-Din, General Murray, the Ministers, and British Advisers. The Maharajah and his staff have gone to the Canal zone in order to inspect the Bikanir Camel Corps, whilst Sir James Meston has proceeded on a short visit to Luxor.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

The Greek Community.

Following the Greek incident at Famagusta, there has been a regrettable sensation at Larnaca. At a meeting held in connection with a festival the Greek Bishop of Kition, who had referred to the affair at Famagusta, was proceeding to speak on the "Cypriot question," when he was abruptly interrupted by a prominent Greek and those who stood near him. The general body of those present strongly objected to the interruption, and loudly expressed their disapproval; upon which angry recriminations took place, and a disturbance arose that threatened to lead to serious consequences. Fortunately, by the timely intervention of some of those present, peace was restored, and the Metropolitan was able, on the urgent request of the great body of his hearers, to continue his address. The circumstance shows that the Greek community is as far as ever from unanimity in its views on some of the matters which principally occupy its attention at present. The Press delivers homilies on the need of complete harmony, in view of the critical period through which "Greek national life" is passing.

The Lighting of the Capital.

For some time past the electric company which supplies Nicosia has been suffering financially owing to the increasing cost of carrying on, and it has been considering what course should be adopted. There is a question whether it would not be expedient to hand over the administration of its service either to the Government or the municipality, with whom it has entered into *pourparlers*. A meeting of shareholders is shortly to come to a decision on the subject. Many are of opinion that, if satisfactory terms can be arranged, it would be well if the municipality were to take over the administration. Many shareholders of the company, on the other hand, are in favour of holding on, seeing that in normal times, after the war, which is the cause of the trouble, good profits can be assured. In the event of the company continuing its work, it is clear that the terms of existing agreements cannot be rigidly enforced, and that various concessions will have to be made. Economy could, e.g., be effected in the lighting of the streets, and the number of lamps as well as the hours could be reduced during the continuance of the present adverse circumstances.

General News.

In the Provost-Marshall's Court various fines have been inflicted. A Greek who showed a light visible from the sea was fined £5. Several others have been fined smaller sums for refusing to sell articles of food.

Papho has followed Nicosia. Bread of mixed barley and wheat is being made, and sold at 3 piastres (4d.) the oke. The municipality has made arrangements for a supply, at moderate prices, of both kinds of grain. From various parts of this and other districts come accounts that villagers are, in only too many cases, being driven into the hands of money-lenders.

At Nicosia Government officials have recently established a co-operative bakery, which promises to be very successful. There are already about 230 shares of the value of £1 10s. each.

THE TENETS OF ISLAM.

At a meeting of the Sufi Society last Tuesday evening, at 86, Ladbroke Road, Inayat Khan spoke on "The Tenets of Islam." He said that Islam meant peace—with one's soul, with those around us, and with God. Mohammed taught the unity of God and the brotherhood of man. He taught respect for all the prophets, from Abraham onwards, who had preceded himself, and never claimed to be anything more than the servant of God and the giver of a divine message. He discouraged his immediate followers from treating him with too great reverence. If they were on a journey he would not allow them to wait upon him, but insisted on doing his share of such necessary work as going to the bazaar to purchase food, cooking the meals, etc. Four things he taught were fasting, prayer, pilgrimage, and charity. In fasting, men learned to discipline themselves. By praying five times a day they kept a constant watch against temptation. We found time for our meals, and ought to be able to find time for our prayers. The Mohammedan pilgrimage was to the Kaaba, the temple founded by Abraham at Mecca. There men from every country in the world met as brothers. All wore the pilgrim's dress, and every distinction of class or nation was laid aside.

According to a wireless Press message from Rome, Bulgaria has forbidden the export of green vegetables and potatoes to Austria and Germany.

It is semi-officially announced that France has given her adherence to the agreement come to between Italy and Great Britain on July 31, 1916, for the establishment of bases for common action in regard to the Senussi, says a Reuter's message from Rome.

THE TURCO-GERMAN "ALLIES."

AN ARAB VIEW.

That the relations between the Turks and their German taskmasters are not, in fact, nearly so cordial as they are officially represented both in Constantinople and in Berlin has long been known. The ill-feeling has been spreading fast of late—and the fall of Baghdad is unlikely to check its spread. Some interesting particulars of German methods of dealing with their "allies"—and in the country of those "allies" be it noted—are given in an article published recently by *El Kiblah*, the official organ of the Hejaz Government. The following passages are extracted from the article referred to, and they speak eloquently enough, for themselves:—

The mutual animosity and hatred between the Germans and the Turks—especially in the case of the officers—has lately increased in intensity on many grounds, some administrative and political, others connected with the treatment extended by the Germans to the Ottomans, their bullying and contemptuous manner of dealing with them, and also the recent conviction on the part of the Turkish officers that their Government is at present doing all in its power to benefit the Germans and injure themselves.

If a German soldier—not to mention an officer—meets a Turkish officer in the streets of an Ottoman city, he does not return his salute, holding him beneath his notice. The Unionists have given to all the German soldiers first-class tickets on all railways, whilst Turkish officers, up to the rank of major, must travel second-class.

As the railway is not completed between Bozanti and Tarsus, automobiles and special carriages are provided for the transport of officers between these places; these are under German control. If there is a vacant seat in one of these automobiles occupied by one or more German officers a Turkish officer is not allowed to enter it, and is, therefore, subjected to endless trouble and fatigue, whereas these carriages are Ottoman carriages on Ottoman soil. The same conditions prevail between El-Mamoura and Iraliyya on the Baghdad railway.

In all cities of the empire you will find the German troops well fed and comfortable in all respects, whilst the Ottoman troops are in the lowest degradation, weak and hungry. And besides these material evils, the latter have to endure scornful manners and the worst of treatment from the Germans.

The Germans have control of all the commissariat depots in the military centres, and this administration is the life of an army. The Germans and Austrians favour their own men, spend vast sums upon them, and facilitate their welfare in every possible way, whilst the Ottoman troops meet with nothing but brutality, ill-treatment, prejudice, and contempt.

The Ottomans feel bitterly the scorn evinced by the German officers towards the Sheikhs and all persons wearing the dress of Ulema. They will not permit these to enter a railway carriage with themselves, and often drive out Sheikhs from places which they have taken.

This state of things has led to many of the Turkish officers and men giving open utterance to curses against the Germans and the Unionists. Their best way of safety is to be taken prisoner in action, whereby they are delivered from these troubles, of which they can discern no end.

The hatred and despair felt by the officers has caused the Unionists to place no confidence in them, and they, therefore, prefer to entrust the army to reserve officers, taken from the School of Law, the Civil College, and the Polytechnic School, most of whom are very young. The sympathy of the Unionists for these men is because they are saturated with Turanian fanaticism and well trained in the established principles enunciated by the new societies for the overthrow of religious morality and the rights of other Ottoman races.

So much for what concerns the army. We have previously drawn attention to the extent of German interference in the Ministries and civil administrations, and the influence which they exercise in provincial administration. It is as though the Germans were waiting at every door through which they might enter and seize upon Ottoman territory. What most concerns German subjects is to gain possession of commerce in all its branches. You will now find many houses at Constantinople in German hands, and most of the houses in Pera are so crowded with German families that you would fancy yourself in a German city. The German spirit is obvious in every part of those regions.

The Government had pretended to the people that the foreign Capitulations had been removed. As a matter of fact, the Allies were willing to renounce these privileges before the war, on the condition that Turkey maintained her neutrality. But when matters turned in favour of the Germans, these latter opened postal and telegraph offices, in which their own countrymen were employed, the reason alleged being that the Turkish officials of these administrations did not know the German language, and that correspondence was thereby subjected to delay. The Turks now perceive the peril that has come upon them, but they have at their disposal no means of escape from their internal and external calamities.

THE NEW TURKISH MINISTRY.

(FROM A CORRESPONDENT.)

CAIRO, February 10.

The former Constantinople correspondent of *Al Mokattam*, who had exceptional opportunities of acquiring first-hand knowledge of the inner workings of Young Turkish politics, makes the following comments on the recent Ministerial changes in Turkey:—

The resignation of Prince Said Halim does not indicate any material change in the Unionists' foreign policy; for, as Prime Minister, he was but a blind instrument in the hands of Talaat Bey and his compeers of the C.U.P. But the actual acceptance by Talaat of the post is of political importance, even though he had always occupied it in fact if not in name. Talaat is a politician of the subtlest type, who has always carried out his evil schemes through cat's-paws, so that he might eventually be able to evade the responsibility of his acts, and to justify himself before public opinion, which he never ceased to court and before which he has always been anxious to appear as the sincere reformer. His direct assumption of the portfolio of Grand Vizier may, therefore, be taken as an indication of a belated realisation by the Unionists of the critical position in which they are placed, and of their anxiety to withdraw from the odious policy to which they had committed themselves. By those who have studied the character of the man, and learned his ways, no other conclusion can be drawn; for had Talaat still retained the belief in the final success of the policy based on wholesale crimes, committed in the name of a simple, innocent man like Prince Said Halim, he need only have compelled the Sultan to refuse the latter's resignation, or to appoint, in his place, another dummy Grand Vizier.

A fact that lends further support to this line of reasoning is the nomination of Musa Kazem Effendi as Sheikh-ul-Islam and Minister of Wakfs; for Kazem Effendi, although a loyal Unionist, is known to be a man of free conscience and true liberalism, as his career in the early days of the Constitution testifies. Moreover, Khalil Bey, Minister of Justice, has not, as far as is known, sullied his name by the atrocities committed during this war, by the Unionist Government. As President of the Majlis he was noted for the sincerity of his intentions.

All that is known of Ahmed Nassimi Bey, the new Minister of Foreign Affairs, is that he was a bright-witted deputy, ardently supporting the Unionists in the Majlis, and a close friend of Javid Bey.

Ali Murad Bey, the new Minister of Public Works, was not known in the Turkish world of politics, and he may have come to the front only since the outbreak of war. As to Shukri Bey, the new Minister of Education, he was one of the leading Unionists, and had held the same portfolio before the war.

Reuter mentions Shereef Bey as the new Minister of Commerce. There is probably an error in the transmission of this name, as no leading Unionist is known by it, and probably Abdul Rahman Sharaf is meant. He was formerly a member of the Senate and Minister of Education. As to the portfolios of the Ministry of War and Marine, these are still held by Enver and Jemal respectively; and this may be taken as a clear indication that no change is contemplated in the foreign policy of the Empire.

Telegrams just received here from Athens say that the new Minister of Foreign Affairs, Ahmed Nassimi Bey, is a stout opponent and rival of Enver; and that political circles in Athens hold that the unequivocal declaration by the Allies of their intentions regarding the fate of Turkey has led to a deep agitation in Turkish political circles, and a strengthening of the party favouring overtures for compromise with the Allies.

The fact of the matter is that the Turks have had a rude awakening to the dire consequences of their anti-Arab policy, and, too late in the day, they are seeking to cover their fatal error.

Daninos Pasha claims to have discovered in Aboukir Bay the site of Canopus, which before the foundation of Alexandria was the commercial capital of the country and the most important religious centre in Lower Egypt. Among the finds is a great public bath of the Ptolemaic period.

Part 1 Now Ready.

4/-, Post Free.

A NEW ENGLISH TRANSLATION OF THE HOLY QUR-ĀN,

With Arabic Text, Phonetic Transliteration and Explanatory Notes.

AHMADIA MOVEMENT, 41, Great Russell Street, London, W.C.

TANGIER TO TEHERAN.

The capture of Baghdad has afforded me enormous satisfaction, as it must have done to every Briton who has been waiting for the good news ever since gallant Townshend's surrender at Kut. If it had only been delayed a day or two longer, I should have let myself go at length over the history of the city and a description of its appearance to-day. But the ground has been so fully covered by nearly every self-respecting paper in England that I am sure you would not thank me for going over it again in these notes. So I confine myself to advising you to check a great deal of what you have (doubtless) been reading in the papers by reference to the recognized authorities on the subject. Some of the statements that have appeared in certain journals certainly require very careful checking.

To me one of the most satisfactory things about the capture of the city is that it will provide—if necessary—comparatively decent hot-weather quarters for our hard-worked troops. The Baghdad climate is not ideal, as I have remarked more than once; but it is infinitely better than that of the lower reaches of the Tigris; and the buildings, which are more or less intelligently designed to afford some protection from the heat, will give welcome shelter to our men. A *serdâb*, even without a punkah going, is infinitely more comfortable than any tent or hut; and the chance of sleeping on the roofs, well above the plain level, should make a huge difference in the sick lists. For all that, the City of the Khalifs is not such a little Paradise that our soldiers there will turn up their noses at any comforts that may find their way out there. And the Mesopotamia Comforts Fund is still willing to accept donations!

Now, I suppose we are all wondering whether General Maude will sit tight in Baghdad or whether he will push on farther. Presumably he will go on at least to Samarra, or wherever the present railroad of the Baghdad north section of the great German railway may be at the present time. And I imagine that some line of defences will be thrown from that point westwards to the Euphrates. Possibly it may be necessary, for military reasons, to press forward to the foothills; and, of course, a good deal will depend upon what line is followed by the Turkish forces now falling back in haste before the Russians across the Persian border. But, as far as the "prestige" idea is concerned, it seems to me that we have done all that is necessary. Our flag now flies over Baghdad. Kut is amply avenged. As long as we hold Baghdad when peace terms are dictated to the Central Powers (and their dupes) the Arab world will not be likely to forget the lesson.

I read "Union Jack's" letter in last week's NEAR EAST with a good deal of satisfaction. It put a point of view which the Cypriot "flag-waggers" have studiously ignored. If the "Hellenic" enthusiasts were not allowed to sport the Greek flag in the days of Turkish rule, why should they be allowed to do so now? After all, the island has been definitely proclaimed a part of the British Empire; and, in view of its position and of the recent attitude of "official" (or "Royalist") Greece towards our enemies of late, it is unthinkable that it will ever be allowed to become anything else. That being so, would it not be wise for the Cypriot "Greeks" to recognize plain facts? And would it not be wisdom on the part of the powers that be if they took up a firm attitude in the matter once and for all, and made it clear that loyalty on the part of the island is expected, and will be exacted?

A friend recently lent me a batch of letters written from Egypt by one of the young officers of the "new" army, and I have read them with a good deal of interest. Though the writer has a quick eye, a nice appreciation of the glorious colouring of Egypt, and a well-developed sense of humour, it is not his description of scenes and peoples that interests me. It is the evidence they contain regarding the opportunities for "seeing the world" that the war has offered to a number of young men who in ordinary times would have been tied to office stools. The writer of these letters, I happen to know, had for some time had a hankering to "go East" and had been badly disappointed at failing to get an appointment he was after in Persia. Then came the war, and he—good man!—promptly threw up his position and enlisted. He was of the right type to go ahead, and he has risen steadily to captain's rank, and has now been some time in Egypt, where he has been revelling in the many opportunities he has had to try to get at the heart of the Orient. He has made the most of his good fortune, learning Arabic, and seeing as much of native life as he can. He is young; to him Egypt is a very

wonderland, and he writes of it with enthusiasm. If he stays there long enough he will modify his views; but in the meantime he is in luck. And I suppose there must be a great many more like him. In this direction the war must be proving a wonderful educational influence.

One point in the letters referred to illustrates rather well a feature of the Bedawi's character. Our captain and a brother officer had struck up a friendship with a certain sheikh, and on one occasion the latter invited them to go for a ride with him, placing horses at their disposal. As only one of them could be spared at a time the question arose: "Which shall it be?" and one of the officers produced a coin to toss up. "The Sheikh," says the writer of the letter, "looked as black as thunder. He thought for the minute that we were going to offer payment for the loan of the horses." But when he saw the coin spin in the air, the quick study of its uppermost side when it came down, he "tumbled to what was on, the frown disappeared, and he beamed delightedly."

CORSAIR.

NEAR EAST BOOKSHELF.

THE RETURN FLOOD.*

Mr. Algernon Blackwood is master of an art which is peculiarly his own. He usually has uncommon things to say, and whether he is dealing with the occult, or with the fairy lore of childhood, he can always be certain of his readers' interest and attention. The first part of his new book is entirely charming, and quite up to the standard of imagination and style which he has led us to expect of him. We find a small boy obsessed by the idea of "a wave," which comes to him, sometimes in his dreams, sometimes in his waking hours, but always with the same nameless appeal of a force of destiny to his imagination. With the wave there comes also the "whiff," a subtle aroma that carries with it dreams of ages long past, and the vision of four eyes, one pair dark, sympathetic, and truthful, the other light and cunning. Here we have admirable material for the working out of a fantasy worthy of the writer.

We follow the boy into his manhood with no wavering of interest; we see him set on the road to achievement in keen anticipation of what is to follow, as the result of the ever-recurring vision of the "wave." While wintering abroad he meets the playmate of his childhood, and we know that one pair of eyes is accounted for. We follow them to Egypt, and there—either our own mood or that of the author failed us lamentably. Under the warm skies of the East each character returns to the instincts of his and her former incarnations, and we find many of the passages penned with all Mr. Blackwood's skill. But in fairness to the reputation of the author, no more can be said. The story is good enough as far as it goes, but it lacks the sign manual of Mr. Algernon Blackwood. For once we even venture to question his reasoning. Either his theory of reincarnation is insincere, in which case the book becomes bathos, or the ending is hopelessly at fault. As it stands, it is a very good ending for the book of a complaisant writer who cares little for anything but the sales of his work, but it is contrary to all that should have happened were Mr. Blackwood confident of his theme. We admit, however, one possibility in this regard. It may have been the author's intention to show that the moving spiral of time, which, at the beginning of the book had been exactly over the period, thousands of years before, when the three principal characters had played their parts in Egypt together, had risen into another plane ere the story was done, and left the characters to their normal lives again. This is quite possible, but if, indeed, it was Mr. Blackwood's intention to work upon this argument he has absolutely failed to make it convincing, or, indeed, to make the idea plain to his readers.

The book is interesting enough, but this author has given us so many exceptional things in the past that we are no longer content with mere interest. We want a great deal more. We want the conviction of his imagination, caring not a jot what the end might be. We want to thrill as we thrilled when we read "John Silence," or to soar as we soared when we read "Jimbo" and "The Education of Uncle Paul." We do not want a pleasant story from Mr. Blackwood; and that is what he has given us, in at least the last portion of his latest work.

BOOK NOTES.

Yet another book on that Jugoslavia of which we had barely heard in this country before the war, and of which we have heard and read so much of late, is now in the press. This is "A Bulwark Against Germany: The Fight

* "The Wave: An Egyptian Aftermath." By Algernon Blackwood. (London. Macmillan and Co. 4s.)

of the Slovenes, the Western Branch of the Jugoslavs, for National Existence." It is written by Bogumil Vosniak, and will be published by Messrs. Allen and Unwin.

Mr. Herbert Jenkins announces "The Tenth (Irish) Division) in Gallipoli: An Account of its Exploits at Anzac and Suvla Bay," by Major Bryan Cooper. General Sir Bryan Mahon writes an introduction to the book, and Mr. Redmond, Sir Edward Carson, and other prominent politicians contribute appreciations.

Mr. Murray has published "The Straits Impregnable," by Sydney de Loghe. The writer, an Australian, served in Egypt and at Gallipoli until his health broke down.

The American Book Supply Company has issued (1s. net) "Slav Achievement in Advanced Science," by Dr. B. Petrovitch, Professor at the University of Belgrade.

BOOK RECEIVED.

The Defences of the British Empire. By Archibald Hurd. Being Volume II. of the International Information Series. (London: The Athenæum Press. 1s. net.)

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

MARKO KRALJEVITCH AND THE SERBIAN SOLDIER.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—If the report of the lecture by Miss M. E. Durham before the Anglo-Russian Literary Society on March 6 is correctly given in your issue of March 9, may I be allowed to express the opinion that the characteristic of the Serbian national hero, Kraljevitch Marko, and, I am afraid I must add, of the whole Serbian national poetry alluded to in this lecture, is misleading. Kraljevitch Marko is not at all strange, but perhaps the most human of all legendary heroes. It is necessary to state this in order to render justice to the Serbian peasant, who is at the same time the Serbian soldier of to-day, of whom Kraljevitch Marko is the typical representative.

Both Kraljevitch Marko and the Serbian soldier are most kind-hearted and just by nature; far from being "blood-thirsty," they are excellent fighters in the same sense as one can now describe the British soldier as an excellent fighter, though we all know that the British soldier is most humane, kind-hearted, and generous.

As to the character of the Serbian soldier, we have the best chance to refer for particulars to the 600 and more British women who have been working in Serbia during the present war. In their few letters and articles already published there is more and better information about the Serbs than in all the books written before by Balkan travellers, who were always in a great hurry, and had just time enough to gain superficial impressions and particular sympathies or antipathies, but certainly never to understand or to appreciate thoroughly circumstances and conditions so complicated and so different from those in Western Europe.—I am, etc.,

(Dr.) M. CURCIN.

A NEW TRANSLATION OF THE KORAN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Mr. Q. Abdullah does not think it creditable to me merely to jeer at the "facts" relating to the advent of a Messiah. No facts were presented, Sir. The question of whether or not the Moslem faith recognises a Messiah did not even arise. The advent of a Messiah was not discussed. What I assailed was the attitude of the author in attempting to force upon readers by sheer iteration the belief that the Messiah, "whose advent was foretold by almost all the great prophets of the world," had already made his appearance, and that he was none other than a certain gentleman mentioned by name. To call this repulsive form of canvassing "facts," and to blame me for failing to consider them or for not judging them on the grounds alleged to have been presented, argues an audacity the like of which is to be found nowhere, save in the complacent offer held out to us by that obscure Asiatic mortal, that heavenly envoy. Mr. Abdullah is under a delusion if he thinks for a moment that anybody could take such fantastic notions seriously. Jeer! Indeed, what could anyone do but jeer at those empty platitudes, these fevered imaginations of an unbalanced mind? Mr. Q. Abdullah has grossly misread me. Else he is a hopeless specimen of dialectician. Nothing can be more irrelevant than his retort embodied in the truism that "if the Azharites resent the claims . . . of a Divine Messenger, this does not prove that his mission is not divine," the impli-

cation being that I inferred the non-divine character of the "Messiah" from the rejection of his claims by the Azharites. I did nothing of the kind. I merely made the statement that the Azharites would resent the "Messiah's" claims. I did not conclude therefrom that the theme was absurd. Absurdity had already been postulated of the idea. The assertion that the Azharites would be roused to indignation followed incidentally. Mr. Abdullah cannot achieve much by setting up supposititious arguments of his own and then setting out to destroy them.

I am said not to have judged the position fairly in most cases where I pointed out departures from the English translators. I cannot resist the impression that this is a grossly unfair indictment. It was the linguistic side of the publication I appreciated, and to which I devoted special attention. In several instances I acknowledged the superiority of the new version. In connection with the fourth verse of El Bakara, e.g., I stated explicitly that the new version was more faithful to the Arabic than either Rodwell's or Palmer's. I expressed the opinion that the view taken by the author in his comment upon the verse was broader and more enlightened. In connection with verse ten I emphatically endorsed the author's version as against that of previous translations, and mentioned approvingly that more than one authority were adduced in support of the alteration. The rendering of verse sixteen was described as ably explained. Where I did not agree with the author's rendering I not only gave reasons for my dissent, but I also used very guarded language.

Mr. Abdullah lays down what he styles principles of supreme importance which should be carefully followed in translating the Koran. He is presumably referring to the "Nasikh and Mansookh." Certain verses of the Koran modify or interpret others which are earlier in point of time. It is arguable that this makes it necessary in a commentary to interpret earlier verses in the light of later ones pertaining to the same theme. But by no stretch of the imagination can it be maintained that in a translation the same rule could be applied. Here is an instance in point. The verse enjoining Moslems in a state of intoxication not to partake of drink until that state is past may be, and, in fact, has been, taken (I admit, erroneously) to imply that it is not sinful to partake of drink. Now, it would be perfectly permissible for a Moslem as such, or a commentator, to judge the position in the light of the later categorical admonition. But it would savour of the ludicrous to extend the principle to the etymological side of the problem. The consistent application of such a rule would contort the version altogether out of shape. The objection taken to such rendering as that God is deceived by the people or that God mocks at the people is perfectly justified. But the condemnation of this form of rendering should not rest—and, indeed, does not rest—on its being inconsistent with the accepted attributes of the Deity. Mere inconsistency would not warrant placing a different construction on a word. If inconsistency existed, a faithful translation would have to reveal it. It is not the business of a translator to furnish apologia.

Having grandiloquently established this "principle of supreme importance," Mr. Abdullah commits a remarkable jump of thought by concluding that "this is why the Moslem authors have the right to say that the English translators of the Koran have failed to manifest the truth." From the importance of a principle, it surely does not follow that a certain group have erred of whose observance or non-observance of that principle nothing is affirmed. To state that the observance of a rule A is a condition of success, and then, without further ado, to adopt this as a basis for condemning X without taking the trouble to charge X with neglect of that rule, is a glaring instance of incoherent reasoning.—I am, etc.,

S. L.

It is reported in Rome, says the *Morning Post's* correspondent in that city, that 4,000 Italian troops have landed in Corfu. The troops are said to be commanded by an officer belonging to one of the other Allies.

From a trustworthy source the *Nederlander* learns that disturbances recently broke out in Serbia, and were "bloodily suppressed" by the Germans. The demonstrators were chiefly women.

To-morrow is the birthday of H.R.H. Princess Victoria.

The Duke of Westminster has left London for Chester.

Lady Roper Parkinson, the hon. treasurer of the Montenegrin Red Cross and Relief Fund, has received a cheque for £2,500 from the New South Wales Government.

Sir W. E. Garstin has been elected an hon. member of the Institution of Civil Engineers.

Prince Bibesco, the first secretary of the Roumanian Legation, has left London for Paris on a brief visit.

M. Boeresco, secretary of the Roumanian Legation, has returned to London.

Lady d'Abernon has accepted the presidency of the newly created Kingston Division of the Red Cross Society, which embraces Kingston, Surbiton, Molesey, the Dittons, and Esher.

Mr. George Lloyd, M.P., who has lately been awarded the D.S.O., is Member of Parliament for West Staffordshire, and an authority on the Near and Middle East. About twelve years ago he conducted a special inquiry into the future of British trade in Asiatic Turkey and the Persian Gulf, and he has since taken much interest in that region. The D.S.O. has been bestowed upon him in recognition of his work as liaison officer, and the official announcement states that his duties were carried out "with the utmost skill," and were such as to place him in constant danger of his life.

Although dated January 1, the announcement that "The King has been graciously pleased to appoint General Sir Francis Reginald Wingate, G.C.B., G.C.V.O., K.C.M.G., D.S.O., to be his Majesty's High Commissioner for Egypt; and Dayrell Eardley Montague Crackanthorpe, Esq., to be a Counsellor of Embassy in his Majesty's Diplomatic Service," has only just been published in the *London Gazette*.

Mr. William Frank Arthur Rattigan, who has just been promoted to be a First Secretary in the Diplomatic Service, has a good knowledge of Arabic. He has served in Tangier—where he acted as Chargé d'Affaires on several occasions—and in Cairo, as well as in Vienna, The Hague, and Berlin. On the outbreak of the war he was lent to the War Office for service with the General Staff, and was attached to the Sixth French Army and the Belgian Army for a short time.

An engagement is announced between Captain J. W. D. Cook, Army Service Corps, son of Mr. and Mrs. Walter H. Cook, Chadhurst, Potters Bar, Middlesex, and Yvonne Marie Fernande Schaar, daughter of Mr. Julien C. Schaar, barrister, Cairo, and Mrs. Schaar (née Maria de Boek von Overloop).

The French Government has just conferred the Médaille des Epidémies in the varying degrees upon Dr. Frances Ivens, head of the Scottish Women's Hospital at Abbaye Royaumont, and other members of her staff as a mark of its appreciation of their unwearied

services to the French wounded during the war. Amongst the doctors who have received the decoration is Dr. Marian Wilson, assistant doctor of the Scottish Mission Hospital at Hebron, who has been working at Abbaye Royaumont for the past sixteen months. The hospital, which is entirely staffed and worked by women, began with 100 beds, but increased its numbers to 400 last year, in response to the special request of the French military authorities.

On Saturday last, in Holy Trinity Church, Eltham, a marriage was solemnised between Lieutenant H. H. Patchell, R.A., of the Canadian Field Artillery, and Miss Ethel May Simmons, of Eltham, daughter of Mr. George C. Simmons, of Constantinople.

The French Consulate at Salonika has published the banns of the forthcoming marriage of General Sarraill to Mlle. de Joannis, a member of the corps of French nurses in Macedonia.

Miralai Savile Bey, the recently appointed Governor of Darfur, had an enthusiastic reception upon his arrival at El Fashr. He was met by MacMichael Bey, Acting Governor MacLaine Bey, O.C. 13th Sudanese, and the majority of the Egyptian officers, native notables, and sheikhs, and large crowds lined the streets leading to the Mudiria.

A farewell party in honour of H.E. El Lewa Kelly Pasha, O.C. Cavalry and Mounted Infantry, was held at Shendi on February 4, before his departure for Egypt, which took place on the following morning.

Mr. J. G. Mathew, who has been transferred from the Sennar Province to the Red Sea Province, left Khartoum on February 16 for Port Sudan, with Mrs. Mathew, to assume his new duties.

M. Caclamanos, the representative of the Greek Provisional Government of M. Venizelos, has arrived in Petrograd from London to take up his duties.

Temporary Capt. Frank Fisher, K.R.R.C., has had the M.C. conferred upon him. The *London Gazette*, in notifying the appointment, says: "He went forward and rallied some men under very heavy fire. He set a splendid example of courage and coolness throughout." In civil life Captain Fisher is on the London staff of the Imperial Ottoman Bank.

The Vice-Chancellor of Cambridge University has been informed that the late Mrs. Louisa Logie, of St. Andrew's, Cambridge, has bequeathed £1,000 to the University as a memorial of her late brother-in-law, William Wright, formerly Professor of Arabic in the University and for the advancement of teaching Arabic, the accumulated income to be applied triennially to either a prize or scholarship for the benefit of graduates of the University born in the United Kingdom and not being Jews.

If you are willing to help The Serbian Army SEND YOUR DONATION FOR THE SERBIAN RED CROSS

to the Serbian Legation in London, which
is alone authorised to collect funds in Great
Britain and the Dominions for the "Serbian
Red Cross Society."

There is a separate fund for the RELIEF OF THE DISTRESS OF THE SERBIAN CIVIL POPULATION

at the disposal of the Serbian Minister, from
which money is sent where it is most urgently
needed. The address of the Serbian Legation
is 195, Queen's Gate, S.W.

An address will be given at the Overseas Club this afternoon, at 5 p.m., by Colonel Sir Thomas Holdich, on "Baghdad, Past and Present." Admission will be by tickets only, a limited number of which may be had on application to the Hon. Organizer, the Overseas Club, General Buildings, Aldwych, W.C.

APPOINTMENTS, PROMOTIONS, ETC.

Our Cyprus Correspondent writes:—

It is stated that Mr. W. Bennett is to be appointed Chief Secretary to Government. Mr. Bennett served in the Chief Secretary's Office in Cyprus for four years, and subsequently held other Colonial appointments.

Mr. Moody, who has directed the detective department of the police, has accepted an appointment on the Gold Coast, and is leaving the island shortly.

The *Sudan Times* announces that the following transfers have been approved:—

Bimbashi A. W. D. Bentinck, 9th Sudanese, to Equatorial Battalion.

Bimbashi R. A. Colville, Sobat-Pibor District, to 15th Sudanese.

Bimbashi (temporary) A. F. Vingoe, Sobat-Pibor District, to 15th Sudanese.

Bimbashi (temporary) W. R. Barker, Khartoum District, to Equatorial Battalion.

Bimbashi (temporary) E. G. Warren, 4th Battalion, to 13th Sudanese.

Lieutenant E. T. N. Grove, Buckinghamshire Yeomanry, has been attached to the Egyptian Army as Special Service Officer with the temporary rank of Bimbashi and attached to the 9th Sudanese for duty.

Captain G. E. S. Woodyatt, Lancashire Fusiliers, has been attached to the Egyptian Army as a Special Service Officer with the temporary rank of Bimbashi, and attached to the 9th Sudanese for duty.

The *Gazette* announces that the King has granted permission to the following officers to wear the decorations (as mentioned against their names) conferred upon them by the Sultan of Egypt:—

ORDER OF THE NILE, GRAND CROSS (1st CLASS).

Lieut.-Gen. (temp. Gen.) Sir Archibald James Murray, K.C.B., K.C.M.G., C.V.O., D.S.O., Col. R. Inniskilling Fus.

Lieut.-Gen. the Rt. Hon. Sir John Grenfell Maxwell, G.C.B., K.C.M.G., C.V.O., D.S.O., Col. R. Highrs.

ORDER OF THE NILE, 2ND CLASS.

Maj.-Gen. John Adye, C.B.; Maj.-Gen. Arthur Lynden Lynden-Bell, C.B., C.M.G.; Maj.-Gen. William Eliot Peyton, C.V.O., C.B., D.S.O., Col. 15th Hussars; Maj.-Gen. Alexander Wallace, C.B., Indian Army; Maj.-Gen. William Arthur Watson, C.B., C.I.E., I.A.; Maj.-Gen. Sir Alexander Wilson, K.C.B., Col. A. and S. Highrs.

ORDER OF THE NILE, 3RD CLASS.

Local Lieut.-Col. James William Barrett, C.M.G.; Col. (temp. Brig.-Gen.) Roger Courtenay Boyle, C.B.; Col. (temp. Maj.-Gen.) Henry George Chauvel, C.B., C.M.G., Australian I.F.; Lieut.-Col. and Brevet-Col. Skipton Hill Climo, C.B., D.S.O., Punjabis, I.A.; Col. Rudolph Robert Basil Aloysius Augustine, Earl of Denbigh and Desmond, C.V.O., A.D.C.; Col. James Fallon, A.M.S.; Col. William James Smyth Fergusson (retd. pay); Lieut.-Col. Stannus Geohagan, C.B., I.A.; Col. George Charles, Earl of Lucan (Res. of Off.); Brig.-Gen. (temp. Maj.-Gen.) Henry Timson Lukin, C.B., C.M.G., D.S.O., S. African Defence Forces; Lieut.-Col. and Brev. Col. (temp. Maj.-Gen.) Neill Malcolm, D.S.O., A. and S. Highrs.; Capt. (temp. Lieut.-Col.) Stephen Hungerford Pollen, C.M.G., (Res. of Off.), late Wilts. Reg.; Lieut.-Col. (temp. Brig.-Gen.) John Buchanan Pollok-McCall, C.M.G., retd. pay, R. Scots Fus. (Res. of Off.); Col. Edmund Ironside Ward; Col. (temp. Brig.-Gen.) Harry Davis Watson, C.M.G., C.I.E., M.V.O., I.A.

ORDER OF THE NILE, 4TH CLASS.

Lieut.-Col. William Frank Bainbridge, C.M.G., D.S.O., I.A.; Capt. Ernest Herbert Campbell Bald, M.C., M.G.C., (Motor), Res. of Off., late 15th Hussars; Lieut. (temp.

Capt.) James Barber, R. Warwick Reg.; Capt. and Brev. Maj. Tarn Pritchard Bassett, D.S.O., R.E., attd. I.A.; Col. Guy Hudleston Boisragon, V.C., I.A.; Lieut. (temp. Capt.) Alfred Bryant, M.C., R.A.; Capt. Arthur John Herbert Chope, D.S.O., Gurkha Rifles; Temp. Capt. F. H. Colson, Special List; Capt. Alan Geoffrey Charles Dawnay, Coldstream Gds.; Temp. Maj. Maurice Gerald Holmes, A.S.C.; Lieut. (acting Capt.) Richard Francis Knight Gooch, M.C., Yeo.; Capt. Stuart Grant-Dalton, D.S.O., Yorks Reg. and R.F.C.; Lieut.-Col. Charles Levenax Haldane, C.M.G., Gurkha Rifles; Maj. (temp. Lieut.-Col.) Godfrey William Vanrenen Holdich, D.S.O., R.A.; Sec.-Lieut. Brainerd Arthur Robinson Jones, Cheshire Reg.; Capt. Patrick Lindsey Price Lang, K.O.S.B.; Temp. Maj. F. S. Lyster, Special List; Capt. James Douglas Macindoe, M.C., Scots Gds.; Sec.-Lieut. (temp. Capt.) Edgar James Merry, Welsh Reg.; Maj. Llewellyn Partridge, Yeo.; Capt. and Brev. Maj. George Forder Perkins, Hamps. Reg.; Lieut. (temp. Capt.) Stuart Keppel Reid, R. Sussex Reg.; Maj. Arthur Justin Ross, D.S.O., R.E. and R.F.C.; Temp. Capt. Helperus Andrias Van Ryneveld, M.C., R.F.C.; Temp. Lieut. (temp. Capt.) George Francis Scott-Elliot, K.O.S.B.; Capt. Harry Ben Le Despencer Tree, Inf., I.A.; Lieut. Christopher John Radcliffe Turner, Sikhs; Maj. (temp. Lieut.-Col.) Richard Lancelot Waller, R.E.; Sec.-Lieut. Claud Herbert Williams, Yeo.; Capt. John Henry Reginald Yardley, D.S.O., R. Inniskilling Fus., S.R.

OBITUARY.

OMAR PASHA SULTAN.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 27.

A familiar and distinguished figure has disappeared from Egyptian society in the person of Omar Pasha Sultan, who died suddenly last week at Minia. Omar Pasha, who was only thirty-five years of age, was the son of Sultan Pasha, first President of the National Council, and was an exceedingly wealthy man, owning large estates in Upper Egypt. At one time he was said to be an active supporter of the Egyptian Nationalist movement, but he never took any prominent part in politics, and will be best remembered for the great interest he took in Arab art, local industries, and horse-breeding, and for the generous support he always gave to all efforts to promote any of these objects.

MAJOR R. M. RICHARDSON.

The death occurred on March 6 at Offley Holes, Hitchin, of Major Robert Mervyn Richardson. Born in Edinburgh in 1857, the son of Mr. James Richardson, F.R.S.E., he was educated at the Edinburgh Academy, Loretto, and Trinity Hall, Cambridge. He joined the 1st Battalion Seaforth Highlanders when they were in India in 1880, and served with them in 1882 in Egypt under Lord Wolseley. He was present at the Battle of Tel-el-Kebir, and was awarded the medal with clasp and the Khedive's star. He afterwards joined the 20th Hussars, and took part with them in 1885 in the Battle of Ginniss. Later he served in the Camel Corps in the expedition for the relief of General Gordon. In 1890 he was transferred to the 14th (King's) Hussars, and served with them through the South African War. Major Richardson retired from the Army in 1903 with the rank of major, but in 1906-8 he acted as major and lieutenant-colonel of the Middlesex Imperial Yeomanry. He married, in 1898, Helen Charlotte, daughter of the late Mr. R. B. Croft, of Fanhams Hall, Herts.

MRS. HARLEY.

In a message dispatched from Salonika on the 7th inst. Reuter's correspondent announced:—"Mrs. Harley, a sister of Lord French, who was in charge of a motor-ambulance unit with the Serbian Army, was wounded this afternoon at Monastir, whither she had gone on duty. The enemy started to shell the town, and a shell burst near the ambulance in which she was seated." Unfortunately the wound proved fatal. Another Reuter's message, sent the following day from Serbian Headquarters, stated:—"Mrs. Harley died almost immediately as

the result of a wound in the head. Her body is being transferred to Florina, and thence to Salonika, where it will be deposited pending the completion of the funeral arrangements at the Scottish Women's Hospital, where Mrs. Harley's eldest daughter is working. Her youngest daughter will accompany the body to Salonika, but she has expressed her intention to return to Monastir to continue her work there."

In the autumn of 1914 Mrs. Harley went to Royaumont with a hospital unit, sent out from Edinburgh for the use of the French troops, and was subsequently appointed administrator of a second unit at Troyes, provided by the authorities of Newnham and Girtton Colleges. Subsequently she accompanied the French Expeditionary Force to Salonika, and in October, 1915, she went to Ghevgheli, where she remained until its evacuation by the Serbians. She then returned to Salonika, where she stayed till the summer of last year. In recognition of her splendid services with this unit she was presented by the French Government with the Croix de Guerre. Later in the year Mrs. Harley took out from England to Salonika a flying column of motor ambulances which was attached to the Serbian Army, and she worked with the American unit of the Scottish Women's Hospital. In December last she devoted herself to work in connection with the relief of Serbian civilian refugees in Monastir, where she was killed.

A special correspondent at Salonika, in a message dated March 8, says:—"The remembrance of this never-tiring, always-smiling, white-haired lady will long remain with those who have known the Monastir front during the present winter. She was satisfied with nothing but the hardest work as close up to the line as possible. I recall stopping to talk with her and one of the English girls who drove the cars of her ambulance one afternoon in the streets of Monastir during a bombardment, when a shell whistled loudly past overhead. Mrs. Harley only smiled quietly. Danger could deter her from the work she had taken up no more than the cold, exposure, and fatigue she met so constantly and so cheerfully while working for the Serbians, whose cause she had made her own, and for whom she has now given her life."

Another message, sent off on Saturday, reports:—"Though this was a bleak and windy day, the funeral of Mrs. Harley, sister of Viscount French, which took place at five o'clock this afternoon in the British Military Cemetery at Zeitinlik, was a most impressive ceremony. The coffin was preceded by British and Serbian bands, and by a Serbian guard of honour. It was followed to the grave by Prince George of Serbia, General Milne and all the staff, Earl Granville, Admiral Troubridge, the British Admiral commanding this station, all the members of the Serbian General Staff, all the Serbian Ministers and high officials now in Salonika, and by an immense crowd of officers of the French, Russian, Italian, and Serbian armies. Mrs. Harley's two daughters were present as chief mourners. A touching funeral oration was delivered over the grave by the Serbian Minister of the Interior, M. Yovanovitch. The Serbians are deeply affected by the loss of this heroic Englishwoman, whom they regarded as one of the greatest of foreign benefactors of their nation in this war."

Lieutenant William Frederick Waller Hills, Royal Flying Corps, who was killed in action on March 6, was the elder son of Colonel E. H. Hills, C.M.G., F.R.S., and of Mrs. Hills, 1, Campden Hill. Born in 1893, he was educated at Horris Hill and Eton, and at the outbreak of war he had just completed his second year as an undergraduate at Trinity College, Cambridge. He obtained a commission as second lieutenant in the R.F.A., and was a member of the first Salonika Expeditionary Force, taking part in the advance into Serbia. He returned to England in May, 1916, in order to join the R.F.C. Immediately on completion of his training he was appointed instructor, and after a short period joined a service squadron and went to the Front in January last.

The death took place at Cairo on February 16 of Maitre Lusena Bey, one of the leading members of the Mixed Bar, Professor

of Procedure in the Sultanieh School of Law. Lusena Bey was born in Cairo in 1855, of Italian parents, and studied law in Italy, where he was admitted into the Italian parquet at the age of 19. Shortly after the mixed tribunals were established in Egypt he returned to that country, and had since been connected with its legal administration both as lawyer in the Mixed Court of Appeal, and subsequently as professor in the Sultanieh School of Law. Many of the leading members of the Courts in Egypt, and even some of the Ministers, were his students. He was the author of several legal works.

DOMESTIC ANNOUNCEMENT.

DEATH.

WILSON.—On the 10th inst., at Clifton, the Reverend Charles Thomas Wilson, M.A., lately Rector of Hatch Beauchamp, and formerly of the Uganda and Palestine Missions and Vicar of Totland Bay, aged 65.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach.

Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troödos.

For Tickets and further Particulars, apply to

NAJEM HOURY & SONS,

THE DARDANELLES COMMISSION

Those who opposed the appointment during the war of a Commission to inquire into all the circumstances of the Dardanelles Expedition are entitled to urge on their own behalf that no one at the time could have anticipated the revelations which have actually been made in the Commission's First Report. It was generally accepted that an attempt to reach Constantinople was justified by the results which its success promised, and that the unsatisfactory way in which the enterprise was carried out was responsible for its failure; but inasmuch as the chapter had been closed by the withdrawal from Gallipoli, an inquiry into the conduct of the operations seemed hardly desirable while the war was still in progress. What was not realised by the public was that there was, perhaps, less need for inquiry into the military part of the expedition than for a rigorous examination of the circumstances in which the British Government came to undertake the venture. The first report of the Commission deals exclusively with the origin and inception of the attempt to force the Straits, and it reveals a tragic and almost incredible state of affairs. Its findings carry a lesson written for all time in letters of blood across the pages of British history. There can, therefore, be no doubt at this stage regarding the wisdom of instituting an inquiry; and, although the whole subject may be considered as the peculiar concern of the British people, their bitter experience is not without interest for the world at large. It is well for the nation to show that it has not shrunk from a frank investigation of its mistakes, and in the light of the fact that a new Government is now in power, it is possible to make known the results of the inquiry, however humiliating they may be, without affording encouragement to the enemy and disheartening our Allies.

The proposal to attack the Dardanelles, after Turkey's declaration of war, was first made at a War Council in November, 1914, by Mr. Churchill, First Lord of the Admiralty, who put forward the suggestion as "the ideal method" of defending Egypt. Considerations of transport at that time prevented the suggestion from being carried into effect. But when on January 2, 1915, the Petrograd Government asked that, if possible, a demonstration should be made against the Turks with a view to relieve the pressure on the Russian forces in the Caucasus, the project of an attack on the Dardanelles assumed a different aspect. It seemed to offer the only means of giving the Russians any practical assistance. We do not need to follow the report in its careful examination of the different phases through which the desire to help our Allies passed before it materialised in the actual operations at the Dardanelles. The leading personalities in the British War Council at that time were Lord Kitchener, Secretary of State for War, and Mr. Churchill. The former was engaged upon the gigantic task of expanding the British Army to meet the needs of the Western Front; and in so far as he comes under the stricture of the Commissioners, it may be well to remember that he probably paid little heed to politicians and their councils, beyond accepting their endorsement of his decisions. Lord Kitchener held that not a man could be spared for any new enterprise. He recognised the obligation of doing what could be done to support the Russians, and, although not hopeful of the actual results, considered a naval demonstration at the Dardanelles as the only feasible course. Mr. Churchill, as we have seen, had entertained the idea of

a serious attempt to force the Straits some weeks previously. He had been obliged to abandon it; but in the opinion of the Commission he seized the proposal of a naval demonstration, and proceeded to expand it into his former scheme. Under the conditions which governed the conduct of affairs in Great Britain at that time Mr. Churchill experienced little difficulty in carrying the War Council with him, if, indeed, any such definite expression is applicable to the haphazard methods which supplied the motive power of the war. The picture drawn by the Commission may be briefly described. On the one hand, there was Mr. Churchill, enthusiastic for a venture which he had made particularly his own; his immediate influence was restricted to the Navy, and he was prepared to make the attempt to force the Straits with a naval force alone. Lord Kitchener, on the other hand, was content to let the Navy do what it could, and at first he was only concerned to see that the Army was not to be used in the scheme. Further consideration showed both Ministers that the employment of troops was inevitable, and before the initial bombardment took place Lord Kitchener had yielded reluctantly on this point. At the last moment, however, owing to the state of affairs in other theatres of war, he refused to allow troops to leave England for the purpose. They were liberated three weeks later; but by this time the naval attack had failed, the enemy had received full warning of what was intended, and was given time to strengthen his defences before the land operations could be begun. Great Britain was now committed to an enterprise from which it was felt she could not draw back, and the "legitimate gamble" was persisted in, under the impression that failure would entail a serious blow to British prestige, until at last the fruitless sacrifice of life compelled the gamblers to cut their losses by withdrawing the ill-fated and costly expedition.

A lurid light is thrown by the Report on the conditions under which the war was being conducted during the inception of the Dardanelles venture. Nominally the direction of the war was in the hands of a War Council, a Committee of the Cabinet with some experts added, "but the main responsibility rested on three members of the Council—namely, the Prime Minister, the Secretary of State for War, and the First Lord of the Admiralty." In reality there was no central control of war operations. Lord Kitchener's experience and his commanding personality left him supreme in regard to all military matters, and Mr. Churchill usurped the same rôle in naval affairs. For the rest, the War Council appears to have conceived its functions as being limited to an endorsement of the decisions arrived at by these two Ministers. Instead of a body of strong-minded men, co-ordinating expert advice and keeping in their hands all the wires along which they could radiate the necessary motive power to the various parts of the complicated machinery, we are introduced to a Council which assessed its own utility so low that it saw no need to meet for two whole months at a time. As three Ministers out of six left matters almost entirely in the hands of the other three, it is not difficult to gauge the value of their contribution to the conduct of the war. On their behalf, however, it may be urged that the combination of the Prime Minister, the Secretary of State for War, and the First Lord of the Admiralty seemed to provide all the mechanism necessary for the prosecution of the war. This would have been the case, if Mr. Asquith had been equal to the part he was called upon to play. Unfortunately, he does not seem to have taken an interest in the war in any way commensurate with his important position. The blight of amateurism and *laissez-faire* dominated the proceedings of the Council. Experts attended its discussions, but their continued silence passed unheeded by the Prime Minister; neither curiosity nor politeness prompted him at any time to inquire what their views might be in regard to the fateful decisions then being taken. He assured the Commission that there was "no operation in the whole of this war which promised better results than the Dardanelles operation"; yet, in the form in which the operation received the sanction of the War Council, it promised no results at all, for no sane man could have

imagined that Constantinople could be captured and held by a fleet alone. "None of the responsible authorities," say the Commissioners, "appears to have paid much attention to the course of action which it would be necessary to adopt after the passage of the Dardanelles had been forced." Nearly every page of the Report contains similar evidence of culpable negligence, ignorance, or indifference. There was no reason why a body of men who had persistently refused to believe in the possibility of war and to prepare for war should have shown themselves better qualified to conduct the war when it came; but honesty and patriotism ought to have prompted them to stand on one side before they brought the country to the verge of irreparable disaster. In spite of them, however, the British Empire stands firm and determined, and will yet win through. Out of the evil has come good—a people that has found itself and that is united as never before. Even the tragedy of the Dardanelles has produced an imperishable epic of national heroism; and with the knowledge that the past mistakes are not likely to be repeated in this war, the country turns from the contemplation of them full of confidence for the future.

THE GIFT OF TONGUES.

(FROM A CORRESPONDENT.)

The recent opening of the School of Oriental Languages by his Majesty the King set my mind humming to the tune of bygone memories. Of the larger sweep of the Far and Middle Orient I know nothing, but on reading the account of the ceremony in Finsbury Circus the other day I found that it revived the pleasant, half-forgotten lilt of tongues that was once so familiar to me in the Near East. And in some strange way it emphasises the fact of war. Of all those countries where in former days the dialects of the peoples rang in my ears with their quaint ring of the Orient but one remains beyond the fringes of Armageddon. Greece, the proudest of them all, full fed with glorious memories as she was, remains apart—her territories, violated, it is true—a fallen nation, drugged in dishonour to an inglorious peace.

All this is, however, beside the mark, because one does not include the Greek language with those of the Orient. But on the occasion of my last journey through the Near East I stayed among the Grecian hills, and the language of the peasants is tribute of a memory the flood of which is entirely Oriental. Egypt is, of course, predominant. Egypt with its sun and its splendour, its changeless memories, and its mosques and minarets from which the muezzin voices the long-drawn call to prayer. And here we have the true tongue of the Orient, rich and ancient. I do not know what the vocabulary of the Arabic language is, but I know that it is far beyond the knowledge of all but a very few scholars who have devoted years to its study. The ordinary "pigeon" Arabic is not difficult to learn. Englishmen frequently speak it fluently and well. When once the guttural sounds are mastered the rest is easy and does not present difficulties of pronunciation. The disheartening part of the affair is when, after a couple of years' practice in the language, the unhappy linguist attempts to extend his knowledge by attending a lecture or speech by any well-educated native. The odds are greatly against his being able to understand more than about 10 per cent. of the words used! Indeed, for the casual student of Arabic the way seems literally to gape with pitfalls. Try as he may, he always seems to be just short of the knowledge he wishes to acquire. I have given one instance—the same sort of thing will probably happen if a visit is paid to the theatre or music hall. The language used may be Arabic, but the singer may hail from Syria, in which case our student might just as well be listening to a singer from Mandalay. Dialects, of course, differ within the confines of the country just as much as they do in Europe. There is, for instance, quite a hard line drawn between the Arabic of Upper and Lower Egypt. The construction of some sentences—particularly in the use of the negative—is entirely different.

When one goes as far north as Berber, the province that

sends sailors and domestic servants to the uttermost ends of Egypt and the Sudan, one comes upon an altogether strange dialect. It is curious that this language should still remain the individual property of the Berber province alone, especially as the people are such wanderers. But I have never come across any native, not of Berber, who could talk in the Berber language with any claim to fluency. Farther south one comes to Arabic again—from Khartoum, roughly, to Kodok, no other tongue is heard. At the latter point, however, one meets for the first time with the quaint and stilted vocabulary of the pseudo-savage tribes. Of the Dinka and Shilluk languages there is, I think, little to choose as regards the number of words employed. It is certainly not large in either, but as far as one may speak from mere personal observation, and without any learning in the matter, I should say that the Dinka tongue was perhaps the richer in its vocabulary. The Shilluk certainly does not err on the side of pedantry. On most ordinary occasions it appears to be all-sufficient to his conversational desires if he may "click" to his neighbour at intervals of several minutes; his companion "clicks" back, and the conversation is at an end. I have written of "clicking" because I can think of no other suitable word. The sound uttered is, to uninitiated ears, for all the world like that uttered by a driver to his horse in England, difference in emphasis and intonation being sufficient to convey the desired meaning. I have heard monkeys conversing in much the same way a little further south.

But throughout the whole of the Sudan a knowledge of Arabic is gradually spreading as the natural result of our occupation with Arabic-speaking officials and troops. It is possible that here again the language may undergo strange transformation in the course of its grafting process, and that the future may find Sudan Arabic a very distinct dialect of the mother tongue.

I am inclined to think that it is rather a pity that the authorities do not make the study of English a compulsory class in the schools and colleges of the Sudan. The people are so quick to learn, and imparting a knowledge of English would be one of the very simplest methods of enabling the future generation of men to grasp and apply British measures of labour, education, and government. This, however, is a digression. But just as it is essential to the Englishman who hopes to deal successfully with Arabic-speaking natives, first to master their language, so, it would seem, we might equally apply the same reasoning on the other side.

The Arabic of the Near Eastern lands, though it is referred to loosely as "Arabic," varies enormously in different countries. Here and there, however, we find curious instances of similarity of pronunciation cropping up in the least expected quarters. The vowel sounds of Egypt, for instance, disappear in adjacent countries, but crop up again in far Baghdad. It is curious, too, that there are certain words of Arabic which are almost identical with those of pure Gaelic. *Sekkin* (knife) is, I have been informed, the word still in use among the Gaelic-speaking folk of Scotland, while other words also bear a closer family resemblance. It is probable, however, that this fact is due to coincidence or to the chance influence of an isolated traveller, rather than to any foundation of root. Words become altered in the most inexplicable way, as our own language bears witness, and only by exhaustive study can such points be determined beyond doubt. A school for the study of Oriental languages is one of the most excellent institutions which we could bestow upon the nation to-day, when, in the Near, the Middle, and the Far East there are signs of increasing necessity of a complete understanding with those nations which, after the war, will be more than ever closely in touch with British influence. The dream of the Esperantists was good, but it is better still to probe the hearts of the nations by learning to think in their own language. An international language might go far to rob the participating nations of their individuality, and that could never be good. Egypt, for instance, robbed of her individuality would be a nation lost, but a close study of her language enables us to understand the aspirations of her people and to apply our own knowledge where it is most needed and to her greatest benefit. A striking example of this is not wanting at the present moment when we look upon the work that is being so successfully accomplished in Egypt to-day by Sir Reginald Wingate, who knows her language almost as he knows his own.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Dardanelles Report. March 12.

Mr. ASQUITH asked the Prime Minister whether, in view of the fact that the Report presented by the Dardanelles Commission had now been published and passed under review, and pronounced judgment upon, the conduct of servants of the Crown, living and dead, instructions would be given for the publication of the evidence upon which the findings of the Commission purported to be founded; and whether, as soon as might be thereafter, an opportunity would be afforded to the House for the discussion of the Report.

Mr. BONAR LAW: In their Report the Commissioners state that they do not recommend the publication of the evidence because parts of it, to give their exact words, "dealt either with naval and military considerations or with the relations between his Majesty's Government and their Allies, which could not without serious detriment to the public interest have been published." In these circumstances the Government are not prepared to give instructions for the publication.

Mr. CHURCHILL: Who was the Minister responsible for the excisions from the Report, or who is the Minister who accepts responsibility?

Mr. BONAR LAW: The excisions were made on the representations of three Departments—the Foreign Office, the Admiralty, and the War Office. The Cabinet is responsible for them.

The Capture of Baghdad.

Mr. ASQUITH asked for information about the recent operations in Mesopotamia.

Mr. BONAR LAW: As has already been announced, Baghdad was occupied early yesterday morning by the forces under the command of Sir Stanley Maude. This is the sequel to a series of brilliant operations which have been carried through by our British and Indian troops, with a dash and determination for which no praise can be too high. The House will remember that, after severe fighting, especially on the right bank of the Tigris, in which very heavy losses were inflicted on the enemy, Lieutenant-General Maude crossed the Tigris above Kut-el-Amarah on the night of February 23-24, and by this operation imperilled the safety of the Turkish army in Mesopotamia. The enemy immediately retired on Baghdad, and was pursued by General Maude with the utmost energy. Not only were large numbers of prisoners and quantities of material of all kinds captured during the pursuit, but we have good reason to believe that nearly two-thirds of the whole of the enemy's artillery either fell into our hands or was thrown by him into the Tigris. On March 5 our cavalry came up with the Turkish rearguard at Lajj, twenty-seven miles from Baghdad, and after an action the Turks retreated during the night, abandoning the position which they had prepared at Ctesiphon. On March 7 the cavalry found the enemy in possession of the Diala River, eight miles from the outskirts of Baghdad. The Diala River, which is an affluent of the Tigris, is a formidable obstacle, over thirty yards in width and unfordable. General Maude, therefore, withdrew his cavalry and brought his infantry into action. The Turks had, in the meantime, received reinforcements from Baghdad, and both offered a stubborn resistance on the Diala, and occupied positions covering Baghdad from the south-west on the right bank of the Tigris. On the night of the 7th-8th General Maude threw a bridge across the Tigris below the junction of that river with the Diala, and crossed his cavalry, supported by other troops, to the right bank of the Tigris. In spite of great heat and dust, these troops made a brilliant march of eighteen miles towards Baghdad, and found the enemy strongly posted six miles south-west of that town. He was at once attacked and driven back to a second position two miles in rear. On the night of the 8th the troops fighting on the Diala had established a footing on the northern bank of that river. During the 9th and 10th our troops on the right bank, in spite of blinding duststorms, pressed their advantage, and drove the enemy on this side back to within three miles of the outskirts of Baghdad, while, at the same time, our troops on the Diala forced the passage of that river and drove the enemy back on the town, which was, as I stated, entered early on the morning of the 11th. General Maude's troops have in these operations completed the victory of Kut-el-Amarah by a pursuit of 110 miles in fifteen days, during which the River Tigris was crossed three times. This pursuit has been conducted in a country destitute of supplies and in spite of the commencement of the summer heats. Apart from the skill and vigour of the leadership and the valour and endurance of the troops, both British and Indian, which are self-evident, such operations could only be carried out in such country after careful and elaborate arrangements for the supply of the troops had been thoroughly and systematically prepared. The fact that General Maude has not only been able to feed his Army, provide it with ammunition, and to assure proper attendance of the sick and wounded, but is able to report that he is satisfied that he can provide for the necessities of his Army in Baghdad, reflects the greatest credit upon all who have been concerned for the due provision of his needs.

The CHANCELLOR OF THE EXCHEQUER added: This statement was given to me by the General Staff. Perhaps I might say, what I know is the opinion of the House, that the whole operation reflects the greatest credit on our General Staff.

The Force at Salonika.

March 13.

Mr. KING asked the Under-Secretary of State for War whether, as stated in the House, the numbers of the Salonika expedition were about 500,000; and, if this number was widely divergent from fact, whether it represented more or less than the actual figure.

Colonel ARCHER-SHEE: Before the question is answered I wish to ask whether information of this character, if given, can only be of use to the enemy.

Mr. MACPHERSON: No authoritative statement as to the strength of our forces at Salonika has been made in this House. It is obviously undesirable that such a statement should be made.

Mr. TENNANT: Is it possible to tell the House without danger to the public interests whether there has been an accretion to that force in recent months?

Mr. MACPHERSON: I am afraid I cannot volunteer any further statement.

The Dardanelles Report.

March 14.

Mr. G. LAMBERT asked Mr. Bonar Law if he would consider the possibility of placing the House in possession of the purport of the passages excised from the Dardanelles report so far as it could do without detriment to the public interest.

Mr. BONAR LAW: I discussed this matter with my colleagues. We have every desire that the House should be put in possession of all the information that we can give, and I think it would be reasonable that the examination of this matter should be made from that point of view. If the late Prime Minister would undertake to act with a small Committee of the Cabinet we should be very glad to have it done.

Mr. ASQUITH: I wish to ask the Chancellor of the Exchequer if the Government will afford an opportunity on which I can make a statement with reference to the Dardanelles operations?

Mr. BONAR LAW: Yes, sir; the Government will be quite ready to afford such an opportunity, and I suggest that it should be on Monday or Tuesday next.

British Prisoners in Turkey.

Mr. HOPE, in a written answer to a question by Mr. HUME-WILLIAMS, says: The Turkish Government persist in their refusal to allow prisoners of war camps to be visited by representatives of the United States Embassy. Delegates of the International Red Cross Society, however, visited in November and December last seven of the camps, two hospitals at Constantinople, and the island of Prinkipo, where General Townshend is interned. The British prisoners at the camps visited numbered 182 European and 211 Indian officers, and 658 European and 417 Indian non-commissioned officers and men. From the information obtained through the Red Cross delegates it appears that, although the condition of the officers is on the whole not unsatisfactory, that of the rank and file leaves much to be desired, and gives cause for some anxiety. There remained unvisited fourteen camps and three hospitals, containing, according to figures furnished by the Turkish authorities, 131 European officers, and 1,086 European and 8,115 Indian non-commissioned officers and men. The information available respecting the camps unvisited is scanty and in general unsatisfactory, but has recently been somewhat more reassuring, at least as regards the transmission of the relief in money and kind which is continuously being issued by the United States Embassy, and for which his Majesty's Government are profoundly grateful.

THE YOUNG TURK REVOLUTION.

Last Wednesday Dr. Pember Reeves concluded his course of lectures at the London School of Economics on the Historical Causes of Problems of the Near East with one describing the events which led Turkey up to revolution and the present situation. Of the Young Turk Revolution, he said it was not fair to say that it was a mere military conspiracy, for large numbers of those who were concerned in it wanted a better governed Turkey, and these reformers were very often Turks. But a military conspiracy had effected the revolution, and the military party were resolved to keep power in their hands. Moreover, the ideals of the really determined and ruthless members of this party were not high. All they sought was to assert the Osmanli system more strongly than ever, while making it better organised. From the first, external difficulties for the Young Turks were added to internal ones. Austria seized Bosnia and Herzegovina. Bulgaria declared itself independent, and there were troubles in Crete which resulted in the Turks withdrawing practically from any sort of interference in the island. In Arabia there were revolts, and the miserable business was resumed of sending troops into a country from which only one in ten came back. Then came the war of 1912, and the sequence of events which brought things up to the point where they stand to-day. Dealing with the rise of the Christian States, Dr. Reeves detailed some of the principal events in the establishment of independent Serbia, Bulgaria, and Greece, notably the heroic defence of Missolonghi and the massacre of Chios. Of the Armenians, who were the last of whom he treated, he said they were not popular with travellers nor in Western Europe. They had not the dignified and impressive manner of the Turk, nor his reputation as a stubborn soldier. But those who knew them well spoke very highly of certain solid qualities that they had—their great industry, their thrift, their perseverance, and their unquenchable national spirit and devotion to their church.

In the Prize Court on Tuesday Sir Samuel Evans disposed of a suit by the Crown asking for the condemnation of three Turkish motor gunboats which had been seized at the yard of the builders, Messrs. John I. Thornycroft and Company, of Woolston, Southampton, where they had just been completed. The vessels were the undelivered portion of an order for twenty-two gunboats for the Ottoman Empire. They were built under contracts of 1910 and 1911, and when seized on the slips on November 17, 1914, they had been examined, tried, and inspected by or on behalf of the Turkish Government. The President condemned the three gunboats as good and lawful prize.

THE PRESS ON THE NEAR EAST.

Reorganising the Roumanian Army.

On Saturday *The Times* published an article from its correspondent with the Roumanian Army. The "forced quasi-armistice" brought about by the intense cold, says the writer, "facilitates the quiet reorganization of the Roumanian Army behind the first lines." As to that reorganization, we are told:—

The commanders of the divisions are all young men. The greater part of the generals who took part in the autumn campaign have been removed. Some have been pensioned, some given insignificant commands in towns, and some tried. The new divisional commanders have given proof of their ability during the campaign, and some of them who had at the outbreak of war only the command of a regiment successfully lead a division to-day. The same procedure has been used with the Staff officers. Those who owed their situation only to seniority have been replaced by younger officers who have given proof of their capacity.

All these changes have had a wholesome effect on the spirit of the troops, who feel that they are led by worthy officers. Naturally, there are to a certain extent gaps among the junior officers. The reserve officers, however, among whom the necessary selection has been made after six months' campaign, have proved themselves reliable leaders.

While groups of this army are in the trenches, other groups are behind to be reorganised. The new recruits, which have been drilled for several months, are brought and incorporated in the old units. Two or three weeks of war-drilling with the men of the old army are sufficient for the new recruits; and the units re-formed in this way are sent to the front, to replace other groups which are brought behind the lines and reorganised in the same way.

Changes at Salonika.

An interesting article on Salonika appears in the *Christian Science Monitor* (Boston) of February 21. Says the writer, whose article is written in Salonika itself:—

Only the man who has seen the growth of the Allied effort since its inception can have any conception of how Salonika has become the most important port in Greece to-day. Yet even to-day, if Tommy is asked what he thinks of Salonika, he usually expresses fervent gratitude at the fact that he is a Britisher—which, of course, is not quite complimentary to those who had the administering of Salonika before the Allied forces took root and began to set the house in order. For Salonika is one of those places to which distance lends enchantment. Its setting is picturesque. Seen from the entrance to its useful harbour, it is a strip of red and white running from the foot of "the everlasting hills." It is dimly reminiscent of Madeira in this respect, only that Madeira clusters in green, and Salonika is not clothed in luxuriant and semi-tropical verdure.

But the disillusionment is as complete as with the Portuguese port. Salonika wasn't planned; it just grew. A cynical person might say that it was jumbled together like dice and thrown down. It wears an Eastern garb and adopts Western manners. Its streets are narrow and tortuous, they lead anywhere, and are cobbled. Walking along them in wet weather is a fine art. They possess an extraordinary capacity for collecting mud. Possibly that is why some of the shopkeepers in some of the streets rarely clean their windows. The architecture is heterogeneous, and so are the shops, with a penchant for eating houses and hairdressing saloons.

By the time the Allies are done Salonika will not know itself. Not only will it be the first port in Greece, but it will very likely be the best administered and most up-to-date town in the country. Modern warfare may be, and is, destructive, but it is also constructive. . . . Of the permanent monuments which the Allies will bequeath to Salonika none will be more enduring than the great white roads leading out through the hills. The Allies came to Salonika and found mule tracks; they have been and are bridging distance in metal. What part those roads play in the Balkan drama need not be stated here; "lines of communication" to a layman is a technical and little understood phrase, but they are of an army.

The Capture of Baghdad.

The British victory at Baghdad and the entry into that famous city of Sir Stanley Maude and his troops naturally gave rise to the greatest enthusiasm in this country. The following extracts from leading London and provincial journals are typical of the Press comments upon this event:—

The German route to the East is blocked, and the existing terminus of the Baghdad Railway has passed into our hands. Great though this achievement may well be reckoned from the military point of view, the moral effect will be even greater. To the watching East it will seem to sound the knell of German aspirations. To the Germans themselves it will mean the ignominious collapse of a scheme to which they devoted infinite subtle and secret labour, and the frustration of one of the principal objects for which they wantonly set the world ablaze.

One very great and immediate consequence of the British occupation of Baghdad is that it will have a steadying influence upon the whole situation in the Middle East. There can be no doubt that our repeated misfortunes a year or more ago in Mesopotamia very seriously diminished British prestige in Asia, but the fall of Baghdad restores the balance. In Oriental eyes the capture of Baghdad will count for much more than the rout of a Turkish army, for, though the city has been shorn of much of its former greatness, it is venerated because of its "dead past, which cannot die." . . . Its fall will bring more renown to British arms in the East than many battles.—*The Times*.

British troops are in occupation of Baghdad. That is the signal event of which the news will resound to-day through the East, from Cairo to Calcutta, and presently will percolate even to Constantinople. And well may the news resound, for it records a very considerable achievement to the credit of British arms—an achievement which goes far to wipe out the blunders and disasters that darkened the earlier story of the British Expeditionary Army in Mesopotamia. We now see what our troops can do even in such a remote and difficult theatre of war, with thorough organisation and good generalship; and from Sir Stanley Maude's swift success we can gather how much one or both of those essential conditions were previously lacking.—*The Morning Post*.

The capture of this famous city is one of the few possible achievements in a secondary theatre of war which is likely to have results on the whole campaign. It re-establishes in the most striking manner possible the prestige of this country, which had been temporarily damaged by the blunders and mishaps of the first Mesopotamian campaign; it deals the Turks a heavy blow in a region where they are most vulnerable; it threatens with extinction the most costly and ambitious of all Pan-German designs. It must by this time be evident to the Turks that their great German Ally is unable to save them or to send them any substantial assistance.—*The Westminster Gazette*.

Clearly, Sir Stanley Maude's success is one of the critical operations of the war, as, indeed, French and Italian commentators have at once realised. It may be too early as yet to estimate the results of this splendid enterprise, which has given us control practically of the whole of Mesopotamia; but inasmuch as the Turkish army seems to have lost all its consistency as a fighting force, we may assume there is little or no likelihood that Sir Stanley Maude will have any difficulty in defending himself in his new position. On the contrary, it seems that he has already sent his cavalry in pursuit of the enemy, who is retiring northwards on Mosul—at least 200 miles off. No doubt, also, the British Commander hopes to give a helping hand to the Russian Army of General Baratoff, which is advancing from the north-east. Thus the pressure on Turkey is daily getting greater, and her Asiatic dominions are menaced from four different quarters.—*The Daily Telegraph*.

This advance has been no heroic knight-errantry like the enterprise of Townshend and his little army. It has been a large and carefully-planned undertaking, very deliberate while the enemy was still effective, swift, and fierce when he had been smashed into ineffectiveness. The Turks, we can now see, were thoroughly beaten and demoralised in the Kut battle. If it had been possible for them to rally, they would have rallied before Baghdad had been reached, for the preservation of the city was a fundamental thing for them and for their German masters. General Maude has left nothing to chance, and is not likely to leave anything to chance in the future.—*Sheffield Daily Telegraph*.

It is to the political rather than to the military results of the capture of Baghdad that one turns. It writes the failure for all the world to read of Germany's project for a railway from Berlin to the Persian Gulf. That railway, in which millions of German funds had been invested, was to be the spinal cord of a nervous system dominating the East, which, to one school of German thought, was a war aim vastly more important than any that could be gained in Europe. Our tenure of Lower Mesopotamia even as far as Kut spelt ruin to that project. Our occupation of Baghdad kills it. To the more moderate of German statesmen, who hoped for their country a great commercial future in the East through amicable arrangements with Britain as to the railway, there could be nothing more bitter than the fall of Baghdad. It is, moreover, the coping-stone to the policy, which the accident of war has forced upon us, of helping in the recrudescence of Arab nationalism—a policy that should have the widest results, not only for ourselves but for the Arab people.—*Manchester Guardian*.

The loss of Baghdad has been directly hastened by Enver Pasha's subservience to his German masters, who diverted divisions to the Roumanian front which were essential for the defence of the Turkish Empire. It would be difficult to find a more cynical instance of treachery to an ally, and if there be still neutrals who incline to Germany, the fate of the Turk should warn them in time against the inevitable penalties of trusting to Prussian faith. We should be much surprised if, after this blow, Turkey herself consents to be treated longer as a pawn in the German game.—*Evening Standard*.

Turkey and Peace.

The Daily Graphic, in a note in its issue of Tuesday, calls attention to a point that must not be lost to sight. "One little ray of hope," it says, "has been created for Germany by the fall of Baghdad, that event having revived in some quarters the idea of a separate peace with Turkey." The writer goes on to say:—

Germany tried her hand at a little plot of that type early last year, when Turkish agents assembled in Switzerland and allowed it to be known that the Ottoman Government was not averse to concluding a separate peace. Then, as now, such an event would favour Germany's forward-looking plans, inasmuch as the separate peace she has in view is one which would preserve the integrity of Turkey in Europe, and so enable her to resume her old intrigues. If the Young Turks have learnt wisdom from their experience of German perfidy and arrogance, and are willing to accept a peace which is based upon the expulsion of the Ottoman Empire from Europe, the detachment of the Turkish troops from the Central Powers would be a distinct gain to the Allies. It is extremely unlikely that Enver Pasha and his confederates have reached that stage of repentance. If not, a separate peace with Turkey is impossible. The Allies have agreed that Russia is to be established at Constantinople, and that pledge seals the fate of Turkey in Europe. . . . Besides.

there is the principle of nationalities to be considered, which involves the freeing from Turkish misrule of Arabs, Armenians, etc. No peace is possible with the Ottoman Government which, by leaving Turkish influence in Europe, would provide Germany with an opportunity to revive her Eastern ambitions.

"Lord Kitchener and the Dardanelles."

In a leading article with the above title, the *Morning Post* (March 10) deals with the position of Lord Kitchener in relation to the Dardanelles campaign, as revealed in the Report of the Dardanelles Commission. "The account of the share taken by Lord Kitchener in the transaction so concisely analysed by the Commission, being chiefly based upon the recollections of various witnesses, is necessarily somewhat conjectural," says the writer. "It was no part of the duties of the Commission to deal with a variety of circumstances whose recital would have made much clearer the position in which Lord Kitchener was placed; and for that very reason it is incumbent upon those who are acquainted with them to do what justice they may to his memory." After summarising the evidence presented by the Commission, the article concludes:—

So far as it goes, the description of the position of Lord Kitchener is scrupulously accurate. But there is a great deal more which requires to be said. Upon Lord Kitchener was laid a burden heavier than mortal man could support, and it was laid upon him by his Majesty's Government. Ministers required Lord Kitchener to raise, equip, and train a new army of millions of men; they required him at the same time to provide the vast supply of guns and munitions which Lord Kitchener told them would be requisite, long before the Government believed him. And, in addition, Lord Kitchener was required to supervise the military operations in every theatre of war. What help did he receive from the Prime Minister? At the very time, in January, 1915, when the new and appalling project for the capture of Constantinople was pressed upon him, Lord Kitchener, besides raising the army for home defence and providing troops for abroad, failed to receive the supplies of equipment, rifles and munitions which the Government had promised to furnish. At that time, for a week together, Lord Kitchener did not get two consecutive hours of sleep. Owing to arrangements made before the war the staff at the War Office had been changed. It does not appear that in the execution of his gigantic labours Lord Kitchener was helped in any substantial way by any member of the Government. And in spite of all, Lord Kitchener succeeded. He made the new army, he forced the Government to provide it with guns and munitions. He was a great man, with big ideas. He did the utmost that lay in him to do. And it is by these things that he will be remembered.

DARDANELLES COMMISSION REPORT.

The subject of the interim Report of the Dardanelles Commission is dealt with elsewhere. For convenience of reference, we reproduce the general conclusions of the Committee:—

(a) The question of attacking the Dardanelles . . . was, on the initiation of Mr. Churchill, brought under the consideration of the War Council on November 2, 1914, as "the ideal method" for defending Egypt.

(b) It may reasonably be assumed that, inasmuch as all the authorities concerned were, *prima facie*, in favour of a joint naval and military rather than a purely naval attack, such attack, if undertaken at all, would have been of the former rather than of the latter character had not other circumstances led to a modification of the programme.

(c) The communication from the Russian Government on January 2, 1915 [expressing the hope that a demonstration would be made against the Turks to relieve the pressure in the Caucasus] introduced a fresh element into the case. The British Government considered that something must be done in response to it, and in this connection the question of attacking the Dardanelles was again raised. The Secretary for War declared that there were no troops immediately available for operations in the East. This statement was accepted by the War Council, who took no steps to satisfy themselves by reports or estimates as to what troops were available then or in the near future. Had this been done we think that it would have been ascertained that sufficient troops would have been available for a joint naval and military operation at an earlier date than was supposed. But this matter was not adequately investigated by the War Council. Thus the question before the War Council on January 13 was whether no action of any kind should, for the time being, be undertaken, or whether action should be taken by the Fleet alone, the Navy being held to be the only force available.

(d) The political arguments which were adduced to the War Council in favour of prompt and effective action, if such were practicable, were valid and of the highest importance, but the practicability of whatever action was proposed was of equal importance.

(e) Mr. Churchill appears to have advocated the attack by ships alone before the War Council, on a certain amount of half-hearted and hesitating expert opinion which favoured a tentative or progressive scheme, beginning with an attack upon the outer forts. This attack, if successful, was to be followed

by further operations against the main defences of the Narrows. There does not appear to have been direct support or direct opposition from the responsible naval and military advisers, Lord Fisher and Sir James Wolfe Murray, as to the practicability of carrying on the operation as approved by the War Council—viz., "To bombard and take the Gallipoli Peninsula, with Constantinople as its objective."

(f) The First Sea Lord and Sir Arthur Wilson, who was the only other Naval Adviser present at the War Council, expressed no dissent, Lord Kitchener, who occupied a commanding position at the time the decision was taken, was in favour of the project. Both Lord Fisher and Sir Arthur Wilson would have preferred a joint naval and military attack, but they did not express to the War Council and were not asked to express any opinion on the subject, and offered no objection to the naval operations, as they considered them experimental and such as could be discontinued if the first results obtained were not satisfactory. Moreover, such objections as they entertained were mainly based on their preference for the adoption of other plans in other theatres of war.

(g) We think that there was an obligation, first, on the First Lord, secondly, on the Prime Minister, and, thirdly, on the other members of the War Council, to see that the views of the Naval Advisers were clearly put before the Council; we also think that the Naval Advisers should have expressed their views to the Council, whether asked or not, if they considered that the project which the Council was about to adopt was impracticable from a naval point of view.

(h) Looking at the position which existed on January 13, we do not think the War Council were justified in coming to a decision without much fuller investigation of the proposition which had been suggested to them that "the Admiralty should prepare for a naval expedition in February to bombard and take the Gallipoli Peninsula with Constantinople as its objective." We do not consider that the urgency was such as to preclude a short adjournment to enable the naval and military advisers of the Government to make a thorough examination of the question. We hold that the possibility of making a surprise amphibious attack on the Gallipoli Peninsula offered such great military and political advantages that it was mistaken and ill-advised to sacrifice this possibility by hastily deciding to undertake a purely naval attack which, from its nature, could not attain completely the objects set out in the terms of the decision.

(i) We are led to the conclusion that the decisions taken on February 16 to mass troops in the neighbourhood of the Dardanelles marked a very critical stage of the whole operation. It ought to have been clear at the time that, when this was once done, although the troops might not have been actually landed, it would become apparent to all the world that a really serious attack was intended, and that withdrawal could no longer be effected without running a serious risk of loss of prestige. We consider that at that moment, inasmuch as time was all-important, no compromise was possible between making an immediate and vigorous effort to ensure success at the Dardanelles by a joint naval and military occupation, or falling back on the original intention of desisting from the naval attack if the experiences gained during the bombardment were not satisfactory.

(j) On February 20 Lord Kitchener decided that the 29th Division, part of the troops which, by the decision of February 16, were to have been sent to the East, should not be sent at that time, and Colonel Fitzgerald, by his order, instructed the Director of Naval Transports that the transports for that division and the rest of the Expeditionary Force would not be required. This was done without informing the First Lord, and the despatch of the troops was thus delayed for three weeks. This delay gravely compromised the probability of success of the original attack made by the land forces, and materially increased the difficulties encountered in the final attack some months later.

(k) We consider that, in view of the opinions expressed by the naval and military authorities on the spot, the decision to abandon the naval attack after the bombardment of March 18 was inevitable.

(l) There was no meeting of the War Council between March 19 and May 14. Meanwhile, important land operations were undertaken. We think that before such operations were commenced the War Council should have carefully reconsidered the whole position. In our opinion, the Prime Minister ought to have summoned a meeting of the War Council for that purpose, and, if not summoned, the other members of the War Council should have pressed for such a meeting. We think this was a serious omission.

(m) We consider that the responsibility of those members of the Cabinet who did not attend the meetings of the War Council was limited to the fact that they had delegated their authority to their colleagues who attended those meetings.

(n) We are of opinion that Lord Kitchener did not sufficiently avail himself of the services of his General Staff, with the result that more work was undertaken by him than was possible for one man to do, and confusion and want of efficiency resulted.

(o) We are unable to concur in the view set forth by Lord Fisher that it was his duty, if he differed from the Chief of his Department, to maintain silence at the Council or to resign. We think that the adoption of any such principle generally would impair the efficiency of the public service.

(p) We think that, although the main object was not attained, certain important political advantages were secured by the Dardanelles Expedition. Whether those advantages were worth the loss of life and treasure involved is, and must always remain, a matter of opinion.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Hun aspirations to a great expansion in the East and in the West have never been so thoroughly given away as they were in a speech by the Radical leader in the recent debate in the German House on the Main Danube Canal Bill. "Somebody coined the phrase, 'Berlin-Baghdad'; why shall we not say 'Antwerp-Baghdad?'" demanded Dr. Günther. "I consider it utterly impossible that we should ever hand back Antwerp to the mad Ministers of King Albert. Why should not Antwerp be connected with the Rhine? What we still have to do is to prolong the great waterway into Austria-Hungary and the Balkans. Mackensen has seen to it that the guns of Belgrade and Semendria can never again menace our Danube shipping. As for Roumania, that criminal State will never recover the position which she had before." Then as regards the East. "For communication with the East," this all-out Radical declares, "We have two roads—the Baghdad Railway and this great waterway. Precisely on the Danube we have great German tasks to perform; a beginning has already been made at Sofia by the establishment of a German newspaper. We will not abandon oversea trade, but we will thank our enemies for having directed our attention to the East." In a word, Europe and Asia are to disappear. The future has only room for a Germany! Sufficient for the day is the evil thereof, however.

In the meantime there has been a slight change in the situation. Baghdad has been removed—I hope for good—from the German vision. The famous city and all it contains is in British hands, and, according to my reckoning, the true description of one of "the two great roads" to which the fiery Hun Radical referred should now be "Berlin—to somewhere in the Eastern desert," and we may take it for granted that the Asiatic railhead, from the German-Turkish point of view, will be a continually shifting one. We can safely leave the matter where it stands at the moment—Berlin has "no further interest," as the player with a poor hand would remark.

Mr. S. M. Crabtree, writing to a contemporary from Cairo, says:—"When I was in England last I was greatly interested in the penny shops—shops in which everything on sale was priced 'One penny.' I do not know or remember exactly what name they traded under, but it has struck me that here in Egypt a tremendous sale could easily be made of goods of this description, and it is my intention to try to set the idea going. I should think—but I may be wrong—that there must be some central agency to supply the innumerable articles which they sell in these wonderful shops." I know the class of goods very well—cheap and nasty—and they might possibly find a ready sale to the peasants. The Germans never found difficulty in securing a market for trash of the sort, but I fear there will be little chance of developing the idea during the period of the war, owing to the all-sufficient reason that, given the goods, there is no shipping to carry them.

I take the following interesting paragraph, dealing with the British Industries Fair now being held in London, from the Board of Trade *Journal* of March 8:—"Admission to the fair has, as in former years, been confined to trade buyers, and during the first six days over 8,000 different visitors have attended the fair. Owing to the restrictions in force at the present time regarding foreign travelling, it was to be anticipated that the number of buyers from oversea countries would be comparatively small, but it is gratifying to be able to record that buyers from France, Russia, Spain, Portugal, Switzerland, Greece, Brazil, Argentina, Uruguay, Bolivia, Dutch East Indies, Canada, South Africa, South Australia, and Egypt have paid visits."

Considerable results, I understand, have already accrued from the fair, although it has not been in progress for long. I hear that several Near Eastern buyers have satisfied themselves that in future they can safely and profitably rely on British makers of fancy goods to supply all their needs. So far the war will prove a blessing to trade, bought at a great price, it is true; but a blessing none the less. The glass exhibits are said to be particularly fine, and were a revelation to those who believed that Austria held the monopoly in cheap lines of this sort.

For the actual truth regarding the treatment accorded to British prisoners by the Turk we have to accept the reports published in an Arabic paper so far afield as Mecca. The *Kibla* declares, on the evidence of an eye-witness, that the Turkish Government last year destroyed the railway lines between Homs and Tripoli (in Syria) and between Jaffa and Jerusalem, and used the rails to build a line between Ras-el-Ain and Diarbekir. This action was in accordance with orders from the German General Staff. British, French, and Russian prisoners were employed on the construction of the line, and were very roughly treated by the Germans and Turks. As a result, a large number of them fell sick with dysentery, and they literally filled the military hospitals at Aleppo. Those who were not attacked by dysentery fell victims to other diseases, brought on by the bad food given to them and the rough treatment and overwork to which they were subjected.

The paper continues:—"One of the tricks which the Germans and the Turks used in order to throw dust in the eyes of the British regarding their treatment of the prisoners was to pay honour to General Townshend. They returned his sword to him and accorded him the best and most respectful treatment possible. They sent him to Aleppo and thence to Constantinople, and there the General wrote a letter of thanks for the good treatment he and his men received at the hands of the Turks. Did General Townshend know, at the time he wrote that letter, what misery and hardship were awaiting his unhappy troops?" It is not possible that he could know, for he, of all men, would not have taken the line of least resistance to evil.

I learn that arrangements are being made to extend the scheme to requisition British ships in the South and East African trades. The arrangements pro-

vide for the hire of the ships to the Government at Blue-book rates, the payment to the State of the profits earned above those terms, and the setting-up of a committee of management on which owners of ships and the Controller will be represented. The work of the committee will be to ensure that all the tonnage available is utilised to the best possible advantage, and that there is none of the inept handling of ships of which we heard so much last year.

The trades in which the preliminary arrangements for the initiation of the scheme have already been instituted include the Indian, Persian Gulf, Burma, and the Straits Settlements, and it is believed that the scheme will, before long, be applied to all shipping within the Empire. Shipowners have displayed a proper and patriotic attitude towards this drastic change, and there would appear to be some hope that, at last, British shipping is to be used to the advantage of the State and according to the exigencies of the time. Let us hope so, at any rate.

A correspondent writes:—"The Customs authorities in Egypt collect a duty, additional to the ordinary duty, of two piastres per kilogramme on all tobacco imported into Egypt from countries not having a commercial treaty with the Egyptian Government. This differential duty is still levied, although Egypt has been a British Protectorate since December 18, 1914. No tobacco is grown in Egypt, so that there can be no question of protecting the native grower. Although the extra duty does not seem very large, I am informed that it gives a very considerable advantage to the countries which do not have to pay it. For example, before the commercial treaty between Russia and the Egyptian Government was concluded, the tobacco imported into Egypt from Russia amounted to between 60,000 and 70,000 kilogrammes, while after the treaty it rose to between 700,000 and 800,000 kilogrammes. The duty bears especially hard on low grade tobaccos.

"Now that the Egyptian sources of supply from Russia, Turkey, Roumania, Bulgaria, Serbia, Montenegro, Bosnia, and Herzegovina have been cut off by the war, Greece is the only country that enjoys the preferential tariff; prices have risen enormously, and Egyptian importers are suffering, while the Egyptian Government obtains very little benefit from the extra duty by the exclusion of imports." It certainly seems strange that Greece should be benefiting at the expense of other countries."

American Trade Energy in the Middle East.

Cotton Goods and Goat Skins in Aden and Arabia.

Reference has frequently been made in THE NEAR EAST to the spirited endeavours which American manufacturers are making to capture various markets in the Near and Middle East. Even before the war broke out our friends had put on a brisk spurt; the opportunities presented by the fact that two-thirds of the manufacturing world are in the vortex have led them to redouble their efforts. And if we are to judge by the voluminous Consular reports which are sent regularly to the Washington Bureau of Foreign and Domestic Commerce, they are making real progress.

The latest field of industry is Aden. As we pointed out the other day, in itself Aden has no great trade importance; but it is an *entrepôt*, a great distributing centre for the east coast of Africa, the Yemen and Arabia generally, and for the Persian Gulf. It is not surprising, therefore, to find that American houses have been established there, and that they have already achieved a considerable standing.

Piecegoods.

One of the directions in which American energy is employed is in cotton goods. The Consul at Aden, Mr. Addison Southard, has been to the trouble to prepare an elaborate review of the market position, and while, perhaps, the mass of figures he has compiled would not be of great interest to our readers, some of the statistics and facts which he gives will go to show the thoroughness of his work. He writes:—

"Cotton manufactures (excluding twist, yarn, thread, etc.) are the largest single item of import into Aden. For the past five years they have formed 18 per cent. of the total incoming cargo of the port, and have approximated £700,000 in value annually. Drills and jeans, longcloth and shirtings, and sheetings, classified as gray (unbleached) cotton piece-goods, make up the bulk of this trade, Aden's imports having averaged for the five-year period under review £11,670, £37,780, and £447,170 for these three classes respectively.

"The United States supplied directly during the fiscal year 1915-16 unbleached longcloth and shirtings to the value of £16,075, or approximately 35 per cent. of the total imports of these fabrics. The year shows for this item a total gain of £29,817, more than half of it represented by increased imports from the United States.

"The United States also supplied £16,770 worth of unbleached drills and jeans, or nearly 80 per cent. of the total imports of this class, the year's gain of £11,185 being more than accounted for by increased purchases of American goods. Unbleached sheetings to the value of £506,600 were imported into Aden in 1915-16, an increase of £143,140, but the share of the United States in this trade—£393,100—was nearly £200,000 greater than in 1914-15.

Rise in Prices.

"As is well known, American unbleached cotton piece-goods enjoy the good name and the resulting universal demand which, among the conservative merchants and primitive ultimate consumers in this consular district, constitute an enormous advantage. In fact, the advantage has been regarded by many local merchants as such as to make absolutely unassailable the position occupied by 'Americani'—the local trade name for American unbleached cottons. However, faith in the deep-rooted and general demand for 'Americani' has been somewhat shaken by recent developments in this market.

"Everyone is familiar with the fact that for some time past American cottons have been climbing in price. It seems that previous to the beginning of this advance large stocks of 'Americani' had been bought and stored here. This is possibly an explanation of the increase in the import figures for 1915-16. Be that as it may, the Aden wholesale merchants with large stocks of cotton goods on hand have been able to manipulate present conditions very much to their own advantage.

"This has continued until Indian merchants who have offices in Bombay have responded to the efforts of a large Japanese firm to have them try Japanese unbleached sheetings. It is understood that 20,000 bales have been contracted for to be delivered in Bombay. Of this amount it is estimated that 12,000 bales will have been brought into the Aden market within a year, while the remainder will go mostly to Muskat and the Persian Gulf, where Aden merchants have built up a trade in 'Americani'.

Japanese Gain Ground.

"While the average Aden merchant, appreciating the superior quality and established popularity of American cottons, is desirous of continuing to sell them, he finds himself losing old customers who can no longer meet the rising prices for the American cottons. He thinks that by buying the best available substitute for 'Americani'—that is, the Japanese goods—he can hold his customers until American cottons are again within reach. No one here believes that the Japanese product will permanently replace the American, although Aden dealers are becoming apprehensive that the higher prices of 'Americani' will force them to handle more and more of the Japanese product.

"Local business people have it that Japanese competition has also affected the sale of the Indian unbleached piece-goods. It is said that considerable stocks of Indian cotton goods are at this time stored in Bombay awaiting a market which is bound to come as prices of 'Americani' continue to soar.

"There are large stocks of American cottons held in Aden. This is considered favourable for the American trade, inasmuch as the holders thereof may find it necessary to unload, and if the Japanese competition is felt they can offer their stock at attractive prices, since it was purchased on a lower market than the one at present prevailing. One Aden dealer is said to be holding 15,000 bales of 'Americani' in his godowns.

Arabian Difficulties.

"Another factor in this year's sales of American cottons will be the practical closing of the Arabian hinterland and the Turkish Yemen to trade on account of political troubles. These regions use a considerable quantity. Perhaps the largest amount of cotton goods imported for the Aden market is sold in Abyssinia and Somaliland. The rainy season in that district has just closed, and goods are beginning to move. The possibility of renewed political disturbances in Abyssinia is to be considered, as in the event of disturbed conditions the movement of trade would be hampered."

It will be seen that while the American is confident in the quality and output of his goods, he is wise enough to take in consideration all the factors in the market. He speaks rather contemptuously, perhaps, of his Eastern rivals, particularly of the Bombay mills, but the Consul, it is to be noted, emphasises the need there is to watch the situation in the market in connection with Japanese competition, high prices, war risks, and disturbed political conditions in Arabia and Abyssinia.

HIDES AND SKINS.

Another direction in which the American is busying himself is in buying hides and skins. In this market his activities have sent the prices for Arabian goat skins to an unparalleled level. The local buyer in Aden, who controls this market, is purchasing exclusively for American clients, and the result is that normal prices of from 27s. 1d. to 31s. 3d. had by the end of last year risen to about 57s. 5d. per score skins.

It is said, indeed, that 60s. per score has been offered for Arabian skins, but so far there is no record of sales at that price. So keen is the demand for goat skins that sellers dispose of their goods without having to sub-

mit them to the usual examination or engage in the usual bickering about prices.

Reason for High Prices.

The bull market in Aden skins was started in about July, 1916, by the arrival of representatives of a firm that had done a large business in Red Sea ports. This firm announced that it was in the market for an unlimited supply of goat skins, and would pay top prices. This firm and the local one above mentioned soon monopolised the skin market, the two older and most prominent American firms in the business in Aden ceasing temporarily to be active buyers.

It is natural that the market should eventually break, but so long as the American tanners directly represented here find it necessary to control the Aden goat skin export for the reason, it is said, that they have fixed contracts to fill, prices will continue high. Aden markets supplied last year an average of 300,000 goat skins per month.

Sources of Supplies.

With the wet season just closed in Abyssinia, which country is the source of many of the best skins marketed in Aden, increased shipments are expected from there. Political troubles in Abyssinia and some interruption to the railroad traffic from Jibuti inland has delayed skins coming to the coast, but the resumption of considerable shipments has already begun.

The principal sources of goat skins in the Aden market are Arabia and Africa. From Arabia large shipments normally originate at Mocha, Jidda, Konfidah, Hodeida, and Ghizan, while the places of shipment of considerable quantities to Aden from Africa are Somaliland, Jibuti, and Obok, Abyssinia and Massaua, Dunkali coast, independent Somali ports, and Italian East Africa.

Normally, Arabian and African ports supply each about one-half. Most of the African skins are sun-dried, known to the trade as flints, while Arabian skins are brine-cured. Due to expertness in skinning, the Abyssinians send skins that are regarded as the best. Somali skins are also highly regarded as being free from knife-cuts and as containing the largest number of primes. The Abyssinian skins are generally of superior weight and condition, although a season either too dry or too wet affects the quality.

Most of the Arabian skins are exported from Aden as "Mochas," but are bought by local buyers under trade names taken from the place of origin, such as Ghizans, Jiddas, Konfidahs, etc. The principal African skins are classified as Mogadiscios, Berberas, Somalis, Massauas, Harrars, Abyssinians, Gallahs, and Dunkalis.

RE-INSURANCE IN ALGERIA.

The French *Journal Officiel* of February 16 last publishes the text of a Law relative to the supervision of re-insurance business effected in France and Algeria.

The Law provides, *inter alia*, that all insurance businesses, French or foreign, carrying out re-insurance in France and Algeria of risks already insured, must inform the authorised agents of the Ministry of Labour and Social Foresight of these transactions, at the same time furnishing them with all documents relative thereto. Every underwriter must enter into an undertaking with the Ministry of Labour not to re-insure any risk concerning a person or property or responsibility in France or Algeria of specific businesses, or belonging to specific countries, such businesses or countries being notified in the *Journal Officiel*. Underwriters are equally required to observe this undertaking in respect of successive re-transferences by their immediate transferor.

Foreign concerns and underwriters operating in France and Algeria must appoint a person resident in France to receive all notifications under this Law, and to furnish all information and documents required. They will further be required, by a Decree to be published thereafter, to give such security of guarantees as may be determined by a consultative committee set up by the Law (under recital), should the Governments of their own countries have taken analogous measures towards French companies.

The consultative committee is to be composed of sixteen members representative of various interests, including foreign insurance concerns.

PRODUCE REPORT.**Currants.**

LONDON, March 15.

There has been a general demand for all qualities, with considerable business done at further advanced prices. It is evident now that before long there will be a scarcity of currants, and the remaining available stocks are sparingly offered, with the expectation of much higher prices in the near future. Amalias are quoted 88s. to 92s., Patras 90s. to 95s., Gulf 91s. to 96s., Vostizza 92s. to 98s., while some Australian fruit is quoted at 85s. to 90s.

Sultanas.

The demand continues at firm rates.

Dates and Figs.

Both kinds are in good demand and steady at recent rates.

Seeds.

Linseed is nominally steady, but in poor demand; Calcutta to London afloat and Feb.-March is quoted 111s., while March-April is offered at 108s., and Bombay Feb.-March and March-April at 110s. Rape-seed is firm for brown Cawnpore-to-London prompt at 98s., and Guzerat prompt at 102s.

Cotton seed has been quiet in all positions. Egyptian-to-London, f.a.q. spot, being offered at £19 5s., and Sakelarides, spot, at £18 10s.; to Hull, f.a.q. spot and prompt, £19 17s. 6d., and Sakelarides, spot, £18 10s.

Rangoon beans, being in narrow compass, are strongly held at the current high prices, while for near and later shipments quotations are higher.

Canary seed is in fair demand, with recent prices well maintained.

Oils.

Linseed oil has been firm during the week, with spot pipes at £52, and barrels at £52 10s.; May-Aug., £54 10s., and Sept.-Dec. at £55 10s.

Rape oil had a better demand, refined English, in barrels, spot, selling at £65 10s. Cotton oil is firmer; crude pipes, spot, £53; refined pale, pipes, £54; and sweet, barrels, £60 to £62, as to make. Olive oil is not offered.

Oilcakes.

Linseed cakes have been in a rather small demand during the week, but owing to the limited production from the home mills and the very small quantities that arrive from abroad, prices generally are steady. London-made, best, sells at £19 10s. to £20, and Western American at £18 to £18 5s. per ton.

Cotton Cakes.

Egyptian are in more or less plentiful supply, spot parcels selling at £15 7s. 6d. to £15 10s., with considerable business done in afloat at £15 2s. 6d. to £15 5s. ex ship, while English-made remains at £15 10s. to £15 12s. 6d. per ton.

Decorticated cotton cakes are selling well at £18 10s. to £18 15s.

TURKISH GUNBOATS CONDEMNED.

In the Prize Court on Tuesday the President, Sir Samuel Evans, disposed of a suit by the Crown asking for the condemnation of three Turkish motor gunboats which had been seized at the yard of the builders, Messrs. John I. Thornycroft and Company (Limited), Woolston, Southampton, where they had just been completed. The vessels were the undelivered portion of an order for 22 gunboats for the Ottoman Empire. They were built under contracts of 1910 and 1911, and when seized on the slips on November 17, 1914, they had been examined, tried, and inspected by or on behalf of the Turkish Government. The whole of the purchase money had been paid except a sum of £3,000. The writ in the action was served by advertisement.

The President condemned the three gunboats as good and lawful prize.

Creditors of the ill-starred Russian Chamber of Commerce met in London yesterday for the first time.

Russian subjects possessing passports for use abroad and certificates for returning to Russia are required to present these to the Russian Consuls to be exchanged for new passes issued under the new regulations.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The market during the past week has been full of discussions relating to the Indian import duties question, and developments in the situation have been followed very closely. Although success of the agitation of Lancashire spinners and manufacturers is not in sight at the time of writing, the opposition to the duties will not be in any way slackened until justice has been obtained for the home country. The general prospects in the market are really no better. Raw cotton prices have continued to advance, and nothing is occurring which is likely to check the upward movement. There is considerable disappointment at the falling off in the forward movement of the Egyptian cotton crop. Up to date the receipts at Alexandria are 4,496,205 cantars against 4,317,012 cantars last year. It is thought in some quarters that the total output will be very little more than 5,000,000 cantars. Rather irregular reports have been received as to the amount of business passing in piece goods for Egypt. Occasional buying has occurred in sized goods, but many of the offers have been impracticable. There is much uncertainty as to the facilities during the next few months for sending goods abroad. A few more offers have been met with in light fabrics for India, but not much has been done. Transactions in shirtings have been few and far between. During the last week or two a little more activity has occurred for China, but demand now seems to be falling off. Some special business has been done for certain of the Near Eastern outlets, chiefly as a result of the success of our troops in Persia. Numerous manufacturers of cloth are feeling the depression very acutely, and some firms are getting ready to stop looms. The yarn market has continued generally flat, but a little more inquiry has been reported in Egyptian spinnings. There are now plenty of easy sellers of American qualities, and there is a marked difference in the prices between ring beams and cop twist.

EXPORTS OF RAW COTTON.

Information has been received by the Liverpool Cotton Association from the Foreign Office that the export and re-export of raw cotton from this country is to be prohibited. The object aimed at is economy of tonnage. Some doubt prevails at Liverpool whether the prohibition will be absolute or whether export will be allowed under licence and until definite information on this point has been secured, the Cotton Association is refraining from issuing an official notice to members. Although small in comparison with the bulk of the trade done, cotton exports from this country are fairly large in volume. They include supplies of raw material to Allied countries, chiefly Russia and France, and the shipment of Egyptian cotton to the United States, a trade which is done via Liverpool. During the ten weeks ended March 8 the total cotton exports amounted to close on 96,000 bales, of which slightly over two-thirds were Egyptian. The Foreign Office letter makes it clear that the re-export of Egyptian cotton to America will not be permitted.

RESOURCES BOARD IN THE SUDAN.

A Resources Board has been created in the Sudan consisting of Mr. H. P. Hewins, Director, Commercial Intelligence Branch, Central Economic Board, as President, and Lieut.-Col. F. U. Carr, Director, Veterinary Department, and Mr. R. Hewison, Assistant Director, Sub-Department of Agriculture, as members.

The duties of the Board are:—

1. To advise as to the manner in which the food resources of the Sudan may be utilised to the greatest advantage in the circumstances arising from the war.
2. To prepare and submit such schemes in this connection as they consider necessary for the development of and the proper utilisation of their resources.
3. To carry into effect the schemes approved by the Acting Governor-General.

CEREALS IN EGYPT.**Important Proclamation Regarding Irrigation.**

The General Officer Commanding-in-Chief his Britannic Majesty's Forces in Egypt has made a proclamation dealing with those areas in Upper Egypt which do not ordinarily enjoy irrigation from the Nile or public canals between March 20 and the arrival of the Nile flood.

(1) Until the arrival of Nile flood water in the Basins in 1917, the Irrigation Service shall have the power to take possession of any land, and to make and maintain thereon such canals, channels, banks, and other works as may be necessary for the irrigation of the areas mentioned in the preceding article or any part thereof. Compensation for any land so taken shall in default of agreement be determined by a Board to be appointed under my hand.

(2) No water from the Nile or public canals supplied during the period mentioned in Article 1 shall be used for the irrigation either in whole or part of a crop other than a cereal crop. Any crop irrigated in contravention of the provisions of this article is liable to be torn up or otherwise destroyed by the agents of the Ministries of Public Works and Agriculture.

(3) No person shall take water from a canal or channel made under the provisions of this Proclamation at a time other than that authorised by the Irrigation Service or for the irrigation of land other than that for which it is destined.

(4) No person shall destroy, damage, obstruct, or in any other way tamper with any canal, channel, bank, or other work, whether public or private used for the distribution of water from the Nile or public canals during the period set forth in Article 1.

(5) Every pump-owner to whom a temporary permit has been accorded by the Irrigation Service for the period mentioned in Article 1 shall comply with the provisions of such permit. Any pump used in contravening the provisions of such permit is liable to be stopped.

(6) Every Omdah within whose jurisdiction water from the Nile or public canals is supplied during the period mentioned in Article 1 shall be informed by the Inspector of Irrigation of the exact areas for which such water is destined, and shall inform the Inspector of Irrigation or Agriculture of the commission of any offence under this Proclamation. Every Omdah must, when called upon, furnish to the Inspector of Irrigation or to the Inspector of Agriculture the name of the owner or tenant of any plot within his jurisdiction.

(7) Any person who, either as principal or accessory, contravenes the provisions of this Proclamation shall, upon conviction by a Military Court, be liable to imprisonment not exceeding two months, or to a fine not exceeding £20, or to both of these penalties.

Following on Mr. McKillip's recent tour of inspection in Upper Egypt in connection with the extension of the cultivation of wheat and other cereals, the Public Works Ministry has decided to allow the cultivators in the inspected area abundant water for the Seif cultivation (summer), and to authorise those who possess water-pump licences for Nile and winter cultivation only to use them in their summer cultivation as well. It is considered that the good flood of 1916 will allow of sufficient water to be given to the usual summer crops as well as to the increased cereals areas.

The Ministry has also decided that water should only be withheld for Sharaki irrigation only during the month of June, thus enabling cultivators to start their dura cultivation early.

Lord Stamfordham, Private Secretary to the King, has written to Sir Adolph Tuck, Bt., Managing Director of Messrs. Raphael Tuck and Sons: "I write to inform you that the King is graciously pleased to give his permission for you to quote the words contained in my communication of the 8th inst. in connection with your specimens of Art productions shown at the British Industries Fair:—'The King regards with appreciation and satisfaction these examples of British Industrial Art.'"

BANNED FIRMS.**Another List Issued in Egypt.**

The following additions to, and removals from, the schedule of firms in neutral countries, with whom firms in Egypt are not permitted to trade, have been published in the *Egyptian Journal Officiel* of various dates:—

BRAZIL.

Bayer, Federico, and Company, Casilla Setembro 1, Rio de Janeiro.

Cooperativa Brasil, Limitada, Rio de Janeiro.

Gomes, Luiz (Cooperativa Brasil), Rio de Janeiro.

Miranda, Agenor, Rua Senador Nabuco 19, Rio de Janeiro.

CHILE.

Bayer, Federico, and Company, Casilla 1267, Santiago; Becker, A. and F., and Company, Concepcion and Bandera 615, Santiago; Brenner, Jorge, Iquique.

Faerber, Gustav, Valparaiso.

Giron Basilio, and Company, Arica.

Hepp and Becker, Talcahuano; Hinch and Company, Valparaiso; Hubenbecker, Teodoro, Bandera 86, Santiago; Huckle Hermanos, Valparaiso.

Pinnau, Carlos, and Company, Suere 295, Antofagasta.

Sombrereria Alemana à Jorge Brenner, Iquique; Spoerer, Oscar, and Company, Concepcion.

Visscher, Alejandro, Hijo and Company, Iquique and Arica.

COLOMBIA.

Acero, Delfin, Cúcuta.

Ramirez, Luis Alberto, Bucaramanga.

DENMARK.

Jeppesen, K. T., Prinsesse Maries Allé 17 (formerly of Jernbanegade 4, and Vodrofs-plads 13), Copenhagen.

EQUADOR.

Hermann, Wilhelm, Quito.

GREECE.

Export Society, Piræus.

Herzog, M. L., and Co., Salonika.

Savopoulos, Sfyris and Co., Rua Notara 67, Piræus; Senegalia, A., Patras.

JAPAN.

Kee Sang, 150, Sakaemachi, Itchome, Kobe; Kojiro Yayama, Shimo Yamate-Dori, 2, Chome, Kobe.

LIBERIA.

Ahlften, V.

Birkenheuer, W.; Busch, A.

Decker, I.; Dinkela, H.

Gaede, W.; Gebhardt, Richard.

Hansen, C.; Heyn, E.; Hoffmann, Jul.

Huber, Oscar.

Jager, Ed. C.

Klinge, Alberico J.; Koch, N.; Kroell, K.; Kuhrmann, Carl.

Labe, H.; Lange, P.

Maier, Eugen; Medicke, W.; Muller, Max;

Munch, N.

Petersen, W.; Preuss, E.

Quickenedt, H.

Richter, N.; Roggenbau, H.

Schaumburg, R.; Scholls, J.; Seifer, A.

Thorade, K.; Tobeck, Louis.

Uckert, Richard.

Vagts, Arthur; Vormeyer, H. Walter.

Wagner, E.; Wiebers, V.; Wursburg, W.

Zschorper, M.

MOROCCO.

Lordjman, Haim (Jaime) V., Tangier.

NETHERLANDS.

Koekkoek, M. A., Nieuwendam, near Amsterdam.

NETHERLAND EAST INDIES.

Hout, J., van, Weltevreden, Batavia.

PERSIA.

Hosseinyeh, Magasin, Tehran.

PERU.

Moreno, David G., Lima.

Roedinger, H., and Co., Ica.

SPAIN.

Deutsche Sudamerikanische Telegraphen Gesellschaft, Tenerife (see German Cable Company)

Ferrer, José Ballester (see José Ballester, Hijo); Fuchs, Siegfried, Villa Alemana, Malaga.

Grube, Werner, Calle Conde de Benomar 11, Seville.

Lecube, Juan, Bilbao; Lopez Guerra, Manuel, Las Palmas, Grand Canary.

"Provincia, La," Las Palmas, Grand Canary.

Soria and Co., Grao de Valencia; Specht (of Deutsche Sudamerikanische Telegraphen Gesellschaft or German Cable Company), Santa Cruz de Tenerife.

Welsch, Richard, Plaza de Cataluna 19, Barcelona.

VENEZUELA.

Quinters, Carracciolo, Santa Ana.

Removals.**BRAZIL.**

Guimaraes, N., and Co., Rua Luiz de Camoes 16, Rio de Janeiro.

Martins, Manoel, and Co., Rio de Janeiro.

ECUADOR.

Guzman, L., and Hijos, Malecón 100, Guayaquil.

MOROCCO.

Benchetrit, Moses, Tangier.

Cohen, Aaron S., Tangier.

NETHERLAND EAST INDIES.

Oei Boen Soei.

PERSIA.

Kaikhosrow, Rustam and Sons, Kerman.

Serushian, Kerman.

PORTUGUESE EAST AFRICA.

Bettman and Kupfer (East African Agency), Lourenço Marques.

SECOND LIST.**Additions to List.****ARGENTINA AND URUGUAY.**

Behr and Ott, Calle Defensa 435, Buenos Aires, Argentina; Barowsky and Company, Calle Sgo. Cabral 172, Rosario, Argentina.

Hermann, Edmundo, c/o Banco Germanico de la America del Sud, Calle O'Higgins 2030, Buenos Aires, Argentina.

Iglesias, Justo A., Piedras 338 and Dom. Agraciada 2114, Montevideo, Uruguay.

Koester, Nicolaus, Rua 25 de Mayo 294, Buenos Aires, Argentina.

Luaces, Leandro, Buenos Aires, Argentina. Müller, Hermanos, San Julian, Patagonia, Argentina.

Olach and Ohlmsted, San Martin 452, Rosario, Argentina.

Plaut and Company, Calle Alsina 902, Buenos Aires, Argentina.

Roma and Company, Buenos Aires, Argentina.

Wulff, Otto, Calle Peru 362; Calle Terrero 109 and Rivadavia 6245, Buenos Aires, Argentina.

BOLIVIA.

Burgoa Teran, Arturo, Oruro.

"Cerveceria Calacala" (see Heimbarto Hinze and Company).

Franco, José, La Paz.

"Gallo, El," La Paz; Gunther, Pablo, Oruro.

Harrison and Bottiger, La Paz; Hinze, Heimbarto, and Company, Oruro.

BRAZIL.

Baasch, Hermann, Rua Sao Bento 22, Rio de Janeiro; Bahlmann, John, Rua Sachet 83, Rio de Janeiro.

Gomez, Candido, Rio de Janeiro.

Israel, Simon, and Company, Rua General Camara 23, Rio de Janeiro.

CHILE.

Aguilar, Rudolf, Talcahuano; Arevalo, Manuel, Coquimbo, and Avenida Brasil 169, Valparaiso.

Barrios, Francisco, Iquique; Bermudez, Guillermo, Calle Esmeralda 85, Valparaiso.

Carstens, F., and Company, Concepcion, San Francisco, Valdivia and Temuco; Contreras, Pablo, Calle Esmeraldas 85, Valparaiso.

Länger, Federico, Calle Estada 142, and Casilla 607, Santiago.

Robles, Eduardo, Casilla 607, Santiago.

Saavedra, Pedro (of F. Carstens and Company); Schacht and Wyneken, Valparaiso and Coronel.

COLOMBIA.

Fehrmann, G., and Company, Apartado 140, Barranquilla.

Loos, Pablo, Cartagena.

GREECE.

Jenny, Fridolin (see Jenny and Vock).

Papathodorou, Athanasios (see Alexandre Zachariou and Company); Pfister, Rudolph Von (see Pfister and Assael).

Vock, Emil (see Jenny and Vock).

Zachariou, Alexandre (see Alexandre Zachariou and Company).

MOROCCO.

Allal Ben Brahim Ben Hima, Tangier; Arevalo, A., Tangier.

Bakkali, Si Abdellah El, Tetuan; Belghiti, Abderaham, Tangier; Belghiti, Hadj Mohammed, Tangier; Boumeghait, Hadj Mohammed, Tangier.

Calduch Gila, F., Tangier.

Guerrero, Carlos Massa, Tangier; Gumpert, Antonio, Tangier; Gumpert, Francisco, Tangier; Gumpert, Luis, Tangier; Gumpert, Manuel, Tangier.

Haessner and Company, Tangier.

Jahn and Toledano, Tangier and Laraiche.

Lauffer, E., Tangier.

Mannesmann Brothers, Tangier; Marakko, Mannesmann and Company, Tangier.

Schiller and Company, Tangier.

Villa Valentino, Tangier.

NETHERLANDS.

Algemeene Handelsvereeniging (late De Ruyter and Company), Voorschoterlaan 145, and Linker Rottekade 145, Rotterdam; American Bicycle Company, Prinsengracht 657, Amsterdam.

Beit and Company, Prins Hendrikkade 66-67, Amsterdam.

Catz Gebroeders, Coolsingel 51-53 and Nieuwehaven 141, Rotterdam; and Kloverburgwal 31, Amsterdam; Cohen, Felix, Leuvehaven 86a, Rotterdam; Cohen-Donnay and Company, K. Hoogstr. 1, Rotterdam.

Deutsche Dampffischerei Gesellschaft "Nordsee," Rijksvischhal, Ymuiden; Deutsche Vereinigte Schuhmaschinenfabriek, Boschveldweg, S'Hertogenbosch.

Eiffe and Company, Reederijst, 5, Rotterdam; Englebrecht, W., Heerengracht 125, Amsterdam.

Hagen and Company, Boompjes 84, Rotterdam; Hoorebeke, André van, Zuidblaak 48, Rotterdam.

International Overzeesche Handelsvereeniging, Keizersgr. 318, Amsterdam.

Jibben, D. H. (of Jibben and Van Reysen), Blauwburgwal 6, Amsterdam.

Koenneker, Wm., Prinsengracht 657, Amsterdam; Koenneker's Kabel Bureau, Prinsengracht 657, Amsterdam; Kroon (de) Stoomzeepfabriek, Houtmarkt 19/21, Haarlem.

Levy, Bernard, Witsenkade 14, Amsterdam.

"Nordsee," Deutsche Dampffischerei Gesellschaft, Rijksvischhal, Ymuiden.

Oosterman and Lomans Zeepziederij de Kroon, Houtmarkt 19/21, Haarlem.

Roose, Friederich, Junior, N. Spiegelstr. 26, Amsterdam; Ruff, G., Leuvehaven, 85, Rotterdam.

Schuhmaschinenfabriek, Deutsche Vereinigte, Boschveldweg, S'Hertogenbosch; Spits (H.) and Zoon, Keizershofkade 14-16, Dordrecht; Stern, Albert, Valeriusstraat 159, Amsterdam; Syndicaatvrije Kolenvereeniging, Heemraadssingel 337, Rotterdam.

Tragbar, C. W. Oudeschans 13, Amsterdam.

Vries, Gebroeders De, Heerengracht 545-549, Amsterdam.

NETHERLAND EAST INDIES.

Aequator, Mijnbouw Maatschappij, Sumatra.

Bakker, W. J., Sourabaya.

Continental Tyre and Rubber Company, Sourabaya.

Dietzold, W., Pematang Siantar.

Everts, J. T., Sourabaya.

Gronert, J. C. N., Batavia.

Hassan, Haji, Batavia.

Jones, Arthur, Samarang.

Kielich, W., Batavia.

Lio oe Kiong, Menado.

Maatschappij Voor Industriële Unterne-ningen op Java.

Olzen, William, Sourabaya.

Persijn, C., Batavia.

Riebschlaeger, F. W., Sourabaya.

Schultz, Ph. H. E., Medan.

Wagner, Hans, Sourabaya.

Zande, J. Van Der, Palem Laan 37, Sourabaya.

NORWAY.

Schioldborg, J., Dronningensgate 28, Christiania.

(To be continued.)

ENGINEERING NOTES.

Motor Ploughing by Night.

The successful experiments by British agriculturists of ploughing throughout the night with the aid of a powerful motor-car acetylene headlight will undoubtedly interest Oriental agriculturists, who, with the present scarcity of farm labour, cannot, during the short autumn and winter days, cultivate as much land as they require. In the farm where the experiments were made the motor-tractor had been at work for five days and three nights, and the whole 40 acres (160 stemmata) were ploughed in that time. To plough the same acreage with a horse-plough would take fifty-six days—and with such small and weak horses or oxen as are used in the East, perhaps one hundred days; while with a motor-tractor working the average eight-hour day it would have taken twelve days. Acetylene apparatus and motor lamps are easily obtained in all towns in the Near East, and the experiment is worth trying.

Sudan Cotton.

During the recent tour in the Sudan of Sir Ismail Sirry Pasha, the Minister of Public Works and War, his first visit after leaving Khartoum was to the experimental farms at Tayiba and Barakat, where he saw the cotton crops in a prosperous condition. He estimated the produce of cotton per feddan as equal to that of similar land in Egypt. Though the grade of the cotton was slightly inferior to that of the Egyptian, still it was almost equal to that of the best Egyptian varieties. The next place the Minister visited was Makwar, where he inspected the site selected for the erection of the barrage across the Blue Nile. There is no doubt but that the site selected is the best one adapted for the purpose. This project, which was put forth by Sir Murdoch Macdonald and Sir Arthur Webb, was exclusively for the benefit of the Sudan. It was intended to facilitate the irrigation, during the flood season, of the lands of the Gezira, which is the most fertile region in the Sudan, and upon which the future of the Sudan as an agricultural country chiefly depends.

The White Nile Dam.

The next project which Sirry Pasha studied was that of a dam across the White Nile. Two localities were suggested for this dam—one at Gebelein above Kosti, and the other at Gebel Aulia. The explorations hitherto made are in favour of the selection of the latter place for the purpose. It is probable that it will be found advisable to divert a portion of the Blue Nile, during the seasons of unusually high floods, into the White Nile above the projected dam, through a canal cut across the Gezira from Makwar. This scheme would help to mitigate or avert any harm that might be done to Egypt during too high floods, as well as to conserve an additional quantity of water to be used for irrigation later on in the year. The other irrigation projects which the Minister has studied are the Basins of Wad Bennaga and Wad Hamid in Berber province.

Evidences of Prosperity.

In an interview with a representative of the *Sudan Times*, Sirry Pasha said he was greatly impressed with the progress achieved during the past few years. He considered himself in a better position to make a correct estimate of this progress than those who had resided in the Sudan all this time and witnessed the various stages of progress gradually developing. He was particularly impressed with the large number of children whom he saw at every town or village he visited. This was an unmistakable sign of prosperity of the population. It was also a great promise for the future of the country, for the increase of its population would mean the increase of the number of hands working on its development.

THE ROADS OF EGYPT.

Link between Port Said and Cairo Completed.

(FROM OUR OWN CORRESPONDENT.)

PORT SAID, February 17.

Now that the road from Port Said to Cairo is finished, the question of its use by the general public for commercial purposes is under consideration, and should the military exigencies permit, it will probably be open to the public under a system of military control.

The construction, of course, has been hurried forward by the military authorities with a view to affording relief to the railway and providing a reliable alternative means of communication to and from and in the Canal zone. It will be taken over after the war by the Egyptian Government, who will then be responsible for its upkeep.

It is understood to be the intention of the Government to improve the many existing roads or tracks in the Delta, thus forming a network of communications between the two main roads, Cairo-Port Said and Cairo-Alexandria. That the scheme in its maturity will prove of benefit to the populace will depend largely on the introduction to the country of suitable commercial motor traction and carriage. Here an opening is at once apparent for the manufacturers of motor lorries, cars and cycles, and our home firms would do well to inquire into the probable needs of Egypt in this respect.

Those who cater for the sporting rider will find a ready market, when things settle down, for motor-cars and cycles, particularly of the light variety so much in vogue nowadays; these, besides being economical in price and consumption of fuel, are eminently suitable in a flat country like Egypt.

Considerable development may also be expected in the Sinai Peninsula, where the military roads and light railways will doubtless be put to useful productive work in peaceful times. Here, however, the problem of water has first to be solved.

PETROLEUM PANIC IN EGYPT.

"There still continues to be a good deal of apprehension among a considerable section of the public of Cairo that Egypt is on the verge of a stringent petroleum famine," the *Egyptian Gazette* wrote recently. "We have made inquiries on the matter from the most reliable sources of information, and we find that there is no justification of any sort or kind for the alarmist reports that have of late been rampant throughout the capital. For the purpose of allaying this baseless panic we append the figures for the stocks of petroleum now held in this country:—

The interior, about 3,000 tons.
At Alexandria, 14,000 tons.
At Suez, 6,000 tons.
On the way to Egypt, 8,000 tons.

"Thus it will be seen that we are assured of 31,000 tons, and it must be borne in mind that this figure does not include the constant supply from the Egyptian oilfields in the Gulf of Suez, nor does it include the supply that we obtain by sea from Persia from time to time. The total consumption of petroleum weekly throughout Egypt is about 2,000 tons.

"The panic appears to be in a great measure due to a few people having bought up far more petroleum than they have any need of and storing it. It is anticipated that the demand will drop to normal soon."

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916.	1917.
	Francs.	Francs.
March 10 and 11.....	520,000	490,000

COMPANY NOTES.

Eastern Bank, Limited.

The seventh annual report, for the year ended December 31, of the directors of the Eastern Bank, Ltd., to be presented at the seventh annual general meeting on Wednesday, March 21, 1917, is as follows:—The gross profits to December 31, 1916, after providing for contingencies and including the balance brought forward from the last account, as shown by the annexed statements, amount to £108,118 9s. 4d., and, after deducting expenses of management, directors' and auditors' fees, there remains a balance of £60,545 10s. Out of this sum the directors recommend the payment of a dividend for the year at the rate of 6 per cent. per annum, less income-tax, absorbing £36,000, placing £15,000 to the reserve fund, which will then stand at £70,000, and carrying forward the balance of £9,545 10s. to the next account. A branch has been opened at Amara, where the bank has been appointed bankers to the Government of India. The directors record with deep regret the loss of their colleague, Sir Jacob Sassoon, Bart., whose death occurred in Bombay towards the end of the year. His successor, Sir Edward Sassoon, Bart., has been invited to and has accepted a seat on the board. The Right Hon. Lord Balfour of Burleigh, K.T., Sir Edward Sassoon, Bart., and Mr. J. S. Haskell, the directors who retire on this occasion in accordance with the articles of association, are eligible, and offer themselves for re-election. The auditors, Messrs. Turquand, Youngs and Co., and Messrs. Lowe, Bingham and Matthews also retire, and offer themselves for re-appointment. The dividend will be payable on and after Monday, March 26, 1917.

Sudan Gold Field Co., Ltd.

The report of the Sudan Gold Field Co., Ltd., for 1916 states that 26,297 tons of quartz were milled, yielding 14,180 ozs. of bar gold, or an average of 10 dwts. 19 grs. per ton. From 18,840 tons of tailings treated were recovered 1,438 ozs. of bar gold, an average of 1 dwt. 13 grs. per ton. The total production was 15,618 ozs. (or 14,007,720 standard ounces) of a realised value of £54,521. The disposable balance is £25,053. Out of this £2,880 has been set aside for depreciation of buildings, machinery and plant, etc., £579 for income-tax, £1,000 for mining and general expenditure, £4,475 has been deposited on account of excess profits duty for 1914, and the amount, provisionally, in respect of excess profits duty for 1915 (partly paid) is £4,011. The directors have declared a dividend of 1s. per share, or 10 per cent. (less tax at the rate of 4s. 6d. in the £), payable 28th instant, and £5,721—subject to royalty to the Sudan Government, remuneration to directors and managers, and to a further claim for excess profits duty in relation to the year 1916—will be carried forward. The liquid assets at December 31 last, after providing for sundry creditors, amounted to £15,314.

Dividends, Payments, Etc.

Piræus-Athens-Peloponnesus Railway Company.—The coupon No. 10—4 per cent. bonds, due January 15, 1917, will be paid at the London office of the Bank of Athens, 22, Fenchurch Street, E.C. Coupons must be left three clear days for examination.—The dividend for the first half-year of 1916, amounting to Dr.2 per share, will be paid against surrender of coupon No. 56 at the offices of the Bank of Athens, 22, Fenchurch Street, E.C.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

Throgmorton Street, London, E.C.,
Thursday.

Business continues very quiet, although there are, here and there, signs of a re-awakening of interest.

Telegraphic communication with Egypt is still slow and irregular, and this also interferes with business. Another thing which is probably responsible in part for the recent inactivity is the fact that Egypt has been subscribing largely to the various War Loans of the Entente Powers, and this has naturally diverted a good deal of money from the ordinary channels of investment.

Some small business has been done in National Banks on the basis of 13½-13¾, but there were no transactions to record in Agricultural, which remain firm at about 5½.

There has been some inquiry for Delta Lands at 8s., with a few shares offering at 8s. 6d. A small transaction has taken place in Gharbieh Land at 17s.

In New Egyptian, a thousand shares were done at 8s. 6d. United Egyptian Lands are slightly harder at about 1-32, some few thousand shares having changed hands.

Egyptian Markets have been a firm spot round 25s., and Salt and Sodas, after changing hands at 19s. 6d., are firmer again round 20s. Some business has been done in Khedivial Mails at 26s., at which price there are further buyers to-night.

In Greek securities the same firm tone has continued, but very little business has been done owing to the absence of sellers. Some Greek Rails have changed hands at 62, and to-day Current Bonds came to business at 87½; but otherwise the transactions effected have been of a trivial nature.

Oil Shares.

There is a slight improvement to record in this market. Spies have been in fair request, and at the close had hardened to 14s. 9d. North Caucasians were quiet, and Urals fell back to 30s. Russian Generals have been in some request at about 33s. 6d., while Constantines were also in demand and improved 6d. to 7s. 6d.

Small declines have been shown by Anglo-Maikops, now at 5s. 1½d., Bakus 2s. 6d., and Premier Pipes at 1s. 9d.

The Paris Bourse.

There has been a fine rally in Suez Canals which, yesterday, sprang 50 francs to 4,300. Turkish securities have continued to harden. Otherwise there is little of interest to report.

AN UNPLEASANT INCIDENT.

"Some interest was aroused by the announcement of the result of the Committee's investigations into certain dealings in General Oilfields shares," says the *Financial Times*. "In consequence of what occurred a broker has been suspended from entering the Stock Exchange for three years, while a firm of dealers is suspended for one month and two others have incurred severe censure."

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, March 15.

Little change has occurred in the conditions in the money market. Short loans have not been quite so easy as was the case previously, owing to the somewhat improved demand for accommodation. Nevertheless, at the close money commanded nothing better than 4 per cent., and some business has been put through at an even lower rate.

In weekly loans, most of the lines transacted were put through at 4½ per cent., although there have been acceptances at ½ less.

Exchange in Alexandria at sight is from 97 to 97½ piastres to the pound sterling.

NOTICE.

NATIONAL BANK OF EGYPT.

Notice is hereby given that an ORDINARY GENERAL MEETING of the Shareholders of the National Bank of Egypt will be held on Saturday, the 7th April, 1917, at 4 p.m., at the Head Office of the Bank in Cairo, for the purpose of:—

- Receiving the Directors' Report.
- Receiving the Auditors' Report.
- Submitting the Accounts for the year ended 31st December, 1916.
- Declaring a dividend.
- Electing Directors.
- Electing Auditors for the year 1917 and fixing their remuneration.

All shareholders holding a minimum of 20 shares have the right to take part in the General Meeting, providing the Shares be deposited under the following conditions at one of the following places, where cards of admission or proxy forms will be delivered:

In Egypt, at the latest, the 2nd April, 1917.

At the Head Office, Cairo.

At the Branch of Alexandria.

At the Agencies of the Bank at Assiout, Assouan, Benha, Beni-Suef, Chibin-el-Kom,

Damanhour, Fayoum, Keneh, Luxor, Mansourah, Minieh, Port Said, Rod el Farag,

Sohag, Tantah, Zagazig, and Mousky (Cairo).

At the Office of the Anglo-Egyptian Bank.

Bank of Athens,

Banque Belge pour l'Etranger,

Imperial Ottoman Bank,

Banque d'Orient,

Banco di Roma,

Cassa di Sconto e di Risparmio,

Comptoir National d'Escompte de Paris,

Crédit Lyonnais.

In the Soudan, at the latest, the 28th March,

1917, at the Agencies of the National Bank of Egypt, at Khartoum, Port Sudan, and Suakim.

In Europe, at the latest, the 16th March, 1917.

In Paris, at the Offices of the Société Marseillaise.

In Italy, at the Offices of the Banca Commerciale Italiana.

In London, at the Agency of the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, Governor.

Cairo, the 27th February, 1917.

MORATORIUM IN TURKEY.

The Austrian journal *Volkszeitung* of February 3 announces that the Turkish Chamber has extended the moratorium until November 30 next. Debtors must pay off five per cent. of their arrears each quarter, so that by the expiry of the moratorium they will have cancelled one-fifth of their debt.

A minimum of £10 may be withdrawn by each holder of a bank deposit on the first day of each quarter, even though this amount exceeds five per cent. of his balance. Rent is no longer subject to the moratorium, and five per cent. of the arrears must be paid off quarterly. Debts, contracts, and other obligations incurred after the moratorium was declared are not subject to the moratorium.

DEFAULTING STATES.

In the annual report of the Corporation of Foreign Bondholders are included some interesting tables showing the position at the beginning of 1917 of the various debts quoted on the Stock Exchange under the heading of "Foreign Stocks, Bonds, etc." The countries and States paying their obligations in full, except in the case of belligerent nations to enemies, are:—Argentina, Austria, Belgium, Bulgaria, Chile, China, Colombia, Costa Rica, Cuba, Denmark, Egypt, Finland, France, Germany, Greece, Guatemala, Holland, Italy, Japan, Liberia, Norway, Persia, Portugal, Roumania, Russia, Serbia, Siam, Spain, Sweden, Switzerland, Turkey, the United States and Venezuela.

NOTES OF THE WEEK.

In the revolution in Russia Armageddon continues to live up to its reputation. No result of the war is likely to have more far-reaching effects than this dramatic movement, provided it can be carried through on the moderate lines to which the prime movers are committed. As the European struggle continued, the shortcomings of the Russian bureaucracy became more and more pronounced. Those in authority took alarm at the awakening of the forces of New Russia, and persuaded themselves—and, it is to be feared, the Court, too—that the danger to autocracy from this quarter was greater than any that could threaten from an inconclusive peace with Germany. There could be no compromise with this attitude, and the situation brooked no delay. When the actual outbreak came, although starting by chance in food riots in a single district of Petrograd, the long-drawn antagonism between the rival forces stood at once revealed, and the Duma, as representatives of the people, took charge. There is no need to include the Tsar in the ranks of the reactionaries; but he was powerless to control the dangerous system that centred round the Court. The course he took was the right one, but the few days' delay played into the hands of the revolutionary extremists, and has complicated the position for the Moderates. Accordingly, for the present, New Russia is not yet out of the wood; for until it is assured that the great change is to follow a middle course, clear of all taint of reaction, but responsive to the traditional spirit of the Russian people, there can be no guarantee that the country will not find its attention distracted from the prosecution of the war by its internal differences.

Whatever course the Russian Revolution pursues, there can be no doubt that it will exercise a profound influence upon the minds of the people of the Central Alliance. Already the Germans have realized that the change in their Eastern neighbour completes the democratic ring by which their own virtually autocratic institutions are surrounded. Revolution is apt to be epidemic. Events in Russia will familiarize the peoples of Germany, Austria-Hungary, Bulgaria, and Turkey with the fact that, where rulers fail to reflect the national will, the

people have the remedy in their own hands; and, further, that where the people are for the most part united a revolution can be carried out more or less peaceably, without elaborate preparations by means of secret societies or through underground channels. To the four countries of the Central Europe block the details of the Russian Revolution are particularly instructive. Its net result, moreover, can hardly fail to lead German public opinion to a new orientation of international politics, with increased emphasis on the question *Quo Vadis?* addressed to itself. The success of the Government in capturing Social Democracy for the purposes of the war was largely due to the fact that autocratic Russia was regarded by the bulk of the party as a natural enemy; a minority only would be affected by commercial and industrial jealousy of Great Britain. But if Russia is suddenly to become more democratic than Germany, the confidence of the Majority Wing of the Social Democrats will be severely shaken. For the rest, the certainty the Allied Powers have of the changes in Russia making for the more vigorous prosecution of the war will be the measure of Germany's disappointed hope of dislodging Russia from the Grand Alliance.

General Maude's Proclamation to the people of the Baghdad vilayet is a document of paramount importance. On the one hand, it is, as we have termed it elsewhere, a charter of Arab liberty; on the other hand, it removes all doubt as to the intentions of the British Government in regard to this region. Any fears whatsoever on this point were unfair to those now in authority; but that they should have been entertained is not surprising in view of all that has happened in the past and of the promptings from various quarters as recently as last month that the Mesopotamia Expedition should be restricted to the re-capture of Kut. There is no need to force the political pace in Mesopotamia now, or to require the British Government to translate generalities into paper constitutions. The promise of what is in store for them has been given to the Arabs; but, as the Proclamation suggests, one of the first duties imposed upon them is to adjust their own dissensions, and under the ægis of a Power which is anxious to do all it can to promote their well-being and national solidarity to prepare for a revival of the days when the lands of the Eastern Khalifate were one of the world's most favoured portions.

The hardships of the Mesopotamia Expedition and the present condition of this region make it difficult to conjure up the glories of Irak a thousand years ago, when owing to its great fertility it was reckoned throughout the East as one of the four earthly paradises. Ctesiphon was the capital of the province at the time of the Arab conquest. The newcomers, however, required cities of their own, and Kufah, Busreh, and Wasit became the chief centres. But numerous other towns dotted the banks of the Tigris, which then took the course of the Shatt-el-Hai, while a series of canals between the Euphrates and the Tigris, with others on the east bank of the latter, made the whole region a Garden of Eden. Of Wasit we learn that the lands around it were extremely fertile, and their crops provisioned Baghdad in time of scarcity; the town markets were magnificent and well stocked, and visitors praise the fine buildings of the city. Baghdad in due course eclipsed all the other cities, and at one time is said to have had two million inhabitants. Since those days the vagaries of the rivers have changed the physical conditions of the country and the population has materially diminished. Irrigation, however, and improved methods of cultivation may do much to revive the fertility of the past. The civilizing influence of steel rails has already entered the land from the south, and in due course, we may hope, a British railway from Baghdad to the coast by way of Damascus will not only open up the country through which it passes, but will prove an important factor in consolidating the Arabs into a strong and prosperous kingdom.

The pursuit of the Turks is being continued towards Samarra, which is railhead of this section of the Baghdad Railway. Only one attempt at a stand seems to have been made by the enemy, at a point covering the railway station at Mushaidie. But a night attack drove the Turks from their strong position, and they were once more in full flight. General Maude reports that on March 16 the whole enemy force, consisting of the remnants of three divisions, was straggling over a distance of twenty miles, the rear being some forty miles north of Baghdad. In the meantime a portion of the Turkish army, which made the stand at the Diala River south of Baghdad, and, when the position was turned by General Maude throwing troops across the Tigris, seems to have been prevented from rejoining the main force, is being pursued up the Diala. Bakuba, a town thirty-three miles north-east of Baghdad, has already been occupied, and the Turks are in flight towards Khanikin, some sixty miles beyond.

Last week in these pages it was pointed out that the capture of Baghdad would exercise an immediate influence on the fortunes of the Turkish force falling back before the Russians in Western Persia. The interest attaching to this theatre has been increased by the fact that a section of the Turkish army defeated at Kut is now being driven towards Khanikin by the British. Russian columns are operating about a hundred miles south of Lake Urmiah, and again on a wider front a hundred and fifty miles farther south on the main road connecting Baghdad with Hamadan by way of Khanikin. In the former operations a series of successful engagements has brought our Allies into Turkish territory, not far from the road which commands the natural way of escape for the Turks from Hamadan. The Russians have already occupied Harunabad, a hundred miles short of Khanikin, and the enemy in front of them now runs the risk of finding his path barred at Khanikin by the British or to the north by a second Russian force. In the last resort the Turks can probably disperse and take to the mountains in small groups, trusting to being able to win through towards Mosul by tracks which an army could not use. They are, however, in a parlous plight, and by the time they reach Mosul, if they should do so, they would offer, even with the remnants of the three divisions retreating from Baghdad, very poor material as a nucleus for any reinforcements the Turks may have hurried there.

The announcement that the spring campaign in Macedonia may be said to have begun is likely to be received with some scepticism after the disappointments of the last twelve months. The British Commander-in-Chief's feelings on the subject seem to find expression in the complete cessation of all official reports. Fighting, however, is in progress, and in due course Macedonia will welcome the spring. Perhaps it would be more surprising, in view of the events in other theatres, if the spring campaign had not begun; so we may accept the strange message at its face value. The operations opened with the British advancing their line a thousand yards on a two-mile front south-west of Doiran. This move was effected by night and without opposition. Immediately afterwards the Italians became active in the Tcherina loop, and the French took up the fighting even more successfully west and north-west of Monastir. Within three days they had taken fourteen hundred Bulgarian prisoners, and had captured an important hill a few miles north of the town, which served the Bulgarians as a valuable observation post. The ejection of the enemy from the positions which enabled him to shell Monastir had become an urgent necessity; but, as was suggested in our last issue, the task requires the co-operation of the whole Allied line, if it is to be accomplished without heavy sacrifices. This probably supplies the explanation of the "spring campaign." A considerable amount of activity is being shown from Lake Ochrida to the Struma river. The phenomenon is not a new one on the Macedonian front; but this time the conditions under which it is repeated are entirely new.

The Ministers of the Entente Powers have taken up their residence again in Athens, and the first cargo of wheat has reached the inhabitants of the capital. In the absence of further information with regard to the way in which the Greek Government is carrying out the terms imposed by the Allies' Notes, we must infer from the return of the Ministers that they are now satisfied that Greece is no longer in a position to translate any nefarious designs into action. It is more than probable that King Constantine, in view of the course of events in Europe and Asia, is congratulating himself on not having pushed things to further extremes. For him, too, the revolution in Russia will seem to bear a very personal message, and there is no reason why its far-reaching effects should not extend even to Greece.

The debate in the House of Commons on the Report of the Dardanelles Commission left the subject where the Report itself had left it. Mr. Asquith failed to realize that the public set less store on individual points in the narrative than on the confirmation which the Commissioners supplied of the verdict already passed on his administration as a whole. The Dardanelles fiasco was symptomatic of the whole conduct of the war during his premiership; it failed primarily because the country lacked leadership, for there was no one at the head of affairs to correlate with a master mind and forceful hand the good work which Lord Kitchener was doing at the War Office and the Navy was doing at sea.

The reference to the Czecho-Slovaks in the statement of the Allies' war aims sent to President Wilson has revealed the fact that some uncertainty exists with regard to the geographical distribution of the nationalities concerned. Briefly expressed, it may be said that the term is meant to include the Czechs of Bohemia, Moravia, and Silesia, together with the Slovaks of Northern Hungary. The territory comprised amounts to nearly 40,000 square miles, with a population estimated at about twelve millions. But as three millions of these are Germans, it may be inferred that when actual boundaries come to be settled an attempt will have to be made to incorporate as many of the latter as possible in one of the neighbouring German States. Fortunately, as the war continues any hesitation that may have been felt in certain quarters regarding the break-up of the Central European block is being removed by the actions of the Central Powers.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 27.

The Foodstuffs Problem.

During the past month or so Messrs. McKillop and Ireland, the Inspectors-General of Agriculture and Irrigation, have been touring Upper Egypt with a view to studying the possibilities of increasing the production of foodstuffs. Incidentally they have attended meetings of the provincial authorities and cultivators, and have discussed with them what they should do and what use the Government intends to make of the extra supply of summer water which will be available this year. They have just returned, and the result of their visit is now evident from a proclamation which has been promulgated this week by General Murray. The preamble of this proclamation states that the Irrigation Service considers it possible to supply water from the Nile for the irrigation from March to the arrival of the new flood, which should take place at the end of July, of certain lands which do not ordinarily enjoy Nile water for irrigation during that period. In view of this fact and of the great need for the encouragement of the cultivation of cereals, powers are given to the irrigation authorities to take possession of any land and to make and maintain thereon such canals, channels, banks, or other works as may be necessary for the irrigation of the areas mentioned above. It is laid down that compensation for any land thus taken will, in default of any agreement, be determined by a special board, and that any cultivator using any of the water supplied in the manner mentioned for any other than a cereal crop will be liable not only to have the crop which he is growing destroyed, but also to very heavy penalties at the hands of a military court.

The area which will be specially irrigated by the Nile water in the manner mentioned is the basin land, which is usually only watered at flood time, and on which crops can only be grown after the flood has subsided, i.e., during the winter. It is expected that by giving this area water during the next four months it will be possible to obtain an extra millet crop of about 30,000 tons. It is understood that arrangements have also been made to give water to a larger rice area than usual, on condition that this rice is grown only as a food and not as a reclamation crop. All these measures show that the responsible authorities are fully alive to the situation, and that they are doing all in their power to increase the production of foodstuffs in the country. The prospects of the maize and rice crops are excellent, and there is reason to believe that the area under wheat will turn out to be normal, notwithstanding the fact that the area under cotton has not been restricted. All these factors should combine to alleviate to a certain extent the stringency in foodstuffs which is anticipated during the ensuing twelve months, though it is to be feared that nothing the local authorities may do in the direction of encouraging the cultivation of food-crops will entirely ward off that stringency.

The Somme Film.

This week the "Battle of the Somme" film was exhibited for the first time in Egypt at an entertainment given at the American Cosmograph in aid of the funds of the British Red Cross and the United Services Welfare Committee. The film, already considerably censured at home, had, according to those who had seen parts of it in London, undergone further excisions out here, but what has been retained is full of interest, and certainly quite gruesome enough to satisfy the most morbid-minded. The audience on this occasion was almost entirely British and Allied, and it will be interesting to see how the film is received by the local cosmopolitan and especially the Egyptian population, to whom it will, I understand, be exhibited in the ordinary way later on at one of the leading cinemas.

According to a Constantinople telegram, the life of Parliament has been prolonged to March 31 in order to enable the Chamber to deal with the Budget. The Chamber has adopted a Bill authorising the advance of £10,000,000 from an Austro-Hungarian banking group.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, February 24.

The annual lawn tennis tournament has taken place during the last week. The men's doubles were finished on Thursday the 22nd, when Messrs. Wedd and Forster beat Captain Pattison and Mr. Field. The winners had a considerable handicap in their favour, and the losers were not able to overcome it. On the same date was the final of the men's singles, the winner of which should meet the holder of the cup, Mr. Job, on the following day. The match was between Mr. Davidson, who was the runner up last year, and Mr. Field, and resulted in a fairly easy win for Mr. Field. On the following day were decided the finals of the Mixed Doubles Handicap and the singles. Mrs. Davidson and Major Bally won the doubles from Mrs. Burnett and Mr. Pelham, after losing the first set. In the singles there was some very good play to watch, and a very close match. Mr. Job finally won in the third set.

All the matches were played on the grounds of the Sudan Club, which was open to the players and their friends for the tournament.

The Skating Rink is to come into use once more, this time for a cinema show, and the first performance is to be on the evening of Sunday the 25th. The programme is in French and Greek, and gives evidence of the cosmopolitan character of the population of Khartoum.

It is reported from the upper reaches of the Nile, the Zeraf, that the water, instead of falling, is positively rising. This is quite unprecedented, and it is to be hoped is only a temporary wonder, as the natives with their herds in those parts will be hard put to it to find a means of living, if the water does not clear off their usual grazing grounds.

Mohammed Allam Pasha, the Governor of Assiut, has arrived on a visit to Khartoum. He went to Wad Medani for a few days, and has returned to Khartoum. He expresses great enthusiasm and admiration for the development of the Sudan.

Lieutenant-Colonel F. U. Carr, the Director of the Veterinary Department, has been seriously ill in Cairo, and all his friends have been most anxious to hear news of improvement in his health, and express the greatest sympathy for his indisposition.

Major Fail, who has been buying camels for the British Army, had an unfortunate accident recently at Señnar, where he slipped on the bank of the river and fell a considerable distance and hurt his back, and was compelled to lie up for some days.

MOSLEMS AND TURKS.

(FROM A CORRESPONDENT.)

Under the above heading, one who signs himself an "Arab Townsman" discusses in *Al-Kawkab* (Cairo), of February 20, the reasons why the Arabs and Moslems have acquiesced for so many centuries in Turkish rule. He argues that one of the reasons could be found in the persistent hope that sooner or later the Turks would follow the lead of European Constitutional Powers and adopt their system of government. Another reason was that Turkey was the only great Mohammedan Power which represented Islam in the face of the world. It was considered that the downfall of the Turkish Empire would be detrimental to Islam. Mohammedans in Turkey bowed their heads to Turkish tyranny for the sake of their religion, while Moslems who lived under the equitable rule of a foreign Power and those who had gained their independence, like the peoples of North Africa, the Persians and the Afghans, did not realise the iniquity of Turkish rule.

When the Revolution of 1908 broke out and the Constitution was proclaimed, all the races of the Turkish Empire welcomed the event and celebrated the occasion as the dawn of a new era. Their enthusiasm was soon to change to bitter disappointment. They found that the Unionist programme was to establish the supremacy of the Turks over the other races of the Empire, especially the Arabs. During the present war the Turks cast off the last simulacrum of restraint and decided to turkify, degrade, and crush all other elements under their rule. The evil culminated in their endeavour to destroy Islam and induce their Mohammedan subjects to revert to paganism and the worship of the White Wolf, as is amply proved by their books and sundry publications. Having failed to subjugate the Arabs to their evil designs, and having no European Power to stay their hands, they inaugurated a regime of terror, spoliation, and murder.

A telegram has been received at the Red Cross Headquarters from Sir Arthur Lawley, British Red Cross Commissioner in Mesopotamia, stating that he witnessed the entire evacuation of the wounded from some of the recent actions of Sir Stanley Maude's troops, and that the arrangements, which were admirable, were carried out without the slightest hitch. Sir Arthur adds, with reference to the motor ambulance boats provided by the Joint War Committee of the British Red Cross Society and the Order of St. John: "Our launches did splendid work."

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

Work of the Holy Synod.

The Holy Synod is dealing with an extensive programme of work, and its meetings will be continued till Easter. Perhaps the principal problem before it is that relating to the better education of the parish priesthood. It has been decided to select twenty students from the Pan-Cypriot college, or the gymnasium, who, after a probationary course, will enter the ranks of the married clergy, and will be appointed to serve in the different dioceses; eight in that of the Archbishop, and four in those of the Metropolitans of Kition, Papho, and Kyrenia respectively. It has been decided, very wisely, to enclose and protect Greek ecclesiastic monuments of archaeological value throughout the island. The constitution of ecclesiastical courts is also under discussion. Respecting these, there has been consultation with leading Greek advocates as regards jurisdiction, procedure, etc. The members have received the warm thanks of the new Archbishop for the services rendered by the Synod to the Church of Cyprus, and to the invaluable help which it has given to himself since his election.

Relief for the Papho District.

Poverty has always pressed more heavily on villagers in the west of the island than on those of most other parts; and the "Paphites," or men of Papho, has in the past been generally reputed as the most backward, as well as the least prosperous. People of this district seek work away from home more largely than others. Recently the employment offered at Salonika has provided relief for a great many, and the villagers who went there in large numbers send home their wages to their families weekly, or whenever opportunity is offered. Work is also now provided by the Government on the public roads in the Papho and Limassol districts, with wages at the rate of 15 piastres (1s. 8d.) a day for men, and less for women and boys. It is not many years ago that half of this rate was considered as adequate pay for road and other work. There is also a prospect that there may be some mining work at the Papho village of Philonsa, near which some prospecting has been recently carried out by a member of the American Mining Company. The condition of the district is thus distinctly improved as regards unemployment. Lands are being now prepared in the Papho and some other districts for summer produce, which includes cotton, sesame, and water-melons.

The Electrical Company.

A meeting of shareholders at Nicosia has decided that the company should continue work, provided that the municipal Council will agree to cancel or modify certain stipulations under the existing contract during the war and for six months afterwards. It is proposed that the number of lamps to be lighted at night be reduced from 730 to 350, and during full moon week that no lamps be lighted; the Municipality to increase its payments by 25 per cent., and the company to be authorised to increase its charges by 50 per cent. for supply of light to private houses, shops, etc. Three members of the Greek community have been requested to draft a letter to this effect, a copy of which is to be sent to the Chief Secretary and the Provost-Marshal of Nicosia, with a notification that if these conditions are not accepted by the Municipality by April 22 the company will be compelled to cut off all supply of electric light to the city.

General News.

The Legislative Council is to meet earlier than was anticipated, as the estimates have already been received back from England.

The Nicosia Assizes have begun. The Chief Justice, Sir Charles Tyser, being indisposed, his place has been taken by Mr. Stanley Fisher, Puisne Judge, pending his absence. Several cases of serious crime have been dealt with.

Crime of a serious nature is still too frequent, murder for trivial causes being too common. A few days ago, in a Nicosia village, during a quarrel over a game of cards between two Moslems, one Ahmet Khalil, struck the other, Ismail Murad, with a chair. The latter drew a knife and stabbed the other to death. He was arrested and taken to Nicosia. In another case a Greek, infuriated by the fact that a girl had transferred her affections to a rival, stabbed her as she sat out of doors with other women, leaving her dangerously wounded. In the present assizes a Turk has been condemned to five years' imprisonment for the attempted murder of a fellow villager.

At the request of the Ministers of the Entente, the Turkish Consuls at Yanina and Prevesa have left Greek territory for Switzerland.

A WAR-TIME DEPARTURE FROM ROUMANIA.

(FROM A CORRESPONDENT.)

For some time before the outbreak of the war—as far as Roumania was concerned—my business kept me fully occupied and practically tied to Galatz. With the beginning of the war our town became perhaps the most important point for the care of the wounded of both Russians and Roumanians, developing into a kind of huge clearing house.

At first, when the storm broke, we were dreadfully short of surgeons and ambulances, and thousands of the poor soldiers had to be transported from station to hospital on springless carts drawn by bullocks. It will, therefore, be easily understood that the arrival of the British Red Cross was hailed with joy. This unit, fully equipped with splendid motors, did invaluable work and treated the worst cases. After the first retreat of the Russo-Roumanians in the Dobruja we had a visit from part of the Scottish Women's Hospital Unit, and these courageous ladies caused a veritable sensation. The Roumanians had no conception of what a woman could do, and the sight of these young women, covered with oil, cleaning and "fixing up" their motors fairly stunned the people. No words of mine, I am afraid, can convey the value of the work done by these self-sacrificing and courageous people. The Boy Scouts, too, were splendid. The little fellows took on the jobs of men, carrying wounded, feeding them, and doing all sorts of work with the greatest devotion.

There was, of course, great suffering in our town as many refugees from the Dobruja and other parts of Roumania flocked to Galatz, which, instead of 70,000, had in December 200,000 souls to house and feed. The Prefect was simply splendid. He looked after the town and county of Covurlin, of which Galatz is the capital, with tact, zeal and intelligence that were beyond all praise.

We had a fair share of excitement in the shape of bombardment by a Zeppelin on Christmas night, though the damage done was insignificant, and no lives were lost. We were visited also by aeroplanes, which were beaten off by anti-aircraft guns; and from the Dobruja side of the river came the rumble of cannon; and at night could be seen the flashes of the guns.

On January 3 I left Galatz with my family for Odessa, which we were lucky enough to reach in three days, en route for England. At Odessa, however, I regret to say, the British Consulate insisted on keeping the Russian Christmas holidays in Russian style, which fact made it impossible for me to interview the Consul or any of his staff until Wednesday, January 10, when I was informed that I must go immediately to Petrograd to go through the formalities necessary to enable me to leave Russia. I rushed off to the station, and it was with great difficulty, and only with the assistance of a friend, that I secured tickets for a train leaving Odessa for Petrograd on January 14—a loss of nine days at least, four of which might have been saved had it been possible for me to get the proper information at the Consulate earlier. Of course, the Consulates were overburdened with work; but this is wartime, when everybody has a share of extra work and worry to bear; and I cannot help feeling that it was a mistake to take such a long holiday.

From Odessa to Petrograd the journey was uneventful and fairly long (three days and nights). The Russian railway cars are very comfortable and clean. Each carriage has two attendants, who supply the passengers with any amount of tea; in fact, I do not know how many glasses we drank every day! Petrograd was very full, so we felt lucky in getting rooms at an hotel on our arrival. It took us nine days to get through our formalities and make a start for our port. We left Petrograd on Friday, January 13/26, and if we had been superstitious we could have put down to the fact of the day and date our subsequent troubles of having to change railway carriages owing to a defective brake, missing our connection, and finally arriving on January 31 at the port of embarkation, only to be informed the next morning that the s.s. ——— was not going to leave for Great Britain. This news, as will be easily understood, was received with a chorus of lamentations by hundreds of subjects of all the Allied nationalities. The town was very short of hotel accommodation, so we were very thankful to receive accommodation on the s.s. ———, whose captain was most kind, and did all he could to make things comfortable for some eighty refugees. After a stay of over three weeks we were offered a passage on a cargo steamer, and so we came, eventually, safely to a British port. We felt proud of the power of our Navy, and had proofs of its vigilance. It was a great relief, however, that we found ourselves at last at our journey's end, after a journey of over two months.

THE RUSSIAN CAMPAIGN IN NEARER ASIA.

(FROM A CORRESPONDENT.)

The first sphere of warfare to waken into activity on a great scale after the long winter period of quiescence has been the East; and the brilliant success of recent operations in Mesopotamia has attracted to that distant front the attention not only of England, but of the world. Our Russian Allies farther north have been content to rest on their laurels during the off-season; and in Persia, notwithstanding the indirect support afforded by the movements of the column under Sir Percy Sykes, they seem hardly to have been able to hold their own against the superior forces of the Turks, who were in all probability aided by restless sections of the local population. But once more they are on the move, and it may be of interest, in view of coming developments, to note the scanty information that has been given by the *communiqués* during winter as to the positions which their troops occupy.

An attempt was made in THE NEAR EAST in the autumn* to explain the movements of the Russian troops in Armenia with reference to geographical conditions. Spring finds those troops in much the same positions as the beginning of winter left them. Difficulties of supply and munitionment on a long line of communications over miserable roads and the severity of the climate probably forebode further advance till fresh provision could be made for the next onset, when climatic conditions became more favourable. But the time has not been lost; the metalling of roads has been energetically pushed on; the towns have been cleaned and elementary principles of sanitation enforced; the cantonments have been made more comfortable for the troops; and supplies have doubtless at the same time been accumulated. It seems to fix the Armenian theatre of operations nearer to know that the Somme films were shown to the Russian soldiery in their principal winter quarters.

The main Russian advance was by the valley of the Phrat—the northern branch of the Euphrates—with linking posts thrown out over the hills of Pontus, to the Trebizond-Erzoroum road, and on thence to the coast. On the north, the extreme right, the Russians, before the campaigning season closed, had advanced as far as the line of the Karshut, which flows into the Black Sea near Tireboli, and recent messages, reporting the repulse of Turkish attacks on Petra-Kale, a fort or fortified village a few miles up the river, show that the Karshut still forms the extreme limit of the Russian advance on the right. In the hills that stretch from there to Erzincan posts of vantage are held by both sides, and the fighting during the winter has been confined to encounters of patrols and scouting parties and to attacks on isolated posts, success inclining now to one side and now to the other. Rarely was a force so large as a company employed. The life of the soldier in these remote posts among the mountains, throughout a terribly severe winter, when frequent snowstorms swept the country, must have been well-nigh unendurable, and the Turks claimed that desertions from the Russian ranks were numerous—a statement not inherently improbable, and possibly made on that account.

Farther south, beyond the rugged Pontus mountains, in the valleys of the rivers the main Russian forces were cantoned at Kelkid Chiftlik and Erzincan. Petty encounters were numerous in the neighbourhood, and there was one more important collision in January near Kemakh, a town on the Phrat, 30 miles below Erzincan, where a Russian column repulsed a Turkish force of a strength of two battalions—the largest force of which mention is made in the *communiqués* of the winter months. Beyond Kemakh the country along the river is believed to be extraordinarily difficult, but there are routes over the hills by which a light force might threaten the communications between Kharput and Sivas; and a menace to these communications might make the Turks apprehensive for the safety of their troops in the next zone of operations.

This zone extends from the high mountain ranges south of Erzincan to the valley of the other branch of the Euphrates—the Murad—and in it lie the villages of Oghnut and Kighi, frequently referred to in the reports. Here the Turks made their most determined thrust in July and August last, and here they were checked, though not without prolonged and sanguinary fighting, till winter set in and the passes by which they might have reached Erzoroum became impracticable. In the autumn the Turks were in great force here, but the bulk of their troops seem to have been withdrawn during the winter, and no serious attempt at attack on the Russian posts has been reported since the first half of November. Farther south still the extreme left wing of the Grand Duke's Army at the end of the autumn campaign had recaptured Mush and pushed forward to the crest of the pass on the Diarbekr road. It

had also closed in on Bitlis, near the western end of Lake Van, and Mr. Buchan, in the last volume of his history, assumes that this place also had fallen. No claim has, however, so far as the present writer is aware, been made by the Russians to the capture of this town, which is a post of great importance, situated as it is at the head of a pass that gives the most direct and convenient access from the highlands of Armenia to the plains of Mesopotamia and to the present railhead of the line to Constantinople. If Bitlis is still, as seems probable, in the hands of the Turks, they will hold on to it to the last in order to prevent the possibility of Russian interference with the communications of their forces operating in Persia.

There has been little news of military activity in the Bitlis-Mush sector during the winter. Such operations as have been reported indicate an intention on the part of the Russians to bring under control the country between Mush and Oghnut on the one hand, and between Bitlis and Van on the other.

The immediate interest, indeed, in the war in the Middle East has shifted from Armenia to Persia, and from the Russian armies to our own, as a result of the transformation caused by the brilliant operations of General Maude. The days of decisive victories have come back to us as in a flash, and the secondary character of the theatre in which these operations have taken place need not detract from our admiration of the skill and energy with which the failures of the previous campaign in Mesopotamia have been retrieved. Such a victory has results that extend far beyond the immediate field of operations. The Turkish armies, for a distance of 200 miles to the north, are now in retreat, and the Russians are following as closely as the difficulties of the country allow; but the situation has been fully discussed in the daily Press, and need not here be dealt with in detail. The Turks in Persia, cut off from Baghdad, must apparently attempt to fall back on Mosul, 200 miles from Khanikin, if, indeed, their most southerly troops succeed in gaining that place. Their route will lie either by rough tracks through the foothills, or by the road which passes through Kerkuk and Erbil (Arbela)—the track along which Xenophon retreated and Alexander advanced. Two considerable rivers have to be crossed, and the line of retreat would not be out of striking distance of the British forces. Even should Mosul be reached and a concentration be effected there with the troops retreating from the directions of Lakes Urmia and Van, the position of the Turks would not be enviable. The railhead, if it has reached Nisibin, will still be 130 miles distant by the shortest route across the desert, and a much greater distance, if the usual route following the Tigris is taken. At Bitlis the Russians are only 100 miles from the point on the Tigris at which the Mosul road diverges to Nisibin, some sixty miles further on, and their position, if they have taken or should take that place, will not only threaten disaster to the Turkish troops further east, but will be a standing menace to any attempt to send reinforcements from the west to Mosul. At last, after many vicissitudes, the English and Russian operations in the East have been coordinated by the victory of Sir Stanley Maude, and in the future the Allies may look to reap all the advantages of concerted action.

AN INCIDENT IN SINAI.

The Secretary of the Syria and Palestine Relief Fund writes: At the present moment when all eyes are turned to the East, the following incident related in a private letter from Cairo throws a lurid light upon the distressing condition of the people of the Sinai Peninsula, until lately under Turkish rule:—

"One day out in the desert some of our troops saw a queer bundle on the sand. It turned out to be an old Bedawi, nearly dead, and all skin and bone. They did all they could to make him happy, but his one thought was his wife. So the officers asked for volunteers, and a party started out into the desert to hunt for his wife. Not far from where they had found him they found an old, old woman, all skin and bone. They brought her in and prepared her a bed, etc., but she would do nothing but sit by the old man's side all the time. They were brought into one of the towns, and there they both died on the same day."

It is such people as these that the Syria and Palestine Fund, of Church House, Westminster, S.W., is doing its best to relieve. Their need is very great, and every help will be gratefully received.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

* See "The Russian Advance in the Caucasus," in THE NEAR EAST of Oct. 20 and 27, 1916.

OFFICIAL VISITS IN PERSIA.

(FROM A CORRESPONDENT.)

Since my arrival at Kerman, I have been busily engaged in returning visits from men of mark. It may amuse your readers to learn how I spent an afternoon in conforming to the rigid etiquette which governs social intercourse in Persia. I left my residence on horseback, with an escort of four lancers, and preceded by two *ferrashes*—answering to the Indian *chaprassi*—on foot. My pace was almost that of the common or garden snail, anything like bustle being abhorrent to the Persian soul. In the corner of the street in which my first "callee" lived, I was waylaid by two servants and escorted to his door. Dismounting, I was marched in a sort of procession to the *mihmankhana*, or reception-room, where my host, with the males of his family, stood ready to receive me. Before exchanging salutations I had leisure to examine this apartment surreptitiously. It was quite small; beautiful old carpets covered the floor, and hung like tapestry on the walls. The domed ceiling of pure white gypsum was scalloped in elaborate geometrical design, including fan-work such as is seen in Henry VII.'s Chapel at home. How uneducated craftsmen can produce such lovely things without the aid of mathematical instruments passes my comprehension. The only furniture was half a dozen chairs and a table piled high with fruit, biscuits, and sweetmeats, which latter were as toothsome as the products of Bond Street or the Avenue de l'Opéra.

Meanwhile my host was greeting me with a salutation never vouchsafed to Christians by the orthodox Sunnis of India, "Allah's peace be with you," to which I responded: "And with you be Allah's peace." He then led me to a chair, and on taking my seat I made a circular bow, asking "How fares your noble condition?" to which the stereotyped reply is: "Praise be to Allah, and by the favour of the lofty doorstep, I am well." A permissible variant would be: "I pray to Allah that the much-to-be-congratulated Presence is not fatigued," answered by: "Praise be to Him, I am not so." After these formalities, the host called for tea, which was offered in small glasses standing in pretty filigree holders on a silver tray. It was, of course, milkless and sugarless, although slices of lemon are sometimes provided. As soon as one glass is emptied another takes its place, and good form enjoins one to nibble a few sweets or biscuits. This light repast over, my host offered a cigarette, on taking which I must bow before he lights it for me. Conversation then became general; and as most good-class Persians are excellent company, the time passed quickly enough. But the visitor's path is strewn with pitfalls. On pain of giving dire offence, he must address a gentleman in the third person, and as "the lofty threshold," and in conversation with a Prince of the Blood must remember to style him "The mighty (or sacred) Presence."

Such personages excepted, all Persians qualify themselves as "your slave" in conversation; but this is not expected from Europeans. It is considered the acme of discourtesy to begin a remark "I tell you," the correct form being "A petition to the congratulated Presence."

After half-an-hour spent in this fashion, coffee, resembling the Turkish but not so thick, was offered as a signal that my host would not be offended if I took my leave. I rose, and said, deprecatingly: "I have caused you much weariness; please give me permission to depart"; whereat he bowed and answered: "You have been very welcome." Then I shook hands with him and his relatives, saying, "The favour of the lofty doorstep is too great." A murmur to the same effect followed me as I left the house, bent on another visit. Your readers will realise that a European has much to learn ere he becomes versed in Persian etiquette. Personally, I rather like all this old-world ceremony. My friends generally have something amusing to relate, if it be only a piece of Court or city gossip; and one picks up more Persian in an afternoon spent in calling than could be acquired by a week's work in office. C. P. S.

Italian troops have reoccupied El Assa, in Western Tripoli.

A regiment of Algerian Spahis has arrived at Salonika, where it was inspected by General Sarraill, in the presence of M. Venizelos.

The Anglo-Hellenic League learns from Salonika that on March 5 a further batch of Greek troops left for the front. The presidents or vice-presidents of thirteen workmen's trade unions who have reached Salonika from Athens or Piræus have addressed a memorandum to the Provisional Government and the representatives of the Allied and neutral Powers. They declare their complete confidence in the Greek Provisional Government, and point out that the resolutions which appear from time to time in the Athenian Press professing to emanate from various labour organisations are fictitious, and do not represent the real feeling of the Greek working classes.

LETTER TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE SERBS AS SEEN IN THEIR BALLADS.
TO THE EDITOR OF "THE NEAR EAST."

Sir,—Dr. Curcin's criticism of a lecture he has not heard is amusing. I did not mention the Serbian soldier, my lecture concerned ballads entirely. As to cruelty—it is, of course, a matter of opinion, and Western opinion differs much on this subject from Balkan opinion. I made my study of Serb ballads during many years of travel. I agree with Dr. Curcin that books written in a hurry, after merely superficial impressions, are useless. I, therefore, during the fourteen years over which my travels have extended made a point always of living for many weeks at a time in various native huts and houses, just as the people did. I took down many songs and ballads, both with phonograph and by writing, from various singers, and heard them discussed in long evenings round the fire.

Marko Kralyevitch's character is clearly delineated. The human Marko stands out distinct from his superhuman attributes. He is certainly bloodthirsty. When the fair Rok-sanda refused to marry Marko or either of his *pobratims*, Milosh and Relye, Marko was furious: "He siezed the maiden by the hand, he drew a sharp dagger from his sash, and he cut off her right arm at the shoulder, and shoved it in her left hand. He cut out her eyes and wrapped them in a silken handkerchief, and thrust them into her breast, and thus said Marko to her: 'Choose, now, oh, Roksanda, which thou wilt have!'"

In another song he cuts off the hand of a smith to prevent him from ever forging so fine a sword again as the one he has made for Marko. This certainly seems slightly cruel and bloodthirsty? Other instances can be found. Ballads such as these, I found to be popular, and to have had a decidedly bad effect on peasants, who have no other literature. I have heard acts of, what seemed to me, hideous cruelty justified by "Marko Kralyevitch did so." Marko was a very faithful friend and servant of the Sultan, and addresses him as "dear father"; and prefers to fight for him rather than to go, when invited, to Christian Princes. This certainly makes him a "strange national hero."

Those interested in the Balkan point of view will find much detail and local colour in the poems of Veliki Voyvoda Mirko, father of H.M. King Nikola of Montenegro. He describes the cutting off of heads, the fixing of them on stakes around a village, and the carrying of others to the tower above the monastery at Cetinje as lately as 1857. And how the Turks had to carry their dead away quickly, "that the Serbs might not cut off their heads." And much to similar effect.

I agree with Dr. Curcin that a great deal of truth about a nation can be learned when doing hospital work—if one knows the language. When nursing wounded and enteric during the first Balkan war (1912-13) I obtained a great deal of information as to their methods of warfare. The long series of ballads from early times to the present day gives an incomparable picture of Balkan beliefs, customs, and history, and I cordially recommend it to the student, for it is the Serbs as seen by themselves, and free from foreign prejudice.—I am, etc., M. E. DURHAM.

Owing to lack of coal, gas lighting has been given up in Athens and the Piræus.

Sir Stanley Maude, replying to congratulations from the Liverpool Exchange, says Lancashire men bore themselves most bravely at the passage of Dila River.

Compulsory service as agricultural labourers for all Turks who are not actually in the Army has been adopted. It is stated in an official Turkish *communiqué* that this will increase this year's harvests by 40 per cent.

In a message dated March 16, the *Times* correspondent in Athens reports:—According to information which has reached here from Turkey, an irade for a general mobilization of the male population was prepared a month ago, but the Government did not dare to publish it, fearing a rising. But in view of the fall of Baghdad the Sheikh-ul-Islam has declared a holy war and the Government has issued the irade, taking every precaution against a rising.

"A Serbian officer whom I met yesterday related to me a striking example of the bravery animating, not only the men, but the women of his country," says a writer in the *Pall Mall Gazette*:—"A young Serbian girl named Mile. Milonuka Sarich has been serving as a volunteer in the army, and has been five times wounded. She was first wounded in 1915, and was sent to Bizerta for treatment. Last year she was twice wounded. On recovering, she again went to the front, and is now once more in hospital."

TANGIER TO TEHERAN.

A friend who has a brother imprisoned at Yuzgat tells me that he writes cheerfully, and that he and his fellow captives appear to be well treated by the Turks. Their chief complaint is that parcels seldom reach them; and next to that they find lack of amusements a severe trial. The particular officer referred to writes: "At least, I shall be a perfect Godsend to all the old maiden ladies at home when I return. I believe I have learned and become more or less expert at every form of 'Patience' that was ever invented." Poor fellow! Patience is, after all, not a wildly exhilarating pastime.

.

At the Bengal Club, Calcutta, it is—or used to be—the custom when anyone told a particularly "tall" story in the dining-room for other members to place their forks on their glasses. The rite, always solemnly performed, was regarded as a polite way of saying: "I am a bit of a liar myself." It seems to me that the Allies—and the neutrals—would be grateful if some equally simple method could be devised for the reception of the German, Turkish, and Bulgarian official announcements regarding their military movements. In regard to these announcements at least the Turks and Bulgars always pay their German "Allies" the compliment of the sincerest flattery. The "withdrawal" from Kut and that from Baghdad, for instance, were, we are gravely told, merely carried out "in accordance with our pre-arranged plans." Tut, tut! A fork and a glass, please!

.

As an admirer of Mr. Gerard Fienness, I read his notes in last Sunday's *Observer* with pleasure. But when I found him writing: "With one Army beyond Baghdad, another on the southern border of Palestine, and blue water in between the two," I must admit that I was puzzled. Would that there were "blue water" on the line referred to. But all my maps show desert—and of the most "deserty" description at that, so to say—and I am afraid that our most dashing naval commander would find it hard to take his ship over the course indicated.

.

I have read somewhere—just where I cannot recall, for I have read so much on the subject during the past fortnight—that the British force has now pushed on so far north of Baghdad that we shall be able to control the floods, or, at least, to prevent the city from being flooded by anything the enemy may be able to do to the Tigris. Though it may be correct, this strikes me as a strange statement. For one thing, the Tigris floods are too big a thing for the Turks or their German "friends" to play about with successfully, even if they should be buoyed up by the agreeable prospect of flooding out the British invaders. For another, if Sir Stanley Maude has to protect the city against floods—as he may have to do, of course—I imagine he would do it by throwing up an embankment just north and east of the city and strengthening the river bank wherever that had to be done. I remember that, when I first entered Baghdad, there was much anxiety about the flood, which was quite exceptionally high that year. The gauge at the British Residency was a subject of close scrutiny and gave some alarming readings, and the Vali instituted a *corvée* for the purpose of strengthening the embankments, and for once in a way, the citizens gave their services cheerfully enough. Happily, our worst fears were not realised, the flood ceasing to rise when about a foot below the top of the embankment. Sir William Willcocks, I believe, estimated the cost of an embankment from Mathum (north of the city) to Gerrara (south) at under £T10,000. It looks as if it would be a good investment at the price.

.

Our entry into Baghdad has revived the discussion of the question how sufficient labour is to be found for the proper cultivation of the country when it has been provided with an efficient system of irrigation. It seems to me to be early days to think of such things yet; but, for my own part, I am inclined to believe that the problem will work itself out in due time. The whole of Lower Mesopotamia cannot, I am convinced, be brought under cultivation at once. Selected areas will have to be provided with irrigation first, and others will be added as time and finances allow. And I believe that for the areas first made available it will be possible to find plenty of labour in the country. The Arabs are not so hopelessly unable to settle to work as certain picturesque writers would have us believe. Hundreds of them worked steadily and well under the Americans at Nippur and the Germans at Babylon and elsewhere, and settled work was what they most desired.

Then, too, we must remember that the "town" Arabs of Baghdad, Mosul, and other places are in many cases the descendants of Bedouin. Is not Mosul peopled largely by descendants of the Shammar, one of the greatest "wandering" tribes? And apart from these sources, there are the "Tel Kaifis" and other "Assyrians," who now make excellent sailors and servants, and even some of the Kurds. My impression is that the local supply of "labour" will prove ample, and far better than many people believe.

CORSAIR.

NEAR EAST BOOKSHELF.

ABOUT ROUMANIA.*

It is a charming though pathetic picture of Roumania which Queen Marie draws in "My Country," the profits from the sale of which are to go to the British Red Cross Society for work in Roumania. She makes no mention of the war, but as "Queen of a small country" she writes of its people and customs as one who, at first a stranger, has now come to love, and be loved, therein. She says on the first page:—

This [Roumania] is a small country, a new country, but it is a country I love. I want others to love it also; therefore to listen to a few words about it. Let me paint a few pictures, draw a few sketches as I have seen them, first with my eyes, then with my heart.

In these few lines, and especially in the last words, you have the whole book. Queen Marie, indeed, draws with her eyes and describes with her heart the picture of the almost primitive Roumanians, surely as simple as any of the European nations, and in reading her book it is impossible not to sympathise and feel as the author does. But though Queen Marie makes no direct allusion to the war, there is something in her description of the Roumanian peasantry which helps the reader to understand in a small part the reason why they failed to stand up against the tougher Bulgar-German hordes:—

"From the beginning of time," writes the Queen, "Roumania was a land subject to invasions. One tyrannical master after another laid heavy hand upon its people; it was accustomed to be dominated, crushed, maltreated. Seldom was it allowed to affirm itself, to raise its head, to be independent, happy or free; nevertheless, in spite of struggles and slavery, it was not a people destined to disappear. It overcame every hardship, endured every subjugation, could not be crushed out of being; but the result is that the Roumanian folk are not gay."

Queen Marie has a happy power of description, and she certainly makes very picturesque reading out of her many experiences among the simple Roumanian peasants. The book is finely illustrated from a number of excellently reproduced photographs, and, bearing in mind the cause for which it is published, it is to be hoped that its sale will be a large one.

W. D. M.

BOOK NOTES.

Mr. Fisher Unwin has published "Lord Kitchener: His Work and His Prestige," by M. Henry D. Davray, the well-known French author, who has done so much to make England and English questions better understood in France. M. Paul Cambon writes a Prefatory Letter to the book, which is published at 2s. 6d. net.

Major H. M. Alexander's "On Two Fronts" (Heinemann, 3s. 6d. net) is concerned with the adventures and achievements of an Indian Mule Corps in Gallipoli and in France, and provides excellent reading.

"A Ride Through the Balkans" describes a journey made by two ladies shortly before the war. They set out originally to secure photographs of archaeological interest, but found the life of to-day more interesting than the relics of the past.

M. Vladimir Jabotinsky, a Russian newspaper correspondent, has written, and Mr. Fisher Unwin will publish very shortly, "Turkey and the War."

Messrs. Constable will publish in the near future "With the Turks in Palestine," by Mr. A. Aaronsohn. The author was in the Holy Land on the outbreak of the war, engaged in taking cinematograph pictures for use in the United States; and, as he had been born in the country, he was conscripted for the Turkish Army, with which he had to serve some time before he was able to make his escape.

The latest pamphlet issued by the Anglo-Hellenic League is "The Anglo-Hellenic Hansard." It is described in its sub-title as "A Reprint from the Official Parliamentary Reports of some Questions and Debates on Greek Affairs in the House of Commons, November 27-December 22, 1916."

* "My Country." By H.M. the Queen of Roumania. (Published for The Times by Hodder and Stoughton. 5s.)

27	14	Tuesday	3	4
28	15	Wednesday	4	5
29	16	Thursday	5	6

To-day Viscount Milner enters his sixty-fourth year.

The Crown Prince of Serbia has telegraphed to the King conveying his congratulations on the brilliant capture of Baghdad.

Prince Bibesco, Secretary to the Roumanian Legation in London, left Paris at the beginning of the week for Cadiz to meet his brother, arriving there from America.

The Duchess of Wellington will shortly issue invitations for an entertainment at Apsley House, on Tuesday afternoon, May 15, for the benefit of the Mesopotamia Comforts Fund.

Wednesday being the Persian New Year, H.E. the Persian Minister was at home, at the Legation, in the afternoon to members of the Persian colony and friends.

Lieutenant-General Sir John and Lady Maxwell were unavoidably prevented from attending the funeral of the Duchess of Connaught at the Chapel Royal, Windsor, owing to an unfortunate delay in the reception (at York) of his Majesty's command to attend the ceremony.

The *Times'* correspondent at Athens telegraphs that the British and Russian Legations were reinstalled in the city on Sunday afternoon, and that the French Legation is expected to return within a week.

Lieutenant-Colonel John Norton-Griffiths, M.P., King Edward's Horse, had the honour of being received by the King at Buckingham Palace on Saturday morning, when his Majesty conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the Most Honourable Order of the Bath (Civil Division).

It is announced that the King has been pleased to approve of the promotion to the rank of Field-Marshal of General Sir Charles Comyn Egerton, G.C.B., D.S.O., retired pay, late Indian Army, in succession to the late Field-Marshal the Right Hon. Earl Roberts, V.C. In addition to much distinguished service in India and on the frontier, Sir Charles, in 1903-1904, was in command of the operations in Somaliland from June, 1903, to May, 1904, when the "Mad Mullah" was so badly defeated at Jidballi.

The Rev. H. J. Hoare, formerly principal of Edwards College, and C.M.S. missionary at Peshawar, India, has been appointed chaplain of All Saints', Ramleh, Alexandria.

The engagement is announced between Second Lieutenant Harold Rodocanachi, R.F.A., second son of Mr. and Mrs. Pandia Rodocanachi, of 34, Pont Street, and Dunchurch, Rugby, and Melita, elder daughter of Mr. and Mrs. Constantine Vassiliadi, of 64, Westbourne Terrace.

St. Peter's, Eaton Square, was the scene of a quiet but pretty wedding on Tuesday last, when Major Theodore Beal Pritchett, R.F.A., M.C., only son of Mr. and Mrs. Theodore Pritchett, of King's Norton, Warwickshire, was married to Irène, daughter of Mr. and Mrs. John Ross, of Alexandria and the Hotel Rubens, London. The Rev. Canon Barnard performed the ceremony, assisted by the Rev. Austin Thompson, vicar of St. Peter's, and the Rev. A. Cameron Ross, uncle of the bride, the service being fully choral. The bride, who was given away by her father, wore a simple and charming gown of white charmeuse, relieved with crêpe nylon and soft silver lace, affixed to the train of charmeuse being a lover's knot of lace edged with white heather and orange blossom. On one corner of her veil was embroidered the R.F.A. regimental badge in white silk. She carried a sheaf bouquet of white roses and heather. Miss Rosamond Anthony, niece of the bridegroom, in a soft white frock, with a garland of white heather encircling her hair, and Master Alister Ross, cousin of the bride, in full dress Ross tartan kilt, made a pretty pair of tiny attendants, there being no bridesmaids. The bridegroom was accompanied by Mr. Malcolm Graham, R.N.V.R., as best man. In spite of the fact that the wedding was postponed at the last moment from the 7th inst., owing to the bride's sudden indisposition, there was a large gathering of friends at the church, the altar of which was beautifully decorated with white flowers, standing out among which were two hearts, formed of red carnations. No reception was held after the ceremony, but a few rela-

tives and friends afterwards proceeded to the Hotel Rubens, whence Major and Mrs. Pritchett later left on a short honeymoon, the bridegroom being due to return to the front in a few days. The bride's travelling dress was of grey gabardine and Georgette, with a large silver tissue picture hat. Among the numerous gifts received were a silver rose-bowl from the officers of the 3rd S. Midland Brigade, a silver coffee tray from the officers of the bridegroom's Battery, and a cheque from the staff of Messrs. John Ross and Co., Alexandria.

The *Egyptian Gazette* of the 3rd inst. states: During his recent ten days' visit to the Desert Column, the Bishop in Jerusalem confirmed 365 men at some ten different places between Ismailia and El Arish. He was accompanied on the tour by the Rev. W. W. Cash, Senior Chaplain of the Eastern Force, who had made all the arrangements with the chaplains concerned. The *Gazette* adds that the Bishop was to start on the 5th inst. with Mrs. MacInnes for visits to the British residents at various places in Upper Egypt and expected to be absent from Cairo for about a week.

The following message from the King of the Hejaz has been received by his Majesty's High Commissioner in Egypt:—With all my heart I congratulate your Excellency over the occupation of Baghdad by your valiant troops. It is only meet that this city should thank God Almighty for its liberation from the criminal hands of the Turanians. We shall hear, if God wills, of similar good news from the Western front. I pray the Almighty to grant victory and success to all those who are defending justice, civilisation, and the liberty of nations, which has been transgressed upon." Sir Reginald Wingate has returned a suitable reply warmly thanking the King of the Hejaz.

Our Cyprus Correspondent informs us that the sum raised by means of the theatrical performance given by the English Field Club at the Papadopoulos Theatre on behalf of the fund for soldiers blinded during the war amounted to £105.

General Sir Stanley Maude has sent a letter of thanks to the Indian Soldiers' Fund for the gifts sent to the troops in Mesopotamia, who "realize the immense amount of labour, time, and money which is necessarily entailed in order to enable such good results to be achieved."

The *Egyptian Gazette* reports that the auction sale held in Cairo on February 23, of some of the late Lord Kitchener's effects, drew an eager crowd of bidders, anxious to secure something—however trifling—which had previously belonged to the great administrator. The lots put up comprised furniture, engravings, carriages, hangings, brassware, and china, and the prices realized were on the high grade. This was due in some measure to the large number of Egyptian gentlemen present, who bid against each other in their desire to secure the various articles on sale.

A memorial service for the late Mrs. Harley, sister of Field-Marshal Viscount French (who was killed at Monastir on March 7), has been arranged by the Serbian Legation, representing the Serbian Red Cross Society, in co-operation with the London units of the Scottish Women's Hospitals (N.U.W.S.S.), and will be held at St. Margaret's, Westminster, next Wednesday, at 12.30 p.m.

As an abiding memorial of the great services rendered to the Serbian nation by Mrs. Harley and of her noble death, the municipality of Monastir has unanimously passed a resolution that the street in which she was killed should be renamed the Rue de Madame Harley.

Many friends of H.H. the Aga Khan will be glad to learn that his mother, H.H. Lady Ali Shah, who was indisposed, is now progressing satisfactorily, says the *World*. She is under the treatment of Lieut.-Colonel Meyer and Major Liston. H.E. the Governor of Bombay and his son paid a visit to Lady Ali Shah to make personal inquiries after her health, and were informed that she was slowly improving.

At a meeting of the Royal Geographical Society, held on Monday evening, the President (Mr. Douglas Freshfield) announced that the King had approved of the award of the Founders' Medal to Commander D. G. Hogarth, R.N.V.R., for his explorations and other geographical work in Asiatic Turkey, 1887-1911.

HELP to meet the needs of the
SERBIAN ARMY,
 and send your Donation for the
SERBIAN RED CROSS
 — to the —
SERBIAN LEGATION, 195, Queen's Gate, S.W.

On Sunday last, the anniversary of the assassination of King George at Salonika in 1913, a solemn Requiem was celebrated there in the Cathedral of Saint Sophia, in the presence of the Provisional Government and the Ministers and representatives of the Allied Powers.

"The Limassol Race Meeting is to take place during the latter half of April, says our Cyprus Correspondent.

In the second annual report of the Armenian Red Cross and Refugee Fund it is stated that £4,146 was received during the year, bringing the total up to £8,917 at the end of 1916, and an appeal is made to sympathisers not to relax their efforts. Donations should be addressed to Miss E. J. Robinson, hon. secretary, 35a, Elsham Road, Kensington, London, W., and cheques should be made payable to Mrs. Lydia Chambers, hon. treasurer.

In Syria and Palestine the chemists' shops have exhausted their stocks of drugs and medicines. The honorary secretary of the Syria and Palestine Relief Fund, Church House, Westminster, will gladly receive any medicines and drugs, or money to buy them, as the dearth of all medicinal requirements, coming on the top of starvation and disease, has made still worse the pitiable condition of the inhabitants of the Holy Land.

APPOINTMENTS, PROMOTIONS, ETC.

Our Cyprus Correspondent writes that the rumours regarding the impending appointment of Mr. W. Bennett as Chief Secretary to the island Government were incorrect. Mr. C. S. Stevenson, Colonial Secretary in Ceylon, has been appointed to the position.

Captain E. O. Newcombe, Reserve of Officers, Traffic Manager Sudan Government Railways, has been granted the Distinguished Service Order for eminent services rendered in the field, and Captain A. G. Cummins, M.B., of the Egyptian Army Medical Corps, has been granted the Military Cross. Captain Cummins was Senior Medical Officer in the Darfur campaign.

Mr. G. E. Seabright, Sudan Government, has relinquished his temporary rank of Bimbashi.

The *London Gazette* announces that the King has been pleased to grant the undermentioned gentlemen authority to wear Decorations (as stated against their respective names) which have been conferred upon them by the Sultan of Egypt in recognition of valuable services rendered by them :

Third Class of the Order of the Nile.

Arthur Norman Wilkinson, Esq., late of the Sudan Government Service.

Fourth Class of the Order of the Nile.

Charles Wiseman, Esq., Department of Ordnance, Egyptian Army.

The *Egyptian Gazette* announces:—Bimbashi A. W. D. Bentinck, 9th Sudanese, and Bimbashi W. R. Barker, Khartoum District, have been transferred to the Equatorial Battalion; Bimbashi R. A. Colville and A. F. Kingoe, of the Sobat Tibor District, have been transferred to the 15th Sudanese; and Bimbashi E. G. Warren, 4th Battalion, has been transferred to the 13th Sudanese.

OBITUARY.

Captain the Hon. Ivan Campbell died at a nursing home in London last Friday. He was in his fifty-eighth year, and was formerly a Lieutenant in the Queen's Own Cameron Highlanders, and later a Captain in the 3rd Battalion Royal Scots. He served with the Egyptian Expedition in 1882, and was present at the Battle of Tel-el-Kebir, and later took part in the South African Campaign of 1900-1. In 1914 he was appointed a General Staff Officer. Captain Campbell, who was a brother of the Marquess of Breadalbane, married in 1884 Lady Margaret Elizabeth Diana Agar, daughter of the third Earl of Normanton.

Friends of Captain and Mrs. Cuthbert E. Binns, formerly of Constantinople, will be grieved to learn of the death of their eldest daughter, Beryl Elizabeth. She was taken ill suddenly on Sunday, the 11th, and passed away peacefully at St. Anthony's Hospital, North Cheam, on Friday, the 16th. The funeral service was held on Monday, the 19th, at St. John the Baptist's Church, at Old Malden, Surrey.

Major Theodore Stephen Fox-Strangways, late Royal Irish Rifles, who has died at Taunton in the fifth-fifth year of his age, was a graduate of the Staff College. He entered the Service in 1884 and retired in 1905. In 1888 Major Fox-Strangways took part in the Sudan Expedition from Suakin (medal with clasp and bronze star), and in the South African War he was on the Staff as assistant provost-marshal and intelligence officer. He had the Queen's and the King's medals with five bars. Major Fox-Strangways was a kinsman of the Earl of Ilchester, he was educated at Winchester, and married in 1893 Rosamund Cleere, daughter of the late Charles Edmund Newton, of Mickleover Manor, near Derby.

DOMESTIC ANNOUNCEMENTS.

The charge for announcements under this heading is 8s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

TESTER.—On March 14, at Old Court, N. Ealing, to Charlotte (née Blofeld), wife of Ernest W. Tester—a daughter.

TOMBAZIS.—On the 24th inst., at 6, Bute Gardens, Glasgow, to Mr. and Mrs. George Tombazis—a son.

MARRIAGE.

PRITCHETT-ROSS.—On the 20th inst., at St. Peter's, Eaton Square, by the Rev. Canon Barnard, assisted by the Rev. Austin Thompson (vicar of St. Peter's), and the Rev. A. Cameron Ross (uncle of the bride), Major T. B. Pritchett, R.F.A., M.C., only son of Mr. and Mrs. Theodore Pritchett, King's Norton, Warwickshire, to Irène, daughter of Mr. and Mrs. John Ross, of Alexandria.

DEATHS.

COSTA.—On March 15, Triantaphyllos C. Costa, for forty-two years Sacristan of the Greek Church, London.

ELDRIDGE.—On March 17, of cerebro-spinal meningitis, Cedric George, only child of the late Edmund J. Eldridge, of the British Consulate, Smyrna, and Mrs. E. Eldridge, Berkhamsted, and grandson of Mrs. Eldridge, L'Incontro, Bournemouth, aged 12½.

O'BRIEN.—On the 17th inst., at a nursing home, Christopher W. O'Brien, of 20, Avenue Bosmans, Antwerp, late partner of Messrs. Gellatly, Hankey, and Co., aged 65.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

FRIDAY, MARCH 23, 1917.

THE FUTURE OF MESOPOTAMIA.

Couched in the language of the East, but free from all Oriental hyperbole and obviously breathing sincerity in every line, the British Proclamation to the people of the Baghdad vilayet is worthy of the place that will be reserved for it in history as the charter of Arab liberty. For twenty years, the inhabitants of Baghdad are reminded, the city has been a centre from which the power of the British and their Allies has been assailed in Persia and Arabia. For that reason alone the rule of the Turks must come to an end, and their capacity to reinforce the Germans as the breakers of the world's peace must be restricted. It has been necessary to defeat the enemy and to drive him from these territories; but the British troops have come not as conquerors or enemies, but as liberators. Great Britain remembers that for more than seven centuries the Arabs of these parts have been subject to the tyranny of strangers. Their palaces have fallen into ruins, their gardens have sunk in desolation, their forefathers and they themselves have groaned in bondage. Their sons have been carried off to wars not of their seeking, their wealth has been stripped from them by unjust men and squandered in distant places. For the last four centuries their oppressors have been the Turks. These have talked, indeed, of reforms, yet the ruins and wastes of to-day testify the vanity of their promises. Now that the Turks have at last been expelled, there is no thought of imposing again upon the Arabs alien institutions. Great Britain cannot remain indifferent as to what takes place in the country now or in the future, but "it is the hope of the British Government that the aspirations of your philosophers and writers shall be realized, and that once again the people of Baghdad shall flourish, enjoying their wealth and substance under institutions which are in consonance with their sacred laws and their racial ideals. . . . It is the hope and desire of the British people and the nations in alliance with them that the Arab race may rise once more to greatness and renown among the peoples of the earth, and that it shall bind itself together to this end in unity and concord." In the name of the British Government, therefore, General Maude has invited the people of Baghdad through their nobles and elders and representatives to participate in the management of their civil affairs in collaboration with the political representatives of Great Britain who accompany the British Army.

No hopes that the Proclamation can raise in the Arab world are likely to exceed the wishes and intentions of the British people in regard to this historic race. There has been a close bond of interest between the two, and among the Baghdadis who welcomed the arrival of General Maude's war-stained troops will have been some who are in a position to compare Turkish and British rule from their personal experience. For two centuries the merchants of the "Queen of Cities" and of Great Britain have traded together, while pilgrims from India have extended their stay in Mesopotamia over a number of years. Terms of friendship have for

some time linked the Sheikhs of Koweit and Mohammerah and the Emir Ibn Saoud with the British Government, and it was to Great Britain that the King of the Hejaz instinctively turned when the moment came to throw off the Turkish yoke. British interest in the Arabs, therefore, is of no sudden growth, although so long as they belonged to the Ottoman Empire and friendly relations subsisted between Great Britain and Turkey there could be no question of differentiation between Turks and Arabs. The British people have believed in the Turk just so long as belief was possible. They admired his individual qualities, and they clung to the hope that his Government would ultimately prove susceptible of reform. The substitution of Young Turkey for the old régime of Abdul Hamid prolonged the period of hope; but the declaration of war provided "the last straw" in the political sphere, and the massacres in Armenia and Syria completed the disillusionment in the social and moral sphere. From the Turks Great Britain turns to the Arabs, whose simultaneous revolt against the Constantinople Government represented the culmination of a movement extending over several years. The Arabs have never lost their sense of nationality under Turkish rule. Religious considerations bound them to the Sultan, and might long have continued to ensure their loyalty, subject to a spirit of temporal independence, had not the Committee of Union and Progress embarked on a policy of trying to "turkify" the subject races. The process was directed particularly against the Arabs, whose position in the Empire was regarded as too anomalous to be compatible with its complete turkification. Their first challenge came from the Hejaz; and, although due allowance must be made for the clannishness of the Arab tribes, there can be no doubt that the revolt of Mecca has evoked an echo throughout the Arab world. Baghdad, the City of the Khalifs, has now its chance of contributing to the success of the movement by preparing under British auspices for the day when the wealth of Mesopotamia shall once again supply the foundation of a great Arab Empire.

Politically the future of the Arab world in general, and of the Baghdad vilayet in particular, rests upon the Arabs themselves; economically they must remain dependent on the measures that will have to be taken for the development of Mesopotamia. This fact must largely determine Great Britain's relationship to these regions. There can be no revival of the spacious times when these lands were fertile, when Arabs gave to the world literature, science, and art, and when Baghdad City was one of the wonders of the world, until the valleys of the Euphrates and Tigris have been restored to their former productiveness. To achieve this, irrigation works will be required; but the first need of all is settled government, and that the presence of the British alone can secure for many a long year. Great irrigation schemes for these parts already hold the field, and a tentative beginning was made by the Turkish Government. If Mesopotamia is once more to take its place among the granaries of the world, the schemes must be carried out on a liberal scale. Irrigation, however, is of no use without an adequate supply of cultivators. After generations of Turkish misrule these regions are sparsely populated, and agriculture, owing to the difficulties and drawbacks attaching to it, has fallen out of favour. But the history of the Arabs proves them to have been skilful cultivators of the soil in the past, and the predilections of individuals to-day suggest that they will readily return to it when conditions are favourable. It may be necessary to introduce irrigation works gradually, so that the land restored to cultivation may not outstrip the supply of workers and to give time to those who have plied other callings to recognize the superior advantages of work on the land. A beginning can be made in the neighbourhood of the towns of Busreh and Baghdad, and an early start will be advisable, as soon as military conditions permit, in order that the Arab population may be reminded that, as it was dependent on Great Britain for its deliverance from the Turkish yoke, so it must look loyally to the same source for the economic advantages which the change of rule may be expected to bring in its train.

THE PROPOSED STATE UNIVERSITY IN EGYPT.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 26.

The Superior Council of Education in the Note on the Budget just presented to the Council of Ministers by the Ministry of Education has approved of a proposal for the creation of a State University, and has added the hope that it will be found possible to carry out the scheme in a very short time. This is not the first time that the idea of a University has been mooted. As far back as 1894 that erudite scholar and savant, Yacoub Artin Pasha, in a work on Public Instruction in Egypt, expressed the opinion that all the Higher Schools ought to be combined in one body, so as to constitute a University, which would render the greatest services to the country, from the point of view of promotion of the study of science, letters, and philosophy, by the traditions that it would set up, the desire for knowledge that it would inspire, and the spirit of competition and emulation with other universities that it would create. Nor is this the first attempt that has been made to establish such an institution. In 1906-1907 the Egyptian University came into existence with just these objects and with identical aspirations. Unfortunately, its founders and directors have failed to make their enterprise a success mainly because they were not men who had any experience of scholastic administration or organisation, but also because they tried to run it too much as an independent enterprise, and because the elements appealing to the youth of the country were lacking.

The underlying idea of the Government's proposal is to complete the existing higher education organisation, which is admittedly defective, to make the courses in the professional colleges more strictly technical than they are at present, to furnish an opportunity for students, after completing their secondary course, to secure a liberal education apart from a professional career, to bring the courses given in the various professional colleges into closer relationship and facilitate optional studies and different combinations of courses, and to encourage post-graduate study and research.

Briefly, the scheme is the following:—To create Faculties of Letters, Science and Oriental Studies, and to correlate the Higher Colleges already existing, such as the Schools of Law, Medicine, Engineering, Agriculture, etc., in one organisation, as a University. The course, whether for a professional diploma or a degree in Letters, Science, or Oriental Studies, would comprise two stages—the Intermediate and the Final. All the courses for the Intermediate stage would be given in the Faculty of Letters or in that of Science, both of which would consequently constitute the centre of the University. The Intermediate course would deal with preliminary general education, and would provide for a wide variety of alternatives and options, so as to meet the varying needs of students who may want to proceed to the different Higher Colleges. The Final stage for a degree in Letters or Science would be continued in the Faculties concerned, that for professional diplomas in the special colleges devoted to these subjects; but no student would be admitted to the Final stage until he had passed the Intermediate Examination in Letters or Science. A supplementary course for an Honours Degree would be included in the Faculties of Letters and Science.

The fact that a student before entering a professional college had to pass an Intermediate Examination in either Letters or Science would mean that when he eventually proceeded to that college he would have received adequate general preparation. This would be a marked improvement on the present system, under which it is found that most of the students on admission to a professional college are inadequately prepared for higher specialised training; and that, consequently, provision has to be made for a certain amount of preliminary education in the professional courses, which as a result become more prolonged than they ought to be.

Under the University scheme the courses in the professional colleges could be more closely restricted to technical training, and the length reduced so that they could admit a larger number of students. "The provision for professional education would thus be extended at the same time that opportunities for a liberal education, apart from a professional career, were created."

Whatever views one may have as to the advisability of giving professional and liberal education on any extended scale to a people who are as generally backward and as essentially agricultural as the Egyptians are, there can be no doubt that, since higher education has been allowed to reach the point at which it stands in Egypt to-day, it is only reasonable that the system should be completed and carried to its logical conclusion, i.e., that the loose ends of higher education, which the various colleges constitute in their present dissociated state, should be gathered together in one institution, which, in addition to linking them up, would at the same time provide the higher educational elements that are so plainly lacking in the existing system. The Council has certainly done wisely in bringing forward this proposal, which, in its own words, would have a stimulating effect on the whole organisation for higher education, would correct any narrowing tendencies in the professional colleges, would give a fresh intellectual outlook to the youth of the country, and, by the encouragement of post-graduate study and research, would make an effort to advance knowledge as well as disseminate it. The scheme should, indeed, tend to raise the standard of the various diplomas granted by the Egyptian Government, and should in the long run produce a more cultured class of Government servant and professional worker. Incidentally, there is the hope that it would in time conduce to the elimination of the *déclassé* element brought into existence by the present disjointed and incomplete system, which answered the purpose very well when it was merely a question of producing sufficient men to fill the many vacancies in the Government service, but which no longer meets the new conditions that have since sprung up.

As is the case with the various schemes for the extension of elementary education and female education suggested by the Superior Council, the date when it will be possible to put the State University scheme into operation depends entirely on the funds which the Egyptian Government may find itself able to set aside for educational purposes; but, seeing that the nucleus for the University already exists, and that the proposals aim at more thorough centralisation with a consequent provision of more accommodation at the various colleges, thus effecting an economy in present expenditure and at the same time opening the way for the receipt of more fees, it should be possible to make a start in the very near future. The date will undoubtedly be brought nearer if the wealthy classes can be prevailed upon to show more public spirit in the matter of education than they have done in the past and come forward with contributions to endow the University. Similar institutions in other countries have owed their foundation and maintenance to private munificence, and there is all the greater call on the wealthier Egyptians to do likewise, seeing that, under the system which has been in vogue for the past thirty years, they and their children have for the most part been educated at the expense of the State.

PARCELS FOR PRISONERS IN TURKEY.

The Secretary of the General Post Office makes the following announcement:—

According to information furnished by the Swiss Post Office, the transmission abroad of parcels addressed to prisoners of war in Turkey is suspended, and, until further notice, such parcels cannot be accepted at post offices. Letters for prisoners of war in Turkey are still being forwarded.

The Postmaster-General announces that from the 20th inst. the conditions which now apply to the transmission of parcels to British and Colonial prisoners of war in Bulgaria and Turkey (also in Germany and Austria-Hungary) will apply to parcels for prisoners of war of Allied nationalities in enemy countries. Such parcels, therefore, unless addressed to officers, will be accepted at post offices from members of the public only if they are addressed to the care of authorised associations. A list of the authorised associations may be consulted at any post-office.

THE PRESS ON THE NEAR EAST.

"Sinbad" and "Fritz."

The *Spectator* (March 17), in an article entitled "Baghdad and Bapaume," refers to the excellent temper in which the British people received the news of the capture of Kut el Amarah by the Turks and the spirit in which it set about doing what was necessary to retrieve that ill fortune:—

The country and the Government made no boasts about how they were going to redress the balance on the Tigris by future action. Silently we began our preparations for another advance. We now see the fruits. Within nine months of our defeat we are not merely back again at Kut, but in possession of Baghdad, the first building seized being the railway terminus upon which our enemies based such a mountain of diplomatic and financial intrigue and such a wealth of political dreams. They bragged about Baghdad. We have taken it. The Baghdad Railway was the thread upon which the pearls of the Pan-Germanic Middle-Europe policy were strung. The thread has been cut, and the pearls (imitation variety, made in Berlin) are rolling about the floor in every direction. How far our military railway from the Gulf has yet gone is a secret which if we knew we could not state, but obviously it must have gone a good way, and we do not doubt that it will not be very long before it reaches Baghdad. After all the talk, it will be a British and not a German-made engine that will be the first to enter the city of Haroun Al-Raschid from a Persian Gulf terminus. Sinbad the Sailor, not Fritz the Frightful, will have told the last and best story in *The Arabian Nights*.

The Organiser of Victory.

The writer then turns to an acknowledgment of our indebtedness to the leaders and the men who have secured this fine victory:—

If the circumstances in which Baghdad has been made ours were characteristic of British thought and action, the friends of General Maude have every right to claim that he has played a specially British part. His care, his thoroughness, and his tenacity of purpose have been not only a miracle but a model for all his brothers-in-arms. He has not advertised himself or his troops, but has worked with a swift and reticent mastery that has been quite admirable. What we like best of all about him and his work is that, having once got hold of the enemy, he has never lost touch with them. . . .

But while we show gratitude to General Maude, we must not forget that in the last resort it is to the gallant men, native and British, under him that we owe the victory. A General may be the finest strategist in the world and the greatest leader, but if his instrument is of lead instead of steel what avails all his skill? Nor, again, must we forget the part that has been played by that most silent and least self-seeking of soldiers, General Monro, the Commander-in-Chief in India. Last August General Monro left the Western front, where he was in command of the First Army—that is, was the chief subordinate of Sir Douglas Haig—to reconstitute and reform Indian military administration wherever such reform was needed. On his way out he paid a visit to the Persian Gulf, and since that time he has been working with that patience, good heart, and steadiness which are his characteristics alike in the office and the field to support General Maude and provide him with whatever is needed by an army in the difficult position occupied by that on the Tigris. But for General Maude's high qualities of command, the expedition must have failed; but it is equally true to say that it would have failed if General Monro, supported of course by the Viceroy and the Indian Government as a whole, had not played the part of Carnot and been "the organiser of victory."

A Change for the Better.

In a leading article, "The Proclamation to the Arabs," the *Manchester Guardian* (March 20) expresses the opinion that the Proclamation "lays the foundation-stone of the new Eastern policy which the Government hopes to build up out of the ruins of the old." In the past we sought to uphold and to help the Turk. He has proved hopeless, and now we turn to the Arab:—

Let no one think that in seeking to create a new Arab nation to take the place of a Turkey which has proved its political bankruptcy we are changing names only and not things. Between the Arab and the Turk there is a deep-rooted animosity which their common religion has never been able to heal. The Arabs are, with the Jews, the sole survivors of the great Semitic family; the Turks are neither European nor Semitic, but Tartars from Central Asia, as alien to Near Asia as they are to Europe. Except as conquerors, the Turks have contributed nothing to the history of the world; the Arabs have not only a great Imperial period but a long and famous history in letters, in philosophy, in medicine, in science, and in commerce. In the Saxon period in England the Arabs were undoubtedly the most highly civilised and enlightened population, and Baghdad was, with its population of two million people, the greatest and the best-governed capital in the world.

The substitution of Arab for Turk, as ruler, cannot but be beneficial and strengthening to our own position in the East. The article concludes:—"For the present the great thing is that English people should understand the splendour of the political ideals that are now put forward by this country."

Our Welcome to Baghdad.

In a leading article, "Bapaume and Baghdad," *The Times* (March 16), referring to the account sent home by Mr. E. Candler of the entry of our troops into Baghdad, remarks:—

The warmth of the welcome they received from the inhabitants is no surprise. There have never been many Turks in Baghdad, and the bulk of the population consists of Jews and Arabs. The Turk was as much an alien in Mesopotamia as we are ourselves, and his disappearance will not be regretted.

This statement is decidedly within the mark. The Arabs of Mesopotamia have always loathed the Turk and his tyranny, and the citizens of Baghdad have long been well disposed towards the British.

Roumania's Weak Spot.

The Times of Tuesday contained an interesting article by its correspondent in the Balkan Peninsula on "The Causes of Roumanian Failure." The writer declares that "a latent, but important, and deeply-rooted cause of the national misfortunes will be found in the unsound social and economic conditions which, notwithstanding occasional efforts at reform, still prevail in the country." He continues:—

The system of land tenure, a legacy from mediæval times, still keeps a large proportion of the agricultural population, the bone and sinew of the nation, in a state scarcely distinguishable from serfdom. It is from this class that the bulk of the Roumanian Army is drawn. The peasant soldiers form not only the majority, but by far the best fighting material in the army; the town-bred troops are very inferior, both in moral and physique.

The greater number of the peasants work on the estates of large proprietors (*boiars*), which are often let out to middlemen. The rule of the middlemen, who are generally speculators in land, is peculiarly oppressive, while the *boiars* have often been absentees from their estates. . . . The system has tended to produce, on the one hand, a pleasure-loving, self-indulgent aristocracy, and, on the other hand, a dispirited and discontented class of agricultural labourers, whose efforts to ameliorate their position have frequently taken the form of outbreaks, sometimes culminating in widespread insurrections, such as those of 1888 and 1907. It was hardly to be expected, in these circumstances, that the Roumanian peasant soldier could rival either in martial spirit or in physical strength the soldiers of nations who are for the most part independent proprietors, who enjoy the fruits of their labour, and realize that they are fighting *pro aris et focis* when called upon to defend their native land. The discontent of the agricultural *proletariat* has been turned to account by the enemies of the country, who in the course of the war have distributed proclamations from aeroplanes declaring that they have come to Roumania as the friends and liberators of the peasants, and exhorting them to rise against their oppressors.

Reference is then made to the solemn promise given to the peasants by the King at the opening of the Parliament in Jassy, regarding legislation to deal with this drawback, and with the existing electoral system. The article concludes:—"The successful conclusion of the war must be followed by a comprehensive and thoroughgoing series of reforms, which will rejuvenate the country and confirm the claim of its Sovereign and Government to direct the destinies of the united Rumanian race."

"The Turkish Bonaparte."

The National News (March 18) awaits "with interest our next news from the Syrian front." The Turks, it thinks, are sure to have despatched reinforcements against Sir Archibald Murray, but doubtless the latter "was simultaneously reinforced," and—

as we believe this general to be at least as pressing and as energetic as his colleague in Mesopotamia, we look forward to the next news from him with confident anticipation. Enver Pasha has recently returned to Constantinople from a visit to Southern Syria. He is perhaps wise to have left it before a battle, for his last exploit on the Caucasus front proved him to be a better politician than warrior, and he may have preferred to see Djemal Pasha and his German mentors incur the risk of Murray's blows and the delicate attentions of the Anzac mounted troops.

The Germans, thinks the *National News*, may quite well be little concerned about what goes on in these distant and very secondary theatres, being inclined to gamble upon victory in the main theatres this summer.

But what will Enver answer to the reproaches of his colleagues, who will ask him what Turkey has gained from her alliance, not to say her subservience, to Germany? Mesopotamia lost, Armenia Russian, the Senussi well thrashed, the Sultan of Darfur dead, Syria invaded, and nothing whatsoever gained. What a record for the Turkish Bonaparte! Enver is bound, we think, to make an effort to protect Turkish interests, and will probably try to bring home his divisions from the Dvina, Galicia, and the Dobrudja, if the Germans will let him, in order that they may strike a blow at one or other of the armies threatening Turkey. We imagine that, Armenia apart, Syria will be the scene preferred for these activities, for since the piercing of the Taurus range the railway communication between Constantinople and Palestine is almost complete. The mass of the Turkish forces must be directed against General Yudenitch, who has proved himself a dangerous and hard-hitting foe, but the balance, we should say, may appear in Southern Syria, which certainly demands the close attention of us all.

The Navy and Baghdad.

Writing in the *Observer* (March 18) on "Baghdad and Its Lesson," Mr. Gerard Fienmes rightly emphasises the importance of the Navy's share in the Mesopotamian campaign. He also pays a well-merited compliment to the Indian marine:—

There is a part of the Empire's naval strength, once famous, but now seldom heard of: the Indian Marine. Perhaps all that many people know or recollect of it is that it supplied one of the gallant band who died with Scott in the Antarctic. It consists of a few troopships and small lightly armed gunboats, named after the Viceroy—Lawrence, Minto, Dalhousie, and so forth. It is officered by British and manned by natives. It usually does such police work as the Indian Government finds necessary upon the sea, or conveys Indian troops upon small expeditions. Its chance for real service came, however, with the Mesopotamia expedition, and its deeds will find a place in the history of the war. India has played her part upon the sea as well as Australia and New Zealand.

The creation, organisation, and conveyance of the Tigris flotilla is another feat of which, as a nation, we shall have a right to be proud when the story is told. India was, of course, the immediate base of the expedition; but much had to go from the Mother Country, both of men and material, and to have kept the line of communication for this distant undertaking, in face of the subtle submarine threat, is as striking a testimony to the influence of sea power as all history affords. Let it not be forgotten, moreover, that the success of the operations in the region of the Garden of Eden and on the scene of the campaigns of Alexander the Great was based upon the Grand Fleet hidden in the mists of the North Sea.

Articles to Note.

"Baghdad and After," in the *New Statesman* (March 17).

"Battle of the Diala and Baghdad," by Hilaire Belloc, in *Land and Water* (March 15).

"The Truth About Greece," by G. F. Abbott, in the *National Weekly* (March 17).

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Dardanelles Report.

March 21.

LORD FISHER said:—My Lords,—When our country is in great jeopardy, as she is now, it is not the time to tarnish great reputations, to asperse the dead, and to discover our supposed weaknesses to the enemy; so I shall not discuss the Dardanelles Reports. I shall await the end of the war, when all the truth can be made known.

Congratulations on Capture of Baghdad.

The LORD CHANCELLOR announced that he had received from the Foreign Office for communication to the House of Lords the following resolution, which has been unanimously adopted by the Senate of the Portuguese Republic:—"Considering that the occupation of Baghdad by the British troops is a notable feat of arms, and seeing that it represents a great advance on the road to the common victory of the Allies in the cause of civilisation and right, the Senate of the Portuguese Republic congratulates England and those who for the peace and progress of the world are fighting on land and sea against the violators of the law of nations." The Lord Chancellor added that he proposed to return a suitable reply.

HOUSE OF COMMONS.

I. E. Telegraph in Persia.

March 14.

Colonel YATE asked the Secretary of State for India whether all officers of the Indo-European Telegraph Department in Persia contribute to an official family pension fund; and, if not, would he take steps to make this contribution obligatory on all officers alike in that department, in order that the widows and families of such officers might not be left destitute in future.

Mr. CHAMBERLAIN: There is no family pension fund for the Department, but officers appointed since August 1, 1909, are required to subscribe to the General Provident Fund on obtaining a substantive pay of Rs. 100 a month or more. Other officers are admitted as optional subscribers. I have received no representations in favour of the establishment of an obligatory pension fund.

Colonel YATE: Will my right hon. friend not consider the urgency of making the contribution of this family pension fund obligatory as recommended by the Royal Commission on the Indian Civil Service?

Mr. CHAMBERLAIN: If I rightly understand my hon. and gallant friend's suggestion, it is that I should make it obligatory on persons who have already joined the service not subject to that condition. That is rather a grave step to take. As at present advised, I am not prepared to do it.

Transport of Troops in the Red Sea.

Colonel YATE asked the Secretary of State for India, whether his attention had been drawn to adverse reports on the two cargo boats, the "Falcon" and the "Africa," owned by Messrs. Cowasjee, Dinshaw and Co., of Aden, which are now being used for the transport of troops from Aden to Perim and the Red Sea

islands; and, if not, whether he would have enquiries made as to the seaworthiness and suitability of these boats for transport work.

Mr. CHAMBERLAIN: No, Sir. I have seen no such reports, but I will make enquiry of the Government of India.

The Dardanelles Report.

March 15.

Mr. BONAR LAW informed Mr. S. MacNeill that Mr. Asquith had agreed to act with a small Committee of the Government for the purpose of considering what might be published of the excised portions of the Dardanelles Commission Report, and, if possible, what the Committee recommended would be published before the debate on Tuesday.

Lord R. CECIL, replying to Mr. Brookes, who asked whether the efforts of Russia and Great Britain had now succeeded in restoring order in Persia and in ejecting the Turks; and whether the Persian Gendarmerie could be so reconstituted as to obviate the necessity of any recurrence of the large-scale military operations on Persian soil both by Russia and by ourselves, said:—As regards the first part of the question, it is hoped that the general retreat of the Turkish forces in Persia which is now taking place will before long bring about normal conditions in that country; the considerations and objects mentioned in the last part of the question are receiving the careful attention of his Majesty's Government in consultation with the Russian and Persian Governments.

Lord R. CECIL, replying to Sir J. D. Rees, said that Sir Percy Molesworth Sykes was at present at Shiraz, where he was engaged in organizing the South Persia Rifles.

The Dardanelles.

March 19.

Sir C. HOBBHOUSE asked whether the House would be entitled to discuss on Tuesday aspects of the report on the Dardanelles as distinct from those to be raised by the Leader of the Liberal Party.

Mr. BONAR LAW replied that that would largely depend on the Speaker, but he had no doubt the desired opportunity would be afforded.

The Dardanelles Operations.

March 20.

Mr. ASQUITH made a statement in regard to certain matters referred to in the Dardanelles Commission's Report. It seemed necessary to him, he said, to say something at once on the subject, not in his own interests only, but in those of his late colleagues of the War Council, and, above all, of Lord Kitchener, who was no longer able to speak for himself. The statement was far too long for reproduction in these columns. Mr. Asquith stated that he had never known the experts to be backward in giving their opinion, asked or unasked. He said that what was first decided upon was a naval expedition alone, because Lord Kitchener, who strongly favoured the project, proved to the satisfaction of his colleagues that he had not sufficient troops to make the expedition a joint operation. The Government, he added, being backed by all the expert naval opinion, was justified in considering the operation a practicable one. After touching on the failure to hold any meeting of the War Council between March 19 and May 14, Mr. Asquith concluded by declaring that the operation ought not to be described as a tragedy or a catastrophe. It saved the position of Russia in the Caucasus; it delayed the defection of Bulgaria to the Central Powers; it kept at least 300,000 Turks immobilized; and it cut off and annihilated a *corps d'élite*, the flower of the Turkish Army. The Turks had never recovered from the blow inflicted on them, and it was one of the contributory causes of the favourable developments we had witnessed in Egypt, Mesopotamia, and Persia.

Sir MARK SYKES said the publication of such a report as this led to useless argument, and prevented them getting on with the war. The report did not give one a complete picture of the situation. Two points seemed to suggest that it had been put together in a hasty manner. The Commissioners suggested that the political consequences of the evacuation were slight. Well, people might write like that fifty years hence, but they could not assess a thing like that suddenly. Nobody who lived in the Orient at that time could have felt the same after the evacuation as before. There was loss of prestige in Persia, Afghanistan, and Armenia, and the anti-war party in Turkey was done—dead and gone. Though he thought personally that our prestige went down from 100 degrees to zero for the time being, he would not speak now but that he thought it had gone back to 75 degrees. Some had to be made up yet. The Commission said also that they thought Lord Kitchener's estimate of 300,000 Turks kept immobilized was conjectural, and they agreed that although the main object was not obtained, certain important political advantages were secured. But they said that whether these were worth the lives and treasure involved must always be a matter of opinion. That casting of doubt as to whether the lives were wasted was one to which no Commission ought to commit itself. It must really bring painful thoughts to the minds of those who had lost those near and dear to them. The Commission had no right to express an opinion when it admitted it had not made a full investigation.

Mr. CHURCHILL also made a lengthy personal statement. He accepted full responsibility for the advice tendered to the War Council; but argued that all the action taken was taken with great precision and thoroughness, and that no one had any right to say that naval expert opinion was not marshalled, arranged, and massed behind the Admiralty action. The responsibility for the failure at the Dardanelles and the subsequent military operations did not rest wholly with those who advocated them. Very strong currents of opinion in this country were opposed throughout to the operations; all the great authority of the military chiefs in France was certainly adverse, and thence came a steady stream of adverse opinion. In Parliament and in the Press enormous influences were at work to discourage and to terminate the Dardanelles operations. Against that powerful undercurrent;

nothing could make headway. "Your Commissions," Mr. Churchill concluded, "may condemn the men who tried to force the Dardanelles, but your children will keep their condemnation for all who did not rally to their aid."

Arabian Politics.

March 21.

SIR J. JARDINE asked the Foreign Secretary if he were in a position to make a statement on the political affairs of the Hejaz and other parts of Arabia and the operations of the Turks in the vicinity of Aden.

MR. BALFOUR: Early in November last the Grand Shereef Hussein assumed the title and office of King at the request of the Ulama and notables of Mecca, approved by the unanimous vote of the people, and has been recognised as King of Hejaz by the Allied Governments. His Highness has established his authority, and has entered into close relations with the important Chieftain Ibn Saud of Nejd and with the Sheikh of Koweit, who have warmly approved the step he has taken. Another important chief, Idrisi of Asir, has also risen against the Turks. The only remaining pro-Turkish chiefs of any consequence are the Imam of Yemen, who is isolated, and Ibn Rashid, the head of the Shammar, whose influence is decidedly on the wane. With regard to the second part of the question, I would point out to my hon. friend that as the Turkish force near Aden is isolated from Turkish headquarters, and the Turkish military authorities have consequently no means of ascertaining its dispositions or condition except through our Press, I would prefer not to give any reply, except to say that we regard the position as satisfactory.

THE COLONIZATION OF PALESTINE.

Last Monday Dr. E. W. G. Masterman read before the Royal Geographical Society a paper describing the resources of Palestine and its suitability for colonization. He said that it was a land without mineral wealth. Bitumen occurred under and near the Dead Sea; petroleum, it was thought, might be found in the same neighbourhood; and phosphates occurred east of the Jordan; but that was all. The wealth of the country was, and had always been, due to the raising of live stock and the tillage of the soil. Viewed from this standpoint, Palestine was, on the whole, a moderately fertile land. Parts consisted of irredeemable desert; much more was now desolate because of the breaking down of terraces that had formerly been made upon the hillsides, or of dams that had held back the winter rains so as to irrigate the valleys during the crop-raising season. Such areas could be restored to their ancient fertility, but it would require a great expenditure both of capital and labour. Other parts were still very fertile. On the Hauran plateau, for example, he had ridden with unbroken stretches of wheatfields extending to the horizon on every side. Palestine had been almost denuded of trees, and reforestation on a great scale was needed. This had been done in parts already by the planting of pine trees on the tops and moister slopes of the hills, and by growing eucalyptus in the Jordan valley. The vine, olive and fig-tree flourished everywhere they had been tried, and oranges and lemons wherever abundant water could be provided by irrigation. Almonds, apricots, and pomegranates thrived in parts of the land. Melons flourished in the plains. Tobacco could be grown in many parts. In the Jordan valley bananas, American corn, rice, dates, sugar-cane, and cotton might be cultivated in the better-watered areas by coloured labour, the white supervisors having their homes on the hills at the side of the valley. The principal article of export was the orange crop of Jaffa; other exports were olive oil, and, more important, sesame oil. To make a living on the soil of Palestine meant hard work under difficult conditions, and great areas were entirely unsuitable for colonists from Europe, or the cooler parts of America, because of heat and malaria. Dr. Masterman briefly recounted the story of various attempts at colonization—the American settlement at Jaffa in 1856, which entirely failed; the German settlements beginning in 1860, which had been more successful; and the Jewish colonies. Of these the most important, he said, were Rishon le Zion, Rehoboth, and Zimmarin. The last-named was on the slopes of Mount Carmel, and there were few pleasanter sights in Palestine than this colony in spring. The vicissitudes of the Jewish colonies had been great, the most successful had received unstinted support from Europe, and were even now scarcely self-supporting. Apart from the colonists, Palestine was by no means uninhabited. Its indigenous population had dwelt there from times earlier than those when the Angles and Saxons came to these islands. They were a mixed race, best described as Syrians, in which much Arab blood had intermingled with that of Canaanites, Jews, Greeks, Egyptians, and, perhaps, even Crusaders. Before the war they numbered something under 700,000, and three-quarters of them were Moslem. Besides these, there were settlements of Moslem Circassians east of the Jordan. In its present condition the land would not support a larger population. To make colonization successful, the greatest need, even more than the restoration of the desolated areas, was a properly organized effort to combat malaria, ophthalmia, and other diseases.

A discussion followed in which some of the speakers took a rather more hopeful view. Lord Bryce said there were special facilities for irrigation in the Jordan valley. Dr. Moses Gaster said that in spite of all difficulties there were now 1,000 souls at Zimmarin. In another case two colonists had covered a barren hillside with almond and other trees. Their method was to make a hole in the sandstone. In this hole soil and water collected, and then they planted the seed. He believed the return of the Jews to Palestine would transform the country; what was needed was the sympathy and support of the British Government.

THE CAUSE OF ARAB FREEDOM.

The following is a translation of the proclamation issued at Baghdad on March 19 by Lieutenant-General Sir Stanley Maude:—

TO THE PEOPLE OF BAGHDAD VILAYET.

In the name of my King, and in the name of the peoples over whom he rules, I address you as follows:—

Our military operations have as their object the defeat of the enemy and the driving of him from these territories. In order to complete this task, I am charged with absolute and supreme control of all regions in which British troops operate, but our armies do not come into your cities and lands as conquerors or enemies, but as liberators.

Since the days of Halaka [Hulagu] your city and your lands have been subject to the tyranny of strangers, your palaces have fallen into ruins, your gardens have sunk in desolation, and your forefathers and yourselves have groaned in bondage. Your sons have been carried off to wars not of your seeking, your wealth has been stripped from you by unjust men and squandered in distant places.

Since the days of Midhat the Turks have talked of reforms, yet do not the ruins and wastes of to-day testify the vanity of those promises?

It is the wish not only of my King and his peoples, but it is also the wish of the great nations with whom he is in alliance, that you should prosper even as in the past, when your lands were fertile, when your ancestors gave to the world literature, science, and art, and when Baghdad city was one of the wonders of the world.

Between your people and the dominions of my King there has been a close bond of interest. For 200 years have the merchants of Baghdad and Great Britain traded together in mutual profit and friendship. On the other hand, the Germans and Turks, who have despoiled you and yours, have for twenty years made Baghdad a centre from which to assail the power of the British and the Allies of the British in Persia and Arabia. Therefore the British Government cannot remain indifferent as to what takes place in your country now or in the future, for in duty to the interests of the British people and their Allies the British Government cannot risk that being done in Baghdad again which has been done by the Turks and Germans during the war.

But you people of Baghdad, whose commercial prosperity and whose safety from oppression and invasion must ever be a matter of the closest concern to the British Government, are not to understand that it is the wish of the British Government to impose upon you alien institutions. It is the hope of the British Government that the aspirations of your philosophers and writers shall be realized, and that once again the people of Baghdad shall flourish, enjoying their wealth and substance under institutions which are in consonance with their sacred laws and their racial ideals. In Hejaz the Arabs have expelled the Turks and Germans, who oppressed them, and proclaimed the Shereef Hussein as their King, and his lordship rules in independence and freedom, and is the ally of the nations who are fighting against the power of Turkey and Germany; so, indeed, are the noble Arabs, the Lords of Koweit, Nejd, and Asir.

Many noble Arabs have perished in the cause of Arab freedom, at the hands of those alien rulers, the Turks, who oppressed them. It is the determination of the Government of Great Britain and the Great Powers allied to Great Britain, that these noble Arabs shall not have suffered in vain. It is the hope and desire of the British people and the nations in alliance with them, that the Arab race may rise once more to greatness and renown among the peoples of the earth, and that it shall bind itself together to this end in unity and concord.

O people of Baghdad! Remember that for twenty-six generations you have suffered under strange tyrants who have ever endeavoured to set one Arab house against another in order that they might profit by your dissensions. This policy is abhorrent to Great Britain and her Allies, for there can be neither peace nor prosperity where there is enmity and misgovernment. Therefore, I am commanded to invite you, through your nobles and elders and representatives, to participate in the management of your civil affairs in collaboration with the political representatives of Great Britain who accompany the British Army, so that you may be united with your kinsmen in north, east, south, and west in realizing the aspirations of your race.

A Reuter's message from Jassy, dated March 20, reports:—The Roumanian Parliament will meet again on Thursday.

Last week a new detachment of the Greek Army of National Defence left for the front after being inspected by General Sarraïl and the Provisional Government.

Reuter's Amsterdam correspondent reports:—A telegram from Sofia states that American interests in Bulgaria, which have hitherto been watched over by the United States Legation at Bucharest, will now be watched over by the United States Embassy in Constantinople.

Escaped Roumanian prisoners report that the Turkish contingents on the Roumanian front have suffered severely from the cold. Five hundred Roumanian labourers were brought from Braïla to bury the dead within the zone of fire, but they were unable to complete their task the same day.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

What has become of the trade in prayer mats for the faithful of Islam? Before the war this was an important branch of German industry, as people in Egypt and neighbouring Mohammedan countries well know. India, too, and Persia were great customers of the Huns. British manufacturers would do well to look into this apparently small business, because it is not so small as it looks. There is great profit in it.

Those in the Near East who have been looking to India to solve, at least partly, the acute fuel problem will learn with some regret that all the coal produced in the country has been earmarked on a strict plan. Some time ago an official committee was appointed to regulate supplies, and I learn that it has been necessary, not only to control the output of the mines, but also to allocate the coal to consumers according to their importance. The following classification has been approved:—(A) Admiralty, R.I.M., railways, public utility companies, Government factories and military farms; (B) shipment and bunker specials; (C) specials for industries engaged wholly or partly in war work and fuel for domestic requirements; (D) cotton mills, jute mills, and other large industries; and (E) other purposes.

Recently, however, so I understand, a substitute for coal has been found in Egypt. Elsewhere in to-day's issue is printed an account of experiments which were undertaken by Mr. John Wells. He was deputed by the Government to investigate the question of combustibles, and as a result he has recently drawn the attention of the authorities to the products and sub-products which are obtainable from cotton and other vegetable stalks. The official chemists professed themselves satisfied with the results of the preliminary experiments, which were enlarged. Now, special kilns are being constructed near Shoubrah and equipped with apparatus capable of dealing with ten tons of stalk a day. Let us hope that a very serious problem is about to be disposed of.

I learn from a particularly well-informed source that, although little news reaches this country from the Balkans, conditions in Roumania are by no means alarming. Indeed, it is believed an improvement has taken place, and that considerable relief may be expected in the future. The Germans and Austrians are profoundly disappointed with the results of their stupendous efforts, which, to say the least, have not been profitable. There is reason to suppose, too, that important developments are impending. The successful overturning of enemy interests in Russia is bound to have an advantageous effect, and Roumanians in this country, and British concerns which have important financial and commercial interests out yonder, watch the progress of events with great satisfaction.

In the meantime, *The Times'* correspondent in the Balkan Peninsula attributes the misfortunes of Roumania to "the unsound social and economic condi-

tions which, notwithstanding occasional efforts at reform, still prevail in the country." The mediæval system of land tenure, he says, keeps a large proportion of the agricultural population in a state scarcely distinguishable from serfdom. "The discontent of the agricultural proletariat has been turned to account by the enemies of the country who, in the course of the war, have distributed proclamations from aeroplanes declaring that they have come to Roumania as the friends and liberators of the peasants, and exhorting them to rise against their oppressors."

It is to be feared that, so far as the past is concerned, this grave allegation is true. I believe, however, that the war will lead to a change. My readers will recall that at the recent opening of the Roumanian Parliament at Jassy, the King promised that the right of the peasantry to possess the soil should be legalized, and that reforms should be made in the electoral system of the country. The King, no doubt, will keep his word because the troops—all recruited from the peasant class—have fought with splendid bravery, and have established a right to a more dignified and independent status.

I am glad to learn that the organisation of an Anglo-Roumanian Chamber of Commerce in London is proceeding definitely along excellent lines, and that we shall not have to wait any great length of time for its prospectus. The movement has been inaugurated under the strongest possible auspices and has been received in important commercial circles with much enthusiasm. I hope in a week or two to be able to deal with this matter at greater length, and in the meantime strongly advise those who have interests in the country of our Ally not to permit themselves to be led into other and less certain paths.

I gather from some of the statements made at the annual meeting of the Sudan Goldfield Company, Limited, that the engineers and staff have considerable faith in the future of the concern. During the year 14,007 standard ounces of gold were produced, and £54,521 was realised, the net result on the year's working being a profit on revenue account of £19,073. The dividend is 10 per cent. The chairman, Lord Vaux of Harrowden, repeated his complaint regarding the excess profits duty. "It is most inequitable," he said, "that a company such as ours, which only reached the dividend-paying stage in 1914, should be liable to this duty, especially in view of the very large amount of capital which was expended on our mine before we became profit earning." There is something to be said for this point of view, of course; but a concern which has paid fair dividends for three years can scarcely expect to escape altogether from war imposts.

As will be seen from the report of the proceedings at the annual meeting, published this week, the Eastern Bank, Ltd., has had another prosperous year, and wound up with the comfortable balance to credit of profit and loss of more than £60,000. Shareholders are to be congratulated on their dividend of 6 per cent. and on the certainty of the prosperity of the

bank. One of the most interesting features of the chairman's speech to the shareholders was his statement that the Baghdad branch of the bank is to be reopened. Lord Balfour of Burleigh held out no hope that the bank's property in the city of the Caliphs was found intact when Sir Stanley Maude entered the city; but, as he remarked, it ought not to be difficult to recover the comparatively small amount which was left over when the war broke out.

Interest also attaches to the statement that the branch at Busreh, where the Eastern Bank act for the Government of India, is making steady progress, and is now on a paying basis. This is a result, achieved in a short period, of which the board of directors have reason to be proud. A branch has also been opened at Amara—between Kut and Busreh—but I gather that, for the present at any rate, most of the business transacted there is official. The great difficulty connected with the establishment of new branches lies in securing the necessary European staff, owing to the war. But (as I believe) the war will soon be over, and we may then look to the already considerable ramifications of the bank being greatly extended.

The shareholders of the Nicosia Electric Lighting Company appear to have fired a pretty stiff ultimatum at the Municipal Council of the city, and I gather that the adversity of war is at the bottom of it. According to a correspondent in the NEAR EAST this week, the company are willing to continue to light the city if the contract is varied, if the number of street lamps is reduced from 730 to 350, and, during the week of full moon, that no lights be lit at all. In addition, the Municipality is to increase its payments by 25 per cent., and the company to be authorised to increase its charges to private consumers by 50 per cent. It is scarcely necessary to point out that this is a formidable addition to the present contractual terms, and if the Council decides that electric lighting is a luxury which can be dispensed with in war time, nobody will be surprised. Why not municipalise the works?

The Hamburg-Amerika Line has been unable to declare a dividend for 1916. How could it be otherwise, indeed? Previous distributions made to shareholders since the war broke out have been regarded with suspicion in Germany and with amusement abroad. Bricks cannot be made without straw; and dividends cannot be earned without trade, and there is no German sea-borne trade.

Questions continue to be raised in this country regarding the imposition of double income-tax on the earnings of companies working abroad, but registered in Great Britain. Shareholders have for years been hammering away at the authorities, with apparently little result. Several large concerns have, in consequence, transferred headquarters to the countries in which their work is carried on, and others, I hear, are considering this step. The British Treasury, by declining to remove this serious injustice, is killing "the goose that lays the golden eggs," and the sooner it awakes to the fact the better.

COMMENTATOR.

Administration of the Greek and Turkish Debt.

Report of the Council of the Corporation of Bondholders for 1916.

We take the following extracts from the forty-third annual report of the Council of the Corporation of Foreign Bondholders for the year 1916. The extracts deal with the Greek and Turkish bonds.

Greece.

"The gross receipts from the monopolies and the Piræus Customs, assigned to the bondholders under the arrangement of 1898, amounted in 1915 to 58,231,475 dr., against 63,087,551 dr. in 1914 and 55,021,654 dr. in 1913. The receipts upon which the plus values are based were 35,308,588 dr., and although this amount was 884,866 dr. less than in 1914, it was, with that exception, the highest on record.

"The principal decreases in 1915 were about 1,000,000 dr. in tobacco and 1,300,000 dr. in stamps, and were mainly due to the effect of the war upon the economical development of the country. There were, however, increases of about 150,000 dr. from petroleum and 1,100,000 fcs. from Naxos emery, the latter resulting from the enhanced price of the mineral and from the fact that, owing to the blockade of Asia Minor, Greece became the sole source of supply.

"As regards 1916, the receipts from which the plus values are derived amounted to 34,229,900 dr. up to the end of the year, against 35,308,588 dr. for 1915. This shows a decline of 1,078,628 dr., out of which 908,309 dr. occurred in December as a result of the blockade. The increases payable in 1917 will probably be as follows: For interest, 22 per cent. to Group I., and 24 per cent. to Groups II. and III.; and for Sinking Fund, 14 per cent. to Groups I. and II., and 16 per cent. to Group III.

"The Council have been informed by his Majesty's Government that the International Financial Commission had sufficient funds in hand at the end of 1916 to enable them in any event to continue the ordinary interest payments up to September, 1917, and that the arrangements necessary to secure the continuance of the receipts after that date would, if circumstances required it, form the subject of consideration by the Governments concerned. Meanwhile it had been decided by the Commission to centralise in Paris the administration of the funds applicable to the service of the Debt.

Turkey.

"As the report of the Debt Council for the year 1914-15 was not published until the autumn of 1916, it was not possible to include any information with regard to the results of that period in the last report of the Council of Foreign Bondholders.

"The net receipts from the assigned revenues in 1914-15, omitting those from the provisional surtaxes on salt and spirits, amounted to £T2,456,756, against £T3,782,935 in the previous year, a reduction of £T1,326,179. The total net receipts, including the surtaxes, were £T2,888,088, against £T4,385,914, a reduction of £T1,497,826. It must be remembered, however, that in 1913-14 the receipts were the highest on record.

"The falling off in the revenues was mainly the result of the disturbance caused by the war in Europe, in which Turkey intervened in November, 1914, but it was accentuated by the Government's failure to pay over to the Debt Council the following amounts:—

"(1) £T114,020 due in substitution of the Eastern Roumelian Annuity; (2) £T129,012 out of £T130,000 due in lieu of the Cyprus Tribute; and (3) £T25,000 out of £T50,000 due on account of the Tumbeki revenue. These three items amounted to £T268,032.

"Deducting from the total net receipts for 1914-15 the fixed annuity of £T2,157,375 required for the service of the Unified Converted Debt and the Lottery Bonds, the surplus divisible between the Government and the bondholders, in the proportion of 75 and 25 per cent., was £T730,713. The 25 per cent. belonging to the bondholders, amounting to £T182,678, instead of being applied, in ac-

cordance with the 'Décret Annexe' of 1/14 September, 1903, to extraordinary amortisation, was carried forward to the next account.

"No mention is made of any application of the sinking fund during the second half of 1914-15.

"As regards the supplementary revenues administered by the Debt Council, it has been reported in the foreign Press that at a meeting of the Council (which now consists of the German, Austrian, and Turkish representatives), held on March 25, 1916, the acting president stated that the net yield of these revenues in 1914-15 was £T1,308,110, as against £T3,223,041 in 1913-14. This marked shrinkage may perhaps be partly explained by the fact that the Debt Administration was said at the date named to be in possession of 'bons de réquisition,' received from the Turkish Government, to the amount of £T1,522,599. This would seem to indicate that tithes collected in kind by the Administration had been requisitioned for war purposes.

"As regards 1915-16, the acting president stated that there was a further heavy falling-off, but the figures given by him were incomplete, so that it does not seem worth while to quote them.

"The Debt Council's report for 1915-16 had not appeared at the time of publication of this report.

"In his statement above referred to, the acting president of the Debt Council is further reported to have said that, over and above its normal functions, the local prestige of the Debt Administration had been utilised by the Turkish Government for the issue in 1915-16 of currency bills for upwards of £T17,000,000, guaranteed as to about 40 per cent. by gold and as to the remainder by German Treasury bills.

"The Council of Foreign Bondholders are of opinion that it was never contemplated under the Decree of Mouharrem that the Debt Administration should be utilised to give credit to an issue of this kind, especially in the circumstances at present prevailing, and no responsibility in the matter will, it is assumed, be admitted by France, Italy, or Great Britain.

"The acting president of the Debt Council is reported to have also said that, in spite of the influence of the war on the economic condition of Turkey, and the fact that a large portion of the administration staff had been mobilised, the service of the Public Debt had not been stopped for a single day."

AN IMPORTANT RAILWAY.

The Quetta-Nushki Line and Why It Should Be Extended.

The Indiaman this week, in its leading article, discusses the railway line which the Government of India has constructed from Quetta to Nushki, and refers to an article, previously published in the paper in which Sir Hugh Barnes, a former Foreign Secretary to the Indian Government, pointed out the obvious political and commercial advantages which would accrue from an extension of the line to the Persian frontier, and added, "the utility of the railway would not cease with the end of the war. The Indian Government is deeply interested in the maintenance of the independence and prosperity of Persia. England and Russia have mutually agreed to respect her independence and integrity. As one of the objects of this war is to uphold the observance of treaties, it is inconceivable—so long as Persia remains neutral—that this agreement should fail to be observed. We may be confident, therefore, that after the war the British and Russian Governments will make a determined effort to set Persia on her legs once more. It will greatly assist us in contributing our share towards the accomplishment of this desirable aim, and will also ensure for all time the security of our own frontier if the Indian communications

with the Persian border are improved in the way suggested.

"Sir Hugh," says *The Indiaman*, "mentioned other directions in which the suggested line would have a military value which are not to be despised. It would, he thought, greatly reduce the cost of our frontier posts, and the power rapidly to place and maintain a military force on the Seistan border would in the event of trouble in or with Afghanistan, at once give us control of the Helmand Valley up to Girishk—a very important advantage. But in the main he based his advocacy of the line on commercial grounds and on the advantage to trade of cheap and rapid transit between Quetta and Seistan.

"Very shortly afterwards the project was taken up by the Government of India, and in the early autumn of 1916 it was decided, as a commencement, to extend the line on the standard gauge from Nushki to Dalbandin, a distance of 115 miles. Work could hardly have been begun before the end of September; yet with such energy was it pushed on that the first train, we learn, steamed into the Dalbandin terminus in the second week in January, a most creditable achievement, for which the officers in charge deserve much praise. . . . But if the true commercial object of the line—viz., the promotion of overland trade with Persia, is to be attained, it obviously must not stop at Dalbandin. To end it there is like ending a bridge in the middle of a stream, and until the desert is crossed and some point on the Persian frontier is reached, there can be little hope that commercially the line will ever prove to be a reproductive work. Some 215 miles of barren plain and desert still intervene between the railhead at Dalbandin and the Seistan border at Koh-i-Malik Siyah.

"Some people, no doubt, are sceptical of the possibility of developing any considerable trade by this route, even with the advantage of railway transport. But the local opinion, so we are informed, is that the piece goods import trade of Eastern Persia would be largely diverted to the railway from its present channel via the Gulf, and that the important wool and cotton exports from the Birjand and Meshed Provinces could be profitably exported via India. The dates from Jalk, Sohtagan, and Ladgash would also find a ready market in India, and for Indian tea, indigo, and jute fabrics, the railway would probably prove to be the cheapest and easiest way into Northern Persia and Central Asia. The military advantages of the line need not be repeated. But it may be mentioned that after the war efforts are likely to be made to revive the gun-running from the coast into Afghanistan, which has cost the Indian Government so much in money and anxiety in the past. The whole of this trade passes through the narrow strip of country, some fifty miles wide, which intervenes between Robat and the unpassable Dasht-i-Lut, in Persia. It is obvious that the existence of a railway along one side of this strip will enable us—with the co-operation of the Persians—to control this trade far more effectually than by expensive naval operations in the Gulf of Oman. On every ground, therefore, we hope the Indian Government will not hesitate to push the railway on till it reaches the Persian border.

"The exact route by which the railway should be carried on from Dalbandin is a question which will require some consideration. For some seventy miles in a south-easterly direction from Koh-i-Malik Siyah there runs a precipitous rocky range of hills known as the Kacha Amalaf range. The existing trade route runs east of this range, but water on it is scarce and bad, and the country is very desolate. On the western side it is said that there is a much better and easier route well supplied with water along the strip of plain between the range and the river Talab, which in part of its course forms the boundary between Persia and Baluchistan. This point can only be settled by a survey, but according to our present information, probably the best plan would be to run the line from Dalbandin over the level plain to Mirjawa, on the Talab river. There it would touch the Persian frontier, and the further extension to our frontier post at Robat could be considered later. The main point we desire to emphasise is that if the railway is to have a fair chance of success, it should obviously be taken the whole way across the desert, and not stopped midway."

SUBSTITUTE FOR COAL.

Acute Near Eastern Problem about to be Solved.

During the summer of 1916, Mr. John Wells, who had been engaged by the Egyptian Government to inquire into the question of combustibles, drew the attention of the authorities to the products and sub-products that might be obtained from cotton and other vegetable stalks. The laboratory experiments undertaken by Mr. John Wells produced results that were submitted to the Government chemists, writes the *Egyptian Gazette*. The latter were very pleased with these results, and recommended more extensive experiments.

Arrangements were then made for a certain number of experiments with the help of a small apparatus capable of using from two to three hundred kilos of cotton stalks every day. The results were encouraging, and it was decided that the Ministry of Agriculture, under the direction of Mr. John Wells, should build in the neighbourhood of Shoubrah, near the Nile, some special kilns fitted with apparatus sufficient to deal with ten tons of stalks per day.

Interesting Programme.

Mr. Wells was sent to France and to England to obtain the material he could not find there, and at the same time to visit certain charcoal-burning furnaces in France. The workshops are being built at Shoubrah, and the object is to find some basis of computing the value of the output of a number of products and sub-products, such as charcoal, methylated alcohol, acetic acid, acetates, tar, oils for lighting purposes, etc., and also to find out the exact cost of production.

It is a well-known fact that motor power, heat and lighting, which can only be obtained by means of combustibles, afford at the present time a serious problem, which will be of vital importance in the future. It is obvious that in a country like Egypt there are always enormous quantities of vegetable stalks from cotton and doura and so on which total millions of tons per year. A great part of these are employed for domestic uses, but an enormous quantity is also used in a most wasteful manner for heating the boilers of machinery, while the balance is burnt or destroyed in one way or another.

The enormous value of charcoal as a generator of energy by means of special machines is nowadays an admitted fact, and it is hoped that a considerable quantity of these vegetable products will be turned into combustibles which will favourably compare with imported combustibles. Furthermore, these vegetable products are furnished year by year, and the experiments undertaken by the Ministry of Agriculture have as their object to make use for the good of the country those products which have hitherto been treated as rubbish. It is hoped that the Shoubrah factory will be working in a few months. After the Ministry has kept it at work for a certain time, the public will be informed of the results.

AN UNFULFILLED PROPHECY.

The *Kölnische Volkszeitung* on February 6, 1916, delivered itself of the following prophecy regarding the Baghdad Railway (says *The Times*):—

"In spite of war and difficult obstacles, the year 1916 will, we may be sure, not come to an end without seeing railway connection finally established between Berlin and Baghdad and German express trains running into the old storied city of Harun-al-Rashid. Baghdad is destined to remain for years to come the terminus of the new line of world-commerce created by German capital. For even if the plan of continuing it 300 miles further to the Persian Gulf is very tempting, railway construction in the section between Baghdad and Busreh is confronted by such great difficulties, and railway traffic would have to stand such severe competition with steamboat traffic on the Tigris, that the revenue to be expected would hardly cover half the costs of construction. For the time being enough will have been secured if the Baghdad Railway is supplemented by a line of German river steamers connecting Baghdad with the Gulf, and to secure this the terms of the peace concluded with England will no doubt afford the best opportunity."

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The market during the past week has been far from active, but in certain quarters business has been of rather fuller dimensions than recently. A strong tone has continued to prevail in raw cotton circles, and there are few indications of lower values in the near future.

Discussions relating to the Indian import duties have fallen off, but Lancashire appears determined to attempt to secure a reversal of the recent decision after the end of the war.

In the cloth market the feature of interest has been the increased inquiry in the variety of fabrics for certain of the near Eastern outlets. Goods in that part of the world are undoubtedly moving off more freely, and should our troops continue to meet with success, there is every expectation of a big trade during the next few months.

Egypt is giving rather more support in sized goods and fancy cloths.

Inquiry for India has broadened, and certain leading exporters have purchased light fabrics to a considerable extent in anticipation of future wants. Miscellaneous sales have also occurred in shirtings.

Operations for China have been rather irregular.

A little more activity has been reported for South America. Prices required by manufacturers depend to a large extent upon the position of individual producers.

American yarns have hardened in sympathy with the upward movement in raw cotton rates, and although fuller prices have not been easily secured, the turnover shows an improvement.

PRODUCE REPORT.

Currants. LONDON, March 22.

There is still a good steady demand for all qualities, but the remaining stocks are now very limited, and so sparingly offered that only small transactions are taking place at, more or less, advanced prices. Only the raising of the blockade will alter the present condition of the market, although it was reported that one or two steamers, loaded with currants, were either on their way to or ready to start for England.

Sultanas.

The demand is moderate, and business is mostly done in Afghanistan fruit at recent advanced prices. Other growths are quiet but very firm; whilst Cretans are selling well at full prices.

Dates and Figs.

Figs are in good demand, with business done for Greek at about 52s.; and Spanish at 56s. to 58s. Dates are dearer, Persian selling at 45s. to 46s.

Seeds.

Linseed is inactive. London Calcutta for forward positions being quoted at 107s., and Bombay ordinary ditto at 106s. Rapeseed is quiet, brown Cawnpore for shipment is offered at 96s.; Gingerat ditto at 100s.; and Teria at 98s. Cotton seed has been rather quiet, but prices are very steady. London-Egyptian f.a.g. prompt is quoted at £19 5s.; with Sakelariades quality at £18 10s. per ton. Rangoon beans on the spot and for shipment up to Nov.-Dec. are maintained at the current high level; whilst canary seed is firm, but the demand very quiet.

Oilcakes.

Cotton cakes. There has been a good demand for Egyptian cakes, mostly spot parcels, which are selling well at about £15 7s. 6d., ex quay; whilst some good business was done for afloat and March shipments at £15 to £15 5s. ex ship terms. English cotton cakes are quiet and unchanged at £15 7s. 6d. to £15 10s.

Linseed cakes: In spite of the time of year the demand has been very small, and prices remain fairly steady for best London made, at £19 5s. to £19 10s. East India seed Pures are offered at £18 10s. to £19; and prime Western American at £18 to £18 5s.

Egyptian eggs, are in very good demand, best selling at 13s. to 13s. 6d., and ordinary at 12s. 6d. to 13s.

The new season Egyptian onions shipped from Alexandria are shortly expected in the market.

TRADE NOTES.

Liquidations.

The liquidations of the businesses of Escher, Tesumann and Co., Joseph Eggart and Franz Newmann have been transferred to the Public Custodian of Enemy Property.

Licences to Trade.

The licence granted to the Société Anonyme des Presses Allemandes has been withdrawn, steps having been taken as far as possible to eliminate enemy interests in the company, and the appointment of Mr. C. W. Strickland, as controller, has been cancelled.

Certificates of Priority.

The following notice appears in the *Journal Officiel* (Egypt) of March 1:—"Owing to the restrictions placed on the manufactures and exports from England of various commodities, especially machinery and metals of all kinds, import merchants and Government departments are hereby informed that orders placed in England must be accompanied by a certificate from the Priority Board of the War Trade Department at the Ministry of Finance. This certificate will take the form of a recommendation to the Ministry of Munitions in London (where the actual grading of priority will be determined). Applications will be recommended for Class A or B or C."

Tenders.

Tenders have been invited by the Survey Department of the Egyptian Ministry of Finance, Giza (Mudiria), for the supply of calico, cambric, and shash required by the Department during the year ended April 23, 1918. The material required is extra strong, and should be similar to sample kept at the stores of the Department. Copies of the conditions of contract and forms of tender may be obtained from the Director-General of the Survey Department, as above, at which address also sealed tenders, on the proper forms, will be received up to noon on April 23.

NEWS FROM ALL SOURCES.

Odessa is to be made a free port.

It is reported that the Swiss Federal Council propose to establish a tobacco monopoly.

In Syria and Palestine the chemists' shops have exhausted their stocks of drugs and medicines.

The Russian Ministry of Finance has withdrawn the authority to export Khava and Bukhara lucerne seed.

With a view to avoid stringent measures the Governor of Malta, through the Press, is appealing to all to economise foodstuffs.

Sir Murza Dawood Khan, Persian Consul-General in India, has recently visited Madras, where he opened the new Consulate.

Little prominence is given to the news of the fall of Baghdad in the Athens newspapers, though they recognise the importance of the event.

Serious disorders broke out in Constantinople on the receipt of the news of the British entry into Baghdad. Poverty and the dearth of provisions were the pretext.

Telegrams received in London on Tuesday from Baku indicate that the political crisis has passed off in Baku without disturbance, and that the situation is now normal.

Owing to the exhaustion of all coal stocks the gas supply in Athens ceased on March 12. The electric supply is being maintained by wood fuel, but this is not expected to last long.

The discharging of the cargo of wheat destined for Piræus, which was detained at Keratsini pending receipt of the French Admiral's instructions, is to be begun immediately.

Daylight saving began in Malta March 11, and will continue until the end of October. Thousands who are accustomed to attend the first mass of the day were in church at three a.m. Greenwich time.

TRADING WITH THE ENEMY.

Grave Charges Against the Stross Brothers of Alexandria.

An interesting case, in which two men are charged with trading with the enemy, has recently occupied the attention of Judge Kershaw at Alexandria. The men are Max and Franz Stross, who represented Adolphe Stross and Co., the well-known Austrian firm of Alexandria, who were the agents of the Deutsche-Levant Line before the war. The Stross brothers had been brought from England for trial.

Mr. Halford, who appeared for the Crown, said the business was started by Adolphe Stross, who took Franz and Max, his sons, into partnership in 1904. After the publication of the decree of August, 1915, the firm obtained a "B" licence for trading, and Mr. Joyce was appointed controller in February, 1916, when the firm was ordered to liquidate under licence. Subsequently, in June, 1916, the licence was withdrawn and Mr. Joyce was appointed receiver of the business.

Receiver's Discoveries.

In the course of his receivership, Mr. Joyce discovered in the books traces of business dealings with Trieste. The person primarily responsible was Mr. Adolphe Stross, but on account of his age and ill-health he had been allowed to leave Egypt.

Counsel next drew attention to the first two charges, which deal with the business carried on by these two partners, Max and Franz, with the Assicurazioni Generale di Trieste, a very large insurance business, with branches in almost every town in Europe. There could be no question that the nationality of this company was Austrian. Correspondence showed that the centre of the Oriental branch of the business was conducted exclusively from Trieste.

The offences on which the first two charges are based are that the Stross firm continued to represent the company, to enter new policies, and to push business generally notwithstanding the provisions against trading with Austria. Later on the Venice branch of the Trieste company was allowed to continue business with Egypt on the condition that it dissociated itself entirely from the Trieste office. On August 10, 1915, Stross was allowed to continue to trade subject to the terms of that licence.

Alleged "Double-dealing."

Although nominally the accused did business with Venice, it was actually done with Trieste, Venice being only a channel of correspondence. War with Austria broke out on August 12, 1914. On August 15 and 16, Stross cabled for a great many new policies to Venice, followed by a letter addressed to Trieste.

Numbers of letters were read to prove the double-dealing of the Stross firm between Venice and Trieste. In one letter, to avoid complications, accused suggested that he should join the Bucharest Insurance Company, as it was neutral, and, with its help, do business with Trieste. At the same time he arranged that the Bucharest Company should be admitted to the Insurance Syndicate at Alexandria.

Several letters were read to show that Bucharest was only a pretence, and that connection with Trieste was never lost sight of. When Italy was involved in the war, there was removal to Switzerland, and the business with Alexandria was done with the Bureau Levant at Zurich, the actual centre of the business still being Trieste, as all the letters showed. Letters from the general manager at Trieste were sent through Zurich to Stross.

As a result of the investigations of Mr. Joyce, the firm had felt that things were getting dangerous, and so gave up their licence to trade as insurance agents for this company. A budget of correspondence was read

showing that the firm was pushing this enemy business as hard as they could right up to January, 1915.

"In Touch with Berlin."

The accused were then charged with paying money to enemy subjects after the proclamation of January, 1915, and a letter was read to show that the Strosses were actually in touch with the Deutsche Orient Bank at Berlin, through whom they managed to pay off a big debt (in marks) in Germany, in connection with the Trieste company.

Another charge dealt with a remittance from Adolphe Stross to his son Walter in Austrian territory. Mr. Halford maintained that there was no excuse for this remittance, because Adolphe Stross had at that time £50,000 in Switzerland, which was ample wherewith to supply his son, and he was bound by his licence not to send money to enemy countries.

Counsel showed that between the outbreak of war and July, 1915, Stross made no fewer than sixty new insurance policies with the Trieste company, which was a distinct breach of the rules laid down in August, 1914. Another charge was that the firm tried to collect debts in connection with the Trieste company, and went on issuing two new kinds of floating policies until April, 1915.

The case was proceeding when the mail left.

BANNED FIRMS.

Changes in the Egyptian Schedule.

We conclude to-day the alterations made by the Egyptian Government in the schedule of firms in neutral countries with whom firms and persons in Egypt are not permitted to trade:—

THE ELEFATHERIOS K. VENIZELOS.

The Judicial Committee of the Privy Council, sitting on February 15, upheld the appeal by the Allied holders of bills of lading to wheat condemned as prize by the British Commercial Court, Malta. The wheat was part of the cargo of the Greek steamer Eleftherios K. Venizelos.

The case was heard in February, when judgment was reserved.

Lord Sumner, delivering the judgment of the Committee on March 15, said the appeal related to a part cargo of wheat 1,000,000 kilos in weight, which was captured on February 27, 1915, by his Majesty's ship York, on board the Greek steamer Eleftherios K. Venizelos, and condemned as prize by the Court at Malta upon the ground of enemy destination on a continuous voyage.

The appellants, the claimants below, were an Italian Company, the Societa Anonima Alfredo Kun, of Genoa, in which shares were largely owned by the firm of Bunge and Born, grain merchants, of Buenos Ayres. The partners in this firm were two subjects of the Argentine Republic, and one J. Born, a Belgian subject. The whole cargo, consisting of various cereals, was shipped by Bunge and Born at Bahia Blanca, and the parcel in question was represented by a single bill of lading which made the wheat deliverable at Genoa, the vessel's port of discharge, to the Unter-mühle Zug Actiengesellschaft, Zug, Switzerland, or their assigns.

The captors adduced no evidence in contradiction of the claimants' case, but subjected the whole of the transactions, as to which the claimants gave evidence in support of their claim, to the closest scrutiny, and suggested that the wheat was on its way to an enemy destination. The trial Judge arrived at that conclusion. Their Lordships were of opinion that all the evidence was to the contrary, and that, being regular in form, genuine in themselves, and contemporary in date, the documents, in the absence of evidence to refute them, were deserving of credit. It followed that the assumptions put forward by the captors were mere conjectures, and therefore inadmissible. Their Lordships therefore held the claimants' evidence discharged such burden as rested on them, and sufficed to establish their claim. Accordingly, their Lordships advised that the appeal should be allowed, with costs, and the order appealed against, so far as it condemned the cargo in question, reversed; and that the sum in Court, representing the proceeds of the sale of the wheat, should be paid out to the appellants.

According to a Constantinople telegram, the life of Parliament has been prolonged to March 31 in order to enable the Chamber to deal with the Budget. The Chamber has adopted a Bill authorising the advance of £10,000,000 from an Austro-Hungarian banking group.

The concessions of the ports of Mehedya, Kenitra and Rabat-Salee, Morocco, have been granted to three French firms. The names of the firms may be obtained on application to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C. 2.

COMPANY MEETING.

The Eastern Bank, Ltd.

The seventh annual general meeting of the Eastern Bank, Ltd., was held on March 21 in London, Lord Balfour of Burleigh presiding.

The Chairman said:—Gentlemen,—On behalf of the board, I have pleasure in presenting to you the seventh annual report and balance-sheet of the bank, showing the position at the close of business on December 31, 1916. In spite of the war, the result is a satisfactory one, but before making any remarks to you upon the subject of the accounts, I should like to refer to the loss sustained by the bank owing to the death of our colleague, Sir Jacob Sassoon, which occurred in Bombay at the end of last year. Sir Jacob was one of our original colleagues; he had a large share in the responsibility for the founding of the bank, he was a pleasant colleague with us—we never had a shadow of difference of opinion with him—and he and his firm have been a source of great strength to the institution ever since its foundation. I am glad to be able to add that Sir Edward Sassoon, Bart., has accepted a seat on the board in succession to his late brother. He is here to-day, and you will be asked to confirm his election shortly.

I will now proceed to deal with the figures you have before you in the report and balance-sheet. You will observe that the net profits for the year, including £6,660 13s. 5d. brought forward, amount to £60,545 10s., and we are glad, now that we are in a position to do so, to revert to the dividend paid for the year 1913, and we therefore recommend a distribution at the rate of 6 per cent. per annum, less tax. This will absorb £36,000, and we propose to place £15,000 to the reserve fund, and to carry forward £9,545 10s. to the next account.

Turning now to the balance-sheet, you will see that the amount of our paid-up capital is £599,879 14s. 4d., a slightly increased figure compared with last year. This is the result of the dividend upon the old shares being applied towards the unpaid calls on the same shareholders' "new" shares. As I explained last year, the greater part of the amount is due from a deceased Belgian's estate, and we must, I fear, await the conclusion of the war before the final adjustment can be made. Our reserve fund remains at last year's figure, namely, £55,000, but this will be increased to £70,000 when this year's appropriation is added. Current accounts and fixed deposits amount to over three millions, a very considerable increase upon last year's total. A large proportion of the increase is attributable to Government balances abroad, which will probably not be maintained to the same extent after the war is over. Bills payable show a decrease of about £40,000, while acceptances on account of customers are slightly higher. Loans payable against bills and securities show a considerable increase, due to our larger holdings of bills of exchange. Sundry accounts, including exchange adjustments, comprise sundry creditors, and on the other side of the balance-sheet sundry debtors, also the adjustments in exchange, interest, and rebate necessary to ascertain the bank's position on the date the books were closed.

Cash on hand and at bankers stands at £1,361,802, a very fair reserve against our liabilities on current accounts and fixed deposits. It has been our constant endeavour to ensure the assets of the bank being kept in as liquid a form as possible, and we think that the large increase in the cash on hand and bills receivable, amounting in the aggregate to one and three-quarter millions, is satisfactory evidence of the success of our efforts. British Government and other securities stand at £209,022 18s. 4d., a reduction as compared with the previous year.

Owing to the removal of minimum prices for gilt-edged securities early last year, the price of our holdings showed a considerable fall, and we estimate our loss on realisation and writing down of securities at over £13,000. But for this the result of our year's working would show a considerable improvement. We have provided all that is necessary in this connection now, and we hope that at the end of the present year we may find it will not be necessary to make further

provision for depreciation. Loans receivable and advances stand at practically the same figure as last year, although the increase in the working capital of the bank might, perhaps, allow of a larger amount being employed in this direction. If we have erred, however, it has been on the safe side, as the increase in our bills receivable shows. The amount due by our agents and correspondents is some £16,000 more than last year, but the amount entirely consists of our credit balances with banks abroad.

The whole of the year under review has seen the bank working under war conditions, and it would be impossible for me in the short time at my disposal to refer to the manifold changes and disturbances which have occurred in the money markets of the world, not excluding those in which we are particularly interested. The artificial scarcity of money in this market and, until quite the latter part of the year, the comparative plentifulness of the same commodity in India necessitated our working on somewhat different lines from those under normal conditions, but the sudden decision of the Indian Government to restrict their Council drawings quickly reversed the position in December last, and we closed the year with exchange in Bombay and Calcutta well over parity and with the Presidency bank rates 3 per cent. all round. This action of the India Council was, we quite recognised, unavoidable, but it disorganised trade. We have done our best to assist the Government, and preference has been given to the financing of exports of national importance in accordance with the expressed wish of the Government. The position arose through the exceeding prosperity of India and the demand for silver coins for up-country and the war zone, which could hardly have been foreseen earlier. We have every hope that the difficulty may shortly be surmounted, and that we may witness a return to more normal conditions before long.

The monsoon last year was exceptionally favourable, and with all produce fetching war prices the prosperity of India is not surprising. The jute mills in Calcutta and the cotton mills in Bombay have all made handsome profits, and it is said of the Calcutta mills that they are in so good a financial position that accommodation from banks is no longer required—a state of affairs which, though very satisfactory in itself, can only be looked upon with mixed feelings by an exchange bank like ourselves.

Since the date of the issue of the notice calling the present meeting the British have entered Baghdad, and we now only await the necessary permission from the authorities to send our representative there with a view to the reopening of our branch. You will remember that in my statement to you in 1915 I pointed out that on the outbreak of war our cash balance, amounting to under £10,000, was seized by the Turkish Government, and our office and securities were sealed up when our manager and staff had to leave that city. It is too much to hope that after this lapse of time they will be found intact, but there is reason to suppose that there are sufficient balances of Turkish money in the hands of our Government to make all losses in that part of the world recoverable. We are convinced that in future we may look for a large and increasing business with this ancient city, and we have every hope that under stable government it will become one of the greatest business centres of the Middle East. Our branch at Basreh, where we act as bankers to the Government of India, is making steady progress, and, as we anticipated, is now on a paying basis. You can understand, however, that present conditions are quite abnormal, and export business is greatly reduced.

At the request of the Government, and mainly for their convenience, we have opened a branch of the bank at Amara, a town on the Tigris, between Basreh and Kut-el-Amara. It will, we anticipate, also assist the operations of our branches at Baghdad and Basreh. Our chief difficulty with regard to the opening of new branches is that of furnishing the necessary European staff. So many of our men are at present on active service and our staff is so depleted that it is exceedingly difficult to find officers of the requisite experience to take charge of new branches. I regret to say that of those who joined the forces one has been killed, and two have re-

ceived wounds, but are reported to be doing well. Nearly half of the remainder have received commissions.

I have now to move the adoption of the report, and after the resolution has been seconded I shall invite discussion and ask you to put any questions you may desire to address to me.

Mr. J. S. Haskell seconded the motion.

The Chairman, in answer to a question, stated that the balance of profit and loss account, £60,545, was after providing for the amount of £13,000 written off the bank's securities, to which he had referred.

The resolution was then carried unanimously.

On the motion of the Chairman, seconded by Lieutenant-Colonel J. Leigh Wood, C.M.G., the dividend as recommended was approved, and the retiring directors and auditors were re-elected.

The proceedings terminated with a cordial vote of thanks to the chairman, the directors, and the staff.

COMPANY NOTES.

Sinai Mining Co.

In the House of Commons on March 20. Major Hunt asked the President of the Board of Trade if, with reference to the lately-advertised sale of the alien enemy-owned shares in the Sinai Mining Co., he could state whether, in view of the fact that the management remained unchanged, any and what precautions were taken to prevent the shares being eventually reacquired by the alien enemy interests; and could he give the names of the buyers of the shares?

Mr. Roberts replied: The purchaser of the enemy-owned shares in the Sinai Mining Co., Ltd., was required to be a natural-born British subject, and to make a statutory declaration that he was not purchasing the shares for or on account of any enemy or foreigner or foreign corporation or corporation under foreign control. The shares held by enemies did not give control of the company. The purchaser was Mr. James Campbell.

Spies Petroleum.—Week ended March 11, 166,000 poods.

It appears that the coupon on the Turkish Unified bonds is to be paid to neutral and non-Ally holders in marks, the remarkable depreciation of which takes a lot of gilt off the ginger-bread. The report just issued by the Ottoman Railway is, of course, a jejune document, the line being still in possession of the enemy, but the debenture holders are receiving interest in scrip, and I (writes *Alert II. in the Financier and Bullionist*) am still of opinion that the Four and Five per Cent. stocks are a fair sporting proposition at present prices.

THE SUDAN TIMES.

THE MANAGING EDITOR, THE SUDAN TIMES,
KHARTOUM.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON AVENUE, Thursday.

We have passed through another quiet week. There has been more buying than selling, with the result that prices, where altered, are somewhat firmer.

Egyptian Unified have continued to be bought at 78½. Agricultural Banks have been dealt in to the extent of about 300 shares between 5½ and 5¼. National Banks changed hands round 13 9-16 for about 300 shares.

In Land Banks there was a small transaction at 4½. Behera Preference are wanted at 3¼, and Delta Lands at 8s. Some few thousand Unified Egyptian Lands have been taken round 6d.

Alexandria Water remained a firm spot at 11½ bid, and with sellers at 12. Markets are again firmer with some business between 25s. 3d. and 26s. Khedivial Mail are better at 26s. 9d.

In Greek securities the market continues very firm. There has been some business in Greek 4 per cent. 1910 round 60, and both Monopoly and Rente are higher at 47 and 42½ respectively.

Oil Shares.

Dealings have been extremely limited in character. Spies have changed hands at 14s. 6d. and under, and Roumanian Consolidated have been easier at 9s. 3d. Shells have come to business more freely, but on the whole there has been little doing.

Anglo-Egyptian "B's" have declined 1½d.

Paris Bourse.

The Parquet has been quiet and steady. Suez Canal shares improved by 25 francs to 4,400. Some closing quotations are:—Egyptian Unified, 89.60; Credit Foncier Egyptian, 634; Ottoman Bank, 428.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, March 22.

The money market has been free, with ample credits in abundance. As a consequence very low rates have prevailed for from-day-to-day loans, for which the opening quotation yesterday was 4 per cent., but this rapidly declined to 3½, and later reached even a lower level. Indeed, it was said that in the afternoon money was in no demand, and that some lenders would have taken 2½ per cent.

Rates for weekly business were in the neighbourhood of 4½ per cent. to 4¼ per cent. Treasury Bills were discounted on the basis of 4½ per cent. to 4 7-16.

Bar silver declined 1-16d. to 35½d. an ounce. There have been some fluctuations in exchange. That on Alexandria, sight, varied from 97 to 97½ piastres to the pound sterling.

NOTICE.

NATIONAL BANK OF EGYPT.

Notice is hereby given that an ORDINARY GENERAL MEETING of the Shareholders of the National Bank of Egypt will be held on Saturday, the 7th April, 1917, at 4 p.m., at the Head Office of the Bank in Cairo, for the purpose of:—

- Receiving the Directors' Report.
- Receiving the Auditors' Report.
- Submitting the Accounts for the year ended 31st December, 1916.
- Declaring a dividend.
- Electing Directors.
- Electing Auditors for the year 1917 and fixing their remuneration.

All shareholders holding a minimum of 20 shares have the right to take part in the General Meeting, providing the Shares be deposited under the following conditions at one of the following places, where cards of admission or proxy forms will be delivered:—

- In Egypt, at the latest, the 2nd April, 1917.
- At the Head Office, Cairo.
- At the Branch of Alexandria.
- At the Agencies of the Bank at Assiout, Assouan, Benha, Beni-Suef, Chibin-el-Kom, Damanhour, Fayoum, Keneh, Luxor, Mansourah, Minieh, Port Said, Rod el Farag, Sohag, Tantah, Zagazig, and Mousky (Cairo).
- At the Office of the Anglo-Egyptian Bank.
- Bank of Athens.
- Banque Belge pour l'Etranger.
- Imperial Ottoman Bank.
- Banque d'Orient.
- Banco di Roma.
- Cassa di Sconto e di Risparmio.
- Comptoir National d'Escompte de Paris.
- Crédit Lyonnais.

In the Soudan, at the latest, the 28th March, 1917, at the Agencies of the National Bank of Egypt, at Khartoum, Port Sudan, and Suakim.

In Europe, at the latest, the 16th March, 1917, in Paris, at the Offices of the Société Marseillaise.

In Italy, at the Offices of the Banca Commerciale Italiana.

In London, at the Agency of the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, Governor.
Cairo, the 27th February, 1917.

BRITISH LOAN TO ROUMANIA.

A Reuter telegram from Jassy, dated March 9, stated:—At a Cabinet Council held here yesterday it was announced that Great Britain had agreed to advance to Roumania a sum of 1,000,000,000 francs (£40,000,000) at par. The loan will bear interest at 5 per cent.

The Rumanian, in giving the news, adds:—The agreement comes to by England and Roumania on the subject of the loan is of special significance as showing that our powerful ally has great confidence in the future of Roumania. As a result of the occupation of the larger part of Roumanian territory the State revenues have practically ceased, while, on the other hand, expenditure has increased owing to the reorganisation of the army and the feeding of the refugee population of Moldavia. The cares of the Government were very great during the first two months of the year owing to difficulties in dealing with an urgent situation. The situation is now sensibly improving, the reorganisation of the army is proceeding rapidly, the administrative services are working actively, the necessary sanitary measures have been taken to prevent the spread of epidemics and ration cards have been introduced.

Unshakable confidence is felt by all classes, especially in view of the Reuter telegrams on the recent successes of the British forces on the Ancre and in Mesopotamia.

Reuter telegrams from Amsterdam that, after an exhaustive debate on the internal and external situation, the Bulgarian Parliament, by a large majority, voted the war credit of £20,000,000 asked for by the Government.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flax, Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.

GEO. THOMAS & CO., Manchester. Tel. and Cable Address: "Hamoth, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc., Cotton, Wool, etc. Testing Machines for all purposes, Tachometers, Balances, &c.

NOTES OF THE WEEK.

Interest in the war during the past week has been absorbed almost exclusively by the Western Front, which grips the public mind with two potential developments—the possibility of the so-called Hindenburg line realizing the expectations formed of it in Germany, and the prospect of a successful Allied advance which will obliterate that line and any other that the enemy may have intended to hold on French soil. For the moment we hear only of progress made by the Allies between Arras and Soissons; but other parts of the long battle front from the English Channel to Switzerland show signs of being galvanized into activity, as if in response to the great events in the middle sector, and it would be no surprise to learn that the Franco-British offensive had become general.

In the East the weather and the internal situation in Russia have helped to prolong the comparative quiescence which has characterized this theatre since the enemy were held on the Sereth line in Roumania. Germany has clearly missed the psychological moment for profiting by the wonderful upheaval through which her neighbour has passed. Inflammatory proclamations dropped from aeroplanes are a poor substitute for a resolute advance against an army which was of necessity in some confusion as a result of the events in Petrograd. The report that a German concentration is taking place near Riga may be true; but nothing that the enemy may attempt now, even if partially successful in spite of the thaw, is likely to have the same effect on the Russian forces as it must have had in the first few days of the revolution. Russia has still an uphill road before her. The two or three days during which the Tsar hesitated to submit to the popular will gave the extremists their opportunity, and they gained a hold in the direction of affairs from which it has proved difficult to dislodge them. But with the army true to the real interests of the country it may still be hoped that the new order will follow a course which commends itself instinctively to the great mass of the people, and will obviate any bitter divisions during the progress of the war. At the worst a German blow at Petrograd could hardly fail to weld the Russian nation into a harmonious whole, endowed with a strength which it has not been able to bring to bear on the war until now.

Under the promise of spring—based, it is to be feared, on the calendar more than on actual meteorological conditions—there has been some activity along

the whole line in Roumania. In all the circumstances it is not to be wondered at that the enemy should claim slight advantages. The engagements are essentially local, the contending forces carefully feeling their way at one point or another with a view to finding out something about the strength of the army in front of them. Our Allies have nothing to gain by premature action. Time must still be required to bring the reorganized Roumanian army to its maximum efficiency; the lapse of a few weeks is unlikely to improve materially the enemy's position. The great object of the Allies must be to bring off concerted action in several theatres, which will prevent the German military authorities from making the most of any force they may have in reserve.

In Nearer Asia, as might have been expected, the pace set by General Maude in his pursuit of the Turks to Baghdad could not be maintained indefinitely. Last week the British forces were reported to be following the enemy up the River Diala towards Khanikin, while the Russians advancing from Hamadan had passed Kermanshah. Near Kerind the Turks made a stand lasting sixteen hours, but were eventually dislodged from their positions and fell back on the town. This Turkish force must now be nearing a point at which it must decide whether it will continue its retreat to Khanikin, where it runs the risk of encountering some of General Maude's troops, or whether it will seek to escape over the broken country to the north and towards Mosul. No report has been received during the week of the British force which had reached Bakuba. But the Russian column operating on the Turco-Persian frontier a little more than a hundred miles to the north of Khanikin is now near Penjvin, and at no great distance as the crow flies from the road which the Turks must take in their retreat on Mosul. The whole region, however, is mountainous, and offers considerable difficulties to military operations. On the other hand, it will assist the Turks to escape, if they elect to scatter in small groups.

The position in this theatre of the war, as was pointed out by a well-informed correspondent in our columns last week, is of special interest. Although the enemy's forces engaged may not be numerous, they are charged with the defence of a not unimportant section of Turkish territory, and can only be reinforced with a great effort and at the expense of some other theatre of war. If they should become thoroughly demoralized, there is always the danger that the troops sent in sup-

port may not be strong enough to resist a determined attack by themselves, and may thus be reduced to the condition of the others. A small outpost affair near Hatvan, on the south-west shore of Lake Van, suggests that the Russians farther north are beginning to stir from their winter quarters. A repetition of the movement which took our Allies from Sarikamish to Erzincan, if directed south from Mush and Bitlis, would entail the loss of Upper Mesopotamia to the Turks. Any further activities on the part of the Russians must almost inevitably be in this direction in view of the course of events in Lower Mesopotamia. West of Erzincan there is no very definite objective before the Allies; but it will be of no little advantage to achieve by military means what must be a political objective, the expulsion of the Turks from the whole of Syria and Arabia.

Reports of disaffection in Turkey may be believed, but no extravagant hopes need be based upon them. Even the Government must feel annoyed at having been compelled to detach troops for Austrian and Bulgarian fronts, when it is proved that there are not enough left for the defence of Turkish territory. That their misgivings were aroused at the time was clearly indicated by the fact that the German Press was at great pains to show that Turkey had realized that her first line of defence was situated in Galicia or in Roumania, as the case might be. Germany, we may be certain, will not wish to break with the Turks at this critical stage, and Ottoman troops will be liberated from Europe for the protection of Asia Minor. Other steps will be taken in the hope of retrieving the situation, and a substantial stream of reinforcements will begin to flow eastwards. Now, therefore, would be the time for a correlation of the Allies' efforts in this part of the world, with a view to introducing a variety of distracting features which would prevent the Turks from massing their troops in any one theatre.

The news from Macedonia continues to belie the expectations formed a short while ago from an optimistic message regarding the opening of the spring campaign. No official reports from the British command are published, and such activity as there is takes place on the Monastir front. During the past week the French have brought up their captures of prisoners to over 2,000, and the ground gained is important from the point of view of future operations. The enemy has launched a number of counter-attacks delivered as the result of reinforcements reaching him, but in each instance these have been repulsed. Operations in the Cerna loop, where the Italians are supported by French artillery, have gone in favour of our Allies; and these gains on the left wing may sooner or later prove the prelude to wider activities.

King Constantine has once more found occasion for a public speech, but it is couched in far less aggressive tones than those which characterized his utterances a year ago. Replying to an address from a group of Cretans and inhabitants of the Cyclades and other islands, he expressed the hope that, as soon as the mists which enfolded the Greeks were dissipated, the great civilized nations, from whom justice was to be expected, would grant them justice. Then those nations would realize that the Greeks had no other wish than the maintenance of neutrality to save them from supreme dangers, perhaps even catastrophes. Anything that had been said or written to the contrary was quite untrue. Although less offensive in tone, the speech showed by its political allusions that King Constantine continues to grudge a whole-hearted acceptance of the actual situation. After all that has happened, it would be thought that he would studiously avoid any reference to international affairs in addressing his own subjects. His words are a clear indication that the Allies have good ground for maintaining that Greece has still not fulfilled all the conditions enumerated in the Allied Notes. For this reason the blockade continues.

The suspicion that there was some connection between Greek recalcitrancy and the appearance of French and Italian troops in Thessaly and North Epirus has been confirmed by a French statement on the subject. According to this report General Sarraill announced when a French patrol was recently murdered by komitajis that he would deal drastically with any repetition of the outrage. The warning was disregarded, and fresh disturbances occurred. Accordingly a search was made in a convent suspected of harbouring komitajis, and a Greek officer and a Bulgarian priest were arrested. They were found guilty of having taken part in komitaji excesses, and were shot by order of the French military authorities. It may be difficult to bring home to the Greek authorities direct complicity in these outrages; but the participation of regular officers, whose absence from the army must be known to the Higher Command, proves that any form of activity directed against the Entente Powers is countenanced, if not encouraged. Little wonder, therefore, that the Allies cannot yet regard the situation in Greece as satisfactory.

The new kingdom of Hejaz is doing good work in acting as the medium of enlightenment to the Moslem world at large with regard to Turkey's overt repudiation of Islam. In the past, the Arab papers admit, the Arabs have shut their eyes to much that was taking place in Constantinople from the belief that their revelations would do harm to Islam; but now that events have gone so far, it is right that the Turks, or at least the Committee of Union and Progress, should be seen in their true colours. The predominance of the Committee, it is pointed out, involves grave perils to the Moslem religion, in view of their heterodoxy, their avowed contempt for the Prophet and the Sacred Law, and, by no means least of all, "the fact that they have brought German officers to Medina to work the destruction of the Prophet's line in the Holy Places themselves." From Medina itself comes a special appeal to the King of the Hejaz to save the tomb of the Prophet from imminent profanation and destruction at the hands of the Unionists and their German coadjutors. Two Germans, it is stated—the editor of the *Ottoman Lloyd* and the Constantinople correspondent of the *Berliner Tageblatt*—have already been introduced into the sacred precincts, "and from the known principles and practice of the Unionists the worst is to be apprehended." King Hussein must be looking eagerly northwards in the hope of seeing his hands strengthened by a British success in Syria which will cut the communications of the Turkish garrison in Medina.

Reports of German terrorism in Roumania cause no surprise to those who have followed the messages from that country that have been published by the German Press. When the advance had spent itself, correspondents were reduced to describing the country or reviving reminiscences of the successful invasion. Then, clearly in accordance with a *mot d'ordre*, the discovery was made that German and Austro-Hungarian subjects had been interned by the Roumanians and had been removed to Russia. Stories of the hardships that these people had to undergo were the subject matter of several messages, the brutality and callousness of Roumanian doctors being a favourite theme for the gentle German to wax eloquent over. Now comes the inevitable sequel. The acts attributed by the Germans to their enemies prove to be precisely those which they had resolved to perpetrate themselves. Old women, young married women, elderly magistrates, and doctors are being arrested and deported to Bulgaria and Turkey. Among the victims is the mother of M. Bratiano, the Prime Minister. The Allies are understood to be considering the question of reprisals in regard to Germany's outrages on sea and land. It may be possible to check the worst forms of devilry practised by the Germans, but we confess to some doubt on the subject. The only way to bring home to Germany and the world in general an adequate sense of the enormities of which the Germans have been guilty is to impose some signal penalty when terms of peace come to be dictated.

PROGRESS IN NORTHERN PERSIA

(By Mirza Firooz Khan.)

I.—THE TAURIS RAILWAY.

The Julfa-Tabriz motor road has now been turned into the Julfa-Tauris Railroad, which has been working since last May. At first only cattle cars and goods waggons were provided, seatless and unheated; and into these conveyances the soldiers and the natives—mostly Persians who had never before seen an "iron road"—would pack themselves like ants, each probably having 10 lbs. to 100 lbs. of baggage with him, and glad enough to get standing room. But great changes have been effected since May. There are now first, second, and third class carriages—brand new ones, too—for ordinary passengers; while the fourth class (and some third class) carriages are reserved for the use of troops. The carriages are similar to those in use on the Julfa-Tiflis line. All bear the inscription "Tauris Railway." One car is painted half green and half yellow, the green-painted half being first class and the yellow second class. It is marked "Tauris-Tiflis," and is used for through traffic, without transfer; while passengers in other carriages must change at Russian Julfa.

In spite of all these things, travelling still remains very slow. From Julfa to Tabriz is only six hours' ride, but it takes you twelve hours to do the journey. You start at eight o'clock in the morning from Russian Julfa, but you must wait in Persian Julfa until eleven; that is to say—since the journey from Russian Julfa to Persian Julfa takes fifteen minutes—for 2½ hours. Starting at eleven from Persian Julfa, you proceed to Marand, where you must wait for an hour and a-half, or two hours. Thence you go on to Sofian, famous as the place where the Russians defeated the Turks and Kurds on January 17, 1915 (O.S.), re-occupying Tabriz; and here you wait another three hours. These "waits" at Persian Julfa, at Marand and at Sofian are necessary, but they are altogether too long! The passengers to mount or dismount are so few at these small towns that one gets really tired of waiting and doing nothing but drinking tea. There are no newspapers or books at these stations.

One Persian fellow-passenger, tired of waiting, after he had tried to kill time by drinking tea and smoking the *Kelian* (water pipe), lost all his patience at last, and said to me:—"Well, Khan, I think this *Kondookhdor* is a fool!"

"How do you make that out?"

"Quite plain! Why should he keep his 'maschine' waiting at a small village like Sofian for three hours? I am killed by drinking tea and smoking *Kelians*. If it is necessary to wait that long, let him first take us to Tabriz, and then come back here again (Sofian to Tabriz is one hour's ride). By making several trips to and from Tabriz he will have more passengers and will make more money!"

There were in the same train also some Persian pilgrims returning from Meshed, who had with them some women. At a smaller station, where a wait of only five or six minutes was to be made, these *Mashadis* (this is a title which the pilgrim wears before his name all his life, unless he becomes a *Hajji*) jumped out of the carriage, took off their shoes and socks and, turning towards Mecca, began their "before-sunset" prayer. A minute or two before their prayers were finished the train moved. Then what a picking up of shoes and socks and running, bare-footed, after the moving train! It provided quite an excitement for the foreign and Russian passengers. Afterwards the pilgrims were complaining amongst themselves and criticising the poor *Kondookhdor* for having a "grudge" against them. Otherwise, "why should he wait three hours at Sofian (which is not prayer time) and not wait at least half-an-hour at Yam, or until we could finish our prayers?" They regretted that they did not travel on donkeys, when they could have got home in less than one-third the time taken by this "maschine."

Their final decision—after a heated but secret debating—was that they should "see"—collectively, of course—the *Kondookhdor* in some "palpable form" and persuade him not to keep them waiting too long.

The women, who were packed into a small, but separate *coupé*, never left their quarters during the twelve hours, and were continually smoking their travelling *Kelian*. Their guard, who was a Karadaghli Khan, was standing at the half-open door of the *coupé*, attending to the demands and wants of the *Khanums* and preventing anyone from entering their department. The fire for the *Kelian* of the ladies was prepared in a *tovlama*. This is a net-form cap of wire with a tail to it. It is filled with charcoal, and another piece of charcoal, half-burned with a match, is placed in the centre of the charcoal-filled *tovlama*. This is swung by the tail until all the charcoal turns into red fire, which is then placed on the tobacco in the *Kelian*. The porter-Khan in uniform was engaged in this fire-making operation when I happened to pass by their *coupé*. I frightened the Khan by cautioning him that he might set fire to the carriage, and that if one carriage burnt the others might do so too, the

passengers might burn, the baggages might burn, and so forth, and then they, being responsible for the starting of the fire, could not pay the damages by selling two or three of their villages! The fright proved effective, for he promised not to engage in a similar operation again until he reached home. "Not even if the *Khanums* die for want of a *Kelian*," he said seriously.

At 8.20 p.m. we arrive at the Tabriz station, which is at the southern end of the city. The line, on reaching the northern suburb of Tabriz, curves, like a five-days-old moon, by the western part of the city, by Karamelik and Shamakazan—both famous as being battle-grounds fought over by the forces of Shuja-ed-Dowleh and Sattar Khan during the fighting at Tabriz for *mashroota*—and stops at a point not far from the caravan road to the South. I am told that the idea of placing the station in the southern suburb of the city is that the railway authorities intend to extend the line southward to Maragha, Sujbulak, Sakkuz, etc., and eastwards to Teheran. Had the station been placed at the northern end of the city the train would have had to pass through the city, which would have been very inconvenient. The distance from the station to the Russian and British Consulates is about five miles, to the palace of the Crown Prince seven or eight miles, and to Shesh-Kilan (centre of city) ten miles.

(To be continued.)

SIR T. HOLDITCH ON BAGHDAD.

At a meeting of the Overseas Club on Friday week Sir Thomas Holdich gave an interesting account of Baghdad; though, he said, it was a good many years since he was there. He described it as a town of narrow streets and tortuous bazaars, the houses entirely closed; so that there was little to admire unless it might be the carved wooden lattice work which covered the windows. It was very much smaller than in the days when it was the centre of Moslem learning and trade. It was a city of gardens, as the name implied; but, though one saw the tops of the trees over the walls, he never got into the gardens unless he had the good fortune to be introduced to some member of the European community who had made his home there. In his own case, he was the guest of the British Resident. As to ancient monuments and similar objects of interest, if there were any such on the eastern bank of the river, where the larger and newer part of the town was situated, he did not know of their existence; but on the other side of the river there was the tomb of the favourite wife of Haroun-er-Raschid, and this every visitor was taken to see. The old palace of the Sultans had disappeared. The people of the town were hospitable and kindly; they were chiefly Arabs. The Turks, who also impressed him very favourably, were wholly occupied with administrative work, and were not more numerous than the Europeans in a large Indian city.

Baghdad was the depot for a strange trade, that of forwarding to Kerbellah the bodies of Shiahs who wished to be buried in the shadow of the mosque that covered the remains of the early Moslem martyrs, the two sons of Ali, the son-in-law of the Prophet. Coming up the river to Baghdad one might find the deck of the steamer piled high with these corpses, and travelling across the desert to Kerbellah one passed caravans carrying nothing else. The amenities of this journey had not been improved for hundreds of years. The caravanserais was a huge collection of buildings erected around a courtyard, and easily capable of defence. It contained no supplies whatever, and, when the traveller had seen to his horse and his luggage, he found nowhere to rest except in the horse's manger. At Kerbellah one might witness once a year a strange religious ceremony, when the Shiahs marched in procession, wept and wailed, and cut each other with knives to commemorate the martyrdom of Hussein and his brother. Sir Thomas Holdich said he had made this pilgrimage to Kerbellah accompanied by his host.

Of recent events the lecturer said it was difficult to forecast the probable results. The capture of Kut by the Turks had been the means of finally deciding the Emperor of Abyssinia to adopt Islam; so it might be seen that the taking of Baghdad would profoundly affect the Oriental mind. As to the future, whether we remained or not, the Turk must not come back. The Arab of the Mesopotamian desert was an ignorant brigand, but the Arab nation had a great past and had taught us a great deal. It was possible that if they were once again placed in control they would rise to the situation.

In the course of a short discussion that followed, Sir Edwin Pears said that when in Turkey he had for six months had in hand the concession to construct a railway from Kerbellah to Baghdad. That concession had been brought to the City of London, where the "Corpse Railway," as it was nick-named, was regarded as the *crème de la crème* of the Baghdad concession. It was not merely that the actual carriage of the bodies was very profitable, but the trade gave splendid opportunities for smuggling.

Up to the end of last month 236 Roumanians of Transylvania, most of them men of education, had been executed by the Hungarians on the pretext of having lent assistance to the invading Roumanian armies. Approximately 1,100 Roumanians of Transylvania have been sentenced to terms of penal servitude varying from thirty years to three years, and the property of more than 600 has been confiscated.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE FUTURE OF PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The lecture of Dr. E. W. G. Masterman to the Royal Geographical Society, to which you gave prominence in your last issue as a contribution to the question of the colonisation of Palestine, has attracted public attention elsewhere under the head of "Respect for Moslem Interests." In this aspect of the question the lecturer ignored, apparently, another and less pressing interest to which most thinking men are turning their minds in the present world crisis—the interest of the Jewish people in their old Fatherland. No one who has followed the remarkable development of Palestine and of Jewish national feeling in connection with it, under the impetus of the world-wide Zionist movement, during the last twenty years, will be inclined to set aside so lightly the claim of this dispersed people to have again a home of its own. Least of all will Englishmen, who have so much in common with "The People of the Book," and who have ever since Cromwell's time encouraged and stimulated every effort which has been made to bring about a Jewish Restoration, be disposed now to turn back from that common aspiration because of some new policy based on "Moslem Interests." That was not the view of such far-seeing statesmen as Beaconsfield or Salisbury or Chamberlain, and it would be strange indeed if it received any support now from any responsible exponents of British policy, directed as this is, more than ever before, to the vindication and establishment of the claims of the little nations.

The Moslem interest which Dr. Masterman mainly relies on is the religious one, and there is no one who will gainsay it; but it cannot override either the Jewish or the Christian interest, and it is, indeed, more recent than either.

The same answer applies to the Arab claim, whether on political or ethnographical grounds; and if one were inclined to forget for a moment the ancient glories of Judah and Israel there are the more recent ones of the Latin Kingdom of Jerusalem, which for over two centuries renewed the prosperity of the land. In modern times what has been the Arab influence or activity in Palestine? Nothing, or worse than nothing; it has been displaced by the sloth or indifference of the Turk. Compare with that the pioneer work of the new Jewish settlers. Since Sir Moses Montefiore, aided by Cremieux, established the first agricultural school on the borders of Judea a generation ago, they have formed nigh on fifty colonies, spread through the length and breadth of the land; their population has increased to over one hundred thousand souls, they have developed the commerce of the country to ten times its former bulk, they have founded schools (both elementary and advanced) and technical institutes in every important district; they have revived the use of Hebrew as a national tongue and made it again a living language; and they have organised a local administration for self-government, including tribunals of justice, to which also the Arabs resort—and all this in spite of Turkish apathy and misgovernment.

This Jewish renaissance is only a faint specimen of what this long-enduring and much-tried people can do for its native land if only it is given the chance of full development under free institutions. That long-hoped-for chance presents itself now, providentially, under the prospect of a British Protectorate; and for those who, like Dr. Masterman, would set up "Moslem Prospects" as an alternative to the claims of the Jews, it may be sufficient to say that Lord Cromer, who knew both the Arabs and the Jews, lent the weight of his great authority to the Zionist scheme of a great Jewish re-settlement as the solution at once of the Jewish problem and the British, in which the security of Egypt, "the spinal cord of the Empire," is bound up.—Yours faithfully, HERBERT BENTWICH.

2, Garden Court, 26th March.

MARKO KRALJEVITCH AND THE BRITISH WOMEN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—When Miss M. E. Durham recommends cordially to the student the Serbian ballads, "for it is the Serbs as seen by themselves," why does she not agree that her lecture on those ballads concerned the Serbian soldier also? And if it was not her intention to evoke a comparison between the legendary Serbian heroes and their fellow-countrymen of to-day, why mention "the methods of warfare" in

1912-13, and introduce a whole passage about Veliki Vovoda Mirko of Montenegro, who has certainly no connection whatever with our discussion? My criticism referred only to the report of the lecture in THE NEAR EAST. But is Miss Durham quite sure that her lecture "concerned ballads entirely?"

While not doubting that Miss Durham's travels have extended over fourteen years, I still wonder if during all this time she has taken opportunity enough to understand the Serbian ballads and the Serbs themselves. If by chance she spent some of this time in the neighbourhood of Serbia, amongst Bulgarians or Albanians, the Serbian songs she discussed round the fire or recorded with a phonograph would hardly suffice to give her the right opinion of the Serbian legendary heroes and of the Serbian soldier of to-day. The passages of the two poems she quotes to prove Marko Kraljevitch "bloodthirsty" are certainly misleading, and when she cites them from thousands of beautiful poems on Kraljevitch Marko, we cannot help thinking that it is done on purpose. All German writers, for instance, either with no time or disposition to go into the matter thoroughly, find Marko strange and cruel, and quote the same two or three poems. Both Miss Durham and the Germans are wrong, and the way they speak about the Serbian national songs, especially those on Kraljevitch Marko—which are in truth a whole world of traits and character, just like the Iliad and Shakespeare—proves at least their incapacity to grasp the spirit of those songs and of the Serbs themselves.

Miss Durham's description of the Serbian national hero and the Serbian national character is just as wrong as her statement about the "cruelty." No, Miss Durham; there are not two kinds of cruelty—one in Western opinion and one in Balkan opinion. You wished to say, perhaps, that there is more cruelty in the Balkans than in the West. But I am certainly not less "bloodthirsty" than yourself, and the recent wars will certainly not leave the Serbs with a reputation for cruelty.

To-day, after all that has happened, and is happening, can you call a nation "bloodthirsty" and cruel when she has given all she had—the lives of her sons and their goods and their families—for an ideal like that in the legends? Is there anything else in the world you can ask the Serbs to do in order to disprove the travesty of the Serbian character circulated by the Austro-Hungaro-Germans for the use of Western Europe? Who can continue to denounce as cruel and criminal the people who have behaved so bravely beyond praise, and suffered so cruelly beyond imagination?

It is also not very wise to do so in Great Britain to-day. When I mentioned the six hundred and more British women who worked among the Serbian soldiers during this war, I knew exactly why I did so. They had no need to speak the language—though a good many of them acquired a fair knowledge of Serbian too—to observe if the Serbian soldier was "bloodthirsty." During long weeks and months they lived and worked together; they saw how the Serbian soldier behaved towards women, and how he treated the Austrian prisoners; and, after all, nearly everyone of them is anxious to go back and continue to help the Serbs. This fact, surprising as it is, will clear away the last "foreign prejudices" about the Serbs in this country, and we have already had the true satisfaction of hearing the British friends who were present at Miss Durham's lecture more indignant about the misleading information than we were ourselves. They will take up the cause of Kraljevitch Marko.

But, as recompense to Miss Durham, I shall confess that it was not at all "amusing" for a Serb to pass criticism on the report in THE NEAR EAST. I felt rather sad at seeing how the typical representative and favourite of the Serbian people was mis-presented in the form of a grotesque savage to the British public by an English woman in the capital of Great Britain at the very moment when the residue of the splendid Serbian army, assisted by her fellow-countrywomen and the British soldiers, was arriving in front of the birthplace of Kraljevitch Marko in their reconquest of Serbian Macedonia.—I am, etc.,

M. CURCIN.

London, March 27.

WITCHCRAFT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—With reference to a paragraph in a recent issue, over the signature of "Corsair," I am of the opinion that there is more in witchcraft than the writer thereof thinks. If he would read that remarkable book, "Life Understood" (F. L. Rawson, M.I.E.E., A.M.I.C.E.), he would see that Paracelsus pointed out ages ago that the object of piercing an image with pins and nails had nothing to do with spells but was merely to enable the witches to concentrate their thought upon the part of the victim that they wanted to harm.

Mr. Rawson gives the scientific reason for this, and also shows the method of protection through prayer. He points out that the miracles of Jesus were not supernatural, but

Divinely natural, the results of scientific right thinking, and that anyone can perform a miracle if they think rightly and lead a good enough life—that is, an unselfish life. It certainly is wonderful the difference this book has made in the lives of people who do their best to follow its teachings and to think rightly.

As doubtless you know, modern psychology now teaches that every thought a man thinks has an effect: if you think good you get good, and if you think evil you get evil. Of course, as Mr. Rawson points out, you must not think so-called good, and think that you are well if you are ill, but you must think of the highest good of which you are capable—namely, of God and heaven.—Yours faithfully,

“VERITAS.”

March 26, 1917.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Officers from Mesopotamia and Aden. March 21.

Colonel YATE asked the Secretary of State for India whether officers both of the British and Indian Armies serving under the Indian Government proceeding from India, Mesopotamia, or Aden on duty or leave, sick or otherwise, to England, or *vice versa*, are generally granted long-sea passages, and hence have to proceed at their own expense across the Continent, while, on the other hand, officers serving under the War Office, proceeding from Salonika or Egypt to England, or *vice versa*, on duty or leave, are given free passage across the Continent, thus causing differentiation of treatment and unnecessary expense to those serving under the Indian Government; and whether arrangements can be made to put both services on the same footing?

Mr. CHAMBERLAIN: Under recent arrangements officers of the British Indian Army proceeding from India, Mesopotamia, or Aden on duty or on leave, and granted free passage *via* the Mediterranean, travel at the public expense through France on the same terms as officers from Salonika or Egypt.

Prisoners of War.

March 26.

Mr. HOPE informed Commander Wedgwood that there were throughout the Empire 55,397 German, 16 Austrian, 763 Bulgarian, and 15,512 Turkish combatant prisoners of war. The total number of British combatant prisoners in German hands was about 32,500. He had no doubt that all these figures were under the mark now.

Prisoners in Turkish Hands.

Replying to Lord H. Bentinck, Mr. HOPE added:—I am informed that there are at present in the hands of the Turks 8,762 British and native prisoners of war, of whom 541 are officers. In addition to these, there are one officer and 5,079 rank and file still untraced. A proposal is at present before the Cabinet for the exchange of 600 British and native prisoners of war in the hands of the Turks as a preliminary to a wider exchange subsequently.

The following table, presented by Mr. Hope, gives the number of prisoners in the hands of Turkey and Bulgaria:—

TURKEY.		Officers.	Other Ranks.
(a) Dardanelles.*			
British	32		345
Australian	9		80
New Zealand	—		21
Indian Natives	—		4
Total	41		450
(b) Mesopotamia*†			
British	267		981
Australian	2		2
Indian Natives	201		6,482‡
Total	470		7,465
(c) Egypt.			
British	29		257
Australian	—		18
New Zealand	1		9
Indian Natives	—		7
Total	30		291
(d) Aden.			
British	—		1
Indian Natives	—		14
Total	—		15
BULGARIA.*			
British	19		495

* Including Royal Navy.
† In addition there are 1 Officer and 1,145 other ranks still untraced.
‡ In addition there are 1,934 other ranks still untraced.

Parcels for Prisoners.

March 27.

Mr. PERO asked the Foreign Secretary whether parcels for prisoners of war in Turkey were now stopped; if so, whether he could state the reason or reasons for this; whether the interned crews of the merchant ships Assiout and City of Khios were included; and whether he was taking any steps in the matter.

Mr. HOPE: Notice has been received through the Swiss Post Office that the transmission through Austria-Hungary of parcels for prisoners in Turkey has been stopped until further notice. His Majesty's Government are not aware of the reasons for this step, which affects the prisoners mentioned in the question as well as others. They have requested the United States Ambassador at Vienna to enter a strong protest against it.

The Blockade of Greece.

Lord R. CECIL (Minister of Blockade) informed Mr. J. King that reports were received during the month of January that two deaths had taken place in Greece owing to food shortage, but there was no official confirmation. Steps had been taken to introduce, under strict supervision, a limited quantity of food-stuffs into Greece, but the blockade would not be raised until the demands of the Allies formulated in December and January last had been complied with.

Mr. KING asked whether it could be understood that all danger of starvation to the lower classes in Greece was eliminated.

Lord R. CECIL: I do not know that my hon. friend can draw any conclusions.

Lieutenant-Colonel Sir C. SEELY: Have the Allies taken care to see that the food in Greece is fairly divided between the Court party and the poor?

No answer was returned.

Operations in the East.

March 28.

Mr. BONAR LAW, answering Major Newman, said there was nothing to add to the official communiqués which had been issued relative to the operations in Mesopotamia and Macedonia. Whenever any news arrived which ought to be published it would be communicated at once to the House.

BRITISH PRISONERS IN TURKEY.

A list of British prisoners of war in Asia Minor, dated Constantinople, March 5, has been received by the International Red Cross Committee at Geneva. The list deals with camps in the Amanus, and mentions five camps—Entille, Airan, Jabachi, Bagtche, and Shekerdéré. Most of the persons named in the list have been moved from one camp to another, and ninety-three men have been brought to Constantinople. Deaths continue to be numerous; twenty-three are notified among the British and forty among the Indian prisoners.

SALONIKA—AN UNFAVOURABLE VIEW.

Canon E. Sidney Savage, Rector of Hexham Abbey, addressed a meeting of the Y.M.C.A. at Tottenham Court Road last Monday, his subject being “On the Valley of the Varda and Nile Desert.” The Rt. Hon. J. H. Whitley, Esq., M.P., Deputy-Speaker of the House of Commons, presided, and Princess Victoria of Schleswig-Holstein was on the platform. The lecture dealt with the work now being done by the Y.M.C.A. on behalf of our soldiers and sailors. Of Salonika Canon Savage said that it had been well described as a den of filth and iniquity. The Macedonian mud was of the kind used in prehistoric times for bird lime with which to catch pterodactyls. He had been in a great many places in the East, but had never seen or heard of—or met anybody else who had seen or heard of—such a cess-pool. There were places in the East where the hot sun dried up the soil and acted as a deodoriser, but in Salonika, under the sun's rays, the poison oozed up out of the dank, foul soil. That part of the Varda Valley was a very malarial spot, and it was a very bad kind of malaria. Of the inhabitants, he said that they were chiefly Greeks or Spanish Jews. If you shook hands with one of the Greeks you not merely had to count your rings afterwards to make sure they were all there, you had to count your very fingers. Yet Salonika had a certain fascination; Olympus was so grand, and the wonderful bay was so beautiful—if you held your nose very tightly.

A Russian official report states that detachments of seaplanes made a raid on Terkos, 27 miles north-west of Constantinople, and dropped 50 bombs on the aqueduct which supplies Constantinople with water. The same day another detachment of seaplanes made a raid on Tultcha [on the Danube] and dropped bombs there.

TANGIER TO TEHERAN.

The report that officers and men of the Turkish Navy are to be trained (by Germans, of course) for service in submarines is distinctly interesting. For one thing, it goes some way to prove—though by itself it certainly does not prove—that the sinking of the Russian hospital ship "Portugal," in the Black Sea, was the work of Germans or Austrians, for if the Turks had really capable submarine officers, they would surely have employed them long ago in training others. But what interests me chiefly is the question: "Will the Turk ever overcome his aversion to machinery sufficiently to make a good submarine officer or sailor?" It may be done; but I much doubt it. The Turk makes a good soldier, and—given the proper officers—a tolerable sailor. But he never yet has made a good engineer; and it is my belief that he never will. The Arab, on the other hand, with his adaptability, his love of novelty, his powers of endurance, and other qualities too numerous to mention, will probably some day make quite a good submarine hand.

The mentality of the Hun baffles me entirely. Again and again, I have found myself hopelessly at fault when trying to follow up his train of thought or to trace his line of argument, especially in regard to what one must call "the minor incidents of the war"—even though they may bulk painfully large to some who take part in them. All that seems reasonably certain to me as yet is (1) that the German, especially the German of the officer caste, is wallowing in filth; (2) that he finds the process quite pleasant and suited to his nature; and (3) that he is determined to let all the world know about it. How otherwise can we account for the fact (reported in *The Times* of the 22nd inst. by a special correspondent, and vouched for by a distinguished French officer) that "German officers sitting at dinner" have not only been "waited upon at table by naked women," but have also been photographed while thus degrading themselves? As some of these photographs have been taken on German prisoners, it is to be hoped that the Allied delegates at the Peace Conference will be provided with copies. They should prove useful if any Teuton or pro-German dared to talk of German humanity or German *Kultur*.

The article on "The Gift of Tongues" in *THE NEAR EAST* of March 16 brought out rather well the difference between the classical and the colloquial Arabic. My acquaintance with the former was always a negligible quantity, I am afraid; and, just as the writer of the article appears to have done, I once or twice found myself hopelessly at sea in the society of educated Arabs. Yet I found little difficulty in mastering the dialects of the different regions I visited, for the vocabulary of the average Arab is very limited, and he is not over nice in his grammar. As to the vulgar Arabic being much more serviceable for workaday use than the classical there can be no question, and it seems to me that anyone who contemplates travelling through, or taking up residence in, any of the Arabic-speaking countries would be well advised to devote some of his energy to the study of the particular dialect of the region he purposes going to. Nevertheless, if I had time and opportunity now I would take up the study of classical Arabic, with a view to reading the Arab geographers and historians, and, if possible, of translating some of them.

That is a work which has in the past been left too much to other nations; and in view of the great developments that are taking place at present it behoves us to effect a change as soon as possible, if we intend to make the most of our position in the Near and Middle East after the war. I wonder whether it will be possible for the School of Oriental Studies, or any other institution, to do something in this matter in the near future? We have several good Arabic and Persian scholars who could render some of the Eastern masters' work accessible to us—if only they are encouraged. But in the past they never have been encouraged. Yet Le Strange's work shows the potential value of study and research of the kind I should like to see fostered. Burton, Payne, Palmer, and the others have had no successors for some time.

Save to the student pure and simple, classical Arabic is, I fear, almost useless. It is to a certain extent the story of ancient Greek and modern Greek over again; only, I fancy, the difference between the classical Arabic and the colloquial is far greater than that between the Greek of Cicero and the Greek of, let us say, M. Gounaris. No doubt you have heard the story of Mr. Gladstone's great oratorical

effort in Athens and its reception by the modern Greeks? The G.O.M. had long cherished an ambition to indulge in a Greek oration before a Greek audience; and during his visit to the Greek capital he seized what he regarded as a suitable opportunity, and delivered an impassioned and fervid address. The following day the leading Greek paper referred to the incident, and remarked: "We are unable to reproduce our distinguished visitor's speech, as we are, unfortunately, not acquainted with the English language."

One of our soldiers serving in the front line trenches was having a rather bad time of it with a particularly active and aggressive "insect pest," which was pasturing on his shoulder, or thereabouts. At last, unable to put up with it any longer, the irritated Tommy performed a weird kind of contortionist trick, stooping down and wrapping his left arm over his right shoulder; and—oh joy!—secured his tormentor. But at the same instant a fragment of shell whistled through the air a couple of inches above his head. If he had not been giving that contortionist performance, he would have been killed; and he recognised the fact at once. Gravely he held his prize 'twixt thumb and finger, and addressed it thus: "Well, you saved my life, you little ——. There, go back where you were!" And the captive was restored to its browsing ground.

CORSAIR.

MOSCOW'S GREETING TO SERBIA.

The Serbian Press Bureau has issued the following statement:—"M. Tebelnokoff, Mayor of Moscow, has sent the following telegram to the Serbian Minister in Petrograd:—

"The new Municipal Council of Moscow at its first full meeting after the advent of the new régime has instructed me to ask you kindly to transmit to the Serbian people and to the glorious Serbian army the very cordial greetings of the town of Moscow and the expression of its firm faith that Free Russia, together with her noble Allies, will obtain final victory over the common enemy."

"In reply to this telegram, M. Pashitch, the Serbian Prime Minister, sent the following despatch through the Serbian Minister in Petrograd:—

"We were deeply touched by the cordial greetings of the town of Moscow, and have transmitted through the Press these greetings from the open heart and pure soul of all the Russian people under the new régime to the Serbian people and the glorious Serbian army. Their affectionate and fraternal words soothe the pains of the bruised heart of Serbia and act as a soft balm to the wounds contracted on the battlefields in defence of liberty and national honour. These words again affirm our deep faith in the inseparability of the destinies of the Serbian people and of the great and glorious Russian nation. They will resound for ever in the heart of the Serbian people, which has suffered every agony, faithful to its Slav blood and its honour. We are convinced that free and democratic Russia will not forget democratic Serbia, which has waged so many long and sanguinary battles in order to assure to the Serbian people democratic institutions, and so that Serbia should be freed from the secret and invisible influences of Austria-Hungary, and, thus liberated, be capable of a national policy having for its object the liberation of the entire Serbian people who are now slaves under the yoke of the foreign oppressor. Without complete victory over German militarism the Slav liberties of person and citizenship are not assured and the true independence of the Slav nations is not completed. We are firmly convinced that a democratic Russia will astound the world by her patriotism and unity, and that Free Russia will kindle a sacred fire in the hearts of all Russians to rescue and liberate Slavism and humanity in the same manner as formerly she lit the flame in her city to liberate Russia. We, moreover, believe that free and democratic Russia will again startle the world by her power, glory, and humane Slav civilization, and that she will contribute, together with her noble Allies, towards the final defeat of the civilized barbarity of Germany, which is without precedent in history, in order that the whole world may be guaranteed free development and a lasting peace."—Reuter.

TROUBLES IN CONSTANTINOPLE.

A special telegram from Geneva to the *Petit Parisien* says that it is learned from an authoritative source that grave troubles have occurred at Constantinople, and that this is the reason for Enver Pasha's visit to the German headquarters on the Eastern front. His object is to ask for Turkish troops to be sent back for the defence of their own country.

The Bulgars, however, have refused to allow their front to be thinned, and have even declared that they would oppose by force the departure of Ottoman troops.

The *Times*' correspondent in Athens reports that information has reached there that the mass levy ordered by the Turkish Government has proved very unpopular among the people, and that up to the 22nd inst. the Government had not ventured to enforce it fully.

NEAR EAST BOOKSHELF.

"THE FLAMING SWORD IN SERBIA."

This very striking title well describes a narrative which is a vivid description of the miseries of war, especially among non-combatants. It is a "demonstration of the capacity of woman to take a useful share in national defence"—one of many hundreds at this time. It is written in the first person, as is inevitable in a narrative so purely personal and so full of personal reflections and ideas. The author, after previous experience of war hospital administration in Bulgaria (1912-13), and in Belgium and France during the present war, undertook, in the spring of 1915, the organisation and direction of No. 3 Unit under the Serbian Relief Fund. This developed into the "Stobart Hospital" at Kragujevatz, the military headquarters of the Serbian Army, and its offshoot, with which the narrative is largely concerned, "The First Serbian-English Field Hospital," commanded by "Madame Stobart."

The book is divided into four parts. Part I. narrates the steps leading to the establishment of the splendid tent hospital in Serbia. It was thought wise, on account of the recent terrible epidemic of typhus, that patients, staff, officers, etc., should be all under canvas. Unfortunately, typhoid invaded the camp, and, as will be remembered by many, Mrs. Dearmer, who had volunteered to work in the unit as an orderly—she had care of all the linen—died of this disease. Part II. describes the development of the work in Kragujevatz and the establishment of half a dozen branch establishments at distances of from 16 to 50 miles around, all in the Schumandia district. A magnificent work seems to have been done, especially among the civilian population. It is sad indeed that the conduct of the Germans should have destroyed such efforts as this, that of Lady Paget at Skoplje and others. One gathers that, had it been left to the more really civilised Bulgarians, these philanthropic agencies would be benefiting the Serbians and Bulgarians even now. Before the unexpected outbreak of savage ferocity exhibited by the Central Powers in this war, it might have been supposed that such noble efforts as these hospitals, almost entirely run by women, might have been allowed to continue to mitigate the horrors of war on both sides. We can only suppose that Germany wished to have no Western European witnesses of her barbarity. Part III., which is certainly the most dramatic, is a vivid diary of the three months of the great Serbian retreat. The author had been invited, after six months' work at Kragujevatz, to take entire charge of a Serbian-English Field Hospital—"the first time in history that such an appointment has been offered to a woman," as the Serbian Colonel remarked in making the request. It was an invitation which she felt it impossible to resist; and how well she played her part and brought her staff safely to Scutari is here told in chapters of deep interest.

It is the tragedy of a nation, borne, however, with a heroism unmatched. Again and again the book bears witness to this spirit. When, at the end of the long trek, the author was invited to join a hundred Serbian officers at dinner, she says:—"I shall never forget my feelings. . . . Of their bravery in the field I and all the world had known, but here, now, was more difficult bravery. The hearts of these Serbian officers were brimful of the knowledge that everything which they prized on earth was lost. Their wives and children were in enemies' hands; their homes were desolate; strangers devoured their land; yet if you had sat and thought for a year of the demeanour which should be shown under the circumstances by officers of a defeated army, met together in exile, at the end of three months' retreat, no finer ideal of quiet dignity and courage could have been conceived." It is the same of the Serbian soldier, of whom she says:—"I never heard or saw a soldier say or do anything that could have given offence to the most fastidious girl." Her verdict agrees with that of Lady Paget in the report of her work:—"My admiration and respect for the Serbian soldier are boundless. He never accepts defeat; he never complains; he is patient beyond belief, and as a fighter few can compare with him."

The fact is that till this war we English have never known or cared about the Serbians. "England was still in the habit of judging them by the unfortunate act which had first brought their nation to the knowledge of the British public."

* "The Flaming Sword in Serbia." By Mrs. St. Clare Stobart. (London: Hodder and Stoughton.)

BOOK NOTES.

Mr. Basil Williams offers a word of apology for including in his series of "Makers of the Nineteenth Century" the forthcoming memoir of "Abdul Hamid," Sir Edwin Pears's volume stripping the late Sultan of even the little credit he had from those who judged him as, at any rate, an astute and able ruler. Abdul Hamid's title to fame, and to a place in Mr. Basil Williams's series, is "that he was the maker of ruin for his country and the man to whose action and example Europe may be able to trace back her redemption from a cruel and oppressive burden."

Messrs. Sotheman's Catalogue (No. 58) of Autograph Letters contains several items of strong interest to students of the Near East and its history. Thus in the letter of Lord Palmerston's regarding the possibility of Persia taking Herat, we find him writing:—"We ought to instruct Colonel Sheil to do his utmost to dissuade the Shah from attacking Herat; and he might if necessary say something about the Island of Harrack. The Shah would by no means like our occupying it."

Another letter from the same writer refers to trouble in Greece, and though written on May 20, 1847, might almost have been penned yesterday as far as concerns the first sentences quoted. It says:—" . . . The plain and straightforward way of settling all these affairs (of Greece) would be to send our Naval Commander to make the demands and require a categorical answer in a stated number of hours, and if the answer was not affirmative to begin reprisals . . . You say that one of these despatches contains language irritating to Canitz . . . I agree with you that as a general principle the personal conduct of Sovereigns ought not to be subjects of Diplomatic discussion."

Included in Mr. Melrose's announcements for the spring is "Early English Adventures in the East," by Arnold Wright. Mr. Melrose also has in preparation "With the British Army in Macedonia," by Harold Lake, of the Middlesex Regiment.

Mr. Heinemann will shortly publish a popular account of the Navy's share in the struggle, by G. MacNeile Dixon, entitled "The British Navy at War."

"The Ethics of Euripides," by Dr. Rhys Carpenter, has just been issued by Mr. Milford. The author's chief object in this work is to bring the ethical teaching of Euripides into relation with that of the "Ethics" of Aristotle, and to suggest that the latter is largely a representation in prose of what the Attic tragedians inculcated.

Messrs. John Long have in preparation a volume of "Rumanian Songs and Ballads," by R. Stewart Patterson, formerly of the British Legation in that country.

The new part (No. 136) of *The Times History of the War* deals with the early stages of the Roumanian campaign in 1916 and the beginning of the Bulgar-German attack on the Dobruja. Three maps are included in the part.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galiegani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepherd's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nassim and Company, 12, Rue Sesostris; Librairie Calabotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francaise, Rue Sabri Pasha.

ATHENS. Librairie Th. Vassilades.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style.)	Julian (Old Style.)	—	Moslem.	Jewish.
1917. March. 30 31	1917. March. 17 18	Friday	1335. Jumada II.	5677. Nisan.
		Saturday	6	7
April. 1	19	Sunday	8	9
2	20	Monday	9	10
3	21	Tuesday	10	11
4	22	Wednesday	11	12
5	23	Thursday	12	13

To-morrow is the birthday of Prince Henry, third son of the King and Queen, who was born at Sandringham in 1900.

A telegram from Athens, received in Paris, states that the French, British, and Russian Ministers, who since January 12 have been on board warships moored off the Piræus, returned to the Legations on Saturday.

M. Diomedes, who had been visiting London on a special mission on behalf of M. Venizelos, left for Paris last week.

Colonel Rudeano, the chief of the Roumanian Military Mission in Paris, accompanied by Captain Prince Callimacki, his secretary, arrived in London from France some days ago.

Reuter's Delhi correspondent reports that messages of rejoicing at the capture of Baghdad continue to reach the Viceroy. Congratulations from the Sultan of Muskat and the Abdali Sultan are among others from the Persian Gulf.

On Monday evening, at the Tottenham Court Road Y.M.C.A., Canon E. S. Savage, rector of Hexham Abbey, who has been in charge of the Y.M.C.A. work at Salonika, lectured on his experiences. Princess Victoria of Schleswig-Holstein was present, and Mr. J. H. Whitley, M.P., Deputy Speaker of the House of Commons, presided.

Sir Arthur Lawley, British Red Cross Commissioner in Mesopotamia, has established a Red Cross dépôt in Baghdad. A number of Red Cross motor-ambulance launches are at Baghdad and are doing excellent work.

Mr. Churchill again gave evidence before the Dardanelles Commission on Wednesday.

Brevet-Colonel O. G. Gunning, C.M.G., Indian Infantry, who has been gazetted brigade commander, with the rank of temporary brigadier-general, saw service with the Dongola Expedition, 1896, for which he was awarded the medal and the Egyptian Medal.

After a course of training at one of the cadet camps, Mr. Bernard Silley has successfully passed the exams and obtained a commission, and will be leaving very shortly for service abroad. On his arrival in England from Constantinople in November, 1914, Mr. Silley was engaged at Woolwich Arsenal, doing service at the same time as a special constable. He joined the Army in October, 1915, as a private, being subsequently promoted lance-corporal, corporal, and machine gun instructor. Second-Lieut. Bernard Silley is the only son of Mr. Walter E. Silley, manager of the Imperial Ottoman Bank of Limassol, Cyprus.

We regret to learn that Corporal John Hunter, who had been wounded twice on the Western front, has since been wounded a third time, and is in hospital at Stokesley, Yorkshire, where his right leg has been amputated. Corporal Hunter is the nephew of Mr. Arthur Hunter, a well-known merchant in Constantinople, and grandson to the late John Hunter, for many years in H.M.'s Consular Service.

In a message from Salonika Mr. G. Ward Price sends particulars of a notable exploit on the Doiran front, where three German aeroplanes were brought down in two days by Captain Murlis Green, R.F.C., who had already accounted for four enemy machines single-handed, and another one in which he shared the honours with a brother airman. On March 18 Captain Green flew into the midst of a squadron of six bombing aeroplanes and brought two of them down. One fell between the lines and the other in flames behind the enemy's trenches. On the following day he engaged an Albatross, with the result that it dived out of control, and its pilot was seen to fall from it. For these and many other duties effectively accomplished in the air Captain Green has received the D.S.O. and the Serbian Order of the White Eagle, which is given only for military deeds of exceptional brilliance. These are in addition to the French War Cross and to the Military Cross with a bar which he already held.

A memorial service to Mrs. Harley (who was killed at Monastir on March 7), sister of Field-Marshal Viscount French, was held at St. Margaret's, Westminster, on Wednesday. Canon Carnegie officiated, and the service, arranged by the Serbian Legation, representing the Serbian Red Cross Society, in co-operation with the London units of the Scottish Women's Hospitals for Foreign Service, consisted of the Requiem (Terchaninov), sung without accompaniment, Prayers, the Lesson, the Magnificat with antiphon (Pavlov), and the Commendatory "Rest Eternal" (Palestrina). Father Nicolai Velimirovic, of St. Saviour's College, Belgrade, delivered an address, and the hymn "Through the night of doubt and sorrow" was followed by the National Anthem. Among relatives of Mrs. Harley present were:—Captain Julian Harley (son), Mrs. Gavin Jones (sister), Colonel and Mrs. Middleton (niece), General Leslie Jones (nephew) and Mrs. Jones, Major Archie Jones (nephew) and Mrs. Jones, Mrs. Despard (sister), Viscountess French (sister-in-law), the Hon. Essex French (niece), Captain the Hon. H. French (nephew) and Mrs. French, Major the Hon. G. French (nephew) and Mrs. French, Colonel and Mrs. Watt (niece), Mrs. Harley, and Mr. Mortimer Harley (brother-in-law).

Viscount French was unable to be present owing to his official duties. Others attending the service included:—Vicomte de La Panouse, French Military Attaché, M. Zarini (representing the Russian Chargé d'Affaires), Major Count Edward Greppi (Italian Military Attaché), M. Albert Maerterlinck (Italian Embassy), the Serbian Minister, representatives of the Belgian, Rumanian, Netherlands, Danish, Swiss, and Greek Legations; Miss Palliser (chairman), Viscountess Cowdray, Mrs. Kinnell, from the London Units of the Scottish Women's Hospitals; Lady Salvesen, Mrs. Laurie (from the Headquarters Committee of the Scottish Women's Hospitals), Mrs. Henry Fawcett, LL.D. (president), Mrs. H. A. L. Fisher, Mrs. Oliver Strachey (from the National Union of Women's Suffrage Societies), Lady Frances Balfour, Countess Brassey, Miss Philippa Strachey (from the London Society), and Miss May Whitty, Miss Fellowes-Robinson (from the British Women's Hospital), Lady Grogan, Mrs. Carrington Wilde, Mr. Glynn Williams (vice-chairman), Dr. and Mrs. Seton Watson (of the Serbian Relief Fund), Mr. R. F. Syngé (Foreign Office), the Hon. Arthur Stanley (chairman, British Red Cross Society), Viscountess Panouse (French Red Cross Society), Mrs. J. Boyd Carpenter (representing the Countess of Selborne), Bishop Burns (representing the Bishop of London), Lady Perley, Sir J. McCall (Agent-General for Tasmania), representatives of the High Commissioners of the Dominions and Agents-General, Colonel Hodgetts (Canadian Red Cross Society), Mr. Charles W. Lloyd (Royal Colonial Institute), Mr. Frank Hastings, and Mr. G. Sawyer (British Red Cross Society), Mrs. J. L. Stocks, Mr. Philip Coxall, and Mr. R. Barsdorf (War Refugees Committee). Several Serbian officers and their wives and a number of refugee Serbian boys from schools in London were present.

A memorial service for Mrs. Harley was also held on Wednesday at the Parish Church, Con Dover. Mrs. Harley's old home in Shropshire, where her husband, Colonel Harley, C.B., is buried. Among those present were Mr. and Mrs. P. D. Harley and Captain and Mrs. Thynne Hereford.

Speaking recently at a meeting held in Westminster, in connection with National Service, Sir George Reid, M.P., told an amusing story of Lord Kitchener. "I told Lord Kitchener," he said, "that I must do my bit for the Empire. I said, 'I am not much of a walker, and if I get on a horse I never know when I am coming off. I only went out shooting twice in Australia. The first time I nearly destroyed myself by forgetting the angle which I had developed, and the second time I irretrievably damaged the hat of my best friend; but can't you make an armoured fort of me and send me to the front?' Lord Kitchener looked down at me and said: 'My dear fellow, I don't think we can do that, but I think there is something you can do. We could make a base of you.' (Laughter.) I didn't know whether to think that was a pleasantry or a gross insult, but it shows Lord Kitchener was not destitute of humour when he had a proper subject for it."

Miss Mary Ann Rice, of Clevedon, Somerset, who died on January 17, left £150 to the society known as the "Friends of Armenia."

The Wounded Allies Relief Committee, 8, Grosvenor Gardens, S.W.1., has presented to the Serbian Relief Fund the sum of £500, for the exclusive purpose of providing food for sick and wounded Serbian prisoners of war in Germany.

SERBIAN LEGATION, 195, Queen's Gate, S.W.

APPOINTMENTS, PROMOTIONS, ETC.

The King has been pleased to give directions for the appointment as a Companion of the Order of Saint Michael and Saint George of Commander William Fortescue Sells, R.N., in recognition of his services during the war as Naval Attaché to his Majesty's Legation at Athens.

A *Morning Post* telegram from Rome states that, as M. Metaxas is remaining in Egypt, M. Simopoulos, Councillor at the Greek Legation in Rome since 1914, has been appointed Greek Chargé d'Affaires in London. M. Simopoulos, whose uncle was a well-known Greek politician and for a time Minister of Finance, has held diplomatic posts at Paris, Constantinople, and Sofia, and some years ago paid a long visit to England and Ireland. His secretary, M. Doulides, has already left Italy for London.

According to *Al-Ahram* (Cairo), it is reported from an authentic source that Sir Paul Harvey, former Financial Adviser in Egypt, will return to the service of the Egyptian Government to occupy a high post.

The promotion of Second-Lieutenant C. A. M. van Millingen, the Rifle Brigade, elder son of the late Professor van Millingen, to lieutenant (November 17, 1916) has been gazetted.

Mr. Douglas J. Binns, of Constantinople, who has been working in the Contraband Department of the Foreign Office, has received a temporary appointment as Assistant Commercial Attaché at H.M. Legation at Copenhagen. Mr. and Mrs. Binns have already reached Denmark.

OBITUARY.**A CROAT PATRIOT.**

The Serbian Press Bureau has issued the following statement:—"Dr. Nile Startchevitch, the Croat politician whose death was announced at Zagreb, in Croatia, was elected a Member of the Austrian Lower House at a time when a split had occurred in the Croat parties of the Right. The group of which he was the leader desired no longer to confine itself to the narrow and Chauvinistic views of the exclusive Croat party, but, on the contrary, began, first through its newspaper *Hrvatska Sloboda*, and afterwards through the newspaper *Croat*, to advocate an agreement with the Serbs; and later they openly fostered the idea of the union of the nation with three names—the Serbs, Croats, and Slovenes—this union to be brought about by the constitution of an autonomous State within the Austro-Hungarian Monarchy, having equal rights with the two other parts of the Dual Monarchy. The war has demonstrated in a peremptory manner that this was a Utopia, the realisation of which would have completed the enslavement of our nation of three names to the Germanic race and to German aims. Dr. Startchevitch thoroughly realised this, and this party would now have urged union with the people beyond the frontiers of the Danubian Monarchy if only circumstances had permitted it. During the war the party of Dr. Startchevitch did not compromise itself by any anti-national statement, and paid a heavy penalty because of its liberal action. Many of its prominent members have disappeared and are languishing in Austrian prisons."

Mr. Joseph Henry Trewby, late Chancellor of the Ottoman Embassy in London, has died suddenly at his residence at Clapham Park, in his eighty-first year. Mr. Trewby, who had been a member of the Council of Administration of the Ottoman Railway from Smyrna to Aidin and deputy-chairman of the railway, was a Knight of the Brazilian Order of the Rose.

The death has occurred in a nursing home of Mrs. Eldridge, widow of Mr. E. J. Eldridge, late of the British Consulate, Smyrna.

Major-General William Hanbury Hawley, a Crimean veteran, who was colonel of the Prince of Wales's Own West Yorkshire Regiment from 1904 till 1914, died at Shiplake-on-Thames last week, in the eighty-eighth year of his age. He obtained an ensign's commission in the 14th Regiment, with which regiment he served for thirty-one years. He took part in the Crimean campaign as a captain, and was engaged at the siege of Sebastopol till the fall of the fortress, taking part in the assault on the Redan, and receiving for his services the medal with clasp and the Turkish Medal.

Herr H. von Miquel, who was German Minister at Cairo at the outbreak of war, has died in Berlin after a long illness.

Second-Lieutenant W. Howard Mason, Royal Engineers, who was killed in action on an Eastern front on March 9, was thirty-two years of age and the eighth son of the late G. Calver and Mrs. Mason, of Broadwater, Ipswich. He was educated at Ipswich School and at the Mining School, Camborne, and after qualifying as a mining engineer was some years in Egypt, India, South Africa, and Mauritius. At the outbreak of war he came home and joined the Inns of Court O.T.C., out of which he obtained his commission in the R.E. in June, 1915. On December 9, 1912, he married Gladys, fourth daughter of the late Captain W. Teague, of Trevenson, Carn Brea, Cornwall, who, with a son, survives him.

DOMESTIC ANNOUNCEMENTS.

The charge for announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

MACLAREN.—On March 21, at Cairo, the wife of Roderick Gair MacLaren, Camel Transport Corps, of Zagazig, Egypt, of a daughter.

NAPIER.—On March 28, at Bickley, the wife of Lieut.-Colonel G. F. Napier, Military Attaché, Teheran, of a daughter.

DEATHS.

ELDRIDGE.—On March 24, in a nursing home, Elfrida Eldridge, of Berkhamsted, widow of E. J. Eldridge, of the British Consulate, Smyrna.

TREWBY.—On the 26th inst., suddenly, at his residence, Langford Lodge, Clapham Park, Joseph Henry Trewby, Knight Brazilian Order of the Rose, late Chancellor, Ottoman Embassy, London, and Deputy Chairman, Ottoman Railway, in his eighty-first year. No flowers by special request.

ROUMANIA AFTER THE WAR.

The promise of Armageddon that no country which it has involved shall remain exactly as it was before is gradually being redeemed. If we know it to be true of the British Empire, which has been fortunate enough to keep the war outside its borders, still more is it likely to be the case in respect of countries that have passed through the fiery ordeal of invasion. War is thus upholding its reputation that it is by no means an un-mixed evil. However grievously it may press on the individual, it is apt to benefit the nation or race, and looked at from the broadest point of view it stands out as the great propagator of civilization. Highly civilized States have been overwhelmed by barbaric hordes; but as a rule it is the civilized nation that overcomes in war the less advanced peoples. The ground for British civilization was prepared at the point of the sword by Romans and Normans; and conquest, whether in war-like or pacific guise, has rescued vast tracts of the earth's surface from uncivilized or unprogressive rule. As times have changed the remedial influence of war has worked from within rather than from without. Modern Germany arose from Prussia's defeat in 1806, and the foundation of France's position to-day was laid by the disaster of 1870. So will it be after the present struggle. Russia may provide the most striking instance, but the same factors will be at work in some degree or another in all the States that have been drawn into the vortex of the war. In some countries the anomalies that are waiting to be removed are manifest to the world at large; in others they may only be realized by the people themselves, and the enlightenment of public opinion will exercise its effects slowly. To the former category Roumania undoubtedly belongs. Her sad fate at such an advanced stage of the war, when it was thought that all eventualities had been foreseen and provided for, implied that more was amiss than the mere failure of military preparations. The causes of her swift defeat drove their roots farther down in the body politic. They are laid bare now, not in time to avert disaster, but before hope had been abandoned and in time to inspire confidence that, with the help of the Allies, the Roumanians will be able to build up a bigger and a better State on new foundations.

Although the war has laid its finger on certain anomalies in Roumanian affairs, it is not the case that these have been recognized as such now for the first time. They have engaged the attention of Roumania's public men, as well they might, for many years; but the war has provided the incentive to see that the more glaring grievances among the citizens shall go unredressed no longer. Already at the opening of Parliament at Jassy, under the shadow of the loss of half the kingdom, King Ferdinand promised that ownership of the soil shall at last be made possible for the peasantry, who form nearly five-sixths of the nation. The agrarian problem, electoral reform, and the Jewish question figured largely in Roumanian politics before the war. Discontent among the peasants, who owing to the prevailing system of land tenure were little better than serfs on the lands they tilled, led to serious disturbances in 1888 and 1907. The manner in which the risings were suppressed left a legacy of deep-seated bitterness that half-measures of reform had not sufficed to remove. In spite of an electoral system which placed parliamentary power in the hands of the classes instead of the

masses public opinion had come to appreciate the gravity of the situation, and the Liberal party in power at the outbreak of the war stood pledged to wide-reaching agrarian reform. Something more than paper legislation, however, is required where it has been found necessary to bring home to those who ought to be the leaders of patriotic feeling a sense of their responsibilities by the enactment that all property-holders must spend at least six months of the year in the kingdom. Absentee landlordism has been the bane of other countries besides Roumania. There it is linked with a tendency among the upper class to treat lightly the obligations of leadership imposed upon them in regard to the more serious spheres of public life. The difficulty of finding an adequate supply of the right type of officers for the mobilized army sprang from the same causes as those which left the economic development of the country largely in foreign hands. The stern awakening which Roumania has received can be relied upon to effect the social regeneration of the upper class, without in any way militating against the qualities which have won general recognition and have made Roumania and her people deservedly popular among the nations of Europe.

While the treatment of the Jews in Roumania stands on a different footing from that of the peasants' grievances, it has attracted more attention in the outside world, and the misrepresentations to which the question has been exposed have been bitterly resented by the Roumanians. At the outset it must be stated that the problem is an economic one, and not a matter of religious feeling. To understand the Roumanian point of view it is necessary to recall something of the struggle to which this sorely-tried people has been exposed for a thousand years to maintain its sense of nationality in the face of innumerable invasions. Finally, when it issued intact from its last trial under the Turkish yoke, there was a tendency to insist with some fierceness upon its right to regard Roumanian soil as its own exclusive property. Although the Jews had been established in the country for many generations, they were regarded as strangers, and at one time no doubt were content to regard themselves in the same light. The Jewish population, it is contended, was in a state of constant flux, receiving sudden accessions of numbers when conditions in Galicia, Poland, or Russia prompted any large stream of emigration. The newcomers showed no signs of becoming assimilated; they remained a people apart, mainly in Moldavia, where ultimately they have come to form more than a tenth of the population, with much larger proportions in individual towns and villages. When popular feeling was aroused against the Jews and found expression in legislation, their main calling was said to be usury or that of innkeepers, by both of which means they contrived to get the peasants and others in their power, and in the opinion of the Roumanians would ultimately have gained possession of the greater part of the land. Hence the laws that refused them rights of citizenship, the right to own land, and the exercise of certain trades. European opinion had been sufficiently aroused to lead to the insertion of a clause in the Treaty of Berlin which stipulated that difference of religion in Roumania should not serve as a political disqualification, and that all foreign subjects should be placed on a footing of perfect equality. Roumania met the situation created by this clause with a compromise which gave the Jews little real redress. But time has gradually improved the status of individual Jews in the kingdom and modified public opinion towards them. The old contention that they took no part in the defence of the country has broken down under their voluntary enlistment for the campaign against Bulgaria, and, it may be inferred, by the events of this war. When the Roumanians of Hungary are incorporated in the new kingdom the proportion of Jews to the Christian population will be considerably lowered. The new spirit animating the whole people must see the wisdom of removing all prominent grievances, in order that a united and Greater Roumania may bring its maximum efficiency to bear upon the speedy recovery of the country from its severe ordeal.

THE RACIAL PROPAGANDA IN TURKEY.

(FROM A CORRESPONDENT.)

Although much has been written about the Young Turks' anti-Arab and anti-Islamic campaign, yet the following minute details of their sinister programme is likely to prove new and interesting reading. German inspiration is clearly seen in the thoroughness and unscrupulousness of the method, as well as in the lack of comprehension of social and human principles, and the imperfect reading of the mind and temper of other peoples.

The Unionists founded a Central Turkish Society under the name of *Türk Ujaghi* (The Turkish Family), whose chief aim was the overthrow of Islam as it stands, and the Turkification of all the non-Turkish elements of the Empire. This society had its headquarters in the capital, and branches in every town and village of Anatolia, the Caucasus, Turkestan, Thrace, and Macedonia, and its funds were drawn from the Ministry of Wakfs and the Interior, as well as from the Mashiekhat-ul-Islam. It worked through four subsidiary organizations, each of which exercised its functions along special lines.

The first, *Türk Yurdu* (The Turkish Kingdom), had for its mission the development of Turkish literature by various means, (a) the purging of the Turkish language of Arabic words, so as to render it a purely Mogul tongue; (b) the writing of national books in this language; (c) the teaching thereof in schools and their distribution broadcast in all Turkish provinces; and, finally, the use of detached letters (such as European letters, in contradistinction to Arabic) so that there should remain no manner of resemblance or parentage between it and Arabic. The duties of the members of this organization were to oppose each Turkish or non-Turkish writer who did not share their views, or profess their creed; to help in the dissemination of national books, and epic poems, and heroic songs among the Turks; to teach the Turks old Turanian history, and impress upon them the idea that they are the greatest nation in the world, and that Fate has chosen them to be the master-race. Sober-minded Turks, such as Ali Kemal Bey, Dr. Riza Nour, Loutfy Fekri Bey, and others, have been actually threatened with death and accused by the members of this organization of treachery to the Turkish cause, and qualified as bastards of impure Greek origin.

The second is *Türk Derneki* (The Steadfast Turk). This was entrusted with the preaching of the national idea among Turkish and non-Turkish Ottomans in a violent manner, unprecedented in the history of nations. The members of this body are extreme Unionists, who deeply hate all the other elements, and are imbued with the fierce desire of Turkifying them and destroying every vestige in them of the national idea. They are fired with extraordinary energy, but their delusion is such as to have blinded their reason, and committed them to acts that were mainly responsible for the disasters that overtook the Empire. As an instance may be cited the fact that during the Balkan war, when the enemy was at Chatalja threatening the very heart of the Empire, one of their leaders, Ahmed Aghaef, was publishing a series of articles in *Tasvir Efkar*, in which the following sentence appeared: "Turkey must give the closest attention to Iran; for Iran is the gateway of India and China."

The third organization, *Türk Belkishi* (The Turkish Standard), was charged with the translation of scientific books into Turkish and the distribution of these books, and the dissemination, at the same time, of the Turkish

national idea in Turkestan and the Caucasus with a view to creating a strong political bond between their Moslem inhabitants and the Unionist Government of Turkey.

The fourth body, *Türk Kuji* (Turkish Power), has its activities confined to the physical development of pure Turks by the popularisation of sports and games.

Among the conditions of admission to the central society or to any of its branches are the following:—

(1) Each member must be a Turk, and undertake to devote his life, energies, and wealth towards the raising of the prestige of the Turk and his domination over the other nations; (2) each member has to change his name and replace it by a purely Turanian one; thus, Enver may be replaced by Ishildak, Mohammed by Timur, Selim by Genghiz, Hussein by Hulagu, Said by Oghuz, and so forth. All the Unionist officers as well as the members of the present Government who are leading members of this society are known to their Turkish friends by Turanian names other than those by which they are known to the non-Turks.

This society and its branches, moreover, founded a large number of clubs in all Turkish towns and villages for teaching old Turkish history, and especially the history of Hulagu, Oghuz, and Genghiz Khan, and further exalting the national ideal, so as to create the conviction of the superiority of the Turks over all other nations. Three days of the week have been fixed for a similar preaching among Turkish women, and for a special course of instruction, having for its aim the proper bringing up of children on purely Turkish lines. The Ministry of Wakfs lately volunteered a grant of £T50,000 for this society to spend on the publishing of comprehensive historical works on Hulagu, Genghiz, and Timurlenk. Non-Turks are forbidden admission to these clubs. Before entering, the member has to produce a card showing his name, photograph, and date of birth.

Among the latest efforts of this society may be mentioned the translation into old Turkish of the Koran and the Friday Sermon, as well as other religious texts and invocations which the Moslem religion requires to be read in Arabic; also the removal of the names of the Suhaba from the mosques, in the belief that the existence of these great Arabic names in places where large crowds constantly congregate is conducive to the weakening of the national ideal in the Turkish soul. The rupture with everything Arabic must be absolute.

All Ottoman schools, whether primary or secondary, military or civil, are but affiliated branches of this society. So are the Committee of Union and Progress and all the other Turkish societies, political, scientific, religious, and literary, which had been founded in Constantinople and Asia Minor prior to the outbreak of the war and after it. Furthermore, the Government introduced in the curriculum of its higher schools, and especially in the military school and that of the General Staff in Constantinople, a special course of instruction in the history of the Turanians, their military science, their literature and laws; and appointed Ahmed Aghaef Bey, Emin Bey, Khaled Zia Bey, and Hamdullah Bey as lecturers in these subjects in the military schools, the schools of law, medicine, and engineering. So fiercely persistent was this racial propaganda that it ended by inflaming the imaginations of Turkish students, who discarded modern works to indulge almost exclusively in reading books on purely Turkish subjects, such as "The Turkish Kingdom," "The Turkish Sword," "The History of Turan," Timur-lenk, Hulagu, Genghiz Khan, and the like.

The following extract from an address given by the Professor of Military Education in the military school before officers of the Reserve a few days before the

NON-GOUTY.

KING GEORGE.

KING OF SPAIN

By Appointment to

entry of Turkey into the great war reveals, in all its ferocity, the spirit of this propaganda:—"We are, gentlemen, before all, Turks. I wonder why we are called Ottomans; for who is Othman after whom we are named? He is a Turk from Altai, who overran this country with his Turkish army. Therefore, it is more of an honour to us to be named after his origin than after himself. We have, so far, been deceived by the ignorance of our forebears, and lie on these forebears who made us forget our nationality. Dear friends, you shall soon be attached to the army, and you shall be the leaders of our heroic soldiers. Teach them that they are Turks, and that, if they fight the enemy for the Turk and the Turkish flag, they shall achieve victory. Be sure that Turkish nationality is better for us than Islam, and racial pride is one of the greatest social virtues."

Here one of the Arab officers protested, saying: "All Ottomans are not Turks, and if the Empire were to be considered purely Turkish, then all the non-Turkish elements would be foreign to it, instead of being living members of the political body known as the Ottoman Empire, fighting the common fight for it and for Islam."

To this the Professor replied: "Know that facts are apart from feelings, and reality must not be confounded with emotion. Although you are an Arab, yet you and your race are subject to Turkey. Have not the Turks colonized your country, and have they not conquered it by the sword? The Ottoman State, which you plead, is nothing but a social trick, to which you resort in order to attain your ends. As to religion, it has no connection with politics. We shall soon march forward in the name of Turkey and the Turkish flag, casting aside religion, as it is only a personal and secondary question. You and your nation must realize that you are Turks, and that there is no such thing as Arab nationality and an Arab fatherland."

All the Arab officers who heard this speech sent a collective protest to the Minister of War, and asked for the dismissal of this Turkish professor. Far, however, from heeding the protest, the Ministry took immediate steps for sending them to various fronts to be in the firing line.

These treacherous designs on the Arabs formed ever the basis of the Unionists' policy. Some of the Arab officers fighting in Bulair during the Balkan war came across a letter addressed by a Unionist leader to a Unionist officer, which contained the following words:—"Expose the Arabs to the enemy's bullets, and do all you can to get rid of them, for there is profit to us in their death."

THE PRESS ON THE NEAR EAST.

"The Land of the Beeches."

The *Fortnightly Review* (March) contains a most readable article, "Bukovina—The Land of the Beeches," by the Hon. W. F. Bailey and Miss Jean V. Bates. It is difficult to know what passages to select for quotation where all are so good, but these paragraphs, telling how the region came by its name, will certainly interest many readers:—

Once upon a time, in the reign of Stefan Domn cel Mare—Stephen the Great, Prince of Moldavia—when the Bukovina was the richest province of that sturdy ruler's dominions, Albrecht, King of Poland, thought fit to pitch his camp and graze the horses of his army on the great open plain lying along the River Pruth. Whereupon Stefan Domn cel Mare sallied out with all his forces and put the intruders to flight after having slain half their host and taken twenty-five thousand prisoners, of whom many were haughty and dissolute nobles. Fearing greatly, the Polish King made overtures to Stefan and offered a large ransom for the release of his subjects. But the Moldavian Prince was not a man who did things half-heartedly. He refused his enemy's offer, and ordered many ploughs to be made. To these he harnessed the Poles, and sent them out to till the lands of the Bukovina, after which he obliged them to sow in the furrows which they had ploughed the seeds of the beech tree.

In time these seeds grew up into great stretches of forest, and so the country came to be called the "Dumbrevile Roshe" which is, being interpreted, the Land of the Bloody Beech-Forest. Legend declares that a terrible curse, the curse of blood, has lain upon the country from that day to this; that the murmur of dead voices sounds through the rustling branches of its woodlands; that the sighing of the slain may be heard

through its softest breezes; and the fact remains that the shadow of the sword has never through long centuries departed from the fields and forests of the Bukovina.

The land is invested with an atmosphere of mystery that lends it a rare charm, and though a curse is said to rest on it, "this Land of Beeches . . . gives pleasant pictures of a strange country and a curious people." But perhaps the most interesting thing about it is the great forest itself:—

In this beech forest a man may wander for days without meeting any of his kind. But those familiar with the secret windings of this green world can follow them safely—bears, wolves, wild swine, and Tziganes, of course, permitting—over the ever-rising moss and leaf-strewn ground, through the silent colonnaded aisles of the grey, smooth beech trees twenty-four feet in girth, which rear themselves aloft and spread fan-shaped polished branches against the bluest of blue skies. Those who have been born and bred beside the forest, where the sunlight glimmers faintly in golden patches through the green, satiny leaves, where the solemn stillness is undisturbed save by the low rumbling growl of a stray bear in search of berries, the song of the birds, the crackling of the brown leaves and nuts under the feet of the passing swine, and the music of running water, those who know the way, after going upward for many hours, can reach at last the spot where the beeches yield place to yews and silver birches, to mountain ash and oak, and finally to the gaunt, straight-stemmed pines which set the limit to vegetation and beyond which rise the foothills, the gaunt, grey precipices, and the snow-crested, impassable summits of the Carpathians. It is a long road which winds us from Teke to the dazzling-browed mountains, and most people are too lazy or too timid to follow it.

The region seems to be a veritable "Land of Honey and Butter," as it is called by envious neighbours, for there is something more than beech forest; there are rich cornlands, lush pastures, and immense plum orchards. The population is very mixed. The authors apparently do not admire the Jews, for they write:—

Jewish villages are never by any chance salubrious or lovely, but these, in the Bukovina, are extraordinarily horrible. Sordid clusters of wretched wooden hovels, plastered with mud and cowering, and smeared over with glaring blue paint, they are, like their inhabitants, indescribably loathsome. The reek of cabbage stew and garlic, offal, and verminous humanity meets the nostrils in every direction. In the open doorways lounge and sprawl black kaftaned men, gaudily turbaned women, and their lice-infested offspring. Until one has learned the little ways of the Israelites it seems incomprehensible why in open, sparsely-populated lands like Galicia, Moldavia, and the Bukovina, human beings should be obliged to compress about five families, a couple of cows and pigs, not a few turkeys, and a considerable number of fowl into two low-roofed rooms, which are lighted and ventilated only by a three-inch wide slit in the wall! Everyone to their taste, however, for, as the rustic Jew hereabouts cannot claim poverty as an excuse, it must be their natural instinct which prompts them to exist in this state of filthiness and intimacy.

Of the other inhabitants we are told much that is interesting and nothing quite so unattractive as this.

The Advance on Baghdad.

The last stages of the British advance upon Baghdad were marked by great deeds on the part of our troops. An interesting account of the passage of the Diala is given by Mr. Edmund Candler, in a message from Baghdad dated March 12:—

The last fighting before Baghdad is likely to become historic on account of the splendid gallantry of our troops in the crossing of the Diala River. After the action at Lajj, the Turkish rear-guard fell back on Diala, destroying the bridge which crosses the stream at its junction with the Tigris. We pushed on in pursuit on the left bank, sending cavalry and two columns of infantry to work round on the right bank and to enter Baghdad from the west. Speed in following up was essential, and the column attacking Diala was faced with another crossing in which the element of surprise was eliminated.

The village lies on both banks of the stream, which is 120 yards wide. The houses, trees, nullah, and walled gardens made it impossible to build a road and ramps quickly and to bring up pontoons without betraying the point of embarkation. Hence the old bridgehead site was chosen. The attack on the night of the 7th was checked, but the quality of courage shown by our men has never been surpassed in war. Immediately the first pontoon was lowered over the ramp the whole launching party was shot down in a few seconds. It was a bright moonlight, and the Turks had concentrated their machine-guns and rifles in the houses on the opposite bank. The second pontoon had got into the middle of the stream when a terrific fusillade was opened on it. The crew of five rowers and ten riflemen were killed, and the boat floated down the stream. A third got nearly across, but was bombed and sank. All the crew were killed, but there was no holding back.

The orders still held to secure the passage. Crew after crew pushed off to an obvious and certain death. The third crossing party was exterminated in the same way, and the pontoons drifted out to the Tigris to float past our camp in the daylight with their freight of dead. The drafts who went over were raised by volunteers from other battalions in the brigade. These and the sappers on the bank share the honour of the night with the attacking battalion. Nothing stopped them save the loss of the pontoons. A Lancashire man remarked: "It is a bit hot

here; let's try higher up." But the gallant fellows were reduced to their last boat. Another regiment, which was to cross higher up, were delayed as the boats had to be carried nearly a mile across country to the stream. After the failure of the bridgehead passage, the second crossing was cancelled, but the men were still game.

On the second night the attempt was pursued with equal gallantry. This time the attack was preceded by a bombardment. Registering by artillery had been impossible on the first day in the speed of the pursuit. It was the barrage that secured us the footing; not the shells, but the dust raised by them. This was so thick that you could not see your hand in front of your face. It formed a curtain behind which ten boats were able to cross. Afterwards, in clear moonlight, when the curtain of dust had lifted, the conditions of the night before were re-established. Succeeding crossing parties were exterminated and pontoons drifted away, but a footing was secured.

A Sickle for the Turks.

In the course of an article, "Baghdad and Beyond," the *Nation* expresses the opinion that we shall be wrong if we regard the Mesopotamia campaign as restricted to a holding on to Baghdad:—

The best defence of the city, in any case, would be to meet any dangers by a bold offensive, and it is probable that General Maude's operations are part of a concerted plan to put Turkey out of the field. Already the Turks are hastening to fall back from Persia. General Baratoff, who last year contrived to send a small body of cavalry to the British, is moving westwards. Along the road, worn by the feet of thousands of pilgrims, the road which Darius and Alexander followed, the Turks are hastening towards the high rim which separates Persia from Mesopotamia. The road runs through Baghdad, and General Maude has probably already made preparations to receive the enemy. The Russians and the British in this part of the vast field of Asiatic Turkey are co-operating to sweep the Turkish troops westward. The alignment forms a rough sickle, with the handle from Trebizond to Erzerum, a similar formation to that which swept across Serbia; and the purpose of the Allies is to brush the enemy westwards towards northern Syria. The Grand Duke is only waiting for the appropriate moment to set Yudenoff's army in motion once more. The position, therefore, holds wide possibilities, and there are certain to be great changes in this area.

"The Hour of Vengeance."

In an article entitled "The Empire of the Turk," *El Kowkab* (of February 6) expresses the opinion that: "It is no marvel that the empire of the Turk should now show signs of decadence, downfall, and dismemberment, after the tyranny and ignorance with which it has been afflicted. But it is a great marvel that it should have endured for so long on such weak and tottering foundations, even though the Powers were anxious for its existence and doing their best for its support." The writer then goes on to show how the Turks converted fertile and prosperous lands into wildernesses; how they strangled arts, commerce, and industry in every land they conquered; and how the Arabs especially have suffered at the hands of the Turks. He continues:—

Even if the matter had stopped at this material issue, it might have been borne; but morality has suffered likewise. The East was the favoured place of Divine revelation and guidance; the land of origin of apostles and prophets; high and generous character was its pride and glory, the beauty and ornament of its people. The breath of the Turk in that pure and serene sky brought gloom and pollution. Morality came down from her throne; valour and faith and honour fled away, their place being taken by corruption, vileness, and deceit. The son took pride in denouncing his father; the father would denounce his son, in greed for money or place. Is there a lower Hell than this? How far is this from the truth and generosity of the Arabs? How far is this dull brutality from that lofty civilisation which even to this day is studied by the greatest of the Frank scholars, who find in it wells of benefit and instruction? May God's mercy be shown to the lands and their inhabitants for the offences which they have committed, in punishment of which this evil has been brought upon them, and they have been subjected to the accursed rule of these caitiffs, born for perfidy and villainy, not for rule and lordship. But we may hope that the time of these calamities is now drawing to its close; that the reign of light and justice will wipe out that of darkness and tyranny; and that the hour of vengeance is at hand, when the oppressors will learn how completely they are overwhelmed.

A German View of the Suez Canal.

The Berne correspondent of the *Morning Post* sends to that journal an interesting summary of an article contributed to the current *Zeitschrift für Politik* by Dr. Steindorff, a well-known Egyptologist. In his article the learned doctor deals not with the past, but with the future of Egypt, his article being entitled—cumbrously enough—"How Shall We Ensure the Freedom of the Suez Canal in the Future?" He bases his argument (writes the *Post's* correspondent) on the assumption that "England is unfortunately able to maintain her present position in Egypt, and to exercise all sovereign rights over the Nile after the war."

He is not, he says, one of the bold optimists who propose that

Germany should demand that part of the French war indemnity shall be paid in Suez Canal shares so that the Empire would automatically acquire considerable influence in the administration of the Canal. As a matter of fact, he adds, it is not certain if the shares held by France are in the possession of the Government or are in private hands. Dr. Steindorff suggests as a more practicable measure that Germany and Austria-Hungary should take over the claims and rights of the German-Austrian Company formed to build the Canal, which, it is alleged, was tricked by de Lesseps.

This is a truly German idea! Dr. Steindorff considers that by insisting on the fulfilment of Hun claims the Central Powers "would restore the international character of the Canal." But, the *Morning Post's* correspondent continues:

Even this, however, does not satisfy the Professor, for he fears that as long as England holds sway in Egypt she will not be deterred by international agreements or by the fact that Germany has an important share in the administration of the Canal from adopting arbitrary measures in time of war. The only means that Dr. Steindorff can conceive by which England could be restrained from adopting such arbitrary measures, and the Canal thus kept absolutely neutral, is the alteration of the eastern frontier of Egypt. He contends that every effort must be made, on the conclusion of peace, to ensure that one of the conditions is that the present "unnatural" frontier of Egypt shall be done away with, and that the Suez Canal itself shall in future separate Africa from Asia, Egypt from Turkey. The Professor points out that the Sinai Peninsula would then no longer serve the purpose of a rampart, to which it had been put by England, the Canal and its western bank could be controlled from the eastern bank, and every hostile preparation, even in time of peace, could be prevented.

With all respect due to the profound learning of the Professor, we would suggest that the old proverb about catching your hare before you cook it would appear to have a certain bearing upon his proposals. At present they appear to be rather wide of the mark.

Germans in Turkey.

In an article in *Land and Water* under the above heading, Sir William Ramsay points out that the course of operations suggests that the German officers have been withdrawn from the Mesopotamian Army. The Turkish Army, he holds, is able to conduct only one kind of operation well, which is to stand a siege or hold a fortified line; and he instances the siege of Plevna.

Now compare the progress of the operations on the Tigris. The Turks were able to put up a very strong resistance at the lines which had been prepared, but they did not know when to retire and how to retire. They held on until it was too late, and there was an alternative presented to them of a hurried retirement or enduring a siege. It seems quite evident that the retirement was so conducted as to degenerate into flight, during which all order was lost and the army became a fleeing mob. This is exactly what takes place when the officers are unfit to control and lead their men. A Turkish army officered by Europeans may be made into one of the best, but a Turkish army officered by Turks can never become a trustworthy force.

It is not merely generals that the Turks want. What they need even more is officers of every rank. They cannot supply men who have at once education and the will to work hard; they cannot learn the art of modern war, and they, therefore, are unable as officers to direct and use their men, while they rarely possess the moral power to control them.

So far as can be judged from the little that is published, the operations seem to prove that the German officers had been in very large degree withdrawn. For this two reasons may suggest themselves. Either the need in Germany was too great and too pressing to allow them to maintain a sufficient number of officers with the Turkish Army, or they believed and hoped that the Turks had been trained sufficiently to be fit to keep up the defence.

It is quite possible that both reasons co-operated in producing the result: the Germans needed all their officers, and they were too ready to believe that the Turkish Army could maintain its discipline and manage itself without European officers.

The Germans seem to have staked too much on the capacity of the Turks, and they have lost. With this loss it is safe to say that the scheme of a great Turco-German army has been wrecked because for such an army European officers are essential.

Articles to Note.

"The Chameleon: Germany's Situation," by the Military Correspondent of *The Times* (March 26).

"Turkish Dêbâcle," by Colonel Feyler, in the *Sunday Times* (March 25).

Victoria has contributed £300 to the Serbian Legation and £50 to the Lord Mayor of London's Armenian Fund.

M. Guillemin, the French Minister at Athens, has joined the British Minister, Sir Francis Elliot, in his protest against the arrest at Patras of the British Consul's clerk while conveying a message to the French Consulate.

According to the Agence Balkanique, Field-Marshal von Mackensen has arrived in Constantinople to reorganise the Turkish Army.

THE ENTENTE NOTE TO PRESIDENT WILSON.

BULGARIAN PRESS VIEWS.

(FROM A CORRESPONDENT.)

As was to be expected, the Bulgarian Press is furious in its attacks upon the Allies' reply to President Wilson.

The Sofia semi-official paper *Dnevnik*, of January 13, writes as follows:—

The refusal of the Entente reeks of lying and hypocrisy. It makes no secret of its covetous aims. What, then, is left for us to do in this case? Precisely what the Note proclaims to all the world, viz., to continue the war with steadfast conviction and faith in the justice of our cause until we have secured a peace which will guarantee the existence, honour, and free development of our nation.

The Sofia paper *Utro*, which is also a Germanophil paper, says, in its issue of January 15:—

The Allied Governments will never give up the conviction that, in their opinion, the responsibility rests with those countries which caused the outbreak of this universal war, and which have contributed to its spreading to other countries. For this reason the Bulgarian Government combines with the Governments of the Allied countries in renouncing every idea of restoring to such States as Russia, Serbia, Montenegro, and Roumania their former frontiers, for with these States rests the heaviest responsibility for the overthrow of European peace.

In commenting upon the Entente Note, the Bulgarian Press also attacks the Entente. Its attacks are mainly directed against England. Thus the Socialist paper *Zarja* declares, in its issue of January 15:—

England is looking round to see whether there is still left any small nation which has not yet been the subject of her life-saving activities. Meanwhile, in all quarters of the globe people are dying under her tyrannous domination. The world is longing for peace and justice, and whoever refuses them to the world will be cursed by future generations.

M. Gueshoff's paper, the *Mir*, the organ of the Liberal-Nationalists, says, on January 15:—

In the Entente Note England is the only nation to whom nothing is promised. Yet it is the English who are conducting this war, and, moreover, it is certain that the Note in reply was written by Lloyd George himself. Of course, it was necessary that England should represent herself as being totally disinterested. But the practical Americans will realise that Lloyd George shows his own selfish aspirations all the more clearly when—even in the Note to the President of the United States—he considers it necessary to ascribe to the Russians, French, and Italians the selfish reasons for which they must protract this war. It is a notorious fact that it is his design to keep those nations and States closely harnessed to his chariot in the interests of the Entente. There is one thing England is afraid of—namely, that one day her Allies will awake, and realise that she has turned her enemies of yesterday into her Allies of to-day merely for the sake of exploiting them for her own advantage.

England is also being attacked by Dr. Rizoff, the Bulgarian Minister in Berlin. In the *Berliner Tagblatt* of January 11 he endeavours to demonstrate the fact that the present war was provoked by the Entente Powers: that Germany did not violate anybody's neutrality or rights, but that, on the contrary, "the history of Great Britain and Russia is a series of violations of treaties and of outrages committed upon other nations." He defends Prussian militarism, and opines that English anti-militarism is a far greater evil.

"Prussian militarism" (he says) "is nothing but the most efficient and, from the German point of view, the most suitable organisation for the defence of Germany. Since the Franco-Prussian war there is no evidence that any harm has been done to the world by this militarism; but there is ample proof of the injury done during that time by Great Britain, with her anti-militarist policy, who has taken Egypt and the island of Cyprus, has divided Persia with Russia, and has destroyed two Boer Republics."

The Bulgarian Press is especially annoyed by the fact that the name of Bulgaria is not even mentioned in the Entente Note. On account of this omission, the *Mir* of January 17 calls the note "poor," and demands that the struggle against the Entente shall "be continued to the end, shoulder to shoulder with our loyal allies."

RUSSIAN NEWSPAPER IN TREBIZOND.

On November 14, 1916, the first Russian newspaper to be published in Trebizond made its appearance under the name of *Trebizondsky Voenni Listok*. Previously, all except those who received the official war telegrams or who understood Greek had to await the arrival of newspapers from Batum, Tiflis, Moscow, and other parts of Russia.

The paper is to be issued every Sunday as a regular two-sheet newspaper, but on other days, Monday excepted, telegrams only will be published on a single sheet. It is sold for 6 kopecks per copy or 2 rubles for two months. The yearly subscription rate has not yet been announced. Advertisements are accepted at the rate of 25 kopecks a line of brevier type in front of the text and 15 kopecks at the end.

ARCHÆOLOGICAL NOTES.

AN ANCIENT BASILICA AT TUNIS.

Père Delattre, who for so many years has carried out successfully the search for antiquities in Tunis, has recently reported to the French Academy that he has discovered the remains of a large Christian Basilica at Carthage. From its position near to, and facing, the sea, and from the evidence of its original magnificence, there can be no doubt that it is the largest of the Basilicas of St. Cyprian, which is famous for the entry into it of Belisarius on the day following his capture of Carthage.

The immense edifice, only part of which has yet been excavated, had no less than seven naves. Fragments of sculptural ornaments of funeral effigies, and of mosaics, and remains of hundreds of Christian lamps have been found. Near by was uncovered a tomb of a Christian lady, undoubtedly a wealthy person, which had never been disturbed. The body had been buried bearing superb good jewellery, including a collar encrusted with precious stones from which is suspended a medallion, bearing the symbols of the Cross and Alpha and Omega. Earrings and brooches, finger rings, and some thousands of ornaments which are worked into a design on the robes, make this the richest find of the kind that has yet been made in Tunis.

Historians and antiquarians will be more interested in the lapidary inscriptions. Père Delattre already makes the fragments bearing writing amount to some 3,000, from which hundreds of sepulchral epitaphs can be reconstructed; of these he has published, in the *Comptes Rendus* of the Académie, about twenty. One of these, giving twelve lines, ten of which are in metre, is in perfect preservation. It is an epitaph for a young lady, but for some reason her name has been omitted.

Three fragments of an inscription in Greek which have been lying for some years in Alexandria Museum have now been arranged by M. Seymour de Ricci and translated by him. The text concerns some derelictions of duty on the part of a body of guards, or police, who were caretakers of the vast cemeteries of the city. For some reason this corps of watchmen was recruited among the Lycian colonists, of whom there were many at Alexandria. The guard at a necropolis had to be strict and efficient because of the Egyptian custom of burying valued jewels with the defunct, making the temptation to tomb robberies very great.

The inscription, which is not quite complete, is an extract from the official register of the functionary called the *Idiologos* at Alexandria. He was administrator of the domains of the Roman Emperors, which in Egypt included not only land and buildings that the Cæsars had actually acquired, but, by a legal fiction, also all the territory and real estate the proprietors of which are alleged to be unknown. The inscription records the summons before the authorities of a certain Ulpis Potamon, a freedman of Trajan's, at the instance of his superior, the Magistrate at Mareotis. With Potamon would be arrested the Lycian police under his command. The date of this document is the fifth year of Hadrian, that is A.D. 120. The inscription undoubtedly set forth the punishment awarded for negligence of duty, and was affixed probably outside one of the large cemeteries as a warning to the guardians, as notices of convictions are displayed at railway stations nowadays.

M. RIBOT AND M. VENIZELOS.

A Reuter's message from Paris states that, replying to the congratulations of M. Venizelos on the formation of his Cabinet, M. Ribot said that France, who is sustaining with her Allies a struggle in which the safeguarding of the liberty of nations is at stake, has awakened in the hearts of the Hellenes memories of their great ancestors who laid the foundations of Greece. M. Ribot adds that he is happy to be able to address to one of the noblest of their descendants his ardent wishes for the success of the lofty ideals to which M. Venizelos has devoted his whole life.

There has been a strike of electricians at Athens. The men have, however, been induced to return to work pending consideration of their grievances.

American interests in Bulgaria are to be watched over by the United States Embassy in Constantinople.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I may be permitted to offer a word of congratulation to my staid and reliable friend the *Financial Times*, which, in the third year of the war, has made a triumphant return to prosperity with a dividend of 5 per cent. Very few London newspapers, I believe, can show a profit of nearly £20,000 on last year's operations, but that is what the Coleman Street journal has accomplished. Paper problems, distribution costs, labour difficulties, and other troubles incidental to journalism have all been accentuated, as every newspaper man knows only too well. I hope the *Financial Times* will live long and robustly to continue its honourable service to the British world of finance and commerce.

Readers of THE NEAR EAST will not have been surprised to learn through Reuter's brief cable that last year in Egypt was one of "undoubted prosperity." The accounts published from time to time all indicated the advance of the Protectorate, its increasing prosperity and expanding trade. As I have frequently pointed out in these columns, Egypt is one of the few countries to which the war has brought opportunities of profit; and all will be glad to learn that the able Administration out yonder has turned them to the best advantage. The full figures for the year will be awaited with great interest.

It is impossible to refrain from expressing sympathy with the fate-battered and long-suffering shareholders in the Smyrna-Aidin Railway, the half-yearly meeting of which was held this week. The company has something like £5,000,000 landlocked in Asia Minor. Lord Strathmore, the chairman, had a great deal to say regarding the what-might-have-been but for German enterprise, German penetration, German forceful diplomacy and systematic bribery of Turkish officials. "The old, old story," one is tempted to remark. Lord Strathmore is, probably, perfectly accurate in his indictment—notwithstanding Sir John Jackson's recent memorable testimonial to the integrity of the Turkish official—but there is at the same time the uncomfortable suspicion that the wickedness of the Hun could not have prevailed so completely if our own people had not regarded the sinner too cheaply. I do not suggest for a moment that British subjects ought to have employed the same methods; but I cannot believe that any very strenuous attempt was made to counter the sinister moves of the Germans.

There is no profit to be gained in whimpering, however. The thing to do at the moment is to look ahead and to prepare for the day when peace will bring new opportunities. It is necessary to point out in this connection that with the opportunities will also come a danger. We may assume that for a long time after the war the Hun will be excluded pretty strictly from zones in which British influences will be at work, and there will be the risk that, in the absence of competition, our people will fall back to their old ways of easy-going and comfortable leisure. That will be as disastrous in its way as German corruption, and I urge this view on the chairman of the Smyrna-Aidin Railway

in particular. For the further aspirations of the company in Asia Minor I must refer readers to the summary of Lord Strathmore's speech at the meeting—published elsewhere in this issue.

Egypt, it may be presumed, like other protectorates and Crown colonies, will be included in the scheme of Imperial reconstruction, which is foreshadowed—if that is not too optimistic a word to use—in the final report of the Dominions Royal Commission. The Commissioners urge very strongly, and on eminently sound grounds, that it would be impossible to confine the proposed Imperial Development Board to the great self-governing Dominions. I am unable to do more than summarize very briefly the recommendations of the Commissioners, but would like to add that their report is an interesting document and a valuable addition to Imperial literature.

The principal recommendations may be summarized as follows: It being vital that the Empire should become self-dependent for supplies of essential materials and commodities, a complete survey should be made of Empire production and requirements.—The creation of an Imperial Development Board to undertake this survey, and generally to carry on permanently the work of the Commission.—Local governments to undertake research in the dominions, limiting the Imperial Institute's activities to India, the Crown Colonies and protectorates.—The extension and improvement of Imperial communications by deepening harbours, developing fast steamship services, regulating freights, extending and cheapening cables.—The reform and strengthening of consular services and commercial intelligence.—Unification of legislation on trade marks, patents, and companies; establishment throughout the Empire of decimal coinage and metric weights and measures. A pretty tall, but none-the-less attractive, programme, when all things are considered.

The Zurich correspondent of the *Economist* contributed the following interesting "par" to that paper recently: "On March 13, the first day after the arrival at Zurich of the news, bitter to Swiss pro-German financiers, of the fall of Baghdad, the shares of the Banque de Chemins de Fer Orientaux were offered at 750 fr., but they found hardly any buyers. On the following day a few buyers appeared, offering 700 fr. Thus the Zurich Stock Exchange considers the value of the Anatolian and Baghdad Railways diminished by one-third through the fall of Baghdad. It is no secret, of course, that the Banque de Chemins holds 'in trust' the shares in the Anatolian and Baghdad Railways which belong to the Deutsche Bank and its allied concerns in Switzerland and Austria. The shares, since they were introduced on the Zurich Exchange in 1911, appreciated from 1,085 fr. to 1,196 before the first Balkan war. At the end of 1916 they had fallen to 810 fr.; the fall of the City of the Caliphs appears to have completed the debacle."

Eager eyes are being turned towards Mesopotamia, and keen memories are recalling the trade glories of the past of that blessed country. Pressel, the famous Swiss engineer, once declared: "In this country, where all the geological and

mineralogical formations are represented, one finds everywhere mercury, borax, copper, zinc, argentiferous lead, antimony, chrome, manganese, coal, petrol, naphtha, bitumen and rock salt. Asiatic Turkey has been favoured more than any other part of the world by nature, and a brilliant future is necessarily in store for it." Then there are the famous *dicta* of Sir William Willcocks, with some of which readers of this journal are familiar. "A land such as this is worth resuscitating," he wrote. "Cotton, sugar, cane, Indian corn, and all the summer products of Egypt will flourish here as on the Nile, while the winter products of cereals, leguminous plants, Egyptian clover, opium, and tobacco, will find themselves at home as they do in Egypt. . . . A land whose climate allows her to produce such crops in tropical profusion over millions of acres cannot be barren and desolate."

It must be remembered also that the great bulk of the trade carried on in this region—or that was carried on up to the outbreak of the war—was British. British steamers ran up the river from Busreh, carried all the cargo and passenger traffic and served as the link between Baghdad and the Persian Gulf. It is absurd, now we come to realise the fact, that huge quantities of the plant and stores, and hundreds of the German engineers and workmen, required for the Baghdad railway were carried by our vessels. There was no reason why they should not have been, of course, but there would have been a reason if in authoritative quarters we had had a man intelligent enough to "spot" exactly what was afoot and brave enough to have declared it frankly. The unofficial people who did speak were not exactly thanked for their pains.

Well, with it all, the Hun has overreached himself. The Baghdad Railway, as he conceived it, has passed beyond the limits of practical economic politics, and with it, let us hope, the Hun has gone as well. It is not for us to speculate on what the future of Mesopotamia is to be, or who will rule and be ruled, but British public opinion ought to insist on safeguards and undertakings, that old things have really passed away, and that the future will be in the hands and control of a new régime—British for choice, but new. I have referred previously to the introduction of British institutions lower down in what was the *vilayet* of Busreh. They are working well, I believe, while the thoroughness of their organisation suggests permanence in character.

The Sudan and its Economic Development.

No. 5.—The Province of Darfur.*

(By Percy F. Martin, F.R.G.S.)

The Province—formerly the Sultanate—of Darfur has been too recently added to the Anglo-Egyptian Sudan, which now consists of fifteen political departments, to enable anything like a useful description being afforded of its economic recommendations. Its whole industrial development, like that of its political government, pertains to the future. Of this, however, one cannot say, with Byron, that "the best of prophets of the future is the past," for the former history of this part of the Sudan has hitherto been as disappointing as that of the remaining provinces has been encouraging. But with the installation of the new administration the industrial regeneration of the country and its inhabitants may be said to have commenced.

Darfur lies 13 degrees N., 25 degrees E., in East Central Africa, between Kordofan and Wadai. Its population is said, by some authorities, to be "4,000,000," but there is as little certainty about this as there is, and always been, about its precise boundaries, the ill-definition of which has in times past occasioned much trouble to the two Governments of France and Great Britain. But for the outbreak of the war this long-standing dispute might, in all probability, have been settled, a draft compromise having been in existence since 1914 for submission to the permanent Arbitration Court at The Hague.

Boundaries.

The boundaries as they exist at present are as follows: The Province is neighboured on the north by Dar Badiat and the desert west of the Wadi Melh; on the east by Kordofan, the frontier running from Kara Serrug, situated in Darfur, in a south-west direction to Dam Jemad, which is in Kordofan; hence it runs in a southerly direction to the Bahrel-Arab and Dar Fertit; Dar Habbania and Dar Taaisha are both in Darfur. The western boundary leaves Dar Sula and Borzu, or Wadai, within the French sphere of influence, and Dar Gimr and Dar Tama to Darfur.

From a scenic point of view the country cannot be said to be attractive. As with the whole of the territory between the Nile and its eastern frontier, there are to be seen vast plains broken in places by clusters of rocky hills, rarely exceeding in height 600 ft. above the surrounding plain, which, in the north, is intersected by wadis which run down the hills and gradually lose themselves in the oceans of sand. A thin, but tough, kind of low-growing scrub is everywhere in evidence, becoming thicker towards the wadis. In the south, the khors become gradually fewer and fewer, until, at about latitude 14° 30' north, they cease altogether. Here the real bush-country begins, and the surface of the country becomes rather more undulating.

Geological Features.

The geological formation offers very little of interest, although it is decidedly varied in character. In the west, the mountains are undoubtedly of volcanic origin; in the north, they are formed of granite and sandstone, and the same may be said of those in the south; in the east, the soil is sandy and contains a quantity of iron, which is worked to a trifling extent. In other parts of the country one comes across white and red sandstone outcrops, gneiss, lava, and some huge dykes of a white quartz. In many of the depressions sand, rich in iron, is met with, and assuredly with proper treatment this might become of great commercial value to the Government.

Naturally, any mining enterprise, like that of agriculture itself, is mainly dependent for successful working upon the water supply. And here Darfur is decidedly better off than its immediate neighbour Kordofan. There the drainage system is complicated, and practically all the rain that falls sinks into

the ground. But while the wadis, after spreading over a bare surface, lose themselves, there is generally good, sweet water to be found by digging for it. In Darfur north, the same kind of thing occurs; but to the west, south-west and south the country is much better watered and more fertile. In the rainy season—June to October—water is everywhere plentiful, and in the south the land becomes even marshy and difficult to travel over. The ordinarily peaceful wadis become torrents, and, although their beds become dry soon after the cessation of the rains, water is generally to be found in abundance, held up by the clayey strata at a few feet below the surface. Clearly, then, something useful can be done with country of this nature, and it may be taken for granted that the Administration is alive to the possibilities awaiting agricultural and pastoral development.

A Human Policy.

Much, of course, also depends upon the character of the natives themselves. The Government of the Sudan, knowing the kind of people with whom it has to deal, has eschewed the policy of most foreign administrations which, according to Mazzini, "are never really willing to aid you until you have shown that you are strong enough to conquer without them." If the Sudan Administration had awaited this display upon the part of the people of the other provinces, their regeneration would have been brought about—never. The contrary has been the adopted policy. The Government have gone to the people, and have shown by practical assistance how anxious they have been to help them, and they have only ceased to act thus when the recipients of support have proved themselves able to dispense with further aid.

The inhabitants of Darfur, speaking generally, are a singularly intelligent and by no means a slothful people. The original tribes are the Fors and the Dago, the latter having, for centuries, ruled over the entire district from their strongholds in Jebel Mara. Unfortunately, a terrible destruction among these people took place during the Mahdist days, when, in the course of some twenty years, whole tribes—such as the Maharia, Nawaiba, Mahamid, Ereigat, Beni Hussein, etc., became so disintegrated and scattered that they have now practically ceased to exist as tribes, and are but seldom met with. Prior to the Mahdi revolt, the population of Darfur was said to be 1,500,000, and of these people, fully one-half were slain or dispersed. If this estimate is accurate, the above quoted statistics of a "4,000,000" population is evidently grossly exaggerated. In all probability the province population stands at about 2,000,000 all told.

El Fasher.

The ruling class, the Masabat and the Kunjara, have their centre at the capital, El Fasher. They are said to be a clean and industrious people, living in neat grass *tukls*, or conical huts, five or six of which, built in a circle, form a "habitation." Other tribes over which the new Government will hold sway are the Jebelawin, the original inhabitants living in the mountainous stronghold of Jebel Mara above referred to; the Zaghawa and Zeidadia, in the north; the Berti and Kaja, in the east; the Maalia and Rezeigat, in the south-east; and the Beni Helba, Habbania, and Taaisha, in the south. In the west, are the Masabat and the Tama. There may be added the considerable sedentary population comprising a variety of tribes such as the Mima, Birgel, Beigo, and Gimr.

What sort of trade have these people hitherto been able to carry on? They have exported feathers, ivory, pepper, rhinoceros horns, tobacco, etc., while they have purchased cotton goods (gomash), sugar, tea, and other kinds of luxuries, for which they, like all natives of the Sudan, evidence the greatest

predilection. The future Darfur trade in ivory alone should be of great value. As a rule this substance comes from Dar Jange and Dar Fertit, in the south. Under the continued disturbances of the late Sultan's rule, however, this trade was almost ruined, but the Wadai troubles being now swept away, the trade route through this district should be speedily renewed and maintained.

The New Government.

The new Government is now completed. As already announced in these columns, El Lewa P. J. V. Kelly, D.S.O., was appointed the first Governor of the newly-created Province of Darfur as a well-deserved reward for his successful services in connection with the military operations which commenced in March and terminated in December of last year. Colonel Kelly having now rejoined the Egyptian Army, the Governorship has been entrusted to El Miralai R. V. Savile, formerly Governor of the Kordofan Province, who has been replaced as Acting-Governor by Mr. J. W. Sagar, the Senior Inspector of the Blue Nile Province. El Kaimakam H. A. MacMichael Bey, D.S.O., occupies the position of Sub-Governor—the single instance of such an appointment in the Administration of the Sudan to-day—with headquarters at El Fasher. Mr. W. Nicholls, formerly Second Inspector, has since been removed to Singa, in the Province of Sennar; while three out of the other five Second Inspectorships of the Darfur Province are filled as follows:—E. Kaimakam E. G. S. Hall Bey at Kutum; Mr. J. A. Gillan and El Bimbashi E. Keith-Roach at El Fasher; and Mr. T. McNeill at Um Kedada. The two remaining Inspectorships at present are unfilled.

NEWS FROM ALL SOURCES.

The Turkish Chamber has ratified the Turco-German politico-commercial treaties negotiated last year.

A telegram from Sofia states that the Bulgarian Sobranje has ratified the agreement for the purchase by the State of the Mustafa-Pasha-Dedeagatch railway.

An Athens telegram states that the King has signed a decree authorising a tax on shipowners' war profits averaging from 5 to 20 per cent., according to tonnage.

An Alexandria telegram, dated March 26, reports that the cottonseed market is firmer, and spot is quoted 134p., equivalent to £12 0s. 1d., and April, 137p., equal to £12 5s. 5d.

As a further stage towards increased intercourse between the two countries, the Turkish Government has decided to send some 10,000 young Turks to Germany, in order there to be trained in different German industries.

According to a decree of the Hungarian Government published November 24, 1916, goods may only be exported to Bulgaria, Macedonia, and Turkey by special trains, and only through the intermediary of the "Hungarian Trade Bureau" (Akademia utca 3, Budapest V).

A supplement to the *Board of Trade Journal* of March 29 contains a complete list of articles the importation of which into the United Kingdom has been prohibited, except under license, by Royal Proclamations of February 15, 1916, and subsequent dates, and in respect of which applications for licenses should be addressed to the Controller, Department of Import Restrictions, 22, Carisle Place, Westminster, London, S.W.1.

Electricians belonging to the Pan-Hellenic Union proclaimed a strike owing to the rejection of their demands. The Government refused to support their case. The result was that the electric current was stopped in Athens and the Piræus, and presumably in other towns, with a consequent cessation of communications, lighting, and industry. An agreement was subsequently reached between the Government and the committee representing the strikers, the committee undertaking to persuade the men to resume work on the assurance that the Government would consider their claims.

* Previous articles in this series have appeared in THE NEAR EAST of December 29, 1916, February 2 and 23, and March 9.

LANCASHIRE COTTON TRADE.**Another Week of Slow Trade and Producers' Complaints.**

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, March 28.

We have experienced another week of slow trade in the market, and complaints from producers have tended to increase. Although the position in many of our outlets abroad is not unhealthy, the problem at the moment is to get goods to our customers, as fewer boats are available than at any time since the beginning of the War.

Although fluctuations have occurred in raw cotton rates, prices remain on a distinctly high level.

Limited operations have transpired in piece goods for Egypt, but rather more inquiry has been reported for certain of the Near Eastern outlets. Much difficulty, however, has been experienced in arranging transactions. Sailings are very irregular.

Only a miscellaneous trade has transpired for India, and certain staple makes, such as grey shirtings, remain decidedly slow.

Few practicable bids have been received for China, but operations in dyed fabrics have not been quite at a standstill. The prospects for manufacturers as a body remain poor. Some firms are making arrangements to extend the usual Easter holidays.

There has been very little life in the yarn market. Spinners of both American and Egyptian qualities have only met with a retail trade. In the commoner marks ground continues to be lost, and stock lots have been cleared at prices which show a definite loss.

PRODUCE REPORT.

(FROM OUR OWN CORRESPONDENT.)

Seeds. LONDON, March 29.

Linseed has been steady during the week, with moderate business passing, at more or less improving rates. Calcutta-to-London spot was sold to-day at 117s., ex warehouse; afloat is quoted at 107s., with some sales at that figure; March-April, 106s.; whilst Bombay, spot, is offered at 113s., with afloat sold at 108s. Bombay-to-Hull spot and afloat is quoted at 108s., but without buyers.

Rapeseed has been in better inquiry, and prices are steady. Brown Cawnpore, prompt, London, 97s. asked, while for Guzera, Mar.-April, at 100s., and Toria, May-June, at 100s., there were few buyers at closing-time.

Cottonseed is quiet, but with prices well maintained. Egypt-to-London f.a.q. spot and prompt, £19 5s., and Sakalarides, £18 5s. East Africa-to-Liverpool is offered at £15 to £15 10s. per ton, quay terms.

Oils.

Linseed oil is somewhat dull, spot pipes being offered at £50, and barrels, spot, and April at £50 10s.; May-Aug., £52 10s.; and Sept.-Dec., £53 10s. Rape oil is firm, with English refined in barrels, spot, at £69. Cotton oil is steady; crude pipes, spot, offered at £54, refined pale pipes at £55, and sweet barrels at £62 to £64. Olive oil is not offered on the market.

Rangoon Beans.

This commodity continues to improve its position in the market, and considerable business has been done this week at higher rates. March sold at £71, Mar.-Apr. was quoted at £68, Apr.-May at £64, May-June, sold, at £61 10s., and June-July at £57 10s., while Aug.-Sept. to Nov.-Dec. are quoted at £56 c.i.f.

Miscellaneous.

Cottonseed meal is firm at £18 to £18 10s. ex store, net.—Beeswax is in better demand, African being held for £8 15s. to £9 5s. a cwt.—Almonds, Barbary, sweet, are selling well at 65s. to 70s. cwt., and bitter at 65s. to 75s. cwt., while Jordans are offered at £10 to £12 cwt.—Lentils find a good market at 43s. per 100 lbs.—Egyptian beans at 50s. per 480 lbs.

Egyptian eggs were scarce this week, prices varying from 13s. to 14s. per 120, while Egyptian new onions are now available, but at rather high prices.

SMYRNA-AIDIN RAILWAY.**German Intrigue Combined with Turkish Bribery.**

Lord Rathmore, presiding on March 27 at the 118th half-yearly meeting of shareholders of "The Ottoman Railway from Smyrna to Aidin of His Imperial Majesty the Sultan," said: "Our railway still remains in the possession of the Turkish Government by which it was lawlessly seized in November, 1914, and from that time we have not received any revenue from it. We still continue to hold together in England as a nucleus those members of our staff who fortunately escaped to this country, and we hope we may thus find ourselves ready on the termination of the war to resume with as little delay as possible the working of the line." Lord Rathmore described the steps which the Council had taken and were taking in the negotiations with the Foreign Office to safeguard the interests of the company, amounting to about £5,000,000 of British capital in Asia Minor. The company was the pioneer of railway construction in Asia Minor, having received its original concession in 1856. The company at first had a struggling existence, but was becoming prosperous, with the intention of extending to Bagdad and the Persian Gulf, when German enterprise penetrated into that territory, and thereafter, with their "forceful diplomacy" and "systematic bribery of Turkish officials," received advantages over the British company. Notwithstanding this unfair competition, the British company had steadily progressed, and 1915 reported the largest net receipts ever earned. With reference to the seizure of their railway and all their property at Smyrna, they had lodged with the Foreign Claims Office a statement of their claims in respect of heavy losses imposed upon them, which might now amount to more than £1,000,000. In a letter to the Foreign Office as to their chances, he (Lord Rathmore), as President of the Council of Administration, had written:—

The future position of the railways of Asia Minor must, we suppose, depend on the political settlement which may be expected to follow upon the conclusion of peace, a settlement as to which it is not possible for us to attempt any forecast; but we think we may reasonably expect that if the Allied Powers obtain a complete victory the railways belonging to those Powers respectively will be restored to their lawful owners. We hope that we may also assume that the German companies will not be permitted to retain the railways which they now govern, considering that it was the German Government that drove Turkey at the last moment into the war, and also considering that, quite apart from the obvious objections from an Imperial point of view to leaving the railway route to India under their control, the frequent intrigues of the German companies against all similar enterprises and their wholesale corruption of Turkish officials must make their continuing influence a constant menace to the peaceful and prosperous working of the other railways of Asia Minor. If this expectation is fulfilled, and if the control of the Anatolian and Bagdad railways be taken out of German hands, my Council would most respectfully suggest that our company shall be entrusted with their management. . . . We feel confident that, with proper safeguards and under fair financial and other conditions (with the possible details of which we do not now presume to occupy your time), we should be able before long to produce such a revenue from the working of those railways as would provide a valuable asset for the liquidation of the debts which after the war may be found justly due from the Ottoman Government.

The Foreign Office, added Lord Rathmore, had acknowledged the letter, assuring the company that its claims and contentions would be carefully borne in mind.

The Premier Oil and Pipeline Company has received information to the effect that the Russian authorities have given to the company's representative possession, under restrictions, of a refinery situated in that part of Galicia which is now occupied by the Russians.

BULGARIAN NOTES.**The Wheat Crop Saved by Snowfall.**

Writing from Sofia on January 23, United States Consul-General D. I. Murphy remarked that "Bulgaria is now experiencing the first real touch of cold weather in the present winter. The recent snowfall probably means the saving of the wheat crop, which during the unseasonably warm weather of November and December had sprung up to a height of about five inches, but was menaced by the cold wave."

"Barley and rye had equally advanced, so that there is widespread satisfaction throughout the country on account of the impression that the snow is deep enough to save the crops. Outside the military zones the acreage of wheat, barley, and rye sown exceeded that of any previous year."

"The warm weather was favourable to the colza fields, as the seed had germinated and taken good root. The same is true of the fields of poppy."

"So unusual was the weather of these two months that geraniums and snowdrops bloomed in Sofia; violets appeared in the forests in quantities never before known; strawberries and raspberries ripened; and wild mustard bloomed in the plains of the Samokov district 3,168 feet above sea-level. The crocus and the hyacinth have been in bloom everywhere."

"In the Strumitza Valley, where twelve months ago war was raging, the people gathered tomatoes and green peppers until Christmas. Lettuce, garlic, broad beans, and other garden plants ripened everywhere under what seemed to be a summer sun. In many places plums, apricots, apples, peaches, and almonds ripened to bring gladness to the holiday season. In Gumuldjina new walnuts larger than the largest hazelnuts were gathered toward the end of December."

"The favourable weather enabled the farmers to finish sowing the winter wheat, barley, and rye, and to prepare their fields for the spring planting. In many places, noticeably around Xanthi, a good crop of hay was harvested in December, which was most unusual. Another good effect of the two warm months of November and December was that in the vineyards the growers were permitted to plant great quantities of American vines, which the phylloxera does not seem to attack, and which are most highly esteemed in Bulgaria."

BRITISH TRADE IN EGYPT.

At the annual meeting of the British Chamber of Commerce in Cairo on February 28, Mr. Jeffes urged the need to develop the British import trade as part of the economic war now being waged. He pointed out the opportunities for capturing the trade formerly in the hands of enemy firms now in liquidation. In the absence of travellers from England it was the duty of the Chamber to do all it could to help the development of British trade in Egypt. To do this he considered the Chamber wanted better weapons than it possessed. It should have a whole-time secretary, in fact each committee should have one with proper premises to work in and a suitable reference library. For this, money must be spent, and he advocated the use of the reserve fund of £E1,500 for this purpose.

He referred to the handicap under which the Cairo Committee laboured, without funds and without power of direct initiative, and invited an expression of opinion on the subject.

After some remarks from other members a resolution was passed with but one dissentient vote to the effect that the Cairo Committee should have further scope.

EGYPTIAN ACCOUNTS FOR 1916.

A Reuter telegram states that the Financial Adviser, in his note accompanying the Egyptian Budget statement, shows that whilst other countries are suffering considerably as a result of the war Egypt has been growing rich. Last year was one of undoubted prosperity. The Budget figures for 1917 are the highest on record. The estimated revenue totalled £E19,525,000, and the estimated expenditure was the same. The estimated increase in the revenue amounted to £E3,000,000.

ENGINEERING NOTES.

(FROM OUR OWN CORRESPONDENT.)

Irrigation.—In Egypt.

Some interesting facts and figures, relating to irrigation in Egypt and India, were recently given to interested parties in Australia by Mr. W. R. Williams, late Inspector-General of the Public Works Department in Egypt. Apart from their instructive value, they show how British rule, without much ado or ostentation, works and accomplishes the development and practical progress of the countries under its care. Mr. Williams said reclamation in connection with irrigation on the Nile does not mean bringing arid desert land under cultivation, but the draining and irrigating of land which was once submerged. The soil served by the river is wonderfully rich and fertile because it has been deposited by countless floods for centuries past. There is an enormous depth of this alluvial, rich soil, but it practically terminates abruptly. There is a distinct line of demarcation between the alluvial soil along the Nile and the desert proper. One does not merge into the other by degrees, and irrigation enterprise does not mean taking water to it. Nothing can be done with the actual desert. But land is reclaimed that has for generations been submerged, or partly submerged, and is full of salts that have to be washed out. There are nearly 6,000,000 acres of land served by irrigation enterprise on the Nile, including partly-developed and high level land in Middle and Upper Egypt, which only gives one crop in the year. The land is practically all privately owned, but a large proportion of the land to be developed in the future will be Government owned. Nearly 2,000,000 acres will be developed; about 225,000 acres have already been partially developed by private owners.

Land Returning Two Crops.

Besides the development of the new lands there is a considerable area which has only inundation irrigation, and, later, will be

provided with perennial irrigation, both by gravitation and pumping schemes; this means that the land will return two crops. To effect this, water will be obtained from the upper reaches of the Nile, and eventually this will necessitate storage three or four times greater than the present capacity of the Assouan Dam—the greatest reservoir in the world at present. In addition, there is a Sudan scheme to develop the Gezira tract, some 3,000,000 acres in extent, which, it is believed, will be brought under cultivation if water is supplied.

Mr. Williams stated that the greater proportion of the irrigated holdings on the Nile are small, and are worked by the owners. There are also some large estates, worked under the supervision of the owners, and some of these are examples of what can be achieved by improved methods of cultivation. There is also a large area of country rented out to small farmers. Rents run from £6 to £12 per acre per annum. The cotton crop, which totals a value of £30,000,000 to £35,000,000 a year, shows an average return of about £20 an acre. Individual growers obtain a return up to £30 per acre. The land is watered once about every three weeks. There is no water tax, but a land tax has to be paid, whether the water is used or not. The land, however, is valueless without the water, so it pays for the privilege of being drained and irrigated by Government channels. Various crops—maize, sugar-cane, and barley—grow prolifically, in addition to cotton. Sugar-cane is a very profitable crop in Upper Egypt; and French and Belgian companies have established sugar refineries.

—In India.

Mr. Williams was for thirteen years an engineer in India, and interesting as he is in what concerns Egypt, he speaks with more enthusiasm of the work carried out by the Public Works Department in India. There are, he said, great irrigation works, works approaching in magnitude that of the Assouan Dam, not one, but twenty of which the out-

side world hears nothing. They are not in the "tourist track" like the work in Egypt, and escape notice. Irrigation in India goes back to ancient days, but where there were about 750,000 acres under irrigation in the country when the British took it over, there are now 24,000,000 acres and that great area includes what are termed protective works that are built in arid tracks to provide against famine.

New Fibre Decorticator.

There is a small, interesting, but little known industry in the Near East in which thousands of women, girls, and men with small capital are engaged, and the products of which, although highly appreciated in the fashionable quarters of Europe and America, few know the origin. It is the manufacture of exquisite and fine laces, tablecovers, handkerchiefs, and such fineries, from the fibres of agave or American aloe. The impediment in the use of developing this industry on a commercial basis is the great difficulty experienced in extracting the fibre from the thick and spiky leaves of the plant—one often weighing from 4lb. to 8lb. The natives put them in water and leave them in it until they are thoroughly rotten. Then, by hand and a tedious process, the fibres are extracted, cleaned and prepared for lacework.

Production Limited.

By this process the production of fibre is, of course, limited, and the industry is making little progress. When the seven Ionian Islands were under the protection of Great Britain, the industry was much encouraged and supported in Cephalonia by English women residing there. Laces were sent to England in fair quantities and the example of Cephalonia was followed by other districts further east along the Mediterranean coast; but always on a small scale. The agave is a native of Mexico but has been successfully naturalized in Southern Europe, especially in the Near East, where it is used as hedges.

(not ordinary Rolling Stock Buffers) SUCH AS

and other
RAILWAY
PLANT

Turntables, Traversers, Tanks, Pumps, Water-Cranes,
Capstans, Winches.

SEAPLANE LAUNCHING APPARATUS.

Also Sole Makers of the "Stoney" Control Sluices, with Stokes' Patent Improvements. Over 1,000 already installed.

RANSOMES & RAPIER, Ltd. (DEPT.), 32, Victoria St., London, S.W.

Telegrams and Cables : "RANSOMES RAPIER, LONDON"; "SLUICE, LONDON."

The plant takes from ten to seventy years to arrive at maturity, flowers once, and then perishes. It requires no attention whatever and can easily be increased in hedgerows.

Failures Retrieved.

Many failures were experienced in trying to find a machine that could extract and prepare such fibres as those in the agave's leaves. American, Italian and other engineers tried but with little or no success, and it was interesting the other day to see a machine of British design and construction that could decorticate various leaf fibres such as sisal, sanseveria, agave, etc., with remarkable success. In the case of the agave, an attendant feeds the leaves in a set of crushing rolls, the object of this process being to crush the central rib and to bruise and partly cut the tough outer skin of each leaf. Endless grip chains convey the crushed leaves from the rolls to the first and then to the second of the two decortivating drums, each of which is provided with sixteen gun-metal strippers. The drums revolve against a cast iron shoe or curved plate, to which is attached a flat oblique phosphor-bronze bar on which the decortication takes place, and which enables the fibre to be easily extracted from the crushed leaves in the most effective manner, with a minimum of power and waste. During the process of decortication, the fibre is nicely washed. When it is separated from sisal or other leaves under the action of the beaters it has a tinge, usually green, due to the juice of the leaves left on the fibre by the decortivating action of the strippers. Without any loss of time, and before the fibre completely emerges from the decortivating operation, the water acts on it and frees it from all juice and extraneous matter. The cleanly decorticated fibre issues from the right of the machine, and is very conveniently piled on the floor.

THE SUDAN RAILWAY.

In his concluding article on "Railways in Africa" which appears in the current issue of *United Empire*, Mr. Evans Lewin writes as follows on the Sudan Railways:—

The railways in the Sudan, in view of the enormous size of the country, cannot be considered extensive. Nevertheless, the building of about 1,500 miles of track through a country which up to the year of the second Sudan campaign of 1897-98 was a prey to incessant warfare, and was then in a state of practical anarchy, may be regarded as a notable Imperial achievement. But for the outbreak of war certain extensions of lines and the construction of railways from Sennar to Singa, the capital of the Sennar Province, and from Tokhar to Suakin, would have been undertaken. With the conclusion of peace there can be no doubt that it would be true economic and strategic wisdom to continue most of the African railway schemes at the point where they have been temporarily abandoned. The future of Africa as the great storehouse of the raw products needed for the industries of Europe, and the source of many important foodstuffs, renders it imperative that its full resources should be utilised by those nations which are capable of exercising a just and righteous control over the teeming millions of the Dark Continent.

NEW GALICIAN OIL GUSHER.

Flowing wells are now not often reported from Galicia. This may be due to the censorship, though recent production figures (quoted last week in this column) are not large enough to leave room in them for many gushers. In these circumstances the news that the MacGarvey interests, who are among the largest producers and refiners in Austria, have got a new well with a production of about 200 tons a day, is noteworthy. These operators brought in a series of good wells during the few months before the war, notably Tloka No. 18, which gave 600 tons per day. This well was situated on property held by the MacGarvey's jointly with French capitalists.—*Financier*.

THE STROSS CASE.

Further Evidence in the Charge of Trading with the Enemy.

The charges against the members of the firm of Adolphe Stross and Co. are still before the Alexandria Court.

At the hearing on March 1, Mr. Hornsby, of the National Bank of Egypt at Cairo, gave evidence as to the account of the Assicurazioni Generale di Trieste with his bank. He adduced copies of letters from Athens in connection with the Bucharest Insurance Company to show the connection of the latter company with the Trieste company.

Mr. Joyce, sub-manager of the Imperial Ottoman Bank at Alexandria, then gave evidence. He said he was appointed controller of the Stross business in March, 1916, and in the following June became the receiver for the purpose of liquidation. The extent of the business in Egypt of the Trieste company was very large, and the profits obtained were considerable.

Mr. Adolphe Stross had been the sole agent of the company for thirty-six years. Before the war the Trieste company was always considered Austrian, but it had an important Italian interest. Witness gave a number of details as to the transactions between Mr. Stross and the Trieste company for the purpose of liquidating various private debts that he had in Germany and Austria. The most important point raised by this evidence was as to the conduct of Mr. Stross in asking the Venice branch of the Trieste company to credit him with £6,000 in Egypt.

Mr. Max Stross, on the following day, was examined for the defence by Mr. Perrott, explained how he came to take up the agency for the Bucharest company, and described the manner in which the transactions with the Bucharest company and with the Trieste and the Venice company were carried out.

He was afterwards cross-examined by Mr. Halford for the Crown. He declined to admit that Trieste was interested in certain contracts. Referring to the letter asking for an introduction for Mr. Stross to be made agent for the Bucharest company after the Venice concern had been refused admission to the Alexandria Insurance Syndicate, Mr. Max Stross admitted that this letter was addressed to Trieste. Asked why he wrote through Trieste instead of directly to Bucharest, he replied that he knew that some of the men on the board of the Trieste company were interested in the Bucharest company.

Mr. Halford then asked why the firm applied at all for the Bucharest agency, and Stross said that at that time, October, 1914, everybody thought that the war would soon be over, and he wished to keep the portfolio which his father had made up with such difficulty. English, French, and Italian insurance companies had already asked the firm to pass its clients on to them. As to the letter in question, Mr. Max Stross accepted full responsibility. Referring to the reply from Venice in answer to that letter, the Venice company agreed to work the business on condition that it was done "exclusively through them," which meant, said Mr. Stross, that every facility would be afforded them as old agents of the Trieste company in Bucharest.

Asked to explain his belief that Bucharest would take on a business such as this without getting any profit from it, Mr. Stross said that he thought Bucharest was only doing a friendly service for Trieste until the war was over, as at that time nobody thought the war would last more than another six months. Mr. Stross, in reply to another question, acknowledged that before he became agent for Bucharest the correspondence sent to Venice had really been intended for Trieste.

The case was adjourned.

COMPANY NOTES.

British Maikop.

The report of the British Maikop Oil to July 13, 1916 (June 30, 1916, o/s), states that the production for the year was 154,921 poods (about 2,499 tons); add stock on hand at July 1, 1915, o/s 8,891 poods—163,812 poods. Less deliveries to pipeline, 143,802 poods; used for fuel and loss by leakage, etc., 13,009 poods—156,811 poods; leaving stock on hand, 7,001 poods. The average net price realised was approximately 48 copecks per pood (which, taken at the normal rate of exchange, as before, is about £3 2s. 7d. per ton).

National Bank of Egypt.

The accounts for 1916 provide for a dividend of 6 per cent. (12s. per share), £31,353 to statutory reserve, £80,000 special reserve, and £22,179 carried forward.

Dividends, Payments, etc.

Agricultural Bank of Egypt. 3½ per cent. bonds coupon No. 25 will be paid by the National Bank of Egypt, 6 and 7, King William Street, London, E.C., on April 2, 1917.

The coupons of the 4 per cent. Greek loan of 1910 falling due on April 1, 1917, should be presented for payment between the hours of 11 and 2, at the Office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, or of Messrs. Erlanger, 8, Crosby Square, E.C., where lists may be obtained.

The Khedivial Mail Steamship and Graving Dock Company, Limited, give notice that tomorrow a dividend at the rate of 5½ per cent. per annum on the Cumulative Preference shares of the Company, less Income Tax at the rate of 5s. in the £ for the six months to December 31, will be paid at the Bank of Glyn, Mills, Currie, and Co., London, and at the Imperial Ottoman Bank, Alexandria. Holders of Preference Share Warrants to Bearer are therefore requested to present Coupon No. 37 for payment by that date.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah production for week 22 tons. Hurgada production for week, 3,107 tons.

Baku Russian Petroleum.—Week ended March 17, 67,900 poods. Decrease due to one day's strike of workmen.

Black Sea Amalgamated.—Week ended March 17, 19,776 poods.

Bibi Eibat.—Week ended March 18, 51,933 poods.

British Maikop Oil.—Week ended March 17, 2,244 poods.

European Oilfields.—Week ended March 18, 76,000 poods. Work interrupted for 24 hours.

International Russian Oilfields.—Four weeks ended March 3, 6,028 poods, or approximately 97 tons.

Maikop Combine.—Week ended March 17, 14,709 poods.

Maikop Pipeline.—Week ended March 17, 115,175 poods.

Russian Petroleum.—Week ended March 17, 47,300 poods.

Spies Petroleum.—Week ended March 18, 164,355 poods.

Ural Caspian Oil.—Week ended March 15, 150,476 poods.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)
THROMMORTON AVENUE, E.C.

Thursday.

Business continues on very restricted lines alike in bank, land, and industrial shares; but there has again been a strong demand throughout the week for both Egyptian Unified and 3½ per cent. preferences. In the former a fairly large business has been done at advancing prices, to-night's quotation of 80½ showing a rise of about 2 on the week.

As regards Egyptian 3½ per cent. preferences, the price is nominally a point higher at 68, but there has been practically no business owing to the lack of sellers.

In Agricultural Banks some trifling transactions have taken place around 5 3/16-5½, and about 150 Nationals have also been done at about 13 9-16.

Anglo-Egyptians, after being rather firmer at 11½, finished unchanged at 11½. Agricultural deferreds have been wanted in the neighbourhood of £330, but there are no sellers, and Agricultural preferences have changed hands in a small way at 6½.

Some business has been done in Egyptian Markets round 26s., and in Salt and Sodas on the basis of 19s. to 20s.

Khedivial Mails have been an improving market, and on some sustained buying have risen 1s. 6d. to 28s. 3d.

In Greek securities, apart from some trifling transactions in Greek Rentes at about 4½, and in Greek Rails round 62, there have been no dealings owing to scarcity of sellers.

Oil Shares.

Inactivity has ruled pretty supremely in this market, and there is little change in values to report. Anglo-Egyptian "B's" were in the vicinity of 11s.; Ural Caspians, 1½; Russian Petroleum eased to 2s.; Premier Oil and Pipe Lines were a turn better at 2s. 3d., following the announcement that the Russian Government had made over, subject to certain restrictions, a refinery in the occupied portion of Galicia.

Paris Bourse.

Business has been restricted to the favourite securities. Egyptian Unified 4 per cents. advanced 50 centimes to 89.50 on Wednesday. Crédit Foncier Egyptians improved a point to 635, and Suez Canals 5 frs. to 4350. Other quotations of moment are:—Serbian, 1895, 54.50; Turkish Unified, 65.75; and Ottoman Bank, 420.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, March 29.

The week has seen an abundance of credit in the market, with practically no demand for money. At the opening to-day, day-to-day loans were called nominally 4 per cent. to 4½ per cent., but the last rate was rarely asked. Towards the close of the day lenders were glad to accept 3 per cent. for balances.

Exchange on Alexandria stands at 97 to 97½ piastres to the pound sterling.

Bar silver recovered sharply 7d. to 36½.

WHEAT, MAIZE, AND RICE CROPS.

The Board of Agriculture have received the following information from the International Agricultural Institute:—

The production of wheat in Argentina, Australia, and New Zealand is estimated at 121,218,000 cwt., or 7.7 per cent. below the average yield in the period 1909-13. The 1916 maize harvest in Spain is estimated at 14,321,000 cwt., or 7.9 per cent. above the average crop in 1909-13. In the United States, Canada, European Russia, Spain, Italy, Switzerland, Japan, and Egypt the total production of maize is estimated to be 1,420,757,000 cwt., a decrease of 5.1 per cent., as compared with the corresponding production in 1909-13.

The production of rice in Spain is 4,758,000 cwt., and in British India 1,049,642,000 cwt., or 27.3 per cent. and 19.21 per cent. respectively above the average yield in 1909-13. In Spain, Italy, the United States, British India, and Japan the total production of rice is estimated at 1,282,104,000 cwt., or 17.5 per cent. above the corresponding average yield in the quinquennial period. The area sown with wheat in 1916-17 in Spain and Japan is estimated at 10,134,000 acres (3 per cent. above last year) and 1,236,000 acres (0.4 per cent. above last year) respectively.

NOTICE.

NATIONAL BANK OF EGYPT.

Notice is hereby given that an ORDINARY GENERAL MEETING of the Shareholders of the National Bank of Egypt will be held on Saturday, the 7th April, 1917, at 4 p.m., at the Head Office of the Bank in Cairo, for the purpose of:—

- Receiving the Directors' Report.
- Receiving the Auditors' Report.
- Submitting the Accounts for the year ended 31st December, 1916.
- Declaring a dividend.
- Electing Directors.
- Electing Auditors for the year 1917 and fixing their remuneration.

All shareholders holding a minimum of 20 shares have the right to take part in the General Meeting, providing the Shares be deposited under the following conditions at one of the following places, where cards of admission or proxy forms will be delivered:—

In Egypt, at the latest, the 2nd April, 1917.

At the Head Office, Cairo.

At the Branch of Alexandria.

At the Agencies of the Bank at Assiout, Assouan, Benha, Beni-Suef, Chabin-el-Kom, Damamhour, Fayoum, Kench, Luxor, Mansourah, Minieh, Port Said, Rod el Farag, Sohag, Tanta, Zagazig, and Moussy (Cairo).

At the Office of the Anglo-Egyptian Bank.

Bank of Athens.

Banque Belge pour l'Etranger.

Imperial Ottoman Bank.

Banque d'Orient.

Banco di Roma.

Cassa di Sconto e di Risparmio.

Comptoir National d'Escompte de Paris.

Crédit Lyonnais.

In the Soudan, at the latest, the 28th March, 1917, at the Agencies of the National Bank of Egypt, at Khartoum, Port Sudan, and Suakim.

In Europe, at the latest, the 16th March, 1917.

In Paris, at the Offices of the Société Marseillaise.

In Italy, at the Offices of the Banca Commerciale Italiana.

In London, at the Agency of the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, Governor.

Cairo, the 27th February, 1917.

THE GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to January 31, 1917 (New Style: January 14, 1916, to February 13, 1917):—

	Monopolies, Tobacco, Stamps	Piræus Customs.
	Stamped Paper	Naxos Emery.
Gross Receipts, Jan., 1917	Drachmas. 3,173,884	Drachmas. 1,455,000
Do. do. do 1916	3,615,870	1,832,000
Estimated Receipts for 1 month (Law of Control)	2,408,333	851,666
Difference between estimated and actual receipts for 1 month	1917 + 765,551	+ 563,333
	1916 + 1,207,537	+ 940,333

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49.15 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1883. The receipts in gold both from Naxos emery and the Piræus Customs are converted into drachmas at par when the average rate of exchange of the month is par or below par, but when the average rate of the month is above par the conversion is made at that average rate.

SUEZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916.	1917.
	Francs.	Francs.
March 20	180,000	200,000
March 21	440,000	280,000
March 25	400,000	170,000
March 26	170,000	170,000

NOTES OF THE WEEK.

Last week, too late for reference in our columns, came the long expected news of the British advance into Palestine. On January 9 the frontier town of Rafa had been captured, and exactly two months later it was announced that the enemy had abandoned a strong position near Sheikh Nuran, some sixteen miles east of Rafa, in the direction of Beersheba. Thus the invasion of Syria could be regarded as properly launched, and further reports of the progress of the forces led by General Dobell and General Chetwode, under the command of Sir Archibald Murray, were awaited with some eagerness. The mention of railway construction in the official statement provides the explanation why the advance has not been more rapid. Raids, however sensational, are of little practical use in this part of the world, and have dropped out of the order of the day. As in Mesopotamia, the British are advancing methodically and consolidating their position in the territory won.

From the two reports now received from the General Officer Commanding-in-Chief, it is evident that the battle of Wadi Ghuzzeh was fiercely contested. Both at Rafa and at Sheikh Nuran the Turks had failed to make any stand, in spite of the strength of the defences, which at the latter place had taken two months to construct. Sooner or later, however, the advance would have to be challenged seriously, and a determined effort has now been made at the water-course five miles south of Gaza. The intention of the British force was to seize the Wadi Ghuzzeh for the purpose of covering the advance of the railway. The Wadi was occupied without a fight, and in order to test the enemy's mettle an attempt was made to capture Gaza by a *coup de main*. It only just failed. A dense fog delayed operations on the morning of March 26; consequently the Gaza position could only be attacked late in the afternoon. The enemy's first-line trenches were occupied and more than 700 prisoners were taken. Three Turkish columns under a German commander were moved up for the support of Gaza, but were engaged by British mounted troops, and suffered heavy losses, the commander and staff of the 53rd Division being captured.

Unfortunately the attack could not be pressed home, as the infantry were dependent for water on what they carried with them. The delay in starting caused by the fog had not been utilised to replenish their supply, and,

presumably at night, this force was withdrawn to a defensive position between Gaza and the Wadi Ghuzzeh. Here they were attacked on the following day, but the Turks, according to the official statement, were everywhere repulsed with heavy losses, "our Camel Corps completely defeating the Turkish Cavalry Division." A further withdrawal took place on March 28 to the Wadi Ghuzzeh itself, which remains in British occupation. As a result of the two days' fighting the enemy's casualties are estimated at 8,000; the prisoners taken amounted to 950. The British losses were less than 400 killed; but some small parties, numbering less than 200 in all, who are believed to have fought their way into Gaza and been cut off, are missing.

Sir Archibald Murray's comment is that "the operation was most successful, and owing to the fog and waterless nature of the country round Gaza just fell short of a complete disaster to the enemy." With this verdict there will be no disposition to find fault. The enemy was engaged and decisively beaten. But the account of the battle acquires added interest, if it be read in conjunction with the article which we publish elsewhere in this issue on the campaign in Palestine. In the first place, the course of the fighting bears out the expectation that the Turks will make as desperate an effort as possible to check the invading force. The capture of Jerusalem, the article suggests, is more likely to be the effect of successful operations to the west and north than to form the immediate objective of the expedition; but for the Turks the fall of the Holy City, however it may be brought about, will mean more than the loss of the surrounding district. It will inevitably carry with it the cutting of the Hejaz Railway and the loss of the whole of Western Arabia. Unless, indeed, General Murray's forces are out for big things, it would be thought that more was to be gained at once by a direct thrust for the Hejaz Railway than by one in a northerly direction. But the information regarding the Turks' powers of resistance must be the deciding factor, and in any case a campaign of intense interest is promised.

In the meantime the British and Russian forces now converging on the frontier between Mesopotamia and Persia continue to make progress. Sir Stanley Maude's troops are advancing on both sides of the Diala River. On the right bank they have reached Deli Abbas, on the road leading to Arbil and Mosul, which any Turks escaping from the Russians must endeavour to join either at Kerkuk or at some point south of it. On the

Khanikin road another British column is approaching Kizil Robat, some twenty miles from Khanikin. The Russians have successfully surmounted the obstacles which delayed their approach to Kasr-i-Shirin, and from where they now are the country falls to Khanikin and beyond. As far as can be gathered from the brief reports, the immediate object of the Turks must be to detain the British force on the Deli Abbas road, and the Russian troops operating south of Bana, in the neighbourhood of Panjevin, in order to give the remnant of the army falling back from Hamadan time to escape towards Mosul. The British advance has encountered strenuous resistance, in the course of which severe losses have been inflicted on the enemy, and near Panjevin the Turks have indulged in unsuccessful counter-attacks. These efforts have not affected the general situation, which is that on a wide front, reaching to the Euphrates on the west, the Turks are now in full retreat.

In the Near East there have been no events of importance during the past week. Minor operations both on the Roumanian front and in Macedonia are chronicled from day to day; but they amount to little more than a statement that the contending forces are in touch with one another. The weather still militates against more extensive activities, while in Roumania the time has not yet come for the Allies to attempt to force the pace. Better things were looked for from Macedonia, where the French and Italian successes which marked the opening of what was termed the spring offensive gave promise of interesting developments. But the operations in the immediate neighbourhood of Monastir have again died down, and the British command breaks silence for the first time to announce that "there have been no operations on a large scale on the fronts occupied by the British forces at Salonika during the past week."

After very long hesitation, for which the President, rather than the people, must be held responsible, the United States may be regarded as having taken the resolve to enter the war against Germany. The enthusiasm which greeted Mr. Wilson's Message to Congress showed that the country as a whole has long been ahead of the Government in making up its mind on the subject. Indeed, it will be difficult for President Wilson to defend himself against the charge that his delay has robbed the United States of all credit for altruistic motives. It is true that they enter the war as "one of the champions of the rights of mankind," but it was not until American rights had been repeatedly assailed that the step was taken. No manner of outrages nor breaches of the law of nations committed by Germany were allowed to affect America until they had touched American citizens, and Germany had to wage war fairly fiercely for some time before the President chose to face the situation. The die, however, has now been cast, and we may expect to see the United States play their part with all the hustle of which they are capable. One of their first contributions to the Allied cause ought to be the liberation of German shipping interned in their harbours for the general use.

The American declaration of war, it is understood, is intended to be restricted to Germany, and not to apply to Turkey and Bulgaria. It will be of interest to see how this situation is accepted by these two countries, and whether Germany will allow them to acquiesce in the distinction. The temptation of the German Government to retaliate as much as lies in its power will be strong, and a word from it will go far to compel both Bulgaria and Turkey to sequester all American property in their possession. But recent events may possibly have persuaded the Sofia and the Constantinople authorities that they are less able than Berlin to affect a splendid indifference to the enmity of the whole world, and they may welcome an opportunity of a tentative display of independence.

The claim made by M. Venizelos, that if the National Movement were given a free hand by the Allies, it would quickly make headway against the Athens Government and its autocratic hold on the country, is being borne out by recent developments in Greece. Discontent with the Royalist Government, it is reported, continues to spread. There is said to have been a definite rising in the island of Leucas (Santa Maura) and disturbances in Thessaly. But it is not by such means that those who wish Greece well will want to see her recover a constitutional regime. These isolated risings can generally be stamped out by the authorities, and cause suffering to many innocent people. What is wanted in Greece is that popular feeling, if it sides with M. Venizelos and the National Government, should have an opportunity of declaring itself without recourse to extreme measures, but in a manner so overwhelming that King Constantine will be compelled to accept defeat. As the days pass and the military position of the Central Powers sheds some of the glamour with which German war bulletins have invested it, the King can hardly fail to discover fresh points of resemblance between the situation in which he finds himself and the history of King Otho. The same Powers stood sponsors for the latter, but this fact did not prevent them from acknowledging Greece's right to change her ruler, if she could show good cause. King Otho had some excuse for supposing that he was hedged around by the divine right of kings. The present sovereign has no justification for forgetting that he is the constitutional monarch of a very democratic people. He has also forgotten, what was proved in King Otho's days, that the German and the Greek temperaments are poles asunder.

In this connection it is of interest to recall the statement made by Lord John Russell, the Secretary of State for Foreign Affairs, in a despatch dated November 6, 1862, to the British Minister at Athens. He wrote: "Her Majesty's Government have learned of these events without surprise; they have long lamented the blind policy pursued by King Otho, and they have long foreseen that it tended, sooner or later, to produce the catastrophe which has now happened. . . . The kingdom of Greece having by the transaction of 1832 been acknowledged as an independent State, the people of Greece are entitled to exercise the rights of national independence. . . . One of the rights which belong to an independent nation . . . is that of changing its governing dynasty upon good and sufficient cause." There should be no departure from such a standpoint at this stage.

Reference was made in these Notes last week to the action of the Germans in spreading abroad complaints of the internment of German and Austrian citizens as a preliminary to a policy of ruthless deportations applied to some, if not most, of the prominent Roumanians left behind in the occupied territory. From an official statement now issued by the Roumanian Government, it appears that the subject of an exchange of interned civilians has been discussed for some time past between Roumania and the Central Powers, and an agreement had been virtually reached with Austria-Hungary for an exchange of all males below seventeen and over fifty years of age. Subsequently, however, Germany intervened with a proposal to exchange all interned persons without conditions as to age, and seems to have set about equalising by wholesale arrests the number of Germans seized by the Roumanians at the declaration of war for espionage or attempted outrages. As the Roumanian Government demurred to this proposal Germany, with a view to bringing pressure to bear upon it, has sent an ultimatum announcing that unless Roumania accepts the terms and carries them out at once the number of Roumanian hostages will be considerably increased, and all will be deported to Turkey or Bulgaria. The action is thoroughly German, and from the threat we are led to infer that the Central Alliance recognises gradations in the amenities of *Kultur* as practised in Germany on the one hand and in her Balkan vassals on the other.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

Garden Party at the Residency.

CAIRO, MARCH 7.

H.E. the High Commissioner and Lady Wingate made their official bow, so to speak, to the British, Egyptian, and foreign communities on Thursday afternoon last, when they gave their first garden party since their transfer to Cairo. There was an enormous gathering, including T.H. Princes Ahmed Fuad, Kemal-ed-Dine, Yussef Kamel, Omar Toussoun, and other members of the Sultania family. The weather was delightful, and the Residency grounds were at their very best; in short, everything combined to make the occasion a memorable one and an auspicious send-off for the new régime which has come into being.

One of the most noticeable figures among the guests was undoubtedly the Maharaja of Bikanir, who had hurried back from the Fayoum, where he had inspected the Bikanir Camel Corps, in order to be present at the garden party. The Maharaja and his two fellow delegates to the Imperial Conference, Sir James Meston and Sir S. Sinha, were entertained at a dinner-party which Sir Reginald and Lady Wingate gave in their honour in the evening, and have since left for Port Said en route for England.

H.H. the Sultan.

The Sultan is making steady progress. Every morning he proceeds to the village of Almaza, out in the Heliopolis Desert, where he remains the whole day, returning to Abdin Palace at night. Tents have been erected at Almaza for his accommodation, and His Highness is deriving great benefit from the excellent air and the complete rest which the sojourn in the desert is affording him.

The Sultan has this past week specially conferred decorations on various officials. Amongst them is Mr. A. T. McKillop, Inspector-General of Agriculture, who has received the high distinction of the Second Class of the Order of the Nile, "in recognition of his long and excellent services."

The Hellenic Community.

General Sir Archibald Murray, as General Officer Commanding-in-Chief the British Forces in Egypt, has just issued a proclamation, which is destined to have wide-reaching effects as well as to regularise the position in Egypt of the adherents to the Venizelist movement. The proclamation points out that the majority of Greeks resident in Egypt have declared their adhesion to the Salonika Provisional Government and their repudiation of the Athens Government and its representatives, but that, while the appointment of Consuls in Egypt by the Provisional Government has secured Consular protection for the adherents of the said Government, no judicial powers have been conferred on these Consular authorities, and that consequently the persons under the protection of the latter are left without the judicial machinery necessary for the protection of their rights. In the circumstances, since it devolves on the Commander-in-Chief, in the interests of public order, to remedy the situation by creating whatever courts may be necessary, and since to enable him to do this and grant to those courts the requisite powers, it is desirable that all for whose benefit those courts are to operate should elect to come under his protection, General Murray has ordered all Greeks resident in Egypt, who have already adhered, or who desire to adhere, to the Salonika Government to declare in writing not later than April 5 next that they place themselves under his protection. Recourse to the powers vested under martial law in the General was the only available means of setting a term to a state of affairs which had been brought into being by the recognition of the Venizelist representatives side by side with those of the Athens Government, who were bound to exercise and enjoy the judicial powers conferred on them under the Capitulations so long as they remained accredited to the Egyptian Government, and so long as the military authorities did not see fit to intervene. It will be interesting to watch developments, for there is no doubt that the promulgation of this proclamation foreshadows the taking of other measures in connection with the local Greek community.

March 14.

The Sultan's Health.

The Sultan has derived so much benefit from his daily outings in the desert beyond Heliopolis that his doctors have advised him to take up his residence for some time in the oasis. His Highness has, accordingly, moved out to the villa which he owns in "New Cairo," and according to present arrangements will stay there until the early days of April. It is expected that the Sultan will proceed earlier than usual to Alexandria this year. Already renovations are being carried out at Ras-el-Tin Palace.

The High Commissioner.

The day after Sir James Meston and the Maharaja of Bikanir left for England Lord and Lady Ronaldshay arrived here on their way to India. They spent the night at the Residency as the guests of Sir Reginald and Lady Wingate, and then proceeded for a few days to Luxor. They have since left for Bombay.

The High Commissioner and Lady Wingate continue their round of visits to the various educational institutions of the city. Amongst the establishments inspected by them this week was the School for British Children, which was opened last autumn, and which, I understand, is proving a great success.

The Census.

The "numbering of the people," fixed for midnight of the 6/7th inst., took place last week. All the arrangements appear to have been excellent; everything went off smoothly, and there were no untoward incidents, in spite of the difficulties usually encountered in dealing with such a cosmopolitan community and such a relatively ignorant mass of people as Egypt possesses. The consular authorities rendered considerable assistance by issuing orders to their nationals to comply with all the census requirements. For once in a way, the city was tolerably quiet during the night, and there was a total absence of those bands of roving Berberin and other vagabonds who usually make the night air hideous with their raucous laughter and loud chatter. The reason for this was that for the purposes of the census the police had instructions to hale before the enumerators stationed at the various caracols (police-stations) all natives found wandering in the streets in the small hours of the morning. A very great number of Government officials (clerks, etc.) have acted as enumerators, and to enable them to repose after their labours through the previous night Wednesday was decreed a holiday for all those who had participated in the work. Most of the Government administrations had, therefore, to work on that day without any of their junior staff. Taking the normal rate of increase, the population of Egypt should turn out to be in the neighbourhood of fourteen millions, but a great many people are of opinion that the number will not fall short of fifteen millions, in view of the facts that they do not consider the 1907 census to have been complete, and that the present one is being conducted on much more efficient and scientific lines.

The Venizelists.

As was to be expected in the circumstances, the proclamation of General Murray, referred to in my last week's letter, has caused quite a flutter in the local Greek dovecote. The Venizelist Press welcomes it as setting a term to the anomalous and unsatisfactory state of affairs which has existed in the colony during the past year; the Royalist Press is somewhat guarded in its remarks, but is plainly disquietened as to what may be at the back of this step on the part of the British authorities. We may rest assured, however, that there will be very few, if any, of the members of the local Greek colony who will not avail themselves of the General's offer of protection, and will not subscribe themselves as adherents to the Salonika movement. I understand that the special Courts having jurisdiction over the local Greeks accepting General Murray's protection, and on which he will confer the necessary powers, will be merely ordinary consular courts attached to and working under the auspices of the Provisional Government Consulates in Egypt.

On Sunday a mass meeting of the Greek colony was held at the Kursaal. Rostovitz Bey, president of the community,

REPRESENTATIVES:

INDIA: 1 & 2, Old Court House Corner, Calcutta. H. L. Bell, Manager.
EGYPT-CAIRO: Everard Stokes, Gen. Man. Egyptian Branch.
ALEXANDRIA: Societe Generale de Prestage et de Depots.
CYPRUS: NAJEM HOURY.

was in the chair, and on this occasion the new Greek Consul representing the Venizelist Government appeared for the first time before the colony. Several speeches were made, the most notable being that pronounced by M. Arvanitakis, who, in the course of his remarks, reminded his audience that the late King of Greece had always been opposed to any close relations with Germany, and informed them that when, after the military revolution of 1909 and the subsequent events of 1910, King George visited Vienna, he had at a public reception at the Greek Embassy made the following statement: "We have come through a very bad and very serious crisis. But all has ended well, because I know my people and because I have refused to listen to Constantine. God alone knows what will happen when I am dead and gone." This statement was corroborated by Rostovitz Bey, who added that the details of this incident were related in Cairo last year by one of the staff of the Greek Embassy who was present at the time, and who is none other than the present representative of the Royalist Government in Egypt.

The 1917-1918 Budget.

Practically all the departmental estimates for the new financial year have been passed by the Ministry of Finance, and the finishing touches are being put to the Budget, which must be in the hands of the public not later than the 25th inst. It is as yet not known when the Financial Adviser's Note will be published, but it will certainly be issued before Lord Edward Cecil returns to Egypt.

After the air raid on Cairo last November very strict lighting restrictions were introduced, and they have been rigorously enforced ever since. On Friday last, however, the military authorities decided to relax the regulations, and henceforward the city will resume its normal aspect after nightfall. The return to ordinary lighting seemed to have a very good effect on the population, which quickly took advantage of it and went abroad in a manner which it had not been accustomed to do since the raid. The removal of the lighting restrictions, followed so closely by the news of the British occupation of Baghdad, has indeed made a tremendous impression on the Egyptians, who see in it a tangible proof of the triumphant march of the Allied arms and of the ultimate defeat of the Hun, together with the eclipse of his vassal, the Turk.

BATTLE PICTURES OF EGYPT AND SYRIA.

Mr. James McBey, who, in the course of a few years, has won high reputation as an artist, has been commissioned to go to Egypt and Syria to work in that battle area on the same lines as those on which Mr. Muirhead Bone is working so splendidly on the Western Front. This is a happy choice, says the *Morning Post*, for Mr. McBey's peculiar vision, temperament and facility are admirably adapted to the presentation of the life and scenery of the desert and mountain lands. Moreover, he has already had considerable experience of nomadic races and of British soldiers. Some years ago he went to Morocco and brought back with him from that delectable country for the artist sketches and etchings which rank among his finest achievements. He has been engaged on war work in France for over a year, and quite recently, while on leave, was given a roving commission to make drawings at will in the Somme sectors vacated by the Germans "according to plan." Thus equipped, the opportunities now within his reach should be productive of most valuable memoranda of British operations in Sinai and Syria.

THE ORIGIN OF PELLAGRA.

At a recent meeting of the Egyptian Institute, a paper was read by Piot Bey on the "Etiology of Pellagra," in which he gave a résumé of the researches of the French doctor, M. Sambon, on the subject, and invited the doctors, and particularly the entomologists, in Egypt to make special researches with a view of discovering whether there were any insects which communicated this disease so common in Egypt. Dr. Sambon, he said, did not share the opinion generally held that pellagra was caused by the maize alimentation, as this disease was to be found in Great Britain, where maize was not an element of food.

Dr. H. W. Wilson, Professor of Physiology at the Kasr El Aini School of Medicine, remarked that though maize was not the direct cause of pellagra, the disease was common among the maize-feeders, as the protein found in maize was below the normal standard, and was not sufficient to make up the waste of protein from the human body. The protein contained in maize possessed one-third of the value of that contained in meat—i.e., in place of 30 grammes of wheat protein a man would require 100 grammes of maize protein, and as the body cannot consume this quantity, the result was that the waste of protein in the body was not replaced; hence pellagra was common amongst the poorer classes, who could not afford to nourish themselves sufficiently well. The same remarks held good for protein of other vegetables, while the protein in rice was equal, if not better, in quality to that of meat; hence pellagra was rare among the rice feeders. Pellagra epidemics had broken out in the refugee camps at Port Said and in Corfu and Bulgaria, and it would be very useful scientifically if investigation was carried out at Port Said and Corfu with the object of finding out the exact causes of this disease.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, February 23.

Boating Fatality.

On the afternoon of the 26th inst. Mr. Dupuis, the Inspector of Khartoum, and Mr. Kinmouth, the Superintendent of Police, went out in a *felucca* to get a few shots at some duck that were expected to flight over the confluence of the Blue and White Niles. A short distance up the White Nile there is a wire rope across the river for the purpose of calculating the pace of the stream. The river here is restricted by the presence of an island in mid-stream, and there is at this time of year a very strong current. The boat, which started a little way above this wire, was driven down the stream, and the mast caught in the wire and the boat was overturned. Although the distance from the bank was only a few yards the stream was too strong to swim against, and the occupants were hard put to it to keep above water. Fortunately there was a boat close by, upon which the two Englishmen drifted, and were hauled out. Meanwhile the native *rais* and one of the crew had succeeded in getting on to the bottom of the upturned boat, and were saved. The other sailor was seen in the water, much exhausted, a short distance from the boat which rescued the others, but just as he came within reach he was carried away by an undercurrent and never seen again. The treachery of these undercurrents is well known, and the survivors are to be congratulated on a fortunate escape. They were already much exhausted when picked up, and one of them was hampered by polo boots, as he had just come from playing polo.

News in Brief.

The Governor-General's Council has been meeting for the last two days, and is expected to continue to meet for several days more.

No English mails have arrived in the Sudan for a considerable time. It will be a full fortnight between mails, where in times of peace there were two weekly, or at least one and a possible second.

Very cool weather for the time of year is being experienced in Khartoum. Furthermore, there is an agreeable absence of wind compared to what is the custom.

CORONATION OF EMPRESS OF ABYSSINIA

Sir R. Wingate Represented.

Describing the Coronation of the Empress of Abyssinia, Router's Addis Abeba correspondent states that it was conducted with great pomp. The Ministers of the Entente Powers represented their Governments, time not permitting of the despatch of special envoys. Among those present were Mr. Leyland Buxton, representing the High Commissioner of Egypt; Mr. G. F. Archer, Commissioner of British Somaliland; Captain Dodds, British Consul at Harrar; the French Governor of Somaliland; the Italian Consul at Harrar; and the Italian Consular Agent from the Wollou district. Major Pearson, who was to have represented the Sudan Government, did not arrive in time. The German Minister and Turkish Consul-General were not present, being without orders from their respective Governments.

After the actual Coronation, at which no European was allowed to be present, the Empress took her seat on a throne in the centre of a large platform which had been erected in the courtyard of the Cathedral of St. George. The Bishop of Abyssinia, in a speech, dwelt on the incidents that had led to the dethronement of Lidj Jeassu and the proclamation of Princess Zaudito (daughter of the Emperor Menelik) as Empress. He said that this was not the first time that Abyssinia had had a Queen, and in Europe many Queens had ruled. He referred especially to England, over which country a queen had ruled for sixty years, and during that time England had become a great nation.

Since the beginning of the operations on the Monastir front the number of prisoners taken is 2,104, in addition to 29 officers.

The Turkish Chamber of Deputies has adopted an extraordinary Naval credit of £1,900,000 for the construction of six high-speed destroyers.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, 16-17, Devonshire Square, London, E.C.

CYPRUS NEWS.

(FROM OUR CORRESPONDENT.)

CYPRUS, March 6.

High Commissioner and Holy Synod.

The Greek Archbishop having intimated the desire of the Holy Synod (i.e., the Primate himself and the Bishops of Papho and Kyrenia) to see his Excellency, Sir John Clauson invited the members to tea on the 1st inst. After being entertained by Sir John and Lady Clauson, they explained the object of their visit through Mr. D. Carageorgiades, the chief Government Greek interpreter. This was that relief might be given by an increase of the grant-in-aid to schoolmasters throughout Cyprus, as had been done in the case of Government officials, on account of the greatly increased cost of living; £20,000 is being applied to the increase of salaries of the latter, and it was asked that £4,000 or £5,000 might be granted from surplus revenue to the teaching body. The Government, it was argued, always proclaimed that surpluses were reserved for times of difficulty. What time could be more difficult than the present? They also asked for early legislation to alter the system under which school fees are at present assessed on the people. His Excellency was not able to give his assent to the proposals, pointing out that the Government desired to leave matters relating to education as far as possible in the hands of the communities themselves.* Speaking of the work of the Synod, the members stated that, besides working for a higher standard of education for the priesthood, they were endeavouring to bring about a better administration of Church properties.

Excavations on a Classic Site.

Mr. Gunther and the co-manager of the American Mining Company's works, accompanied by Mr. Markides, Curator of Antiquities, have proceeded to Arsos, near Tremithousa, to start excavations, the cost of which will be defrayed out of the generous gift made by Mr. Gunther to the Cyprus Museum. The spot chosen is an interesting one, connected with the great Adonis myth. One mythographer at least records that Aphrodite, in her grief, found the body of Adonis "in the town of Argos, in Cyprus," in the precincts of a temple of Apollo. Dr. Simos Menardos, Professor of Modern Greek at Oxford, in an interesting contribution to the *Journal of Hellenic Studies* (1908), contends that this Argos (an unidentified site) is Arsos. There are two villages of this name in Cyprus—one in the Limassol, the other in the Nicosia district. It is the latter which is referred to. The correct reading of Argos is, he says, Arsos, which in reality is Alsos (ἄλσος), a holy grove. Modern Greeks like the Attics, pronounce λ as ρ. Alsos thus becomes Arsos. Dr. M. O. Richter discovered here some objects which point to the existence of a temple of Apollo. If we accept Dr. Menardos's theory, the truth of which seems most probable, it is likely that the present excavations will yield results of great interest and value.

General News.

A slight earthquake shock was felt in parts of the island on February 20.

The co-operative movement for bread-baking is being extended at Nicosia. A society is being formed by clerks of banks and others engaged in commerce for the establishment of a bakery, and similar associations will probably be formed at Papho and other places.

The prospecting work for copper and other metals which has been carried out near Athienou, in the Nicosia district, by the American company, has not been so far successful. But fossils of considerable interest have been found at a depth of about 80 ft., including marine shells and remains of fish.

The postal service from Nicosia to the picturesque and popular town of Kyrenia, on the north coast, will be carried by motor from April 1.

A Greek convicted of the murder of a fellow-villager in the Famagusta district has been sentenced to pay £173 as blood money to the heirs of the murdered man.

Good rain has fallen in most parts of the island, and agricultural prospects continue to be satisfactory.

After four years of negotiation the Italian Government has obtained, by means of the exchange of Arabs in their custody, the liberation of the Italian prisoners in Cyrenaica.

Two Athens Venizelist newspapers, *Hesti* and *Ethnos*, were published on March 28, for the first time since the December disorders, says *The Times* Athens correspondent. Altogether 57,000 copies were sold, 16,000 being the previous "record" for any one newspaper. The Gounarist Party, who imagined that Venizelism had been extinguished, have been sharply undeceived, adds the correspondent.

* Reconsideration was asked for.

NEWS FROM SYRIA.

(FROM A CORRESPONDENT.)

CAIRO, March 8.

Direct news from Syria has been interrupted for some time, but a great deal of detailed information has been coming lately through Busreh, and the informants are presumably either captured prisoners of war or refugees who had fled from Syria to escape death from hunger or persecution. According to these informants, the total number of families exiled from Syria is 7,000, and the condition of those left behind is said to be pitiable in the extreme, on account of famine and epidemic disease.

Conflicts with Turkish Troops.

The Turkish Government is said to have detailed a purely Turkish battalion to the Ansairi Mountains, ostensibly for the purpose of tracking deserters, but really for taking over the new harvest. The brutal conduct of the troops was such as to have provoked the Ansairi to open revolt, and a battle ensued which ended in the defeat of the Turkish force, whose losses amounted to about 200 killed and wounded, while the Ansairi's casualties were only twenty killed and fifty wounded. The Turks, on this occasion, set fire to the village of Wady-el-Eyoun and four deserted hamlets. The remnant of the troops was then ordered back to Hama to await reinforcements, then to return to the mountains with a mountain battery to inflict condign punishment on the rebels. This punitive expedition, however, had to be abandoned; for, meanwhile, news arrived that the Druses of the Hauran had also refused to give up their crops to the Turkish force which had been sent for the purpose. As a result of this refusal, a battle, which lasted fifteen days, is said to have taken place between the five Turkish battalions and the Druses. In this case, too, the Turks were defeated, thanks to the strong help received by the Druses from the neighbouring Arab tribes. The Turkish losses are estimated at about 500 killed and wounded, while those of the Druses and Arabs were only 300.

Fear of a Rising.

Fearing that persistence in this policy of violence was likely to kindle the fire of revolt throughout the country, Jemal Pasha instituted milder tactics, and not only ordered the forces in Hama and Hauran to return to their respective bases, but caused some of their officers to be tried by court martial. He then sent a few emissaries to try and calm the popular effervescence, and, soon after, caused manifestoes to be published in the Ansairi and Druse mountains whereby the people were called upon to return to their peaceful occupations; and, while regret was expressed for all that had been committed by the troops, they were informed that the responsible officers were being dealt with severely. Then a mischievous and unscrupulous Druse chieftain, belonging to the infamous clique of Jemal Pasha, won over, by bribes, three persons of no consequence, who came over from the revolted districts to swear faithful allegiance to the Commander. These were, of course, rewarded generously with gifts and decorations in the hope of attracting the real leaders, but with these proud-spirited men this mean trick did not prevail.

Persecution of the Druses.

Smarting under their defeat in the Hauran the Turks, to satisfy their desire for revenge, set to persecuting some of the Druses of the Lebanon, accusing them of complicity in the revolt there. The emigration of some young Druses to Hauran in quest of food was taken as a pretext by the Government to increase the rigour of its revengeful acts. Some of the Druse chieftains were arrested, and two of their leading men were brought up for trial before the court martial at Damascus, which condemned one to forced labour and the other to death by crucifixion.

Following the revolt in the Hauran, and the incidents at Bsherre and Ehden in Northern Lebanon, which have been fully described in previous notes, the Turkish Government gave another downward turn to the screw, and tightened the cordon that it had drawn round the Lebanon to prevent the free access of foodstuffs thereto. The informant's pessimism is such that he actually believed the bulk of the Lebanese population would perish, if the then existing state continued for another month.

Turkish Immigrants.

In place of the 7,000 Syrian families that have been exiled, the Turkish Government has brought over a corresponding number of Turkish and Kurdish immigrants from Anatolia and Macedonia, who are said to be the object of special solicitude on the part of the authorities, and to be allowed to commit, with impunity, continual acts of aggression and violence on the native inhabitants.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE SERBS AND THEIR BALLADS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I see a correspondence is going on in your columns on Marko Kraljevitich. I think Miss Durham is very hard upon him. As one who has known Serbia and Serbs, north, south, east and west, both in war and peace, I have been tempted to wax indignant. I content myself, however, with translating for you the little Serbian poem, "Marko Kraljevitich and the Falcon":—

A sickness came on Marko Kraljevitich
While he did ride along a lonesome road;
He laid him down, his spear close at his head,
His white horse, Sharatz, tethered by his side.
Then in his pain and faintness he did murmur:
"Can there be none to bring me cool water?"
"Can no one me protect from this great Sun?"
"O that some helper might most quickly come,
"And God would surely grant him place in heaven."
A falcon grey o'erheard the hero's cry,
And swiftly flying brought to him cool water;
Him he did shelter too with outspread wing;
So Marko now revived, restored, refreshed,
With grateful gaze did eye the gracious bird,
The falcon bird which so had tended him.
"O falcon grey, now strengthen'd Marko said,
"What kindness have I ever done to thee,
"That thou dost do such loving deeds for me?"
To which the falcon grey thus answer made:
"By thee forgotten, not by me forgot.
"When on that field, that high-engirdled ground,
"The Serbs did battle fierce with unbelievers,
"And tyrant Turks did cripple both my wings.
"To earth I fell amid the legs of men,
"But thou at once didst pick me up again—
"How can I this forget?—and didst put me
"Upon a lofty branch of green pine tree.
"Therefore to thee a'one my life I owe,
"And mindful I now am my love to show."

If we may judge a man by how he treats his dog, perhaps we may judge Marko by how he treated the falcon.—Yours truly,

JAMES W. WILES.

Christ's College, Cambridge,
March 27.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I repeat that, in the lecture I recently gave at the Russian Literary Society, I made no attack whatever on the Serbian Army's conduct in the present war. I never mentioned it. I wished to spare Dr. Curcin's feelings in my last letter, and so refrained from publishing my reasons for stating that the constant reciting of these mediæval horrors and lack of other literature had had a bad effect on the people.

I quoted Veliki Voyvoda Mirko's poems as an example of how the constant perusal and singing of these national ballads (for he was a great "gusle" singer) had caused a man in a high position to retain a quite mediæval mind right into the nineteenth century. His songs are of much interest to the anthropologist, though of small literary merit.

The Middle Ages in all lands were cruel and bloody. Dr. Curcin can find many old English ballads of great ferocity.—I am, etc.,

March 31, 1917.

M. EDITH DURHAM.

[Miss Durham's reasons for holding the opinions she does certainly seem sufficient. The facts are, however, too gruesome for publication at the present time. This correspondence is now closed.—EDITOR.]

THE FUTURE OF PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In a letter to the current number of THE NEAR EAST Mr. H. Bentwich, on the strength apparently of some comment—which I have not seen—on my paper read recently at the Royal Geographical Society, accused me of "ignoring" "the interest of the Jewish people in their old fatherland." Although I am quite sure no one who heard my paper, or will read it after its publication in the *Geographical Journal*, would think of supporting such an idea, I feel, in justice to my own views, that I should point out that there was nothing in it to countenance such a view. I cannot believe that any fair-minded Hebrew can seriously differ from me on the importance of respect for the Moslem feeling about the *Haram esh Sherif* at Jerusalem, or the undoubted rights of the indigenous peoples of Palestine to their own land. I am not aware that a word was said about "Moslem prospects," and the purpose of the whole paper was to suggest, after a personal knowledge of Palestine ex-

tending over nearly a quarter of a century, some of the conditions which, in my opinion, require serious consideration and wisely directed effort in carrying out the very projects which Mr. Bentwich has at heart.

E. W. G. MASTERMAN.

March 30, 1917.

ROUMANIAN RELIEF FUND.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I cordially commend to the citizens of London the National Roumanian Relief Fund, which is under the patronage of her Majesty Queen Alexandra and her Majesty Queen Marie of Roumania. The object of the fund is to provide Roumania with Red Cross equipment and to relieve distress among the civilian poor.

Although Roumania was ready to return blow for blow with her redoubtable foe, her medical services are admittedly inadequate to deal with the rush of wounded now pouring into the already crowded hospitals. Queen Marie of Roumania, to whom our country is bound by ties of blood and affection, and who is herself in charge of the Palace Hospital at Bucharest, has appealed to Britain for help, stating that field hospitals, motor ambulances, surgical equipment, etc., are urgently required by the Roumanian Red Cross.

We are all morally bound to stand by our brave Ally in her hour of difficulty and danger. Recent events have doubled her claims on British generosity, and, although the war's demands on our people are many and heavy, I feel sure that no one will hesitate to stretch out a helping hand to save these people from unnecessary suffering. Roumania is a poor country, and needs all the help we can send her.

I feel confident that you will find pleasure in giving to Roumania a tangible token of your sympathy and gratitude.

W. H. DUNN, Lord Mayor.

The Mansion House, London, E.C.

Donations should be sent to the Hon. Treasurer, Lord Mayor's Appeal for the National Roumanian Relief Fund, 30, Bishopsgate, E.C.

MISS DURHAM ON SOUTHERN SLAV CUSTOMS AND BELIEFS.

Speaking at the Royal Anthropological Institute in Russell Street, London, last Tuesday week, Miss M. Edith Durham said that until the wars of 1876-77 many exceedingly old laws still prevailed in Montenegro, the Primorje, the Herzegovina, and the Bocche di Cattaro, and that the tradition of those times still lingered in the villages—especially among people who could not read and write, and who had good memories. The law used to be administered by the Council of Good Men. These were the heads of houses, and the Council was summoned to make peace in the many blood feuds which raged until comparatively recent times. When two bratsvos were "in blood" with each other these head men would order a truce, and then summon the parties and balance the account. A dead man on one side was counted as equivalent to a dead man on the other, and a money value was put upon wounds, according to their severity. Further reconciliation was effected by making the parties to the feud swear blood brotherhood, or by ordering the head man of the injured bratsvo to be godfather to infants of the other bratsvo. Godfatherhood was reckoned as equivalent to consanguinity, and so would lead to peace. Miss Durham gave several examples of such verdicts as described. In Montenegro, she said, if the contending parties were unwilling to accept the ruling of the Good Men, the case was referred to the ruling Prince as final court of appeal. A curious case occurred in 1853. Two lads—cousins—quarrelled violently over the head of a wounded Turk whom both wished to decapitate. One wounded the other; the local head man could not reconcile them. For the one that was wounded wanted the other one's blood. The quarrel being referred to the Prince, he permitted the duel to be fought out before him and his Senators. Both lads were severely wounded, and then made the quarrel up. Many blood feuds arose over women, whom the old law regarded very much as chattels. Infant betrothal was common. Grim tales were told in some of the ballads of the punishment of an unfaithful wife—the custom of cutting off the nose of a woman suspected of infidelity only died out in the nineteenth century. The Southern Slav practice of exogamy was amply illustrated in the ballads, for the bridegroom almost always sought his bride from afar; and a vivid picture was given of the marriage ceremonies and customs. The fetching of the bride by a large party of the bridegroom's male relatives, the gun-firing—possibly a relic of marriage by capture—the feasting and the gay garments of the guests, were told in great detail. The ballads as a whole probably gave one of the best and most complete pictures of life in the Middle Ages which had come down to us. We found traces of many interesting beliefs in them. The Vila occurred often, and belief in this mountain spirit had not quite died out yet. Other relics of Paganism were to be found in the references to the Virgin Mary as the hurler of lightning, and to St. Elija as the Thunderer.

The Wounded Allies Relief Committee (8, Grosvenor Gardens) has presented to the Serbian Relief Fund the sum of £500, to be used exclusively in providing food for sick and wounded Serbian prisoners of war in Germany.

NEAR EAST BOOKSHELF.

IN ASIATIC TURKEY.*

At a time when there is much talk of the Turk being bundled out of Europe for good and all, it is distinctly startling to find Mr. Warfield asking in his first chapter: "Who can doubt that Turkey is a European Power?" The question is posed in connection with the explanation given of the title of the book, so it need not, perhaps, be debated here. All that is necessary is to explain that our author "would . . . draw the line between East and West in such a way as to leave the Turkish Empire to the West and Persia to the East." One of the gateposts of Asia is placed in the Persian Gulf, the other in the Black Sea; and we must conceive of the "gate" as following the course of the Turco-Persian frontier. It was on the Turkish side of the "gate" that Mr. Warfield and his companion did most of the travelling described in this volume.

They met at Karachi and journeyed up the Gulf together in the usual fashion. Mr. Warfield's comments on the Gulf ports and Gulf politics are shrewd enough, but he has little to say on the subject that will be fresh to most English readers, and occasionally he writes in a way that is rather misleading. Thus, to talk of Muskat as a "British port" a few years ago is inaccurate. The accounts of the gun-runners and the wiles they employ against our naval men are, however, quite interesting.

The description of the journey up the Tigris and of modern Baghdad are entertainingly written, and our author shows a nice appreciation of the picturesque side of the City of the Khalifs even in its fallen condition. We are unable to agree with his estimate of Haroun-al-Rashid as "a weakling," and we do not regard much of his history as quite satisfactory; but we do enjoy his visits to the coffee shops and the bazaars. It is, by the way, interesting to note that even in 1913, when our travellers asked to be allowed to see the work on the Baghdad Railway, they "were courteously but firmly refused." The Huns certainly made a great mystery of their pet project. Mr. Warfield's remarks upon "England's weakness in permitting this German interest to be pushed forward to Baghdad," are still worth reading, even though we may hope that there will be no further displays of such weakness on our part in the future. From Baghdad the travellers made a "side trip" to Babylon before striking north. They visited the German excavations, and we get a not uninteresting theory regarding the "writing on the wall," put forward by one of the Teuton professors; but the reader is spared the infliction of long accounts of the ruins.

From Baghdad the travellers went north with their own caravan—hired after the usual troubles and disappointments—and came at last, after many wanderings and several excitements, to Bitlis. Thence they turned east, to Urmia and Tabriz, and eventually they came to Batoum by way of Julfa. Much of the region that they traversed has sprung into prominence since their journey was made; and this fact enhances the value of the book for English readers at the present time. Thus, Mosul, Kerkook, Erbil, and other places likely to figure conspicuously in military operations in the near future, are visited and described in some detail; and Mr. Warfield tells us also a good many stories, old and new, that will amuse the reader who comes upon them for the first time.

At Kerkook Mr. Warfield was arrested as a spy—in the English service apparently!—but his native wit took him through the somewhat trying situation with flying colours. What stands out most clearly from many passages describing the ups and downs of the journey is the extraordinarily difficult nature of much of the "road." It is bad country for a small caravan; it would, one thinks, be impossible for an army. Stragglers are like to meet with no enviable fate in this debatable land, where might is right, and has been for generations untold; and if the Turks have to retreat here in disorder, they may look for a bad time indeed. The author makes it very clear that no love was lost between Turk and Arab in Irak so long ago as 1913; and the other elements of the mixed population are not much better disposed towards their rulers than are the Arabs.

The Yezidis, or "devil worshippers," receive a good deal of attention from the author, and what he writes of them (in Chapter VIII.) is well worth reading. But more valuable by far are his remarks, in Chapter X., on the constant quarrels between the various peoples who go to make up the population of this region. These quarrels are often represented by interested parties as due to religious differences, and, of course, to Moslem intolerance. Mr. Warfield points out that "in this part of the East religion is a matter of race, not of conviction"; and that: "The

reason that these quarrels are so largely on a religious basis is that the simplest way to make trouble and to arouse racial hatreds here and in all the East, is to call upon the name of God." The descriptions of the various native Christian Churches and their methods of proselytising hardly make pleasant reading.

Consistency in spelling proper names is not a feature of the book; we have "Buzrah" and "Busra" within a very short distance of one another. The transliteration of Arabic is not happy; "Allamdu illah" is shocking! And to write, as Mr. Warfield does (on page 220), of any particular date in the Gregorian calendar corresponding with one in the Moslem calendar is likely to mislead the uninitiated. Moreover, one notices numerous minor slips (such as "amounting" for "amounted" on page 12), which seem to indicate somewhat hurried proof reading!

We can, however, readily forgive these shortcomings, for the book as a whole is good, and the author tells us many quaint stories. Thus, he writes of the military hospital at Mosul:—

When we were there it had had six patients. Their experiences are eloquently set forth in the pages of the hospital record book. Each of these is divided into four columns, headed, "Received," "Cured," "Died," "Ran Away." In the first column were six names, in the second none, in the third two, and in the fourth four.

BOOK NOTES.

In his new book, "Turkey and the War" (Mr. Fisher Unwin), Mr. Vladimir Jabotinsky, late military correspondent of a leading Moscow newspaper (*Russkii Vedomosti*), considers the destruction and partition of the Ottoman Empire as the principal aim of the present struggle. He discusses the different schemes of partition, dwelling in particular on the question of the Straits, on the importance of Syria for the protection of the Suez Canal, on the Arab aspirations, etc.

Messrs. J. B. Rye and H. G. Groser's book, "Kitchener in His Own Words," which has been announced for some time, will be published this month by Mr. Fisher Unwin. After a careful examination of the published writings and speeches of Kitchener, the authors have constructed a narrative of the events of his life, told as far as is possible in his own words. They have incorporated in it a large collection of his pronouncements, e.g., on the Administration of Armies, the Functions of a Staff, General Joffre, Lord French, Sir Douglas Haig, Lords Cromer and Milner, the Development of Egypt and the Sudan, Turkish Misrule in Asia Minor, the Cotton Industry, the State in Relation to Trade and Commerce, Education—Military and Civil, Hunting and Polo Regarded from a Military Standpoint, and the Boy Scouts.

According to a Sofia telegram received in Amsterdam, M. Radoslavoff has announced in the Sobranje, in the name of his Government, his agreement with the declarations of the Imperial Chancellor and Count Czernin regarding Russia.

The name of Gallipoli brings in these days sad and disastrous recent memories. But March 28 was the 391st anniversary of the death, on March 28, 1526, of a "Bishop of Gallipoli" in *partibus*, who bore the very English name of John Young, remarks the *Guardian*. He was consecrated on July 3, 1513, by Richard Fitzjames, Bishop of London, in the Church of St. Thomas of Acre, London, and was, according to Bishop W. Stubbs, Rector of St. Martin's, Oxford, Warden of New College, Archdeacon of London, and Dean of Chichester, besides holding other preferment. For thirteen years, until his death in 1526, he acted as Suffragan in the Diocese of London, and it is safe to assume that he never saw Gallipoli, which was then in Paynim hands.

Mr. BERNARD SHAW says:

"The New Witness' employs more specific literary talent to the square inch than most of our journals could enlist even if they liked literary talent (which they mostly don't)."

Mr. G. K. CHESTERTON contributes each week an article on current events, under the title: "AT THE SIGN OF THE WORLD'S END."

Mr. HILAIRE BELLOC writes special articles on matters of public import connected with the national crisis.

Mr. ERNEST NEWMAN, our Musical Critic, writes weekly.

M. ERNEST DIMNET, whose articles on French politics have attracted so much attention, will continue his series, entitled "France at War."

Mr. RAYMOND RADCLIFFE, the City Editor of THE NEW WITNESS, replies to any queries accompanied by a coupon.

Mr. HERBERT VIVIAN, our Special Correspondent on the Italian front, contributes a series of striking articles from Italy.

DRAMA: THE NEW WITNESS follows closely all dramatic performances.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style.)	Julian (Old Style.)	—	Moslem.	Jewish.
1917. April. 6 7 8 9 10 11 12	1917. March. 24 25 26 27 28 29 30	Friday Saturday Sunday Monday Tuesday Wednesday Thursday	1335. Jumada II. 13 14 15 16 17 18 19	5677. Nisan. 14 15 16 17 18 19 20

The Prime Minister gave evidence before the Dardanelles Commission on Monday. His evidence occupied an hour and three-quarters, and he was followed by Mr. H. J. Creedy, C.B., of the War Office.

Lieutenant-General Sir John Cowans, Sir Charles Harris, and Lieutenant-General Sir James Wolfe Murray were examined by the Dardanelles Commissioners on Friday.

The Press Bureau on Friday issued the following denial:—The statement which has appeared in some of the morning papers to the effect that M. Venizelos is in London and has visited the Foreign Office is totally without foundation.

Among the callers at the Foreign Office on Monday was M. Gennadius, Agent for the Greek Provisional Government in London.

It is confirmed by the *Frankfurter Zeitung* that after the occupation of Bucharest the Germans took prisoner as hostage Mme. Bratiano, mother of the Prime Minister. Mme. Bratiano is 75 years of age.

Colonel Rudeano, the Chief of the Roumanian Military Mission in Paris, accompanied by Captain Prince Callimacki, left London on Friday for the French capital.

Our Cyprus Correspondent, writing on March 5, states that the new Chief Secretary, Mr. Stevenson, from Ceylon, was expected to arrive in the island in about a month.

Mr. A. B. Geary, H.B.M.'s Vice-Consul at Alexandria, who accepted a temporary commission in the Army last August, and has been attached for the last few months to the political branch of the Expeditionary Force in Mesopotamia, has returned to Egypt and reported himself for duty in Cairo, says the *Egyptian Gazette*.

In *The Times* of March 12 it was stated that Mr. Marko Vuletitch, formerly President of the Belgrade Chamber of Commerce, had been arrested in Belgrade and deported to Hungary. The Austrian authorities at Belgrade have since published a statement that Mr. Vuletitch is fully at liberty in Belgrade. The correspondent who furnished *The Times* with the information explains that the error was due to a confusion of names.

"The recent beautiful message to the people of Baghdad was, as Mr. Bonar Law said, 'the work of several hands,' but the main part of it was written by Colonel Sir Mark Sykes, M.P." (writes the Lobby Correspondent of the *Daily Express*). "It is understood that he is now engaged in writing a message from the British Government to the people of Jerusalem."

It is not generally known that Colonel John Ward, the story of whose fine control of his battalion of "Die-Hards" on the unfortunate Tyndareus has stirred the public imagination, was a member of the Railway Construction Corps under Graham in the Sudan in 1885, and won the Khedive's Star, a medal and a clasp for his services on that occasion.

Mesopotamia Day on April 13—a flag day without flags—promises to be a great success, and Miss Stella Maude, who is directing the affair from headquarters at 26, Regent Street, S.W.1, is hopeful of beating all flag day records. Miss Maude is the daughter of the conqueror of Baghdad, General Sir Stanley Maude; therefore her interest in the day is a strong personal one.

Our Khartoum Correspondent writes under date of March 11:

Major Besant, who was one of the first party of officers who were transferred to the Egyptian Army, has arrived in Khartoum on a visit. He is going to Kosti to see some of the Sudanese officers who served under him, and will go to Merowe to visit Colonel Jackson, who is one of the few that survive of the officers who laid the foundations of the Egyptian Army and still remains in the country.

The Rev. R. Burroughs, who came to Khartoum as the emissary of the Archbishop of Canterbury, has gone to Atbara, en route for Halfa and thence to Cairo. His mission was a great success, and there was a very good attendance at the Cathedral to hear his addresses.

Mr. Woodland, the Senior Inspector of the White Nile Province, arrived in Khartoum on the 10th for a few days. It is expected that he will be leaving that province for Kordofan at the beginning of next month.

Mr. Corbyn, who has come from Kordofan, has begun to take up his duties as Assistant Civil Secretary.

Major Fielden is expected to leave the Bahr-el-Ghazal shortly to take up the position of Civil Secretary. He was in charge of the personal section of the Civil Secretary's Office before he went to take charge of that province.

Captain Dumbell has returned from the South, where he has been on a tour of inspection. By the same boat also returned Mr. and Mrs. Echlin. Major Hart also arrived from the Bahr-el-Ghazal on his way North.

Mr. P. W. Carver has resigned his position as trustee and hon. treasurer of the British Protestant Cemeteries at Alexandria, in consequence of a disagreement with the Consul-General. Dr. the Rev. G. M. Mackie and the Rev. Mr. Fry have been appointed trustees in his place. No hon. treasurer has yet been found.

Lady Murray, wife of the General Officer Commanding in Egypt, is on the committee which is organising Soldiers' Day, fixed for May 3. On that day everyone will be asked to buy a flower or a flag for the benefit of Queen Alexandra's Field Force Fund, which since October, 1914, has been sending comforts to the troops.

The wedding arranged between Lieutenant Holly H. Patchell, R.A., and Miss Ethel May Simmons took place, in March, at Holy Trinity Church, Eltham, Kent. Miss Simmons is the only daughter of George Charles Simmons, of Constantinople, and has been engaged in V.A.D. hospital work in England since the outbreak of war. Lieutenant Patchell is the youngest son of Robert R. Patchell, of St. John, N.B., Canada, and has recently returned from overseas to take up a post as instructor at the Canadian School of Gunnery here. The bride was given away by Mr. H. Lockwood, while the groom was supported by his brother, Lieutenant Robert T. Patchell, Canadian Infantry. Only the immediate friends of the young couple attended. They have now taken up their residence at Hythe, Kent.

APPOINTMENTS, PROMOTIONS, ETC.

The King has been pleased to appoint Sir Wilfred Collet, K.C.M.G. (Governor of British Honduras), to be Governor and Commander-in-Chief of the Colony of British Guiana. Sir Wilfrid, who is in his 61st year, has been Governor of British Honduras since 1913. He was educated at University College School, London, and entered the Fiji Civil Service in 1881. He afterwards acted as Secretary to the High Commissioner for the Western Pacific, and later as Receiver-General of Cyprus.

Mr. Andrew Weir has been placed in charge of a new Department at the War Office, which will take over from the Departments of the Quartermaster-General, the Master-General of the Ordnance and the Finance Member of the Army Council such of their functions as relate to the commercial side of the business of supplying the Army (except as to munitions). He will be styled Surveyor-General of Supply, and will be made an additional member of the War Council. Mr. Weir is head of the large shipowning firm of Andrew Weir and Co., who have considerable interests in the Persian Gulf.

Mr. John Stavridi has been appointed Honorary Counsellor to the Greek Diplomatic Agency in London, which represents the Venizelist Government. Mr. Stavridi is the Consul-General of that Government, and a partner in the firm of Messrs. Westbury, Preston and Stavridi, solicitors, of 40, Old Broad Street, E.C.

Miralai O. C. Parker Bey, Commandant of the Egyptian Police School, who has been attached for special service with the military authorities since the outbreak of the war, has now been finally appointed as Governor of Sinai Province. Parker Bey spent several years in Sinai before his appointment as Commandant of Police and as Governor.

Parker Bey has been succeeded in the Police School by Miralai Jennings Bramley Bey, late Governor of Sinai, who, since the war started, has been representing the Intelligence Department in the Canal zone.

Temporary Lewa M. Coutts Pasha, Director-General of Stores, Sudan Government, C.E. Wilson Pasha, Governor of the Red

If you are willing to help
THE SERBIAN ARMY
SEND YOUR DONATION FOR
THE SERBIAN RED CROSS

to the Serbian Legation in London, which is alone authorised to collect funds in Great Britain and the Dominions for the "Serbian Red Cross Society."

There is a separate fund for the
**RELIEF OF THE DISTRESS OF THE
SERBIAN CIVIL POPULATION**
at the disposal of the Serbian Minister, from which money is sent where it is most urgently needed. The address of the Serbian Legation is 195, Queen's Gate, S.W.

Sea Province, E.C. Midwinter Pasha, C.B., C.M.G., D.S.O., General Manager of the Sudan Government Railways, and M. R. Kennedy Pasha, C.M.G., D.S.O., have been granted the substantive rank of Lewa.

Mr. Greg, formerly of the British Residency in Cairo, who recently arrived in Egypt from England, has, according to the *Egyptian Gazette*, been appointed Director-General of the Ministry of Foreign Affairs.

The Arab Art Preservation Committee have decided on the appointment of Mr. Patricolo as Chief Engineer to the Arab Art Department in Egypt and as member of that committee, in succession to Herz Pasha, its former chief engineer.

OBITUARY.

LORD MUNCASTER.

We regret to announce the death of Josslyn Francis Pennington, fifth Baron Muncaster, which occurred on the 30th ult. at Muncaster Castle, Ravenglass, Cumberland. Born on Christmas Day, 1834, Lord Muncaster was educated at Eton, and obtained a commission in the 90th Light Infantry, with which he served in the Crimean campaign, taking part in the attack on the Redan on September 8, 1855. Subsequently he exchanged to the Rifle Brigade, and retired from the Army with the rank of captain just before he succeeded to the title in 1862. The following year he married the second daughter of Mr. Edmund L'Estrange, of Tynte, co. Sligo, and a niece of the seventh Earl of Scarborough.

It was in 1870 that the event occurred with which his name will always be linked. On April 11 of that year a party of ladies and gentlemen, among them members of the British, French, Italian and Austrian Legations at Athens, were captured by brigands at Oropos while on an excursion to Marathon. Among the party were Lord and Lady Muncaster, the Hon. Edward Herbert, and Mr. Frederick Grantham Vyner, the two last-named being respectively nephew of the third Earl of Carnarvon and brother of the first Marchioness of Ripon. The party was not unguarded, a number of gendarmes having been told off for their protection, but this protection proved hopelessly inadequate, as two of them were shot and the rest speedily overcome, and the captives were rapidly taken away into the bushes. The ladies experienced much ill-usage, but, with the children, were shortly set free, as the brigands hoped to obtain a ransom by means of the men captives, whom they conveyed to the mountains.

Then the brigands commenced to negotiate, first asking £32,000, then £50,000, and finally half that amount, and a free and full pardon, and also the release of certain comrades who had been imprisoned. It was decided by lot that Mr. Vyner should go to Athens to raise the money, but he, being unmarried, with splendid self-sacrifice, insisted on Lord Muncaster taking his place. Eventually Lord Muncaster consented, and left for Athens, with the parting threat ringing in his ears that the party would be murdered if any pursuit was attempted. The English Envoy at Athens urged the Greek Government to accede to the demands; but, rating the threat too lightly, the Government despatched a body of troops to seize the brigands. Learning of the scheme, they carried their captives further into the interior, and, after keeping them in pitiful anxiety, brutally murdered them. When the bodies were recovered it was found that, besides being shot, many of the men had been stabbed in the back.

Needless to say, there was great indignation at the outrage, and several members of the Parliamentary Opposition in Greece were arrested and tried, with seven of the brigands, for complicity with the massacre. Several of the brigands had been killed by the troops, and those who were placed on trial were all condemned to death, and five of them were executed.

The rest of Lord Muncaster's life lacked any outstanding event. He was created a Baron of the United Kingdom in 1898, having previously represented West Cumberland in Parliament from 1872 to 1880, and the Egremont Division of Cumberland from 1885 to 1892, in the Conservative interest. He had no children, and there is no heir to the barony.

LIEUT.-COLONEL J. H. WESTERN.

Lieutenant Colonel James Halifax Western, C.M.G., late R.E., whose death took place at his house at Hurstpierpoint on Monday, joined the Royal Engineers in 1860, but spent most of his career in the service of the Indian Public Works Department. In 1863 he became Assistant Engineer for the North-West Provinces, and Executive Engineer in 1868. In 1862 he went to the Punjab as Superintending Engineer, and two years later was appointed Officiating Chief Engineer and Joint Secretary for Irrigation for the Punjab, and afterwards Director-General of Works. In 1890 he went to Egypt as Engineering Inspector for that country, and held the position for ten years. He retired from the Army with the honorary rank of lieutenant-colonel in 1887. Lieutenant-Colonel Western, who was 75 years of age, married in 1869 the third daughter of Mr. Guy Atkinson, of Cangort.

The death occurred on Monday, at Thrumpton Hall, Derby, of George Frederick William, ninth Lord Byron. He was born in 1851, and was the son of the late Hon. Frederick Byron, nephew of the eighth baron, and a kinsman of the poet.

Colonel J. H. Beasons, formerly Military Attaché of the United States Embassy in London, whose death, at the age of 60, is announced, went to Egypt in 1896, in the hope, which was not fulfilled, that he might be able to accompany the Dongola Expeditionary Force.

Captain Somerset Charles Godfrey Fairfax Astell, D.S.O., North Staffordshire Regiment, who died on March 24 in a military hospital, from pneumonia, only son of the late Major-General and Mrs. Charles Astell, West Lodge, Dorchester, took part in the Expedition to Dongola in 1896 (Egyptian and British medals) and fought in the Boer War in 1900-2.

Lieutenant Arthur Edward Durham, R.N., who was killed at sea on March 23, had seen service in the Persian Gulf in 1910-11, in H.M.S. Odin. In her he also served on the East Coast of Africa; and he held both the Persian Gulf and the Somaliland medals. Since the outbreak of the war he has commanded three destroyers. He was the younger son of Prebendary and Mrs. Durham, of the Rectory, Newton Abbott, South Devon, and was 28 years old.

The death took place at Khartoum, on March 6, of Mr. J. H. Thring, of the Posts and Telegraphs Administration. Death was due to heart failure. The deceased had gone on the previous evening to the British Barracks to visit some friends. He was taken ill and could not return home. Arrangements were then made for him to sleep there. In the morning he was found dead in his bed, and the post-mortem examination showed that death was due to heart failure. The funeral, which took place the next day, was conducted by Rev. H. B. Rivington, and was attended by a large number of the Posts and Telegraphs officials and employees and other friends of the deceased. Mr. Thring leaves a widow and child in England.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

BOYD.—On the 8th March, in Cairo, the wife of Fielding Boyd, Egyptian State Railways, of a son.

DEATH.

WESTERN.—On April 2, at Halifax Lodge, Hurstpierpoint, Lieut.-Colonel James Halifax Western, C.M.G., late R.E., aged 74. Funeral at Hurst, 2.45 on Saturday, 7th inst. No flowers.

WHERE TO STAY.

THE ALLIES AND GREECE.

A point consistently maintained in these columns, that whatever the Entente Powers may wish or do, the present situation in Greece, for which they are largely responsible, represents no permanent adjustment of the country's difficulties, receives significant confirmation from an important statement made by M. Venizelos to a collaborator of *The New Europe*. For the first time in a public statement, as far as we are aware, M. Venizelos accepts the implied revolutionary character of a movement which was the outcome of a loyal desire to see Greece honour her treaty obligations and to defend her territory from attack, and he indicates very clearly that the movement relies upon being able in good time to attain its logical conclusion—the restoration of a constitutional regime for Greece. In these circumstances it is well that there should be among the people of the Allied nations a clear understanding of the course of events and the influences that have been at work in shaping Hellenic affairs during the war. The actual history of the period can be briefly summarised. In January, 1915, M. Venizelos submitted to King Constantine two memoranda, in which he suggested the reconstruction of the Balkan League in order to strike a death-blow at Turkey in Europe. When, however, there was ground for suspecting the intentions of Bulgaria, M. Venizelos abandoned the idea of a Balkan League, and suggested to the King that Greece should take part in the war on the side of the Allies, who at that time asked for the use of Greece's harbours and territories as bases for their naval and military operations, and for Greek co-operation in the Dardanelles expedition. King Constantine was within his rights in refusing to endorse M. Venizelos's policy, and the latter, according to constitutional practice, resigned on March 6, 1915. After M. Zaimis had refused the Premiership, the King appointed M. Gounaris to form a Cabinet. The Chamber was dissolved and new elections took place in June, 1915. M. Venizelos was returned with a substantial majority; the Government was defeated when the Chamber met in August, and M. Venizelos was again in power on August 23. On September 21 Bulgaria mobilised; four days later the Greek army was mobilised, but King Constantine refused to allow any steps to be taken for the assistance of Serbia. The first contingent of the Allied troops landed at Salonika on October 2, and it was owing to a statement made by M. Venizelos to the Chamber, which seemed to contemplate action on the part of Greece that might bring her in conflict with the Central Powers, that King Constantine sent for M. Venizelos and requested him to resign. He was succeeded by M. Zaimis, who in November made way for M. Skouloudis. Fresh elections, from which the Liberal party abstained, took place in December. Towards the end of May, 1916, came the surrender of Fort Rupel and the overrunning of Macedonia by the German-Bulgarian forces. M. Venizelos does not hesitate to charge King Constantine with having "organised, in connivance with the Germans and Bulgarians, the invasion of Western and Eastern Macedonia." This action, followed by a fresh refusal on the part of Greece to make common cause with the Allies when Roumania entered the war at the end of August, 1916, finally led M. Venizelos to send

a message to the King that he would consider it his duty to revolt. He left Athens with Admiral Coudouriotis and General Danglis, and they "at once decided to raise the standard of revolt."

There could be no question of a "revolution" in Athens at that time. The Army was with the King, and the latter still enjoyed a measure of personal popularity which prevented unanimous action on the part of the people on a constitutional question. Accordingly, it was the intention of M. Venizelos and his associates to plead their cause where there were no troops, and where the majority of the population was known to be for them. Thus they hoped to gather strength and gradually to carry the whole of Greece with them. The Provisional Government went to Crete and other islands, and coming to Salonika made common cause with the Committee of National Defence, which had already been constituted independently of it. From Salonika M. Venizelos intended to go to Thessaly, Epirus, and the Aegean and Ionian Islands; but it was at this stage, when he applied to the Entente Powers for official recognition of the Provisional Government, that the Allied Governments began to put spokes in his wheel. The Boulogne Conference refused recognition, but promised financial and material means for the organisation of the national army. Just when the Provisional Government was prepared to extend its operations to Thessaly and Epirus, the Allies instituted a neutral zone at Katerini, and debarred the national movement from access to those districts. The action of Admiral du Fournet at Athens on December 1, 1916, exposed Venizelists to a reign of terror, and the Allies' blockade checked the exodus of those who were anxious to make their way to Salonika. At no time up to that point had M. Venizelos wished to give the movement an anti-dynastic character; but the Allies made it an "express stipulation" of their indispensable aid that the movement should not be anti-dynastic. Further, "at the Rome Conference you were induced to concede to the King guarantees under the terms of which 'to avoid all misunderstanding,' you gave the Greek Government 'formal and categorical assurances that the Allies will neither on land nor on sea allow the extension of the Venizelist movement in the territories hitherto occupied by the state of the kingdom of Greece'; and it was even added that the Entente also promised that 'Venizelist authorities and officials will not be accepted in any places occupied in Old Greece.'"

M. Venizelos is too sound a statesman not to recognise what is behind the Allies' embargo, and not to bow to their decision for the time being; but he points out that "if the National Government were free, it would very quickly be strong enough to put a definite end to 'the Government of the kingdom of Greece.'"

The present situation is that the Allies have bound themselves to give certain guarantees to their avowed enemy, King Constantine, which they made no attempt to give to one of their number, Nicholas II. The late Tsar has been driven into the wilderness; however great his responsibility for what took place in Russia, he was essentially loyal to the Grand Alliance; he meant well and was as much sinned against as he may have sinned. King Constantine has been consistently hostile to the Allies, and personally treacherous; he means ill and does ill whenever he can with impunity; and any sense of provocation he may have acted under is primarily of his own creation. But the Allies have gone out of their way to stand between him and his deserts, and in so doing they have done violence to the interests of Greece and injustice to those Greeks who are their staunch friends. This state of affairs cannot continue indefinitely. One result of it is that in Greece to-day Allied officers are counting rifles and checking railway trucks; and Allied troops and Allied ships are on duty when they could be more profitably employed elsewhere. The policy is not only unjust, but from the Allies' point of view pernicious. At least, King Constantine might be given to understand that, if his attitude remains unsatisfactory, the guarantees will be withdrawn and the National Government will be left free to adopt its own methods of restoring national unity. Such a stage will be reached in any case when the war is over, and in the meantime it is well that the reasons why the process has been delayed should be generally known.

THE CAMPAIGN IN PALESTINE.

Although we are still in a state of suspense regarding the actual military situation in Palestine, there can be no doubt that an active offensive has now begun. In April the land is at its best climatically. The fields of Philistia are green with young corn, affording abundant fodder for horses and camels; the ground has hardened since the winter's rains, and fresh breezes and occasional showers mitigate the heat. The malaria, which makes camping dangerous in the plains during the summer and autumn months, is now of a mild type, and can usually be avoided. Once fairly in Palestine, north of, say, Gaza, there should be no lack of water or provender for the army.

Those watching from afar may ask what is the next objective. Is there to be a rapid advance on Jerusalem—vague rumours of British cavalry half-way there float about—or is the Holy City, for the present, a secondary consideration? If one may judge by the teaching of history, not to say geography, it is difficult to think that the capture of the city will be attempted before at least all the coastal region is secured, a stage which may take some time in the conditions of modern warfare. The strength of Jerusalem for defence is very great. This does not lie in her ancient walls and towers, nor even in any possible trenches in the neighbourhood, but in the fact that the city lies some 2,400 ft. above sea level, encircled by rugged mountains, and the few passes are in deep valleys, capable of easy defence. It was these conditions of natural strength which enabled the kingdom of Judah to outlive that of Israel by considerably more than a century; that made possible the success of the Jewish uprising against the Greco-Syrians, and—over two centuries later—so greatly prolonged resistance of the Jews against the Romans (A.D. 64-70).

When, too, after the battle of Hattin (1187), when the flower of the Crusaders' army was destroyed, and the city, bereft of its defenders, passed into the hands of the conquering Saladin, the Franks, although they hung on for a century more to the coast lands, were never able to recapture the city itself.

Against an army advancing from Egypt Jerusalem is secured by wilderness frontiers to the east and south, while no attack is possible from the north until the Plain of Esdraelon is secured. The western frontier presents a long wall of mountain. South-west the new-made military road running to Beersheba and beyond would present a very long line of difficult advance. The pass up the valleys Es Sant and Es Sur—up which the army of Antiochus V., with camel corps and elephants, made a successful attack on Jerusalem in B.C. 163—would, if successfully negotiated, bring our troops rapidly astride this great southern road, which runs north to Bethlehem and Jerusalem. But this pass would only be suitable for mountain guns, and could hardly be used as the main attack. The direct routes are by way of the railway through the Valley of Sorek, a long, winding track through a deep gorge very easily defended, and the more open, but still difficult, high road a little further north. Probably the entries to both these valleys will by now be fortified. Even their approaches are not improbably guarded by earthworks at Tell-el-Jizer—ancient Gezer; this site, which is still scarred with the trenches made in the cause of archaeology, is one well suited even now for the defence of both the road and railway. The difficulties are indeed so great that one cannot help thinking that a modern military expedition would, as has occurred several times in history, leave Jerusalem itself as the last aim of the campaign. If the approaches on every side are captured, the city itself must fall; indeed, in all probability the Turkish army would hasten to extricate itself before the last avenue was closed. The fate of Jerusalem has several times before this been settled in the plains.

Most suggestive at the present juncture is the record of the expedition of Napoleon to this land in 1799, a very clear résumé of which, by the late Sir Charles Watson, is given in the January number of the Quarterly Statement of the Palestine Exploration Fund. This expedi-

tion was, like our present one, undertaken for the defence of Egypt, and was, one may add, by no means the failure which some of our historians would make us believe. Indeed, Sir Charles Watson points out that it is a misfortune that we did not profit by this example of aggressive advance early in the war. "It would," he says, "have been a far more effective way of stopping an invasion of Egypt from Palestine than sitting down in front of a long line of the Suez Canal and waiting until an attack upon it was developed." Napoleon went to Palestine to defeat the oncoming army. He did that thoroughly, and also managed to get back to Egypt in time to destroy at the Battle of Aboukir, a second Turkish army coming by sea.

The narrative of this expedition is of extraordinary interest at the present time. The force consisted of some 12,507 men—mostly infantry—and over 50 guns. It advanced from Katieh, February 7, 1799, reached El Arish the following evening, occupied Khan Yunus, five miles north of Raia, on the 22nd. A few days later it advanced and captured Gaza, the Turkish army retreating before them; on the 28th they reached Ashdod, and the next day Ramleh. After some days spent in reducing Jaffa, the army resumed its advance on March 14, reached Haifa on the 16th, and encamped east of Akka on the 18th. While engaged in besieging Akka, in the defence of which England gave assistance by sea, Napoleon sent Murat to occupy Safed—on the direct road to Damascus—Junot to occupy Nazareth, that he might watch the road by the Lake of Galilee, and Vidal to Tyre, to prevent assistance coming to the Turks from Beyrout. Having been warned from Nazareth of the approach of large forces from over the Jordan, Napoleon advanced from Akka and engaged them in the famous "Battle of Mount Tabor," fought at El Fuleh in the Plain of Esdraelon. He defeated a host of 20,000 irregular horsemen, some of his mounted troops pursuing the flying remnants to the Jordan. How Napoleon raised the siege of Akka on May 20 and skilfully and rapidly withdrew his army, so that in a month he was back in Cairo, does not concern us here. The itinerary, however, is worth study when we notice that Ramleh is to-day the meeting-place of two railways (Jaffa-Jerusalem and Damascus-Beersheba lines) and of the Jaffa-Jerusalem carriage road, and that Haifa is now the starting-place of the western branch of the Hejaz railway, which joins the Damascus-Hejaz railway at Daráa (ancient Edrei). Further, to-day a new military road runs from Akka through Safed to Damascus, so that the mountain stronghold of Safed is still an important place at which to sever connections with the East. Lastly, close to El Fuleh, the scene of Napoleon's battle, is now the junction of the Samaria-Ramleh-Beersheba branch of the Hejaz railway. All these places which figure in Napoleon's war are thus of at least as great strategic interest to-day.

We have before us to-day a more definite goal than had Napoleon in the main Hejaz line itself. It is hardly possible for us to reach this except through Palestine itself, and for the sake of the Arabs in Arabia, who are seeking to maintain their long-fought-for independence, as well as for the conquest of Palestine, it is of paramount importance that an attempt should be made to cut this line. It lies some thirty-five to forty miles east of the Jordan, but is exposed to attack at many points, if once the Jordan is crossed. This seized and held, the fate of Jerusalem is sealed. Some talk and write as if Palestine were already within our grasp; but it is to be feared that a campaign of much difficulty and on a large scale will be necessary before this happens. The German-led Turkish forces will certainly resist to the utmost any attempt to wrest from their grasp any part of a land on the retention of which for varying reasons both Germans and Turks set such store.

E. W. G. M.

According to the German newspapers, Enver Pasha, during his recent visit to North Germany, narrowly escaped being killed. He visited the submarine base at Wilhelmshaven, and then left by motor for Oldenburg to visit the Grand Duke. When near the village of Rastede his car collided with another carriage. His chauffeur was seriously injured, and splinters of broken glass hit Enver in the face. Enver admitted that he was within a hair's-breadth of being killed.

TANGIER TO TEHERAN.

The news of the big fight south of Gaza can hardly have surprised many people; for all the signs had been pointing to something of the kind for some little time past, to say nothing of rumours that found their way some time ago into Syrian and Armenian quarters in London, apparently from Egypt. But if not unexpected, the news was none the less welcome, and the capture of an entire Turkish Divisional Staff, with a sprinkling of Austrians and Huns, did nothing to diminish the satisfaction it afforded us. The only "fly in the ointment," when first the news came through, was, I fancy, the difficulty in finding the "Wadi Ghuzze" of the War Office announcement on our maps. I turned at once to the Palestine Exploration Fund's Annual for 1914-1915, feeling tolerably sure I should find the wadi on the map therein given. I was disappointed, and half a dozen other maps failed to satisfy my thirst for knowledge. Finally I ran the name to earth, so to say, on the R.G.S.'s map of Turkey-in-Asia, etc., and even there it was marked "W. Chaza or Rozze." Curiously enough, a branch of this wadi, known as the Wadi-el-Sharia, is marked on many of the maps that ignore the main wadi.

Of course, there was never any doubt in our minds as to the position of the wadi; for the War Office announcement expressly mentioned that it is "five miles south of Gaza." But many of us find a lot of satisfaction in hunting up any place mentioned in despatches and so forth, and the more difficult they are to find, the better the fun—if only you do find them at last. Our trouble over the "Wadi Ghuzze" was due to our excitement, no doubt. We should have remembered that Gaza is spelled in various ways—"Ghazze," "Azzah," and so on. But excitement ought surely to have died away sufficiently by the following day, for one of the morning papers to avoid printing "Radesh-barnea" for Kadesh-Barnea.

Of Gaza's biblical and historical associations you have probably read enough—if not more than enough—in the daily papers since last Thursday, and I do not purpose going over the well-worn ground again. But a small point may be worth mentioning. The place has been since very early days, and still remains, rather well-known amongst the Bedouin for its pottery, which is ribbed and very hard. The site has been occupied for many centuries, of course, and if only excavations could be undertaken on a large scale they would certainly yield valuable results. West of the town there is, I am told by a friend with archaeological leanings, a most tempting tell, with traces of an important wall of unbaked brick and very much early pottery. Perhaps here, as elsewhere, the Soldier will prove the friend of the Archaeologist.

Feloojah (or Feluja), the place on the Euphrates which, it is announced, our troops occupied on March 19, is known to all travellers who have followed the overland route from Baghdad homewards. It is—or was when I last saw it—a tiny place, consisting of a khan and a few Arab hovels; and it had only one feature to distinguish it from quite a number of similar caravan halting-places: its khan had five octagonal upper chambers, each of which was provided with a peculiar umbrella-like roof, such as I never saw anywhere else in the country. These somehow suggested to me the idea of pagodas; and they are so utterly unlike any other buildings in the neighbourhood that I feel almost sure they must owe their design to a foreigner—probably a Chinaman! That they are still standing I should much doubt, for the whole khan was in a desperately tumbledown state. If it has survived, we may hope to see a picture of it ere long in one of the illustrated papers, for it is not the kind of building that the amateur photographer would overlook.

In his letter to the Editor on the subject of "Witchcraft" "Veritas" pays me the compliment of referring to a paragraph on the subject that I wrote a few weeks ago. I am grateful to him for his hint about Mr. Rawson's book, which, judging by its title, ought to be very well worth reading; and I hope to benefit by it as soon as I can find time for reading. I am also interested in the explanation given of the reason for the "witches" piercing images of their victims. But I do not know why "Veritas" should conclude, as he appears to have done, that I think there is little or nothing in "witchcraft." I have no faith at all in the "witch," or the dabbler in "magic" of any kind, who is willing to exercise her (or his) "art" for any pecuniary consideration; but I am very ready to admit that there are many forces at work which we by no means understand, and in the power of "will" to work wonders I have great faith.

The last paragraph of "Veritas's" letter raises a point that interests me greatly. Unfortunately, it has nothing whatever to do with the Near East, and therefore I should be wandering outside my appointed sphere if I were to deal with it at length. But I cannot refrain altogether from referring briefly to it. "Veritas" writes:—"Modern psychology now teaches that every thought a man thinks has an effect," etc. Up to a certain point this is undoubtedly sound. It is the modern recognition of the principle that was embodied in the Ahriman and Ormuzd belief. But at what point does the contest between the rival forces begin? In other words, when does the "idea," swift and fleeting, often elusive, become a "thought," capable of having an effect?

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Mosquito Netting for Troops.

March 29.

MR. MACPHERSON informed Major Palmer that mosquito netting would be issued to the British troops at Salonika this summer.

British Success in the East.

MR. BONAR LAW, in reply to Mr. Asquith, read the communiqué received from the Commander-in-Chief in Egypt reporting the success achieved by our troops. The House cheered the news with great heartiness.

Greece and the Allies.

April 2.

MR. LYNCH (N., Clare, West) asked whether the fall of the Russian despotism would have any effect in modifying the policy of the Allies towards Greece; whether King Constantine was in constant communication with the German Emperor; and whether, in view of the new political situation, a more energetic programme would be adopted in the Balkans.

MR. BALFOUR. The answer to the first and second parts of the question is in the negative, and I am unable, for obvious reasons, to make any observations in answer to the last portion of the inquiry.

MR. LYNCH: Does not the condition of Greece represent, on a smaller scale, the condition of Russia before the fall of the Emperor, and are you not, by your policy, supporting those parties in Greece favourable to the German cause?

MR. BALFOUR: Historical parallels are dangerous and treacherous, and I would not venture, at all events, to traverse those points by way of question and answer.

The Turkish Defeat near Gaza.

April 2.

MR. BONAR LAW, replying to Sir A. Williamson, read an additional report from the Commander-in-Chief in Egypt, describing the fighting near Gaza on March 26 and 27. The report, which states that the Turkish losses are estimated at 8,000, while our total of killed was less than 400, is dealt with elsewhere.

British and Turkish Prisoners.

THE MARQUESS OF LANSDOWNE said that extremely distressing accounts had been published of the treatment of British prisoners in Turkish hands, showing that they were not only cruelly neglected, but were suffering from diseases of many kinds and from starvation, and that some had succumbed to their ill-treatment. He asked for information concerning these cases.

LOID NEWTON, in reply, said that a Red Cross Commission which recently visited a number of the camps in Asia Minor reported that, while the condition of the officers detained in them was not unsatisfactory, that of the men was almost intolerable, as, indeed, anyone would understand must be the case where Europeans were the captives of an Oriental Power. A recommendation was made that as many of these men as might be possible should be exchanged, and he was happy to say that the consent of the War Cabinet had been obtained to a proposal of that kind being made. It had been suggested that a preliminary exchange of 600 men should take place. That number was chosen because 600 men could be conveyed in a hospital ship, and it was hoped that it would be possible for such a ship to take 600 Turks from Egypt to a port in Asia Minor, and to bring back an equal number of British captured and wounded. There had not been sufficient time for a reply to be received; but from private information he had reason to hope that the proposal would be acceded to, and he trusted that this would be only preliminary to a larger exchange.

At a meeting of 3,000 Zionists, held at Odessa, a resolution was passed urging the inclusion at the Peace Conference at the close of the war of the question of ceding Palestine to the Jews.

It is understood that, subject to the possible recalling of some witnesses on small points, the Dardanelles Commissioners have now concluded the hearing of evidence, and will proceed with the consideration of their report on the second section of their inquiry—the conduct of the operations. The Commissioners will not sit again for a fortnight.

THE PRESS ON THE NEAR EAST.

Arab Responsiveness.

The difference between the Arab and the Turk is very clearly brought out in an article, entitled "The Arab World: its Past and its Future," which appeared in last Friday's *Times*. The writer begins with a reference to the Arab world as "that world of noise, bustle, passion, and rhetoric which has lain under the deadening influence of the various Turkish dynasties near upon a thousand years," and he acknowledges that the Arab race, "divided, scattered, and battered by war, revolution, conquest, and deliberate misgovernment," presents a sad spectacle. There is, however, no need to despair:—

When the Arab has met civilization in the past the marriage of intellects has been fruitful. The nature of the issue is demonstrated by the ruins which scatter Syria, Mesopotamia and Irak. The groves of columns at Tadmor, the vast temple of Baalbek, the palace of Al Hadhr, the hippodrome of Gerash, the theatre of Amman, the basilicas of the Hauran and North Syria, the mosques and tombs of Damascus, the desert castles of Kerak, Salkhad and El Nejin, are witnesses to results of the mating of the Arab mind with the successive cultures of Greece, Rome, Parthia, Persia, Byzantium and the Franks.

A very necessary distinction between the "Arab" of Northern Africa and the true Arab is then drawn:—

Though Egypt is Arab in tongue, the western desert in name, it is not until you arrive at Baghdad that you reach that roaring, chinking, clattering, arguing, bellowing, demonstrative world of Rabelaisian jest, caustic satire, plaintive poetry, majestic verse, calculated rhetoric, comprehensive invective, subtle flattery, remorseless logic, and strident, ear-piercing din which stretches to the Mediterranean coast on the west, the Kurdish hills on the east, and the rugged fringes of the Taurus on the north, that space of earth which the old Arabian geographers named Irak, Jazirah, Shamiyah, Suriya and Filistin.

After reminding us of the prosperity and the advanced state of civilization of the great empire of which Baghdad was formerly the capital, the article contrasts these things with the "desolation and wretchedness of to-day." It then continues:—

Has the Arab degenerated? What explanation can account for the utter collapse of this people? Degenerate in the true sense the Arab certainly is not; you will find his memory as acute, his wit as nimble, his sense of humour as keen, his observation as direct, as in the days of Ibn Batuta, Abu Nowas, or Ed Tabari. Lithe and supple, of good physique, his perfect features, glossy hair, small hands and feet, show he is in body as true to type as his puns, oratory, wit and astuteness prove his mind to be unaltered; yet he who gave civilization and order to a third of Asia and the whole of North Africa now lives on a dunghill amidst flies and ruins. What is the answer to the enigma?

I think the answer is that the Arab intellect is one that only produces itself to the utmost by contact with other minds. For centuries the Arab of Arabia, which is the Arab of isolation, has remained in the same position, neither advancing nor retiring, absolutely changeless. In the days of the Prophet the Arabs of Arabia were, as to-day, intensely aristocratic in sentiment as regards birth and breed, desultory but courageous warriors, brilliant poets, fine conversationalists and astute diplomatists. The Arabs that Arabia has put forth have been whatsoever the contacts they established with the outer world made them.

—And Turkish Distinctiveness.

The Turk's policy towards the Arab has been simply and consistently destructive. He "has not been able to oppress an Arab and reduce him to slavery and sullen bondage, as he could the Armenians, Bulgarians, and Greeks," but he has done his worst. He has sowed dissension among the tribes and the sheikhs; he has bartered away the assets of the country "in rascally concessions to Levantine financiers"; in the cities he has "encouraged faction and feud until every municipality is a seething mass of intrigue and hatred"; and the peasant has been overtaxed, unprovided with proper means of communication, conscripted, oppressed in every way:—

The Arabs, under such influences as these, have seen their cities and agriculture wither away, and, being easily divided, have sunk back into the misery from which they had emerged in a blaze of glory. . . . Yet though the Arabs are brought to this pass, there are sure and certain indications that after centuries of deforming and errant circumstance they have within them still that eternal spark of vitality which enabled them to beget greatness in the past. . . .

To-day a little breeze of life is stirring in the Arab world. Isolated, dispersed, sundered by creed and geographical circumstance, warped as they are by misfortune, nevertheless there is among the Arabs a movement toward cohesion, a new sense of being. There is an Arab movement, vague, undefined, at times almost imperceptible, yet it exists. The common tongue, the common vitality, the pride of race, the great memories of the past, combine to stimulate through the Arab world a little throbbing pulse of life. The Arabs are so ancient and so unconquered a people that there is not yet a sense of nationalism; the Arabs are in a pre-nationalist state; but the racial sense is strong and deep, the pride of race is deeper still, the desire to realize their destiny is a growing force.

A Great World-Asset.

How soon will that desire be realized? Much will depend upon Great Britain; and the article concludes with a paragraph that should help us all to realize how serious will be our responsibility if we fail to help the Arab along that path of progress which he has so long been debarred by the Turk from following:—

At this moment the British are in Baghdad. The Turks, please God, are going from the lands they have ruined and broken. The Arabs are on the verge of a new contact—contact with the post-war Europe that is not yet. What may come of it who can tell? Approached as "natives" or in "a white man's burden" manner, the Arab will shut up like an oyster. Approached as what he is, in the light of what he was (and in the teachings of 2,000 years of history mean anything, again shall be), the Arab of the future will prove to be one of the great world-assets. Firmness, tolerance, humility and understanding are the qualities which those who would help to raise this people must pray for. To help the Arab once again to greatness, to partnership in the fruitfulness of the earth, to break the spell of the Turanian destroyer, and begin afresh the great story of Semitic civilization, is more than an Imperial task—it is a contribution to the fulfilment of the destiny of mankind.

M. Venizelos Interviewed.

The *New Europe* for March 29 contains an interview with M. Venizelos. This gives in some detail M. Venizelos's reasons for effacing himself to the extent that he did—and to a certain extent, continues to do, for going to Salonika instead of continuing the fight in the capital, and for not giving his movement an anti-dynastic character. It also explains how it is that the Venizelist movement, "whose avowed aim was to rally Greece in arms against the Bulgars and the enemies of the Entente, could, at the end of four months, only send some 10,000 men to the front." These points were all put in the form of direct questions to M. Venizelos, and what he had to say with regard to the last one may be fairly well guessed from his remark, "It is not to me that your last question should be addressed." The Entente does, in fact, seem to have shown less delicacy in regard to Venizelist susceptibilities than in regard to those of King Constantine and his followers. As to his reasons for not giving an anti-dynastic character to his movement, although he had declared that King Constantine had betrayed his country, M. Venizelos said:—

It is because the Entente had been good enough to promise me their indispensable aid, under the express stipulation that the movement should not be anti-dynastic. Besides, I did not myself dream of changing either the form of government or the reigning House. What I desired was to fulfil, so far as possible, our treaty obligations to Serbia, to join the Allies in driving the Bulgars from our territory, and to contribute, according to our modest powers, to the final victory, thus bringing Greece back into the path of her traditional policy by the side of the Protecting Powers. After the war and the success on which I reckoned, we could have restored our Constitutional liberties by convoking a Constituent Assembly.

Who is to Blame?

It capitulates some of the things that the Entente compelled M. Venizelos to do (as set out in the *New Europe* article), and continues:—

Who was responsible? We know something now of the treachery to our cause which emanated from the Russian Court. Have we to look to the same quarter for the "hidden hand" that protected Constantine and muzzled Venizelos? Were there other similar influences at work? If so, where were they and what were they? These questions will be asked, and they will have to be answered. Europe is in no mood for concealment any longer. It will want to know who its enemies are, and it will not be fobbed off with diplomatic equivocations. Let us not forget that the darkest feature of the whole story is that, in permitting Constantine to make waste paper of the Constitution, the Allied Powers were betraying their trust as guarantors of the liberties of the Greek nation. It was not the Greeks who were faithless to their bond. They returned Venizelos to power in the teeth of the King, and even now the Liberal leader says that if the Allies will put the King aside and secure an election he is sure of a large majority. It was the Court that was the enemy, and it is the Court to which the interests of the Allies have been sacrificed.

This interview forms the subject of a leading article in the *Daily News* of March 30. The *News* is moved, and not unnaturally so, by the shabby treatment of M. Venizelos; and it believes that it is not only by King Constantine that he has been shabbily treated:—

What is new in the revelations and what will, we believe, move democratic Europe to indignation is the light they throw on the conduct of the Allies throughout the time when Venizelos was taking his life in his hands on their behalf, and when Constantine was engaged in helping the Kaiser to defeat them. The simple fact that emerges is that, but for the interdict of the Allies, Venizelos would and could have defeated Constantine's schemes, and would and could have brought Greece into the scale on our side. At every stage he was checkmated, not by Constantine so much as by the Allies.

The Turks and Palestine.

Commenting on Sir Archibald Murray's victory near Gaza, *The Times* (March 30) considers that the Turks have received a blow which is likely to weaken them grievously for

a long time to come. The effect of our success would have been serious in any event; it will be greatly enhanced by the fact that it has followed so hard upon our capture of Baghdad. As to the value of Palestine:—

The Turks and their German mentors are well aware of the military importance of Palestine and of the routes which lead through it. It is, indeed, believed that they neglected to strengthen their forces on the Tigris in order to reinforce those which guarded the way towards Damascus, and perhaps towards other points which the projectors of the Baghdad Railway and its extensions watch with anxiety. The nationality of the inhabitants and the consciousness of the barbarous cruelty exercised upon them since the outbreak of the war may well increase the uneasiness of the oppressors. For the Jews and the Arabs, who form the majority, the Allies are carrying on a real war of liberation. It was, indeed, the savage inhumanity with which the Young Turks treated the Arabs of Syria that roused their brethren in the Hejaz to revolt. A Turkish retreat through Palestine and Syria will be a retreat through hostile populations.

It is to be hoped that the retreat, if carried far, will be so hurried that the Turk will have no time to vent his spite (further) on the poor people whom he has driven into hostility towards him by his own sheer bad government and brutality.

The Future of Palestine.

In *Palestine*, the organ of the British Palestine Committee, the future settlement of that country is discussed, and, in particular, a proposal made by Commander Wedgwood that it should be put under the sovereignty of the United States:—

"What evidence is there," it is asked, "that she desires to undertake the serious responsibility for her involved in the annexation of Palestine? The proposal has been ventilated in *Harper's Weekly* by Mr. Norman Hapgood, but it cannot be said that it met with a particularly cordial reception. There is good reason to believe that precisely the argument which appeals to Commander Wedgwood repels many Americans. They do not want America to become involved in Europe, as a lodgment in the Mediterranean would involve her. Of the strength of that sentiment the British Palestine Committee has received evidence which convinces it that the American solution of the Palestinian question is not practical politics. That does not mean that America is indifferent to the revival of a Jewish national life in Palestine. She could not be unless the very powerful Jewish community in the United States were indifferent, and unless she had lost her sense of generous ideas. America will lend all her support, short of taking over Palestine herself, to the recreation there of a centre for the Jewish people. As we have the best of reasons for knowing, American Jewry favours a British Palestine. It cannot be doubted, therefore, that American influence at the Peace settlement will be directed to that end."

The Berlin-Baghdad Mirage.

The *Rheinisch Westfälische Zeitung*, dwelling on the Berlin-Baghdad dreams, which are again occupying the attention of the German public, says:—

The railway line from Constantinople to Baghdad is at present militarily important for Germany, which greatly desires to maintain a strong Turkey. But Turkey's military weakness lies in the little developed railway system in Asia Minor. If it were developed the railway would materially assist Turkey in her defence. German dreams about Berlin to Baghdad can, economically, only end in a fiasco. It is out of the question for the railway to achieve economic importance or even to replace the sea route. Whoever coined the words "Berlin to Baghdad," whoever defends them, is obscuring the eyes of the people from the fact that Germany possesses one outlet to the world—namely, across the North Sea, and that we want the freedom of the North Sea and its highways in order to be a free people in the future centuries. The fight with England would not have been spared us if we had tried to gain a free sea through Baghdad and Koweit. We must either free our sea towns from England or not be free at all.

An Admiralty notice in the *London Gazette* states that preparations are being made for the intended distribution of the Prize Bounty awarded for the destruction of a Turkish gunboat by H.M. submarine E.14 on May 1, 1915.

The Joint Finance Committee of the British Red Cross Society and the Order of St. John has just received a donation of £199 for Red Cross work in Mesopotamia from natives of Baghdad residing in Marseilles. The gift was handed to the British Consul-General at Marseilles "in grateful recognition of the occupation of Baghdad by British troops and its liberation from the Ottoman yoke."

GERMAN INTRIGUES IN MOROCCO.

A paper which Captain A. J. A. Douglas, of the Cameron Highlanders, read before the Royal Geographical Society last Monday, which described two journeys in the High Atlas in 1911 and 1912, was remarkable for its revelation of German intrigues in that country. In Mogador he had found a small international club and had been introduced to the leading European residents. He learned that the German firm of Mauesmann Brothers had a branch there. This firm was subsidised by the German Government, and had native and European agents scattered in the hinterland. The Germans were friendly, and in conversation with Captain Douglas took every opportunity of running down the French. They tried to dissuade him from going inland, telling him he would be killed by the Berbers of Atlas. They did not trust him, nor did he trust them.

Captain Douglas described the country he travelled through, the people and the castles in which the headmen of the clans lived. He said that he and his party were regarded with open disfavour by the natives as Christians. They were made to feel their inferiority, and insults were hurled at them as they passed through the streets of Morocco. He was nevertheless well received by the Governor of this city and by the headmen of other places to which he went, thanks to letters of introduction which he carried. At the castle of Arballo, however, the Khalifa would have nothing to do with the party, and they consequently found it impossible to push on to the castle of Glawi, for they had finished the supply of food for the mules, and the natives would not sell them any more. Captain Douglas, obliged to change his plans, made his way back, by another route, to Mogador, from which town he had started. In this part of his journey he had great difficulty with the headmen of the villages wherever he wished to stay. Once, having passed a villainous-looking man on horseback and armed with a long gun, he turned and saw that this individual had dismounted and was pointing the gun at him. Captain Douglas covered the man with his Mauser pistol, whereupon the would-be assassin remounted and rode off. An explanation of this and the other incidents appeared when Captain Douglas learned that the Germans had sent an emissary ahead of him to bribe the Berbers to put every obstacle in his path, and to kill him if a suitable opportunity of doing so quietly presented itself. He had been represented as an agent of the British Government sent to spy out the land preparatory to returning with an armed force to seize and occupy it. Next year when he visited the western end of Atlas he had a similar adventure. He and his party had got as far as the valley inhabited by the Ait Tubb tribe, a spot to which he was told no European had been before. The Sheikh was friendly, but refused to let the party go further, fearing they would be killed by hostile Berbers. They stayed ten days with this tribe. On the ninth day, as they were making ready to depart, two men arrived from the main range, saying they were sent by their Sheikh to invite the party to their village. Here again it was discovered that the intention was to ambush and kill the travellers, and that a German native agent had bribed the Sheikh who was to have committed the crime.

Of the country itself, Captain Douglas said that Morocco would be an extremely valuable asset to the French when they had time to devote their energies to its development. The climate of the coast belt was ideal, with a temperature seldom over 70 degs. in the summer, or under 60 degs. in the winter. There was sufficient rainfall, and the crops, even under native methods, were surprisingly rich. Under the hands of French agriculturists Morocco might well become one of the granaries of the world. Until now the system of native government had retarded and, in fact, almost prevented development. Under French protection this would be changed. The one great defect was the want of a good harbour on the Atlantic coast. Already the old order was changing, and it was not hard to foresee that under firm and wise government Morocco would come into her own. Her Atlantic coast might some day be a second Riviera.

In the course of a short discussion that followed, Mr. Douglas Freshfield, who presided, said that of the two things that had struck him most when visiting Morocco, one was the extreme barbarism of the people. He had felt while there that he was more among primitive surroundings than he had been in any other place in the Near or Far East that he had been to. The only place where he had had quite the same feeling had been in the heart of Central Africa. The other thing that had struck him was the unexpected greenness of the part of Morocco that he had visited. Strategically Morocco was extraordinarily important. From its coast could be controlled the shipping to the Cape, and largely that to South America also. It was, too, very convenient for the Mediterranean. No doubt the Germans had these facts in view when they attempted to get some kind of settlement or harbour either on the main coast of Morocco or on some of the islands not far off.

For the fifth time within a month, says Monday's French report from Macedonia, enemy airmen have bombarded the Allied hospitals at Eksison, although these are plainly marked with red crosses. Among the victims of the latest raid were 20 Bulgarian prisoners.

In a message from Salonika, Mr. Ward Price says that the monastery community of Mount Athos has sent a telegram to say that after a religious ceremony, attended by the principal Ecclesiastical personages, a proclamation was made of the community's formal adhesion to the Venizelist Government.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

All the indications that have been forthcoming in the last few months go to show that Germany has been badly off for an adequate supply of cotton for her textile industries, a fact in which Egyptian mill interests will take more than a passing interest. The reports received regarding the spinning industry show that the available supplies of raw material have been meagre, and there is little probability that the old sources of supply can ever again be tapped—at least, for some years. This is, probably, one of the reasons why the Germans have cultivated Turkish friendship with so much assiduity. In recent months extensive experiments in cotton growing have been made in those parts of Asia Minor which are served by the more westerly sections of the Baghdad Railway. We are told that these experiments have been pushed along on scientific lines, that extensive irrigation work has been undertaken, and that the Germans and Austrians have joined in the establishment of a cotton-buying association in order to develop a market for purchase of the raw material when it has been grown.

The project appears to be more or less a desperate one, and those who have studied the rapid deterioration of the Ottomans as a fighting factor will appreciate this fact. The British advances in Syria and in Mesopotamia lead to the hope that the Turks will presently be so busy in preventing the fissures in their Empire from growing that there will not be much time or space for experimental cultivation. The feeding of the Turks themselves will become a more urgent matter than the provision of cotton for idle mills in Germany, and it will not be surprising to learn that the Turks have revolted against the economic helotry to which their Hunnish masters appear to have condemned them. All the evidence there is shows that Turkey wants food and other domestic necessities, and the result of her need can have only one end. It will scarcely be toleration of further exploitation by her allies.

General Dobell's fine victory over the Turks at Gaza has had a gratifying effect on the Stock Exchange here, where Egyptian securities have appreciated in value. It must not be supposed, however, that we have ever believed that the boast of the Turks and the Huns that they would cut into the Suez Canal and over-run Egypt has ever received serious attention. We are able to judge the value of such vapourings very well; but there has been the possibility that the enemy might cause trouble, retard national developments, and, perhaps, thus interfere with crops and such like essential branches of trade. This possibility has now been eliminated, and nothing remains to obstruct the splendid wave of prosperity which has been washing the shores of the Protectorate.

I am glad to observe that the country receives increased attention in the British financial and commercial Press. The *Financier* and *Bullionist* devoted its leading article to the subject on March 31, and, while I was surprised to learn from my excellent contemporary—as all good

Britons in Egypt will be surprised to learn—that the country "is under the rule of the ex-Khedive, now known as the Sultan," it discussed in an informed and lucid manner the various industrial and commercial concerns operating in the country.

A report is published elsewhere in this issue of the further development in the establishment of the Anglo-Roumanian Chamber of Commerce. It will be seen from the list of the members of the Council that the new Chamber is composed of stalwarts, and that if human agency can avail in the rehabilitation of trade success is assured. Lord Bessborough is the chairman, a sufficient guarantee in itself; and with a strong staff, which is also in evidence, and the complete support which the personnel of the Council indicates will be forthcoming, the work of the Chamber should be definite and enduring.

The British Chamber of Commerce of Egypt, on the other hand, does not appear to be as effective as the needs of the country demand. A spirited discussion took place at a meeting held early last month, in the course of which it was pretty freely admitted that all was not as it should be. Lack of vitality and enterprise and narrowness of scope were some of the allegations to which no real defence was offered. Conviction of sin, however, is the first step to conversion, and with the new opportunities for trade which now present themselves in Egypt, and along the East Mediterranean littoral, I hope soon to hear that conversion has really taken place.

I have referred on many previous occasions to the fact that America—a welcome to our new Ally!—is engaged busily in study and penetration of Near Eastern markets. I was interested recently in a note submitted by the United States Consul at Mombasa (Mr. Henry P. Starrett) to the Bureau of Foreign and Domestic Commerce at Washington—the source of those very interesting reports on the commerce of the world—in which he described Mombasa, not only as a port of entry to a vast territory in East and Central Africa, but also as a model, so to speak, on which the requirements of the natives of countries in which my readers are interested can be gauged. He is worth quoting.

"When it is stated" (he writes) "that Mombasa serves as a port of entry to a vast territory in East and Central Africa within which there are not less than 20,000,000 natives, and that goods designed to meet their taste and pocket-book are equally appropriate for the important markets of the Red Sea coasts, Somaliland, Abyssinia, the Sudan, the Belgian Congo basin, and even parts of South Africa and the West Coast, it would seem that the prospect for the sale of prints, dyed goods, and blankets, made up to meet the peculiar requirements of this trade, might well be worth very careful consideration. Although present conditions may not warrant immediate action in this respect, plans should be laid for an extensive campaign looking to the introduction of such goods just as soon as shipping conditions become normal. Such a market can only be developed by careful preparation and energetic execution, and

by being able to keep actively in mind the peculiarities of the trade, the unquestioned development which is taking place in Africa despite the war, and the enormously increased future demand which this progress will stimulate." This is real, scientific commercial intelligence, and I commend it to the attention of British manufacturers, shippers, and all public bodies entrusted with the protection and development of trade interests.

Mr. D. E. Pachundaki, a member of the Egyptian Institute, in a lecture at Cairo recently, pointed out some of the defects in the Egyptian fishing industry, and offered remedy. "Egypt," he declared, "with a sea-coast of 2,800 kilometres, and with a great river cutting it through from south to north, should afford an extensive field for the development of the industry. Unfortunately, we find it as primitive now as it was in the days of the Pharaohs. The Red Sea side of the Egyptian coast is practically neglected, and fishing is restricted to the Mediterranean. Only a few Italian fishing boats work the coast near Alexandria on a more or less scientific basis. At Port Said there are only four fishing vessels!"

Little wonder is it that the quantity of the weekly haul is less than it was ten years ago, and the quality inferior; and I think some effect ought to be given to the suggestions which Mr. Pachundaki made by way of remedy. He believes the remedy would be for the public to interest themselves in the question with a view to making a special study of it on scientific lines and to the establishment of special study stations for marine biology, similar to those in Europe. A "reserve of fish" should be kept for breeding purposes, and it might be found feasible to carry out also artificial fecundation as is done in sixty different lakes of the United States.

Another famine in Egypt! The tobacco stock, writes the *Egyptian Gazette*, reduced by constant withdrawals without imports, now consists of 50,000 bales. This quantity will be consumed in a period of from two to three months; and the tobacco crisis is accordingly becoming very acute, and unless the Government takes steps either to revive the cultivation of tobacco in Egypt or to have tobacco imported from some sources abroad the country will find itself entirely without tobacco in three months' time." Prices, we are told, have soared, and Greek leaf of "the lowest quality" is now sold at from P.T. 55 to P.T. 70 by wholesalers, while retailers take the oke at the rate of from P.T. 88 to P.T. 90 and even P.T. 100. "The Turkish tobacco known as Samsoun and Basma has become very rare, and is kept for special clients."

The paper mentions a rumour that the Government has begun to study the revival of tobacco-growing in Egypt in the present circumstances, but admits that this lacks confirmation. The statement seems to have come from the fact that the authorities at the Tobacco Customs asked the wholesale merchants, when they withdrew their goods, about the qualities and values of the tobacco taken to the market. In the opinion of some merchants this new examination by the authorities means that the Government is anxious to know the kinds of tobacco which ought to be grown in the country.

Sudan Government Budget for 1917.

Increased Revenue Due to Trade Expansion--Darfur's First Balance Sheet.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 7.

The Sudan Government has just issued its Budget for the current year. Revenue is estimated at £E1,806,000 and expenditure at a like amount, the time-worn custom of balancing the estimates without showing a surplus or a deficit—surviving from the day when a subvention was annually received from Egypt to make both ends meet—having been followed this year. This estimate is 10 per cent. above that for 1916, when the figure was fixed at £E1,642,500.

The principal increases on the revenue side are Provincial (in which are included royalties, animal, land, date and traders' taxes) by £E31,200, to £E520,600; Customs by £E20,000 to £E200,000; Posts and Telegraphs by £E10,800 to £E76,000; and Railways by £E95,000 to £E765,000. On the expenditure side the main increases are:—Provincial, £E34,597; Finance Department, £E13,700; Agriculture and Forests, £E8,312; Post Office, £E8,184; and Railways, £E85,543.

The increases in expenditure are, in the case of the provinces, due to normal expansion, provision for which, for the reasons stated in previous reviews of the country's finances, is imperative if the Sudan is to follow the proper course of its development. The £E85,543 additional railway credit is almost entirely due to the high cost of coal and materials. Although, for similar reasons, an increase had to be granted to the Steamers Department, that increase has been more than set off by the elimination of non-recurring expenditure, which it has been possible to effect this year, with the result that the actual figure against this Department is £E8,486 less than it was last year. To compensate for the increased expenditure on coal and materials an extra 10 per cent. has been added to the railway rates, making a total addition in this direction of 20 per cent. since the outbreak of war. The balance of the increase in the railway receipts is due to improved traffic returns, despite reduction of trains, whilst the improvement in Customs receipts, though in a measure brought about by the rise in the price of articles on the world's markets, is at the same time due to increased foreign trade, and the expansion registered in the provincial receipts to improved internal trade conditions.

An Interesting Innovation.

One interesting feature in the new Budget is the inclusion for the first time of the newly conquered province of Darfur. The latter stands for the modest sum of £E10,800 on both sides of the account. As regards revenue, this figure is naturally but a rough estimate, owing to the imperfect knowledge which the authorities possess at present of the province's capacity at this very initial stage in its history. In the case of the expenditure the total outlay will be much more than £E10,800, but as the major portion will be borne by the War Department, which will still be very much taken up with the administration of the country, only what can be reasonably set against the civil administration has been allowed for in this part of the Budget.

A Comparison with 1913 Budget.

A comparison of the current year's Budget with that for 1913, i.e., the last normal one issued before the war, shows that, allowance being made for the extra 20 per cent. added to the railway rates, which has been included in the estimated receipts as well, the total revenue this year is expected to be £E42,000 better than was anticipated four years ago, whilst an additional expenditure of £E72,000 has been allowed for. Again, leaving out of consideration the Railway receipts, which despite the fact that they are inflated by the extra rates, show an expansion

in traffic, it is interesting to note that the Provincial Receipts and those from the Customs are this year assessed at practically the same figure as four years ago. The former are put down at £E520,600 against £E519,000 and the latter at £E200,000 against £E203,000. In the first case this plainly shows that the effects of the bad rains and low flood, which made themselves felt in 1913-1915, have worn off, and that the country has completely recovered; in the case of the Customs, although, as already stated, some of the increase must be assigned to the general rise in the world's markets, nevertheless the statistics show that the foreign trade of the country is flourishing. The combination of these two factors with the fact that railway traffic has improved may be taken as a sure indication that the economic condition of the country and of its inhabitants has not suffered one whit from the war.

A Cautious and Fair Estimate.

That the figures, on which these deductions are based and which have been fixed in the Budget for this year, are not exaggerated, that in fact they are fully justified, is proved by the latest statement of accounts to hand for the period ending November 30, 1916. In that statement the revenue collected is shown as £E1,666,101 and the actual expenditure incurred as £E1,430,456. During the concluding months of the financial year the revenue and expenditure are always proportionately greater than the average of the other months; usually the outgoings are much higher than the incomings. As it happens, November shows an excess of revenue over expenditure during the month. If we allow revenue for December at the average of the preceding months and instead of basing the expenditure on the same average take the higher figure of December, 1915, we find that the estimated revenue for the current year is slightly below what should in the circumstances be the final revenue for 1916, and that the expenditure is about £E160,000 higher than what the total should be for the past year. Thus it is evident that the Budget for the current year has been framed with the prudence and skill which Bernard Pasha, the Financial Secretary, has consistently displayed throughout his long direction of the Sudan finances, and that it presents a very fair estimate of what the country's financial resources may reasonably be expected to be during the current year.

The Past a Record Year.

In conclusion it may be pointed out that at the end of November the revenue collected had exceeded the estimate for the entire year and that a surplus of just under a quarter of a million was available. As already explained, however, it is highly probable that the December account will show that the debit side increased out of proportion to the receipts during the month, with the result that the above surplus will be considerably reduced. Even so we can safely count on a surplus of well over £E100,000. This is eminently satisfactory and is in reality more so than would appear at first sight, for on looking up the statistics we find that this constitutes a record for the Sudan, the previous highest surplus having been £E97,301 in 1912. What makes this even more noteworthy is the fact that in 1912 the Sudan was in receipt of a subvention of £E163,000 from Egypt, whereas to-day she does not receive one red cent of financial support from outside. There can be no doubt whatsoever that the whole position in the Sudan reflects the greatest credit on all concerned, especially on the staff of the Financial Department and on the Provincial authorities, without whose cordial co-operation the retrenchment rendered necessary during the early period of the war could not have been carried into effect with such little ill effects, indeed with such happy results as the political and economic situation of the Sudan reveals to-day.

ANGLO-ROUMANIAN TRADE.

Establishment of the New Chamber of Commerce.

A meeting presided over by the Earl of Bessborough was held at the London Chamber of Commerce on April 2 for the purpose of taking the initial steps to form a British Roumanian Chamber of Commerce, having for its object the promotion of trade between the United Kingdom and Roumania. A number of influential business men were present, including his Excellency the Roumanian Minister (M. N. Misu), who was elected President of the Chamber. The Earl of Bessborough, Chairman of the Bank of Roumania, Ltd., and Sir Albert K. Rolit (Consul-General for Roumania) were elected Vice-Presidents, and an Executive Committee was appointed to settle the memorandum and articles of association and by-laws and generally to conduct the affairs of the Chamber until the first general meeting of the members. Mr. H. Locke (London manager of the Bank of Roumania, Ltd.) was elected honorary treasurer of the new body and Mr. Charles E. Musgrave (secretary of the London Chamber) honorary secretary.

The formation of the Chamber is the outcome of an expressed desire on the part of those connected with Roumanian trade that some active steps should be taken to embrace the opportunity, which will present itself after the war, of considerably extending Great Britain's trade with Roumania, having regard to the fact that signs are not wanting that Roumania is not prepared to extend to her present enemies the trade welcome they enjoyed before the war. The British-Roumanian Chamber of Commerce will be solely devoted to British-Roumanian interests and a number of influential firms have intimated their intention of giving it their fullest support.

The following have agreed to serve on the Council:—Mr. Edward T. Agius (E. T. Agius Ltd.), Mr. E. W. H. Barry (Director of the Bank of Roumania, Ltd.), Mr. R. Blenkinsop (Director of May and Baker, Ltd.), Mr. George Bonar (Low and Bonar, Dundee), Mr. G. Bonesco (Commercial Attache to the Roumanian Legation in London), Mr. A. Borneman (Ruston Proctor and Co., Ltd., Lincoln), Mr. H. Ernest Crawley (Crawley, Dixon and Co., Ltd.), Mr. J. F. Cleeves (Cleeves and Co.), Mr. J. P. Dickson (Denny, Mott and Dickson), Sir Trevor Dawson (Vickers Limited), Mr. Edward Dean (R. Hood, Haggie and Son, Ltd.), Mr. H. C. Field (Alfred Field and Co., Birmingham), Lord Furness (Furness, Withy and Co.), Mr. H. C. Godfrey-Ashton (Wilkinson, Heywood and Clark, Ltd.), Lord Goschen (Chairman, London County and Westminster Bank, Ltd.), Mr. Frederick Greenish (John Greenish and Sons), Sir Clarendon Hyde (S. Pearson and Son, Ltd.), Mr. Samuel Lamb (Coddington and Lamb, Manchester), Mr. E. H. Langdon (S. L. Behrens, Manchester), Mr. J. K. Lees (A. and A. Crompton and Co., Ltd., Shaw), Mr. H. Locke (Manager of the Bank of Roumania, Ltd., London), Mr. Edward Manville (Birmingham Small Arms Co., Ltd.), Mr. S. F. Mendl (F. Mendl and Co.), Mr. E. W. Morgan (Managing Director of Howse, Mead and Sons, Ltd.), Mr. Percy Quilter (Roumanian Consolidated Oilfields), Mr. C. C. Railton (Chairman, Calico Printers Association, Ltd., Manchester), Mr. James Spence (Debenhams, Ltd.), Mr. T. M. Thornton (Levy Bros. and Knowles Ltd., Manchester), Mr. W. M. Watson (Watson and Youell), Mr. F. P. Archbold (Watson and Youell).

It is stated, with reference to the Greek Debt, on page 37 of the recently-published annual report of the Council of Foreign Bondholders, that it had been decided to centralise in Paris the administration of the funds applicable to the service of the debt. The Council desires to correct an omission inadvertently made in this statement, which should read that centralisation was only contemplated in the event of a rupture of diplomatic relations between the Greek Government and the Allied Powers.

BRITISH TRADE IN EGYPT.**Criticisms of the Chamber of Commerce.**

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 7.

On Tuesday evening last a meeting of the Cairo members of the British Chamber of Commerce was held at the offices of the Anglo-Egyptian Bank. A discussion ensued as to the promotion and consolidation of British trade interests in Egypt, and it was unanimously decided that an improvement in the status of the Cairo Committee was imperative, so as to enable it to extend its scope of action and respond more to the needs of the situation than it has done in the past. This decision is a most welcome one, and it is sincerely to be hoped not only that it will speedily be given effect to, but that it will prove to be the forerunner of a radical revision and reorganisation of the Chamber as a whole and of its methods.

The Chambers' Journal.

For some time there has been a decided feeling abroad that the British Chamber of Commerce in Egypt has not been satisfactorily filling the rôle towards British trade interests that it should have done, and that it has lacked vitality and enterprise. Certainly, if the *Journal* may be regarded—and there is, after all, no reason why one should not so regard it—as an outward reflection of the inward energy, activities, and intelligence displayed by those responsible for the direction of the Chamber's labours, it is not in the least bit surprising that dissatisfaction is expressed.

There can be no doubt that if we are to emerge as successfully as we ought from the general trade war which lies ahead of us we must be more efficiently and more intelligently organised abroad for the defence and promotion of British trade interests. For that organisation the existing system of Chambers of Commerce should find a place, but those chambers, if they are going to play a useful part in the furtherance of British trade interests, must necessarily be directed by the most able, the most active, the most broad-minded, and the most enterprising members of the local British commercial communities. They must not be over-conservative and hidebound in their ideas, but accustomed to move with the times and to strike out in fresh directions and readjust their methods as new circumstances arise—men who thoroughly understand the requirements of the situation and are fully alive to the great responsibility they have assumed towards their fellow traders. They must be men, too, who, whilst naturally watching over local interests, will not be inclined to take too parochial a view of questions that may arise, but will study them and take action in regard to them from the Imperial standpoint as well.

Change Foreshadowed.

It must be admitted that individual members of the British Chamber of Commerce in Egypt have repeatedly shown marked initiative, public spirit, and enterprise, but it cannot, I think, for one moment, be contended that the Chamber, as a corporate body, has hitherto satisfied the conditions which, in the future, even more than in the past, should characterise the work of all representative bodies instituted for the protection and furtherance of British trade interests abroad. It is therefore to be hoped that the decision of the Cairo members will be carried out without delay, and that a radical reorganisation of the Chamber will follow, so that the latter may, before it is too late, be enabled to take up its proper rôle towards Imperial trade in general and British trade in Egypt in particular.

The Greek steamer *Mentor* is reported to have been sunk after being in collision with a British steamer.

The Russian Provisional Government has decided upon simplified procedure in the creation of limited companies. The Ministry of Commerce and Industry will now deal with such matters, which will not have to be referred to the Cabinet.

LANCASHIRE COTTON TRADE.**No Activity and a Poor Outlook.**

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Tuesday.

This has been a short week in the market and no activity can be recorded in any direction. Buyers continue to mark time and the prospects remain poor. It is understood representations have been made to the Government with regard to the small amount of tonnage available for the export of cotton goods, but it is doubtful whether the authorities are in a position to give special facilities to Lancashire traders. In raw cotton circles there has been some nervousness owing to the possibility of changes in prices as a result of political developments in the United States. A fair amount of buying continues to take place by Lancashire spinners in Egyptian cotton and supplies are by no means plentiful. Shippers of piece goods to Egypt have acted with caution and although occasional sales have been put through in sized cloths most of the buying is said to be to replace goods lost in transit. Fancies have not attracted much attention. For India comparatively few offers have come through from the other side and shippers here are in no mood to anticipate future wants. Some inquiry has been about in grey shirtings for China but very little progress has been made by buyers and sellers. Miscellaneous cloths have been in fair request for South America. Numerous manufacturers have made arrangements to stop the sheds for a longer period than usual this Easter time. American yarns have been rather firmer in quotation partly owing to the extended holidays in the Oldham district, and some spinners are hoping to obtain relief by the curtailment of production. Fresh business of any importance has been scarce. No revival of demand in export yarns can be recorded and shipping difficulties continue to check trade. A little more activity has recently occurred in the finer numbers of Egyptian yarns but there is plenty of room for improvement in coarse carded numbers and producers of 60's twist would appreciate more orders.

GERMANY AND THE FLAX INDUSTRY.

German spinners and weavers of flax have been well employed during the past few months. Not only have goods orders been received from the military authorities, but there has also been a large demand for civilian goods. Owing to the development of flax cultivation, about 23,000 acres have been put under seed; wherefore Germany expects to be largely independent of foreign sources. Furthermore, a large percentage of the territories occupied in the east and west is highly suitable for flax cultivation, and it is hoped that Austria-Hungary, the Balkans, and Asia Minor will become sources of future supplies, while Russia may soon be boycotted in this respect. Up to the outbreak of war Germany was Russia's chief customer, taking 80 per cent. of her total production of flax.

AGRICULTURAL DEVELOPMENT.

The Board of Directors of the Sultania Agricultural Society have just arrived at two important decisions.

First.—The extension of the technical works of the society by (a) the appointment of an agricultural counsellor to direct its experimental farms at Baltim, as well as its entomological, botanical, and chemical sections in order to be able to unite the works of these sections together for the realisation of a programme which meets the requirements of the country; (b) the appointment of a new inspector for Lower Egypt, possessing the diploma of the Higher School of Agriculture at Giza, thus raising the number of its inspectors in Lower Egypt to three. (c) Increasing the number of its employees who are graduates of the Higher School of Agriculture by reserving for them the posts of delegates and controllers in the provinces which may become vacant, as well as the posts in the technical sections.

Second.—The purchase of 8,000 more tons of nitrate of soda and fixing the selling price of this article at P.T.2,375 per ton, delivered at its Alexandria depot. This price represents the purchase price plus the price of sacks and expenses.

ADEN SKINS MARKET.**Rapid and Substantial Fall in Prices.**

We referred recently to the prices of skins in the Aden markets at the end of November, 1916. The upward tendency of the prices then paid for goat and sheep skins apparently reached its limit at the end of the year. So far as can be learned, the highest price paid for skins was Rs.55 per score, which is more than twice the normal price. Sales at this figure were reported during the last week in December.

Beginning the new year prices began to fall, and prime skins could, on January 15, be bought for Rs.35 per score, as against Rs.55 per score paid less than a month ago. The tendency is still downward, and well-known buyers predict a return to the normal price of Rs.20 to Rs.25 per score. Most of the experienced dealers have temporarily ceased buying. It is said that probably only one local firm stands to lose heavily, because of large stocks acquired at the high prices prevailing just before the break came. Other firms will have some loss.

Several causes are reported as responsible for the decline in prices, but the four principal ones seem to be as follows:—

(1) Large stocks purchased and accumulated, awaiting freight space, which is scarce and costly. One firm with unusually large stocks is said to have recently bid £26 a ton on space for skins from Aden to New York. Even at that figure the firm was able to secure only a limited amount of space.

(2) Heavier arrivals from Abyssinia and Somaliland, which always occur during the winter months.

(3) Scarcity of ready cash to pay native sellers of skins.

(4) A weakening of the demand under the abnormal advance in prices. The demand has not yet recovered, and it is predicted that prices must and will decline still more before there is a recovery.

In the nine months from April 1, 1916, to December 31, 1916, the number of goat and sheep skins shipped from Aden to America was 3,571,565, valued at £471,025, as against 3,773,726 skins, valued at £281,892 for the entire year ended March 31, 1916.

GREEK LUMBER MARKET.

Before the outbreak of the European war this district received its chief supplies of lumber from Austria-Hungary, wrote Mr. A. B. Cooke, U.S. Consul at Patras, to the Bureau at Washington on December 29. After this source was closed, local lumber importers turned to the American market for their supplies, and during 1915 and the first half of 1916 large supplies of both lumber and staves were bought. Freight rates, insurance, and the costs of transportation in general had risen to such a high mark by the summer of 1916 that importers found it difficult to do business in the United States. The ocean freight amounted to three or four times the original cost of the lumber or staves on the American market.

Importers, looking for some source from which they might secure supplies at less cost, turned to Spain, and during the last half of 1916 considerable purchases were made in that country. The lumber imported was a species of elm and of poplar, which was brought in by small sail ships either in the form of heavy boards of a six-foot length or in small cuts of the same length. Freight and insurance were, of course, much cheaper than those covering shipments from America. This lumber was for the construction of currant cases or barrels. For such purposes it appears that the Spanish article is inferior to the American. The staves turned out are crude in appearance and make a much less satisfactory container than the stave brought from America; the case makes also a less attractive container than that made from American wood.

Returns from India show that no jute bags were shipped from India to Egypt and Levantine ports in January, 1917. The figures for the same month last year were 250,000.

TRADE NOTES.

Licences.

The following notifications appear in the *Egyptian Journal Officiel*:—The following have been granted licences to trade in Egypt, with the British Empire and with Allies of Great Britain:—Ratcheff, Ivan Mintcheff, 2, Rue Varda, Alexandria; Toumangheloff, Dincho Luca, 19, Rue Sidi Metwalli, Alexandria; Picciotto, Raphael Mayer de, 7, Rue el Achi, Abdin, Cairo; Barbouleff, Petre Nentcho, 2, Rue Abou Varda, Alexandria.

Licence No. 120, dated January 25, 1916, granted in respect of the business of Kunzler and Co. for the purpose of liquidating only, is this day withdrawn, and all remaining assets of the liquidation are forthwith vested in the Public Custodian of enemy property. The appointment of Mr. R. E. Moore as controller of the liquidation is cancelled.

Notwithstanding the prohibition against trading with "The Anatoli Insurance Company, of Athens," contained in the Proclamation of January 19, 1917, licence has been granted to the company's representative in Egypt to continue relations with persons in Egypt insured with the company prior to January 25, 1917, subject to the limitations and control set out in the licence.

The licence granted in respect of the business of "Steava Romana" for the purpose of liquidation has been withdrawn, and the assets have been vested in the Public Custodian of Enemy Property, Egypt.

A similar announcement has been made in respect of the business of Escher Jesumann and Co.

Contracts.

The Egyptian State Railways and Telegraphs has placed the contract for the supply of winter clothing for the winter season, 1917-1918, with Messrs. C. J. Webb and Co., Ltd., London, as follows:—Blue uniforms, for cawasses, double and single breasted, at £E2,400 mills, and £E2,198 mills, respectively. Ordinary, at £E1,711 mills. Dark grey uniforms ordinary, at £E1,197 mills. For Loco. Department watchmen and sailors, etc., at £E1,303 mills. Blue overcoats, for cawasses, double and single breasted at £E2,048 mills, and £E1,760 mills respectively. Ordinary, at £E1,650 mills. Light grey overcoats, ordinary, at £E1,150 mills. Dark grey overcoats, for Gaffers and Bridges Department employees, at £E1,231 mills. For Loco. Department watchmen, at £E1,352 mills. These prices are per overcoats and uniforms, including packing in bales and delivery free into the Administration's Central Stores at Boulac, Cairo.

Liquidation.

The Société d'Exportation Hongroise-Levantine, Caïre, is liquidating its affairs, and the Receiver, Mr. W. B. Delaney, notifies that all persons having any claims or demands against the firm are required to send particulars in writing of their claims or demands addressed to the Receiver at Standard Building, Shawa

Soliman Pasha, Cairo, on or before April 15, 1917.

CASTOR-OIL SEED PRODUCTION.

At a recent meeting of the Egyptian Institute, Cairo, M. Victor Mosseri read a paper on the "Influence of Soil and Climate on the Weight and Oil Production of Castor Oil Seeds." He referred to the experiments carried out by him at Kom Ombo with seeds brought from France, and those carried out at Belkas with the same variety of seeds produced at Kom Ombo.

These experiments, said M. Mosseri, showed that the same number grown at Kom Ombo was in Lower Egypt or even in France. The weight of 100 seeds brought from France was 53.10 grammes, that of the same number grown at Kom Ombo was 54.30 grammes, while that of those grown at Belkas was 46.80 grammes. He concluded from these experiments that the same variety of seeds becomes richer in hotter and drier climates, and that the fertility of the soil was not so important in determining the production of castor oil. He also referred to experiments carried out by Mr. F. Hughes, Chief Chemist of the Ministry of Agriculture, in seventeen different varieties of castor oilseeds.

Mr. Hughes then explained that, as a result of the experiments carried out by him, he had come to the conclusion that the different varieties showed the same result as regards the chemical and physical character of ricinolic oil, if grown side by side.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds,
Broadcloths, Coatings, Hosiery, Rugs,
Puttees, Uniforms, &c., &c. . . .

CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,

CAWNPORE, INDIA.

Army Boot and Equipment Manufacturers.

CONTRACTORS TO THE INDIAN, EGYPTIAN AND
OTHER GOVERNMENTS.

THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,

CAWNPORE, INDIA.

Tanners and Curriers, Leather Goods Manufacturers.

Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.

CAWNPORE, INDIA.

Spinners, Weavers, Bleachers, Dyers, and
makers of every description of Cotton
Goods such as TENTS, DURRIES (Cotton
Carpets), and other Floor Coverings,
Dusters, Towels, Bed & Table Linen, &c., &c.

Contractors to various Government Departments for
Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co., Ltd.

DHARIWAL, PUNJAB, INDIA.

Sole Manufacturers of the Famous . .

Dhariwal
Long Life Wool Wear

Costume and Suiting Materials, Blankets, Rugs,
Lohis, Hosiery, Puttees, Uniforms, Liveries, &c. &c.

CONTRACTORS TO GOVERNMENT.

ENGINEERING NOTES.

Agricultural Machinery in Egypt.

In a recent issue of the *Egyptian Gazette*, a correspondent discusses the dearth of agricultural machinery in Egypt, which, he says, is due to two main causes: (a) the cheapness of labour, which renders such labour-saving devices less indispensable, especially in the case of the small cultivator whose means are limited; and (b) the lack of roads,* to enable threshing and other machines to be transported from place to place. It is true that a few of the larger estates and dairas employ threshing and ploughing machinery, but the number of these large enough to warrant such an outlay is small. If more agricultural roads existed it would be easy for several neighbouring estates to combine and purchase a threshing machine, which could be transported in turn to the different properties at harvest time. The same system could be adopted in the case of steam-ploughing tackle, and the motor tractors of which so much has lately been heard in England. Besides the private combination of landowners suggested above, it is probable that, with a better road system, good profits would be assured to a company or society who carried on business by hiring out agricultural machinery to individual cultivators, charging so much per ardeb for threshing and so much per feddan for ploughing.

Steam Ploughing.

The advantages of steam-ploughing would be: (a) deeper ploughing, and consequently larger yields; (b) a decrease in the number of working cattle, with a corresponding reduction in the barley, bean and bersim areas,† whereby the land so economised could be devoted to wheat and maize for human consumption; and (c) a saving to the farmer of the cost of keeping a large number of animals mainly employed only for ploughing. By the employment of threshing machinery, a great improvement in the conditions of the grain would be obtained, which would mean a higher price to the cultivator. The time saved in threshing by machinery would enable him to sow his summer crop earlier than if he had to wait to finish his harvesting by the old methods.

Need for Agricultural Roads.

It has frequently been stated that the chief objection to the employment of harvesting machinery in Egypt is that, by this method, the *tibn*, or chaff, is not bruised and broken up into fine particles as by the *norag*, but is merely cut into small pieces. By means of the bruising attachment now supplied by makers of harvesting machinery, this objection could be easily overruled. Any straw not required for horse and cattle feeding could always be utilised for paper-making, etc.

Without an improved system of agricultural roads, however, we have seen that little can be done to encourage the use of agricultural machinery in Egypt, but at this time, when every feddan possible is required for the production of human food, it seems a pity that, for lack of such roads, large areas should be yearly devoted to the raising of food for working animals, not to mention the other advantages which would accrue from a more extended use of agricultural machinery in the country. It may be objected that the present is no time to suggest any extra outlay

of public money on road-making, but the Imperial food-supply question is one for all time. It is true that, during the war, it would be almost impossible to import agricultural machinery even if a demand for it existed in Egypt, but, after peace has been signed, it will be necessary to develop to the utmost the food-producing capacity of the Empire, and an increase in the number of agricultural roads will be necessary to enable Egypt to contribute her share, as well as to render her independent of foreign food supplies. Much encouragement to importers of agricultural machinery could be afforded by the Government if the latter were to reduce or entirely suspend, as is done in Russia, the import duty on such machinery. The fuel question seems likely to be solved as the result of the experiments conducted by Mr. John Wells on behalf of the Egyptian Government, for the production of charcoal from cotton-sticks, etc.

Gezira Canal Works.

Work on the construction of the excavator for the Gezira canal is going on apace at Makwar. The excavator, the *Egyptian Gazette* understands, will be ready within a month. The designer, Signor Fiorentino, has gone to the Sudan in order to start it working himself. The excavator is a huge machine in the style of a dredger movable on rails, which will be capable of excavating a canal about twenty yards (sixteen metres) wide, depositing the earth excavated on the sides of the canal, thus making an embankment or a level road. Another excavator is going to be put up also and possibly others still, which, when in full operation, will considerably expedite the excavation of the canal. Trial pits, or shafts, for the Barrage are now being sunk on the eastern bank of the river at Makwar. The object of these, as of those which have already been dug on the western bank of the river, is to ascertain the nature of the strata where the Barrage is to be built, and select the most suitable site for it.

THE SUEZ CANAL.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916.	1917.
March 27	Francs. 130,000	Francs. 110,000
March 28, 29	410,000	320,000
March 30†	340,000	450,000
March 31;	130,000	100,000

The following items appear in the British Treasury Accounts for the financial year ended March 31, 1917:—

RECEIPTS.	
Shares drawn and paid off	£10,795
PAYMENTS.	
Issued to reduce debt under the Finance Act, 1898	£10,795

The Board of Directors has decided that from July 1, 1917, the Transit Dues will be increased from 7fr. 75c. to 8fr. 50c. per ton for Loaded Ships, and from 5fr. 25c. to 6 fr. for Ships in Ballast.

The Times writes: "It would seem unwise to suggest that the rise in the Suez Canal dues as from July next, is likely to prove the forerunner of an increased dividend on the shares in May. Although the dues have been advanced altogether by 2fr. 25c. since the outbreak of war, owing to the abnormal conditions, the dividend has declined from 165fr., paid in 1911-13, to 120fr. for 1914 and 1915. The expectation at present seems to be that the dividend for 1916 may fall to at least 100fr. and may possibly be reduced further. A falling off in receipts and greatly increased working costs were to be anticipated, and the forthcoming rise in the dues is only expected very partially to counteract the unfavourable experience of the company. That this view is the correct one receives confirmation in the fact that on the Paris Bourse the price of the shares fell 30 points to 4,360fr."

A serious outbreak of plague has broken out among the fowls in Egypt. The fowls die twenty-four hours after the first symptoms have made their appearance, and there seems to be no remedy. The Government have attempted to localise the disease, but the veterinary surgeons have been unable to effect any serious progress in this respect owing to the distrust of the fellahs, who refuse to notify outbreaks of the malady.

COMPANY NOTES.

Dividends, Payments etc.

The half-yearly coupon for interest due on the Ottoman 4 per cent. Loan on April 10, 1917, will be paid on and after that date by Messrs. Glyn, Mills, Currie and Co., 67, Lombard Street, E.C.

The Eastern Telegraph Company, Limited, announce the payment by warrants on May 1 of interest for the half-year to April 30 on the 4 per cent. mortgage debenture stock.

Messrs. J. Henry Schröder and Co., 145, Leadenhall Street, E.C., make the following announcements on behalf of the Roumanian Government:—4½ per cent. redeemable gold bonds 1913:—The half-yearly interest due April 1 was payable on April 2 and any succeeding day.

Messrs. J. Henry Schröder and Co. have received additional funds in respect of the coupons and drawn bonds, the payment of which has been delayed owing to temporary exhaustion of funds. Such coupons and bonds may now be lodged at their counting-house.

The directors of the Ionian Bank, Limited, recommend a final dividend of 2s. 6d. per share, together with a bonus of 1s. per share, both free of income-tax, subject to audit, for the half-year ended December 31-January 13, 1917, making with the interim dividend 6 per cent. per annum for the year 1916.

The Bank of England are prepared to receive the coupons due on April 15 on Egyptian Preference Bonds: the necessary lists can be procured on application at the Dividend Pay Office.

Company Meetings.

The fourteenth ordinary general meeting of the Agricultural Bank of Egypt will be held at the head office of the Bank in Cairo, on Wednesday, April 25, 1917, for the purpose, among other things, of:—Receiving the directors' report; receiving the auditors' report; approving the accounts for the period ended January 31, 1917; declaration of dividends; election of directors; election of auditors and fixing their remuneration; and the transaction of the general business of the ordinary general meeting.

The ordinary general meeting of La Société Egyptienne d'Irrigation will be held in Cairo on April 14.

Oil Outputs.

British Maikop.—Week ended March 24, 2,202 poods.

Bibi Eibat Oil.—Week ended March 25, 879 tons.

Cheleken Oilfields.—Fortnight ended March 24 (N.S.), 382 tons.

Baku Russian Petroleum.—Week ended March 24, 71,800 poods.

Black Sea Amalgamated.—Week ended March 24, 298 tons.

Maikop Combine.—Week ended March 24, 240 tons.

It has been finally decided to transfer the Technical Department of the Egyptian Ports and Lights Administration to the Ministry of Public Works, where it will form a branch of the Mechanical Department of that Ministry, with effect from April 1, which is the beginning of the financial year.

It is now believed that Mr. Dudgeon, Adviser to the Ministry of Agriculture, has prepared a report on the question of tobacco growing, objecting to the revival of this cultivation in Egypt for certain reasons. According to the *Ahram* the Adviser, who has drawn up that report after a careful study of the matter, will present the document to the Agricultural Commercial Council.

* According to the Egyptian Government Almanac for the year 1917 (page 208), only 3,810 kilometres of main and agricultural roads are maintained by the Main Roads Department of the Ministry of Public Works, say 2,386 kilometres in Lower Egypt, and 1,424 kilometres in Upper Egypt.

† Areas under barley, beans and bersim, in feddans:—
1913-14 .. 383,342 .. 428,497 .. 1,323,097
1914-15 .. 445,615 .. 623,321 .. 1,318,337
1915-16 .. 422,765 .. 502,812 .. 1,206,907

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON AVENUE, E.C.

There is a firm tone in our market, but business is still short. All the advices from Egypt are of a favourable nature, and, sooner or later, this is bound to be reflected in the share market.

The feature of the week has been the rise in Egyptian Unified Bonds, which are a further $\frac{1}{2}$ up at 82. Agricultural Banks have been done in a small way at $5\frac{1}{2}$, and the deferred shares have changed hands at the advanced level of £345, with buyers at the finish at £350.

In National Banks some transactions have taken place round 13 $\frac{1}{2}$, showing a slight advance since last week. The dividend of 12s. per share, against 8s. last year, is satisfactory in view of the fact that the earnings have been largely in excess of this distribution.

There has been a revival in Delta Light, which, on some small lock-up purchases for after the war, has improved from 5 to $5\frac{1}{2}$. Both Delta Lands and New Egyptian have been wanted at 8s. 3d. In Salt and Sodas about 500 shares changed hands at 9s. 3d., closing buyers at this price, with sellers at 20s.

In Egyptian Markets 25s. 6d. has been paid and the shares are still in demand. Gharbiehs are wanted at 16s. 3d., but sellers are scarce. United Lands have changed hands at 6d. Khedivial Mail have been firm round 28s. 3d.

The Behéra preliminary financial figures for 1916, just received, show a much improved financial position, the bank debt having been reduced from about £91,000 to about £26,000. The net profit, after providing for all expenses and debenture service, is £38,311, against £22,562 for 1915, which is equal to the full 5 per cent. on the prefs., and over 5 per cent. on the ordinary. But no dividends are paid, £12,000 being written off for extraordinary depreciation on work-shops, plant, and material, and £7,881 against discount on debentures; while £18,430 goes to swell the balance at credit of profit and loss account to £74,918.

In Greek securities the demand has continued, but lack of sellers has restricted business. Some business took place in Currant Bonds at 88. Rente has been done at $41\frac{1}{2}$ ex div., and Funding at 49 ex div.

Oil Shares.

This market has been exceedingly quiet. An improvement has been shown by Anglo-Egyptian "B" at 11s. 3d. One or two deals were recorded in Roumanian Consols on the basis of 9s. 3d. Spies also came to business a few times either side of 14s. Russian Petroleum changed hands at 1s. 9d. North Caucasians were done at 27s. and over, and Urals were dealt in at 32s.

Paris Bourse.

While there has been no improvement in the general demand, the quantity of available securities has been smaller, and prices have been maintained. Suez Canal shares eased to 4.360. Other quotations are:—Egyptian Unified, 91.50; Turkish Unified, 63; Credit Foncier Egyptien, 635; Ottoman Bank, 418.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, April 5.

There has been a better demand for money, due mainly to the fact that on Tuesday payment had to be made for £50,000,000 Treasury Bills issued last week. Short loans have commanded from 4 to $4\frac{1}{2}$ per cent., although, later, balances were offered at $3\frac{1}{2}$ per cent. and less.

The discount market has been weaker, two, three, and four months' bills having been quoted at $4\frac{1}{2}$ per cent., and six months' at 4 9-16 to $4\frac{1}{2}$.

Treasuries were easier at $4\frac{1}{2}$ to $4\frac{3}{4}$ per cent. Exchange on Alexandria varies between 97 and 97 $\frac{1}{2}$ piastres to the pound sterling.

NOTICE.

THE AGRICULTURAL BANK OF EGYPT.

Notice is hereby given that the FOURTEENTH ORDINARY GENERAL MEETING of the Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Wednesday, the 25th April, 1917, at 4 o'clock p.m., for the purpose, among other things, of:—

Receiving the Directors' Report;
Receiving the Auditors' Report;
Approving the Accounts for the period ended 31st January, 1917;
Declaration of Dividends;
Election of Directors;
Election of Auditors and fixing their remuneration;
And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 4th April, 1917), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

In Egypt—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.

In London—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

F. T. ROWLATT, President.
Cairo, 23rd March, 1917.

EGYPTIAN FINANCIAL MARKET.

We take the following review from the monthly *Journal* of the British Chamber of Commerce in Egypt:—

The great feature of the past month, financially, has certainly been the tremendous success of the new British War Loan, constituting a real victory for the Allies, for, more than ever now, money forms the sinews of war. Egypt has taken a very honourable place in the list of subscriptions, the total of which, some £5,000,000, being a fresh proof of the prosperity of this country. In spite of this enormous drainage of capital, our financial market has, none the less, maintained its interest in local securities, and scarcely had the lists of subscriptions to the War Loan closed than regular buying began again, not only of Egyptian Government stock, but of nearly every other class of shares. The most noticeable advance has been in the shares of the brewery companies, due chiefly to the approach of the final dividend for the year, which, with the interim dividends already paid, will make a total of 60 fr. a share for each of the two companies. Besides this distribution of profits, both companies have passed large sums to the reserve, thus fully justifying the present high value of their shares.

The purchase by the Société Générale des Pressages of a controlling interest in the Société des Presses Allemandes not only constitutes a guarantee of security for stockholders in this latter company, but shows that German controlling influence in commercial concerns in this country is gradually but definitely becoming a thing of the past.

In the House of Commons, Colonel Yate asked the Secretary for India whether officers and men of the troops serving in Persia and on the Persian and Afghan frontiers would now be given the same rate of exchange of rupees into krans as that granted to gazetted and non-gazetted officers of the Indo-European Telegraph Department in Persia. Mr. Chamberlain: The Government of India referred this question to a Committee, whose recommendations are now under consideration. A decision will be arrived at as soon as possible.

NOTES OF THE WEEK.

The war time-table is conforming with the calendar rather than with the weather, and the Allies have no fault to find with the initial instalments of the spring offensive. On one sector of the Western Front the Germans sought to disorganize Franco-British plans by a withdrawal on a line stretching from Arras to Soissons; but the Allies accepted the challenge with an alacrity for which they had not been given credit, and the enemy's retirement took place under constantly increasing pressure. Before it had come to an end the British Army launched an attack of its own from Arras northwards, and no comfortable theories regarding a Hindenburg line help the Germans to explain away the loss of 9,000 prisoners in the first day's fighting, apart from the capture of such an important position as the Vimy Ridge. The success is a heartening earnest of what may be looked for from the real spring offensive; and it has the additional advantage in coming at this moment that it is a very practical contribution to our Russian Allies in the trying stage of transition through which they are passing.

Germany's well-directed blow on the Stokhod shows that she would have taken full advantage of the upheaval in Russia, if she had been in a position to do so. It is more than probable that she has been deterred so far from any greater attempt than this one attack by the danger threatening her in the West. In the withdrawal to a shorter line west of Bapaume she may have hoped to secure sufficient respite for a serious effort in the East—a plan which might not have been altogether checkmated by the Allies' rapid pursuit. The subsequent attack north of Arras, however, will have convinced the German Higher Command that it is possible to underestimate the Allies' capacities, and perhaps the most important result of the British achievement will only be seen when the Russian Army, having emerged from the temporary difficulties caused by the revolution, is able to resume the offensive fortified by the knowledge that its bravery and generalship in the field are being adequately supported at home.

The junction of the British and Russian forces operating in Mesopotamia and Persia respectively has taken place at Kizil Robat, which has been occupied by our Allies. Sir Stanley Maude's troops are now operating in four more or less distinct districts over a front stretching from Feluja on the Euphrates to Kizil Robat, contact with the enemy being maintained on a front between the railway line to Samarra and the

Diala River. On the railway we have occupied Belad and Harbe stations, some twenty miles from Samarra. Another force is astride the Shatt el-Adhaim, which runs into the Tigris sixty miles north of Baghdad, and a fourth column is keeping touch with the Russians on the east and advancing up the Kifri Road from Deli Abbas. According to the latest reports the retreating Turks have received reinforcements, and an attempt is to be made to drive back the British troops, while the Russian advance is contained.

A stand by the enemy may well suit the Allies' plans, as in this part of Mesopotamia they must be more anxious to account for Turkish troops than merely to occupy additional territory. If the British advance has been carried out as systematically north of Baghdad as it was south of that city General Maude should have an ample margin for meeting any force that the Turks may bring against him. Moreover, the longer the enemy is detained south of Kifri the more time will the Russian force in the Penjvin district have for developing its offensive to a point at which it will threaten the communications of the southern Turkish army. The distances, however, between the two fronts are great enough to prevent any rapid developments of this nature, and before they can take place we shall know what value attaches to the Turkish rally. Even if our own forces should be hard pressed, we ought to be able to count on the Russians turning the enemy line by an advance from Kasr-i-Shirin, which is well to the north of the flank of the line on which the Turks are expected to make a stand.

From the Desert Army which is now in sight of the Promised Land there has been no further news during the past week. The methodical progress by means of railway construction was interrupted to deal with the enemy force based on Gaza before it received useful reinforcements. General Dobell wisely decided to attack the two units separately before they could combine, and only the incidence of the fog on the morning of March 26 prevented the plan from being a complete success and Gaza from falling into our hands. As it was, the Turks were handsomely routed. From this point, accordingly, the former method of progress will have to be resumed; but as the enemy has been given due warning of the strength of the British force, the work ahead of the latter is likely to prove more formidable as it advances.

A statement attributed to the Russian Minister for Justice to the effect that Russia would be content with the internationalization of Constantinople has been

seized upon as offering an opportunity for modifying the terms set out in the Allies' Note to the United States as the basis on which they were prepared to accept peace. It is hoped in certain quarters that by "letting Turkey down gently" in this way the Allies may be able to detach her from the Central Powers. With Major Chapple's contention that in regard to the Near East political strategy must not be lost sight of in the strategy of arms we are wholly in sympathy, and we are convinced that there is a good opening for the former at this juncture. But care must be taken not to confuse the meanings of words. In the first place, the actual views of the Russian Provisional Government must be learned officially. There would seem to be some contradiction between M. Kerensky's ideas and those expressed by M. Miliukoff, the Minister for Foreign Affairs, to a Press representative in Petrograd on April 7. M. Miliukoff is reported to have said that in regard to the acquisition of the Dardanelles by Russia there could not be two opinions. "In the event of the neutralization of the Dardanelles the free entry of foreign ships of war into the Black Sea would force Russia to think perpetually about the fortifying of the Black Sea coasts and to maintain a powerful fleet. Such a condition of things would be worse than that which existed before the war."

It is true that M. Miliukoff spoke of the Dardanelles, while M. Kerensky referred to Constantinople. But the point which the Allies feel obliged to establish, it may be presumed, is that for the future the important waterway between the Mediterranean and the Black Sea shall not be allowed to be a factor in the designs of any Power or group of Powers likely to challenge the peace of Europe. In Turkey's hands Constantinople and the Dardanelles must always be exposed to playing this part, and the Allies have decided that in the interests of Europe as a whole the control of the waterway must be taken from the Turks. As far as the latter are concerned, it must be more or less a matter of indifference whether the control passes to one Power or to a group of Powers, if Turkey herself is no longer to be pre-eminent on the shores of the Bosphorus and Dardanelles. It would be a *reductio ad absurdum* to allow the principle of nationality, to which Major Chapple appeals, to apply to this comparatively small strip of territory. In any case the position of the Turks in Europe, as well as their record in dealing with the original inhabitants, would have to be taken into consideration. On the other hand, there need be no compulsory deportation of the Turkish inhabitants who elect to remain under foreign jurisdiction, and the expression "the expulsion of the Turk from Europe" is surely to be understood as restricted to Turkish rule.

There has been much play with the word "internationalization" in connection with the future of Constantinople. We should prefer to see it erased from the political dictionary. The unanimous verdict of experience is that international administration sooner or later proves unworkable, unless, as in the case of the international settlement at Shanghai, all practical control is centred in one Power. To attempt to administer Constantinople on international lines with the representatives of a dozen or more Powers having an equal voice in its affairs, or by means of a Council in which international politics would exercise a dominant influence, would be more likely to engender strife in Europe than to make for peace. It might be possible to introduce the theory of joint ownership, but responsibility for the actual administration should be vested in a single Power. In such circumstances there would seem to be little chance of the Allies being able to modify their peace terms without perpetuating the evils which it is one of the objects of this war to remove.

Even if it be not desirable to open up negotiations with the present Turkish Government, means should be found of acquainting the people of Turkey with the fate in store for them and with the fact that their salvation lies in cutting their losses at the earliest possible moment. Elsewhere in this issue an attempt is made

to elaborate a similar method for dealing with Bulgaria. The Allies can have no more intention of accepting King Ferdinand as the responsible head of the Bulgaria with whom terms of peace have to be settled than they have of allowing the same rôle in Germany to be filled by the Emperor William II. Apart from other considerations there is good reason to believe that King Ferdinand has himself intervened to prevent the alleviation of the lot of Allied prisoners in Bulgarian hands. If President Wilson's contention that the United States are making war not on the German people, but on the military system that dominates them, be accepted by the Allies, the principle will hold good in regard to Bulgaria. It will be of use, therefore, to make sure that the Bulgarians are fully acquainted with the situation. Already, if report be true, dissatisfaction with the powers that be has found expression in riots in several towns. The nation would, doubtless, feel on still stronger ground, if it had the assurance that its existing rulers constitute an insuperable obstacle to any understanding with the Allied Powers.

Such information as reaches the outside world from Greece indicates that the Athenian public has not yet grasped the full meaning of the recent changes in the general military situation, nor indeed does it seem to have appreciated the significance of the United States' declaration of war upon Germany. There is still a tendency to indulge in pinpricks at the expense of the Allies. The British Minister has had to warn the Greek Government that in case any violence should be committed against the Venizelists in Old Greece, the Entente Powers would consider as annulled their guarantee against an extension of the Venizelist movement into Old Greece. As has already been pointed out in these pages, the attempt of the Allies to hold the balance even between the King and the Venizelists has had the effect of doing grave injustice to the latter. It has prevented them from sweeping the country in favour of M. Venizelos, and virtually shields King Constantine on his throne from his deserts at the hands of the Greek people. As the event shows, the Venizelist movement continues to spread without the instigation of the National Government. The island of Zante, encouraged by the presence of French troops, has revolted against the Athens Government, and the local officials of the latter have withdrawn to the mainland. It is satisfactory to find the Allies threatening to remove their embargo on the extension of the Venizelist movement; such action at least implies recognition that the policy is a disservice to the National Government.

A lurid light on the disaster which overwhelmed Roumania has been thrown by General Ilescu, formerly Chief of the Roumanian General Staff, and the explanation deserves attention on the strength of the source from which it comes. In July, 1916, General Ilescu declared, in a statement reported by *Le Matin*, Roumania, who had had to increase her army from 180,000 men to 820,000, was still not ready for war, but it was "towards this period that a sort of summons from Russia reached us." At the same time an elaborate plan of campaign was submitted to the Roumanian Government; it took no account of Bulgaria, and on the omission being pointed out, M. Stürmer replied that the Bulgarians would never be willing to fight against Russia. As the Russian Government refused to undertake the operations against Bulgaria asked for by the Roumanians, the latter fell in with its plan and invaded Transylvania on the understanding that the Russians would advance from Dorna Vatra. They made no move at all, and the Roumanians essayed the hopeless task of a rapid thrust with a view to shortening their line between Orsova and Bukovina, with the results already known. When it came to a stand on the Argesh line west of Bucharest, the division commanded by General Sococ, since condemned to penal servitude by a Council of War, failed. The General himself had left for Bucharest, and when the enemy attacked at this point the position was not held, and the whole line was broken.

Summing up his indictment, General Iliescu continued, according to *Le Matin*, quoted by *The New Europe*: Roumania's entry into action was connected with a double plan, political and strategic. M. Stürmer's Government forced us to declare war because he needed our troops to cover the left flank of the Russian army in Bukovina. The troops in this region were intended to remain where they were, contrary to the assurances given to Roumania and to France. The defeat of Roumania was foreseen and organised by M. Stürmer, who wished to finish the war by this striking fact. So from the month of September the Russian armies organised the lines of the Sereth with full knowledge of the development of events. In my opinion this was M. Stürmer's plan when he forced our hand and organised our campaign:—"To allow Roumania to be invaded as far as the Sereth, to allow the triumph of the military power of the Central Empires, to conclude a separate peace in consequence of a defeat which would not be a Russian defeat, and consequently would not shake either his power or that of the Tsar at all." In conclusion, General Iliescu is careful to add that there was no failure on the part of the Russian leaders or troops; those sent were excellent, and the Russian Staff officers were eminent men. The Roumanians were beaten because they were inferior in armament and leadership to the enemy, but the initial cause of the defeat "was the disloyal plan of the Germanophil Government of Petrograd, who played with the fate of Roumania in order to facilitate a premeditated act of treachery." In the interests of the Grand Alliance and of the Roumanians themselves the whole matter ought to be officially cleared up; but some time may elapse before the new Government in Russia is in a position to deal exhaustively with the question. If General Iliescu's version be substantially correct, it will supply a strong incentive to the Russians to make good the shortcomings of the old regime, and at the same time will fill the Roumanians with a strong confidence in themselves when the army is once more in a position to move forward.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 20.

Egyptian Opinion and Entente Victories.

The good news from the Western front is having an excellent effect on the local population and is successfully counteracting the unfortunate impression at first made by the revolution in Russia. When the cables arrived reporting that the Tsar had abdicated and that a Provisional Government had been proclaimed at Petrograd, practically every Egyptian I met regarded these events as portending no good for the Allies and as being tantamount to a bloodless victory on the Eastern front for Germany. Further inquiry only confirmed that this was the prevalent impression in most indigenous circles. The vernacular Press soon came to the rescue, however, and, especially *Al Mokattam*, gave a clear explanation of the situation, which quickly cleared the atmosphere and revealed the true aspect of the Muscovite *coup d'état*. The announcement of the entry of the Russians into Van and of the rout of the Turks north of Baghdad, following the news from France, has further confirmed the feeling of confidence in the triumph of the Allied armies, and with characteristic lack of sense of proportion people out here are now talking enthusiastically of a peace with honour for the Entente this summer.

The Closing of Port Said.

Now that, in view of the progress made by the Egyptian Expeditionary Force in Sinai, the military authorities have reconsidered their decision with regard to the lighting of Cairo, and have decreed a return to normal conditions, it is to be hoped that they will give similar favourable attention to the embargo placed on residents wishing to visit Port Said—an embargo which, undoubtedly necessary when first enforced, appears to have lost its justification owing to the change in the situation on the Canal. For just about a year now that town has been closed to the public. With great difficulty people have been able to obtain permission to visit it, but they have had to show very good cause for their journey, and in but very rare instances have they been allowed to make a stay of more than a couple of days; whilst officials and residents return-

ing from leave have been hustled out of the town with a haste which was only rendered bearable by the knowledge that the restriction was in the public interest and by the extreme civility with which the local responsible officials carried out their task.

Of late years Port Said has tended more and more to become a summer resort, and before the outbreak of war residents whose turn it was to spend the hot weather in Egypt were taking to send their families down there in preference to Alexandria, where it has become increasingly difficult to find decent accommodation at reasonable terms. Last year it was possible for those who did not mind risking the sea journey to go to Europe or Cyprus; but even then Alexandria was overcrowded, and the opening and development of new resorts such as Borollos Beach and Ras-el-Bahr did not alleviate the situation at all. This year women and children are not to be allowed to go to Europe or Cyprus; so that the summer resort question will become more acute than ever. To the ordinary layman Port Said appears now to have lost the military importance which it had a year ago, and there would on the face of it seem to be no valid reason why the town should not revert to its normal state in so far as concerns the reception and sojourn of visitors. Granted, however, that there are considerations unknown to the "civil" mind which make it undesirable to open the town generally to the public, it should surely be possible to permit bona-fide officials and respectable European residents to send their families down there for the hot weather. The military authorities have probably not realised the situation which has now arisen, and no doubt it is only necessary to bring the matter to their attention for them to take action in the required direction. It is to be hoped that some decision will be taken without delay. A spell of warm weather has just set in, warning us that we may expect an early summer, and it would certainly be a great relief in every respect to residents if they could be informed that Port Said would be open to them this year.

The Mixed Courts.

Recently I announced that Mr. W. H. H. Thorne, President of the Larnaca District Court, had been appointed to the vacant English judgeship in the Mixed Courts of First Instance. Mr. Thorne has now been selected as one of the British members of the International Commission at Athens, for which city he has already left, and Mr. S. H. Carey, of the Native Courts, has been appointed to fill his seat on the Alexandria Mixed Bench until his return.

The National Mission.

The "National Mission" movement is still going strong. Mr. Burroughs has just returned from a most successful visit to the Sudan, where he held meetings at Khartoum, Port Sudan, and Atbara; and he has arranged to stay on in Egypt for the next few weeks. He is about to leave for a short tour in the Canal zone, and will return to Cairo for Holy Week, during which he will deliver a series of addresses. Meanwhile, Dean Storrs, who has happily made a complete recovery from his illness, is fulfilling the engagements at Alexandria which he had been compelled to break. After a visit to Port Said he will leave for Cyprus for a short tour extending over Easter, and on his return the National Mission work in Egypt will be brought to a conclusion, it is hoped, by a final series of meetings.

On Thursday the Bulgarian Sobranje adjourned, after passing a Bill for the sequestration of all enemy property in Bulgaria and forbidding commercial relations with enemy countries.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, March 17.

Military Training for British Subjects.

An Ordinance has just been published enjoining on the British-born subjects resident in the Sudan the duty of military training. Every British-born subject between the ages of twenty and fifty is called upon to become "efficient." The new Ordinance is so consistent with what is being done in all parts of the Empire that it requires no explanation. The precise nature of the scheme to be carried out by the training is not yet known, as the Ordinance was only published to-day. The general idea seems to be parallel to the corps maintained in India. Owing to the small number of British subjects in the Sudan the training will be only possible in Khartoum, Atbara, and Port Sudan, and in the last-named places there has been a Volunteer Company since the declaration of war between England and Turkey. Amongst the residents of the Sudan there are a number of retired soldiers, who should form an admirable nucleus for the new service and provide many of the officers and N.C.O.'s.

Arabs and the Fall of Baghdad.

Great satisfaction is expressed throughout the country at the taking of Baghdad. The wildest Arab has certain literary and historic feelings that enable him to have some, if vague, knowledge of the great period of Arab culture that is represented by that city, and the wresting of it from the Turk is greeted with profound satisfaction. Amongst the more civilised natives it is realised how important this development is to the success of the Shereef of Mecca, to whom the Arabs will flock when they see that the power of the Turk is really broken and there is no fear of reprisals in the future.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

The Excavations at Arsos.

The work that is being carried out at Arsos has already yielded good results. The ruins of a temple of the Gorgian Aphrodite have been discovered, and a few objects of gold and various other articles of value have been unearthed. Golgi, one of the principal seats of the cult of Aphrodite, is located between Idalium (the modern Dali) and Tremithus, as we know from Pausanias. Catullus (Carm. 36) mentions it as a favourite haunt of Venus, together with Idalium and Amathus (in the Limassol district). It is probable that further interesting discoveries will be made, among them, it is to be hoped, inscriptions, which so often throw light on doubtful points connected with the mythology of ancient times.

The Venizelist Cause at Limassol.

A large gathering of persons who support the policy of M. Venizelos has been held at Limassol. The Hon. John Kyriakides, for many years member of the Legislative Council for the Limassol-Papho division, spoke strongly in favour of the great Greek statesman. During his speech he stated that the policy of M. Venizelos has an important bearing on the situation in Cyprus, and that through it might be found a solution of questions regarding the island's future. It was resolved that a club, to be called the Union of Liberals, should be formed, and a committee was appointed with a view to drawing up rules to be submitted to a general meeting.

The Nicosia Poorhouse.

Figures relating to the recently established poor-house at the capital, which is for the poor of Nicosia only, show that the total number admitted is 47 (Greeks 27: 17 male and 10 female; Moslems 20: 15 men and 5 women)—not a formidable number for a population of over 15,000. Should the number increase, enlargement of the building, or the hiring of other premises, will become necessary. The poor-house also distributes food daily at midday to about 80 persons. Of beggars not belonging to Nicosia some, in consequence of the anti-mendicity regulations, have departed to other towns and districts where such rules are not in force. Others remain in suburbs outside municipal jurisdiction, but will not be able to find support there for long. The application of the new order has shown, as is not unusual in such circumstances, that some beggars were hoarders or misers. One applicant for admission had in his purse £32 in English gold. Another, a blind beggar who was forcibly taken to the poorhouse, protested loudly, saying that he had property of over £30, besides owning a small house. The municipality, having verified his statements, released him on the following day on condition that he would abandon the profession of a mendicant, or quit the city.

CONDITIONS IN SIVAS.

(FROM A CORRESPONDENT.)

Last November a small party of refugees from Sivas succeeded in penetrating the Turkish lines, and, after a most exhausting and roundabout journey across the snow-covered hills, made their way to Erzeroum. Eventually they went on to Erzeroum; and from a correspondent in that city I have received the following account of conditions in Sivas and the neighbourhood, as given by them:—

Towards the end of last July the capture of Erzinjan by the Russians caused a serious panic amongst the Turkish military authorities in Sivas. It was the general opinion that should the Russians advance farther westward without giving the Turks time to reorganise the defence of the city, there would be but one thing to do in order to save the forces on this front—that is, to evacuate Sivas and fall back on Angora, the terminus of the railway from Constantinople. Hajji Hamdy Bey, a Turkish general of Circassian origin, who, much against his will, had had to retire from Erzinjan at the head of a demoralised division, made himself conspicuous in Sivas by declaring publicly that the Germans, who were conducting the operations on the Caucasus front, did not care one jot about defending Ottoman territory to the full power of the Turkish forces. As a result of his outspoken criticisms this Circassian general was granted some months' furlough and ordered to leave Sivas.

As a "measure of reprisal" for the fall of Erzinjan the Turks put to death 1,700 Armenian soldiers and artisans, who up to that time had been employed upon road-making and in Government workshops.

In consequence of the heavy strain placed upon the Turks by the relentless way in which the Russians pressed on operations in spring and summer last year, most of the Turkish battalions were actually reduced to half their normal strength, and sickness was rampant amongst the rank and file. Munitions, too, were running short; for means of transport were daily becoming less; hundreds of pack-horses and camels employed in carrying military stores and supplies from Angora to Sivas fell by the roadside owing to overwork and ill-usage. There were days on which the soldiers were fed on ground corn or millet. The distribution of military supplies was just as bad as it could be. As for the civilians, open discontent was rife amongst every class and race; everybody longed for peace, but nobody dared to indulge in any demonstration.

During the flight of the Turkish troops from Kighi, south-west of Erzeroum, some Kurdish tribes swept down from the hills, attacked the retreating forces in the rear, and robbed and killed many of them. The Turks later returned in great numbers and wiped out whole Kurdish districts as ruthlessly as possible.

For some time past the Turks had been deporting Greeks from the towns and villages of the Black Sea coast. There had been no massacre of the Greeks, but many had died, in the same way that the Armenians had suffered.

The Turks were distinctly losing faith in a German victory, and their feeling was manifested now and then by their hostile attitude towards German officers serving in the Turkish army.

Last November the Sivas authorities undertook to organise a new army corps, but up to the time when the refugees left, the endeavour to do so had met with very little success. On the other hand, great numbers of men were deserting from the army every day, and the hillsides were infested with hungry robbers and marauders.

TANGIER TO TEHERAN.

To-day is "Mesopotamia Day," and it behoves us all to do our best to see that Miss Stella Maude's hope of beating all flag day records is fulfilled. Think what a satisfaction it will be to her if she can report to General Maude that her hope has been justified, and consider for one moment what a satisfaction it will be to General Maude and every member of his force to see the folk at home showing their appreciation of all that has gone to convert the Mesopotamia campaign from a failure into a success! It is our first real chance of showing this. Surely we shall not miss it. Mesopotamia has sent us grand news of late; now we have a chance to send good news to Mesopotamia. Besides, we must prove once and for all that Friday is not an "unlucky day" and that 13 is not an "unlucky number." I hope I am not really superstitious, but I own that I used to feel a little nervous about Fridays and the number 13. Then, some years ago, I found that, far from being "unlucky," both were very lucky indeed, for me at any rate. And so may they prove for "Mesopotamia Day," which, by the way, has its headquarters at 26, Regent Street—twice 13—doubly good luck!

A writer in the *Daily Chronicle* states that "General Maude is said to be aiming" for Aleppo. I do not know on what authority this statement is based, but, with all due respect, it seems to me to be a trifle premature at least. If the great "Baghdad" Railway were to be left quite intact by the enemy, and if it were nearer completion than is supposed, General Maude might quite reasonably "aim for" Aleppo; though even so I should have thought the force from Egypt would be more likely to get there first. But, as things actually are, for the Baghdad force to try to get across the width of Asiatic Turkey would seem to be distinctly unnecessary, if not unwise; and I am inclined to think that the *Chronicle's* writer must have been misinformed.

Some years ago, in writing of the date trade of Busreh, Mr. H. J. Whigham remarked that it was "apparently a rather speculative business, depending a great deal on the output of figs and other dried fruits in other parts of the world." He added—very truly, as far as I have been able to judge from personal observation: "If there are not enough figs to go round, English and American children, it seems, take kindly to dates, but they do not clamour for them if they can get anything else in the dried fruit line." This attitude of the boys and girls strikes me as a very natural one; a dried date is all very well, if it has been carefully packed and has not become musty; but it has not the attractiveness of the fig, the muscatel, or other dried fruits. And this is especially the case if you happen ever to have been present at date picking or date packing operations in the East. I was not surprised to read the other day that a question had been asked in the House of Commons in regard to the packing of dates at Busreh. If this could be improved—that is to say, if it could be carried out under more sanitary conditions, and under strict supervision by qualified and trustworthy inspectors—it would certainly add to my pleasure in eating dates from Mesopotamia; and I believe it would eventually benefit the date exporters themselves.

My thoughts have run on this subject because a few days ago I found in a package of dates from Busreh that the fruit at the centre tasted strongly of paraffin, while that outside was less strongly impregnated. The cardboard box showed no signs of having been in contact with oil, so the deduction was obvious. Such things will hardly help the Busreh date trade. But perhaps the date exporters are getting such good prices that they are feeling quite independent—like our shopkeepers here, who not only charge you exorbitant prices, but seem to regard it as a favour to serve you at all! At any rate, I observe in the fruiterers that good dates are "up" to 9d. and 10d. the lb., which strikes me as a ridiculous price to ask. I should like to see the face of a Busreh or Baghdad Arab who saw any one pay that price for dates. *Mashallah!* but the fruiterer would hear a flow of Arabic that would cause him to call for the police in a hurry, I fancy.

As a matter of fact, I cannot understand why dates should be so dear now. They ought, surely, to be cheaper than ever before; for many more British ships must have been going into Busreh, and if they have not brought back dates, what have they brought? There cannot be much else to come out of the country just now—at least, not much

that the ordinary cargo steamer could carry. Perhaps the explanation of the scarcity—for scarcity there seems to have been to some extent—is that our Mesopotamia Expeditionary Force is keen on the Busreh dates. But I rather doubt it. Human nature is a contrary thing, and seldom values what lies to its hand, so to say. Yet the freshly-picked date is certainly a far more delicate and tempting thing than the distorted, dried-up, unappetising affair that we generally get in England. Unfortunately, some of the very finest varieties (there are about eighty of these varieties recognised in Baghdad) will not bear packing at all. I remember one kind—long, slender, golden, and small-stoned—which had a flavour almost like new honey; but its delicacy soon passed away, and it would not stand packing in any form at all.

Mr. Somers Clarke has, I see, written to the *Egyptian Gazette* regarding a rumour that is now floating about Cairo—and one that is sufficiently horrible to alarm all lovers of old Egypt. He puts the matter thus:—"It is stated that a private association of Americans has proposed to erect an educational establishment of considerable size and, in order to draw attention to it, desires to establish it cheek by jowl with the great Pyramid! We are not to be able to see the monument without its neighbour the school. The Pyramids are in fact to serve as an advertisement to the school." He adds: "We cannot believe that such an outrage will be permitted," and I should imagine his incredulity to be justified up to the hilt. A proposal of the nature indicated may conceivably have been made by "a private association of Americans," but its fate can hardly have been in doubt for a single instant.

COBSAIR.

KASHGAR AND THE PAMIRS.

"Seven Months in High Asia" was the subject of a lecture by Miss Ella C. Sykes, F.R.G.S., given last Tuesday at the Royal Victoria Hall, South London. It described her experiences in a country rarely, if ever, visited by a woman from Europe. She said that the reason for her going was that her brother took the place of the Consul-General at Kashgar, Sir George Macartney, while that gentleman came home on leave. She said that Kashgar is a most inaccessible place, and more so because of the war. The party left England in the winter of 1915, and made their way through Scandinavia, Finland, and Russia. During this part of the journey the country was robbed in snow. The thaw began at Samara, where the railway crosses the Volga. When Asia was reached, at Orenburg, there was a wonderful feeling of spring in the air, and Tashkend was found embowered in fruit blossom. From the end of the Russian railway a drive of thirty miles brought them to a place where a caravan was collected for a twelve days' ride across the mountain, and they arrived in Kashgar early in April. Miss Sykes said that Kashgar is on the confines of the desert of Gobi, and she found the riding there delightful along sandy roads bordered by irrigation channels planted with poplars and willows. It is a great cotton-producing country, and among other crops are wheat, barley, maize, rice, lucerne for fodder, and, above all, melons. Of lucerne she said six crops can be grown in a year. The sheep and cattle are literally hand-fed, for there is no grazing whatever, except that when a field is cleared of its crop the animals are turned in among the stubble. She found the Kashgar people the most musical she had ever met. The town is surrounded by mud walls. The legend is that these were built by slaves, and that if one of these unfortunates died whilst at his work the body was straightway buried in the wall and the building went on as before. In June Miss Sykes accompanied her brother on an expedition into the Pamirs after the Ovis Poli, a very large mountain sheep named after Marco Polo, who first described it to Europeans. His story of the wonderful size of its horns was disbelieved, until in modern times the Pamirs were again visited. The first part of Miss Sykes's journey was through a defile sixty miles long. The highest mountain of the district is 25,000 ft. high. The party camped at 14,000 ft., and crossed a pass at 17,000 ft. Miss Sykes said she did not care for these great heights; she always had a curious feeling as if a hand were on her throat. Although it was July, the rivers were sometimes frozen over in parts, and snow lay in places where the sun's rays did not penetrate. While the cold was intense at night and in the early morning, at mid-day it was necessary to wear a pith hat to avoid sunstroke. The people of the country are Khirgiz, and live largely on yak's milk. This, said Miss Sykes, is far richer than that of the cow; but she could not enjoy it, for the only fuel of the district is the yak's dung, and this, when burning, gives off a volume of acrid smoke which taints the milk boiled over it. Further, she discovered that the receptacles in which the milk was stored and boiled were never cleaned, that the people made no use of spoons, but used their hands for all such purposes, and that those hands were rarely, if ever, washed; so that, altogether, Miss Sykes said, she did not enjoy either the milk or the wonderful crisp pastry that the women made. Of the position of woman she said it was better among the Khirgiz than at Kashgar, though there, again, it was better than in Persia. In the Pamirs a man would give 100 sheep, or the equivalent, for a wife, and divorce was extremely rare.

NEAR EAST BOOKSHELF.

A SON OF THE BALKANS.*

If the Serbian spirit is the Slav spirit (and after all it cannot but be so), then Jan Gordon has certainly reproduced it faithfully in his "Balkan Freebooter." There abound throughout the book those little naïf touches which would be crude if they were not naïf—and Slavonic. We know how often Tolstoi says things that would be absurd if they were not childish. For what is really and thoroughly child-like is near the borderline of the sublime and its antithesis—but always on the right side of the borderline. So here in this collection of adventures, which the author tells us are not invented. The names are mostly fictitious, but "Petko Moritz is a living man, and I met him in Serbia," says Gordon. And it is a living man that the reader meets, too; and it is in Serbia. Some of Petko's stories are monstrous lies, but alluring because they are monstrous, inasmuch as monsters always have been part of art: witness the deathless gargoyle.

The book is really a collection of little half-drawn pictures with a wealth of suggestion behind them; and occasionally a big real pulsation of human action at its strongest, if not at its best. The style is loose on the whole, and the book depends on its matter as a *raison d'être*. And yet some of those little semi-crudities are style in themselves. We could wish there were more of them.

The central figure is an attractive one. Petko Moritz is a fine muscular human animal with a refreshing and healthy determination to live; with no particular views on anything—not even on politics, though he dislikes one politician sufficiently to bring himself within the law for bodily assault. He is essentially a splendid animal, though a little too wicked occasionally for an animal. We never see deeper than his strength and his passions. Simply because there is nothing else to see. He is an amiable giant who develops into a rather amiable blackguard by force of circumstances. He lives honestly as long as he can: that is, as long as primitive Serbian justice will let him. And then he turns his hand to theft, with no searchings of conscience. He has none to search. So, in spite of his adventurous life, he is a prosaic person after all, whose tremendous vital powers enable him to survive the most atrocious sufferings and even emerge alive from a Turkish prison.

But he is big at times; in those moments when the caged animal decides to be free. Then there is a superb contempt for danger and an irresistible determination which transform the nondescript animal into a lion, and the book becomes for a while almost epic—until the lion wanders back into a café.

Beyond its value as a story, the book gives a good perspective of the Balkans, fragmentary but clear, a little wearisome but not without purple patches. And the descriptive passages bear the inimitable stamp of truth.

A. R. C.

BOOKS RECEIVED.

The Geography and Geology of West-Central Sinai. By John Ball, Ph.D., D.Sc., etc. Published by the Egyptian Survey Department. (Cairo: Government Press. P.T. 30.)

Turkey and War. By Vladimir Jabotinsky. (Fisher Unwin. 6s. net.)

Serbian Folk-Songs, Fairy Tales, and Proverbs. By Maximilian A. Mügge. (Drane's.)

A strong commission has been appointed in Egypt to study the proposed judicial and administrative reforms which will be necessitated by the declaration of the protectorate and the eventual abolition of the Capitulations.

The *Morning Post's* Cairo correspondent reports that an exhibition of trophies captured from the Turks and Senussi was opened on April 2 in the square outside the Abdin Palace, and was visited by many thousands of natives.

The Agent-General for New South Wales, the Right Hon. Sir Timothy Coghlan, has handed over to the Serbian Minister the sum of £10,790 for the purpose of sending a "New South Wales train" of foodstuffs and clothing from Switzerland to the distressed and starving people in Serbia.

Those who have friends or relatives serving in Mesopotamia will read with interest the following extract from a letter written by a gunner with that force:—"Since last writing we have been in action for over a month, continually moving and firing at the enemy, and the work which that entails is rather heavy, digging with pick and shovel, etc., etc. . . . The food, however, is remarkably good, when you reckon that we are fighting and constantly changing our ground, yet we have never been without the good white bread, as good as you can get in London, with jam, fresh meat and vegetables (occasionally), and plenty of butter."

* "A Balkan Freebooter." By Jan Gordon. (London: Smith, Elder and Co.)

THE PRESS ON THE NEAR EAST.

The Linking-up in Mesopotamia.

Commenting on the junction near Khanikin of the Russian and British forces, *The Times* (April 7) says:—

The news was expected, but is none the less both gratifying and important. It sets the seal on the complete rout of the Turkish forces in this direction. The Russian advance, since the stubborn resistance of the Turks in the Patak Pass was overcome, has been particularly rapid. Both they and the British troops have had to surmount formidable obstacles—snow and flooded rivers, and the poverty of a land laid waste by the enemy as he retired. The Turks, we are told, are reported to be in retreat in the direction of Kifri, on the road to Mosul. Evidently they have succeeded, for the moment at least, in evading the converging movement of the British and Russian forces. They may still be intercepted by the main Russian body. In any case, they have been taught a lesson the full fruits of which are not yet visible, which cannot fail to wake a sinister echo in the courts of Constantinople, and which has more than re-established the shaken prestige of Great Britain and of Russia in Persia and among the Arab tribes.

The *Westminster Gazette* of the same date considers that the "news, although expected, marks a very important stage in the operations in Mesopotamia and Persia," and adds:—

The forces were not able to link up at a point where they could have trapped the Turks retreating from Persia. Weather and formidable natural obstacles prevented that consummation. But the Turks who have escaped along the road to Mosul are a shattered force, and may arrive at Mosul only to find that place threatened by the Russians who are advancing from Lake Van. The Turks have now suffered a series of reverses which cannot but leave the forces in Asiatic Turkey demoralised, and which will awaken unpleasant thoughts at Constantinople. Russian and British prestige have been re-established in the soundest way, and the road is open for an even more severe lesson to the enemy. We cannot but pay our tribute to the Russian forces, who have made a brilliant forced march through the mountains under conditions which must have stopped any but the hardest troops.

The *Daily Graphic* (April 7) also deals with the same subject, and takes advantage of the occasion to point out the folly of giving way to pessimism.

Equal praise seems to be due to each force, as, if the Russians have had to encounter the enemy in mountainous country, our own force has met with stubborn resistance in fighting its way along the Tigris. . . . Whatever the immediate developments, the feat is a fine one, giving evidence of ceaseless progress by the Allied forces. Germany is evidently helpless to extricate her ally. All that she cares about Turkey just now is to seize as much as possible of her foodstuffs for her own dire needs. Taken in conjunction with developments in Palestine, which we may be certain are proceeding satisfactorily, the situation of the Turks in Mesopotamia is growing steadily worse. The campaign there has taught us at least one valuable lesson—the folly of giving way to pessimism and expecting speedy results in a land of such vast distances and natural obstacles. There has been no setback since Baghdad fell. The cumulative nature of this progressive success must react daily through the Middle East and be recognised in Germany as sealing the doom of Teutonic ambitions.

Russia and Roumania.

Saturday's *Morning Post* contained an article on "The Roumanian Reverses," written by the Jassy correspondent of the *Post*. The sub-title "Russian 'Dark Forces' to Blame," indicates the lines of the article, which is full of interest. The article begins:—

The new situation in Russia must be considered not only in relation to the future, but also in the light it is beginning to throw on the past, more particularly on some of the more poignant features of recent events. It would seem that the drama of Roumania is the first to be brought out into the open by the new Russian régime. The rapidity with which the Dobrudsha, Oltenia, and Wallachia were occupied by the Germans and Bulgarians caused disappointment in the Allied camp. It was felt that the Army of Roumania had not been equal to the task of conducting a national war in the midst of a world-wide catastrophe, and that the country had been guilty of culpable negligence. For months past—during which the terrible sufferings caused by the enemy occupation, followed by sanguinary and devastating sacrifices, have been sustained—the Roumanians have suffered moral torture owing to the obscurity in which were wrapped the real causes of their terrible situation.

The explanation of the mystery is given by the writer as "M. Stürmer, who . . . if he was not the Minister of the Emperor . . . was, at any rate, the Minister of the Empress and the late monarch Rasputin." The writer goes on to say:—

It is well established by proofs which are in the hands of the Roumanian Government that if Germany undertook the Roumanian campaign, it was because she relied, above all, for success on Petrograd intrigues. . . . In fact, if Roumania did not realise her first intention of attacking Bulgaria in order to seize the quadrilateral, and bar the road to the Bulgarians before attacking beyond the Carpathians, it was simply because she received from Russia advice to abandon the Bulgarian attack

and the promise that nothing was to be feared from Bulgaria, because "Bulgaria will not attack Roumania." It is common knowledge now that immediately after the majority of the Roumanian divisions had passed the Carpathians the Bulgarians attacked, with Turtukai as their first objective. Certain Roumanian divisions had to be recalled from Roumania and sent to the Dobrudsha. A representative of King Ferdinand of Roumania visited the Emperor Nicholas, who promised four army corps in the shortest possible time to Roumania.

What happened we know: Russia sent troops to Roumania in greater numbers than promised—but not till M. Stürmer was got rid of. Roumania suffered heavily by the work of the "dark forces."

Greece and the Adriatic.

The *Christian Science Monitor* (Boston, Mass.) March 14 contained an article (headed "Entente Allies Act Jointly in Greek Liberation") from which we quote the concluding paragraph:—

As to the Adriatic question, regarding which M. Venizelos has been persistently misjudged by Italian newspapers, the facts are that the leader of the National Government has always recognised the vital interests of Italy, and in any case has never regarded the Adriatic as coming within the orbit of the ambitions of Greece. At the Consulta there is a written record of a conversation between the Foreign Minister, Marchese Di San Giuliano, and M. Venizelos in December, 1913, when the Greek statesman declared that Greece would welcome an Italian occupation of Valona. During the Balkan wars the Greeks were accused of having designs on Valona, but M. Venizelos had a clear conscience in assuring Italy, as he did, that Greece had no such designs. Italy, of course, maintains that Valona, as the key to the Adriatic, is a vital necessity to Italy, and far from objecting to this, Greece even acquiesced uncomplainingly in the Italian occupation of the island of Sasseno in 1914, although the latter island, which belonged to England from 1815 to 1864, is held by Greeks to be one of the Ionian islands generously ceded to Greece in the latter year. As to recent events, the attitude of M. Venizelos has always been that he welcomed the adhesion to the Entente of any Power such as Italy, likely to assist in securing the victory which he regards as demanded by the cause of liberty and the rights of small nations in particular, in which connection M. Venizelos holds that a Greece established on the basis of nationality could be no menace to an expanding country like Italy, with a rapidly increasing population.

War Comes to Sinaia.

Madame Jonescu, wife of the famous Roumanian statesman, contributes to the *Morning Post* (April 10) a very interesting article entitled "The Ordeal of Roumania." From this we take the following passages, describing how Sinaia was surprised by the crash of the outbreak of war:—

One evening towards the end of last August the occupants of the charming villas and luxurious hotels, while some were gambling at the Casino, others listening to a concert, the rest spending their evening playing bridge in their own villas, were suddenly startled by the roar of cannon echoing and re-echoing in the rocky gorges.

Roumania's declaration of war was presented in Vienna at eight o'clock Sunday evening, August 27, 1916. At nine o'clock all the valleys of the Carpathians resounded with the din of artillery, and in a few hours several passes were in the hands of the Roumanian Army. But to peaceful Sinaia, nestling in the calm of her pine-covered hills, the crash of war came as an alarming surprise. It is true that rumours of imminent invasion or of Roumania's entry in the field had caused various panics during the last two years, but when the final step was decided on the intentions of the Government were kept a profound secret. Even the Royal children were not removed from Sinaia until the day before the attack. When the evidence of war burst on the senses of the frequenters of the Casino, the gamblers, alone unperturbed, were with difficulty dispersed to enable the Red Cross workers to begin transforming the building into a hospital. All through that night the boom of heavy guns broke the stillness of the air, sometimes nearer as it seemed to the terrified listeners, sometimes more distant. Hurried preparations for departure were made. The early morning found the railway station thronged with an impatient and excited crowd, besieging the already half-demented station-master with supplications for places in the overcrowded trains. Many passed continually in the direction of the frontier, crammed with troops, but for some days few were available to carry civilians in the opposite direction. The single line traversing the Parahova Valley was not sufficient for the transport of troops, artillery, etc., and ordinary passengers. Every conceivable vehicle was pressed into service for the exodus from the vicinity of the war zone. The few trains were crowded not only inside, where all stood on and off the seats, but the roofs, the steps, every ledge that could afford a precarious foothold were occupied at imminent risk, while the journey to Bucharest, usually lasting three or four hours, was lengthened to two or three days.

The "W.O." and Mesopotamia.

Under the heading, "The 'Blessed Word,'" the *Observer* (April 8) discusses the operations in Mesopotamia. It considers the junction of the British and Russian forces on the mountain border "by far the most picturesque event of the week," and rejoices over the fruits of General Maude's success in mastering Baghdad. And it is anxious to see credit given where credit is due, believing that it has not yet been sufficiently given:—

Worthy of his command, General Maude's success never could have been achieved without the organising work of the War Office at home. That institution is so thoroughly "crabbed" by custom when the least thing goes wrong that it ought to receive its well-earned praise when a very big thing goes right. The facts are remarkable. When the War Office received control after General Townshend's surrender, the whole work of reorganisation was taken in hand at home by General Collard working under the Quartermaster-General. As a result, between last July and January the traffic up the Tigris increased by no less than a thousand per cent. The river transport passed into the hands not of naval men, as has been too readily assumed, but into that of soldiers, with Colonel Grey at their head, using Basra as his base.

The article then gives some details of what has been achieved in the way of providing all that was lacking in Mesopotamia to make the great advance possible. It concludes:—

In a word, British organisation in the Middle East has been far more than a match for German organisation. Let us not yield to the mania of lauding beyond reason every ordinary German feat of war-direction, and disparaging and minimising—even ignoring or denying—the best achievements which stand to our own national credit. Conjuring out of original vacancy or chaos the military organisation now second to none in the world, the British War Office has made many mistakes, as a matter of course, but it has done colossal things. We doubt whether any part of its work has been better done than the reorganisation on the Tigris, which has changed the whole position and prospect of the war in the Middle East.

Joshua and Tommy Atkins.

The following paragraph is extracted from an article, "At the Gates of Gaza," which appeared in the *East Anglian Daily Times* of April 7:—

The British troops marching over the ground have encountered the same difficulties the hosts of Joshua met before them. For twelve months our men advanced laboriously over the Desert, fighting hard, always digging, making military works, building railways, constructing pipe lines and roads, and for ever marching over inhospitable wastes. Then suddenly a marvellous scene spread itself out—the Promised Land. Not Joshua's men were more grateful than our own. Behind them they had left a hundred miles of monotonous sand. Before them, as far as the eye could reach, was unfolded a picture of transcendent beauty. When the troops breasted the last sandy hillocks, and looked over the billowy downs before them, they broke into rounds of cheers. They could not restrain their joy; they shouted just as loudly, no doubt, as Joshua's men, when they reached the same Promised Land.

Articles to Note

"The End of a Long Pause," by H. R. W., in *Blackwood's Magazine* (April).

"The Serbian Front in Macedonia," by E. P. Stebbing, in the *Scottish Geographical Magazine* (April).

"A Point of Prestige," by Harry Ascalon, in *United Empire* (April).

A PREDECESSOR OF SIR A. MURRAY.

By Joseph Offord.

The route by which the British army, with its new railway being constructed in its rear, is advancing into Palestine is almost identical with that selected by Tahutmes III. for his celebrated invasion of Syria. He left the border forts at Zaru, somewhere upon the route of the present Suez Canal, on its western side, and made straight across the desert to Sharhah, or Beersheba, therefore keeping a little further inland than we have done. As he did not rely upon any protection from a fleet this was probably good policy. From Sharhah he moved north-westward to Gerara, upon the Wadi Guzze, and so arrived at precisely the neighbourhood that our troops have passed. From thence he occupied Gaza, whereat, on April 26, he celebrated the fête day of his coronation. The following morning his forces set forth on their northward march along the regular caravan road not far from the shore, and in twelve days reached Yehem, near to Mount Carmel. He therefore avoided the precipitous country towards Jerusalem and Hebron. At Yehem the King's intelligence department reported that the main forces of the Syrian chiefs were concentrated near Megiddo, in the plain of Esdraelon, they having decided to give battle in the low ground because of their much superior force of chariots. Tahutmes pushed through the pass by the route to Aluna and obtained a decisive victory close to Megiddo, although the city did not fall until after a siege of some duration. The remnants of the Syrian and Hittite army fled northward, and having taken Megiddo the Pharaoh proceeded to conquer the hill country as far as the Jordan piece by piece. When he had thus secured his communications, he utilised Palestine, with its fertile valleys and littoral, as a base, from which he advanced in a number of campaigns into northern Syria, finally reaching the banks of the Euphrates.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. April. 13	1917. March. 31	Friday	1335. Jumada II. 20	5677. Nisan. 21
14	April. 1	Saturday	21	22
15	2	Sunday	22	23
16	3	Monday	23	24
17	4	Tuesday	24	25
18	5	Wednesday	25	26
19	6	Thursday	26	27

Tuesday is the birthday of Prince Mirko, of Montenegro, who was born in Cetinje in 1879.

Tuesday is also the birthday of Prince Arsène Kara-Georgevitch, brother of King Peter of Serbia, who was born at Temesvar in 1859. Prince Arsène, who is a general in the Serbian Army, is also a colonel in the Russian Army.

Wednesday is the birthday of Princess Marguerite of Greece, eldest daughter of Prince Andrew, who was born in Athens in 1905.

His Majesty the King has been graciously pleased to approve of the award of a Knight Commandership of the Most Distinguished Order of Saint Michael and Saint George to Major-General George Vero Kemball, C.B., D.S.O., in recognition of his distinguished service in the field in Mesopotamia, with effect from June 3, 1916, inclusive. General Kemball, who was awarded the D.S.O. in 1902 and the C.B. in the following year, while he was holding the appointment of Inspector-General of the West African Frontier Force, has already been twice mentioned in despatches from Mesopotamia.

The Earl of Bessborough left London for Wolverhampton last week.

General Sir Ian Hamilton has left London for Scotland.

Lord Derby has telegraphed as follows to General Sir Archibald Murray, Commander-in-Chief in Egypt, says a Reuter's message from Cairo:—"The Imperial War Cabinet, at which representatives of the United Kingdom, the Dominions, and India are assembled, charge me to convey to you and all ranks concerned cordial congratulations on the striking and important success achieved near Gaza. They have heard with special gratification your commendation of the gallantry of the troops." General Sir Archibald Murray replied to the effect that it was the earnest determination of all ranks in the Egyptian field force to "pull their full weight."

Madame Take Jonescu has left London for Hartpury, Gloucester, for a few days.

Major Arion, of the Roumanian Military Mission, left London last Friday for Paris for a few days.

Captain P. W. Hope, C.B., who has just been promoted to be Rear-Admiral, was in command of H.M.S. Queen Elizabeth during the Gallipoli operations.

Mr. Percy Bennett, Commercial Attaché to the British Legation at Jassy, has arrived in London.

General Lyantey, ex-French Minister for War, who has been reappointed Resident-General in Morocco, is expected shortly to visit Madrid.

M. Charles Jean Vidic, the Chief Technical Director of the Roumanian Post Office in Jassy, has left London for Roumania.

The *Times'* correspondent in Salonika reports that Austro-Bulgarian attempts to persuade the Serbs that they have been abandoned by their King have entirely failed. The Serbs revere King Peter as a saint fore-ordained by Heaven for the salvation of the Serbian nation.

Baroness d'Erlanger has returned to London from Bath.

Our Khartoum Correspondent writes under date of March 17: Major Fielden is on his way from Wau to take up the duties of Civil Secretary. Viscount Hawarden will act as Governor of the Bahr el Ghazal in his absence.

Mr. Robinson, of the Customs, has arrived from Halfa, where he has been on a protracted spell of duty as a Censor, to take up work in connection with the Resources Board.

A theatrical entertainment was given by Judge and Mrs. Peacock at their house at Gereif on the 10th inst., and the company repeated the piece at the Gordon College on the 17th for the benefit of the battalion quartered at Khartoum. In both cases great success attended the acting, that of Mrs. Peacock being specially appreciated.

Next Tuesday (April 17) the Workrooms and Depot of the Serbian Red Cross Society, at 9, Ennismore Gardens, S.W., will be formally opened. At eleven o'clock there will be a religious ceremony, conducted by Father Nikolai Velimirovitch, D.D., ex-Chaplain to King Peter; and at three o'clock there will be a reception and entertainment.

We understand that Serbian and English ladies are already busily engaged at Ennismore Gardens in making many useful articles for Serbia and the Serbs. Madame Yovanovitch, the Serbian Minister's wife, to whom the premises have been kindly lent by Sir John Brunner, is asking friends of the Serbians to help with her work, which will be in close co-operation with the British institutions already doing so much for Serbia. The loan or gift of furniture and household requisites still needed for the house will be much appreciated, and things lent will be taken care of, so that they may be returned in the condition in which they arrived. All suitable gifts will be transported to Serbia as an English souvenir when the country is once more free. Those desiring to help or to send contributions can obtain all necessary information from Miss A. J. Dickinson or Mrs. Robert Frank, who are acting as hon secretaries to Madame Yovanovitch. The depot and the workrooms are opened as a part of the "Serbian Red Cross Fund" administered by the Serbian Legation in London (195, Queen's Gate, S.W.) and registered under the War Charities Act as the sole representative of the "Serbian Red Cross Society" in Great Britain and the Dominions.

In the course of an appreciation of Lord Milner, the *National News* (April 8) says:—"Lord Milner's remarkable tact, his knowledge of human nature, his extraordinary faculty for handling men, and his exceptionally adroit control of a thousand and one affairs, besides those of mere finance in Egypt, would have established for him a reputation as a brilliant statesman had he never gone to South Africa at all. But, as a matter of fact, Egypt owes him a debt it can never repay. With the utmost generosity, and indeed with a keen sense of justice and fair play, Lord Milner attributes all modern Egypt's happy state to the wonderful and undying work and influence of the late Lord Cromer, one of the greatest men that England ever sent forth to build up and reinvigorate an ancient and historic land. It is perfectly true. Lord Cromer's work was glorious. But he himself would be the first to acknowledge, and to insist upon the fact, as indeed he frequently did, that without Lord Milner at his side in those strenuous days in the late 'eighties and the early 'nineties he himself could never have carried out the work he did so magnificently accomplish ere he left the land of the Pharaohs."

APPOINTMENTS, PROMOTIONS, ETC.

EGYPTIAN ARMY HONOURS.

The Sultan of Egypt has been pleased to approve of the award of honours, as set out below, for services rendered in connection with the military operations in Darfur and the situation in the Sudan created by the war:—

THE ORDER OF THE NILE.

2nd Class.—Lewa P. J. V. Kelly Pasha, D.S.O., Officer Commanding Western Frontier Force and Governor, Darfur Province.

3rd Class.—Miralai L. K. Smith Bey, D.S.O., Officer Commanding Khartoum District; Miralai H. J. Huddleston Bey, D.S.O., M.C., late Officer Commanding Camel Corps; Miralai M. J. Wheatley Bey, Mr. G. E. Iles, Mr. C. E. Lyall, Mr. R. E. More, Sudan Government; Shahin Bey George, Arabic Secretary to the Sirdar.

4th Class.—Miralai W. A. Davenport Bey, Equatorial Battalion and Kaimakamat; C. Graham Bey, Officer Commanding 11th Sudanese; E. D. F. Gee Bey, Second in Command Artillery; W. Middleton Bey, Officer Commanding 9th Sudanese; G. G. Cobden Bey, Cavalry and M.I.; Mohammed Bey Emin, Officer Commanding 6th Battalion.

Bimbashis.—T. A. Nicholas, Sudan Government; W. F. M. Bagshawe, Dept. of Ordnance; Hon. T. P. P. Butler, Artillery; L. Daniels, Sudan Government; R. W. Hutton, Sudan Government; H. C. Maydon, late Cavalry and M.I.; D. S. Buist, M.B., Medical Corps; E. M. Parsons-Smith, Medical Corps; H. T. C. Jones-Vaughan, Sudan Government; A. J. Pott, 13th Sudanese; G. C. Gowland, Military Works Department; W. L. Clinton, late 11th Sudanese; R. K. B. Walker, M.C., 13th Sudanese; F. G. Peake, Camel Corps; A. C. Marsh, 2nd Battalion; W. St. J. F. McCartney, Veterinary Dept.; Mohammed Effendi Wifki, Camel Corps; Haidar Effendi Rustum, Sudan Government; Mohammed Effendi El Subki, Artillery (now *en pension*).

Saghkolaghassis.—Mr. R. A. Benze-Pembroke, Mr. E. N. Corbyn, Mr. S. Dennett, Lieut.-Commander P. N. Draper, Mr. J. A. Gillan, Mr. A. W. Keown-Boyd, Hon. H. G. G. Pelham,

HELP to meet the needs of the
SERBIAN ARMY,
 and send your Donation for the
SERBIAN RED CROSS
 — to the —
SERBIAN LEGATION, 195, Queen's Gate, S.W.

Mr. F. G. A. Pinckney, Mr. G. R. Storrar, Ibrahim Bey Dimitri, all of Sudan Government.

5th Class.—Bimbashi H. Garland, Dept. of Ordnance; Mr. W. B. Patterson, Sudan Government.

The Sultan has also been pleased to approve of the under-mentioned honours for services rendered in connection with the Jebel Miri Patrol:—

THE ORDER OF THE NILE.

3rd Class.—Miralai R. S. Wilson Bey, Sudan Government.

4th Class.—Kaimakam G. P. Knott Bey, late Sudan Government; Kaimakam D. C. Percy-Smith Bey, D.S.O., Officer Commanding 1st Battalion; Bimbashi Hassan Effendi Zeki, Artillery.

M. Argyropoulos, Greek Minister of Communications, has resigned.

Kaimakam J.P.L. Mostyn Bey, Sudan Government, has been granted the Fourth Class Order of the Nile.

Miralai C. H. Townsend Bey, Governor of Kassala Province, and Miralai R.V. Savile Bey, Governor of Darfur Province, have been granted the temporary rank of Lewa (major-general). These promotions entitle them to the rank of Pasha.

Kaimakam (temporary Lewa) P.J.V. Kelly Pasha, D.S.O., Officer Commanding Cavalry and Mounted Infantry, has been granted the substantive rank of Miralai.

A temporary Miralaiat has been granted to M. H. Logan Bey, Acting Chief Staff Officer and Acting Adjutant-General; L. K. Smith Bey, D.S.O., Officer Commanding Khartoum District, C. W. Spinks Bey, Commandant of Artillery and Director of Ordnance, W. E. Longfield Bey, M. E. Sowerby Bey, and E. O. A. Newcombe Bey, of the Sudan Government Railways, and R. P. S. Elderton Bey, Assistant Financial Secretary Sudan Government, have been granted the substantive rank of Miralai.

Temporary Kaimakam W. MacConaghy, Special Service, has been granted the rank of Kaimakam.

Captain Robert C. Carlyle, M.B., Royal Army Medical Corps, having reported his arrival in Egypt, has been taken on the strength of the Egyptian Army as a Special Service officer, with the rank of Bimbashi, and posted to the Medical Corps.

Bimbashi R. Chevenix-Trench, M.C., Assistant Director of Posts and Telegraphs, has been struck off the strength of the Egyptian Army.

Major W. S. Lennon, Royal Dublin Fusiliers, and Captain H. B. Sayer, Royal Engineers, have been taken on the strength of the Egyptian Army as special service officers, with the rank of Bimbashi, and attached to the Sudan Government.

OBITUARY.

Major-General Stuart James Nicholson, C.B., Colonel-Commandant, Royal Artillery, died at St. Andrews on Tuesday. A son of the late Mr. W. H. Nicholson, of St. Margaret's, Kent, he was born in 1836, and was educated at Charterhouse and the Royal Military Academy. He received his commission in 1855, and thirty years later he served in the Sudan Expedition, in command of the artillery. He took part in the advance on Hasheen, the fighting there and the destruction of Hasheen village, and the advance on Tamai. For his services in these operations he was mentioned in despatches, received the medal with clasp and the bronze star, and was promoted to the rank of colonel. Later he was in command of a Royal Artillery Brigade at Malta, and, in 1895-97, of the Royal Artillery, Southern District. During his service in the Army he held many different appointments. From 1881 to 1884 he was Assistant Director of Artillery at the War Office; was a member of the Ordnance Committee for a year, and later Commandant and Superintendent of the School of Gunnery at Shoeburyness. He was appointed Colonel-Commandant Royal Artillery in 1906, and was created a C.B. in 1897. He married, in 1870, a daughter of Mr. David Laing Burn, of St. Andrews.

It is announced that the Rev. James Hope Moulton, Greenwood Professor of Hellenistic Greek and Indo-European Philology in Victoria University, Manchester, has died as the result of exposure. He was travelling from India, where he had been on a missionary tour, when his ship was sunk. He was fifty-four years old.

MESOPOTAMIA DAY.

The Flag Day in connection with the Mesopotamia Comforts Fund is to-day (Friday), and we all join in hoping that it will be an unqualified success. This, no doubt, it will be, providing the weather is favourable. It is hoped, however, that even should the weather be bad, that will not prevent those ladies who have kindly offered to help from fulfilling their promise.

The arrangements for the Flag Day are being carried out by a committee, of which the following are the members:—President, Field-Marshal the Lord Grenfell, G.C.B., G.C.M.G.; Chairman, Mr. Percy C. Simmons, L.C.C.; Committee, The Countess Dowager of Carnarvon, the Countess of Minto, Lady Mildred Allsopp, the Hon. Lady Lawley, Lady Robertson,

Lady Alexander; Hon. Organiser, Miss Stella Maude; Hon. Treasurer, Captain Feilden; Hon. Secretaries, Mrs. Reginald Walter, Miss Meiggs.

A number of ladies have very kindly given their services.

Colonel the Viscount Goschen, President of the Mesopotamia Comforts Fund, in company with Miss Stella Maude, daughter of the gallant officer who has so successfully led the troops to Baghdad and beyond, will be at Smithfield Market as early as 5.30 a.m., and they will afterwards proceed to Covent Garden. Field-Marshal Lord Grenfell, with Miss Beryl Maude, will visit the Stock Exchange, Lloyd's, and the Mansion House. Several actresses are also kindly giving their services—Miss Gertie Millar at the Savoy, Lady Alexander and Madam Clara Butt at the Carlton. Lady Blackwood and Lady Milson Rees will be in the Regent Palace Hotel, Miss Mabel Seally in the Piccadilly Hotel, Countess Carter at the Ritz, Miss Minnie Lake at the Berkeley, Miss Julia James at the Princess, Mrs. Tod at the Trocadero, and Miss Mabel Russell at the Criterion.

That the troops who are now fighting in this far-away land will appreciate the services of the many ladies who are taking part we can well imagine; and the following telegram has been received from Lieutenant-General Sir Stanley Maude, having been sent off from Baghdad on March 30:—"My best wishes that every success may attend Mesopotamia Day. Gifts so kindly provided by the Mesopotamia Comforts Fund are most gratefully appreciated by the gallant soldiers who have fought, and are still fighting, so splendidly."

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

FRIDAY, APRIL 13, 1917.

THE NEW RUSSIA AND THE BALKANS.

Domestic concerns and provision for the more effective conduct of the war necessarily engross the attention of the new Russian Government; but there is one aspect of Russia's foreign policy which has had so important a bearing on the grouping of the belligerent nations that no time ought to be lost in seeing whether an opportunity does not now present itself for a fresh orientation. Although the fact was hidden from the collective wisdom of the Allied Governments at the outbreak of the war, it was well known in less responsible circles that, whatever ties might link the Bulgarian and Russian peoples, a feeling of mistrust had grown up in Bulgaria with regard to the Imperialist designs of the Russian Court or Government in the Balkans. In this connection we have to distinguish between the politicians and their immediate entourage on the one hand and the great mass of the Bulgarian peasantry on the other. Among the latter the tradition of the Tsar Liberator would be retained, except in so far as it had been purposely undermined by the intrigues of politicians. In certain circles, however, and particularly among those who had not wholly surrendered themselves to partisan politics, it was noted that Russia was no longer content to rely upon the instinctive gratitude of the Bulgarian people, but indulged in active propaganda through the paid agency of some members at least of the Russophil party. It may not be possible to determine how far Russian activities were directly provoked by German and Austrian intrigue; but, however the responsibility may be apportioned, the result in the country was a general misgiving of all the rivals. In these circumstances what was required to decide Bulgaria's part in the war between the Central Powers and Russia was a definite lead in one direction or the other by the Sofia Government. With King Ferdinand's personal estate wholly in the hands of Austria-Hungary, it was obvious where his sympathies would be placed, while German gold and the presence of Serbia on the side of the Entente tended to throw both the Government and the people as well into the arms of the Central Powers. Such a critical situation called for careful diplomatic handling, if it were desired to keep Bulgaria neutral; but the first step of the Entente Governments was to entrust the negotiations to Russia, than whom no more suspect agent could be found. In the light of all that is now known of the old regime in Russia it is not a matter for surprise that the overtures of the Entente failed to achieve their purpose. Bulgaria may have been too far committed when the negotiations were opened for any other result to have been possible, and no fault may attach to Russia's diplomacy. But at this juncture the point to bear in mind is that, in whatever frame of mind the Bulgarians entered the war, they were not long in it before they had satisfied themselves that Russia was their natural enemy, and had all along entertained designs upon Bulgaria's integrity in furtherance of a sinister policy in the Near East. Consequently, the nation was able to devote itself with a considerable degree of unanimity to the prosecution of the war.

Bulgarian opinion may have been entirely misinformed, but so long as the Emperor Nicholas II. remained on the Russian throne and Bulgaria was in the power of Germany there could be little opportunity of

undeceiving it. Events in Russia, unless we are mistaken, will have seriously exercised the minds of the Bulgarians. While their first thought will be that their suspicions of the former administration in Petrograd have received striking confirmation, their present troubles and war-weariness will revive, especially among the peasant soldiery, the old feelings towards the Russian people, to whose generous instincts they really owed their deliverance from the Turkish yoke. As far as Bulgaria's heart is in the war to-day, it is because it labours under the impression that the Russian autocracy, if the Allies were victorious in the war, would lay hands by one device or another upon a portion of Bulgaria's Black Sea littoral to serve as a "corridor" to the new "Tsargrad" on the Bosphorus. These fears, the Bulgarians will be quick to realize, are now out of place. At no time could there have been any real foundation for them, inasmuch as the Allied Powers stood committed to the principle of nationality. But the knowledge that they had incurred the just anger of the Tsar led the Bulgarians to associate with their conception of Russian autocracy even violation of the Allies' declared principles. The new Government in Russia, which has dared greatly for the liberty of its own people, is not going to lend itself to vindictive treatment of a kindred nation, although the latter has done so much to forfeit all consideration. Bulgaria, therefore, on whom the signs of the times cannot be wholly lost, will at this point be readjusting some of her theories regarding the war, and it may be worth while for the Allies to inquire whether they cannot turn to account her new frame of mind.

So far we have dealt with the Bulgarian side of the problem in seeking to discover whether one of the four enemy nations may not have reached a stage at which it finds it prudent to take stock of its position in the war and of the objects for which it is prolonging the struggle. From the Allies' point of view, there can be no objection to allowing diplomacy to lend its aid to military efforts. Their object is to bring about the defeat and extirpation of German militarism, in order that liberty and justice, based upon the principle of nationality, may become a settled tradition among the peoples of Europe. Bulgaria enters the picture, because she has thrown in her lot with the Central Powers, and under the direction of a corrupt Government has endeavoured to profit by militarism in the minor sphere of the Balkans. The bulk of her people, however, are actuated by purely elementary considerations. They bore a grudge against the Serbians, and were told to entertain another against the Russians. The appeal to war has gone against them in a manner even more instructive to their peasant minds than a straightforward defeat. They have beaten the Serbians; but, owing to their political entanglements, they can derive no benefit from the circumstance, and have to struggle on in ever-increasing distress, until their victory is followed by complete national collapse. After two years of war the country as a whole must be ready to acknowledge defeat, while recognizing that the crime of those who embarked it upon a senseless adventure will have justified the imposition of penalties that are of a military character and fall short of actual dismemberment. As they have taken their stand on the principle of nationality, the terms which the Allies will have to impose upon Bulgaria in the general interests of Europe and as a fitting punishment for Bulgarian treachery must be practically the same, whether the Bulgarians surrender unconditionally now or when the Central Powers have been beaten. On the other hand, it would be of the utmost military advantage to dislodge at this stage Bulgaria, and consequently Turkey, from their alliance with Germany and Austria-Hungary. Such a *coup* as this would be is worth a specific effort, and for this reason we should like to see definite steps taken—first, to reassure the Bulgarian people in regard to Russian intentions in the Balkans: and, secondly, to bring to their knowledge what their fate is likely to be, whether they yield now or prolong the struggle, to their own increasing hurt, until the war as a whole is over. It should be made plain that there can be no question of bargaining. The lofty principles to which the Allies have subscribed are not susceptible of trimming after the manner dear to the

Oriental. Some margin is perhaps provided for an early surrender on Bulgaria's part by modifications of Russia's former policy, and by the hostile attitude of the Greek Government, which has freed the Allies from the necessity of consulting it in regard to the Balkan settlement; but the Bulgarian people should be notified that the better terms can only be secured by immediate acceptance. Action should be taken at once by the Allies, in order that the Provisional Government should make the necessary move before the opinion of New Russia is crystallized in irrevocable hostility towards the Bulgarians, through omission to find some explanation of their treachery in the attitude of Imperialist Russia towards the Balkans.

"THE MOUNTAIN OF INHERITANCE."

The news of the British advance into Palestine came as a welcome certainty after a long spell of whispers, conjectures and guesses. There can be no English heart which does not beat quicker over the expedition into Palestine, the latest great Crusade; for through long centuries England and Palestine have been linked together by a magic sympathy, which neither time nor circumstance has availed to weaken, as well as by many events in the history of each country. Tradition more or less well founded attests the link as one of very early forging, but if we look merely at days somewhat nearer our own, we find Alfred the Great sending embassies of friendship to the Patriarch of Jerusalem; Robert of Normandy and Edgar Atheling (representing the rival Royal Houses of England) fighting side by side in the First Crusade; Richard Cœur de Lion straining soul and body to free Jerusalem, swearing that he would sell London herself to that end could he but find a bidder; Edward I. winning a notable victory at Nazareth; and Sir Sidney Smith holding the crumbling walls of Acre by sheer force and prestige of English valour, thereby saving India, and causing Napoleon to "miss his destiny." How can we English, to the very farthest limit of the Empire, forget that through many centuries England has poured out her blood and treasure and devotion upon Palestine, for love of the Beloved City and belief in her destiny? All over Palestine our English dead lie buried—pilgrims, crusaders, soldiers, high and low—all one in sacrifice. There are lonely neglected graves of 1799 at Acre, and Crusaders' tombs in the Mosque El Akhsa, and a pilgrim-knight—one of those who won and signed the Great Charter of our Liberty—rests in peace in the courtyard of the Holy Sepulchre. Thus, England has taken seizin of Palestine through successive ages. There will be other British graves, too, in Palestine before Jerusalem is freed, and each one of these, like those older and forgotten resting-places, shall be to Jerusalem an earnest of England's will and purpose to help her.

It may well be that to Jerusalem herself, wrapped in the gloom and frost of bondage, no word has yet come of approaching help; she sits in darkness and sees no light anywhere. But it was to those who kept watch by night that good tidings of great joy were brought the first Christmas; and her night will be broken soon. That will be a great day indeed to her when she realizes that freedom is at hand, and that it comes by the nation to whom above all others she would fain owe her deliverance—England.

We who lived in Palestine before the war and knew the country well had thought for some time that great changes were bound to come, simply because things were so bad that they could not continue so much longer. I suppose we did not go farther than that,

even in thought; it would have been too wild a dream to hope that help and deliverance should come by England's hand; for there was nothing then to compel her intervention. We saw Scripture literally fulfilled day by day in the ordinary course of things: we lived in a land that was "utterly emptied and utterly spoiled," a land where men fasted for "strife and debate" rather than to "deal bread to the hungry"; a land where the "sons of strangers built up the walls," because there was truly "none to guide Jerusalem amongst all the sons whom she had brought forth, nor any left that took her by the hand, of all the sons that she had brought up"; a land where their unfaithfulness and injustice made the names of priest and judge a byword to the people. When we saw Jerusalem in the dust, her sacredness and beauty debased, how could we doubt that there must be a term to such suffering?

Jerusalem is in the centre of the world, says the Russian pilgrim, and utters a profound truth; for she is the centre of the religious world. Rome may be the centre of the Faith to the West, as Constantinople is to the East, but Jerusalem is the centre of the religious world to both East and West, to Christian and to Jew, while to the Moslem she comes second in sanctity only to Mecca and Medina. To Jerusalem, in actual fact, do all the tribes of the Lord go up.

What is the secret of the spell she lays upon us? No one can say what it is, nor wherein its power lies. No one has yet been able to define it; others abide our question, she is free; you cannot classify her nor explain her; student, artist, historian, archæologist, theologian, mystic, antiquarian, collector—even, alas! the globe-trotter and the crank as well—she allures them all and nourishes them all; and yet her store is never empty, her well never dry. There are, of course, many who see in Jerusalem only a forlorn, oppressed, insanitary Eastern city, a melancholy heap of ruins, the graveyard of a greater past. To such the Beloved City has never revealed herself; seeing her, they see and do not perceive; hearing her spoken of, they listen and can never understand. To such she remains a dead letter, a mutilated memory. But those who will see and hear and seek to understand something of her matchless charm and beauty know Jerusalem for what she is—the Mother of the Nations, the Centre of the Faith, mysterious, beautiful, most wonderful indeed.

Knowledge does not stop at revelation. With that comes a terrible and growing perception of the curse that shadows both the City and the Land, the curse so wantonly invoked when a whole people cried out: "His blood be on us and on our children!" Read the story of the Land these nineteen hundred years, and see how that curse has shadowed it from generation to generation; no one who loves it, and works for it with any sincerity of purpose, can escape his share of the shadow. "On us and on our children"—Jerusalem has children of the spirit as well as of the flesh. There is no escape. Jerusalem leads you by steep and painful paths until you are down in the dust of her abasement, and there she teaches you things hard and terrible to learn, impossible to forget. Your illusions are stripped from you one by one, and they are hard to part with, especially when you are young; there are many things we can spare better than our illusions. In this school of naked truth your illusions are the first sacrifice you must make. When you look around and see how unlovely a thing Christianity can be when inflamed and scarred by strife, and the lust of place and money, and by jealousies, racial and political—when you see Church arrayed against Church, Jew against Gentile, Moslem against Christian and Jew, then, indeed, you doubt the truth of any creed which can show itself in such hateful guise. You may go even further, and hope that there is nothing in creeds that seem to live like vampires by blood and selfishness. To your

**WHITE HORSE
WHISKY.**

AND
BOUQUET.**

KING GEORGE.

KING OF SPAIN

sick imagination the whole place seems full of rottenness and dead men's bones—and of nothing else. Nor is it only the religious illusions that suffer. Politics underlie everything; intrigue and jealousy abound; nothing is what it seems or professes to be; all is hollowness and insincerity. Your own little corner, too, is not free from petty miseries and misunderstandings and hurt feelings, as is inevitable amongst a number of very earnest people who are all engaged in good works, and all trying most strenuously to live the higher life, and often so remarkably lacking in the saving grace of humour. And this is the daily life of Jerusalem, the city of peace—these petty bickerings, these shameful religious fights and political enmities! Sick to the very heart, you drop your cherished illusions one by one to the last, and realize that sorrow ever lingers in the house of learning.

Then comes understanding. Hope gilds the dark hills that hem you in, rays of promise strike upwards through the gloom. Little by little, with many a faltering and backward step, you come at some perception of eternal verities that you have missed before. You realize that only a very real and vital Faith could survive the amazing network of party strife, meanness, envy, spite, and trickery that have sought so long to choke its growth. If it is terribly bewildering to find in a small city like Jerusalem every Church and most creeds represented, you grasp the more eagerly the noble explanation given by the Eastern Church, who says that here, in the city where Christ declared His will for the unity of His Church, that will must one day be fulfilled. Here, then, are gathered together the Churches awaiting their Day of Pentecost. Here, as in a field, are lying the stones, ready for the hand of the Master-BUILDER. When we have known her in the days of her darkness and mourning, we are but the more passionately convinced of her coming glorious restoration.

That was Jerusalem as we knew her, living in her before the war. Throughout these two years of warfare, thick mists of uncertainty and silence have baffled all our anxious questionings. How shall we find her when the mist is lifted and the silence broken? There will be heart-breaking tales of suffering to hear, many that we knew gone out into the great silence, many a home we cared for left desolate. But the Beloved City herself? Will she be safe? Will her grey walls still rest like a crown on the little hills? Will her wonderful shrines, so dearly hallowed by tradition and the devotion of centuries, be found unharmed? If we had to reckon only with the Turk, we should say "Yes," with some confidence; but when we remember Louvain and Malines, Ypres and Rheims, the young fruit-trees, the defiled graveyards, and the little helpless villages of France, can our hopes for Jerusalem be stronger than our fears? Germany sits astride the Holy Land; a German governor—oh, crowning degradation!—rules at Jerusalem. Will the German mark of blood and ruin and desecration be found stamped upon the East as well as on the West? This does not bear thinking on; but Jerusalem is the heritage of the ages to both East and West, and if Germany has hurt her, surely both East and West will rise and call her to account.

Jerusalem keeps her vigil, as yet unbroken by any gleam of hope; and we, her lovers, scattered all through the lands, from East to West—we also keep watch with her, from without the walls.

"Watchman, what of the night? Watchman, what of the night?"

The watchman said, "The day cometh!"

ESTELLE BLYTH.

BRITISH PRISONERS IN TURKEY.

The International Committee of the Red Cross at Geneva has received from Constantinople, under date March 15, a list of British prisoners in Asia Minor. Most of the names in this list are those of Indian soldiers interned in the Amanus and at Ras-el-Ain, Afion-Kara-Hissar, and Budjak. It is also stated that thirteen English are interned at Budjak and Afion-Kara-Hissar. Nine pages of the list are devoted to the names of 172 British who died, mostly in July, August, and September, at Bagtche, Tarsus, and Adana.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE FUTURE OF PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I trespass on your space again to reply to Miss Blyth's criticism of my forecast for the future of the Holy Land, though it is hardly correct to call it my forecast, as it is written in the Book for all to read? I will endeavour to quote my authority for the happenings which I outlined: and, as I said in my previous letter, Biblical prophecy having been proved accurate in the past, it is unreasonable not to rely on it for the future, until it is proved in error.

In Isa. xi. 15 we read: "And the Lord shall utterly destroy the tongue of the Egyptian Sea." Now, the most obvious thing that is referred to is the Gulf of Suez, especially as in the latter part of the verse the judgments are carried on to the Nile Delta. The destruction of the Gulf of Suez involves also, if not the destruction, at least the uselessness of the Suez Canal.

In Zech. xiv. 4-5 (R.V.) we have: "... The Mount of Olives shall cleave in the midst thereof toward the east and toward the west and there shall be a very great valley, half of the mountain shall remove toward the north, and half of it toward the south... ye shall flee, like as ye fled before the earthquake in the days of Uzziah." Here we have the mighty convulsion of nature which is to cause this deep valley, and which probably would mean a good deal of destruction in Jerusalem, including the Mosque of Omar, which, being levelled, would probably go a long way towards solving the politico-religious question of the Jews being allowed to rebuild their Temple on its old site. In verse 8 of the same chapter we get: "And it shall come to pass in that day that living waters shall go out from Jerusalem, half of them toward the eastern sea, and half of them toward the western sea"; in other words, the Dead Sea and the Mediterranean. In Ezek. xlviii. 8 and 10 (R.V.) we have: "... these waters issue out toward the eastern region, and go down into the Arabah, and they shall go toward the sea... and the waters shall be healed... And it shall come to pass that every living creature which swarmeth in every place whither the rivers (Heb. two rivers) come, shall live... Their fish shall be after their kinds, as the fish of the great sea, exceeding many." Now, if words mean anything this tells us that there will be a waterway from the Mediterranean to the Dead Sea, and consequently on to the Gulf of Akaba, passing by Jerusalem, and with quantities of fish of the same species as those found in the Mediterranean. What more could one wish for?—the only waterway between East and West and Jerusalem at its centre. In the 60th chapter of Isaiah one sees how the prophet is almost at a loss for words to describe the wealth which will be poured into Zion by the nations, who will then acknowledge Jerusalem as the political, religious and distributing centre of the world.

One thing more and I have done. Miss Blyth says, "Would not that mighty overflowing equally submerge the whole of the Jordan valley and a good part of Galilee?" This is perfectly true, but even allowing that the rest of the country would not alter its level, the submerged part would only be a comparatively small portion of the land. If one looks at a good contour map of Palestine we see that the Dead Sea would be increased in width from 8 to 10 or 11 miles, and would extend about 30 miles north of its present limit; northward of that the inundation would be from 5 to 8 miles in width, with an arm about 10 miles long going up the Valley of Jezreel. The Sea of Galilee at its widest part is seven miles across, and this width would be augmented by barely two miles, with a narrow arm stretching nine miles north of that. It may be thought that the destruction of its principal river would impair the fertility of the land, but it must be remembered that Palestine is not watered by its rivers, but by rains and springs, and at any rate the former would be likely to be increased by the creation of these fiords, which would give water communication with the rest of the world, such as few other countries possess.—I am, etc.,

VICTOR L. TRUMPER,

Lieut.-Com., R.N.R.

Port Said, March 20, 1917.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Future of Constantinople.

April 4.

MAJOR CHAPPLE asked the Foreign Secretary whether his attention had been called to the statement of the Russian Minister for Justice to the effect that Russia would be content with the internationalisation of Constantinople; whether this indicated that the demand made upon Turkey in the terms of peace suggested to the United States would be modified; and, if so, whether, in conjunction with our Allies, he would state what these modifications were.

Mr. BALFOUR: The answer to the first part of the question is in the affirmative. Nothing has been said to us by the Russian Government on the subject.

SUFFERINGS IN SYRIA.

The following passages are translated from an article published in *El Kowkab* of February 20, and signed Izz-ed-Din Ilm-ed-Din. The writer states that he had recently arrived in Egypt—of course, from Syria:—

In Syria, at present, each individual is bound to give returns of all provisions in his house, he who fails to do so being subjected to various cruel punishments, including death. For nine months past the Government has ceased to pay the allowances to the destitute families of the troops, which previously were paid in paper money of half its declared value. The rise in prices, consequent on the seizure by the authorities of all comestibles in the possession of the people, caused the allowances paid to the families of the Arab troops to suffice for ten days only instead of for a month, and now girls, women, and children of the poor and middle classes are to be seen camping in the streets, mosques, and churches, starving and naked. In the Lebanon, in Syria, and in Palestine deaths from starvation are numerous, and the doctors state that many of these have been sacrificed to the consumption of green almonds and orange-peelings, green almonds, as is well known, possessing poisonous qualities. A great number have died of infectious diseases, as their system was too feeble to endure the want of food, clothing and shelter. These are perishing every day in the presence of their people, of whom the Government of Ghenghiz will soon leave no remnant in existence. They are perishing in presence of a Government which calls itself Moslem (be it said to their shame), and the men of that Government—be it Jemal Pasha or the least of his servants—are wholly indifferent to these calamities of the hapless Arab race.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Owing to extreme pressure on space this week, it has been found necessary to hold over publication of the Egyptian trade returns for February. The Cairo Correspondent of THE NEAR EAST writes that trade fell off somewhat during February: imports were £E1,838,246 and exports £E3,715,624, as compared with £E2,254,769 and £E4,763,071 in the corresponding month in the previous year. The figures are in excess of those for February, 1915, however. Cotton exports decreased by £E1,131,940, but India trebled her purchases—almost entirely a matter of sugar transactions—while trade with the Sudan also showed a brisk expansion. The summary of the accounts will be published next week.

I gather from advices which I received from India by the last mail that the once considerable trade between Calcutta and the Eastern Mediterranean in jute products has fizzled out. Many causes contribute to this fact, of course, but there has been some conjecture regarding the substitute which Near Eastern countries have found for the gunny bag. That fewer of these are required in these days of restricted trade and closed exports—there are the Balkan States and the ruined industries of Asia Minor, for example—may easily be understood, but some are still necessary for the attenuated exports that are left. The most recent Calcutta quotations for Egypt, I see, are: Sugar bags, 48 by 28, 2½ lbs., 6 by 8, are Rs.38 to Rs.39, and grain sacks, 60 by 30, 5 lbs., 6 by 8, at Rs.79—a pretty expensive line when compared with the old days of unlimited trade and ample ships.

Nevertheless, Egypt has not much to complain of in the matter of prosperity. Reference to the interesting letter from the Cairo Correspondent of THE NEAR EAST—published this week—will show that the country is in a more prosperous condition than has been the case for many years. Taxes have never been collected so easily, and the banks have had an agreeably easy task in collecting their loan instalments and interest. It is satisfactory to observe, too, that the Government have "kept their heads," and have adopted a cautious policy, preferring not to "gamble" on the chances which the future may or may not present. It is as well to realise that Egyptian prosperity is largely a war condition, and that, while prior to August, 1914, the outlook had improved, the return of the Angel of Peace to this discordant world will inevitably bring dislocations to what, after nearly three years of the struggle, has become almost normality.

I have been asked to draw attention to a scheme for textile research which has been inaugurated to consider the possibility of conducting an investigation of the various problems presented by the cotton-using industries. A provisional committee (108, Deansgate, Manchester) has been appointed and constituted a committee of the Advisory Council of the Government Department of Scientific and Industrial Research. It has already been decided that there is need for investiga-

tion of questions bearing on the cultivation and the manufacture of cotton, and of the dyeing, printing, bleaching, and other finishing processes. It is also considered that efforts should be made to increase and to improve the system of textile education.

The committee, I may say, is thoroughly representative of the various interests concerned. Its function is to formulate a preliminary scheme of a comprehensive character, to report to the Advisory Council, and then to lay before the trade for its consideration definite proposals for the establishment of a Research Association, eligible for recognition by the Government department, and consequently for monetary grants from the national exchequer. The place for research in each branch of the cotton industry will be thought out, whether in the cultivation of cotton, in spinning, doubling, manufacturing, knitting, lace-making, bleaching, dyeing, printing, finishing, or in the technology of cellulose. I am glad to see that the education of boys entering any of these branches is not to be neglected, and that steps will be taken to ascertain what opportunities are likely to be offered by the trade for the employment of highly trained men. The establishment of a research institution is also included in the programme.

It must not be assumed that the fact that the interim dividend—12 per cent.—declared by the directors of the Peninsular and Oriental Steam Navigation Co., Ltd., is the same as that of last year—when it was increased from the usual 10 to 12—is an indication that the profitable operations of this famous concern have not expanded. That by no means follows. Interested readers will recall that the increase in the interim dividend on the deferred stock for the half-year which ended on March 31, 1916, was followed by an increase at the end of the year in the bonus, which was raised from 5 to 6 per cent., the total return for 1916 being 18 per cent., against 15 in 1915. Stock-holders may reasonably assume that they will receive a similar payment this year. When he spoke at the last annual meeting, Lord Inchcape, the chairman of the company, declared that the directors were able to recommend the increase "in a great measure owing to the fact that the company's resources in the past have been conserved under the prudent guidance of our late chairman, Sir Thomas Sutherland." In other words, it was not a special war dividend.

Shareholders in the United Egyptian Lands, Limited, cannot yet regard themselves as being "out of the wood," but according to Mr. James Davenport's speech at the extra-ordinary general meeting of shareholders held in London on April 3, their position, so far as the threatened action by the Mortgage Company of Egypt is concerned, is somewhat clearer. It will be recalled that the debt due to the Mortgage Company is, approximately, £95,000, that the United Lands, Ltd., is in arrears with its payments, and that an action was threatened. Mr. Davenport was able to tell the shareholders that although they had not actually been able to come to terms with the Mortgage Company, the latter had met them in the most friendly spirit, and had

promised to give every assistance they could to help the United Egyptian Lands to retrieve its misfortunes. "I am able to say," added Mr. Davenport, "that we have made very considerable progress towards this end, and I am hopeful we shall be able to complete a bargain which we can recommend you to adopt." I hope to learn that the United Lands has found a happy issue out of its afflictions. Mr. S. S. Lamert, of Lindsey House, Lloyd's Place, Blackheath, S.E., and Mr. Reginald Tayler, of 16, Russell Chambers, Bury Street, W.C., were elected directors of the company.

America, our new ally, is sending an expert representative, in the person of Mr. Charles S. Williams, of Mansfield, Ohio, to study the markets in the Near East in which American hardware is most likely to find buyers. I gather that Mr. Williams' investigation is part of the world-wide inquiry which the Washington Bureau of Foreign and Domestic Commerce has undertaken. The representative, it is said, will give special attention to markets for tools, agricultural implements, builders' hardware, household utensils, and a number of less important lines. Before he leaves the United States he will equip himself with special knowledge by visits to the principal manufacturing and exporting centres, where he will make a point of ascertaining the obstacles which firms have hitherto encountered in their attempts to sell in such countries as the Balkan States, Turkey, Egypt, and Persia.

It is possible that I may be charged with giving an unnecessary advertisement to this enterprising trade mission: if to impress on British manufacturers and the British Board of Trade the all-out character of the American trade campaign is to give it an advertisement, then I plead guilty to the charge. Time and again I have emphasised in these columns the great need of propaganda work of this character, and I propose to continue to do so until somebody in authority takes the matter out of my incompetent hands. When it comes to the exploitation of new markets, or to the improvement of conditions in existing markets, I fear we are not altogether a live people. We have succeeded in gaining a certain trade position, and appear to be satisfied with it. In the meantime the people whose undevelopment enabled us to win our place have been steadily advancing, and we are in danger of losing it. Who said "Wake up, England"?

The Egyptian Budget for 1916-17.

Highest Revenue in the Modern History of the Country.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 20.

The Council of Ministers have just passed the Budget for the coming financial year (1917-1918)—the highest on record in the modern history of Egypt. Revenue has been fixed at £E19,525,000 and expenditure at a like amount, the financial authorities having been able to balance both sides of the account, contrary to what was found possible the year before the war and in the case of the two subsequent Budgets, on each of which occasions a draft on the Reserve Fund had to be provided for.

The table given below provides an interesting comparison of the Budgets before and since the war with the actual results obtained.

Revenue.

As will be seen, the last three Budgets have fixed revenue at figures which in each case were below the actual amount collected during the preceding financial year. There is every reason to expect that the total for the year, which ends on March 31, will be higher than the estimate for the ensuing financial year.

The estimated increase of £E2,995,000 in revenue in 1917-18 over the estimate for 1916-17 is arrived at in the following manner:—Increases, Land Tax £E74,000, Customs £E600,000, Judicial Fees £E112,000, Railways £E657,000, Domains £E107,000, Investment of Funds £E492,000, Profit on Mining £E150,000, Extraordinary Receipts £E342,000, Other Heads £E768,000; Decreases, Tobacco Dues £E250,000, and Port Dues £E57,000.

The excellent flood last year has permitted the watering of all the cultivable land; there has been no "Sharaki" and consequently no need for exemptions, and it is expected that an increase in land tax collections to the extent provided for will result during the coming year. The high price of cotton has increased the purchasing power of the people and it has been considered permissible to allow for an increase in Customs receipts; for similar reasons an addition to the Railway receipts is expected. The Domains, likewise, will benefit from the high cotton prices, as that administration produces a large crop every year in addition to renting its land to tenants for the cultivation of cotton. The extra profit derived from the investment of funds comes partly from the larger dossier of securities held by the Government and partly from its share in the profit on the issue of bank notes. It has been thought advisable to increase the estimate of Judicial Fees, for although there are fewer suits for collection of debts in the Native Courts, there is a noticeable increase in land deals and consequently in registration of deeds of sale, etc., in the Mixed Courts.

The Extraordinary Receipts include the sum of £E62,000 for sale of land and the balance represents two items of non-recurring nature, the reserve fund of the Ghaffir service, which was kept separately from the Budget, and the credit balance of the Land Expropriation Suspense Accounts. A decrease of £E250,000 is provided for in the Tobacco Dues, because, although the receipts at present are very high, there is every reason to anticipate a drop owing to the small stock held in the Bonded Stores and the difficulty of getting

further consignments from Greece under present circumstances.

Expenditure.

Practically every head shows an increase in expenditure. This is due, in the first place, to the high price of material; secondly, to the promotions, which it was felt must be given to the smaller officials, who are harder hit by present prices than anyone else in the land, and to those who have had no increases of pay since the outbreak of war; thirdly, to the necessity of taking steps to repair buildings, roads, river banks, etc., which had been neglected on account of the enforced economies during the past two years, and which threatened to deteriorate very much if this work was not done now.

The most important increases in administration budgets are:—Public Instruction, £E45,000, of which £E20,000 for raising of salaries and the balance for materials, clothing, and food, which is in part reimbursed to the Government in the form of fees; Ministry of the Interior £E172,204, of which £E54,204 for the prisons, partly for the expenses of the convicts working in the Sudan and partly to meet the extra cost of fuel, food, and clothing; £E74,585 for the Department of Public Health, to defray the extra cost of materials, etc., and to enable it to meet the growing needs of the country, and the balance for the central administration which has to provide for new local commissions, new work in connection with the existing ones, and the reopening of Tor quarantine station owing to the resumption of the pilgrimage; Ministry of Public Works, £E519,000, of which the Irrigation service absorbs £E385,000 (£E342,000 for new works, £E32,000 for maintenance works, and the balance for increase in salaries)—the Drainage Service takes £E39,700, the Tanzim £E45,000, the Buildings Service £E15,000, and the Main Roads £E13,000; Ministry of Agriculture, £E46,000, of which £E24,700 for supplementary work in connection with the boll-worm campaign, £E16,000 for experiments with the manufacture of charcoal and other products out of cotton sticks, and the balance for the expansion of this comparatively new administration; State Railways £E902,207, of which no less than £E650,000 is for increased cost of coal, the balance being for the major part for the purchase of new trucks; War Office, £E395,730, partly to meet the cost of the military administration of the newly conquered province of Darfur and partly for the rearming of the Egyptian Army, which has been decided upon, and the increase of the Camel Corps; Ministry of Finance, £E68,965, of which £E18,000 represents extra cost of materials required by the National Printing Office.

For the first time there appears on both sides of the accounts a heading "Ghaffir Service," for which £E722,000 is provided as expenditure, and an amount of £E664,000 is included above under "Other Heads" as receipts from the Ghaffir Tax. Neither of these items have figured in the Budget before, as they were kept in an entirely separate account. Prior to the war there was extreme difficulty in collecting the tax, as the Powers had not all agreed to its imposition, and so foreigners could refuse payment. But last year the General issued

a proclamation ordering all who were called upon to pay to settle the claim under penalty of their refusal or delay being considered a military offence. Thus the collection of the tax has been put on a legal basis—although there still exists doubt as to whether the tenant or the landlord is liable—and consequently the wish expressed by the Legislative Assembly that this service should be included in the General Budget has now been acceded to.

Egypt's Fortunate Position.

The framing of a Budget of over £E19,000,000 is, indeed, an event in the annals of Egypt. It would, however, be unwise to reckon on this repeating itself in the future. Compared with other countries Egypt has been exceptionally fortunate. She has not been called upon to bear any great part in the expense in men, money, or material of the present war, and has dwelt under the protection of Great Britain's armies, which have enabled her to continue uninterruptedly the development of her commerce and her agricultural resources. Producing one of the most important commodities required for war purposes, she has been able to derive enormous profit from the very high price that product has necessarily commanded, and from the great demand in Europe for cereals and other agricultural products which she has been able to supply to a very large extent. As the Finance Committee rightly says, the purchasing power of the people has been considerably increased, and there is every reason for the present to expect the upward tendency of the Customs receipts to persevere. But we can none of us tell what condition of things will set in after peace is declared, or how long the present abnormal state of affairs will last; therefore it were prudent not to count on any continuation of the present very high revenue collections.

Very special factors have contributed to bring about this record Budget, factors such as the abnormally high freights and cost of production of imported articles, and the equally abnormal market prices abroad of such commodities as cotton, cereals, and their subsidiary products, all of which naturally have their influence on the Customs returns, railway receipts, and other heads of revenue. These factors may not exist after the conclusion of peace, or, if some of them do, they may be counteracted by a restriction in demand or an increase in output, bringing in their train a reduction in prices. Again, water conditions may not be so favourable as they have been during the past year or so, whilst many of the works which have now had to be postponed, not so much because there is no money as because it is not possible to obtain the material necessary, will have to be resumed as soon as hostilities cease, and for the very reason of the delay which has been incurred, the cost may turn out to be heavier than would otherwise have been the case.

All these are weighty considerations which must be taken into account. The Egyptian Government is, therefore, quite right to follow a cautious policy and to husband its financial resources against the day when the present state of affairs will give way before new conditions which are bound to follow in the wake of peace.

Unparalleled Prosperity.

Whilst, however, it is necessary to utter this word of warning lest the too sanguine jump at the conclusion that the day of twenty million budgets, with bumper surpluses, has dawned, nevertheless there is no doubt that the present forecast of the Egyptian Government is fully justified by the situation in Egypt, which is in a more prosperous condition than it has been for many years past. Indeed, there are many who aver—and the writer is inclined to agree with them—that the country has never known such prosperity as has come to it since war started. Certainly the taxes and other imposts have never been collected with such ease, nor have the banks had their loan instalments repaid with such promptitude. All this speaks well for the economic and financial condition of the people, and with level-headed and cautious men at the head of affairs, as we have at present, we should have no fear that the country will be committed to a policy which may cause it to suffer a set-back just at the moment when it will require to go forward.

Trade of the Sudan.

Heavy Increases in Imports and Exports Last Year.⁹

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 16.

Almost simultaneously with the publication of the Budget for the current year, and as if to substantiate the optimistic impression the latter conveys as to the economic situation in the Sudan, we have the Customs returns for the last quarter of 1916 making their appearance. The state of affairs revealed by these returns is, to say the least of it, satisfactory. Imports during the year came to £2,661,468, and exports to £2,288,403, against £1,704,250 and £1,577,991 respectively during the preceding year. In other words, the total turnover has increased by over 50 per cent., imports improving by £957,218, or 55 per cent., and exports by £710,412, or 45 per cent. It is to be noted that, whilst in 1915, taking into account the re-exports, the balance of trade was just slightly in favour of the Sudan, last year it was the other way, only the difference is so small that it is of no significance, and for all practical purposes one can say that the trade balanced.

The following table shows how the past year compares with previous periods, and, incidentally, illustrates the extraordinary progress made by the Sudan in so far as concerns its foreign trade:—

Year.	Imports.	Exports (including re-exports).
	£E.	£E.
1907	1,604,187	498,344
1908	1,832,798	553,017
1909	1,775,957	734,843
1910	1,981,466	1,035,579
1911	2,273,949	1,461,852
1912	1,967,429	1,465,776
1913	2,075,298	1,274,677
1914	1,870,532	1,104,147
1915	1,704,250	1,708,306
1916	2,661,468	2,515,515

From this table we see that in the last ten years, whereas the imports have increased by about 66 per cent., the exports have quintupled, and that the balance of trade, although this year it is slightly against the Sudan, has in reality been steadily improving. Even allowing for inflated prices due to the war, which, however, affect both sides of the account, it must be admitted that the position is highly satisfactory. Considering that at present the Sudan is in a comparatively undeveloped state, this answers well for the time when its proper development will have been definitely embarked on.

Imports.

Compared with 1915, the chief increases in imports were:—Horses and other beasts of burden, by £10,505 to £14,302; hides, skins and leather goods, by £28,394 to £53,559; candles, by £5,101 to £10,254; rice, by £8,359 to £20,749; flour, by £15,327 to £90,499; refined sugar, by £103,894 to £330,150; coffee, by £36,737 to £115,938; tea, by £16,802 to £51,375; beer, by £9,865 to £16,873; petroleum, £10,517 to £22,240; stationery, by £9,206 to £24,442; coal, by £210,823 to £291,853; cotton fabrics, by £173,798 to £655,571; motor-cars and accessories, by £42,243 to £43,301; tobacco, by £32,003 to £74,844. The cost of production, the demand on the foreign markets, and the rise in freights have, of course, played an important part in the increase in the value of the imports, and many of the items have not unnaturally not increased in volume in proportion to the extra value recorded against them. The most striking instances of this are:—Coal, of which about 60 per cent. more came in, and the value of which more than trebled; petroleum, of which the quantity was, roughly, the same, and the value just about doubled; cotton fabrics, which slightly increased in volume, and the value of which rose by 30 per cent.; and rice, of which the quantity rose by about 35 per cent., and the value by nigh on 70 per cent.

Exports.

Turning to exports, we find that the most important increases were:—Horses and

camels, by £144,463 to £145,643 (due to the demands made by the Army); untanned sheep and goat skins, by £19,702 to £50,102; ivory, by £22,102 to £70,234; millet, by £142,898 to £350,054; sesame, by £88,198 to £173,340; dates, by £19,526 to £43,693; gum, by £273,021 to £586,102; charcoal, by £16,233 to £29,847; senna, by £18,587 to £41,986; cotton, by £32,300 to £269,593. The most important decreases were:—Cattle, by £66,214 to £104,186; sheep, by £15,171 to £74,355; untanned hides, by £31,572 to £60,743.

It is ever an ill wind that blows no one any good, and the demand on the world's markets, with its resultant increase in prices, whilst it has affected the import statistics, has stood the Sudan in good stead, for it has been able to benefit thereby in the sale of its products. In nearly every case the proportionate values have gone up in some instances, such as millet, sesame, gum and cotton, very considerably. Indeed, had it not been for the difficulty in finding bottoms, the volume exported would certainly have been very much more, and the returns correspondingly higher. As it is, the authorities have done exceedingly well, for 64 per cent. of the total trade has gone out via the Red Sea and 33 per cent. via the Nile, as against 71 and 24 per cent. in 1913, when shipping was normal. This shows that the efforts made by the Sudan Government in the early days of the war to get shipowners to send steamers to Suakin and Port Sudan have borne fruit, and that those who have ships available are finding it pays to send them to the Red Sea. It is no exaggeration to say that if the Khartoum authorities had not shown such foresight and enterprise, the Sudan would have had very great difficulty in getting its products to the markets of the world.

I give below the usual table of the principal exports in 1916 and 1913—the last normal year before the war.

The Sudan's Customers.

Egypt, as usual, has been the Sudan's best customer, her exports amounting to £1,339,286, and her purchases to £1,945,250, as against £925,611 and £653,106 respectively the preceding year—a slight increase in proportion in each case. As in the previous year, Egypt drew on the Sudan very extensively for live stock and cereals to make up her own deficiencies, whilst half the Sudan cotton crop went to her. She likewise supplied half the textiles, all the sugar, and a considerable portion of the Colonial products. Next to Egypt comes Great Britain, with £566,708 in imports and £649,827 in purchases, against £364,926 and £387,422 respectively in 1915—a slight increase in proportion in the case

of purchases. Half the gum went to Great Britain, as well as the other half of the cotton crop, whilst about 15 per cent. of the textiles imported came from her. However, as the Sudan has used the Nile route in order to overcome the shipping difficulty and get her produce away to Europe, it is highly probable—nay, almost certain—that the textiles entered against Egypt came from England, and that a good portion of the exports to Egypt were in transit there. Indeed, except for livestock and cereals, it would be permissible to say that all the exports to Egypt were in transit to abroad. After Great Britain come India and Aden, linked together in the statistics. Their imports into and exports from the Sudan both doubled, the amount in the former case being £427,782, of which over 60 per cent. represented textiles. Imports of coffee from Abyssinia increased considerably, and trade with Arabia showed developments, mostly in cereals and coffee. On the other hand, trade with Malta fell off considerably; this was foreshadowed in the review of the previous year's trade statistics.

AID FOR CULTIVATORS.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, March 17.

A scheme is now being set to work to provide a number of pumping stations at various points along the Nile north of Khartoum. The object is to increase the output of wheat and barley and to develop the resources of the country in a way which the lack of capital amongst the natives makes impossible without the intervention of the Government. The scheme is extremely popular with the natives, and very great hopes are entertained of the results to be obtained. Owing to the present prosperous condition of the people, there should be little difficulty in getting the land opened up; the only trouble is likely to lie in the large demand for labour. Various influential natives are taking great interest in the matter, and will be of much assistance in seeing that the labour is forthcoming.

Cattle disease is reported from Dongola Province and in Kassala, but all steps have been taken to localise the outbreaks, and it is to be hoped that no serious dislocation of the trade will be caused.

Tokar Cotton Crop.

Owing to the unusual cold, the cotton at Tokar is late in ripening, and there will probably be considerable difficulty in finding the necessary labour to pick the cotton, as it will all ripen at the same moment, and Tokar is remote, and it is difficult for labourers to go there for only a short time, owing to the cost of the journey, which not only involves a considerable distance in the train, but also two days across the desert from Suakin to Tokar.

The extension of the railway to Tokar will be a great boon, but it is unlikely that this work can be completed during the war owing to the difficulty of getting the necessary rails. Indeed, those portions of the railway that are in running order now may cause considerable anxiety in the near future, as it seems likely that some sections will require relaying.

ENGINEERING NOTES.**Machinery for Mesopotamia.**

The bulk of the machinery imported in the Baghdad district consists of oil engines with centrifugal pumps for irrigation, and about 400 plants of this kind were in regular operation on the Tigris and Euphrates before the outbreak of the war. The larger sizes of plant, being more economical, were becoming popular, and nearly all in use were of British manufacture. It is possible, according to an official report, that with the construction of canals and distributories and the development of a large system of State irrigation which should follow, if it does not accompany, the construction of State barrages, irrigation by gravitation will in parts of the country supersede the oil engine, as the latter is now superseding the horse lift. This, however, is still a somewhat remote contingency, and in any case many tracts will probably remain in which mechanical pumps can be employed with advantage.

The Jordan Valley.

The attention paid before the war to the growing of cotton in the districts around Haifa and the Jordan valley has created possibilities for the use of machinery, especially steam ploughs, for opening up large tracts of land needed for this special kind of cultivation. Inquiries for ploughs and machinery have been numerous, and specifications from British and foreign firms have been obtained; but the war has prevented any further progress. According to reports, however, a German firm had taken the matter in hand in a practical way and sent a complete ploughing outfit to Haifa. This consisted of an oil tractor and six share plough. Two competent mechanics were sent in charge of the machinery, and were to conduct a series of trials. This step was taken by the firm as an advertisement, and had also in view the testing of machinery in order to ascertain how far it will satisfy local requirements.

Prospects in Palestine.

There are people who think that Palestine is a semi-desert, and, of course, not a market for machinery. To these an abstract from a recent letter of Mr. W. T. Massey, the British Press correspondent with the Desert Column, written on March 20 from near Gaza, will be interesting. Before and around us, says Mr. Massey, everything is green and fresh. Large patches of barley, for which the plain south of Gaza is famous, shine like emeralds, and immense tracts of pasture are to-day as bright and beautiful as the rolling downs at home. You can truthfully compare the country to the Berkshire Downs. Elsewhere in his letter Mr. Massey says that one of the prettiest pictures he has seen for many a long day was the horses of an Australian regiment out grazing. This land does not seem to be a desert! It will provide scope, perhaps within this year, for agricultural machinery and implements for improved and more extensive cultivation.

Electrical Appliances.

With the extension of the use of electricity for lighting purposes, and the growth of industrial activity in the towns of Beirut and Damascus, a growing demand for electrical materials had sprung up before the war. According to a German official report, transmission wire was supplied before the war from Germany and France. Incandescent lamps, of from 16 to 200 c.p. for 105 or 110 volts, were imported from Germany, Great Britain, and France. Electric fans, which find an increasing demand owing to the heat of the summer, were sent chiefly from Italy, which supplies a cheap article. In Beirut, ventilators for 110 volts, with a wing diameter of from 25 to 40 cm., are used; whilst table ventilators cost from 25 to 70 marks at the works, and ceiling ventilators from 100 to 150 marks.

LANCASHIRE COTTON TRADE.**Marked Advance in Price of Egyptians.**

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The market has displayed little activity during the week and, naturally, it has taken a few days for buyers and sellers to recover from the effects of the recent holidays.

Although a fair amount of inquiry has been dealt with in some quarters difficulties of one kind and another have been very pronounced, and the problem for solution at the moment is how to get goods to customers abroad in view of the transference of tonnage from the Eastern routes to other services.

A marked advance has occurred in Egyptian cotton rates. Supplies are limited, and it is said there is a considerably short interest in the trade at the present time. Yarns have been put up in sympathy with the rise in the raw material, but users have not been stimulated to purchase more freely.

The demand in piece goods for Egypt has improved somewhat. Better advices are being received from Alexandria and Cairo regarding clearances. Buyers realise that there is little probability of lower values in the near future. Some fair lots have been put through in sized goods and also in fancies.

Other Near Eastern outlets have also provided a rather more promising inquiry.

Our market in India is not over-supplied, and a few more offers have come through, but much uncertainty exists as to shipping facilities in the near future. A definite announcement by the Shipping Controller is eagerly awaited.

There has been business offering in grey shirtings for China, but not much has been done.

Miscellaneous sales have occurred for South America. Many manufacturers at the time of writing have not started work again after the Easter holidays.

American yarns have hardened in quotation, but it has been difficult for producers to obtain higher figures, and an irregular business has been done. No particular development has shown itself in the offtake in export yarns.

PRODUCE REPORT.

LONDON, April 13.

Seeds.

Linseed has been firm and dearer in sympathy with oil. Calcutta to London spot is quoted £29 10s. per ton. March-April is offered at £29 5s.; April-May realised £28 15s. Bombay prompt is asked at £29 5s.; and ditto to Hull at £29 5s. 3d. Rapeseed is firm and again harder to buy; brown Cawnpore to London prompt is quoted £25 6s. 3d.; and Toria April-May £27 6s. 3d.; Guzerat to Hull, April-May £27 0s. 9d. Cotton seed is firmer; Egyptian to London, spot, f.a.g. £18 0s. 9d., and prompt £18 12s. 6d.; to Hull spot, sellers ask £19 2s. 6d. Rangoon Beans continue firm. March were sold at £80, while March-April are quoted £78; April-May £73 10s.; May-June £68 10s., and June-July £63.

Oils.

Linseed oil is strong for spot pipes at £52, and barrels at £52 15s., with spot landed 6d. extra; April £53; May-August £54 10s.; September-December £55 0s. 10d. Rape oil is firm. Ordinary brown naked, spot, £64; English refined in barrels, spot, is offered at £69 to £70. Cotton oil is also firm, for crude pipes, spot, at £54; refined pale, pipes, £58; and sweet barrels £62 to £64.

Dates.

The supplies are comparatively small, and with the expectation of a probable scarcity the prices advanced, Persians being quoted at 50s. to 52s.

TRADE NOTES.**Liquidations.**

Mr. J. L. Elder, of Damanhús, has been appointed Receiver of the business of Albia and Otto Krumholz, with instructions to liquidate the same.

Mr. F. H. Russell, of Gresham House, Cairo, has received a similar appointment and instructions with regard to the business of Zola, Photographer.

All the property in Egypt of Messrs. O. A. Rosenberg and Co., and of Mr. O. A. Rosenberg, has been vested in the Public Custodian of Enemy Property. The Public Custodian has appointed Mr. Henri Lack to manage the properties in Egypt, under the control of the Public Custodian.

The estate of Alfred Wiesendanger (deceased) is liquidating its affairs, and all claims are to be sent in to the Official Receiver of the Liquidation, Mr. F. H. Russell, Gresham House, Sharia Suliman Pasha, Cairo.

NEWS FROM SYRIA.**Rainfall Gives Relief to Cultivators**

The following news from Syria is taken from a recent issue of the *Moustakbil*, an Arabic paper, published in Paris:—

Heavy rains have fallen in Syria lately, to the great satisfaction of cultivators, who rely upon rain-water for their cultivation, the rich showers that irrigate the land at this time of the year help to produce good crops. According to news from the interior of Syria, landowners there have had a good opportunity to sow their seeds and prepare their farms for growing products. . . .

A new "economic company" has been organised in the town of Homs, Syria, with the object of "protecting the market" with a capital of £T10,000 divided into 200 shares. The shares are reported to have been subscribed by the people. The scheme was carried out successfully in Damascus, where the administrative board is said to have been formed under the chairmanship of the Wali. Several branches have been formed in the districts, and the inhabitants are reaping enormous benefits from the new company's work.

COTTON FROM TURKEY.

We are told by the German economic Press that the growing of cotton in the Turkish hinterland goes hand in hand with the opening up of the country by the Bagdad Railway. It is not as yet possible to obtain a comprehensive view of all the scattered attempts that are being made in various places.

"Considering, however, that the climate of Asia Minor is very favourable to cotton growing, that all along the line of the railway fallow land is being brought under cultivation, as far as the water supply admits, and that extensive irrigation works are already in course of construction, we may confidently expect that within a short time cotton growing will become general in these districts. Large quantities of cotton seed have been sent to Smyrna, with instructions to take up growing of cotton on a large scale."

We are further told that the German and Austrian textile industries are interested in supporting these attempts.

Growers are placing their produce at the disposal of the military authorities, and as far back as October 50,000 bales had already arrived at Budapest. "This is not much, considering the enormous consumption of the armies of the Central Powers, to say nothing of the civilians; still, the results are satisfactory, and afford satisfactory prospects for the future of Turkish cotton growing."

COMPANY MEETING.

"THE FINANCIAL TIMES."

The ordinary general meeting of the *Financial Times*, Ltd., was held on April 5, at 72, Coleman Street, E.C., Mr. William Graham (the Chairman) presiding.

The Chairman said: You have all received a copy of the directors' report and balance-sheet, and you will, I am sure, have noted with pleasure, and probably with a certain amount of surprise, that under such adverse conditions we have been able to make the not inconsiderable profit of £19,263 2s., an increase on the profit earned for 1915 of just £10,000. The usual amount has been placed to staff pension fund, and the necessary redemption of debenture stock has been effected. We have dealt with the stocks and accounts in a thoroughly conservative manner, and a substantial sum has again been set aside as a reserve for income-tax. That reserve is necessary in view of taxation on the basis of three years' trading, during one of which a handsome profit was made. I am very glad to inform you that the increase in the amount of business done has been effected in every branch of the business, and that the operations of the company for the first three months of the current year are quite up to the standard of the operations during the corresponding period of last year.

Dividend of 5 Per Cent.

The directors have given the most careful consideration to the question of whether the payment of a dividend on the ordinary shares should be made under all the circumstances prevailing. They have decided to recommend a distribution of 5 per cent. Too fearful anticipations of the future might deprecate the distribution of any cash, but the directors do not think that there is occasion for such pessimism as would deprive the shareholders of a dividend substantially less than that earned during the year, for the payment of which the company has ready resources. After payment of the dividend we shall carry forward £26,978 to the credit of next year's accounts, which is practically £2,000 more than was brought forward last year. In the directors' opinion it is only fair that the ordinary shareholders should receive a distribution. Most people want income in these times, and when profits are earned and are available we see no reason why shareholders should be deprived of reasonable distribution.

Position Maintained.

I have pointed out that the year just passed has been one necessitating economy in the use of paper, yet I think I may claim that we

have fully maintained the standing and reputation of the *Financial Times* as the leading financial journal in this country, and that we have also maintained the standing and reputation of our other papers, which are the leaders in their own spheres. While small papers have been the rule with the *Financial Times*, we have dealt effectively with every phase of finance, and have all the facilities, and are still able, as occasion arises, to produce large papers, as, for instance, in February last, when we produced a fourteen-page paper, containing our annual Banking Supplement, and last Friday, when we produced a twelve-page paper, containing our annual Insurance Supplement.

The past year has not been one suitable for the launching of new publications, but we have during the year produced several handbooks, all of which have not only proved valuable advertising media, but have resulted in a profit to the company. Among these I might mention the "Income Tax Guide," now in its sixth edition, "Tin Mining Handbook," "Russian Mines," and the book now universally regarded as the standard work dealing with rubber companies—namely, "Rubber Producing Companies." For the 1916 edition we had a wonderful sale, and are now taking orders in considerable numbers for the 1917 edition, which is now in preparation, and which will be published about the end of May.

The manner in which the sale of the *Financial Times* has kept up during these very trying times has been very gratifying. In times of boom one naturally expects a great demand for financial papers, but the steadiness of our circulation, which to-day stands higher than it did this time last year, is a most satisfactory indication of the hold the *Financial Times* has, not only on the speculative element in the country, but on the great investing class, who in ever-increasing numbers look to the *Financial Times* for guidance in the investing of their money and for being kept up to date on all matters that affect their investments.

War Finance.

The enormous financial war operations of the past year have convincingly demonstrated the value of the Press in raising money for the nation and instructing investors as to their duties and responsibilities. Nothing is more important in war time than to prevent the capital of the country from being wasted or diverted from the directions in which it can be of best use to the nation, and in this respect we may, without any suspicion of egotism, maintain that the *Financial Times* has done excellent work.

The steady stream of inquiries which are dealt with daily in our Answers to Correspondents

affords ample evidence of the position held by the paper among capitalists of all classes, and that our advice, which is always given after careful consideration and after a full use of our unique advantages in the matter of experience and means of research, is generally followed we have good means of knowing.

Company's Other Journals.

But now I want to say a word to you about the other branches of our business which have always been a great source of strength to the company and which during the period of war have been of such paramount assistance to the company and its shareholders. You have in the *Drapers' Record* and in *Men's Wear* two papers which are the leading journals in the drapery and textile trades. Both of those papers have well maintained their popularity during the period of the war, and such has been the demand for the *Drapers' Record* that, notwithstanding the increase of the price from 1d. to 2d., the sales have not diminished.

In this branch of our business the paper difficulty is and has been a serious one, but thanks to the foresight of your managing director, Mr. Bridgewater, and his able lieutenants, the position has been well safeguarded, and we think we can pass through the crisis successfully.

Printing Works.

The company's excellent printing works, "The St. Clements Press," has passed through the year successfully and profitably. The works are maintained in the highest efficiency, and in addition to *The Financial Times* and your other papers, the St. Clements Press prints no less than 40 weekly and monthly newspapers.

The shortage of labour is a difficulty which Mr. Hart has up to the present time, by care and arduous attention, succeeded in overcoming. The company has a very substantial general printing and jobbing business, and shareholders will be consulting their own interests, both as to their pockets as shareholders and their convenience in getting printing economically and expeditiously executed, by becoming customers of the St. Clements Press.

In conclusion I should like to say how much I consider the shareholders are indebted to those of my colleagues who are engaged in the day-to-day management of the business of the company and to those who work under them, for the good work they have given to the company during the past year, and the excellent results which they have achieved.

Many members of the company's staff have not only been doing their own work, but have been filling the places of those members

LONDON COUNTY & WESTMINSTER BANK, LTD.

ESTABLISHED IN 1836.

CAPITAL - £14,000,000, in 700,000 Shares of £20 each.
PAID-UP CAPITAL - £3,500,000. RESERVE - £4,000,000.

22, Place Vendôme.

Sums of £10 and upwards received on deposit, and interest allowed thereon.

Every description of British and Foreign Banking Business transacted.

EXECUTOR AND TRUSTEE DUTIES UNDERTAKEN.

of the staff who have joined the Colours. Altogether 314 employees of the company, including men from the printing works, are now serving in His Majesty's Forces in all parts of the world, and their berths are being kept open for them when the happy time arrives for them to return to civil duties. In the meantime the directors have afforded during the past year, and hope to continue to afford, assistance in relieving financial hardships that may be involved to men in their employment answering their country's call. I beg to move "That the report and accounts submitted to the meeting be received and adopted."

The report and accounts were adopted. Mr. G. E. Hart and Mr. H. A. Randall were re-elected directors, and after the usual compliments to the chairman the proceedings terminated.

COMPANY NOTES.

Meeting.

Having failed to attain the statutory quorum of votes at the General Meeting held on March 30, 1917, the shareholders of the Société Anonyme du Béhéra are called to a second meeting which will be held on Thursday, April 27, 1917.

Dividends, Payments, etc.

At the General Meeting of the National Bank of Egypt held in Cairo on April 7, 1917, a dividend of 12s. per share was declared payable on April 11, 1917, for the year ended December 31, 1916. Coupon No. 23 will therefore be payable on and after April 11, 1917.

The directors of the Royal Exchange Assurance Company recommend a further dividend of 7 per cent., less income tax, making 12 per cent., less income tax, for 1916, as compared with 11 per cent., less income tax, for 1915.

The directors of the Peninsular and Oriental Steam Navigation Company announce a dividend at the rate of 5 per cent. per annum on the preferred stock (less income tax), and an interim dividend at the rate of 12 per cent. per annum on the deferred stock of the company (free of income tax) for the half-year ended March 31 last. Warrants on May 16.

Oil Outputs.

Anglo-Egyptian.—Gemsah, 25 and 23 tons; Hurgada 2,625 and 4,134 tons.

Baku Russian.—Week ended March 31, 67,800 poods.

Bibi Eibat.—Week to April 1, 57,300 poods (924 tons).

Black Sea Amalgamated.—Week ended March 31, 19,630 poods.

British Maikop.—Week ended March 31, 1,997 poods.

International Russian.—Four weeks to March 31, 5,463 poods.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON STREET,
LONDON, E.C., April 12.

The holidays have interfered with business this week, but the tone of the market has remained very firm, and here and there we have to note a further hardening of prices.

Government stocks have continued a strong point, but business has been restricted owing to the absence of sellers.

Agricultural Banks are slightly firmer at 5½, at which price about a couple of hundred shares have changed hands. National Banks are also firmer at 13½ (ex-div.) but without business. Delta Lights have been done in a small way up to 5½. Behéras are wanted at the improved price of 7 and Behéra Prefs. at 3½. Egyptian Delta Lands and New Egyptians are both firmer at 9s. Khedivial Mails are, exceptionally, a trifle quieter at 27s. 9d.

In Greek stocks prices are firm, while Renten are somewhat higher at 41½, but although the demand continues, no business has been possible owing to the lack of sellers.

Oil Shares.

The market has been, and is, as dull as ever it was. A deal in Chelekens hardened the price to 6s. 3d. and Spies have changed hands at 14s. There have also been some deals in Rumanian Consolidateds, but the price of the stock has not been affected thereby.

North Caucasians have improved to 27s. 9d., and other Russian shares have remained firm.

Paris Bourse.

Except in purely French lines business on the Parquet has been quiet to dull. Quotations of interest yesterday were:—Egyptian Unified 92, Turkish Unified 62, against 63. Credit Foncier Egyptian 635 against 633, and Suez Canal 4,365 against 4,400.

THE MONEY MARKET.

(FROM OUR CITY CORRESPONDENT.)

LONDON, April 12.

The discount market has been affected by the impending Treasury bill issue and the expectation that an issue of Exchequer bonds will soon be announced. The result was that while there was ample money the demand for bills was not keen.

Nevertheless there has been an improved condition; rates have been less nominal. There has been little demand for day-to-day accommodation, the rates for which have been called 4 to 4½ per cent. There were few borrowers, however, and money might have been had at 3 per cent.

Exchange on Alexandria stands at 97 to 97½ piastres to £1 sterling.

NOTICES.

THE AGRICULTURAL BANK OF EGYPT.

Notice is hereby given that the FOURTEENTH ORDINARY GENERAL MEETING of the Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Wednesday, the 25th April, 1917, at 4 o'clock p.m., for the purpose, among other things, of:—

- Receiving the Directors' Report;
- Receiving the Auditors' Report;
- Approving the Accounts for the period ended 31st January, 1917;
- Declaration of Dividends;
- Election of Directors;
- Election of Auditors and fixing their remuneration;
- And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 4th April, 1917), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

In Egypt—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.

In London—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

F. T. ROWLATT, President.
Cairo, 23rd March, 1917.

NATIONAL BANK OF EGYPT.

At the General Meeting of the National Bank of Egypt held in Cairo on the 7th April, 1917, a DIVIDEND of 12s. per share was DECLARED PAYABLE on the 11th April, 1917, for the year ended 31st December, 1916. Coupon No. 23 will therefore be payable on and after 11th April, 1917. Coupons must be listed on forms to be obtained at the National Bank of Egypt, 6 and 7, King William Street, London, E.C.

NOTES OF THE WEEK.

If the ill-disguised dissatisfaction which the German Press was allowed to indulge in over the failure of the Turks to defend Baghdad reflected the displeasure felt by the German Higher Command and possibly conveyed to the Turkish military authorities, the latter will now be able to return the compliment by a reference to the Western front. Unless all the indications are at fault, even the Germans themselves will have to admit that the events of the last two weeks in France eclipse in military importance any possible reverse which the Central Alliance could suffer in distant Mesopotamia or on the confines of Palestine. Not only have the enemy lost 28,000 men as prisoners in ten days and been driven back on ground which they had no intention to yield and made desperate efforts to retain or to reconquer, but the German General Staff must also have a shrewd notion that the attack now in progress between Loos and Rheims does not represent the limit of the Allies' efforts. In such circumstances it may be held that the Allied force in Macedonia has no reason to grumble at the dull rôle which it has been forced to play. That it has largely interfered with the plans of the Central Powers in the Near East is obvious, and to this extent, therefore, it has served a useful purpose; but to the whole composite army, from General Sarrail to the last private arrived, the ordeal of enforced inactivity must have proved more trying than the fiercest battle.

In view of last year's experience it can hardly be the intention of the Allied Governments to keep this Salonika force in the same unhealthy positions through another summer. As a forward move is inevitable, it comes as an unpleasant realisation to those who recall the whole story of this expedition to learn what disappointments in regard to the equipment and provisioning of General Sarrail's army must have been incurred by the Allies during recent months. No troops would have remained stationary, if they had been able to essay an advance. The time for military movements in this part of the world has arrived, but the Commander-in-Chief has to content himself with desultory artillery practice and with dropping proclamations from aeroplanes over the Bulgarian lines. *Communiqués* from this front, however, are becoming more frequent, and we may hope that, even if the increased activity does

not lead to any sensational results, it will at least do more to wear down the enemy's staying power than the comparatively peaceful existence maintained hitherto on both sides.

The object of the proclamations was to inform the Bulgarian soldiery that revolt had broken out in their country, particularly at Sofia, where the people and the troops had risen on account of the tyranny of the Germans, "of whom the Bulgarian Government have become the mere valets." Reference was also made to the action of the United States as showing that Germany is the enemy of the whole of humanity, and the Bulgarians were invited to imitate the example of the Russians and to fling off the handful of Germans who hold Bulgaria beneath their yoke. Such messages may be necessary, for it is part of the German system, which will have been adopted in Bulgaria, to hoodwink the public and to keep the soldiers at the front in ignorance of the real state of affairs. But we are inclined to think that something in the nature of a serious defeat would be the best means of impressing the Bulgarians. So far, it must be remembered, they have, thanks to Austro-German aid, carried all before them. No doubt, they do not like the indefinite prolongation of the war; but nothing has been done to convince them of the Allies' capacity to strike hard and to win the war. There is good reason for bringing diplomacy to bear on the Bulgarian situation at this juncture; but it would be immeasurably strengthened, if General Sarrail had been in a position to score an unmistakable success on the battlefield.

A significant development has taken place in the Greek situation. Last week it was announced that the islanders on Zante had revolted against the Athens Government, and that the French naval command had intervened to persuade the Royalist officials to withdraw to the mainland. This movement has now spread to all the Ionian islands, including Corfu, as well as to Skiathos, off the east coast of Greece, and to Cythera, off the south. In each case the Royalist authorities have been expelled and representatives of the Venizelist Government have been installed. It will be remembered that in a recent interview M. Venizelos called attention to the fact that the Entente Powers had put a spoke in his wheel by giving a pledge to King Constantine that in return for his good behaviour they would not allow

the National Government of Salonika to extend its propaganda to those parts of Greece which were at the moment under the jurisdiction of the Athens Government. But for this embargo, M. Venizelos contended, he would have won over to his cause all the islands as well as Thessaly and Epirus. This claim has now in part been made good.

It appears that the Entente Powers have been dissatisfied with the attitude of King Constantine's Government towards the question of the armed bands operating against French troops in the neutral zone in Thessaly. Representations were made on the subject, but the Greek Premier was unable or unwilling to give any satisfactory answer. Accordingly, the Entente Powers have decided that, as King Constantine refuses to act up to his part of the agreement, they are absolved from their pledge to resist the extension of the jurisdiction of the National Government. What is not clear is the reason why the Entente Governments do not strengthen their case by an early publication of the facts. It was left to the Anglo-Hellenic League to make it known that the French military authorities controlling the neutral zone were in possession of definite proof that the bands of irregular troops were being armed and organized from Athens. At one village the French had occasion to arrest the Assistant Commissioner of King Constantine's police, who had been communicating to the Athenian Press imaginary stories of the proceedings of the French Army. In his office was found a complete file of documents, conveying orders from the Athens authorities to the chiefs of the various irregular bands operating in Thessaly, and at the same place were discovered more than five hundred rifles of the Greek regulation Army pattern, together with nearly half a million cartridges. We cannot help thinking that a better effect would be created, both in Greece and outside, if the Allied Governments made these facts officially known at once, and stated the steps that they proposed to adopt in consequence of the action of King Constantine's Government.

In the interview to which reference has already been made M. Venizelos stated that the plan of his Government was to extend its jurisdiction throughout Greece until King Constantine and the Athens Government were entirely surrounded by a people resolved to have a Constitutional regime. He anticipated that the supporters of autocracy would then capitulate and Greece would be able to restore her Constitution. The successful extension of the National Government's authority to a number of important islands justifies M. Venizelos' prediction, and we may look with some confidence to the rest of his programme being carried out. Now that the Entente Powers have yielded so much ground they would be well advised to leave M. Venizelos a clear field. The activities of the komitaji bands in Thessaly prove the hopelessness of looking for really satisfactory dealing on the part of King Constantine and his puppet Ministers. For this reason we are tempted to doubt the usefulness of an inspired statement circulated by a telegraphic agency to the effect that, as the King has modified his attitude towards the Entente, the time has come to revise the current estimate of him. We do not know from what source the inspiration comes, but the suggestion is in keeping with the policy which is responsible for the mismanagement of the Greek question. King Constantine's treachery to the Allies is only one part of the question, and a small part, for the Allies have been able to look after themselves. On the other hand, his treachery to Greece is serious. He has violated the Constitution and has split the country into two hostile camps. The Greek problem will not have been solved when he has ceased to annoy the Entente Powers. The solution towards which the Allies must work is the restoration of constitutionalism in Greece and the reunion of the people under the leadership which commands the approval of the majority.

It may be that the resignation of the Greek Prime Minister, which is said to be impending, will help to bring matters in Greece to a head. As far as the outside world is aware, the only reason for the step contemplated by M. Lambros is the general hopelessness of the situation in Royalist Greece. His own explanation to King Constantine is reported to have been that "the difficulties of the situation" made it undesirable that he should retain office. Whether any other time-serving politician among those who have pinned their faith to German money will be able to regard the position of First Minister to King Constantine more optimistically remains to be seen. The Allied Governments are not called upon to take any part in king-making or king-unmaking in Greece, but, as far as is consistent with the safety of the Salonika forces, they should put no obstacle in the way of the Greek people working out its own salvation by any embargo on the activities of the National Government.

The enemy's converging attack on the Anglo-Russian front in Mesopotamia has met with little success. Sir Stanley Maude withdrew his advanced detachments on the right bank of the DIALA and succeeded in drawing the bulk of the Turkish forces on this flank in a south-westerly direction towards Deltawa. Then, moving forward part of his left wing from the Tigris, he threatened to envelop the Turks, and caused them to retire hurriedly to their former positions. A battle begun on the morning of April 11 had to be temporarily suspended on account of a mirage; otherwise the enemy's losses would have been more severe. As it was, over three hundred killed were found on the battlefield. Meanwhile an advance on the right bank of the Tigris has brought British troops to the enemy's line fifteen miles south of Samarra, a satisfactory indication that General Maude has no intention of surrendering the initiative or of allowing the Turks much time to reorganise.

The searching ordeal through which Roumania has passed must make her people keenly susceptible to any symptoms of a turn in the tide of their misfortunes. Reports that the Germans are burning Braila and Focsani will inevitably raise hopes of an enemy withdrawal from the occupied territory; but the suggestion carries us far beyond the immediate fortunes of Roumania, and for that reason it must be received with caution. The present line held by the Central Alliance against our Allies in the East is the shortest possible. For the Germans to abandon it at this stage would imply that they recognise that the days of their co-operation with Bulgaria and Turkey are numbered, and that they are preparing for the time when the fighting will be transferred to German and Austro-Hungarian territory. If their thoughts already run in this direction, then Mr. Bonar Law's belief that the long night of sorrow and anguish which has desolated the world is coming to a close may not be unduly optimistic. For the Roumanian peasantry and soldiers of equal significance will be the official assurances given them that the old feudal system is to be broken down, and that henceforth each man may look forward to the possession of the land on which his whole life is spent. King Ferdinand has set an example to the other great landowners by undertaking to distribute some of the royal domains among the peasants. His predecessor had shown his confidence in the country of his adoption by investing large sums of money in Roumanian land, and consequently King Ferdinand will be in a position to make an important contribution to the settlement of what has long been a vexed question in Roumania.

A report on the condition of Allied prisoners in Turkey, issued by delegates of the International Committee of the Red Cross, offers some comfort in regard to a matter about which there has been considerable anxiety in this country. Unfortunately, the report deals mainly with officers' camps. Experience in Germany has shown that an attempt was made from the outset to introduce a modicum of humane treatment

into officers' camps, but an entirely different system prevailed in regard to the men's camps. In Turkey, it is to be feared, visits to officer prisoners of war would similarly reveal only the rosier side of the picture. Behind the well-meant effort to put the best complexion on what they saw, the delegates here and there lift the veil which obscures the fate of the bulk of the British prisoners. In the margin left to the imagination of the reader there is room for confirmation of the worst reports. "The Europeans, principally those coming from Kut, have been so weakened by the marches across the desert that one can understand that their restoration to health would be rendered more difficult by an insufficient diet. When, as at Afium Kara Hissar, they have to work, their strength is taxed to an extent which is not in proportion with their power of resistance." The situation could hardly be portrayed more mildly. But when the delegates add that "this implies no blame upon the Turkish military authorities, but is the result of exceptional circumstances," most people will be tempted to demur. The exceptional circumstances were solely due to the Turkish military authorities; for whatever difficulties of transport there may have been, there was no cause to make men work who were not in a fit condition.

From a copy of the report which has reached *The Times* we learn that the inspection of the camps in Asia Minor was made by M. Alfred Boissier and Dr. Adolphe Vischer, and lasted from October, 1916, to January, 1917. On arriving in Constantinople the visitors were received with great courtesy by the high officials of the Turkish Red Crescent and by the Director of the Prisoners' Agency, Izzet Bey. They were given particulars of the work of the agency in preparing lists of prisoners and despatching parcels, and pay a tribute to the way in which the work has been carried out, while recording the fact that the delay in forwarding letters and parcels has often been due on the one hand to illegible writing and imperfect addressing, and on the other hand to the difficulties of transport. It was owing to the latter cause that the officers of the Kut Army, who arrived at Kastamuni in July, 1916, were obliged to wait for an indefinite length of time for parcels which were sent to Baghdad, Mosul, and other places. Izzet Bey, who accompanied them on their mission, took measures to remedy this regrettable state of things, and proposed in the interest of the prisoners that henceforth the officers should be satisfied with two parcels and the soldiers with one parcel a month. By this means regular order will be established, and an end put to a number of complaints. On December 21, 1916, the Red Crescent had despatched 1,060 parcels; the number sent up to date was 30,257.

A second report by the International Committee of the Red Cross deals with visits to prisoners of war camps in Egypt, mainly those containing Turkish prisoners. The inspection of these camps, as well as of others in France and Corsica, was made by Dr. F. Blanchod, M. F. Thormeyer, and M. E. Schoch in December and January last. They declare themselves extremely satisfied with the arrangements made by the British authorities for the housing, feeding, and clothing of the prisoners. The camps are situated in healthy spots, and as a result of the sanitary precautions and of systematic vaccination there have been no epidemics. Beyond the work of cleaning their quarters the prisoners dispose entirely of their time. Their discipline is excellent. After closely examining the situation, the delegates express their conviction that the various officials treat the prisoners with humanity and do all in their power to soften their lot.

MINISTERIAL CRISIS IN ATHENS.

A Reuter telegram, dated April 18, from Athens, states:—Though not yet officially announced, there is practically a ministerial crisis, and the King last night consulted certain party leaders. At the King's invitation, Sir Francis Elliot, the British Minister, had a long audience this morning, the first since the events of last December.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

Use of the Hellenic Flag.

At a recent meeting of the members of the Legislative Council for the Nicosia-Kyrenia Division and the members of the Holy Synod, it was decided to call a meeting of all members and ex-members of the Council, and of the mayors of the island, to consider the matter of the use of the Greek flag, respecting which there has been correspondence between the Greek Archbishop and the High Commissioner, arising out of the incident at Famagusta.

Progress in the Solea District.

The region of Solea, in the north-west, may be regarded as one of the more progressive parts of the island in matters of husbandry. The Director of Agriculture, Mr. Bevan, has recently visited the district, and encouraged villagers with regard to tree-planting, the upkeep of village school gardens, and various other matters. In several villages the people expressed a strong desire that there should be a return to the system under which field watchmen (an important class, at any rate, theoretically) were chosen and paid by the Government instead of by the village communities, their work being supervised by Government inspectors. Legislation would be necessary. At present there is much party feeling and quarrelling over the appointments, and irregularity in payment of wages, etc.

Soli, from which the region takes its name, possesses some interest, though nothing like that of Soli (latterly Pompeiopolis), on the opposite coast of Asia Minor, to the west of Mersina, the extensive ruins of which are well worth a visit. The latter Soli, by the way, is said to have given rise to the term solecism, owing to the corrupt *patois* of its citizens. The Cypriot Soli, however, was of some importance, and has temples to Aphrodite and Isis. Some have ascribed its name to Solon, by whose advice a Cypriot prince founded a city here. Solon, according to Herodotus, visited Cyprus. Others state that it was a colony from Athens.

M. Venizelos and the Holy Synod.

Greek papers publish the reply of M. Venizelos to members of the Greek Church at Paris. The Holy Synod of Greece recently suspended the Archimandrite at Paris, Vasilakis, who ceased to mention the King's name in services of the Greek Church. A general meeting of Greeks protested against this decision, and referred the matter to the National Government at Salonika through M. Romanos; also requesting that the Greek Church of St. Stephen, in Paris, might be taken under the protection of the Government at Salonika. The reply of M. Venizelos has been that, according to the Bishop of Salonika, priests who omit mentioning the names of the King and members of the Royal Family in church prayers are not liable to canonic penalty. The Holy Synod at Athens, therefore, exceeded its powers, and its decision is accordingly null and void.

Athletic Sports.

The Greek Pan-Cypriot Sports are held triennially in normal times at different chief towns, but these are suspended for the period of the war. A local meeting was held at Limassol on April 3, 4 and 6, to which all athletes were invited. The programme of events was a full one. These meetings are generally of a semi-political nature. Patriotic speeches are made, with allusions to the great historic past of Greece, and the youth of Cyprus are exhorted to show themselves worthy of the great traditions. The Hymn of the Olympic Games, by Samarra, was sung by 100 Greek girls and youths. The "Œdipus Tyrannus" of Sophocles, rendered into modern Greek, was played. At Nicosia the "Elektra" of Sophocles, also modernised, is being acted by pupils of the high schools.

According to a report from Constantinople, the American guard-ship, *Scorpion*, a familiar sight in the Bosphorus, has been interned.

A special mission sent by the Sultan of Turkey to the Kaiser arrived in Berlin last week, for the purpose of presenting to the Kaiser a golden sword of honour as "a token of the admiration of the Turkish Army."

Refugees who have arrived in Mytilene report a great scarcity of food in Asia Minor. Numbers of persons are stated to have died of starvation at Smyrna, and desertions among the soldiers are common.

German agents are reported to be conducting an active Pan-Islamic propaganda in the Dutch East Indies, and attempts have been made to bring in contraband of war. One vessel which sailed from California with war material has been seized by the Dutch authorities.

PROGRESS IN NORTHERN PERSIA.

By Mirza Firooz Khan.

'II.—IN TABRIZ.

Of all the Julfa-Tabriz line stations Tabriz is the busiest and most crowded, as becomes the capital city of our fertile province. The long road leading from the station into the city has been divided into three parts. The first section is named "Teresbinskia Avenue," after M. Teresbinsky, the chief engineer of the railroad; the second portion is called "Beliaeyeve," after the Russian Consul-General; while the third is named "Valiahd's Avenue," after the title of the Persian Crown Prince. The first and second portions have already been paved, and the Valiahd's Avenue is now being made ready for paving. The mud walls on each side of the narrow street are being demolished, and it is being widened from eight to ten Persian *arshins*. The first two sections have been paved by the Russians, the third is to be paved at the expense of H.I.H. the Valiahd himself.

The large open space or square in front of the station is filled with a throng of passengers, onlookers—loafers and idlers, who have come here to see the *donkooz* ("pig-machine") arrive—and many carriages. As soon as the train stops there is a great rush for these carriages, which are never sufficient to meet the requirements of the railway travellers. The "cabby" is much like his *confrère* in other lands, and charges you from 8 to 12 *krans*, and more if he can. Now, at the present rate of exchange 12 *krans* are equivalent to 10 roubles; but that is the "fare" here in Tabriz, though in Tiflis one can go from the station to any part of the city for one rouble only. What makes the imposition all the more galling is the fact that in the city the "taxsa," or fixed price, is two *krans*: you can ride in the city eight or ten miles and pay only two *krans*, but for the same distance from the station you have to pay six times as much. I would respectfully call the attention of the City Council and the Russian Consul-General to this state of affairs. Something should be done to put a stop to the extortions of those *faïton* drivers, whose greed is simply boundless.

Since the opening of the railroad—in fact, since the Russians entered the city—Tabriz has undergone many changes. The price of land has increased to five times what it was, as also have the cost of living and the price of foodstuffs. On the principal streets many stores and shops have been built in the Russian style, and anyone who has a site on any of these streets clears it as soon as he can of its old buildings, and in a few weeks there arises a fine "modern" shop, which brings in a sure and permanent income. The Russians have a chief of police in the city, and the police (Persians and Armenians) are under his control. In Russian style, the police carry a sword, a revolver, and a whip; their swords and their uniforms are also Russian in style, but their *papakhs* (caps) are of black lambskin.

Here, as elsewhere, the war has caused the cost of living to advance terribly. Indeed, life has become almost impossible for a certain class of the population. As an illustration of the rise in prices, I may say that before the war Russian sugar was actually cheaper in Persia than it was in Russia; it is now quite the reverse. In Russia to-day sugar is sold at ten roubles a *put*, but in Tabriz the *put* costs from 95 to 105 roubles. In spite of this, tea-drinking goes on just as it used to.

Those responsible for the rise in the price of sugar, I should explain, are not the Russians, but a few local merchants who revel in "speculations" of this kind. Such men ought by rights to be in jail, but they manage to avoid getting their deserts—by methods that were in use long, long before the war. Persia has lacked the firm hand of a master ever since the death of the powerful and never-to-be-forgotten Nasr-ed-Din Shah. And at present these "speculators" are making hay while the sun shines with a vengeance. It is not only in sugar that they operate. The rise and fall of the rouble, in this city at least, depends largely upon them, and it is currently reported that some of them have made between 15,000 and 20,000 *tomans* in a day by skill at this game.

A Montenegrin Committee for "National Union," which has been constituted by M. Radovitch, the former Prime Minister, and three former Montenegrin Ministers, has published at Geneva a journal—the *Quyédinyenyé* (Union)—with the object of promoting the union of Montenegro with Serbia and the Croats, Serbs, and Slovenes of Austria-Hungary.

BRITAIN IN BUSREH.

(FROM A CORRESPONDENT.)

Mesopotamia suffers in reputation owing to its distance from Great Britain; it is only when our Army, so brilliantly led by Sir Stanley Maude, inflicts a defeat on the disordered remnants of a Turkish army that the public at home realises that north of the Persian Gulf the flag is unfurled, that Kut-el-Amara has been retrieved, and that we are slowly working out our plans which maladministration and inept calculation interfered with last year.

Much has been accomplished in the Busreh region which deserves attention, of which people in this country know little; indeed, the public memory is so short that it is probable that even that little has been forgotten.

The fact is, however, that the work of organisation from our point of view, and amelioration from the point of view of the population, has been proceeded with most vigorously and successfully. British institutions are flourishing, corruption has been eliminated, the fear that makes the day precarious and the night horrible has disappeared, and order and peace reign where once chaos and terror ruled in sinister partnership.

It is difficult to realise, perhaps, but it is none the less true, that people who know Indian ports and towns and have gone to Busreh find in the one-time Turkish stronghold most of the characteristics of a British-administered Indian district. There are a Custom House, in which an officer of the Indian Customs Service, of gazetted rank, exercises complete control, and deals righteously with the traders who go to him; a police service, officered and manned by trained British and Indian civilians; a Public Works Department, in similar circumstances, busily engaged in constructing roads and buildings; a medical service, introducing all the best known methods of modern sanitary science; and a post and telegraph service, maintaining old communications, restoring dislocation, and establishing new lines as calmly as if they were at work in Bombay, or Calcutta, or Lahore.

Is it not a matter for regret that the British public are not made to realise all these facts? If they did so, would the knowledge not stimulate the Imperial sense and build up a stronger and more abounding faith in the British mission? In our elementary schools, for example, would not the ideal of civilisation be made clearer to the children if, when the war is spoken of and the enemy's ravages in Belgium, France, and Roumania described, the British way were illustrated—not from what we believe the British way ought to be, but from what we know it has accomplished?

There are lessons, too, not only for British and Allied children, but for the grown-ups who live in the few countries which remain neutral. Not long before I paid my first visit to Busreh, in 1894, everybody was still engaged in discussing the plight of the Marsh Arabs. Their desperation, caused by the oppression and ill-doing of their Turkish overlords, was so great that a horde of them actually proceeded to Amara, a desolate river station, and fired on one of the Blon-Lynch steamers moored there.

They had no grievance against the ship's company or her owners. They merely desired, as they explained later, to draw the attention of the British Government to their grievances and sorrow.

Turkish oppression and corruption did not affect the Arabs only, however. A young engineer employed on a British India steamer died and was buried at Busreh. His shipmates collected sufficient money to erect a tombstone, duly bought the article, shipped it, and it only got so far as the Busreh Custom House. Then the trouble began. The officer in charge demanded *backsheesh*, which, very properly, was refused.

"No *backshish*, no stone," was his reply, and when the local authorities were called on for an explanation it was forthcoming in the remarkable fact that the Customs authorities were unable to classify the stone for tariff purposes.

I have spoken to Busreh people of many races—Greeks, Armenians, British subjects, and even to Turks—and all agreed that Turkish rule meant oppression and unrighteousness. In those days there was no hope of better things. Turkey was a friendly Power, whose interests were to be safeguarded. We tolerated corruption and wickedness for reasons which we need not discuss now; but the fortunes of war brought her out on the side of our enemies, and it is appropriate, perhaps, that in this corner of the Ottoman empire it should be a distinctly British mission to do the "cleaning up."

The progress we have made in this direction has been so considerable in the face of extreme difficulty that there is ground for hope that from north to south of this great territory we shall be able to change milk for blood and peace for strife; and the ground is so strong and definite that we should not hesitate to tell the world what we have already accomplished.

THE SCHOOL OF ORIENTAL STUDIES.

Not a few people were profoundly sceptical as to the advisability of opening the School of Oriental Studies in war time. They felt that it was improbable that any very great number of students could be obtained under war conditions, and that this factor might materially affect the future of so promising a scheme. No doubt there was something to be said for this attitude, but all things considered it was much better to court an inauspicious commencement rather than delay opening the school, and thus prevent it being of immediate utility in the commercial rivalry after the war.

As things have turned out (says the *Indiaman*) the first term of the school, far from being inauspicious, has actually been most promising. Judged by peace time standards, the results may not have been brilliant, but all the same it is no mean achievement that the school should have attracted some seventy-five students so early in its career. That number does not represent the permanent students, for it includes several who for one cause or another have only been in temporary attendance at the school, but it is near enough for practical purposes. About a third of the students are ladies, some of whom are learning languages prior to undertaking missionary work, while others are simply enthusiasts in the pursuit of knowledge. The students naturally include many Indians and Japanese, but the English students, owing largely to the influx of lady students, are much more numerous than might have been expected under the prevailing circumstances.

In one respect the school will have to wait until after the war to realise expectations, and that is with regard to training men in business houses who are going out to the Far East. It might have been thought that City firms would have taken advantage of the facilities afforded by the school to send the more promising of their younger employees to it, so that they might be available for service abroad when required. This has not been the case, only one or two names having been entered, and these men, it may be added, were called up for military service before they could join the school. No doubt the reason for the attitude of business firms is that they are all so short-handed that it is impossible to allow their employees the necessary time to attend the school. After the war things will be very different, and it is from this source, indeed, that the school may expect to receive most of its students.

It is interesting as showing the diversity of interests of the present students and also, incidentally, a tribute to the syllabus, that scarcely one of the twenty languages for which provision has been made is at present untaught. This is partly due, of course, to the fact that there are a number of advanced students at the school who are already proficient in some Oriental languages, and are there for the purpose of acquiring some specialised knowledge. That the school should be attracting these men is a particularly happy feature, and one in thorough keeping with its aim, which is to be an institution for the acquirement of knowledge and not merely a school of languages, and there is a wide gulf between the two ideals.

As to the immediate future, there is every reason for thinking that the number of students will be materially increased, and as numerous appointments to the I.C.S. and other Eastern services will have to be made when the war ends it seems probable that the declaration of peace will be followed by a large influx of students. One all-important factor, however, will determine the continued popularity of Oriental languages in this country. It is only natural that students should expect to see some goal before them as the result of their work, and in the past the drawback has been that throughout the country there were not many more than half-a-dozen positions really worth having at the disposal of the Orientalists, leaving out of account appointments abroad. That being the case, the neglect of Oriental languages is not surprising, and before any permanent improvement is to be expected a very different state of things must prevail. If and when a definite career is assured to every proficient student of Oriental languages, then that branch of learning will be in a fair way of receiving the attention it deserves.

In the House of Commons yesterday, Lord Robert Cecil said the Foreign Secretary had no official information showing that the Provisional Government in Russia was prepared to agree that the Bosphorus and Dardanelles should be internationalized. General von Bissing, the German "Governor-General" of Belgium, whose death was announced yesterday, was the father of Dr. William von Bissing, Professor of Oriental Archaeology and Egyptology at Munich University.

SWEDES AND THE ARMENIAN ATROCITIES.

(FROM A CORRESPONDENT.)

On March 27 a meeting was held in the largest hall in Stockholm to protest against the Armenian deportations and the atrocities committed against the Armenian people by the Turkish Government. The hall was completely packed with many hundreds of people and was presided over by the Burgomaster of Stockholm, Mr. Lindhagen.

The chief speaker was the well-known Mr. Branting. After referring to the various acts of barbarity committed by Germany in this war he said that the determined effort made by the Turks to exterminate a whole people exceeded, if possible, the other events in horror. He referred his audience to Lord Bryce's collection of documents on the subject, terming them a body of evidence which it was impossible to deny. These events had up to that time been passed over in silence in Sweden, but he thought that the Swedes, who theoretically hold International Law in such high honour, should now protest in the strongest terms against these atrocities, which were far graver breaches of International Law than the detention of ships and the seizure of parcels post. He concluded by referring to the dawn of liberty in Russia and hoping that, as the new Russian Government had accepted the principle of freedom for oppressed nationalities, the rights and liberties of the Armenians might now be re-established.

His speech was received with the greatest enthusiasm and afterwards the story of the Armenian deportations was told by Madame Marika Stenstedt. Her husband, Mr. Ludwig Nordstrom, has written several pro-Ally books and pamphlets, notably a life of Mr. Lloyd George, which has already passed through many editions.

It may be remarked that the pro-German Conservative Press made scarcely any reference to this large and enthusiastic meeting and in some of their organs all mention of it was entirely suppressed.

HELP FOR ARMENIAN REFUGEES.

The following letter has been received from the Mayor of Tiflis by the Hon. Secretary of the Armenian Red Cross and Refugee Fund. Some of the war garments referred to were supplied by our readers in response to an appeal in these columns:—

Dear Miss Robinson,—In reply to your esteemed letter I have the honour to inform you that the four cases of warm clothes sent by you for the Armenian refugees on the S.S. —, which left London for Archangel on the 29th June, 1916, have lately arrived and have been distributed among the districts most crowded by refugees in the following manner: In the district of Trebizond the articles have been sent with the member of the Tiflis Municipality and assistant representative of the Caucasian Committee of the Union of All Russian Towns, Prince Argoutinsky Dolgoroukoff, for immediate distribution among the refugees of that district; in the district of Saricamish-Erzorum with Dr. Piroumoff and Knies-Moushky to the disposal of Dr. Zavrieff. Of the arrival of the 28 cases of medicaments I have informed you in my letter of the 24th November, 1916. Allow me, dear Miss Robinson, to express to you and to all the members of the Armenian Red Cross my personal and of the Caucasian Committee's of the Union of All Russian Towns deep gratitude for the help accorded to the refugees, whose sharp need is considerably diminished by the generous contribution of your Fund.—I remain, etc.,

ALEX. KHATISSOFF,

Mayor of Tiflis City.

Tiflis, January 27, 1917.

Lists were enclosed of the numbers and various kinds of garments distributed in the above districts by Dr. Khatissoff at Tiflis.

It is impossible to send garments now, but money is very badly needed for food and clothing for the thousands of starving refugees who are crowding into Erzeroum and other towns as the Russian army advances. Contributions sent to Miss E. J. Robinson, Hon. Secretary of the Armenian Red Cross and Refugee Fund, 35a, Elsham Road, London, W.14, will be gratefully acknowledged. Cheques should be made payable to the Hon. Treasurer, Mrs. Lydia Chambers. This fund is registered under the War Charities Act.

RED CROSS WORK AT SALONIKA.

Red Cross work in Salonika continues to be of an exacting character.

Reports received at the London headquarters show that the five Red Cross kitchens have recently produced 83,660 meals, and the rest stations supplied refreshments to 2,361 men of the Allied Armies. An officers' convalescent camp has been organised by the medical service, and two motor kitchens provided for the Serbian Army have been detailed to accompany detachments on the march.

The British Red Cross has arranged with the Serbian Minister of the Interior to compile reading matter for Serbian soldiers. Three books have been printed locally, and a preliminary distribution of some 500 copies of each has been made among the Serbian hospitals and convalescent camps.

TANGIER TO TEHERAN.

The other day a friend told me of a curious experience that he had had. He lives not far from an aerodrome, and the sight and sounds of aeroplanes dashing hither and thither have become so familiar to him that he pays no heed at all to them. On this particular day, however, as he was walking across a field, he suddenly became aware that the engine of an aeroplane which had been whirring overhead had ceased abruptly. He looked up at once, and there, very low—"it looked only 500 ft. up," as he said—was an aeroplane with its propeller making one or two lazy, half-hearted revolutions. Knowing what this indicated, my friend felt anxious—and with reason. The aeroplane suddenly turned its nose earthwards and started an appalling dive. The spectator stood horror-struck. But the airman had kept his nerve, and ere the machine could dash itself and him to bits he had it under control again, and planed down to a safe landing some way off. My friend hastened to telephone news of the incident to the flying station, and learned that the machine and the officer in charge of it were expected and had come on from town. Later inquiring, he learned that no harm had been done. The airman was mildly vexed that his mishap had been observed at all, apparently. At any rate, when someone asked him what had gone wrong with his engine, he replied, quite testily: "Nothing at all. My propeller just stopped. That's all."

Now, the sight of the aeroplane's dive had made a strong impression on my friend, and naturally so. As he said, "Only the airman's perfect nerve made the difference between his landing safely and his coming down, a horrible wreck, in my field, almost at my feet." But what struck me, personally, as the strangest point in the narrative was that the narrator mentioned, quite casually, that the thing happened "just where I had dreamed several times of its happening." He himself thought this quite natural, apparently.

How does one's subconscious mind do that kind of thing? And, having done it, why does it so often present the particular picture it wants to impress upon us over and over again? Shortly before I paid my first visit to Mesopotamia, at a time when I had no idea of going out there, I dreamed many times over of being cut off in a flat country by sudden floods. And this actually happened to me on my first little journey from Baghdad. It was necessary to travel in the first part of the night, and our little caravan lost its way entirely in the flooded country. I felt then that my dream was "coming true." But, fortunately for me, the ending—my drowning—failed to come to fulfilment—thanks largely, I fancy, to the sagacity of the mule I was riding. In the dark we found ourselves on the edge of running water, and my mount refused to budge, though I did my best to force it on. Then the moon came out for a minute or two, and we found ourselves on the edge of a raging flood that was bad indeed to look on. After that I trusted my mule!

A correspondent, who is in a position to know the facts of the case, has sent me a letter on the subject of the price of dates in this country, regarding which I had something to say last week. I am much obliged to him, and should like to reproduce his remarks *in extenso*, but they are, perhaps, rather too technical for this frivolous column. So I shall pass the letter on to my talented confrère, "Commentator." Here it will suffice for me to say that, according to my correspondent, it appears that the exorbitant price is due to iniquitous high freights, and—to a less extent—to the prohibition of the importation of certain other fruits. But apparently there is also a good deal of "profiteering." What have the Food Controller and his assistants to say on the subject? In view of the food value of dates it seems to me to be an important one.

The taking of the Census in Egypt has brought to light at Alexandria a community hitherto "unknown," or unrecognised officially. According to the Egyptian papers, there are sixty families of these surprising folk, and as each family numbers from six to ten members, there must be nearly 500 of them in all. They are, as far as I can make out, allied to the gipsies, if not by blood at least in custom. Their language is said to resemble "the Aleppo gipsy tongue," and the men are all "pipers," or flute-players, while "the women tell fortunes and play the castanets and cymbals." The fair ones are also conspicuous by reason of the enormous nose-rings they wear. Both "men and women are in request at the marriages of the poorer classes of the native population"; and yet their language proved almost incomprehensible to the Census enumerators. I shall be anxious to see if further details of these newly "discovered" people are published in the Egyptian papers.

I have seen no mention of the subject in the English Press—probably because I have not looked in the right quarters!—but in the *Egyptian Gazette* of March 9 I read of a proposal to institute an Arabic Literary Association. London is suggested—naturally enough, one feels—as the headquarters of the society (which, however, is to be an "international" one), and "there is reason for hoping that the association, if satisfactorily started, could for a time be affiliated to the Royal Asiatic Society." The objects of the society, I gather, would be to study the great quantity of material available in the form of Arabic literary work; to facilitate the translation, both from and into Arabic, of suitable texts; to secure their publication; and to bring about co-operation between workers in this field. All these things, it seems to me, are much to be wished for. Indeed, it is only a fortnight ago that I mentioned the desirability of such work being undertaken on a larger scale and more systematically in this country. But if the scheme is to prove entirely successful, it is my humble opinion that it will have to be kept "all-British." Co-operation with similar bodies in foreign, but friendly, countries would certainly be highly desirable; but without the stimulus of healthy rivalry I am afraid the British members of the proposed association would fail to do themselves justice, and would eventually be "swamped." Would it not be possible to combine forces in some way with the London School of Oriental Studies?

To my story of the soldier who owed his life to one of those "insect pests," as they are called in the advertisements that you see nowadays in every chemist's window, may be added the following one. It may (or may not!) prove useful to travellers in the Near East when the return of peace enables civilians to resume travel there. At any rate, here it is:—Some soldiers back from the trenches were being shown behind the lines a machine for sterilizing clothing, and, of course, eliminating the "pests." One of the party was obviously quite unimpressed, and afterwards an assistant at the sanitary station asked him whether he did not think the machine a fine one. "Well enough, perhaps," said he. "But I've got a dodge of my own that is better." "Oh, what is that?" "Well, I wear my shirt two days one way; then they are all inside, see?" "Yes." "Then I turn it inside out, and wear it that way. Then they're all outside, aren't they?" "Well, yes!" "By the time they've got inside again I turn it back again." "Well, well?" "And so I go on and on; and at last the—marching and counter-marching breaks the little—s' hearts, and they die."

CORSAIR.

LETTER TO THE EDITOR.

THE FUTURE OF PALESTINE AND SYRIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—When the German Herzl launched his scheme of Zionism, and had our sympathetic attention, he was actuated by purely material considerations, in opposition to other Jewish colonisation schemes in Africa and South America. Sentimental considerations and Biblical prophesying never entered his mind; he knew very well that, for obvious reasons, Jerusalem can never be handed back to Judaism.

But now, apart from the unbridgable gulf which separates Jews from Christians and Mohammedans, the necessity for a Jewish place of refuge from Russian persecution no longer holds good. Therefore the creation of a Jewish quasi-State in a circumscribed Palestine would be ridiculously inadequate, even as a burying-place for the derelict Jews of all nations who would flock to it. I say derelict because, with assured equality for them in any part of Europe, the Jews would find it more agreeable, and especially more profitable, to remain where they are.

The fate of that part of the world will, however, have to be settled as soon as the country can be freed from the Turks; and, to my mind, the only solution would be to create a Syrian Republic that will stretch from El-Arish to the Euphrates, round to Mersine, including Cyprus, and be in Customs union, for land produce, with Egypt, Arabia, and Irak, under the protection of the Allies.

Arabia proper, which is just now discussed in some French papers, quite uselessly to my mind, will know how to take care of itself, under the wise guidance of the King of the Hejaz.

From my experience of those countries, their peoples, and those peoples' aspirations, and on statesmanship grounds, I am quite sure that any other solution would be resented, and lead to much unstability, present and future.—I am, etc..

ALEXANDER SEFL.

London, N.W.,
April 13.

NEAR EAST BOOKSHELF.

ARMENIAN POEMS.*

Of the sufferings and wrongs of the Armenians we have heard much, but of their literature, ancient and modern, their poems and legends, very little is yet known in England. Miss Boyajian has, therefore, comparatively new ground to take us over; and her handsome and attractive book should be sure of a welcome. As already mentioned in *THE NEAR EAST*, the profits are to be given to the Lord Mayor's Fund for Armenian Refugees.

The poems selected appear to be chiefly of comparatively recent date, probably because the earlier ones were mostly of a strictly religious character. The majority of them have been translated by Miss Boyajian herself, but there are several specimens of renderings by Miss Alice Stone Blackwell, an American lady who works enthusiastically for the Armenian cause. Upon the whole the verses are pleasing enough; and here and there are some really charming stanzas, as, for instance, in "The Nightingale of Avarair" and "Concerning the Rose and the Nightingale." Through many of the poems, however, runs a note of pessimism, of mourning over past greatness, that becomes in course of time rather monotonous. Occasionally, on the other hand, one has to regret a tendency to "self-praise," or at least to somewhat flamboyant praise of the Armenians and their genius. These things are, of course, due to the Oriental origin of the legends and poems. And the Armenians have at least every right to be proud of their patriotism, of the tenacity with which they have clung to their faith, and of the powers of recuperation that they have shown over and over again. Some idea of their history may be gathered from M. Aram Raffi's contribution to the volume, the section entitled "Armenia: Its Epics, Folk Songs, and Mediæval Poetry."

The volume contains a dozen illustrations in colour by Miss Boyajian. "The decorative scheme" of these pictures, we are told, "is based upon ancient Armenian art as seen in mediæval illuminations." They are shadeless and far removed from any approach to realism, but they are quite attractive in their own style, the colouring being particularly agreeable. Miss Boyajian certainly deserves congratulations upon a piece of work creditably done, and it is to be hoped that her effort will result in securing substantial help for the Fund in which she is so interested.

BOOK NOTES.

Messrs. Hodder and Stoughton announce "In Mesopotamia," by Martin Swayne. The author, who served in Lower Irak, illustrates his descriptions with colour sketches drawn on the spot.

Another volume issued by Messrs. Hodder and Stoughton which has Mesopotamia as a background is "Miss Haroun al Raschid," by Jessie Douglas Kerruish. This, we understand, is the first prize winner in the publishers' thousand guinea novel competition. Mesopotamia is certainly well to the fore in many ways at present.

Mr. Milford is publishing Sir W. M. Ramsay's "The Intermixture of Races in Asia Minor; Some of its Causes and Effects."

Messrs. Blackie have published recently "Lord Kitchener: The Story of his Life and Work," by D. A. Mackenzie. The little book, which is very suitable for young readers, costs 1s.

Messrs. Bell and Son announce "A History of Serbia," by Captain H. V. Temperley. The price is 10s. 6d. net.

In the Royal Asiatic Society's *Journal*, M. Alphonse Mingana writes of the "sacred books" of the Yezidis, or devil-worshippers. He is sceptical regarding their authenticity.

"The History of the Eastern Question from the Advent of the Ottomans to the Outbreak of the European War," by Mr. J. A. R. Marriott, is announced by the Oxford University Press.

"The Gates of Kut," by Lindsay Russell (Cassell and Co.), is a novel, in which the operations upon the Tigris play only a very minor part.

The April "Quarterly Statement" of the Palestine Exploration Fund contains a paper by the late Lord Kitchener, giving a lively account of a ride from Gaza to Jerusalem, and a description of the "Great Holy Fire" and the ceremonies connected therewith. Dr. Masterman and Professor Macalister provide a particularly interesting paper on the modern inhabitants of Palestine; and Mr. Joseph Offord, in addition to his Notes on Jewish Antiquities, writes of "Egyptian Records Illustrative of Genesis xxxvi."

The "Life and Letters" of Sir Colin Scott-Moncrieff are announced by Mr. Murray. It is a record, mainly told in his own words, of public service in India and Egypt, at home and abroad. It throws interesting sidelights upon the

early events of the British occupation of Egypt, including the death of General Gordon, the Cromer administration, and the regeneration of the country, to which Sir Colin's own bold schemes of irrigation largely contributed.

Mr. John Richmond, of 14-15, Conduit Street, W.1, has just published a very remarkable book of visions, with the suggestive title of "The Swine Gods," by Regina Miriam Bloch, a foreword by Israel Zangwill, and a cover designed by Will Gordon Mein. Price 3s. 6d. net. "The Swine Gods" is a peculiarly vivid and appealing work, strong but elusive, repellent, yet with a profound charm that fascinates. A brilliant literary career is predicted for the young author.

CONSTANTINOPLE: PAST AND FUTURE.

At the Royal Victoria Hall last Tuesday evening the Rev. J. A. Douglas, who was at one time Chaplain of the British Embassy in Constantinople, lectured on the past and future of that city. He said that Constantine's conversion to Christianity was not popular at Rome, and in 321, when he visited that city, he was hooted as he rode in the knights' procession to the Capitol. He left Rome the same day, and it was doubtful if he ever saw it again. He proceeded at once to carry out a plan which he had long meditated, that of building a city which should be to the eastern part of the empire what Rome was to the west—a centre of civilisation. For this purpose he chose the site of Byzantium, and so completely pulled down the ancient city that to-day only one of its monuments remained—that of his predecessor Severus. He commenced his work in 325, and dedicated the city he had rebuilt in 330. The walls were built by Theodosius toward the end of the fifth century, and remained virgin for almost a thousand years. Saint Sophia was built by Justinian in 535, about a thousand years earlier than St. Peter's, which was built by Pope Leo to replace it when it fell into the hands of the Turks. Constantine brought many Roman nobles with him to the new city, but the bulk of the population was Greek, and continued so until after the conquest by the Turks in 1453. To-day the bulk of the population was, roughly, one-third Turkish, one-third Greek, and one-third Armenian, the Armenians having been originally brought there to replace the people that were massacred when the city was taken. From 1453 until recent times Constantinople lay like the sleeping beauty in the fairy story. The Kaiser imagined himself the prince who was to awaken her, and made his celebrated visit in 1898. Then the big officials were bought up, and the country got under German control. Of the future of Constantinople the lecturer said that it would be best if the city went to Russia. The Greeks would not be strong enough to hold it, and it would not be a good thing to internationalise the city and cut it off from the country around about it. But the crisis in Russia might leave the Russian people unwilling to face the responsibility of taking over Constantinople, and still more unwilling to appear as annexationists. What the future would be no one could say, but if the Allies carried the war through to victory, as they would, the Turk would have to leave Constantinople.

The lecture was illustrated by lantern slides. One of these showed the door through which the Greek Patriarch was brought in 1825 when, out of revenge for a defeat they had sustained at the hands of the revolting Greeks, the Turks dragged him from the altar and hanged him in his vestments. Mr. Douglas said that the door has been kept closed ever since, and that every new Patriarch swears that he will never have it reopened until he goes through it to re-consecrate St. Sophia as a Christian church.

MESOPOTAMIA DAY.

The moderate weather which "favoured" Mesopotamia Day in England on April 14 was outdone in generosity by the thousands of people who purchased emblems which were sold in aid of the Comforts for British Troops Fund. An excellent "trade" was done by the hundreds of ladies who gave up their time to the "business," and before they had been long at work nearly everybody was in possession of the medal with a camel device, hanging from red, white, and blue ribbon, or a bunch of the "apples of Eden," or paper "palms." Camel brooches or leaves were also in steady demand. Nearly 3,000,000 emblems of various sorts were sold, and a large sum was realised.

Chief in interest among the sellers in London was Miss Stella Maude, daughter of Lieutenant-General Sir Stanley Maude, the British Commander-in-Chief in Mesopotamia. Early in the day, accompanied by Lord Goschen, Miss Maude went to Smithfield, the principal meat market in the metropolis, where a considerable sum was collected. Billingsgate, the famous fish-market, was also visited with similar success.

At the Stock Exchange Lord Grenfell rallied the members, who made huge purchases of emblems, paying for more than the tariff value for them. Lord Grenfell, in the course of a speech in which he appealed for funds, said the first troops to enter Baghdad were a squadron of Yeomanry, composed almost entirely of Stock Exchange men, and led by one of them.

Lloyd's was next visited, and there, for the first time in the history of the famous institution, a lady made a speech. That was Miss Maude, who, provided with a "slip," received the members' signatures for various sums. More than £1,000 was thus collected.

Mesopotamia Day was celebrated on Saturday last at Watford, which is the home of Sir Stanley Maude. Of the local committee, Lady Maude acted as president, and has since stated that the results locally exceeded all anticipations.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style.)	Julian (Old Style.)	—	Moslem.	Jewish.
1917. April. 20 21 22	1917. April. 7 8 9	Friday Saturday Sunday	1335. Jumada II. 27 28 29	5677. Nisan. 28 29 30
23 24 25 26	10 11 12 13	Monday Tuesday Wednesday Thursday,	Rejeb. 1 2 3 4	Iyar. 1 2 3 4

Monday is the birthday of Princess Xenia of Montenegro, fifth daughter of King Nicholas, who was born in Cetinje in 1881.

Wednesday is the birthday of Princess Mary, who was born at Sandringham in 1897.

Prince Antoine Bibesco, First Secretary to the Roumanian Legation, arrived in London on Sunday from the Continent.

Prince Emanuel Bibesco, the brother of Prince Antoine Bibesco, has returned to London from the United States.

Rear-Admiral Nicolas Graçoski, aide-de-camp to the King of Roumania, and representing the Roumanian Red Cross, has left London for Berne on a special mission.

On Sunday the Serbian Minister and Madame Yovanovitch entertained a large number of members of the Serbian Colony at luncheon at the Legation.

The Serbian Minister and M. Voislav Antonievitch, secretary, visited Manchester this week, and were entertained by the Lord Mayor at luncheon.

Colonel Radomir Boyovitch, who was formerly Serbian Minister of War, has arrived in London.

Colonel J. Nicolaievitch, Military Attaché to the Serbian Legation, arrived in London last Friday from France.

Madame Take Jonescu has left London to pay a series of visits in the country.

At Windsor Castle last Saturday Major-General George Kemball had the honour of being received by the King, when his Majesty conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the most Distinguished Order of St. Michael and St. George.

Major Arion returned to London from Paris last week and resumed his duties at India House.

According to the Greek Calendar, last Friday was Good Friday, and at the Greek Church, Bayswater, a service was held during the evening. The Great Archimandrite, Dr. Constantine Pagonis, officiated, being assisted by the Archimandrite. The musical part of the service was under the direction of M. Napoleon Lambelet. Among the congregation were M. Jean Gennadius, Madame Gennadius, the *personnel* of the Legation of the Greek National Government, M. Misu, the Roumanian Minister, Madame Misu, M. Michel B. Boeresco, Madame Take Jonescu, General Georgesco, of the Roumanian Military Mission, and Madame Georgesco.

Brigadier-General A. Carton de Wiart, V.C., D.S.O., is reported to have been wounded again, for the seventh time during the war.

Captain and Adjutant Fisher (who in civil life is connected with the Imperial Ottoman Bank) is at present at home wounded in the leg. He is getting along well.

The marriage will take place very shortly in Egypt of Captain H. A. B. Johnson, Cavalry, Indian Army, only son of Brigadier-General Sir Henry Johnson, Bart., of 60, Lexham Gardens, Kensington, W., to Dorothy Nora, younger daughter of Martyn Gurney, Esq., C.M.G., M.V.O., H.B.M. Consul-General at Marseilles, and Mrs. Gurney, of Beaulieu, Mazargues, Bouches-du-Rhône, and Château St. Laurent, Nice.

Mrs. Highton, wife of Lieutenant Highton, R.N., gave birth to a son at Seaton Cottage, Gerrard's Cross, Bucks, on the 15th inst. Both mother and child are doing well.

On Wednesday next, the second anniversary of the landing in Gallipoli, General Sir Ian Hamilton will unveil a memorial to the 29th Division in the Lady Chapel of Holy Trinity Church, Eltham, S.E. The memorial consists of a carved reredos, with an appropriate inscription and a list of the units in the original division. Bishop Montgomery is to perform the dedication.

Last Friday afternoon, at Lowestoft, Lady Jellicoe opened a bazaar in aid of a fund for providing a Lord Kitchener Memorial Holiday Home for Disabled Sailors and Soldiers. In the course of her opening speech, she said that her audience might be interested to know that Lord Kitchener's last day in this world was spent with Sir John Jellicoe on board his flagship, and that he talked very earnestly about the future of disabled sailors and soldiers. It would thus be seen that his sympathy and support would have been given fully to such a home.

Colonel Sir T. H. Holdich, K.C.M.G., K.C.I.E., C.B., will read a paper on "Baghdad" before the Central Asian Society, 22, Albemarle Street, on Wednesday, April 25. Sir H. Mortimer Durand, P.C., G.C.M.G., K.C.S.I., will preside.

Next Monday afternoon, at a meeting of the Société Internationale de Philologie, Sciences et Beaux-Arts, which meets at 39, Upper Bedford Place, Mr. Marmaduke Pickthall will deliver an address on the modern folk-lore of Palestine.

On Sunday next, at the Unitarian Church, Reading, Professor Léon will lecture on "Turkish Poetry."

The Roumanian Red Cross Society has opened a depot at 24, Hill Street, Knightsbridge, and the committee will welcome the help of ladies who will assist by giving up a portion of their time to making bandages, dressings, shirts, rugs, etc., for Roumanian wounded. M. Misu, the Roumanian Minister, is president; Lady Muriel Paget is chairman, and Mme. Misu is vice-chairman. The secretary is Miss Wright. Ladies who are willing to assist and learn the work are requested to call and see the secretary any day between 10 a.m. and 5.30 p.m.

The Committee of the Serbian Relief Fund appeal for clothing for women and children, having received a cable from Salonika urgently asking for such clothing for refugees from the Monastir region. Mrs. Carrington Wilde will be very glad to receive parcels at 5, Cornwell Road, S.W.7.

Lieutenant R. H. Walker, of the Seaforth Highlanders, who was killed on April 9, was for some time in Athens as the representative of the Neuchatel Asphalt Company. He was the eldest son of Lieutenant-Colonel J. B. Walker, late Royal Artillery, of Eythorne, Wokingham, and married, in 1905, the elder daughter of the late Mr. Thomas Wathen, of Bridge Court, Hereford.

A correspondent writes:—Those of your readers who think the action of the Bulgars in the present war is rather due to their king than to the people, will be interested in the following instance of Bulgar chivalry, which we get from the letter of a British officer serving on that front. Our troops played football on a spot well within range and no notice was taken. When, however, they drilled there shells were thrown. Afterwards a notice was left where the British patrols would find it: "Play football there as much as you like, but if you drill there we must shell you."

APPOINTMENTS, PROMOTIONS, ETC.

The *London Gazette* notifies the following Army appointment: Brevet Major (temporary Colonel) Sir G. B. Macanley, K.C.M.G., C.B., Reserve of Officers, to be temporary Brigadier-General whilst employed as a Director of Railway Transport; April 19, 1917.

M. L. Melas, who has been appointed First Secretary at the Legation of the Greek Nationalist Government, arrived in London last week and entered upon his duties.

M. S. A. Vagliano has been appointed an Attaché to the Greek Legation in London of the Provisional Government presided over by M. Venizelos.

M. Sakellarides, late Greek Consul at Mansourah in Egypt, has been appointed to represent the Provisional Government of M. Venizelos in Cyprus.

The Lord Mayor of Cardiff has received a letter from the Home Office stating that it has been decided to withdraw the recognition which was granted to the Greek Consul, M. Stephanatos, in his Consular capacity, says the *South Wales Daily News*. It may be remembered that some time ago Mr. Melville Heard was appointed to represent the Greek Provisional Government in Cardiff, M. Stephanatos representing the Greek Royalist Government.

OBITUARY.

BRIGADIER-GENERAL MATTHEWS.

Brigadier-General Godfrey Estcourt Matthews, C.B., C.M.G., R.M.L.I., who died of wounds on April 13, was born in 1866. He joined the Marines in 1884, and in 1897 was seconded for service with the Egyptian Army. With a break of a few months in 1910, he remained in Egypt until 1913. During these sixteen years General Matthews saw considerable active service on the Nile, and besides being twice mentioned in despatches, he was specially promoted to brevet-major, received the Order of the Mejidieh, second class, and later of the Osmanieh, third class, and was specially thanked by the Sirdar on behalf of the Sudan Government. General Matthews afterwards became Governor of the Province of the Upper Nile, and was subsequently appointed Commandant of the troops in the Khartoum District. Before leaving Egypt he was made a C.B. On the outbreak of war he was given command of a battalion of the Naval Division, and assisted at the landing at the Dardanelles on April 25, 1915, for which he received the C.M.G. He was wounded in July of that year, but was able to be in command of his battalion again for the operations in August. In May, 1916, he was given command of a brigade, and went out to another front in February. He was seriously wounded by a shell on April 12, and died the following day.

BRIGADIER-GENERAL BULKELEY-JOHNSON.

Brigadier-General Charles Bulkeley Bulkeley-Johnson, who was killed in action last week, took part in the Nile Expedition of 1899 and in the operations that led up to the defeat of the Khalifa. He was awarded the Egyptian medal with clasps and the Order of Mejidieh (4th Class), and was twice mentioned in despatches. He received his commission in 1887, at the age of twenty, and became a captain in 1894, and a major eight years later. He was appointed brigadier-general in November, 1914, on vacating the command of the Royal Scots Greys.

A correspondent writes to the *Morning Post*:—The death of Brigadier-General Bulkeley-Johnson seems to have passed almost unnoticed in last week's fighting, but those who knew him well know best what a loss the country has sustained in his death. He was the perfect specimen of the regimental officer in the old Army, keen on his regiment and profession, widely read, a deep thinker, and a great sportsman. In the late 'nineties, when peace seemed likely to reign indefinitely in Europe, he went to Egypt and spent four years in the Egyptian Cavalry, first organising and afterwards testing his work in the campaign which ended in the defeat and death of the Khalifa; he thus missed the South African War and the chance of making an even bigger name for himself than he had done in the Sudan. Shortly after he had returned to the Scots Greys he wrote an article in a London newspaper respecting the *arme blanche* in modern warfare. On taking over the command of the Scots Greys in 1911 he bent all his energy on training the regiment for active service, and it was a perfectly-trained unit that crossed to France in August, 1914. It went through the retreat from Mons to the Marne and up again to Ypres, with surprisingly light casualties to men and horses, largely due to his training and leadership. Honours fell thick and fast upon him. He was appointed Brigadier-General and A.D.C. to the King in November, 1914, and was awarded the Cross of the Legion of Honour and the Russian Order of St. George. During the long period of inactivity of the Cavalry his gallant spirit was always fretting for action, and now, in about the first cavalry action since the retreat, he has fallen. Details are still lacking, but we who knew him well will be surprised if he was not struck down well in front of his brigade, showing his men the way they should go, and cheering them on. His force of character, his example and training have left an indelible mark on his old regiment, where he was idolised by officers and men, and where he will long be missed. But for himself let there be "no moaning at the bar." He has "put out to sea" in the way he would have chosen.

The death is announced in action of Lieutenant F. H. Masham, H.A.C., seventh son of the late Mr. W. G. Masham, I.S.O., of the Board of Education, and a brother-in-law of Mr. Wm. Sprowson, of Constantinople, with whom he was formerly in partnership. In announcing Mr. Masham's death to his widow, the captain of his company wrote:—"We had to make an attack on a certain point, and whilst gallantly going forward with the company he was hit by a bullet and killed instantaneously, and mercifully saved all suffering. We shall miss him so much. Ever cheery and brave through these strenuous days—a magnificent example. We know only too well what his loss will mean to you and yours."

Captain Eric Fitzgerald Clarke, London Regiment, who was killed on April 9, was for some time in 1915 at Khartoum, whence he proceeded to the Gallipoli Peninsula, where he was wounded at Suvla Bay. While in Khartoum he edited the regimental paper, which afforded amusing reading at times to civilians as well as the soldiers. He was the eldest son of Mr. F. W. A. Clarke, Accountant and Comptroller-General of Customs and Excise, and of Mrs. Clarke, of 24, Nevern Square, S.W. From Shirley House Preparatory School, Blackheath, he went to Dulwich College, where he gained the Doughty Memorial prize for English literature and the Anstie Memorial reading prize, and in 1913 went up to Corpus Christi College, Oxford, with a classical scholarship. Immediately after the outbreak of war he obtained a commission from the University O.T.C.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

GARNETT.—On April 8, at Cairo, the wife of R. M. Garnett, Lieut. R.F.A., of a son.

HIGHTON.—At Seaton Cottage, Gerrard's Cross, Bucks, on April 15, the wife of Lieutenant Highton, R.N., of a son.

MARRIAGE.

SNEATH—SUTTON.—On April 11, at the Church of Our Lady of Lourdes, Harrow Road, W., by the Rev. Leonard McCabe, Arthur Sneath, B.A.(Cantab), Toynton, Felixstowe, late of Egyptian Government Civil Service, son of W. Sneath, Stamford, Lincs., to Lena, sixth daughter of the late Robert A. Sutton and of Mrs. Frances M. Sutton, Rose Lodge, Blackrock, Cork.

DEATHS.

ADAMS.—On April 6, 1917, at 33, Ailesbury Road, Dublin, William Chatterton Adams, Egyptian Civil Service, aged forty-three, eldest son of the late William Adams, J.P., Drumelton House, Cootehill, Co. Cavan. (Egyptian and Indian papers please copy.)

MACKAY.—On April 7, at Croydon, Richard Dermott ("Derry"), the elder son of Ernest and Dorothy Mackay, of Luxor, Upper Egypt, aged 2½ years.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

FRIDAY, APRIL 20, 1917.

AMERICA AND THE NEAR EAST

In his Message to Congress asking for an immediate declaration that a state of war existed between the United States and Germany President Wilson deliberately refrained from any reference to Bulgaria and Turkey, on the ground that these countries had not made war upon Americans or challenged them to defend their rights and their honour. It must have been evident, however, to the President and to the American people that their desire to differentiate between the members of the Central Alliance had little chance of materialising. Whatever views on the subject might be held in Sofia and Constantinople, Germany would work hard to secure that the maximum injury should be done to American interests wherever these could be reached. Accordingly, without any actual declaration, the United States find themselves drifting into a state of war with the Bulgarians and Turks, the first overt act of which would seem, on the part of the latter, to have been the internment of the American guardship *Scorpion*. American interests in the two countries are represented for the most part by mission and educational establishments; but these are important enough to be the object of vindictive action on the part of the Governments concerned, if they are minded in this instance also to model their conduct on that of their German mentors. The course of events, therefore, in the Near East in connection with America's entry into the war is worthy of being watched with some attention, in view of its bearing on the attitude of the United States towards the peace settlement. In declaring war upon Germany President Wilson stated that Americans had not quarrelled with the German people and had no feeling towards them but one of sympathy and friendship. Presumably he would claim to have the same feelings towards the Turks and Bulgarians. The Allies, it so happens, have a very definite quarrel with the German people; for quite apart from the outrages committed by the army, which after all is the nation, there is some ground for supposing that the rest of Germany, including professors, pastors and Red Cross nurses, have only been less guilty of vile practices through lack of the same opportunities. If America plays her full part in the war side by side with the Allies, Dr. Wilson may have occasion to revise his present opinions and to extend his quarrel to the German people; similarly, if the Bulgarian and Turkish Governments take German vengeance on American property, the terms of peace as they affect the Near East may entail some modification of the peace principles enunciated in the Message to Congress.

At this stage of the war Americans will be justified in hoping that both the Turkish and Bulgarian Governments may display sufficient independence of Germany to avoid extreme measures, although they may formally declare war on the United States. There is little likelihood of their engaging in military or naval operations with American forces, and it ought to be hard for them, even in existing circumstances, to forget the peculiar

obligations under which their respective countries are placed in regard to the American people. In Turkey, American mission activity dates back for sixty years, to a period when Bulgaria had not recovered her independence. Americans are responsible for practically all the secondary education that exists in the Ottoman Empire to-day, and the Turks are indebted to them for much of the intellectual development that prompted whatever spirit of progress Turkey has manifested. In the case of Bulgaria the debt to America is even greater. Robert College, founded at Bebek in 1863, and removed in 1871 to Rumeli Hissar on the Bosphorus, where it occupies a site of fifty acres, has throughout its useful career been attended by as many Bulgarians as Turks. For the first twenty years the great majority of its graduates were Bulgarians, and the institution earned from King Ferdinand the title of the nursery of Bulgarian statesmen. Constantinople College is a secondary school for girls, which was established first at Scutari in 1871, and was removed to its present site near Robert College in 1912. Two similar institutions at Samakof have played an important part in the development of education in Bulgaria, while in both countries numerous American mission stations have fulfilled the same rôle on a smaller scale. During the past year it is unfortunately true that a number of American schools and mission stations in Turkey have been closed, probably at Germany's instigation, on the ground that their existence became an anomaly after the abolition of the Capitulations. But because in the heyday of German influence the Turkish Government was quick to adopt a suggestion which pandered to its vanity, it does not necessarily follow that it will now consent to go the whole length of Germany's demands and commit itself to a policy which must irrevocably forfeit any kindly feeling the Government of the United States may have for the Ottoman Empire.

The determining factor in the attitude of the Turkish and Bulgarian Governments is likely to be the precise degree to which the German alliance is now proving irksome in Constantinople and Sofia. But apart from the fate of American property in the Near East the entry of the United States into the war inevitably raises the question of the future of Constantinople. Certain utterances on the part of responsible members of the new order in Russia have given rise to the belief that when peace terms come to be settled the Petrograd Government will not insist upon the possession of Constantinople, which formed the basis of understanding between the Entente Powers in 1915. It is no secret that the American Government at one time was not inclined to view with favour this part of the Allies' price of victory. In laying down the attitude of the United States towards the war on April 2 President Wilson confined himself for the most part to general statements, and naturally made no specific reference to Turkey. As far as anything he said may be held to bear on the subject, it is to be found in his indictment of autocratic Governments. If the hint is given to Germany that she must rid herself of the Hohenzollerns before she can hope to make her peace with the Allies, there will be an even stronger reason for the elimination of King Ferdinand's rule in Bulgaria and of the Government of the Committee of Union and Progress in Turkey. Whether the Turks can be expected to remodel their state on democratic lines in the way that the Germans are likely to do it is another matter, and even if a favourable answer could be given, it would still leave open the question of the future interests of Europe in regard to the fate of Constantinople. In view of the situation in Russia, we should prefer to see the problem in abeyance until such time as Russia is in a position to know her own mind. Too many cross-currents are at work to enable her to approach complicated questions of foreign policy in the right spirit. The future of the Straits ought not to be revived and decided again off-hand, after it has formed the subject of a formal statement by the Allied Powers. The suggestions of the United States will be worthy of full consideration; but let it be given in solemn conclave and not while flags are being waved from a sudden exuberance of spirits.

"TURANIAN" AND MOSLEM.

THE TURKISH APOSTASY.

(FROM A CORRESPONDENT.)

The Turanian movement is not the spasmodic effort of a few enthusiasts. It represents a carefully matured plan most elaborately studied in its philosophical and practical aspects, and carried out on a vast and ambitious scale. The spirit of its teaching has been made to permeate all classes of the purely Turkish population, including women; while, in the army, it has been taught in the shape of a patriotic creed, and the force of military discipline has been laid at the service of its promoters. The movement, therefore, no longer expresses the creed of a limited number of nationalist fanatics, represented by the Central Committee of Union and Progress, or the extremist section of it, but of practically the whole of the Turkish people, backed by the formidable power of the army. Thus, the view that would represent the Turkish people as unwitting or unwilling tools in the hands of the Unionist Government can no longer be accepted. The Turkish race as a whole, with but few exceptions, stands convicted of indulging in a wanton political dream, for the realization of which it seized the opportunity of the world-war to commit most atrocious crimes. It is true that the initial responsibility lies with the C.U.P., but the whole of the Turkish nation has since shared the responsibility by its ready response. This is borne out by the easy success attained by the Unionist Government in modifying—with hardly a dissentient voice—the system of State education, embracing even the elementary schools, and in misappropriating the *Wakfs* funds.

Military officers of the higher grades were instructed to pay periodical visits to the barracks and there deliver lectures of a mixed religious and racial character, prepared by the Government. Were not the Turkish heart a ready soil, such sowings would not have yielded such an early and abundant harvest. In spite of successive admixtures of blood, the Turks have retained the original instincts of the wild men of the Steppes; and a creed aiming at conquest and domination through destruction and bloodshed found eager response in their souls. Islam, sympathetic as it is, despite its militant character, was sacrificed for the realization of this widest of human dreams. There was not enough of "iron and blood" in its teaching. The Turanian creed, framed on the Prussian pattern of militarism, appealed a thousand times more to the Turks' savage nature; and the proof is that, without any compulsion being employed, it quickly supplanted the religious heritage of centuries. The troops took up readily the heroic Turanian songs in place of the usual prayers which had, until lately, been compulsory, but are so no more. The simplest of Anatolians willingly accepted the idea that the prophet of later days is Enver! The fundamental rules of Islam became, for them, the Testimony (for the unity of God), Reason, Character, and the Collection of contributions for the Government and the War under the Turkish banner. An officer once declared that the most potent means for propagating their nationalist doctrine was the barracks.

Following the proclamation of the Constitution of 1908, several opinions were discussed at the Ottoman Congress as to the future political system in Turkey. Some recommended the maintenance of the old system, while others suggested that the principle of nationality should form the foundation-stone of the Empire. The partisans of the latter theory are the men now in power in Turkey. Some of these held that Islam should be used as a weapon with which to attain their ends. Then there appeared in the arena the well-known Turkish writer Jelal Noury Bey, the author of "Union of Islam." The title of this work is misleading, but any reader of ordinary intelligence will at once perceive beneath the innocent surface the author's covert design of depicting the "Islamic Union" as being, in fact, but a plot conceived by deep-thinking Arabs for arabicizing the nations under the name of Islam. "What," asks the writer, "are Islam and Islamic Union? Islam is not only a religion, but also a social organization, a moral doctrine, a governmental system, a code of laws, and a philosophy. As to Islamic Union, it means the constitution of a government subject to these laws, traditions and habits—the whole of a social fabric set up by the Arabs thousands of years before the rise of Islam."

This book passed quickly into three editions in Constantinople alone. It seemed to crystallize the racial aspirations and ambitions of the Turkish youth into a well-defined political creed. It served, moreover, to widen the chasm between Islam and the Turkish political ideal by popularizing and intensifying the idea that they were mutually antagonistic. Jelal Noury Bey says to the Turkish youth: "Every Moslem is an Arab"; and he has a subtle, though curious, way of arguing the point. "If," adds he, "we assume the stan-

dard of pure Arab nationality to be represented by 100 degrees, we find that the Moslem at the farthest confines of China is by one or more degrees an Arab, because, however ignorant he may be, he can always pronounce the *Shahada* (testimony of *Ash'had Inn la ilah illallah*) in Arabic, and he is by so much an Arab. He who knows the *Fatila* (the opening Sura of the Koran) is still more of an Arab. Each Moslem must necessarily learn something of the geography of Arabia and of the history of the Arabs when learning the tenets of his religion; and if he performs the sacred duty of pilgrimage he comes still more under the arabicizing influence of Islam." The example is cited of a man who enters for the first time a mosque for prayer. What first strikes his attention are the names of the *Suhaba* on the wall. He naturally asks what these represent, and he is told that the first is the name of our Master (Sayed) Mohammed, the Arab Prophet who was born in Mecca on such a date, and that the others are the names of Abu Bekr, Omar, Othman, and Ali. "Now by so much knowledge of Arabian history that man becomes somewhat an Arab. What benefit is to be derived from the pan-Islamic Union?" The author evades a clear answer, and adds: "What I know is that it is the duty of every young Turk to know himself first of all, then fix his eyes on the future. Know, oh, young Turks! that there is no union but by language. This I say to thee: propagate thy language and literature that thou and thy nation may attain happiness." These are, in brief, the underlying principles of Jelal Noury's political creed.

The following exposition of the Turkish point of view was given to a Moslem Syrian who had exceptional opportunities of coming in contact with leading "Turaniens." The speaker was a member of the formidable association, "Turk-Ujaghi," and a prominent leader of thought among the Young Turks:

"Know, my friend," said he, "that we Turks now regard Islam as being foreign to us. We were born Turks before we trod this religious path. In other words, we are Turks, and Nature has thus fashioned us. After the lapse of years and centuries over this natural legacy we have entered Islam; but it is known that Islam is essentially Arabian, because, if we analyze it, we find clearly that it rests on principles that are eminently suited to the Arab temperament; for the Prophet was an Arab, and was sent to the Arabs, and, as far as is known, he only mixed with the Arabs, and did not go beyond the limits of Arabia. That is why I tell thee that we Turks consider Islamic culture in this form as suggesting the case of an Oriental who wishes to imitate a Westerner's mode of life and thinking, and *vice versa*. None of these can fill their rôle in life properly, owing to the divergence between instinct and culture in each case, Nature having endowed each with a racial characteristic. We Turks consider Islam as a social organization, a sort of sociological philosophy, a legislative system, a code of laws, as Jelal Noury said; and, as thou knowest, each nation develops along special lines in this world struggle until it attains the final stage—complete maturity. The French, for example, have a special culture and a special social and political system, and their national development has followed along lines which are different from those of other nations. If we were to suppose that one of the Western nations entrusted to another the framing of its laws and the working of its system of national existence, we should see, as an inevitable consequence, the degeneration of that nation. Know, my friend, that there is in Islam, as Jelal Noury said, a mysterious agency, which only the few deep thinkers have been able to comprehend and unravel, that is, a strong distinctive assimilative quality. If we compare the Christian with the Moslem religion, we find that there is a vast difference, of a sociological order, between them. The distinguishing feature of Christianity is that it is non-racial; it does not impart a racial character to its followers, whereas Islam, on the contrary, impresses its followers with its national 'cachet,' which is purely Arabian. As I have told thee, life in this world is but the enacting of a social drama. But who plays the successful rôle? First of all, the spirit of the individual or society must be conformable to the function he or it is called upon to exercise, and must suit his or its temperament and character. If, for instance, we call upon a man, cowardly by nature, to fulfil the function of a brave hero, the result would be an awkward attempt, and a sorry and ridiculous failure, and *vice versa*. This symbolizes the

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square London, E.C.2.

relation between Arab and Turk. The Turkish nation is a Turanian nation from Moghulistan, which had a cult, as well as traditions and habits of life, different from those of the Arabs of Arabia proper. Consequently, the Arab can adopt the Islamic religion, and fulfil thereby a sociological function which the Turk cannot, however much he may try to perfect his rôle. Furthermore, the spirit of this religion is Arabian, and it is difficult for the Turk to acquire a profound knowledge of its teachings, however deeply he may study the Arabic language. I have not seen one Turk in ten thousand who was well versed in Arabic; wherefore we see the Arab playing this part (the Islamic one) more or less to perfection, while the Turk's effort in this sense is but an awkward, unnatural, and sorry performance."

The Turks professed Islam for over six centuries, until the Germans, to suit their own political designs, unhinged the minds of their youth by subtle philosophical sophistries. Vain children as the Turks have always been, especially in matters intellectual, the Germans, with wonderful astuteness, played upon this racial weakness, and have made them abandon the faith of their forefathers, and sacrifice it on the altar of foolish pride, by representing their race as the master race, whose high mission was the hegemony of Asia.

ARCHÆOLOGICAL NOTES.

By JOSEPH OFFORD.

Since the famed excavations at the Temple of Diana, at Ephesus, carried out by the British explorer, Wood, the Austrians have made further explorations at the site, as has also our countryman, Mr. Hogarth. These labours have resulted in considerable additions to the relics of the many sculptures which adorned the edifice. The whole subject is now adequately treated by Mr. W. R. Lethaby in the *Journal of Hellenic Studies* for 1916. Among other facts concerning these decorative features of the temple, Mr. Lethaby shows that the finest carvings—those upon the angular base pedestals of the front row of the building and the circular drums of the second row of entrance columns—depicted the Labours of Hercules and the Adventures of Theseus, whilst those at the back of the temple, where all the columns were round ones, gave figures of Hellenic deities and tableaux of preparations for the great festival of Diana. He also describes the motives of the pedestal and other sculptures, showing how these were copied later by vase painters and artists of all *métiers* in Greece and Italy.

One of the finds of the Austrian Ephesus expedition was a relief of an Amazon, now preserved at Vienna. It probably came off the great Artemis Altar. At Copenhagen and Berlin there are replicas of statues of another Amazon from the Ephesus temple. The Amazon figure in the relief now at Vienna is designed under the inspiration of an earlier Amazon, which Herr Noack believes to have been the "Euenemon," or "lovely legged" Amazon of the sculptor Strongylion. It is well known that the great goddess, "Diana of the Ephesians" of the Acts was a many-breasted deity; but she was not the only one so depicted in Asia Minor, for in the *Comptes Rendus* of the French Academy, M. Cumont, one of the many Belgian savants who have escaped from the Germans, edited a relief in the Leyden Museum, found near Koula, in ancient Mæonia, which shows the goddess Anaitis with the upper part of her body covered with many breasts, and the stag, Diana's special companion, by her side.

The destruction of historical and scientific material rescued from decay by ardent scholars and antiquarians, often at the risk of health and life itself, caused by this war of *kultur* against human freedom, is incalculable. A crucial instance of this is the carrying off—ostensibly to Constantinople, but probably with the basic idea of their perhaps ultimately arriving at Berlin—of the many valuable manuscripts gathered together by the learned Fathers of the St. Joseph College at Beyrout. The gradual but steady decline of Asiatic Turkey in the last century caused thousands of manuscripts to pass into oblivion, and this collection consisted of the gleanings of codices sporadically saved in ruins, or by private owners, and representing the last existing fragments of a vast lost literature. Fortunately, some of the rarest texts have been published in the seven or eight complete volumes of the *Mélanges d'Archéologie Orientale* of the St. Joseph University, or in the excellently edited magazine *El Machiq*, which the Fathers have carried on for many years.

Apropos of manuscripts, M. Munier, of the French Institute at Cairo, has recently edited in the Institute's *Bulletin* a Coptic work, giving what purports to be a veracious life of Saints Maximus and Domecius, or Duma-

dus. This is a Sahidic text, from the Egyptian Hamouli Convent, of a book already partly extant in other Coptic dialects. The whole of the text and a careful translation are given. Whilst this does great honour to M. Munier's erudition, it seems a pity that some fifty pages and so much time and study should have been devoted to such a worthless production. The so-called "miracles" of the two "saints" are of the most fantastic and puerile description, resembling the absurd stories of ancient Egyptian magical papyri, and being quite unworthy of any genuine Christian hagiology. Whether any of the early Egyptian Christians gave credence to such falsehoods is a moot point, but early Coptic literature is practically made up of such vagaries, which may perhaps account for the delay in publishing the many Coptic treatises for which the late Mr. Pierpont Morgan paid such fabulous prices to a Cairene dealer.

The writer, some years ago, had the pleasure of being at Sakkara with M. Jean Capart when he was excavating the great tomb which was, and it is to be hoped still will be, the chief monument in the Musée Cinquantenaire, at Brussels. Carefully removed in pieces, it was reconstituted in Belgium as an old Egyptian mastaba. The Metropolitan Museum has in emulation recently excavated, shipped, and re-erected in New York another large sepulchre from Sakkara of the fifth dynasty. The work was carried out by Mr. A. Lythgoe, who is, we believe, a Canadian. It was built for a courtier and official named Perneb, about 2,800 years B.C., and so is certainly the oldest tomb embellished with bas relief in the United States.

A good many years ago Professor Flinders Petrie found and uncovered a smaller tomb near the Pyramids. The Cairo Museum authorities did not want it for their collection, and so it was filled in and thinly covered over again, but under the warning of the Professor that it was not, in his opinion, safe from clandestine spoliation. Nothing, however, happened to it for so many years that someone who evidently felt interested in its existence thought it had been forgotten. Then one day it suddenly disappeared, and the disturbed and empty ground was the only evidence of its once having been. The whole must have been uncovered, broken up, and removed by night. The person suspected was a wealthy native dealer at Giza, who doubtless intended to conceal it for so long that its disappearance would be forgotten, after which his sons could make a little fortune out of its sale, in pieces, to tourists and collectors. Instead of being profitable, however, the transaction proved just the opposite to the spoliator. There were too many people in the secret—for numbers must have been employed in the deed—and all these, when impecunious, demanded "baksheesh" to keep silence! Sir Gaston Maspero, feeling sure this very Egyptian form of Nemesis would almost ruin the culprit, let matters run the course they were sure to do by the banks of the Nile.

The newly issued volume for 1916 of the *Bulletin de l'Institut Français d'Archéologie*, of Cairo, contains an essay by that very accurate Egyptologist, M. G. Daressey, upon the peculiar animal that figures throughout Egyptian history as the most generally used type of the god Set, who was almost—but not quite—always regarded as a malevolent being. It was he who murdered and dismembered Osiris, and he is supposed to have been the type of darkness and evil of the desert and sterility. The cause of M. Daressey's taking up this subject is a suggestion put forward by Dr. Schweinfurth that the creature in question depicts the Ethiopian and South African ant-eater, or aard-vark, of the Boers. This seems hardly likely to be the case, for although the head and curved snout of the Set animal, as shown by Schweinfurth, are nearly identical, the legs and long tail, with forked termination, which is often shown erected above the back, are quite alien from the aard-vark's form. The attribution to the ant-eater is, however, more plausible than to the okapi. M. Daressey decides that the animal is not a copy of anything really produced by Nature, but a fantastic imaginary creature which would be useless in a combat with man or another animal, and which thus typifies the impotence of Set, as against his conqueror Horus, or to injure any true pious Egyptian devotees of the latter deity.

General Caubone has informed the Greek Government that the Allies have proofs of the existence of organised bands in the Greek neutral zone, and of the complicity of officers and officials in the organisation of the bands.

Serbian children born in the invaded country during the Austrian rule have been so frequently christened by the names of Slobodan ("Freeman") and Nadejda ("Hope") that the Austrian authorities have sent an intimation to the Serbian priests forbidding them in future to christen children with such names.

THE PRESS ON THE NEAR EAST.

Germany's Real Ambition.

Germany persists in her declaration that the Allies are fighting for nothing and that the war was forced on her. Count Gleichen, writing in the *National Review*, shows the absurdity and futility of the lie.

Such trifles as her unprovoked attack on Belgium and occupation of a large portion of Northern France and Western Russia were, of course, forced on her by the ingratitude of these countries [he writes with fine satire], and her conversion of Bulgaria and Turkey into allies for the suppression of Serbia and attacks on Egypt were necessitated by the outrageous treachery of Great Britain, combined with the obligation to help her Austrian ally in the south. Nothing was further from her thoughts than a war of extension or of conquest—it was purely a war for the purposes of self-defence.

Meanwhile, under cover of these protestations, the real tendency of her movements was becoming apparent. The "Mittel-Europa" scheme, heralded by writers of eminence and moderation, gradually took shape. At first tentatively and delicately expressed, for fear of hurting the feelings of her main ally, suggestions were put forward both in pamphlet form and in the Government Press hinting at the eventual moral absorption into the German Empire of the Austro-Hungarian one. It need hardly be said that the proposal was made as tending directly to the benefit of the Austrians and their numerous nationalities; and the possibilities of real absorption were never even mentioned. It was to be a closer binding, a closer relation, a closer communion, political and commercial, with the object of mutual defence against Russia and other evil Powers, and so on. Naumann's book on "Mittel Europa" was the first open and well-reasoned argument in favour of the movement; and it was followed by hordes of other more or less well-written pamphlets with the same object in view. The movement, however, was not at first foreshadowed as reaching, for the present, any further: the idea was merely Germany and Austria combined as a Central Power, and wits were exercised as to how far a central Customs Union (*Zollverein*) was possible, how a combination was to be effected of the different nationalities into one harmonious whole, etc.

The development of the main idea itself was, however, spreading. It cannot be called in any sense new, for the Pan-Germans have for many years been issuing their views on the desirability of a huge German Empire extending from the North Sea to Asia Minor, and beyond. But what is new is that the Government have now given their imprimatur and sanction to the diffusion of these Pan-Germanic—one might almost call them Super-Germanic—ideas.

A Venomous Pan-German.

Count Gleichen then proceeds to review a book by Franz Köhler—"unknown up to the present, but a thorough representative of the ignorant, frothy, and venomous spirit which unfortunately animates such a large proportion of the German people"—on "A Political Programme of Work for the whole German Nation and its Friends." The Count writes:—

Any importance that the book possesses is not intrinsically due to the theories that it enunciates, for these are visionary and largely impracticable. But it is certainly remarkable in showing that these wild projects for the future are, in spite of the ignorance displayed in their compilation, acceptable to masses of the author's fellow-countrymen, and are greedily swallowed by them. Still more remarkably evident is it that the Government, in sanctioning their publication, gives its tacit approval to this form of propaganda and desires the assimilation of these theories by the populace.

The main idea of the book—let us say it at once—is that it is the duty of every German to strive towards the formation of a new Triple Alliance consisting of:

(a) The Germanic race (exclusive, of course, of Great Britain, but comprising Germany, Austria-Hungary, Holland, Denmark, Switzerland, Norway, and Sweden).

(b) The Western Slavs (Serbians, Czechs, Slovaks, Slovenes, Poles, Bulgarians, Letts, Balts, and the Little Russians, i.e., the inhabitants of the Ukraine).

(c) The Mohammedan world in general.

The ultimate object to be attained in this monstrous programme would seem to be the seizure of the world's trade—or, at all events, that of Central and South-East Europe, of Africa, and of a large part of Asia—by land, so as to make the commercial development of the Super-Empire independent of the sea and of England's superiority thereon. This hardly bears out the Emperor's dictum as to the future of Germany lying on the water, but it is satisfactory in so far that it appears to acknowledge the incapacity of Germany to wrest the sovereignty of the seas from ourselves. Perhaps—who knows?—it may have been written with the purpose of gradually accustoming the Teuton mind to the fallacy of the dictum aforesaid.

On the other hand, we are told at the beginning of the book in so many words that "the destruction of England stands in the forefront of our desires," and the author proceeds to justify this kindly project by an account of our relations with other States, and references to our history which are, briefly put, a tissue of falsehoods based on pure imagination. The author must have a poor opinion of the intelligence of his compatriots if he expects them to accept his statements without examination. But, judging by the circulation of this precious book, he is right in his estimate.

"Besieged in Kut."

Amongst the many excellent articles in the centenary number of *Blackwood's Magazine* not the least interesting is "Besieged in Kut—and After," by "C. B." It gives a great deal of interesting information about the country under war conditions, and the description of life in Kut before and during the earlier stages of the siege help us to realise as vividly as any mere reader can do, perhaps, something of the horror of that time. The author, who is, one gathers, a surgeon of the Indian Army, introduces us to the country at Busreh; and afterwards we accompany him on his adventurous journey up the Tigris. But before we leave Busreh we have a description of the palm—one almost writes "a tribute to the palm"—which undoubtedly merits quotation:—

We have become fond of the palm. She is Mesopotamia, so far as we have seen it—we have watched her and her mate quiescent during the winter, blossoming forth with flowers and new foliage in the spring, have noted the process of fertilisation guided and controlled by her human owners; watched the formation of the fruit whilst her large and graceful leaves spread themselves in their richness and pride; and, finally, have awaited with ever-increasing curiosity the ripening of the generous fruit hanging in great golden bunches from her neck. Borne down with the weight and wealth of the fruit, exhausted by their wonderful effort, these God-sent trees lose their gloss and colour; their lower leaves wither and brown; they look worn and bedraggled; they return to rest for another winter, and care not how their human taskmasters dispose of their progeny. They have done their work; they have earned their rest. Their fruit does not, however, represent their only usefulness. The lighter parts of the old frond are used for making matting, which forms the floors and walls of many a poor dwelling, whilst the stem of the leaf, tough and strong, serves the hundred purposes to which short sticks are put—the base of the old leaf is the staple fire-wood, and the trunks of the old trees are seen in many a rustic bridge over irrigation channels, and form the props or beams of many a house. No part of the palm is lost, nothing is wasted.

In describing the journey up the Tigris, the author tells us that at Kurnah there has been erected a look-out tower, 180 feet high, which affords a wonderful view of the flat country. He also mentions a fact not widely known: that Amarah owes much to the ex-Sultan Abdul Hamid, who "took a special interest in the design and erection of this tower." But perhaps the chief interest of this part of the article lies in the way in which it makes us realise the risk run by the party of being attacked and cut up by the Arabs. This, in view of our occupation of all the main points on the river, certainly strikes the reader as strange. Of Kut itself we have a detailed description; and here, again, we are made to understand what an important factor in the situation were the Arabs at that time. "The uncertain attitude of a force of Beni Lam Arabs a few miles away under the hills" led the British to "put in a good deal of work in preparing perimeter breastworks and small trenches around our hospital as part of a local defence scheme, which at one time appeared likely to assume prime importance."

At Ctesiphon and Kut.

Apparently the British left behind in Kut when our force advanced on Baghdad did not feel over-sanguine of the result; and when they got the news—on December 2—it cannot have been any surprise. This is how the first tidings came:—

Boom! boom! boom! Faintly the sound of distant guns was borne to us on the north wind. It was the 2nd of December, and, tired and hungry, we were sitting down to a late breakfast and talking inconsequently, but the unmistakable sound made us sit up and stare at each other. "By God! those are guns, F—," said one, and we were up and outside the tent in a second, listening for a repetition of the ominous sound. Boom! boom! Yes, there was no doubt about it, and all the tales and rumours of disaster we had been hearing at intervals for the past ten days suddenly seemed to take concrete form, and the ghastly truth of it all was borne in upon us. We conjured up visions of our struggling, retreating troops being pressed by a relentless foe, and having to fight hard to keep him off.

Boom! boom! they must be eight or ten miles away yet. God! what sort of a time have they had for the last sixty miles if they are still being so pressed within a mile or two of Kut, where they mean to stand? Such the unspoken question that rises unbidden to our lips, and we seem to realise in a flash something of the past ten days' horror through which the old 6th Division has passed.

Vivid descriptions of life under siege conditions are given, and no reader can fail to be intensely proud of the brave little garrison and the magnificent defence it put up. We can quote only one more passage. It refers to an attack on the fort on the right of our line, delivered just before Christmas:—

Frequent bombardments of the tiny place had knocked it about a good deal, and the violent shelling on Christmas Eve played sad havoc with the walls. But in spite of it all, the gallant garrison put up a great fight, and held the place for England. The Turks did their best to rush it, and came on gallantly in swarms, struggling over the rough ground, stumbling through and over the wire, and being shot down in hundreds. They reached and took the bastion. Clambering over such walls as were left, they

drove our men back and through the second line of defence that had been built across the base of the projection. This was all they could manage, and they were not allowed to stay there for long. A few hours later the gallant Blank and Downshires counter-attacked and drove them out, and no enemy ever set foot therein again until the end of the siege. Abdul had lost very heavily indeed, and he never attempted a similar attack in force.

The Bulgarians and the War.

Writing in the *Daily Express* from the Headquarters of the Serbian Army, Salonika, Major Claude Askew declares that "the Bulgars are not fighting in the same mood that they did a few months ago. Generally speaking, they are tired and demoralised. They have lost their spirit." And it is not surprising, of course, to be told that it is the Bulgarians' German masters who are mainly to blame for this state of affairs:—

Not only because the Germans rule with a rod of iron and appropriate to their own needs everything of the best that happens to be going—though this has a good deal to do with it—but because the Bulgars have not been allowed to fight according to their own method. The Boche does not favour infantry attack; he generally gets the worst of it when he is compelled to that course. He prefers to use the infantry for reconnoitring purposes, and then to bring up his heavy guns.

This is just what the Bulgar, like the Serb, cannot stand. He is not accustomed to remain long in the same place. The wars in which he has taken part, though frequent, have not been of great duration. He grows sick of lying in the trenches. He expects either to advance or to be driven back; the middle course is particularly distasteful to him; and it is just this that he has to put up with.

Contrasting the Bulgar with the Serb, Mr. Askew writes:—

The Bulgars have not the patriotism of the Serbs. Few of them, like the majority of the latter, are landowners on their own account. One is surprised, in talking to a Bulgarian prisoner or deserter, at the indifference he expresses as to the result of the war. He is naturally a fighter, and war comes agreeably to him for what he can make out of it, to say nothing of the old-standing enmity; but when it comes to making nothing whatever as far as he himself is concerned, to prolonging a struggle under extremely difficult circumstances, and, particularly, to finding himself forced to be content with a pound of bread a day—and lucky if he gets that—when he is accustomed to eat at least two pounds with every meal, then he becomes discontented and—deserts.

Another factor in the situation is that the letters the Bulgarian soldier receives from home have now lost all their former cheerfulness and are full of complaints as to the cost of living, the prolongation of the war, and so forth.

The *Pall Mall Gazette* touched on the same subject of Bulgarian weariness in an article ("The Balkan Outlook") published last Friday:—

Bulgaria, according to more than one source of news, has already provided a small echo of the (Russian) revolution. There is a great war-weariness throughout the country, and there have been riots at Sofia, where the people have demonstrated against Ferdinand and his German garrisons. It is, of course, easily possible to attach more importance to these symptoms than they deserve, and to build high expectations upon them would be foolish. But we cannot go far wrong in anticipating marked developments as the principle of Hohenzollern militarism approaches its end, and the new world order for which America now joins the Allies begins to take its place.

The Balkan Tangle.

Writing in the *April Empire Review* upon "Future International Relations," Mr. H. Douglas Gregory reminds his readers that the principle of nationality must be shortly observed by the Allies, as well as enforced by them. He continues:—

In the Balkans particularly it forms a most difficult problem, and there can be no permanent hope of peace, unless the rights and individuality of nations are most scrupulously regarded both by victors and vanquished.

There may be serious temptation, especially in the Balkans, to ignore racial considerations in territorial readjustment. Both Serbia and Roumania have suffered grave injury from Bulgaria, and doubtless a clamour will arise in some quarters to annex Bulgarian territory irrespective of the nationality of the inhabitants. If a permanent and statesmanlike settlement is to be reached this clamour must be resisted, as unjust annexation will simply lay the foundation for a future Balkan war. We must strive, after all this bloodshed, to achieve an enduring solution of the Balkan tangle.

If "an enduring solution" can indeed be reached, the war will not have been fought in vain. And if it is to be reached justice—not sentiment—must be the guiding principle.

The Allies at Salonika.

The following passage is taken from a leading article, "The Salonika Army," in Tuesday's *Times*:—

"The mountains grow green" in the Balkans, where the Orthodox Easter has ever been the most propitious moment for campaigning. Indeed, the hope is widely shared in quarters where the war is regarded as a correlated whole that the apparent quiescence of General Sarrail's forces may be apparent only. His Army has now been reinforced by some tens of thousands

of Venizelist Hellenes, upon whose efficiency and moral General Sarrail is understood recently to have made a highly satisfactory report. The situation at Athens, which at one moment seemed to involve the danger of a flank attack upon his communications, is believed to be well in hand, and King Constantine himself to have been rendered by the logic of events a wiser, albeit a somewhat sadder, potentate than when he and his misguided counsellors were awaiting German succour from the north. From the military standpoint it is even more important that, were King Constantine never so ill-disposed towards the Allies, his power for evil has been so curtailed by the measures concerted at the Rome Conference that he is scarcely in a position to do much harm. He may safely be left to his own devices—for the present. The Commander of the Allied Forces in the Balkans should therefore be free to concentrate all his energy upon the defeat of the enemy entrenched before him. That enemy is the Bulgar.

After referring to the dropping in the Bulgarian lines of proclamations calling upon the enemy to imitate the example of Russia, the article remarks that the Bulgarians are a hard-headed folk, who are more amenable to manifestations of power than to arguments by proclamation. "Defeat in the field would serve to quicken their apprehension of German wiles—and of German impotence." And it concludes with the expression of the hope that "the great Allied Army of Salonika will speedily justify its existence by teaching the Bulgar dupes of Germany a stern and wholesome lesson."

"Time the Despot."

Under the above title, Mr. Crawford Price contributes an interesting article to the *Daily Graphic*. He holds that a crisis is coming in Greece; and believes that we may already detect the first signs of an oncoming tempest. He continues:—

In order that we may understand the situation when it arises, it is necessary to remember that in October, 1895, the King, so to speak, descended from his throne and became the chief of a political party—which may be called the Royalist or Anti-Venizelist party, as you will—and that the party adopted the programme laid down by its Royal leader. For the purposes of argument, we may leave aside the matter of German influence and propaganda and the mistakes of omission and commission of which Entente diplomacy was guilty, because after we have stripped the question of these important trappings the fact remains that King Constantine came forward himself with a cut-and-dried policy, which is now shown to have involved his country in divers nefarious consequences.

He then sketches the "motley party of men" grouped round the King's policy. It is not an attractive group, and what it will do, or not do, if and when the King requires its real help and service, remains to be seen. That "minority of Hellenes who have been alienated from Venizelos will commence to balance up accounts" ere long:—

They will find, much to their displeasure, that the prospects of Greater Hellas have been jettisoned. In addition, they will discover that the State has been commercially and financially ruined, that constitutional liberty has been usurped by a despotism, that the much-trumpeted German prowess is powerless to harm them, that Greece is rent in twain, friendless, degraded, and dishonoured, and that in that same Venizelos who was scorned and persecuted lies the only hope that the existing frontiers of the kingdom may be maintained intact.

Inwardly, the people may upbraid themselves for having lost faith in Venizelos; but, outwardly, while they will blame the Allies for having played their cards so badly, they will throw the onus of the responsibility upon King Constantine. M. Venizelos thinks that the internal Greek settlement must await the close of the war—and it is certain that the Nationalists will never lay down their arms until they have restored constitutional liberty and personal freedom to their country—but it is possible that the crisis will be precipitated from within at an earlier date. These first murmurings of discontent at the failure of the Royal policy may grow in volume, and, mingling with the voice of the majority (which, even in Old Greece, has remained faithful to Venizelos), themselves sweep away the newly raised ramparts of Prussianism in Hellas.

"False Prophecies Come True."

The *World's Work* for April draws a telling comparison between the first advance on Baghdad and the second. It says:—

The first Mesopotamian campaign was characterised by too great hurry and too little preparation. Roads were not built, transport was uncertain, and the weather so constantly unfavourable as to prove almost an ally of the Turks. Through humiliation we have, in our usual fashion, won through to success.

Competent Eastern authorities tell us that even the failure at Gallipoli has now been wiped out. Certainly the Eastern world attaches the greatest importance to Baghdad; and again believes in the long, strong arm of the British Empire.

Soldiers everywhere are unanimous in admiration of the conduct of the best planned and most successful military operation of the war. It is not often that false prophecies come true; but when eighteen months ago, acting upon Mr. Asquith's soft and comforting assurances, we lavished just such praise upon the expedition ending so disastrously in the surrender of Kut, few could have dreamed of a day to come when similar phrases would prove well earned.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The excellent appreciation in the value of P. and O. Deferred stock which has been witnessed during the past few days need occasion no surprise. For one thing the directors have been able to maintain the 3 per cent. increase in the interim dividend—the return for last year, it will be recalled, was 18 per cent., against the usual 15—and Lord Inchcape, to whose fine leadership this enhanced prosperity is really due, declared at the meeting that the increase was not to be regarded merely as a war development. The last quotation of the stock on April 18 was 324½—a rise of four points on the day. Excellent, indeed!

As a matter of fact, those who are "in the know" will not be surprised. The famous company stands out as a model of steamship management; its chiefs have an extraordinary facility for choosing the right men for the right places. Afloat, its officers command the supreme confidence of shippers and passengers, and with all these circumstances in view we may regard the prospects of the company as brilliant. Testimonials of this kind are often platitudes, but in the case of the P. and O. I can speak from an experience going well into twenty years, particularly east of the Canal, where conditions are more trying than they are in other trades. Lord Inchcape, it will be recalled, with Sir M. C. Turner, also took a leading part in establishing the prosperity of the British India years before that great concern linked up its fortunes so closely with the P. and O.

What do our Greek friends say now regarding King Constantine's Hun colleagues? The story of the torpedoing of the Nestos, a steamship belonging to the National Steam Navigation Company of Greece, which was carrying to a Greek port a cargo of wheat consigned to the Greek Government, will require some explanation. The wheat was intended for food for the hungry Greek poor, and the Berlin and Vienna Governments were duly informed of all the circumstances. Both ship and cargo were insured by the National Bank of Greece, under the guarantee of the Greek Government. There was no question whatever of Allied interest in the vessel or her cargo, and the Huns and their allies could not possibly have been in any doubt in the matter.

"Why do the Greek people not act?" a Greek friend with whom I discussed the matter asked me. Of course, I could not say, but I gathered from him that the entire colony in this country would hail definite action against German interests in Greece with great satisfaction, whoever took it. "Quite apart from the question of national honour," said my friend, "there is the welfare of Greek trade now and in the future to be considered." I must not repeat all he told me lest I embarrass, and be embarrassed by, my friend the Censor; I may say, however, that the Greeks in Britain, profoundly pro-Ally in sympathy, are greatly distressed by the continuance of the intolerable situation. The case of the Nestos will not act as a balm to their wounds.

In the meantime the financial difficulties of the Greek Government are increasing. The proposal to tax the war profits of the shipowners has upset that class very considerably; but seeing that shipowning has been the only profitable industry in the country since the war broke out, the proposal is not entirely unjustifiable. The revenue from those parts of the country occupied by our friend M. Venizelos's party has been entirely lost to the Royalist Government, and I have a shrewd suspicion that if the profits tax were intended to assist the Venizelist exchequer the opposition to it would not be so strenuous as it appears to be. The pity of it all is that the King is looking for the quickest way to the Bankruptcy Court; if he had played the game with the people who gave the throne to his family they would not have been in such desperate straits today. The unfortunate point about the lost revenue is that investors in Allied and neutral countries will suffer in common with those in enemy lands, because the money is devoted usually to meeting obligations on loans incurred abroad.

The fact, mentioned in the letter from our Cairo Correspondent, which is published to-day, that in February last the value of exports of cotton from Egypt was less by more than a million pounds will serve to recall that the cotton textile manufacturing trade in Lancashire is faced by a grave crisis. Fewer vessels will be available for non-war freights, and as Sir L. C. Money, Parliamentary Secretary to the Ministry of Shipping, stated in the House of Commons last week, the exigencies of national need demand that ships should be employed on short voyages. The cotton trade is as unhappily situated as others which depend on imported raw material. Cotton has to be brought to England for the mills, and the manufactured goods have to be shipped to the overseas markets, which means, of course, a double drain on shipping. The situation in Manchester is acute. I learn from the *Textile Mercury* that "yarn and cloth to the value of millions of pounds sterling are lying in mills, warehouses, and docks that should have been delivered months ago."

There is a lesson for Egypt to learn in this matter. It is that the time has come for her to make herself less dependent of overseas buyers of cotton, and this can only be done by embarking on a new campaign of industry. If Egypt used her own cotton for textile manufactures she would find herself well placed regarding markets. There are the Red Sea ports, East Africa, where new markets are in progress of being opened up, the Persian Gulf, and Mesopotamia, and certain parts of Arabia. I am fully aware that there are many difficulties in the way—there are always difficulties in the way of anything that is worth having—but there is no reason outside Egypt herself why she should not possess a prosperous textile industry. All that is wanted is a man to lead the way.

It would be interesting to discover the condition of the wheat crop in Bulgaria and other Balkan countries in enemy occupation. Reports from other producing centres are to the effect that there is a general shortage in the crops this year which works out at, approximately, 27 per

cent. below the yield of 1916 and 16 per cent. below the average of the five years 1911-1915. The returns on which this dismal calculation are based include those from India, Algeria, Egypt, Tunis, and all the great producing countries in the East and West.

The *Times* on Saturday outlined the scheme which has been suggested to improve the collection and circulation of commercial intelligence, and I am afraid that I am not impressed by it. In short, it amounts to this:—Chambers of Commerce will receive from the Foreign Trade Department the information received from Consuls, and will circulate it secretly to manufacturers and dealers in British goods who are members of the Chambers and whose names are approved by the Department. We all appreciate that there is considerable difficulty in the way of engineering reforms in war time, particularly when there are questions of labour involved, but it is by no means certain that the scheme now proposed to the Chambers will not entail large armies of clerks and the like—it does not matter by whom they are employed, by a Government office or a group of trade associations, the result is the same.

The point is made that, by this scheme, "instead of the wearisome and belated annual Consular report a form is substituted which every Consular officer is required to fill up quarterly." There need never have been a "belated annual report," and no Consular report ought ever to be wearisome to the people for whose benefit it is compiled. Furthermore, there ought not now to be a quarterly report. The period is too long. What is wanted in this country is the system worked by the Bureau of Foreign and Domestic Commerce, something of an equivalent, perhaps, of the Commercial Intelligence Branch of the British Board of Trade. The "Bulletins" of the Bureau are published daily, and cover in brief and concise form an immense amount of ground. They present word pictures of markets and opportunities which are difficult to beat, and American traders in India, the Straits Settlements, and elsewhere have told me that these documents have proved invaluable to them.

I have a copy of one of the American Commerce Reports before me as I write, and to illustrate the ground covered in this small brochure of sixteen pages of the size of a large sheet of notepaper, I set out some of its principal contents:—

- Exports from London to U.S.
- Rubber production in Dutch East Indies.
- Advance in trans-Pacific freight rates.
- Returns of Canadian Government Railways.
- Raw soda deposits in East Africa.
- Hong Kong exports of bristles.
- American hardware in Hong Kong.
- Receipts of Vera Cruz Custom House.
- Features of Trinidad's holiday trade.
- Report of French West African Bank.
- Russian railway construction.
- South Africa independent in meat trade.
- British Columbia agricultural notes.
- Live-stock statistics of Bolivia.

Multiply that lot by about 300 for the working days of the year, and there is a fairly useful mass of ready-to-hand information to be placed at the disposal of manufacturers and traders.

COMMENTATOR

The Sudan and Its Economic Development.

No. 6.—The Halfa Province.

By PERCY F. MARTIN, F.R.G.S.

Entering from the Egyptian side, the flat, brown, and uninteresting-looking land of Halfa is the first Sudanese territory encountered by the traveller. So poorly is one impressed that one is reminded of Hare's description in "Guesses at Truth"—"the mind is like a sheet of white paper in this, that the impression it receives the oftenest, and retains the longest, is the blackest." Certainly in his progress through the province there is little that the traveller meets with scenically that helps to remove the unpleasant early effect of the ugly-looking country stretching away endlessly towards the Red Sea.

Halfa Province is almost evenly bisected by the railway line, which, commencing at Wady Halfa, runs across the continent to Port Sudan. West of the line is seen nothing but arid country, the general formation of which is that of a plain covered with sand or gravel, dotted here and there with black, forbidding-looking rocks, and steep, sometimes precipitous hills of from 100 to 800 feet elevation above the plain which falls gently and uniformly towards the Nile. East of the railway is what is known as the "Atbai," which lies approximately between N. Lat. 26° and 20°. Of this the northern half, inhabited by the Ababda, belongs to Egypt, and the southern portion, inhabited by the Bisharin and the Amarar, belongs to the Sudan. You will see this country labelled on some maps "the Nubian Desert"; but much of it is anything but true desert.

Favourable Climate.

In spite of the unattractive appearance of the country, the climate of Halfa Province is, perhaps, one of the best to be found in the Sudan, the air being absolutely pure, while the elevation—1,500 to 3,000 feet above sea level—considerably mitigates the shade temperature. If it were not for the intense glare of the sun, reflected from the sand and rocks, and the occasional waves of superheated air (such as destroyed a convoy on the march from Korosko to Abu Hamed in 1897), one would feel inclined to recommend Halfa as a "rest cure" for consumptives.

In such a desolate-looking region one would hardly expect to find any kind of vegetation whatever; but the traveller who leaves the railway track and wanders away inland will find plenty, and moreover of a luxuriant nature, on the banks and in the beds of the wadis—such as that of Alagi, where one sees the fine *sayal* and *heglig* trees, as well as the graceful *marakh*, the *arak*, and other evergreens, mixed with date-palms, beautiful grasses, and brilliantly coloured wild blossoms.

The town of Halfa formerly marked the limit of the rule of the ancient Egyptians on the south, while the famous Forts of Semnah and Kumna, which still stand at a distance of thirty-five miles from the Second Cataract, are now known to have been merely advanced outposts. Here, by the end of November, 1884, had passed through the 7,000 Egyptian troops, forming part of the first Sudan Expeditionary Force under the gallant Sir Herbert Stewart, while the 11,000 British troops, under Lord Wolseley, were transported between Assiout (sometimes spelt Asvút) and Wadi Halfa, a distance of 550 miles, by the agents of Messrs. Thomas Cook and Son. The expedition, however, proved anything but a "pleasure trip." Nevertheless, so well did the eminent firm of tourist-agents carry out their task, that Mr. Royle,

the author of "The Egyptian Campaigns," has declared that had Cook been entrusted with the relief of General Gordon they would have succeeded in bringing that great soldier and his garrison safely out of Khartoum.

First Railway Track.

Here, also, in 1897, had been commenced the long line of railway track, the construction of which was found absolutely necessary to overcome the difficulty of transporting the troops of the Second Expeditionary Force. Abu Hamed was the objective point, and by the time that the track had reached but half-way from the Wadi Halfa, the Dervishes—who then infested the whole district—had been seriously defeated by General Hunter, no fewer than 1,300 of the enemy being killed and wounded out of a total of 1,500. Thus was the enterprise abundantly justified. The line finally reached Abu Hamed on October 31, 1897. The town remained the headquarters of the Sudan Government Railways until 1906, when the workshops, offices, and carriage sheds were removed to Atbara, where they still remain.

Precarious Cultivation.

In the Province of Halfa cultivation is carried on very precariously on account of the uncongenial nature of the soil and the always uncertain rainfall. When it rains, however, it rains—violent showers fall that beat the sand into temporary fountains of spray; while many places may go without rain for several years in succession, other parts are fairly well visited during the months of July and August (rains have even been known in May), such falls being classed as "Shuti" rains. Heavy dews are also met with, but they are not of sufficient density to make the short grass grow. The glorious Nile, of course, serves the district of Wadi Halfa, and opposite the town the width of the river cannot be less than 900 yards. It is navigable up to the foot of the Second Cataract, 26½ miles up stream. The old Halfa Camp, so famous in Sudanese history, was situated 802 miles from Cairo, while the Quarantine Station is still maintained here on a sandy slope towards the river.

The population of the province of Halfa is given officially as 38,325, and of this some 30,000 are Berberin. The province contains no nomad tribes, if one excepts a few of the Kababish from Dongola, who habitually reside there, but still pay their tribute to the adjoining province. Naturally, with so unresponsive a soil with which to deal, the people have very little opportunity of succeeding in agriculture, which is still further handicapped by the lack of rapid means of communication. Entirely dependent upon the vagaries of the Nile, it is always a question how much or how little prosperity is likely to attend the industry of the people.

Two Lean Years.

In the two successive years, 1913 and 1914, for instance, the crops secured proved exceedingly poor, owing to the low Nile. The crops usually grown are dura, wheat, and barley, but the mainstay is the date-palm, which flourishes in Halfa as it flourishes in but few other parts of the Sudan—Dongola alone excepted. Some 80 per cent. of the revenue is derived from date and land taxes. Fortunately, the people do not rely entirely for a living upon the pursuit of agriculture; if they did so, governmental assistance would be never-ending. A considerable number of the male population earn a fair living abroad, and, as a general rule, they faithfully transmit a substantial part of their winnings to their families in Halfa. In times of depression thousands of the people wander away from the province in search of a living elsewhere, always, however, coming back when reports reach them of improved local conditions.

As to the town of Halfa, "I'chabod" has long since been written above its portals, for,

with the removal of the railway headquarters, departed its *raison d'être*. Nevertheless, there remain several interesting buildings, such as the early official headquarters of the Kitchener days, with their neat and well-kept little gardens (maintained with difficulty on account of every drop of water expended upon them having to be drawn up from the Nile, running many feet below the banks), and the quarters of the European official element. Trees which were planted seventeen years ago—including sycamore, lebbek, wild fig, and acacia—give the town a semi-tropical appearance when first viewed from the Shellal steamer deck, thus softening to some extent the crude and ill-constructed native hovels which abound everywhere. Australian eucalyptus-trees have also flourished apace in Wadi Halfa, the strong perfume mixing pleasantly with the more delicate odour of the many roses which bloom in the Sudan practically all the year round.

"The Cabinet."

The European Government staff maintained is a modest one, consisting of the Governor (up till last month Mr. C. E. Lyall was the Governor, but he has now succeeded Captain C. H. Townsend as the Governor of Kassala); one Third Inspector, Mr. W. L. Cheesman, and the District Judge, Major S. K. Flint. A former Governor of this province, Mr. G. E. Iles, who left in 1914, and is now located in a similar capacity at Wad Medani, Blue Nile Province, effected many substantial improvements during his term of office. He did much to improve the sanitation of Halfa town, and worked loyally and successfully in regard to the land settlement of Orgin, commenced and completed in 1913. Apart from his undoubted administrative abilities, Mr. Iles is considered one of the finest Arabic scholars, having been one of the few Sudan officials to win the handsome cash bonus of £E100 offered by the Sudan Government to the successful competitor in the advanced Arabic examination. All three of the permanent officials above-mentioned are customarily located at Wadi Halfa.

U BOATS AND BRITISH SHIPS

Official tables have now been issued regarding the losses of shipping in the Hun U-boat campaign by the British authorities, and while, unfortunately, the toll has been heavy, there are no present indications of the materialisation of the German boast that the British Empire will be brought to her knees.

In a period of eight weeks 130 ships of over 1,600 tons, 58 ships of under 1,600 tons, and 65 fishing boats have been sunk, making a total of 253 vessels. During the same period 118 merchant vessels were unsuccessfully attacked by submarines. It appears, therefore, that out of every three ships subjected to attack two were sunk and one escaped. Some of the losses were due to mines, but how many is not shown.

Similar tables issued by the Allies indicate a somewhat different result. The French have lost 75 ships, and only nine vessels escaped, so that out of every seven ships attacked six were sunk.

The Italian tables also indicate a high proportion of losses relatively to the numbers attacked. The total sunk was 52, while the vessels which escaped were only five. Therefore out of every ten attacked nine were sunk.

Britons abroad will be glad to realise that so far as our figures of arrival and departure are concerned, those of the period mentioned show that the volume of traffic has been steadily maintained.

In the week which ended on March 18, the highest total was reached, both at British and French ports. Little change is to be noted in the traffic to and from Italian ports, the best week being that which ended on March 25.

Slight Set - Back in Egyptian Trade.

Reduced Imports and Exports in February. Cotton Less by £1,131,940.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 22.

Trade fell off somewhat during February, according to the Customs returns for that month just published. Imports amounted to £E1,838,246 and exports to £E3,715,624, as against £E2,254,768 and £E4,763,071 in the corresponding month of the previous year. There was, therefore, a drop of £E416,523 in imports and one of £E1,047,447 in exports, but it is interesting to note that the figures for February this year are still in excess of those for February, 1915.

The total imports for the two first months of the current year came to £E4,432,291 and the exports to £E9,078,062, representing increases of £E482,468 and £E1,066,622 respectively over the totals for the corresponding period of 1916.

Principal Imports.

The principal imports during the month were: preserved meat £E103,618, barley £E11,323, flour £E34,702, coffee £E54,560, wine £E16,119, beer £E21,795, petroleum £E82,709, liquid fuel £E30,215, stationery £E63,771, coal £E283,552, indigo £E15,791, drugs £E12,874, cotton threads £E53,941, cotton tissues £E367,574, sacks £E21,011, wool tissues £E22,580, worked iron and steel £E47,964, and machinery £E13,545.

No wheat, maize or other cereals were imported during the month, and the principal decreases were in flour and barley, both of which fell off by 50 per cent., beer by 33 per cent., common soap by 80 per cent., tobacco imports increased by £E28,168, to £E96,181, or by 300 tons to 900 tons.

Exports.

The most important exports were: eggs, which fell off by £E33,927 to £E71,071; skins and tanned goods, which improved by £E17,169 to £E34,538; cereals, which fell off by £E105,360 to £E93,193; sugar, which increased from £E10,723 to £E148,813; cotton seed oil, which rose from practically nil to £E23,504; cotton, which decreased by £E1,131,940 to £E3,030,943; and cotton seed and cake, which improved by £E41,719 to £E215,245.

Owing to the prohibition of imports into Great Britain no quails were exported; the export of alcohol also fell to comparatively nil. Cigarettes slightly decreased during the month.

Cause and Effect.

The decrease in the imports is accounted for by the falling off in the shipments from Great Britain, Chili, and Canada. The former's share fell by £E264,463 to £E822,599, whilst nothing came from the other two countries. Great Britain sent all the coal, chemical manures and barley, 6 per cent. of the beer, 60 per cent. of the textiles (75 per cent. of the cotton tissues and 80 per cent. of the wool tissues) and 80 per cent. of the metals.

Australia rose from a fraction to £E102,245 (preserved meat), America from £E94,828 to £E112,391 (all the petroleum and benzene, half the skins and all but a fraction of the construction wood), Greece by £E15,051 to £E92,725 (due to the increase in tobacco), Norway from £E1,611 to £E13,589 (half the writing and printing paper and 14 per cent. of the packing paper and cardboard), Persia from £E13,037 to £E35,936 (all the liquid fuel and over half the carpets), Italy fell off by about 10 per cent., Sweden by two-thirds, and France by 60 per cent. Great Britain's share of the exports decreased by £E669,177 to £E1,500,311; she took all the wool, cotton seed and cake, 36 per cent. of the cotton, and practically all the eggs.

Advance India!

On the other hand, India trebled her purchases to £E28,797 (almost entirely sugar). America fell off by 12 per cent. to

£E1,181,482, Japan by £E110,945 to £E47,257, Russia by 85 per cent. to £E35,785, and France by £E210,814 (practically all cotton), but it is interesting to note that the French Possessions in the Mediterranean make up for a good part of the decrease in their mother-country's share, by taking £E120,991, against £E912 a year ago (all sugar). Switzerland is once more to the fore with £E227,010, against £E30,546 (all cotton).

Trade With the Sudan.

Trade with the Sudan was brisk during February. Imports thence into Egypt more than doubled, the figures being £E167,883 as compared with £E81,654; traffic in the other direction, however, fell off slightly from £E94,680 to £E89,440. The chief imports into Egypt were: skins £E10,800, maize £E56,969, sesame £E13,280, live-stock £E50,660, gum £E5,566, charcoal £E2,227, and senna £E3,248. Exports from Egypt into the Sudan were: refined sugar £E15,744, and cotton tissues £E21,826.

EGYPTIAN FOOD CROPS.

The yield from the Egyptian maize and millet crops will be slightly above the normal, according to the most recent reports. The condition of the rice crops is from 6 to 10 per cent. above the average, while wheat and barley are only just normal. With the exception of maize, all the areas sown are larger than in the year before the war, but it is feared that there will be a shortage in the supply of breadstuffs this year owing to the drastic curtailment of flour and rice imports. The Government is encouraging the production of crops that will assist in alleviating the situation, and arrangements have been made for a substantial increase in the area under potatoes. It is customary in Egypt to rely mainly on imported potatoes, only just sufficient being cultivated in the country to meet requirements during the winter months, when the supply abroad is at its lowest ebb. Seed potatoes also have to be imported, the locally-produced seed, as in other tropical countries, being of no use for reproduction. Hitherto Italy has been the main source of Egypt's potato supply, but now this market is closed, the export of all foodstuffs having been forbidden. The British military authorities have, as described in THE NEAR EAST some time ago, placed a certain quantity of good seed potatoes at the disposal of the Egyptian Government, and this timely assistance will materially help to counterbalance the anticipated shortage of breadstuffs.

WORLD'S WHEAT CROP IN 1917.

The Board of Agriculture and Fisheries have received the following information from the International Agricultural Institute:—

The yield of wheat in 1916 and 1916-17 is not yet known for the following countries:—Germany, Austria-Hungary, Belgium, Bulgaria, Luxembourg, Russia-in-Asia, Chile and Uruguay, but in the case of the following countries it is known:—Denmark, Spain, France, Great Britain, Ireland, Italy, Norway, Netherlands, Sweden, Switzerland, Canada, United States, India, Japan, Algeria, Egypt, Tunis, Argentina, Australia, and New Zealand.

The total yield of wheat in these countries is estimated at 293,384,000 cwt., or 27.7 per cent. below the yield of 1916 and 16.9 per cent. below the average of the five years 1911-15. The carry-over of the preceding crop remaining at the beginning of the commercial season (August 1, 1916, in the Northern Hemisphere, and January 1, 1917, in the Southern Hemisphere), together is estimated at 50,484,000 cwt., making the total available supply 343,868,000 cwt.

LANCASHIRE COTTON TRADE.

Buyers and Sellers Go Slow Owing to Uncertain Outlook.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, April 19.

The conditions prevailing in the market during the past week have not shown very much change. The outlook is very uncertain, and buyers and sellers are still disposed to go slowly. Some recent developments in our local industry have not been very favourable, and the fact that an old-established spinning and weaving concern is going into liquidation has caused some nervousness as to the future financial position.

Many ups and downs have occurred in raw cotton rates, and many things may happen to prices during the next few months. The application of the operative weavers for an advance in wages has been strongly refused, but we shall probably hear more of this matter, and it is said the trade union officials are determined to press their demand.

Users of Egyptian cotton are a good deal harassed at the moment, and difficulty is experienced in obtaining adequate supplies of certain grades. Advances as to clearances of piece goods in Egypt are generally encouraging, and steady buying has continued to take place in our market.

Although prices are on a high level, further supplies are needed abroad, and the demand from the up-country districts is said to be improving, there being better advices from Baghdad.

For India, scattered sales have been put through, but most of the offers have been disappointing, especially in grey shirtings.

Some special transactions have been mentioned for China in white and grey shirtings, without the general demand being important.

The South American markets have given rather irregular support. Useful orders continue to be booked in home trade fabrics. American yarns for home use have been sold in small lots at irregular rates.

It has been hard work to arrange transactions in shipping yarns, but there has been inquiry about in bundles for India.

Egyptian yarns have been firm in quotation, without much activity. The higher numbers continue distinctly better situated than coarse counts, such as 60's twist.

BOARD OF TRADE ACTIVITIES.

Sir William Clark, Comptroller of the Commercial Intelligence Branch of the Board of Trade, explained to a gathering of members of the Aldwych Club on Tuesday what the Government is doing to further British trade abroad.

The Intelligence Branch, which was established twenty years ago, did not flourish at first, said Sir William, but when it was rid of official surroundings and was accommodated with offices in Basinghall Street it began a career of great usefulness. This usefulness had increased considerably since the outbreak of the war. Information had been acquired and collated and distributed to those interested.

A library of 7,000 volumes of trade catalogues had been collected, and representatives had been sent abroad to study trade necessities. Attached to the Department was a section consisting of commercial experts, with special trade information and a polyglot command of languages. But the chief glory of the Department was, he thought, the institution of industrial fairs in this country on lines modified from those of the Leipzig fair. The third of these had been held, and it was intended to hold them yearly.

RESTRICTED TRADE.

The supplement to the *Board of Trade Journal* of April 19 contained complete lists of articles which, according to the latest information received by the Board of Trade, are prohibited to be exported to various destinations from British India, Canada, New Zealand, South Africa, Newfoundland, Egypt, Malta, Cyprus, Mauritius and Ceylon. Copies of the supplement may be obtained either from any bookseller or from His Majesty's Stationery Office, Imperial House, Kingsway, London, W.C.2.

WORLD'S TOBACCO SUPPLIES**Russian Planters and the Serious Shortage.**

The serious scarcity in cigarette tobacco owing to the dislocation in supplies from Turkey and Macedonia has caused the more important manufacturers to look abroad for a solution of the problem with which they have thus been confronted.

According to a writer in the *Financier and Bullionist*, the manufacturers, when they realized the situation, "began to take measures to get into their hands the finest parcels of Russian leaf in order to send them abroad as soon as possible, the more so as the inland market was quite secured with the existing supplies. Not being bound by fixed prices for tobacco goods, they can purchase leaf tobacco at much higher prices than is permitted for the supply of the inland market, for which only poor parcels of tobacco and trash is available which was unsaleable previous to the war.

"Coming to the planters, it must be observed, first of all, that very favourable circumstances have smiled on them. After two years of war, thanks to a great rise in the price of tobacco, planters to a great extent spread their responsibilities and losses over a period of years. Large profits for these

years made it possible for them to improve their properties and build stores, of which great need had been experienced in the earlier times, when, instead of holding their tobacco for suitable prices, they had to sell it prematurely to obviate injury.

"Unfortunately, for some time amongst the tobacco planters an opinion has been forming that they should not extend their production this year, so as not to spoil prices now ruling for tobacco by offering large quantities. On this subject the organ of the Kuban tobacco growers observes that the state of the market, combined with the general conditions for supplying the world-market with cigarette tobacco, is such that with even an increased area of tobacco plantations, double that of the preceding year, prices would not suffer much.

"On the other hand, if the tobacco planters carry their intention into effect—namely, reduce the area of planting—this may produce a serious tobacco crisis which would materially affect the consumer."

The Société Internationale d'Etudes et de Travaux au Maroc and the Société d'Entreprises du Maroc Occidental (address—16, rue de l'Abbé de l'Épée, Paris) have jointly obtained the contract for the construction of the Bab Tisra section, near Mequinez, of the French part of the Tangier-Fez railway.

NEWS FROM ALL SOURCES.

The parcel post to Russia is entirely suspended.

A large quantity of merchandise seized as prize on enemy ships is announced for sale through the Egyptian Bonded Warehouses Company, Ltd., in Alexandria.

The Bulgarian Sobranje has adjourned, after passing a Bill for the sequestration of all enemy property in Bulgaria and forbidding commercial relations with enemy countries.

An Alexandria message of April 10 states that the cottonseed market is dull and prices are easier at 131p., equivalent to £11 14s. 8d., for April, and 135p., equal to £12 1s. 10d. for May.

A Turkish *communiqué* says a Turkish submarine sank at the port of Alexandria the steamship Hamour (?) of 8,500 tons, with 7,000 tons of coal and 1,000 tons of cattle food on board. No steamer called the Hamour appears in Lloyd's Register.

Messrs. Elder, Dempster and Co., Ltd., have acquired from Messrs. J. H. Welford and Co., Ltd., and the Gulf Transport Company their interests in the regular Gulf trade, together with the steamers Indore and Ikal, which were specially built for that trade.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds,
Broadcloths, Coatings, Hosiery, Rugs,
Puttees, Uniforms, &c., &c. . . .

CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,

CAWNPORE, INDIA.

Army Boot and Equipment Manufacturers.

CONTRACTORS TO THE INDIAN, EGYPTIAN AND
OTHER GOVERNMENTS.

THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,

CAWNPORE, INDIA.

Tanners and Curriers, Leather Goods Manufacturers.

Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.

CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.

CAWNPORE, INDIA.

Spinners, Weavers, Bleachers, Dyers, and
makers of every description of Cotton
Goods such as TENTS, DURRIES (Cotton
Carpets), and other Floor Coverings,
Dusters, Towels, Bed & Table Linen, &c., &c.

Contractors to various Government Departments for
Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co., Ltd.

DHARIWAL, PUNJAB, INDIA.

Sole Manufacturers of the Famous . .

Dhariwal
Long Life Wool Wear

Costume and Suiting Materials, Blankets, Rugs,
Lohis, Hosiery, Puttees, Uniforms, Liveries, &c., &c.

CONTRACTORS TO GOVERNMENT.

CYPRUS NOTES.

Decrease in Exports in Last Quarter of 1916.

(FROM A CORRESPONDENT).

For the three months ended December 31, 1916, the value of imports is given as £321,693, as against £213,719, for the corresponding period in 1915. Exports £195,955, as against £213,465. Flour imported during this period was valued at £53,238.

Monopoly of Eggs.

The General Provost Marshal has decided that all eggs in the island will be bought by the Provost Marshal in each district, at six piastres (8d.) a dozen, and sold to the public at the same rate. All eggs which are not required for inland consumption are to be sold at 1s. a dozen for British troops at Salonika, the difference in price being applied to expenses of purchase, etc. It is not anticipated that, under present circumstances, the surplus for export will be large. The eggs will be sold at various depots in convenient centres.

Agricultural Prospects.

More rain has fallen very opportunely. The torrents have been filled, and have brought down abundant water for irrigation purposes. Mr. Bevan, Director of Agriculture, has been visiting the Solea district, which may be reckoned among the more progressive parts of the island.

At some villages the people made strong appeals for a return to the system under which Field Watchmen, an important class (now chosen by villagers) were formerly appointed and paid by the Government, being under District Inspectors. This is also desired in many other parts. Legislation would be necessary. These visits are of great value. Villagers are encouraged in tree planting, the upkeep of village school gardens, and on various questions relating to agricultural progress.

Mining Prospects.

The experimental borings which have been carried out at Athénou by Mr. Gunther, of the American Mining Company, having failed to produce satisfactory results, work at this site has been abandoned, and Mr. Gunther proposes to try a new field at Mitseros, also in the Nicosia District.

Mitseros lies in the northern spurs of the great central range of mountains, between two of the main branches of the torrent which irrigates the large Morphou plain in the north west, as the Pedies river does the central and eastern plains. Dr. Photiades, who is medical officer at the Amiantos Asbestos quarries on Mount Troodos, has been also appointed as physician at the American Company's copper mine at Skouriotissa.

ENGLISH SUGAR.

Sugar-producing countries in the Empire in which the industry has been neglected will be interested to learn that an enterprise for the production of British-grown sugar, estimated to cost £500,000, has now been initiated. A grant has been made by the Treasury of £125,000 by way of loan from the Development Fund towards the purchase of an estate of 5,600 acres at Kelham, near Newark, where it is proposed to grow sugar beet and to erect a factory for its manufacture into sugar. The undertaking is to be carried out by the British Sugar Beet Growers' Society, Limited, of which the chairman is Captain Beville Stanier, M.P. The property has already been acquired on behalf of the society by the vice-chairman, Mr. Ernest Jardine, M.P.

If the result of this enterprise is to make less urgent—from the Home point of view, the long-promised, but equally long-delayed—developments in our African and Indian possessions, the latter will have little cause for complaint.

EGYPTIAN COTTON SEED.

A noticeable decrease in the importation of Egyptian cotton seed into Britain is recorded during 1916 by the Port of Hull Annual, 1917. The decrease is accounted for largely by restricted transport facilities. As was the case in 1915, the entire crop came to the United Kingdom. Hull's share was nearly three-quarters of the whole shipment, but it worked out at about 85,000 tons below that last year.

WHY DATES ARE DEAR.

High Freights, Restricted Imports and Speculative Buying.

A correspondent who knows the trade, and all the conditions which have controlled it for years past, writes to THE NEAR EAST—in connection with "Corsair's" lament last week—to point out why the prices of this valuable fruit-food have advanced so remarkably in the last few months.

He writes: "The new dates were bought and packed at Busreh in September last, on the basis of a selling price of 9s. to 10s. cwt., free on board, in half-hundredweight cases, and 15s. in cartons. This was cheap enough, but the dates had to be brought home.

"Well, the general rate of freight from India to the United Kingdom was then about 90s. a ton, but slower loading at Busreh incurred ship demurrage, and shipowners deserved a better rate of freight. In circumstances over which the owners had no control, freights went up to anything between 180s. to 240s. a ton, of which, I understand, the owners received only from 72s. to 100s.

"Compared with a pre-war rate of 25s. a ton, the owner's share still remains exorbitant.

"This increase in freight meant an extra penny to the consumer on this side, but this was not all.

"Some of the owners are also date merchants, and have branches at Busreh, and some of these, again, combined to 'corner' the date trade and send prices 'up.' Dates that, even with dear freight, could have been sold profitably at 24s. a cwt. c.i.f. were not offered under 32s. and 33s. c.i.f. This added another penny to the price to be paid to the consumer. The consequence was that London retailers put the dates in their windows at 6d. per lb.

"Then came the Government order, which restricted imports to this country of various fruits. Speculators rushed quickly to buy dates, and paid 40s., then 44s., then 50s., then 55s. a cwt. Wherefor, the public has now to pay 8d. to 10d. a lb. instead of the pre-war prices of 2d. and less.

"Apply these 'principles' to wheat, rice, maize, lentils, peas, beans, macaroni, raisins, nuts, etc., and, if you can, discover the sums which the public pays to profiteers!"

CONSULAR REF

"Commentator," in his notes to-day, discusses a scheme of Consular reform which was published a few days ago.

It will be recalled that one of the most important recommendations made by the Dominions Royal Commission in their recently issued report has reference to the reform of the British Consular Service and is to the following effect:—"As regards the Consular Service the Commission recommends that a training of six months or a year in the Department of Commercial Intelligence should be regarded as essential before a Consul or Vice-Consul entering the service takes up his duties abroad. . . . It is remarked also that this brief preliminary training will be of little avail unless steps are taken to secure that adequate attention shall be paid to commercial matters during the subsequent career of Consular Officers.

"The Commission approves the suggestion that there should be a more extended system of trade representation in foreign countries, and recommends the appointment of officers with duties analogous to those of Trade Commissioners in the Dominions.

"In addition, the existing arrangements for partially utilising the service for the trade of the Dominions might be extended. For example, Consuls might be instructed to furnish occasional reports on openings for Dominion trade, similar to those relating to openings for United Kingdom trade which they already provide.

"Again, arrangements might be made to send to the competent Departments of the Dominions, or to their Trade Commissioners, information received from Consuls, Commercial Attachés and other sources abroad. Finally, Consuls in important centres might be instructed to pay periodic visits to the Dominions."

PIROT CARPET INDUSTRY.

A Famous Serbian Industry under War-Time Conditions.

A correspondent sends to the *Textile Mercury* an interesting account of the carpet industry of Pirot, as it is carried out under war-time conditions and under German occupation. He writes:—

The industry, which is mostly dependent upon the labour of women and children, has so far not been greatly interfered with by the war. Among the Bulgarian and German soldiers the young girls may be seen sitting or kneeling in front of the simple wooden frames on which they weave the white, red, and green carpets with their characteristic patterns. While working they sing, keeping time to the "tack-tack" of the looms, and as three or four girls work on each carpet, some very pleasant music is often to be heard.

A Cotton Industry.

The Pirot carpet weaving industry (Schiffli looms) is several centuries old. At one time it was a "personal industry" pure and simple; at present certain well-defined patterns, and styles are followed by everyone. The carpets are mostly made at home, the loom usually belonging to the weaver, while the wool is wholly or partially supplied by the employer.

If a large carpet is being made, and the members of one family are not sufficient to cope with it, two or even three families will combine in the work. For such assistance from 60 to 80 para (5d. to 6½d.) are paid per diem, or are booked to the credit of the weaver.

These women do not have an easy time of it; they work from ten to eighteen hours daily, and, with the low pay, obtain little money for themselves, save when able to make a carpet from their own materials, selling direct to the buyers. Even so they do not earn much, as the purchase price of these carpets only leaves a very poor margin of profit.

"Organized" Labour.

This sad state of affairs has led to the founding of the "Pirot Carpet Weavers' Union," the chief aims of which are to facilitate the purchase of cheap raw material and the due control of sale prices. Unfortunately, owing to the scattered situation of the various centres of production at Pirot, and also to the suspicious nature of the peasants, who preferred to buy their bad wool at dearer prices from travelling Wallachians, the Union has hitherto not made much progress. Now, however, a good warehouse stored with good wool has been opened, and, owing to the war, the peasants are being forced to patronise it, this helping to open their eyes to the folly of their action.

A few years ago the introduction of aniline dyes jeopardised the quality, and hence the reputation and very existence of these carpets; but the danger was soon removed, the State forbidding the use of these dyes, as the fame of the Pirot carpet was based upon its imperishable colours, original designs, and durability. The Union also is doing good work in retaining these features, and preventing the industry from being debased by "modern improvements."

Successful Exhibits.

Pirot carpets, which were exhibited at the World's Exhibition in Paris and Turin, and at the London Balkan Exhibition (at all of which they took first prizes), have still but a restricted sale abroad. This is due to the way in which sales are organised in Serbia, and so far the Union's capital has been too small to enable adequate dealing with the situation. A better time will come after the war, when this industry will no longer be crippled; when its beautiful products will, it is hoped, go out far and wide to win further and warmer friends in all parts of the globe. The Union is already taking steps to bring this about, and the efforts will be greatly assisted by the Balkan-Orient Railway, laid down by Germany, but destined (we will hope) to slip from her grasp into the hands of a worthier and nobler people.

The death is announced of Mr. Thomas H. Barker, who was for many years Secretary to the Liverpool Chamber of Commerce.

COMPANY NOTES.

Dividends, Payments, etc.

The half-yearly dividend due on April 15, on the outstanding bonds of the Ottoman 3½ per cent. loan of 1894 (secured by the Egyptian Tribute) is payable at the offices of Messrs. Dent, Palmer and Co., 1, Gresham House, Old Broad Street, London, E.C.

The Bank of England are prepared to receive the coupons, due on May 1, on Egyptian Unified Bonds.

The numbers are announced of 112 bonds, amounting to £6,240, of the Imperial Government of Persia 5 per cent. sterling loan 1911, which have been drawn for redemption on May 15.

Oil Outputs.

Anglo-Egyptian.—Gemsah, 25 tons, against 23 tons; Hurgahda, 2,256 tons, against 2,635 tons.

Bibi Eibat.—Week ended April 1, 88,500 poods; week ended April 8, 974 tons.

European Corporation.—Week ended March 25, 76,600 poods; week ended April 8, 87,900 poods.

North Caucasian.—Week ended April 10, 10,447 tons.

Russian Petroleum.—Week ended April 7, 47,900 poods.

Ural Caspian.—Week ended April 5, 119,810 poods.

Meeting.

The ordinary annual general meeting of the Egyptian Delta Land and Investment Company, Ltd., will be held at 8, Sharia Bank el Watani, Cairo; on April 23.

THE MONEY MARKET.

(FROM OUR CITY CORRESPONDENT.)

LONDON, April 19.

At the close of this week there has been a keen demand for money for short loans owing to the due payment on account of War Loan. The average rate for day-to-day advances consequently hardened to 4½ per cent., although in some directions there was cash to be had at 4. Some money, on weekly transaction basis, passed from the Bank of England at 5½ per cent. For fixtures 4½ and 4½ per cent. were paid.

Discount business has been fairly brisk, rates being from 1-16 to ¼ per cent harder all round. The bank rate continues at 5 per cent.

Exchange on Alexandria remains at 97½ piasres to the pound sterling.

THE SUEZ CANAL.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916.	1917.
April 11	Francs. 230,000	Francs. 250,000
April 12	239,000	160,000
April 13, 14	240,000	510,000
April 15	240,000	130,000
April 16	220,000	70,000

According to news received by *Beirut* (a journal bearing the name of the town) from Baalbeck, the Lebanese Government has established a special bureau to deal with the question of organising shelters for the poor, and appointed for it a manager and two inspectors. The Constantinople papers have paid a high tribute to Ali Munif Bey, Governor of the Lebanon, for the energetic efforts that have been made by him in connection with these shelters, which are being resorted to by thousands of needy people.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flat Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.

GEO. THOMAS & CO., Manchester. Tel. and Cable Address: "Samohit, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc., Cotton, Wool, etc. Testing Machines for all purposes, Tachometers, Balances, &c.

ON 'CHANGE.

Growing Interest in Egyptian Stocks and Shares.

(FROM OUR CITY CORRESPONDENT.)

Throgmorton Street, E.C.

Thursday, April 19.

There has been a growing interest in Egyptian shares, but so far not much business has resulted, owing to the scarcity of sellers at present levels. The price of cotton and other produce is much higher than it was a year ago, and, barring accidents, the encashments of all Egyptian companies, which were certainly quite satisfactory last year, should this year produce record results. It is not surprising, therefore, that the public should look about to pick up what shares offer at the present advantageously low level.

Agricultural Banks have been dealt in to-day up to 5½, showing an advance of ½, and Anglo-Egyptian Banks are ½ higher at 11½. Nationals remain a firm spot, but with hardly any business passing. Alexandria Waters are in continuous demand, and business has been done to-day at 12. Delta Light Rails have again been done at about 5 9-16.

Behéras continue to be wanted, but there are no sellers, and Behéras Prefrs. have improved to about 4. Gharbiehs are buyers at about 17s. 6d., but no shares are offering. New Egyptians are in strong demand, but here again the absence of sellers stops business. Some business was done in United Egyptian Lands at about 6d., and there are still better buyers to-night; but even here shares are scarce.

Markets are again firmer round 26s. 3d., and Salts have further improved 6d. to 20s. 6d. Khedivial Mails have been in constant demand, and have risen from 28s. to nearly 30s.

In Greek securities Bonds have been strong to-day, with a large business in Rentes round 44.44½, and a further 1 per cent. rise in 1881. 1884, Larissa and Monopoly.

Oil Shares.

This market has not recovered from the attack of lethargy which we have previously reported. The only improvements of note this week have taken place in Maikop Pipes, which advanced on Wednesday to 3s. 4½d., and Anglo-Persian Prefrs., which have been in moderate request, and rose 2½d. to 3d., finally halting at 22s.

There has also been some demand for new Schibaieffs, but sellers were scarce. Their price is hard at 7s. 6d. Ural Caspians have been steady at 1 11-16; Spies and North Caucasians have not been touched.

Paris Bourse.

Closing prices of Near Eastern interest on the Bourse on April 18 were:—Serbian 1895, 55 (unchanged); Turkish Unified, 62 (unchanged); Crédit Foncier Egyptian, 635 (against 636); Ottoman Bank, 415 (against 416), and Suez Canal shares, 4,378 (against 4,400).

NOTICE.

THE AGRICULTURAL BANK OF EGYPT.

Notice is hereby given that the FOURTEENTH ORDINARY GENERAL MEETING of the Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Wednesday, the 25th April, 1917, at 4 o'clock p.m., for the purpose, among other things, of:—

- Receiving the Directors' Report;
- Receiving the Auditors' Report;
- Approving the Accounts for the period ended 31st January, 1917;
- Declaration of Dividends;
- Election of Directors;
- Election of Auditors and fixing their remuneration;
- And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 4th April, 1917), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

- In Egypt—At the National Bank of Egypt, Cairo.
- At the National Bank of Egypt, Alexandria.
- In London—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.
- F. T. ROWLATT, President.
- Cairo, 23rd March, 1917.

STOCK AND SHARE LIST.

NOTES OF THE WEEK.

With the occupation of Samarra station another notable landmark has been reached in the Mesopotamian campaign. Some uncertainty has prevailed regarding the exact locality of railhead of this small section of the Baghdad Railway, as it was thought that the Turks had contrived to carry the line some miles further north. The capture, however, of a considerable quantity of rolling stock—sixteen locomotives and over two hundred trucks—would seem to indicate that the railway has not been extended, and that the enemy's retreat had been sufficiently hurried to prevent him from destroying all the railway material. General Maude's success has not been gained without stubborn fighting. The railway would naturally form the main line of the British advance, and the Turks in attempting a converging movement on General Maude's right flank no doubt hoped to strike a weak spot, and by rolling up the British front on this side to relieve the pressure on Samarra. Their effort was short-lived. Quickly routed, they were forced to fall back in the direction of Deli Abbas, and the advance on Samarra continued without further interruption.

Taking advantage of the course of the Tigris, which at this point flows almost due east, the Turks had selected a strong position for defence, some twelve miles south of Samarra, stretching from Istabulat, a station on the railway line, to the junction of the Shatt-el-Adhaim with the Tigris. Once again the enemy's defences were turned by means of a force thrown across the river at night, and on the morning of April 18 a general attack on the main position on the left bank of the Tigris was begun. It was completely successful; over twelve hundred Turks were taken prisoners, together with six machine guns and a considerable amount of other booty. General Maude mentions that only the exhaustion of the horses prevented the capture of the enemy's guns. The heat was excessive, and after a hard day's fight under such conditions it is not a matter for surprise to find that the troops engaged were given a respite the following days. The portion of the Istabulat position on the right bank of the Tigris remained in the hands of the Turks, but from these they were driven on the 21st or they evacuated them during the same night, and the next morning found the British advancing against a new Turkish position six miles nearer Samarra. The engagement began late in the afternoon, and was carried on well into the night. Fighting, it is stated, was severe

and hand-to-hand, numerous counter-attacks being made by the enemy, but he was driven from a stubbornly defended position elaborately prepared with iron-roofed dug-outs. Following in pursuit, British troops occupied Samarra station early on April 23.

The British and Russian forces in Mesopotamia are now disposed along the arc of a circle stretching from Samarra on the west through Deltawa and Kizil Robat to Kasr-i-Shirin on the Persian border. From the fact that enemy irregulars fell upon a Russian squadron at Shahroban, on the Baghdad—Kasr-i-Shirin road, on April 15, we may infer that the Turks who made the unsuccessful attack on General Maude's right flank are still in the district between Deltawa and Deli Abbas. In these circumstances, as both Kizil Robat and Khanikin are well to the north-east of Deli Abbas, there would be an excellent opportunity for the Allies to clear the whole of this region of the enemy, by a converging movement, if the Russians were in sufficient strength to support General Maude's operations on the western flank. There has been no news of General Baratoff's main force since the occupation of Khanikin; but the Turks report unsuccessful attempts on the part of the Russians to advance in the neighbourhood of Penjivin, on the Turco-Persian frontier north of Kasr-i-Shirin, and at Rowandiz, north-east of Mosul, and it is evident that the Russians are for the present unable to make headway against the enemy.

The experience of the Mesopotamia Expedition, as well as that of the force under General Dobell now in Palestine, suggests that the Turks still have considerable powers of resistance, and it may not be altogether an improbable statement that they have obtained the services of the redoubtable von Mackensen for the supreme command in Asiatic Turkey. Neither the fate of von der Goltz Pasha nor the general situation in the Ottoman Empire can make the post a very attractive one at this juncture, but from the German point of view it will be a case of a desperate remedy for a desperate disease. The battle of Wadi Ghuzzeh was fought on March 26 and 27; but in spite of the heavy losses inflicted on the enemy the British force was not able to advance beyond the position it had gained until April 17. On that day the Turkish foremost positions on a front of over six miles were captured, the attack being assisted by the fire from men-of-war. As our troops were now in touch with the enemy's main position covering Gaza, it was to be expected that an immediate attempt would be

made to capture the town. But so far there has been no report of any further operations, apart from an artillery duel. On the Western front the Germans seem to have decided that the time has come to use their reserves in the firing line in the hope of stemming the Allied advance, and it may be that the Turks are adopting the same policy and are preparing to stake all in an attempt to prevent the British from penetrating farther into Palestine.

An interchange of visits between highly placed representatives of the countries forming the Central Alliance lends colour to the reports that the longing and the absolute necessity for peace in two at least of the States allied to Germany can no longer be ignored. Following upon conferences between Germany and Austria-Hungary, Talaat Pasha, the Turkish Grand Vizier, has recently visited both Vienna and Berlin. Prince Cyril of Bulgaria went to Constantinople ostensibly to decorate the Sultan with a Bulgarian Order; but, as he was accompanied by General Jekoff, the Bulgarian Commander-in-Chief, and General Petroff, it is evident that important military considerations prompted the visit. It is believed that Turkey's insistence upon using her army to protect her own territory is causing embarrassment to her allies, as the presence of Turkish troops in countries where the temper of the people is rapidly becoming more and more unreliable is held by the anxious authorities to be an almost indispensable precaution.

In regard to one point we may feel more certain—that as the food position in each country grows more critical, those in authority will be exercised to know what prospects there will be of replenishing stocks even when peace has been declared. Unless Germany is able to give her allies an assurance that peace will bring an immediate amelioration of the existing state of affairs, they will want guarantees that the war will end before their food supplies are entirely depleted. If, for instance, Bulgaria should foresee difficulty in feeding herself until the new harvest, it will be to the interest of the Government to have the war over some time before the real pinch is felt. Moreover, even where the present shortage can be weathered, it may be out of the question to face the possibility of a year still leaner than this one; and to obviate this, demobilization will have to be carried out before the time comes for preparing for the next sowing. An indication that the position in Bulgaria is giving rise to uneasiness is afforded by the extravagant expectations formed of the results to be obtained from the appointment of a Food Controller with plenary powers.

Greece continues to play her rôle as a great political and diplomatic laboratory. Here all manner of strange germs are handled, experiments made and minor explosions take place. But no damage is done, unless it be to the germs and test tubes, and who shall grudge the Allied Governments their hobby? During the past week it has been possible to watch the evolution of a harmless Ministerial crisis. As there happens to be a political vacuum in Greece at the present time, no action of this character could take place, unless the ingredients were introduced from outside. M. Lambros appears to have found it undesirable that he should retain the Premiership, and King Constantine at once performs his part in forwarding the process of evolution. The problem of how to deal with the friendly head of an unfriendly country is next propounded. It proves of absorbing interest to the Allies, who discuss the matter in all its bearings with M. Zaimis. Meanwhile, in another part of the laboratory the task of squaring the circle is being carried out with much avidity. The British Minister has an audience of King Constantine, who from another source is styled "technically a friendly Sovereign," and we learn that the conversation "made a favourable impression in Royalist circles"—presumably the ones which the Allies are trying to square. In the message to *The Times* of the same date appear the following statements:—"To-day German officers continue to frequent the Palace clandestinely"; "From Athens have been organized

those irregular bands which infest the neutral zone and have had numerous affrays with French troops"; "There are at least 20,000 rifles still available for arming troops in the country"; "At the least the royal regime seems to be entering upon the period of dissolution."

As an illustration of the way in which the Government of one who is technically a friendly Sovereign acts the Greek Government has been pressed to publish the correspondence which has passed between the head of the Allied Military Control Board and the Greek Premier in regard to the action of komitajis in the neutral zone in Thessaly. If this correspondence had not taken place in a privileged laboratory conducted by way of a hobby, it is certain that the only possible sequel would have been an immediate rupture of relations between the Allies and Greece. But as both parties to the international farce seem to have agreed that nothing done in Greece matters, M. Lambros remains in office, his offensive and equivocal correspondence is published, and the British Minister pays friendly visits to the man who is solely responsible for a regime described as one "which has never been anything but a German propaganda centre."

There has been a recrudescence of activity on the Macedonian front during the last week, but the net result is not for the present considerable. Trenches have changed hands both in the west in the French and Italian sectors and in the eastern portion held by the British. After a bombardment lasting three days, the latter attacked on a front of two and a-half miles in the neighbourhood of Doiran Lake and Doiran town. Some ground was gained north of the latter and four counter-attacks repelled, but nearer the Lake, although some enemy trenches were occupied, they had to be evacuated subsequently. In so far as this activity may be a sign that General Sarrail now finds himself in a position to contemplate an offensive it will be welcomed by the troops themselves no less than in France and Great Britain; but it is manifest that the enemy have used their long respite to some advantage, and have formidable defences.

The report of the Mesopotamia Commission is expected at an early date. Whatever explanations may be given of mistakes made in the past, the point that concerns the British public most is that it should have a definite assurance that the blunders and the tragedy of 1915 and 1916 have long been at an end and can never be repeated. Welcome testimony to this effect is given by a letter from Sir Arthur Lawley, Chief Commissioner in Mesopotamia of the British Red Cross Society and of the Order of St. John of Jerusalem, addressed to the Secretary of State for India. He writes *inter alia*:—"Now a new chapter is in the writing. The story of our failure is known. Its cause is clear enough. The days of muddle are ended and order has been evolved out of chaos. To-day all that human agency can do has been and is being done to turn past failures to success and prevent future breakdowns in our organization. Communications by road, railway, and river have been laid out and developed on a well-thought-out plan. Facilities for loading and unloading of vessels at Busreh of every kind exist on an adequate scale. Stores in abundance are available and methodically controlled. Medical equipment has been introduced on a lavish scale. An ample water-supply is assured at the base and every camp."

Sir Arthur Lawley proceeds to describe the evacuation of the wounded after the storming of the Sanna-i-Yat position and during a subsequent engagement higher up the river, of which he was himself an eyewitness. He concludes: "After what I have seen since my arrival in this country I am equally certain that you may contemplate the future with perfect confidence so far as that [the medical] organization is concerned. I have had a unique opportunity of testing, so to speak, every link in the chain so far as a layman can do so, and I feel assured that the chain is throughout free from flaw and well able to bear any strain put upon it, however great the strain may be."

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 28.

The New Budget.

The unprecedented size of the 1917-18 Budget has, not unnaturally, aroused considerable comment, and has in certain circles given rise to the expression of somewhat ultra-optimistic and exaggerated forecasts as to the future. The more level-headed of the population, however, agree that the new Budget is merely the outcome of the abnormal circumstances created by the war, and that, although Egypt is exceedingly prosperous, yet the Egyptians must not expect the present condition of things to continue, and must be prepared for the shrinkage in trade values which is bound to set in sooner or later. Certain writers in the vernacular Press have lately been lecturing the people on the situation, and have, very rightly, been enjoining them not to spend their money on luxurious and unproductive articles, but either to invest it in directions that will prove remunerative or to put it by against the inevitable period of depression. It is much to be feared, however, that these wise counsels are not being listened to; for, albeit the Mixed Courts' records and the mortgage companies' balance-sheets show that some Egyptians are utilising their profits to increase their holdings of land and reduce their indebtedness, there are distinct indications that the population, as a whole, is not retrenching, but is spending money up to the hilt.

One important fact seems to have escaped attention, and that is that the enormous revenue collected last year and budgeted for the current year is being obtained without the imposition of any fresh direct taxation. Railway rates, first and second class, have been increased by 10 per cent., the telegraph rates and some of the postal ones have been doubled, and the Customs tariff on tobacco, coal, and construction wood has been raised. These increases have, however, all been dictated by special considerations, such as decrease in traffic, extra cost of working, or the desirability of making people pay more for services or commodities which are not exactly of first necessity. In every case they represent purely indirect taxation. The fact that it has not been found necessary to increase the rate of direct taxation, which is admittedly very low in Egypt, and the nature and scope of which constitute an important fiscal reserve, that, indeed, it has been possible, and is considered still to be possible, to meet the extra cost of administration due to the war without calling for any greater direct contribution from the people than was made in pre-war times, is a remarkable feature of the British administration of Egypt, and redounds to the credit of those responsible for it during the past two years. At the same time, mature consideration of the situation and a comparison of their condition with that of other peoples, especially of those in countries occupied or controlled by the Germans, should arouse in the hearts of the Egyptians a feeling of thankfulness and of loyalty to Great Britain, to whose disinterestedness and solicitude they owe the better fate which in every respect has befallen them.

The Egyptian Army.

With regard to the credit for the Egyptian Army, which is raised by £E396,000, or 40 per cent. of the previous year's military Budget, and which is explained as being due to the extra expenditure in Darfur, the re-arming of the Army, and the reinforcement of the Camel Corps, I understand that it is intended to increase the strength of the Army by a little over 2,000 men. It must be remembered that Egypt's frontier responsibilities have considerably increased since the war. Darfur has been added to the territory garrisoned by the Egyptian Army, as also has all the country between Mariut and the Tripoli frontier. For some time—even after peace is declared—it will be necessary to keep troops at all the outlying stations, and it is surprising that a greater addition is not being made to the strength of the Egyptian Army, which, as it is, seems remarkably small, when one considers the vast area that has to be policed by it in Egypt and the Sudan.

An Assize Court Sensation.

Quite a sensation has been caused by a case which has just come before the Criminal Courts. Briefly, the facts are the following. A man was accused of murder and duly brought before the Assize Court, which found him guilty and sentenced him to death. An appeal was lodged with the Court of Cassation on a question of procedure, and the point being allowed, the sentence was quashed and a re-trial was ordered before another Assize Court. The re-trial took place, but the new Court acquitted the man, on the ground, it is understood, that the evidence was suspect. Needless to say, this result has given rise to no little comment in

both legal and lay circles, for the evidence before the second Court was substantially the same as before the first. Had it not been for the technical illegality committed in connection with the first trial, the accused would have been executed for a crime of which he has since been declared innocent. It should be explained that in Egypt no Assize Court decision can be appealed against on questions of fact; only appeals on points of law or procedure can be made, as in this case, to the Court of Cassation. This case would certainly appear to strengthen the arguments in favour of the re-establishment of a Court of Criminal Appeal, which, it may be mentioned, was abolished in this country at about the same time as we created a similar jurisdiction at home.

Egypt's Fishing Industry.

An industry which is very much neglected and certainly merits special attention on the part of the Government is the fishing industry, which, according to a paper recently read at the Sultania Society of Political Economy, has fallen off very much of late years. A considerable amount of fish is, of course, caught in the lakes in the north, but what I particularly refer to is the sea-fishing industry. Considering that Egypt has a coast-line of 2,800 kilometres—as the lecturer pointed out, but 100 kilometres less than that possessed by France, where the industry is particularly flourishing—this country ought to be an important fish market. So it was at one time, but to-day the catch has in many cases fallen off by half compared with the quantity caught some forty years ago. This is undoubtedly due to the fact that beyond the control exercised over the lake fisheries there is no organisation existing in Egypt, as in other countries, for the supervision of the industry, especially the sea-fishing branch. Certainly the facts and figures quoted by the lecturer are very striking, and it would appear to be extremely desirable that some official action should be taken in this matter without delay. H.H. Prince Fuad has already announced his intention to form an organisation for the study of the subject with a view to developing and protecting the Egyptian fishing industry on proper scientific lines; but whilst private initiative is welcome as always, and can undoubtedly render very substantial assistance, this would appear to be pre-eminently a matter where the State should intervene; and it is to be hoped that before long we shall hear that the Government has taken up the question.

PARCELS FOR PRISONERS IN TURKEY.

According to information furnished by the Swiss Post Office the transmission abroad of parcels addressed to prisoners of war in Turkey has been resumed. Such parcels are, therefore, again being accepted at post offices, subject to the general regulations governing the acceptance and transmission of parcels for prisoners of war.

ANTI-GERMAN MOVEMENT IN BULGARIA.

Information has reached here (says the Athens correspondent of *The Times*) that the anti-German movement in Bulgaria has led to outbreaks in more than twenty towns. Several bombs have been used against German officers. The Bulgarian Government, it is said, has begged the Turkish authorities to allow the Turkish troops to remain in Bulgaria so that they may be employed to stifle the revolution, which is directed by a secret committee composed of Russophil politicians and officers impatient of the German yoke. Prince Cyril of Bulgaria's mission to Constantinople is partly concerned with this request.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

The Legislative Council

The Council will be opened on April 24. The High Commissioner has informed members by letter that, for reasons connected with the war, the customary ceremonial will not be observed at the opening, and that the first meeting will be of an ordinary character. The session should again be a short one.

Irregular Greek Marriages and the Holy Synod.

The Holy Synod will probably bring its meetings to a close on April 2. It has been dealing for some weeks with matters of importance to the Greek community, Church and laity alike. One of the subjects which has been under discussion has been that of marriages which are not recognized by the Church, and which are a topic of frequent local discussion. Many Cypriots have contracted marriages, not lawful in the eyes of the Church, with persons connected by blood relationship or affinity. Marriages between first cousins are, for instance, not infrequent. Only under very special circumstances is the Church able theoretically to give its sanction to such unions. How numerous these unrecognized marriages are may be gathered from the fact that in the diocese of one of the four island bishops alone there are 250 such unions. Many of the persons so united in matrimony have applied, without success, to the ecclesiastical authorities and to the Holy Synod praying that they may obtain the recognition of the Church. The Holy Synod has, indeed, the power to relax the rule of prohibition in certain degrees both of blood relationship and of affinity, but it has not deemed it expedient to proceed to any definite resolution in favour of applicants without first securing common action by the other Patriarchal Churches, and especially that of the Church in Greece. The matter has, it seems, been under their consideration for a considerable time; but the ecclesiastical mills grind slowly, and no definite decision has been arrived at. In the circumstances the Holy Synod of Cyprus proposes to communicate without delay with the Churches referred to, and to address itself in the first instance to the Church of Alexandria. As there is still much work to be carried out, the Synod will probably be convened during the summer, either at Larnaca or on Mount Troodos.

Athletic Sports of the English School.

The annual meeting of the English school at Nicosia was held on April 24 in the presence of Sir John and Lady Clauson and a large gathering of the British, Greek, and Turkish communities. The principal winners were Spyros Hadji Changari and Pavlos Angelinides, both of whom received silver cups presented by Lady Clauson and Lady Tyser. Other prizes were given by Mr. Bowring, Mr. E. Lucie Smith, and M. Michaelides. The meeting was a very successful one.

HILL STATIONS IN THE SUDAN.

(BY OUR KHARTOUM CORRESPONDENT.)

The intense dry heat of the greater part of the Sudan makes it imperative for the Europeans resident there to get a change yearly if possible, and those who disregard the rule generally pay for it in the form of some sort of breakdown, or by contracting fever, or the like. It is difficult and expensive for most people to go to Europe every year, and it has been hoped to establish a hill station to which Europeans could retreat, or, at least, send their families to. The first effort in this direction was made at Erkowit, in the hills of the Red Sea Province, at a place discovered by General Wingate when he was at Suakin in the early days of the Sudan Expedition, and, indeed, he is said to have made a hurried retreat thence, as the Dervishes had news of his venturing into the hills and tried to cut him off. He remembered the place with the intention of returning thither in the future, and when he became Governor-General and Sirdar he had a house built in the valley and went there yearly with his staff for some part of the hot weather.

The valley lies some twenty miles south of the highest point of the Port Sudan-Khartoum railway, and a road was made for motor traffic, so that the distance could be covered with greater ease and speed. Numerous other houses were built there, and it was thought that the hill station of the Sudan had been found. The valley is singularly attractive to those whose eyes are weary with the continual brown and yellow of the desert, as it is very green, and there are quantities of trees and flowers, and the maidenhair fern grows in abundance. The valley is cut up by a "khor," or dry bed of a stream, which runs right through it in curves, incidentally supplying the golf course with many of its hazards. The khor winds, owing to the presence of a number of small hills around which it has to make its way.

On the top of each of these hills is a house, as this ensures complete drainage when the rain comes, while it is obviously easier to build on the flat surface on the top of the hill than on the steep side. There is a considerable open space available for the purpose of making tennis courts or giving accommodation to those who prefer to put up tents.

Unfortunately, the accommodation is somewhat limited, and it is not so far worth the while of any enterprising builder to erect other houses, as the period over which he would have to get the rent to cover his expenses is rather short, and he would find it necessary to put almost prohibitive rents on his houses. Furthermore, beautiful as the valley is, it bears a sinister reputation among the local Arabs, who maintain that the water is not good for their animals, and therefore only go there under the compulsion of drought elsewhere. The result is that supplies are difficult to get, and they have to be carried from the railway. The country through which the railway goes at this point is almost non-productive, and the supplies have to be sent from the sea or from the Nile—in each case a considerable distance. Thus it has turned out that Erkowit is not used except by the Governor-General and the Governor of the Red Sea Province and their respective Staffs.

The people of Suakin all go to Sinkat for the hot weather, and there is a considerable town there during those months. This is on the railway, and is only about twenty-five miles from Erkowit. Owing to the presence of the natives, it is possible to get meat and eggs in reasonable quantities, and some of the officials of Port Sudan have built houses there.

Further down the line there has grown up in the last few years quite a settlement at Gebeit, which is the local headquarters of the railway. Steps have been taken to make it easy to get board and lodging at set terms, and an increasing number of junior officials are taking advantage of the accommodation.

Both Sinkat and Gebeit are infinitely cooler than the coast of the Red Sea in the hot months, but they offer little in the way of occupation to visitors. The scenery is chiefly rocky hills barren of any vegetation, and though there is a little shooting to be got, it is nothing very great. Ibex do, indeed, exist, but it is an expensive business to pay for the necessary beaters for more than a day or two.

In effect, though there is a respite from the heat, the hills of the Red Sea Province have little else to offer to the holiday-maker. The cost of living in that province is extremely high, and for those who wish to be economical it has not much to recommend it. Those who can disregard economy can go to Egypt or to Europe.

Perhaps the most attractive country in the Sudan is the hill country of the extreme South, where the altitude ensures cool weather, at any rate, as compared with the North. The hills are wooded, and there is an abundance of fruit of almost every description. Unfortunately, much of this country is almost unexplored, and it is at this date difficult to get to, and it will be many years before the journey will be done from Khartoum under several weeks.

Possibly the Zeppelin will find a use in peace to transport travellers over the wastes of the "Sudd," where there are miles and miles of land hidden by water and papyrus grass, a country through which no railway could go without the expenditure of millions in reclaiming the marshes. Until that Utopian scheme can be carried into effect the residents of the Sudan will have to be content with the hill stations that they have got. No doubt much may be done to increase the accommodation and to provide the standard amusements of the true Briton. Much can be done by improving the water supply, to make gardens, and grow vegetables and fruit. The first need is housing, and that, where there is nothing but stone on the spot, is more difficult than it sounds, as the accessories of wood, etc., are very costly, and the war has made this worse than ever. Still, it is to be hoped that a beginning will be made, as there is no doubt that with some expenditure after a few years a quite adequate settlement could be made.

At present there are several rival spots, and none of them is concentrated upon. If one were selected and worked up, after a short time it would soon improve in appearance and become popular. Probably the best place for the purpose is Sinkat. First, it is the native selection, and, consciously or not, the native has generally selected the best places for his habitation. The presence of a number of natives simplifies the question of supplies, and draws a number of small shopkeepers, who may learn to extend their trade to Europeans. The difficulty of getting water can probably be solved without any great trouble, and it remains for some of the merchants of Suakin who go habitually to Sinkat to add to their profits by building some houses suitable for Europeans. It is possible too, that the headquarters of the province may go to Sinkat instead of Erkowit, owing to the proximity of the natives with whom the administration has to deal. Tentative efforts have already been made to arrange a golf course there, and football is already well known, thanks to the military, and the natives emulate the British in their enthusiasm for the game.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

GREEK "FLAG-WAGGING" IN CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Referring to correspondence in THE NEAR EAST regarding the use of the Greek flag in Cyprus, I have not yet seen what has been the outcome of the incident at Famagusta. I concur in the views of "Union Jack," in your issue of March 9.

The custom which has been carried to such ridiculous lengths should never have been allowed to grow up at all. It was due to the weak toleration of disaffection on the part of a small handful of Greek town agitators in the early years of the occupation. The Government "gave an inch," with the proverbial results. Semi-Orientals, as well as Orientals, require a firm as well as a just hand over them.

I notice in the *British Empire Review* for April, in an article on "Cyprus of To-day," by Rose Henniker-Heaton, that the late High Commissioner, Sir Hamilton Gould Adams, "won the esteem of the whole island by his firmness and the prompt measures he took." When on tour he "let it be known that if any Greek flag was flying at any village en route he would not receive any deputation or accept any petition from the inhabitants." But surely it is monstrous that the Governor of such a small island cannot go where he pleases without such proviso, but can be, as it were, dictated to by villagers, led by a group of "lawyers or school masters," who endeavour to propagate their views among a people who are perfectly contented, who do not desire to meddle in politics, but only wish to be left alone. The writer referred to regards the flags as a "hostile demonstration." We need not go so far as that, but the custom undoubtedly indicates disloyalty, if not active disaffection. These displays of the Hellenic flag by Cypriots who are not Hellenic subjects are quite out of place, and should not be tolerated.—Yours truly,

E. E.

London, April 25, 1917.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I was glad to read in THE NEAR EAST last month that the question of the use of the Hellenic flag by the Greek-speaking community had come under notice. A step was, very rightly, taken at Famagusta to restrict or prohibit the unlimited use of the Greek flag at public meetings and functions. The new Greek Archbishop protested to the High Commissioner—an act of very questionable propriety. The Archbishop has not, I believe, been a "political Bishop," as was his predecessor in office; so presumably he acted under pressure of the agitating Greek element. I have been curious to know what was the reply of the High Commissioner to his protest. Your correspondent has not yet, I think, informed us; but, no doubt, it has been given; for I notice, in your issue of March 20, that a meeting of Greek members of the Legislative Council and mayors has been called to consider the matter further.

I believe that all impartial persons who know or have visited Cyprus will agree with your correspondent that "it is high time that the use of the Greek flag should be made the subject of proper regulations," which have apparently been hitherto lacking. A great deal more might be said respecting the altogether improper use of the Hellenic flag in an island practically without Hellenes; and, it might be added, about the manner in which the Hellenic national air is (or certainly was a few years ago) played at Greek meetings in precedence of, and, when possible, to the exclusion of the British.

The abuse of the freedom which was introduced into Cyprus under British rule has grown out of small beginnings, and gradually reached a point at which some check should be imposed. The island is now British, and this licence, in place of liberty, should not be tolerated. Moreover, the feelings of other, and loyal, communities, to whom this flaunting of the Greek flag is offensive, should be considered. I hope, and I know that many others share the hope, that some action will now be taken to place this matter, too long neglected, on a proper footing.—I am, etc.,

READER.

April 20, 1917.

BAGHDAD AND THE FUTURE OF ARABIA.

Last Tuesday, before the Central Asian Society, Sir Thos. Holdich read a paper on Baghdad. He had, he said, visited that city twenty years ago, travelling there from India, at a time when it was necessary to learn something of the topography of the southern highlands of Persia, through which overland communication might eventually be established with the Persian Gulf. He had found Baghdad an Oriental city, as yet not Europeanised. Turks, Arabs, Jews and Persians were there in the undiluted atmosphere of the East. Top hats and bowlers were not to be seen beyond the European quarter, and even there European women had to wear veils when out of doors. It was a unique experience to meet a lady of your acquaintance and see her welcoming smile beneath the veil, but not be able to take off your hat or otherwise salute her.

Speaking of the country generally, Sir Thomas said that geographically, ethnographically and, above all, historically Mesopotamia was associated with Arabia. All the great empires of Western Asia had swung their sceptres over its plain; but it was not until the second of the Abbaside Khalifs selected Baghdad for his capital that Damascus paled before the rising significance of the new city. Doubtless it was the wealth of the Mesopotamian plain which led to this choice, but Baghdad also had great advantages as a strategic centre for an attack on India. Whilst it was impossible to draw any sharp line of demarcation between Arabia and Mesopotamia, the line was sharp enough between Arabia and Persia, for between the Aryan, Persian and the Semitic Arab there was no affinity of race or tongue, and, though both were Moslems, the division between Sunni and Shia went back to the earliest days of Islam, and was as irreconcilable now as ever.

Of the future Sir Thomas said he did not think the Arabs would ever be united again into one consolidated nationality, governed from one supreme centre, and acknowledging but one overlord; Arabia would never again be even a federation of provinces owning allegiance in political and military matters to a central administration; Medina, Damascus and Baghdad would all be revived as centres of administration, apart from Central Arabia. Thus Baghdad might become once more a home of Oriental literature and art, but it would be long ere we could leave Baghdad and Mesopotamia to work out their own salvation. We should have to see to it that the Mesopotamian provinces were well guarded and well administered, that the remarkable opportunity they afforded for agricultural renovation was brought to a successful issue, and that well-defined boundaries drew a line between Mesopotamia and Turkey or Russia, before we could leave the Baghdad railway and Mesopotamian culture, both human and agrarian, to take care of themselves.

In the course of a discussion that followed, Sir Edwin Pears said that with regard to the idea which involved the separation of the Arabs from the Turks and the establishment of a great Arab state which should include Mesopotamia, Baghdad and the regions beyond the Euphrates and Tigris, he would not venture to express an opinion. Men of eminence in the Arab state, it had been suggested, should consider among themselves what should be their form of government. They had already done so, for eight or nine years ago Mahmoud Yahia, a man of large possessions in Mesopotamia, had been chosen Khalif for the Sheikhs. He had gone to Medina, and, according to the most recent reports, had thrown in his lot with the Shereef of Mecca, who had proclaimed himself King of the Hejaz. The remarkable dissensions which had arisen on religious and political matters between Turk and Arab had occasioned a large amount of unrest, and if the Arabs could maintain their unity and not quarrel among themselves, it was possible they would ask England to be their protector. If we accepted that responsibility, we must remember we had nothing to do with the question of who should be Khalif. If we kept ourselves out of the religious difficulty, we might live to see a great Arab state, occupying from Mesopotamia to Bab-el-Mandeb and from the Red Sea to the Persian Gulf.

A French patrol vessel entered the fortified port of Beyrout (Syria) on April 22. After firing 24 shots and being fired at, the vessel steamed off without having suffered any damage.

at the disposal of the Serbian Minister, from which money is sent where it is most urgently needed. The address of the Serbian Legation is 195, Queen's Gate, S.W.

TANGIER TO TEHERAN.

The Russian Revolution has had its effects in quarters that I, for one, should have regarded as unlikely to be affected by it. Reuter's Petrograd correspondent reports that the Khan of Khiva, "in response to popular demand," has decided to grant a Constitution "on broad democratic lines." Shades of Fred Burnaby! "Popular demand" for a broadly democratic Constitution in Khiva! At this rate, it looks as if Khiva may yet prove irresistibly attractive as a place of residence to Mr. H. G. Wells. The only drawback that strikes me at once is that it would take so long for his letters to reach *The Times*.

Then, again, we are informed that the Khan of Khiva's neighbour (so to say), the Emir of Bokhara, has been influenced by the Russian Revolution to the extent of publishing a manifesto "promising extensive internal reforms" and "containing an order to set at liberty all persons detained in the prisons." Of the wisdom of the last mentioned step I have my doubts—and very active doubts at that—but the first part of the message is remarkable enough in all conscience. With all due respect to Khiva and Bokhara, it strikes me as quaint to find them so hot-foot on the road to Progress.

But in connection with the Russian Revolution, I am inclined to think that the palm for unconscious humour in a message bearing on the subject must be awarded to one from Sofia. Unfortunately I have mislaid the newspaper cutting, but I remember that the message concluded with a kind of reassurance for Russia, and I think the wording was: "New Russia has nothing to fear from Bulgaria." At any rate, that was the spirit of the thing; and it struck me as truly gorgeous.

By the time these lines appear in print Sir Stanley Maude may have captured the town of Samarra, as well as the railway station of that name. But I imagine that it would be a far less valuable prize than the station; for in these days historical associations do not count for much—at any rate, they have no value for a conqueror—and historical associations are almost the only thing that Samarra has to boast about. I never visited it, but those of my friends who did so all agreed in assuring me that I had missed nothing. Mr. Soane thus describes it in his interesting book, "To Mesopotamia and Kurdistan in Disguise":—

"It is a big place upon a cliff that juts out into the broad Tigris; tawny, like the desert out of which it rises, its great mosque standing clear above all, with that clean, new appearance that any strong building must possess in this clear, dry atmosphere. No trees adorn its streets, they are as desert as the plain outside. Only upon the opposite side are a few gardens, and the remains of a bridge of boats, which affords sufficient excuse for the Turks to take a toll from all who pass down the stream."

The mosque to which Mr. Soane refers is the reputed burying place of many of the supporters of Hussein, the son of Ali. It is also one of the two (or more) places in which the Twelfth Imam, "El Mahdi," is reported to have disappeared—the other being, I think, at Hillah. The dome of this mosque, like that at Kazimaim and the minarets at Kerbellah, is plated with gold, and presents a fine spectacle from a distance, I am told. Possibly it is this effulgence that has won for the place its name. Surra-man-ra means either "That maketh glad the heart of him who spies it" or "Delighted was he who saw (it)." But it is more likely that the name is a survival of the old days when it was for a time the capital of the Abbasside Khalifs. There seems to be some little doubt whether Mamun or Mutassim first favoured the spot as a royal residence. But there can be very little, if any, doubt that Mutassim used it as a centre for his Turkish troops, who were always making trouble for him in Baghdad.

Another point of interest about Samarra, and one that I have not seen mentioned elsewhere, is referred to in Messrs. W. A. and E. T. Wigram's "The Cradle of Mankind." They write that here "stands the only ziggurat or Babylonian temple tower that has not been ruined in the lapse of centuries." When the temple ceased to be used, this tower appears to have been preserved "as Zoroastrian fire-temple, and subsequently as minaret to the great mosque which Haroun-al-Rashid built at its foot." That is surely a strange story, and we can readily agree with the Messrs. Wigram when they observe that "we owe some gratitude

to the Abbasside who was great enough to revere the monument of an older day." One is less inclined to share their hopes that the Germans will one day excavate this fine site. If they have not already done so, the Huns are unlikely to do so in the near future, at any rate!

Those who believe in "omens" and so forth may find in the chasing of the Turks first from Baghdad and then from Samarra good grounds for hope of a revival of Arab learning and Arab civilisation. For it is undeniable that it was the advent of the Turks in these two cities that heralded the downfall of the splendid Arab empire. Having made the mistake of employing them for their bodyguard, the successors of Haroun-el-Rashid found it impossible to get rid of them. Now they have been got rid of so far as this particular region is concerned. Will Baghdad resume its former greatness? And will even little Samarra become a place of importance once again? *Inshallah!*

It is not many weeks since I mentioned in these columns the production of "Hamlet" in Arabic, and with considerable revisions, in the Sudan, by an amateur dramatic society. Now I read in the *Egyptian Mail* that the first performance in Arabic of the opera "Carmen" was witnessed recently in Cairo. The event attracted a crowded audience, and, apparently, went off most successfully. The title-rôle was played by Mme. Munira, who is described in the report as "the first woman of true Egyptian nationality that has ever appeared on the Egyptian stage," and as "strikingly handsome, and as fair in complexion as any Andalusian beauty that has sustained the popular rôle of Carmen." This being so, it is easy to understand "the general desire to be present . . . which resulted in the early publication of the 'house full' notice and the turning away of many from the doors." Moreover, as the critic discreetly hints, Egyptian ladies detected in the appearance of Mme. Munira another step along the line of "feminine development"; and, attracted by this, occupied the galleries "in great numbers." I regret to read, also, that their "interest in the proceedings caused them largely to disregard the traditional conventions of seclusion." It sounds rather alarming. Did they indulge in oranges and nuts, or did they so far forget the "conventions of seclusion" as to let their veils slip aside?

Be that as it may, the leading lady (on the stage) scored a great triumph. "Her acting was instinct with verve and grace, and it would have been a stony Don José, indeed, who was not melted by her charm." The enunciation of the text, we are informed, was declared perfect by Arabic critics. But it puzzles me not a little to read that "the music was expressly written for her by Kamel Effendi el Khali and Abdul Hamid Effendi Ali, though some of Bizet's well-known airs were sung by the choruses of soldiers," etc. . . . It may be unavoidable, but it almost looks as if the composer and his work were of very small importance in the adaptation of an opera for an Arab audience!

CORSAIR.

The United States Ambassador at Constantinople has obtained the consent of the Turkish Government to the inspection of certain of the prisoners' camps by representatives of the Embassy.

Prince Boris of Bulgaria, after a stay of several days at Main Headquarters with the Kaiser, has returned to Bulgaria.

TURKEY AND THE WAR.*

The British nation is a bad hater. In this war the Germans have done their utmost to correct this defect in our nature, and have aroused such depths of loathing that possibly decades will pass before their deeds are forgotten or forgiven. But towards a people who are not in a position to do us such great harm we shall always remain more inclined to emphasize the good that is in them than to lay stress on the evil that they have done or are capable of doing. The Turk is a case in point, and in spite of his record in association with the German there will be many people who will doubt whether he really deserves the drastic fate that is thought to be in store for him. It is well, therefore, to be able to turn to a critical analysis of the Turkish question *per se*, especially at a moment when the changed order in Russia is interpreted in some quarters to imply that the Allied Powers may be called upon to revise their previous arrangement in regard to the disposal of Constantinople. M. Jabotinsky may attempt to carry his readers farther than some of them will care to go at this stage in the division of the bear's skin; but there can be no doubt that his statement is a useful contribution to the understanding of the problem which centres in the future of Turkey in Europe. His contention is that Asiatic Turkey rather than the Balkans was the real origin of the war, that Austria-Hungary, as well as her more vigorous partner, looked beyond Salonika and the Aegean to the "borderless spaces and bottomless resources" of Asia Minor, and that Germany was not aiming at the partition of Turkey, because she preferred to swallow Turkey as a whole. The war, having been brought about, has revealed the close interest which all the Powers have in the "Turkish heritage," and the special circumstances prevent any other solution than partition pure and simple, which the author proceeds to outline in very clear colours. Into a small compass he compresses a masterly *résumé* of Turkey's internal condition, and seeks to show that it is practically impossible to keep Turkish rule in Turkey.

"The Turkish culture is one of the poorest in Turkey; their language is one of the least considered; their part in the higher levels of economic life is little short of nothing. Peasants, soldiers, and officials, they rule the country only as long as they are able to keep the sword and the seal in their hands. Their authority is not supported by any fact of the life outside the barrack and the office; it is built upon itself alone, and can only last as long as every seat representing any infinitesimal fraction of power is kept by a Turk.

"The conclusion is clear. Turkish rule in Turkey can be assured only by autocracy, and rather a mediæval autocracy."

In view of the author's nationality the reader will expect to find Russia's claim to Constantinople and the Straits strongly urged. The case is succinctly stated, and the conclusions drawn are thus summed up:—

"Some international agreement concerning the free use of the Straits may prove indispensable, and would certainly not be opposed by Russian opinion in principle; but Russia could accept it only as a corollary in a settlement which should leave to her the full sovereignty, the military and administrative control of the two shores of the Bosphorus and of the two shores of the Dardanelles. Any other decision of the half-way sort would inevitably lead to this one result—that Russia would seize the first opportunity to help herself out of a precarious 'neutralisation' which would leave her, just as now, under the sword of Damocles."

Syria and Palestine are also provided for, and the future of the Arab people is indicated. M. Jabotinsky has written an informative volume, and in a question hitherto approached with bated breath it is not unrefreshing to come across some one prepared to take the bull by the horns, even though it means the end of the bull.

BOOK NOTES.

Mr. Milford has just issued "The Religious Thought of the Greeks," by Professor Clifford Herschel Moore. The work, which contains eight lectures given before the Lowell Institute in Boston by the Professor of Latin at Harvard University, with material drawn from a course of University Lectures, covers the period between the time of Homer to the rise of Christianity.

Messrs. Constable are about to publish an essay on "The Expansion of Europe," by Professor Ramsey Muir. In this work, which is a continuation of the author's essays previously published under the title "Nationalism and Internationalism," Professor Ramsey Muir analyses the nature of the share taken by the leading Powers in the process by

which, during the last four centuries, the whole world has come under the influence of the civilisation of Europe.

Messrs. Allen and Unwin have in preparation "A Dying Empire," by Bogumil Vojak. It has been the author's aim in this volume to trace the sociological factors in the breakdown of the Hapsburg Empire, and also to show how closely its future is bound up with the fate of Pan-Germanism. Mr. T. P. O'Connor, M.P., is contributing a preface to the work.

PALESTINE BEDOUIN AND THE TURKS.

Writing on April 3, a Cairo correspondent reports:—Some alarmists have lately been indulging in gloomy interpretations of the cessation of news during the last few weeks from Emir Faisal, the warrior son of the King of the Hejaz. Admirers of the Emir have learned, not only with relief, but with the deepest gratification, the news, just arrived, of his having received lately a large representative deputation from the leading Bedouin tribes of Palestine and Syria, such as the Jof and Kerak, which presented him, among other gifts, with 150 steeds of the purest breed. The recent blow dealt by General Murray to the Turkish forces in Southern Palestine has afforded these Bedouin tribes the chance of joining in the glorious task of freeing this part of the Near East from the rule of the Turk.

PROFESSOR LEON ON TURKISH POETRY.

Last Sunday, at the Reading Unitarian Church, Dr. Henri M. Léon lectured on Turkish poetry. The earliest Turkish poet was, he said, Ashik Pasha, who was born in 1271, and died in 1332. Ashik's great poem was called *Ghalib Kitab*, or the "Stranger's Book." He also wrote many shorter poems, amongst others a *ghazal* called "Yalnız," in English "Alone." This Dr. Léon translated as follows:—

Alone doth man pass when he endeth this life,
Alone he endures its struggles and strife;
Alone 'fore his God to be judged at last,
Alone must he bear the sentence then pass'd;
Alone he to answer for ev'ry misdeed,
Alone then to prove his faith and his creed.
Alone man retire e'er it be too late,
Alone there deep muse on thy possible fate;
Alone man resolve for sin to atone,
Alone man e'er strive, yet never alone.
For learn then, O man! whatever betide,
Thou art not alone, for God's by thy side.

JOHN RICHMOND,
14-15, CONDUIT STREET, W.1, LONDON,
announces the publication of

GLORY OF YOUTH

By TEMPLE BAILEY,

Author of "Contrary Mary."

Price 6s. Cloth. Illustrated.

(The Romance of a Rich Airman and a Poor Girl.)

The Athenæum says:—"The principal characters are all attractive and pleasant, and the book well written. . . . A wealthy American lady, sojourning in Germany, fascinated by the mediævalism of the Rhine castles, becomes engaged to a baron. . . ."

The Times Literary Supplement speaks of the "wonderful Diana."

The Financial Chronicle says:—"The book has a charm for jaded nerves and war-worn spirits."

The Field, in a sweet criticism, says:—"The story has one quality so permanent that it is impossible to miss it. It is sweetness—so evidently this is just the novel to absorb one these sugarless days—but—well, read the book."

A marvellous Book of Visions, called

THE SWINE GODS

By REGINA MIRIAM BLOCH,

with a Foreword by ISRAEL ZANGWILL, and a Cover designed by W. GORDON MEIN. Will be published in a few days.

Price 3s. 6d. net.

PERSONAL AND SOCIAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1917. April. 27 28 29 30 May. 1 2 3	1917. April. 14 15 16 17 18 19 20	Friday Saturday Sunday Monday Tuesday Wednesday Thursday	1335. Rejeb. 5 6 7 8 9 10 11	5677. Iyar. 5 6 7 8 9 10 11

To-morrow is the birthday of Prince Paul Kara-Georgevitch, son of Prince Arsène and nephew of King Peter. His Highness was born in Petrograd in 1893.

Tuesday is the birthday of Prince Arthur of Connaught, who was born in 1883.

Thursday is the birthday of Princess Helen of Greece, eldest daughter of King Constantine, who was born in Athens in 1896.

Lord Oranmore and Browne has left London for Ireland. Lady Oranmore is staying at Lutterworth.

The Comtesse Laura de Rubien, Comte de Beaumont and M. Fauchier-Magnay, who are connected with the French Red Cross, and who recently arrived in this country from Roumania, have left London for Paris.

Lady Carter, the wife of Sir Maurice Bonham Carter, who gave birth to a daughter on Sunday, is doing well.

Mr. Elkers, the United States Ambassador in Constantinople, is suffering from typhus and will be compelled to remain in the Turkish capital for some time, in spite of the severance of diplomatic relations between Turkey and America.

Lieutenant C. J. Law, King's Own Scottish Borderers, second son of Mr. Bonar Law, has been wounded in the fighting in Palestine, and is missing.

Colonel Borgovitch has arrived in London.

Next Tuesday afternoon, at 64, New Bond Street, Madame Yovanovitch, the wife of H.E. the Serbian Minister, will open an Exhibition of Serbian Handicrafts made by the Serbian refugees in Corsica. The exhibition will also be open from 10 to 6 o'clock on May 2, 3 and 4, and admission will be free. We understand that some very beautiful examples of our Allies' work will be on view.

M. Cincinat Pavelesco, the well-known Roumanian author, left London on Sunday for Paris.

The King has granted to Mr. Richard Abdy, president of the British Chamber of Commerce in Alexandria, his Majesty's Royal licence to wear the Insignia of the Second Class of the Order of the Nile, conferred on him by the Sultan of Egypt.

The marriage arranged between Captain A. Maule Ramsay, Coldstream Guards, and Lady Ninian Crichton-Stuart will take place very quietly next Monday, April 30, at St. James's Church, Spanish Place. No invitations will be issued, but all friends will be welcome at the church.

The marriage arranged between Mr. John Henry Goldsmith, Sudan Civil Service, and Miss Coote, of Ballyfin, will, owing to the war, take place at the English Church, Port Sudan, on Wednesday, May 9.

According to the *Egyptian Gazette*, Mr. Critchley, manager of the Imperial Ottoman Bank at Alexandria, has left Egypt on a visit to the bank's branches in Mesopotamia.

Writing from Jassy on March 21, the *Times* correspondent in the Balkan Peninsula refers to the equipment, early in the war, of the ground floor of the Royal Palace at Bucharest as a hospital. This was done, as our readers doubtless recall, by the direction of Queen Marie, and here, says the *Times* correspondent, "she and the young Princesses ministered to the patients with unremitting care and devotion. I had the honour of accompanying her Majesty as she passed through the rooms; it was interesting to see how the eyes of the patients brightened at her approach."

Our Khartoum Correspondent writes under date of March 31: Major R. M. Feilden, the Governor of the Bahr el Ghazal Province, has arrived, and is taking over his new office of Civil Secretary.

Major Colville has reached Khartoum from Kaffia Kangi, on his way north for change of air.

Lieutenant Robinson, R.N.R., has arrived on a visit to Khartoum.

The sum of £400 has been collected at Khartoum for the Roumanian Red Cross Fund and despatched to the Roumanian representative at Cairo.

Mr. Huddleston, the Senior Inspector of Berber Province, has come to Khartoum for a few days to discuss agricultural developments in that Province.

Mr. C. H. Thomson has come in from Kassala for his Arabic examination. The examination will be taking place during the first few days of April.

Colonel Kennedy has gone for a few days to Port Sudan. He was accompanied by Mrs. Kennedy.

The Rev. T. McNeile has returned from El Obeid, and will remain a short time in Khartoum, and then proceed north.

Mr. Drossos, a member of the Venizelist Committee at Alexandria, has arrived at Khartoum for a few days' visit, partly to go into the affairs of his business in Khartoum and partly to see how the affairs of the party are progressing in the Sudan.

The weather has been excessively oppressive lately; the thermometer went up to 109 deg. Fahr., and the nights have been still and hot. The wind has been variable, and from an unfavourable direction, and the hot weather has definitely set in.

A number of notables from Western Kordofan have been visiting Khartoum, and have been seeing the sights. They went to the Experimental Farm and to the Quarantine Station, where the Veterinary Department has a selection of stallions for the improvement of the breed of horses, a stud bull and various of its progeny, and experiments in sheep and mules, all of which were much appreciated by these Arabs, who live by live stock and realise the possibilities before them.

We regret to announce the death at Hove, on the 22nd inst., of General Geoffrey Mairis, late Royal Marine Light Infantry, who served through the Crimean Campaign, including the Battle of Balaklava and the Siege of Sebastopol, 1854-5, and with the Flying Squadron in the Baltic in 1856. He also served through the China War, 1857 to 1861.

Our Cyprus Correspondent writes:—

The death of M. Theokharves Mites, on March 23, has deprived the Greek Community of one of its foremost citizens. Mr. Mites was well known and respected from times preceding the British occupation. On the reform of the Law Courts, in 1883, he was appointed to be one of the first native judges, and he served for many years in the Kyrenia and Nicosia Districts, retiring on a pension a few years ago. He was esteemed by all communities, not only as a judge, but for his many good qualities.

Dervish Hadji Shukri, a member of the Turkish Community of Nicosia, has died, and has left £3,000 for the benefit of Ottoman schools at the capital, subject to certain provisions.

Wednesday was "Gallipoli Day" for the English troops and "Anzac Day" for the New Zealanders and Australians. A tablet was unveiled by General Sir Ian Hamilton and dedicated by Bishop Montgomery at the Holy Trinity Church, Eltham. It has been erected by officers and men of the 29th Division, B.E.F., in memory of their comrades who fell at Gallipoli. A wreath was placed upon the tablet by the New Zealanders, bearing the following inscription: "A tribute to the glorious men of the 29th Division from their New Zealand comrades." Representatives of each infantry unit of the original 29th Division formed a guard of honour. The Rev. Henry A. Hall, vicar of Trinity Church and Chaplain to the 29th Division at the landing, assisted at the service, and in the congregation were many relatives of officers and men who fell at Gallipoli, the officers commanding H.M.S. Queen Elizabeth and H.M.S. Implacable, Rear-Admiral Hope and Captain Lockyer, and Brigadier-General and Mrs. A. Stokes.

APPOINTMENTS, PROMOTIONS, ETC.

Lord Edward Cecil, the Financial Adviser to the Egyptian Government, is, says the *Mokattam*, of Cairo, to be appointed to a high position in the British Government, and will be succeeded at the Finance Ministry by Sir Arthur Chitty, K.C.M.G., formerly Adviser to the Ministry of the Interior, who retired from the service of the Egyptian Government in 1910.

The Sultan of Egypt has approved of the promotion of Bimbashi T. A. Nicholas, Veterinary Department, Sudan Government; E. D. Bally, Intelligence Department; P. G. W. Maynard and R. S. Hart, Inspector Sudan Government, to the rank of Kaimakam.

EXHIBITION OF
SERBIAN HANDICRAFTS.

Embroideries, Hand-weaving, Pottery, Opanki, &c.,
made by refugees in the workshops of the

SERBIAN RELIEF FUND IN CORSICA.

To be Opened on MAY 1st, at 3 p.m., by

Madame JOVANOVITCH (wife of H.E. the Serbian Minister),
at 64, NEW BOND STREET, W. (corner of Brook Street).

The EXHIBITION will REMAIN OPEN on
MAY 2nd, 3rd, and 4th. Daily 10 a.m. to 6 p.m.

ADMISSION FREE.

Lieutenant C. A. M. van Millingen, the Rifle Brigade, elder son of the late Professor van Millingen, has been appointed Adjutant of his battalion.

Bimbashi Wylie, 11th Sudanese, has been transferred to the Eastern Arab Corps.

Bimbashi W. F. M. Bagshaw, Department of Ordnance, has been granted the temporary rank of Kaimakam.

HONOURS FOR BRITISH OFFICERS.

Two Supplements to the *London Gazette*—one naval and the other military—were issued on Saturday. Each contained a list of decorations conferred on officers and men of the British forces for distinguished services during the war. The following are the honours conferred for operations in the Near East:—

BY THE KING OF SERBIA.

(In recognition of services during the operations in Serbia in November and December, 1915.)

Order of the White Eagle, Third Class.—Major and Brevet Colonel (temporary Major-General) T. E. Clarke, Royal Inniskilling Fusiliers; Colonel L. L. Nicol, C.B. (retired pay); Lieutenant-Colonel and Brevet Colonel (temporary Brigadier-General) R. S. Vandeleur, C.M.G., Seaforth Highlanders.

Order of the White Eagle, Fourth Class.—Major (temporary Lieutenant-Colonel) J. D. M. Beckett, D.S.O., Hampshire Regiment; Lieutenant-Colonel E. T. F. Birrell, C.M.G., M.B., Royal Army Medical Corps; Major M. J. Cromie, Royal Army Medical Corps; Lieutenant-Colonel F. Cunliffe-Owen, C.M.G., Royal Artillery; Captain (temporary Lieutenant-Colonel) G. Drage (retired, Indian Army), Royal Munster Fusiliers; Major (acting Lieutenant-Colonel) M. J. Furnell, Royal Irish Fusiliers, attached South Lancashire Regiment; Lieutenant-Colonel G. H. Gordon, Royal Artillery; Captain (temporary Lieutenant-Colonel) the Right Honourable B. A. W. P. Hastings, Earl of Granard, K.P., G.C.V.O., Reserve of Officers, late Scots Guards; Major A. P. Heneage, Royal Artillery; Major-General N. Malcolm, D.S.O.; Lieutenant-Colonel J. S. Matthew, D.S.O., Lowland Divisional Train, Army Service Corps; Captain (temporary Major) V. M. B. Scully, Border Regiment, attached Connaught Rangers; Lieutenant (temporary Major) W. H. Whyte, Reserve of Officers, Royal Dublin Fusiliers, attached Royal Irish Fusiliers.

Order of the White Eagle, Fifth Class.—Temporary Captain C. F. Davies, Royal Inniskilling Fusiliers; Temporary Captain H. T. Goodland, Royal Munster Fusiliers; Temporary Captain C. Grellier, Hampshire Regiment; Captain E. S. C. Grune, Suffolk Regiment, attached Essex Regiment; Temporary Second Lieutenant G. Robinson, M.C., Connaught Rangers; Lieutenant T. H. Stern, Royal Engineers, Special Reserve; Lieutenant G. W. B. Tarleton, M.C., Royal Dublin Fusiliers; Lieutenant (temporary Lieutenant-Colonel) C. W. Villiers, D.S.O., Coldstream Guards, Special Reserve.

Order of St. Sava.—Temporary Lieutenant R. MacK. Morison, M.B., Royal Army Medical Corps.

BY H.M. THE KING OF MONTENEGRO.

Obilitch Medal (Gold).—General Sir H. S. Rawlinson, Bart., K.C.B., K.C.V.O.

BY THE SULTAN OF EGYPT.

Order of Mahommed Ali, First Class (Grand Cordon).—General Sir F. R. Wingate, G.C.B., G.C.V.O., K.C.M.G., D.S.O.

Order of the Nile, Second Class.—Lieutenant-Colonel C. E. Palmer, D.S.O., Royal Artillery, late Commandant of Artillery and Director of Ordnance, Egyptian Army.

Order of the Nile, Third Class.—Major R. G. Anderson, Royal Army Medical Corps, late Assistant Adjutant-General, Recruiting Department, Egyptian Army; Major W. Byam, Royal Army Medical Corps, late Medical Corps, Egyptian Army.

Order of the Nile, Fourth Class.—Major F. W. L. Edwards, King's Royal Rifle Corps, General Staff, Egyptian Army; Honorary Lieutenant F. Ferguson, Director of Music, attached to Egyptian Army; Major the Honourable B. A. Forbes, Royal Irish Rifles, General Staff, Egyptian Army; Captain E. Gibbon, M.B., Royal Army Medical Corps, attached Medical Corps, Egyptian Army; Captain C. C. Godwin, Yorkshire Regiment, General Staff, Egyptian Army; Major A. C. Hewitt, Royal Fusiliers, attached Egyptian Army; Major P. C. Joyce, Connaught Rangers, late attached Egyptian Army; Major F. J. M. Postlethwaite, Yorkshire Light Infantry, late Egyptian Army and Sudan Service; Major P. B. Stafford, East Surrey Regiment, attached Egyptian Army; Major G. B. Wauhope, York and Lancaster Regiment, late Egyptian Army and Sudan Government Service; Deputy Commissary of Ordnance and Honorary Captain (temporary Commissary of Ordnance and Honorary Major) H. S. Willson, Army Ordnance Department, Assistant Director of Stores, Egyptian Army.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

HUDDESTON.—On April 17, at 11, Selwyn Gardens, Cambridge, the wife of A. J. C. Huddleston, Sudan Civil Service, of a daughter.

NOBLE.—On April 13, at 13, Prince's Gate, the wife of Crawford Noble, second-lieutenant, Yeomanry, and A.P.F.O., Cyprus, of a daughter.

MARRIAGE.

PARKER—DUCKETT-CLARK.—On Primrose Day, at All Saints, East Finchley, N., by the Rev. H. Haslem-Jones, Arnold Shirecliffe Parker, Manchester Regiment, of Alexandria, son of the late Arnold Parker, Esq., Brincliffe, Sheffield, to Muriel Primrose, daughter of the late R. W. Duckett-Clark, Esq., of Dulwich.

THEATRICALS IN ALEXANDRIA.

Our Alexandria Correspondent writes:—"No. 15 General," Abbassia, is one of the military hospitals in Alexandria whose staffs were called upon to perform almost superhuman tasks during the Gallipoli campaign, especially in its earlier stages. Indeed, it is on record that on one occasion its surgeons operated for an unbroken stretch of 48 hours. In the more normal times which have succeeded those months of well-nigh intolerable strain, the need for providing suitable recreation for the staff in its leisure hours has resulted in the formation of a Musical and Dramatic Society under the presidency of Lieut.-Colonel H. E. R. James, C.B., C.M.G., and, incidentally, in the discovery among the staff of talent of no mean order.

On March 14, in celebration of the second anniversary of the landing of the unit in Egypt, the society presented Oscar Wilde's comedy, "The Importance of Being Earnest," and on March 24 a second representation was given, to which the officers invited friends.

In hands less competent than those of Lance-Corporal Nugent Monck, R.A.M.C., the producer, this not unambitious effort might have been fraught with disaster, but, obviously, the cast had "found" itself, and the author's brilliantly cynical dialogue lost nothing of its effect histrionically. Captain E. L. Taylor and Corporal Monck admirably sustained their respective rôles of John Worthing and Lady Bracknell, while the personal charm and "will to woo" of Corporal Smithson, as the Hon. Gwendolen Fairfax, made light of her lack of dowry. Private R. W. Symes, as Algernon Moncrieff, the languid, self-possessed, dilettante man-about-town of the period, with an infinite capacity for muffins, "Bunburyism," and the enjoyment of a life of leisure, was particularly convincing, and if his vocation in civil life be unconnected with the stage, let his talent or my ignorance justify the conjecture. The decoration in all three scenes was carefully contrived and artistically executed by Private J. E. Lee, who, it is rumoured, is not unknown in Chelsea art circles. Captain J. A. Delmege and Lance-Corporal J. H. Teasdale were responsible for the incidental music, and Corporal F. P. Waters for the stage carpentry. It is to be hoped that the society will not languish during the summer months.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

GLYMENOPOULOU, RAMLEH.

This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.

Terms from: Pension, P.T.60; Lunch, P.T.20
Dinner, P.T.25.

NAJEM HOUY'S CYPRUS HOTELS COMPANY.

OPEN ALL THE YEAR ROUND—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

FOR SUMMER SEASON—

PLATRES—Platres Hotel. TROODOS—Olympus Hotel.

4,000 feet above sea level. 6,000 feet above sea level.

Open from May till October. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms.

Excursions to Mount Troodos.

FRIDAY, APRIL 27, 1917.

ARAB AND TURK.

In these days when history is being made on a large scale in so many parts of the world there seems to be little time to spare for the consideration of movements of a less spectacular growth. One of such movements is the Hejaz revolt, which, however modest its present dimensions may be, deserves attention, nevertheless, by reason of its potential significance. The lull that has succeeded the earlier military operations based on Mecca is far from implying that the movement has ceased to make progress. It is probably in the interests of the new kingdom that the extension of the King's sovereignty should be gradual, in order that the ground won may be consolidated. Owing to the thoroughness with which his plans were laid, the Grand Shereef of Mecca achieved his immediate object in a surprisingly short time. Medina alone, thanks to its railway communication and to the facilities thus given to the Turks to reinforce their garrison, resisted capture by a *coup de main*, and the Shereef hesitated to shed blood unnecessarily, in the confidence that circumstances would eventually bring the town into his possession without a struggle. Meanwhile he has had opportunity to establish his claim to the title of King of the Hejaz and to meet the criticisms which his action inevitably evoked in the Arab world. The particularist tendencies of the Arabs could hardly fail to make them suspicious of a chieftain who stepped forward so suddenly into the limelight, and it is certain that the Turks would know well how to launch a campaign of misrepresentation with a view to prejudicing King Hussein Ali in the eyes of his co-religionists. His sturdy common sense and the progressive nature of his rule, however, have compelled general respect. Some of the difficulties attending the first days of his reign may be gauged by the fact that he was supposed in certain quarters to be acting in collusion with the Turks, in order that, by feigning a revolt, he might secure supplies from the Allied Powers, who had stopped the importation of foodstuffs to the Holy Places when they found that they were being deflected for the use of Turkish troops. Arab opinion, apart from the Hejaz itself, was at first frankly critical of the movement, and in the long run it will probably be shown that the King has been fortunate in being able to concentrate his attention on winning the good opinion of his fellow-Arabs instead of being engaged in an incessant struggle against Turkish forces.

For the outside world the preliminary success of the King of the Hejaz raises the question of the capacity of the Arabs to recover their lost independence and to build up once more a great State on the ruins which will shortly represent all that is left of the Ottoman Empire after the rule of Abdul Hamid and the Committee of Union and Progress. It may be premature to speak of an Arab movement, in the sense that the Arabs of the Ottoman Empire are conscious of aspirations towards national unity; but there can be little doubt that the defeat of the Turks in Mesopotamia and Palestine, coming on the top of the persecution which the Arabs have suffered at the hands of the Constantinople Government, will open up prospects to which the Hejaz revolt will seem to have given a practical application. Is the world-

war, which is already responsible for the stirring of so many dry bones, to achieve this yet greater wonder and to bring forth the Arab from the islands of his desert after centuries of seclusion to revive something of the glories associated with his name? That he has continued to inherit the qualities which enabled his forefathers to conquer the world and to found three empires is shown by his record when he is content to leave Arabia. His energy is abundant; his capacities, whether as trader, soldier or statesman, have aroused the jealousy of his Turkish ruler and caused him to be a marked man in an Empire where individuality outside the dominant clique is a crime. The secret of the failure of the Turks lies in the fact that in their own country they form a minority not only in point of numbers, but also in respect of all the many-sided activities that make up a modern State. In the military profession only does the Turk hold his own. The Arabs were possessed of an old civilization when the Turks were yet barbaric nomads; their literature and language form the basis of such intellectual wealth as the Turk can claim for his own; in their petty States in the recesses of the wilderness they have brought democracy to a pitch which will stand comparison with the great republics on either side of the Atlantic.

For the present, however, the Arabs of the Ottoman Empire remain, as they have been for centuries, divided into a number of distinct elements which show little inclination to come together to form a homogeneous whole. The standard of revolt has been raised first in the Hejaz, but Western Arabia unfortunately possesses no adequate source of wealth to enable it to carry the burden of a great Arab empire. The Hejaz, however, has special claims on the respect and loyalty of the rest of the Arab world, in view of the prominent part it plays in Islam, which the Young Turks have recently discovered to be "essentially Arabian," and for that reason unsuited for the rôle it has hitherto filled in the Ottoman Empire. When, therefore, the new State is freed from immediate anxiety regarding its own future, and sees, perhaps, in Syria or Palestine a permanent bulwark of defence established between it and the Turks, there will be time for it to feel the pulse of Arab unity. The liberation of Syria from the Turkish yoke is likely to give further impetus to the movement, as it has supplied the major part of its *intelligenza* in the past. But we may look to the action of the Turks themselves to provide the main incentive to a common effort on the part of the Arabs. The latter realize that the success of the Turanian movement, which has become the official policy of the Committee of Union and Progress, was only possible over the dead bodies of the chief Arabs and the leaders of Arab thought. The war strengthened the determination of the Turks, under German influence, to achieve a short cut to the Turkification of the Empire, and although they would have found it practically impossible to impose their will upon the Arab of the Desert, who would always withdraw to his fastnesses, they might, in time, have worked their will upon the Arab of the Borderland. Happily, the successful declaration of independence on the part of the Grand Shereef and the British invasion of Mesopotamia have prevented the policy from being carried out in other parts of the Arab world with the thoroughness which has been applied in Syria. The absence of economic resources, however, must always constitute a barrier to any rapid progress of the Arab movement. It should, therefore, be the aim of its leaders to see that political evolution does not outstrip economic developments. For this reason they will do well to associate themselves politically with those who are in a position to revive the long dormant wealth which once made their country a watchword of splendour among the nations.

PUBLIC WORKS IN EGYPT.

SIR MURDOCH MACDONALD'S REPORT.

(By OUR CAIRO CORRESPONDENT.)

Sir Murdoch Macdonald, Adviser to the Ministry of Public Works, has just published his report on Public Works in Egypt during 1915-16. It is a most interesting document, and in many respects is a complement to his report for 1914-1915, wherein he discussed at considerable length and with great frankness the various projects which must be carried out in the near future if Egypt and the Sudan are to be assured all the water which they both require. Those projects, it may be remembered, were works for the further control of the annual flood and the provision of more summer water for Egypt; a weir on the Blue Nile for the irrigation of the Gezira Plain, which is to be cultivated with cotton and cereals; two large drainage projects in the Delta; the remodelling of the main canal system in Lower Egypt; and the conversion of the remaining basin lands of Upper Egypt to perennial irrigation. As Sir Murdoch points out, these are not really new undertakings, but they "form a logical extension of the ideas which have fructified so well in the past and from which, in their further development, there is no reason to fear any other result than is shown by the estimated figures." There can be no question of abandoning them owing to the war, or of relegating them to a distant date. The whole future of the two countries concerned depends on their execution, so that any undue procrastination would have very serious consequences.

The Need for More Summer Water.

As was explained last year, the works already completed have brought about so great a development that it is not possible to satisfy the demand for summer water. A practically rainless country, Egypt is entirely dependent on the Nile for her water supply. If the flood is good, she receives abundant water during the great part of the year, but in the summer during three months preceding the arrival of the flood the Nile is low and the supply has to be artificially augmented. The crops dependent on summer water are cotton and rice; maize, although in other respects a flood crop, also requires summer water for sowing. Prior to the construction of the Assuan Dam maize had to wait for water until such time as the flood had caused an excess over the supply available for the summer crops. Since the creation of the reservoir the efforts of the Irrigation authorities have been directed to providing water for the entire cotton area and for about 200,000 acres of rice, and to using a small portion of the additional supply to enable maize to be sown at an earlier date than would have been otherwise possible. But as the demand is always greater than the supply, these efforts are never completely successful. "The loss falls most heavily on rice, which has always to be restricted in area. Cotton does not get water with sufficient frequency, and maize is to its detriment often delayed in sowing."

The water stored in the reservoir adds during four months about a third to the volume passing down the river in a normal year, but it does not remove the liability to vary which that volume always shows. Experience has demonstrated that in bad years the supply is insufficient for cotton and a restricted area under rice, even though maize be left to wait entirely for the real flood; that in normal years, if cotton and 200,000 acres of rice were assured water, maize could not certainly be sown at the most desirable moment; and that only in years when the river is well above the normal can the three present areas of cultivation be assured the water required to give a full return of crop. But "summers of such plentiful natural supply as would warrant extension into new areas are few and far between." There is at present no means of providing the existing area with the summer water it requires, so that further extension of the cultivated area of Egypt will not be possible until such works as those projected on the White and Blue Niles are completed. These rivers can, as previously explained, meet the present and future requirements of Egypt, and at the same time the works constructed on them would constitute a control over the height and duration of the flood wave, and thus relieve Egypt from the great risk of inundation which she runs to-day. For these reasons, it is most desirable that these works should be proceeded with without delay.

Sir Murdoch, who in his opening paragraphs pointed out that the irrigation works already constructed had been most instrumental in conferring prosperity on Egypt, and that the Assuan Dam, which cost in all £5,000,000, produces with the water it stores crops worth annually between £5,000,000 and £10,000,000, gives an interesting example of what return an increase of summer water can bring. In 1915, as is well known, the cotton area was restricted. As a result, it was found possible to give water to 300,000 acres of rice land instead of the 200,000 acres of a normal year. The extra crop reaped was worth about £1,000,000. The point lies in the fact that these extra 100,000 acres were not set free for rice by the restriction in the cotton area; they are always available for rice, but cannot as a rule be cultivated, owing to the shortage in summer water. Thus it can be seen that if works providing summer water were carried out, a small portion of them would on this count alone produce an extra £1,000,000 per annum.

Drainage and Reclamation.

That the project for the drainage and reclamation of vast areas of waste land in the Northern Delta cannot fail to be remunerative has been proved by the State Domains Administration, which a few years ago decided to improve certain areas of waste land belonging to it. The capital expenditure per acre was not more than £20 and the maintenance cost was not increased by more than 8s. per annum; the result of this work is, however, that land formerly worth little or nothing now bears valuable crops, and an excellent return in rentals is obtained.

One of the great objections to the reclamation of vast areas has been the difficulty in finding cultivators willing to take up holdings in these new districts. It has frequently been stated that the Egyptian fellah is too conservative to leave his original surroundings and move to areas where the future not unnaturally may appear to him somewhat uncertain. In this connection Sir Murdoch advances the theory that "the condition of the soil is probably a more important factor than the character of the fellah, who may not care for a land of promise, but yet be quite ready to take over a property whose value has been proved"; and he thinks that it may be necessary "not only to construct Government canals and drains, which after all serve only large areas and do not include the multitudinous smaller channels required before cultivation can be produced, but also to provide these latter and carry out a thorough washing of the soil to clear it of salt before it is handed over." Obviously the fellah could not carry out this work himself, since he could not command the requisite capital. Seeing, however, that the State has already attained success in this direction, Sir Murdoch opines that it should effect this work, which would have "the further advantage of enabling the State to reap the benefit of its possession of the land in its waste but potentially valuable condition, which it could not do if the land were surrendered at a nominal price for others to reclaim."

He here outlines an experiment which might be tried, and which, if successful, "might have far-reaching effects on the general health and social habits of the Egyptian." He refers to the cramped condition in which the fellahin live. In the olden days, when inundations were not infrequent, they built their houses on sites above the flood-level. Albeit these dangers no longer exist to-day, at any rate on anything approaching the same scale, the fellahin still cling to the old system of these villages, which rise above the plain like small hills, and which, owing to their narrow, tortuous and unpaved streets, have a high death rate, due to the absence of modern ways for avoidance and eradication of sickness. In the Sudan, whenever land has been put under cultivation, premises have been built on a corner of each plot for the tenant, and Sir Murdoch, who records that "few things probably strike the stranger to Egypt more vividly than the absence of houses on the land itself in the fashion of Europe," thinks that if the same system were tried in Egypt it "might well repay its cost and would very likely assist in solving many of the medical problems to-day before the Government."

Irrigation Canal Improvements.

The remodelling of the existing canal system is a project which requires urgent attention. Especially does this apply to Lower Egypt, where, as mentioned in a recent note on the subject published in THE NEAR EAST, even at flood

KING GEORGE.

KING OF SPAIN.

time, when there is ample water in the river, serious shortage is experienced in the lower reaches owing to the area which they are now called upon to serve having been extended beyond the capacity of those canals. Enlargement is the only remedy, and this will have to be accompanied by better provision for the escape of surplus water. This latter "is amply provided for under the new irrigation projects." At the same time, more accurate knowledge of the requirements of particular crops at different seasons and in different districts is needed. The Government has just taken over a large pumping station near Cairo, where it is carrying out a series of observations with this object.

Greater control of the water supply on all the canals is necessary, and Sir Murdoch considers that "as part and parcel of a complete overhaul of canals should be the taking over and remodelling of the more important private canals constructed and maintained by private enterprise." As regards the first, this could be attained by remodelling the outlets to correspond to the actual areas served, by constructing parallel channels, thereby lessening the need for direct irrigation from main canals and by developing the system of flood distributaries at the apex of the Delta. The cost of this work, even for the existing cultivated areas, would be considerable, but he thinks that a public saving of money could be effected owing to the decrease in the necessity of lifting water, whilst there would be direct compensating advantages to cover interest on the capital involved. As regards the private canals, these have been dug by private individual proprietors, who combine together in this manner to obtain water, which for some reason or another was not immediately available for them under the State canal scheme. To-day many of these canals serve more proprietors than was originally intended, whilst difficulties in regard to maintenance have cropped up; as a result, proprietors near the heads are better served if the canal lower down is not cleaned. Undoubtedly if the Government took over these canals and maintained them, subject to the payment of a tax to cover the work of maintenance, they could be made to serve the areas more equitably.

Irrigation by Free Flow.

An important experiment in the method of distribution was carried out in 1915-1916. In ordinary years the country requires for irrigation and drainage purposes about 400,000 tons of coal. The war gave rise to fears that it might not be possible to secure this enormous quantity at the proper time, and it was suggested that in the first place a reserve of 40,000 tons should be secured to relieve the situation in the event of the importers being late with their deliveries, and that, in the second place, water should be given in the canals at a much higher level than is usual in the summer. Both suggestions were acted upon.

It is explained that the canals are kept at two distinct levels, according to the season of the year, viz.: the flood level, which is maintained after the advent of the flood and whilst it is still at its height; and the summer level, which is introduced when the flood is past and is maintained until the next one arrives. At the flood level, which is, of course, the higher, the water flows freely on to the fields through outlets which, having been made by the cultivators themselves, are for the most part too large for the area served. The wastage of water which ensues, owing to these excessive outlets, does not matter much when the flood is on, but it is a different matter when it is past, for that is the period when every drop of water has to be made to do its full duty. At the latter period, therefore, the levels in the canals are reduced to the point where the cultivators have to lift all the water they require and have to incur thereby an expenditure which effects an automatic economy in the quantity taken. Of course, there was a risk that if the levels were raised the cultivators might, some of them, obtain more than was their due, but as proper-sized pipes had been substituted for most of the old outlets it was considered worth while running that risk. The effect of this introduction of higher summer levels was, as a matter of fact, most happy, for the normal consumption of coal fell from 400,000 to 150,000 tons in the season. Although the high price of coal induced the fellahs to burn straw, cotton sticks, etc., and to fell considerable numbers of trees, Sir Murdoch is of the opinion that "these substitutes cannot have accounted for more than a small percentage of the total saving, the bulk of which must be set down to higher levels in the canals."

(To be continued.)

The *Hestia* (Athens) learns from a diplomatic source that Marshal von Mackensen has been ordered by the Kaiser, at Enver Pasha's request, to command the Turkish forces in Asia Minor. After passing through Sofia he inspected the troops on the Macedonian front, and is now journeying to Constantinople to take up his new command.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

British Prisoners in Turkey.

April 19.

In a written reply to a question put by Mr. Hume-Williams, Mr. J. F. HOPE stated: No actual exchange of prisoners in Turkey has yet taken place. A proposal has recently been made to the Turkish Government for the exchange of 600 men on either side as a preliminary to a wider exchange subsequently. No reply has yet been received, but one is expected momentarily. I am glad to take the opportunity of stating that the United States Ambassador at Constantinople has obtained the consent of the Turkish Government to the inspection of certain of the prisoners' camps by representatives of the Embassy.

The Situation in Greece.

Mr. BONAR LAW informed Mr. Dillon that the situation in Greece was now under discussion by the Allied Governments, and added that any statement in regard to it at present would be premature.

Mr. DILLON: As there is great public anxiety on this question, and good ground for it, may we not have a full discussion of it and the policy which the Allied Governments are going to pursue?

Mr. BONAR LAW: I think it would be very desirable, if it were possible, to have a discussion on this subject, and I may say now that the Government have decided that it would be desirable to have a private session of this House. I hope to be able to state next week when the private session will take place.

Salonika Casualties.

April 23.

Mr. W. ROCH asked the Chancellor of the Exchequer whether he could, consistently with the public interest, give the number of casualties incurred up to date by the British forces at Salonika.

Mr. MACPHERSON: I am afraid it will not be in the public interest to give them.

Mr. ROCH asked the Chancellor of the Exchequer whether he could make any statement as to the present position of the British forces at Salonika.

Mr. MACPHERSON: I have nothing to add to what has appeared in the Press.

Concerning King Constantine.

Mr. RONALD M'NEILL asked whether the Secretary for Foreign Affairs had received information to the effect that the French military authorities at Salonika were in possession of proofs that bands of irregulars and *Komitajis* guilty of depredations on the Venizelists in Greece had been armed and organised from Athens; whether the assistant commissioner of police at Kipourgo was recently arrested by the French for communicating false statements concerning the French Army to the Athenian Press and was found in possession of written orders from the King's officials to the chiefs of irregular bands committing depredations in Thessaly, as well as of rifles and ammunition of the Greek Army pattern; and whether the Powers who guaranteed constitutional government in Greece had taken or would take any steps to prevent the possibility of such occurrences in the future. The hon. member said that the question did not appear on the paper in the form in which he handed it in, and he wished to know whether the rule which prohibited expressions reflecting on a friendly Sovereign could be held to apply to the King of the Hellenes, having regard to the fact that he was not a friendly Sovereign.

The SPEAKER: He is technically a friendly Sovereign.

Mr. R. M'NEILL: Are we to be bound by technicalities in face of the notorious facts?

The SPEAKER: There is no use in insulting neutrals.

Lord R. CECIL, in reply to the question on the paper, said the answer to the first two parts of the question was in the affirmative. As regarded the last part, the French General Commanding-in-Chief in Macedonia was taking all necessary steps to deal with the situation.

Greece and the Allies.

April 25.

Mr. R. M'NEILL asked the Secretary of State for Foreign Affairs whether German officers continued to frequent the Royal Palace at Athens and were received by General Dousmanis and by members of the General Staff; whether German agents continued active throughout Thessaly; whether irregular bands of Greeks in the neutral zone, organised and led by officers of the Greek Regular Army, had had numerous engagements with French troops; whether M. Lambros had been informed by the head of the Allied military control in Athens of the proved intrigues of Generals Dousmanis and Papoulos with the irregular bands acting against the Allied cause in Epirus, but replied that these officers were above suspicion in their duty to the King and Government; whether 2,500 Greek soldiers had been allowed, on the pretext of going on leave, to return in uniform to the mainland of Greece; whether many thousands of rifles were known to be still available for arming the troops of the Royal Army; and what steps were being taken to put an end to the *régime* of treachery and intrigue prevailing in Athens.

Lord R. CECIL said, in the view of his Majesty's Government, action in Greece must be chiefly, if not solely, determined by the war interests of the Allies as a whole, and could not, therefore, be adequately discussed in public. An opportunity for discussing the matter would arise in the Secret Session. He would only now say that he could not accept all the statements made in the question.

THE PRESS ON THE NEAR EAST

King Constantine.

On Tuesday the *Pall Mall Gazette* published a vigorous little article entitled "The Traitor King." We quote the first portion:—

It was the Speaker's own sardonic gift which alluded to King Constantine yesterday as being "technically a friendly Sovereign." Events are repeating the lesson we have so long drawn from them in these columns that this technical friendship should be judged by a more searching standard, and that a Monarch who has made himself a mere hack of the German Government should be removed from his present seat of mischief. When great despotisms are toppling over or trembling in the balance, it is no time for allowing small ones to obstruct the path of good government and civilisation. The King of Greece is a petty, but a highly typical, representative of autocracy at its worst. He has played the traitor to his friends, and the knave to his own people.

There can be no doubt that public opinion in this country would welcome the disappearance of King Constantine almost as heartily as it would welcome that of the Kaiser or of "Tsar" Ferdinand. The *Manchester Guardian*, in an article headed *tout court* "Constantine," voices an anxiety as to the future that is widely shared.

The plain fact is that, as things go at present, we are in danger of finishing this war with King Constantine still seated in place and power at Athens—a thorough tyrant who will ruthlessly exterminate his Venizelist opponents as soon as he is released from his fears of the Allied forces, a Prussianised autocrat who will keep Greece in the political servitude to which he has reduced her, a friend of Germany who will work for her in peace as he has done in war throughout the Near East. These things are certainties if the Allies do not remove Constantine from the throne. It may be urged that when the final victory over Germany has been won the Allies will deal decisively with him. But will they? It seems to us a rash and dangerous assumption. Whatever difficulties have so far held back the hand of the Allies—and they have never been stated—will exist also when the war comes to an end. . . . Surely, if we cannot go so far as to take sides openly with our friends against our enemies, we might at least be impartial and remove this extraordinary prohibition.

'Unsatisfactory.'

How terribly unsatisfactory is the position in Greece is shown in an article published on the same date by the *Manchester Guardian*. From this we quote one paragraph:—

Every imaginable trick has been resorted to in order to elude the vigilance of the Allies' control. Thus, at the surrender of war material, rifles and cartridges were delivered packed in cases, each of which purported to contain a certain specified quantity. On several occasions cases were opened and found to contain only a fraction of the stated quantity. Leave was granted to men belonging to regiments that were about to be removed to the Peloponnese, desertions took place "en masse" on the journey south, so that the strength of the regiments when they reached their destination had greatly dwindled. The force of gendarmerie which was allowed to be maintained on the mainland was increased by the incorporation of soldiers. A great number of soldiers, discarding their uniforms, have formed bands in Thessaly and Epirus under the command of Greek officers, and now General Sarrail is busy hunting them down.

At Jassy.

On Tuesday *The Times* published an article, "The Troubles of Roumania," written by its correspondent in the Balkan Peninsula, and dated March 21. The writer mentions strange rumours regarding the reception in Budapest of the German and Bulgarian invaders:—

From German or professedly "neutral" sources we learn that the conquerors were received by the population with acclamations and showers of flowers which, in view of the season, must surely have been artificial; that German plays are performed in the theatre before delighted audiences, and that in other places of public resort German *farces de café-concert* have aroused such turbulent enthusiasm as to provoke the contempt and disgust of the German officers present. If there be any grain of truth in these tales we must remember that the Germanized Jewish element forms a not inconsiderable minority in the capital, and that the suburbs are largely inhabited by a Bulgarian population, which no doubt extended a welcome to its kith and kin.

Jassy, however, has so many troubles of its own that it has little time to think of those of Bucharest or Braila:—

The truth is that the town is overcrowded with refugees, its population being at least trebled, while the authorities, owing to indifference or compassion, have hitherto refrained from obstructing their arrival. The fugitives, who for the most part have no occupation, wander listlessly through the streets.

The result of this state of affairs has been the near approach of famine and pestilence. At the end of last November, during the first few days of the arrival of the Government and the diplomatic corps, the restaurants, though overcrowded, contrived in some measure to supply the wants of their too numerous customers, but meat soon became rare, while sweetmeats, which at first were occasionally obtainable, before long disappeared altogether as the supply of sugar gave out. Beer had vanished

completely within the first week of the arrival of the earlier refugees. By degrees the cafés ceased to supply the usual refreshments; some were closed; in others, which remained open, the guests might be seen sitting at empty tables—such is the force of habit—keeping themselves warm as best they could and enjoying a little mental pabulum. To-day it is still sometimes possible to obtain a cup of tea in these establishments, but as a rule without milk or sugar. Piteous indeed is the sight of the long *queues* of hungry men, women, and children waiting before the bakers' shops in the snow; sometimes there is a struggle, but in general the people display a wonderful patience and resignation. . . . Among the crowds making their way through the streets, now blocked with huge piles of frozen snow, the greater number of persons are not only underfed, but insufficiently clothed, and are compelled to take refuge at night in unwarmed houses while the thermometer is 20deg. below freezing point. The lack of fuel, like that of food, is due in the main to insufficiency of means of transport.

The spread of Epidemics is the most serious feature in the situation, says the writer. The hospitals are overcrowded, and many victims are claimed every day. The article concludes, however, on a note of hope:—

In a few weeks fighting will be resumed all along the front, and events on the Roumanian front may perhaps contribute in no small degree to the anticipated success of the general offensive of the Allies. Great as have been the misfortunes of Roumania, the heart of the nation is undismayed, and all men look confidently forward to the triumph of the cause of liberty and justice. At the same time, it would be affectation to disguise the concern with which news of recent events in Russia has been received here, for the fate of Roumania is bound up with that of Russia. For better, for worse, for weal or woe, the destinies of the smaller country are linked with those of her great neighbour.

Lessons of the Dardanelles.

Sir John Leyland, in an article in the April number of the *Nineteenth Century and After*, discusses the Report of the Dardanelles Commission, which he describes as "one of the most remarkable, not to say amazing, documents ever laid before Parliament." Sir John discusses at length all that has been said for and against those who were responsible for the conduct of the campaign, and all the reasons which were held at the time to justify it. He proceeds:—

We recognise the salutary truth that the organisation and systems of peace must inevitably often break down and be shaped anew in the stress of a national struggle. We have discovered with wonder, but without surprise, that inherited tradition and the bonds of that discipline which are part of the very being of the men of the sea impose even upon the most forceful of them a certain reticence of silence, which is among the most significant of the disclosures in the Report of the Commission. The purpose of driving a way through the passage of the Dardanelles and dictating terms at Constantinople, though it imposed upon us a singularly bitter experience, was unquestionably the fruit of a sound idea, and if a combined naval and military expedition had been organised at the beginning, and the action could have been rapid and continuous, the rich experience of history shows that there might have been notable success. . . .

The responsibility for the failure lies at home. Its root was in the vague and haphazard fashion in which the guidance of our naval and military policy was conducted at the time. There was excess of confidence, where confidence could not be justified. There was no disposition to ponder over every hazard that might be run. . . . Time was an essential consideration in the business in hand. But the War Council vacillated "in the imminent breach," and arrived at no clear-cut and definite decisions. Its only rational alternatives would have been either to renounce the expedition altogether or to push it forward with every proper and available naval and military force to the end desired. Delay increased immensely the difficulties of the task.

To Prevent Waste of Water.

A correspondent sends to *Palestine* some notes upon the benefits to be secured by the intelligent and liberal erection of dams in the Holy Land. He writes:—

The damming of the Jordan would be the key to immense prosperity. The fall from Tiberias to the Dead Sea is ten feet a mile, so a dam would be needed at every mile or two—say fifty dams in all. From each such lake water would be trained out with high-level canals contouring the foot-hills, and giving perennial irrigation to the immense hot-house of the Jordan valley, which would become the richest agricultural land in the world.

Not only are dams needed in the Jordan valley; every stream in the country needs damming. It is the saddest sight to see

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

The SUMMER TERM will begin on APRIL 30.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

a fine shower of rain shooting down the deep stream beds straight into the sea. An inch fall of rain will all be run off in a single day, and do very little good to the land. I asked the Bedawy why no one ponded up the water in the deep-cut stream beds, which would be invaluable for their flocks. The only reply was, "Who has a head for that?" Owing to mismanagement, the face of the land is simply a net of draining ditches for the most rapid waste of water. Every one of these stream beds should be a chain of ponds and lakes, with the water trained out at high level from each lake as far as possible. The cost of damming such narrow beds, often only ten or twenty yards wide, and half as deep, would be a trifle, repaid in a single year's profit of crops.

The proposal certainly is a practical one, and it is to be hoped that when peace returns once more it may be given a trial.

Nejd and El Hasa.

The *Illustrated London News* recently published a short article, "Some Great Arab Rulers and the Entente," illustrated with pictures of Ibn Saud, the Sheikh of Mohammerah, and the Sheikh of Koweit, taken on the occasion of their visit to Busreh to meet Sir Percy Cox. Here is a passage from the article, describing a land of which the world still knows only very little:—

Ibn Saud rules over Nejd and El Hasa. The first-named is a province of Arabia, bounded on the north by the Nafud Desert, on the east by El Hasa, on the south by the Dahua Desert, and on the west by Asir and Hedjaz. It extends nearly 550 miles from north to south, 450 from east to west, and covers approximately 180,000 square miles. Practically all of it is upland, varying in altitude from 5,000 to 1,500 feet, the north and east containing many fertile oases, whilst the western and southern portion is mostly desert, with a little pasture land, capable of

supporting a nomad population only. The four great Bedoun tribes who form the principal population (the total population probably exceeds 1,000,000), are those of Shammar, Harb, Ataba, and Muter, of which the Harb are the most numerous; and the principal crops the land yields are dates, wheat, barley and garden produce. In 1871 Nejd became a nominal Dependency of the Turkish Empire, when Midhat Pasha established a small garrison in El Hasa; but Turkish rule was never taken seriously, and to-day the rule of Ibn Saud goes unchallenged by the Ottoman Government, not only in Nejd, but in the coast province of El Hasa, which, stretching along the coast of the Persian Gulf from Koweyt to the south point of Bahrein, a distance of 360 miles—well cultivated in a few places, but mostly barren, owing to lack of irrigation, and containing a remarkable citadel attributed to Carmathian Princes, with a share in the valuable pearl fishery at Bahrein—was, until recently, under some sort of control by the Turks. This, however, has vanished now, thanks to their crushing defeat in Mesopotamia, by our forces, and Nejd and El Hasa know one lord only—Ibn Saud, who is a firm friend of the Entente, and eager, above all things, to see the last of Turkish misrule in Arabia.

The Mesopotamia Commission met at the House of Lords on Tuesday and further considered their report.

The Budapest *Hirlap*, of April 11, announced the arrival of the first consignment of Roumanian corn in Vienna.

M. Tatanis, proprietor of the influential Venizelist organ *Ethnikos Kiryx* in New York, has offered to form Greek volunteer companies throughout the United States to fight under the American flag.

All the wheat in the occupied portions of Roumania has been confiscated by the Germans for the use of their army. Bread-tickets have been introduced for the Roumanians. The Germans have also seized and removed all the cattle.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

— CAWNPORE, INDIA. —

Everything in Pure Wool.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I am glad to learn that the Egyptian Minister of Agriculture is losing no time in putting in operation the law which compels ginners to instal in their factories machines for killing the pink boll worm in the cottonseed. The Simons hot air machine has been approved for the purpose, and ginners were given until March 31 to place their order so that it may actually be at work on September 1, 1917. Ginners in Upper Egypt were informed that if their orders were not received by March 31 it would be assumed officially that either they did not intend to continue to work their factories or were prepared to take the responsibility of installing the machines themselves. Owing to the difficulty in securing the necessary number of machines in time the operation of the law in Lower Egypt has been suspended until the requirements of Upper Egypt have been met. Our Cairo Correspondent refers to the subject in his letter, which will be found on the next page. I agree with him that the work of fumigation of the gineries is too important to be delayed—there has been too much delay already—and that it is unfortunate that the whole of the country cannot be brought under the operation of the law for some months to come.

Merchants in India, particularly in Bombay, have not been slow to realise the importance to Indian trade of the capture of Baghdad, and that the term "Bombay-to-Baghdad" is not a vague, indefinite figure of speech as "Berlin-to-Baghdad" was. It is pointed out with perfect truth that in ordinary circumstances nearly all the orders for certain classes of goods will go to the Western capital of India, and piece goods is one of the lines indicated. An earnest appeal is being made to industrialists to speed up and prepare for the day of greater things which is believed to be imminent. German influence was long paramount in the city of the Caliphs, and whatever the future of it may be, we may take it for granted that the Huns will not have restored to them the "vested interest" as their hold on the trade of the region was once regarded.

Very little news comes through from any part of the Balkans, but I have just read an American consular report, written in Sofia before the United States declared war against the Huns, in which it was stated that banking is still excellent business in Sofia, as may be judged from the fact that in 1916, in the midst of war, dividends averaged 9 per cent. The Deutsche Bank is soon to open a branch in Sofia, while a German newspaper, for which a complete printing and publishing plant is *en route*, is to be published there. The Bulgars are no strangers to German and Austrian banking, of course, because the Banque de Crédit (German) and the Banque Balkanique (Austrian) have been in active and successful operation for several years. Other interesting facts mentioned are that the only overshoes to be found in the Sofia markets are Russian, that German and Austrian commercial travellers are still active, but that Bulgarians do not believe that, for some time after the war, German machinery makers will be able to supply more than their own needs.

As I have written, this note was submitted before America came into the war, and it is impossible to say what the future, immediate or distant, of Bulgaria will be; but it is interesting to observe that the writer has a profound belief in the prosperity of the country. This is what he writes:—"Sofia is destined, in all probability, to be an important capital. Its geographical position and its extensive railroad connections fit it to dominate the rule of the entire Balkan peninsula." So great is (or was) his faith, indeed, that he presses for the establishment of the "American-Bulgarian Bank, which has been talked of in business and financial circles for a year or more. Such a bank, capitalised at 20,000,000 francs, would help to gain for the United States a great part of the Bulgarian trade. One-half of the capital necessary is already within call in Sofia, and such an institution would undoubtedly do a safe and most profitable business from the start." But things have happened since that was written.

Crop reports from Egypt vary according to the commodity. That on the condition of cotton is not altogether satisfactory. Weather conditions in March retarded sowing, hampered germination of the early crop, and made a good deal of re-sowing necessary. In Behera and Gharbia only 50 per cent. of the area had been planted up to the end of the month, and in some localities pests have caused a deal of trouble. Wheat appears to promise well in Upper Egypt despite a shortage in chemical manures, but elsewhere rust has caused damage, and the trouble threatened to become acute. Barley is well reported on generally, and beans, although attacked by pests in some districts, promise a fair yield. Bersim was reported to be healthy and to be growing well.

The enemy counted his chickens before they were hatched in the matter of the oil supplies he was to secure from Roumania. The Austrian Government recently informed all municipal and commercial bodies that the people would have to rely on what could be secured from the Galician fields, and that for months to come the greatest economy in the use of petroleum and its by-products would have to be exercised. The population have been "rationed," the quantity allowed to each household being less than half a pint. Conditions do not appear to be much better in parts of Germany, and even in "free" Hamburg the original "ration" of a pint and three-quarters has been reduced by one-half. A considerable difference between anticipation and realisation!

A correspondent informs me that the plant for the wool-washing establishment which is to be operated in Algiers has not yet been provided, and that as the season will soon begin there is not much of a chance that any appreciable progress will be made this year. The site has finally been chosen near the Experimental Gardens, the former one near the Wad Har-rach, at Maison Carrée, having been abandoned owing to water considerations. In Algiers there is a plentiful supply of fine spring water.

I am informed that Mr. Edwin E. Humphries, chief accountant and secretary of the Union Bank of Manchester, has received an important appointment in

the Imperial Ottoman Bank, and is about to proceed to the East to take it up. Mr. Humphries was in the service of the Union Bank for more than twenty-six years, and became chief secretary and accountant last year.

The report of the year's work of the National Bank of Egypt and of the proceedings of the general meeting of the shareholders which has just been held in Cairo—both of which we publish to-day—will make good reading for those whose interests are linked up with Egyptian prosperity. In the twelve months ended on December 31, 1916, the gross profit of the bank, after providing for bad and doubtful debts, minor depreciation, and for rebate, amounted to £624,890, rather more than £217,000 above that of the previous year. A considerable proportion of the profit accrued from the management of the note issue; but there is abounding evidence of general prosperity and well-being.

Ordinary deposits increased in period under report from £6,224,777 to £8,654,860, and those held by the bank on behalf of the Government from £2,975,523 to £5,983,349. On the assets side the cash is £2,002,329, against £1,165,357 last year; Government securities and guaranteed securities at £5,697,429, against £2,190,756; and bills of exchange at £5,366,266, against £3,351,215. The increase in the gross profit was accompanied by an expansion of only £32,000 in the current expenses, which amounted to £189,547, giving a net profit of £435,343, which is £185,480 better than that in 1915. The sum of £80,000 is placed to special and £31,353 to statutory reserve, against nothing a year ago, while £59,742 is set aside for depreciation in the bank's investments and £55,366 for depreciation in securities deposited against the note issue, as compared with £27,863 and £94,350 respectively in 1915. The dividend is at the rate of 6 per cent., against 4 per cent. for the previous twelve months, and £22,179 is carried forward.

The brief account which a correspondent sends to THE NEAR EAST of the trade figures of Cyprus for last year makes me wish there was more information available in this country about that little British outpost in the Mediterranean. It will be observed that the trade of the island has expanded by nearly half a million sterling, and while the trade balance of £49,449 in 1915 has given place to a preponderance of £256,366 on imports in 1916, that fact does not imply a setback.

SUDAN CROPS.**Dura Nearly Completed. Cotton Backward.**

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, March 25.

The hot weather has arrived with extreme suddenness, and the temperature has gone up 10 to 15 degs., both maximum and minimum. Owing to the unusually prolonged cool weather, the abrupt change is felt more oppressive than ordinarily.

The bulk of the dura crops has now been got in and put on the market, as is shown by the reduction of the amounts being cleared by the S.G. Railways. This is shown by the fact that, whereas they were previously clearing up to 6,000 tons a week, the amount is now reduced to 2,000 tons, and there is a corresponding falling off in the goods traffic, which, in view of the present difficulty in getting coal, is not without its advantage. The respite, however, will be short, as the gum crop will shortly be moved, though this in any case does not entail any serious pressure on the resources of the railway.

Owing to the prolonged cool weather, cotton has been backward, and some difficulty will be caused by all the crops ripening at the same moment, thus requiring an increased number of natives, so that the cotton may be plucked before it falls on the ground and becomes dirty. This labour is suitable for women and children. As the senna crop is being picked at the same time, the demand for labour considerably exceeds the supply. It is notable that many natives have taken advantage of the much enhanced price of senna to grow it on irrigated lands, whereas formerly it was picked in the desert from self-sown plants. Whether this industry is likely to be permanent is a question. It is unlikely that the price of senna will continue to hold as high after the war as it does now, although it will probably never return to the low rates holding previous to the war.

Drug Plants.

A certain amount of trade is being developed in datura and henbane for the manufacture of drugs. These are not grown especially, but are found in the desert in considerable quantities, and involve only the cost of collection and transport. As, however, the places where they are most particularly to be found are frequently some distance from the railway, the cost of collection is by no means negligible.

The season has been marked by a remarkable lack of sand-grouse. In previous years parties have been able to go out and get a very satisfactory bag in the early morning as the grouse take flight. This year, for some reason so far unknown, the grouse only appear in very small numbers. This is probably due to the fact that there is a considerable amount of water in the South, greater than usual for the time of year. But, as in any case the birds migrate northwards every season, the reason seems slightly inadequate. The duck, too, are extremely shy and difficult to get at.

WORLD'S WHEAT SUPPLY.

The Board of Agriculture has received the following information from the International Agricultural Institute:—

The condition of wheat in France, Italy, Switzerland and Egypt is reported to be average, and in Great Britain and the United States rather under average, while that of rye in France, Italy, Switzerland and the United States is average. Barley in France, Italy, Switzerland and Egypt is in average condition; while oats are average in Italy and the United States, but under average in France and Ireland.

The probable yield of winter wheat in the United States has been estimated at 230,363,000 cwt., or 10.7 per cent. below the corresponding production last year.

The total production of wheat in Argentina, Australia and New Zealand in 1916-17 is now estimated at 121,991,000 cwt.

PINK SEED WORM.**The Gineries' Fumigation Law.**

(FROM OUR OWN CORRESPONDENT.)

CAIRO, April 3.

Difficulties having arisen in regard to obtaining all the requisite machines, it has not been found possible to enforce in its entirety the law passed last year ordering all gineries to instal apparatus for the fumigation of all cottonseed before September next. As only a certain number of these machines (Simon's Hot Air Machines) will be available by the date stipulated, it has been decided to suspend for this year the application of this order to Lower Egypt and to apply it solely to Upper Egypt.

While it is much to be regretted that circumstances have prevented the carrying out of the original scheme, nevertheless the decision to apply it to Upper Egypt is a very sound one, because, owing to the peculiar conditions in which the cotton crop is handled there, it will be possible to obtain definite results, which will go a long way to proving whether, on a large scale, the fumigation theory is the remedy for the pink-seed worm epidemic that it is claimed to be.

Upper Egypt, it may be explained, is entirely devoted to the cultivation of what is known as Ashmuni cotton, whilst Sakellarides and the other varieties are confined to Lower Egypt.

By a law passed some five years ago it is forbidden to transport cotton in seed from Upper to Lower Egypt, or vice versa, across a line fixed every year by the Government. This law was introduced to prevent the mixing of Ashmuni with other superior varieties, which was practised by certain ginners to the detriment of the reputation of Egyptian cotton, and which can only be carried out during the process of ginning.

As a result of this regulation the entire Ashmuni crop is always ginned south of the above-mentioned line. This year all the seed from the coming Ashmuni crop will be subjected to the fumigation process, and as all the sowing seed received for Upper Egypt is kept there from the time of ginning till after the sowing period has passed, it follows that no infection from Lower Egypt can take place.

In other words, Upper Egypt is a closed zone as far as the rest of the cotton area is concerned, and it will be possible to observe the results of this fumigation of the seed by hot air just as satisfactorily as if the scheme had been applied to the whole of Egypt.

Enemy Concerns in Egypt.

It is announced that Messrs. W. E. Morum and Frank Young have acquired the Egyptian business of Stein's Oriental Stores, and that the latter will henceforward be carried out under the style of "Morum's Oriental Stores." This Austro-German concern, which has been in the past one of the best-paying businesses in the country, has been in the market for some time, and the fact that it had not been taken over by any Britishers caused many to fear that British trade was not alive to its interests.

Many difficulties have, however, stood in the way of its sale to British purchasers, and the delay has not been entirely the fault of the latter, but rather due to factors over which neither they nor the local authorities had any control.

The successful sale of this concern is highly satisfactory from every point of view, and the responsible officials in the Ministry of Finance are to be congratulated on having overcome the obstacles that stood in the way, and brought off this "deal."

An Alexandria telegram dated April 19 stated that the cotton-seed market was firm, with April quoted at 140 piastres and May at 144 piastres.

TRADE NOTES.**Liquidations, etc.**

Mr. E. D. Joyce, Imperial Ottoman Bank, has been appointed Receiver of the business in Egypt of Schilling and Glessing, French Market, Alexandria, with instructions to liquidate the same.

The engineering firm of Albin and Otto Krumbholz, of Damanhür (Albin's Workshop), is liquidating its affairs. Receiver: Mr. J. L. Elder, Damanhür.

Openings.

The Ministry of Finance (Egypt) invites tenders for the supply of seventy-five type-writing machines (French keyboard). Date, May 3, 1917.

BANNED FIRMS.

The following are included in the changes in the Statutory list of persons and firms with whom trading is prohibited:—

ADDITIONS.

Bozorg (see Haji Mirza Bagher Tabrizi); Haji Mirza Bagher Tabrizi (or Teherani) (alias Meshidi Agha Bozorg Tabrizi), Teheran. (Telegraphic address: "Bozorg.")

Meshidi Agha Bozorg Tabrizi (see Haji Mirza Bagher Tabrizi).

REMOVAL.

Muhammed Mehdi Samsai, Isfahan, Persia.

OILFIELD OUTPUTS.

Anglo-Egyptian.—Gemsah, 23 tons, against 25; Hurgada, 1,833 tons against 2,256.

Baku Russian.—Week ended April 14, 71,900 poods.

Bibi Eibat.—Week ended April 15, 61,533 poods (922 tons).

Black Sea Amalgamated.—Week ended April 7, 335 tons; week ended April 14, 338 tons.

Cheleken.—Fortnight ended April 7, 412 tons.

European Oilfields.—Week ended April 15, 84,000 poods.

Maikop Combine.—Week ended April 7, 241 tons; week ended April 14, 245 tons.

Maikop Pipeline Transport.—Week ended April 14, 115,701 poods.

Russian Petroleum.—Week ended April 14, 48,700 poods.

North Caucasian.—Week ended April 17, 10,481 tons.

Ural Caspian.—Week ended April 12, 112,339 poods; week ended April 19, 107,247 poods.

THE SUEZ CANAL.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916.	1917.
	Francs.	Francs.
April 20	130,000	180,000
April 21	370,000	160,000
April 22	300,000	220,000
April 23	260,000	180,000

It is notified that letters and newspapers are again being forwarded from the United Kingdom to Greece, but parcels can be accepted for transmission by post only to Salonika (including the immediate locality, Crete, and other islands not included in the blockaded area).

An official report of the joint meeting of members of the various sections of the Manchester Chamber of Commerce interested in the shipment of cotton goods states that, owing to shortage of timber, an Order will probably be issued very shortly prohibiting the use of cases for the packing of cotton piece goods and yarns. The deputation had placed before Sir Bampfylde Fuller a list of certain goods which, owing to their nature, could not be packed in bales, and the probability is that when the Order is made such goods will be excluded.

GRANT & CHINN,

The British Sanitary Engineers
of Egypt and the Sudan.

LANCASHIRE COTTON TRADE.

Uncertain Conditions in the Market.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, April 26.

Obstacles to progress in the market continue to be met with at every turn, but the prospects in certain directions during the past week have shown some improvement. Some buyers are beginning to realise that, quite apart from the level of values in the raw material, there is the probability of higher prices in manufactured goods because the cost of production and distribution tends to increase.

Merchants have been rather surprised at the decision of the Government to put up insurance rates from three to five guineas per cent., and our customers abroad will have to bear this charge.

Notices have been issued of an increase in the rates for bleaching of 15 per cent.

No further action has yet been taken by the Trades' Union officials with regard to the demand for an increase in wages of weaving operatives of 20 per cent., but it is said that the policy to be adopted will be decided at the end of next week.

A considerable inquiry has come through in cloth for shipment abroad. There have been plenty of offers about in a variety of cloths for Egypt, but there is a shortage of vessels and some merchants have shown caution in arranging contracts. Sales abroad are on a healthy scale and stocks require to be replenished.

An improvement has shown itself in the turnover for India. Grey shirtings have attracted increased attention for Calcutta and Madras. Some fair lines have also been put through in light fabrics.

The undercurrent of demand for China continues healthier and some very fair sales have been reported. Useful orders have also been booked for Singapore and Java. Although numerous manufacturers are still wretchedly situated the general outlook is improving. The chief difficulty at the moment is the lack of sufficient tonnage to meet the demand of customers abroad.

Rather more business has been done in home American yarns, especially in the better qualities, but easy sellers are not difficult to find.

The violent fluctuations in Egyptian cotton rates have rather disorganised trade in Bolton spinnings—and operations have been irregular.

There has been very little activity in export yarns.

TRADE BOOM IN CYPRUS.

Imports and Exports Nearly Half a Million up in 1916.

(FROM A CORRESPONDENT.)

The value of imports into Cyprus for the year ended December 31, 1916, amounted to £976,958, as against £611,948 for the preceding year; exports £720,592, as against £661,397.

The Chief Secretary has notified the public that all who desire to proceed to Malta must apply for the necessary passports or *visés* on forms which are supplied by the District Commissioners; and these must be submitted in good time, so that the Government may consult the authorities in Malta.

The order under which all eggs are bought and sold by agents appointed by Provost-Marshal came into force on March 19. The eggs collected in the first five days in the Nicosia District amounted to 50,000, of which 10,000 only were bought, leaving 40,000 for despatch to Salonika. This number was exceeded in the second week. As Easter approaches there will be a larger local consumption, and the supply available will be less for a week or two.

The municipal elections have taken place throughout the island. The Mayors of Nicosia and Limassol, Mr. A. Liassides and M. Spyros Araousos, have been re-elected.

Mr. Albert G. Sandeman and Mr. Stanley Machin have been reappointed to represent the London Chamber of Commerce on the Council of Foreign Bondholders, in accordance with the provisions of the Corporation of Foreign Bondholders' Act 1868.

COMPANY REPORTS.

Aboukir Company.

The report of the Aboukir Company for 1916 states that there were no sales during the year. The rent roll shows a reduction in the area let of nineteen feddans and an increase in the rental of £E2,969, the average rent being £E4,660 per feddan. Owing to the failure of the water supply to Aboukir lands during the month of July the yield was the worst on record. On the other hand, the supply to the Bourlos estate was adequate and the yield equal to that of the previous year. The price obtained was £5 10s. 4d. per kantar, as against £4 9s. 6d. last year. After writing off a bad debt of £1,785 the accounts show a credit balance of £407, which, with the balance brought forward from the previous year of £181, makes a total to be carried forward of £588. Meeting, 134, Palmerston House, Bishopsgate, E.C., on 30th instant at noon.

Royal Exchange Assurance.

The report for the year ended December 31 states that in the life department 1,377 proposals were received for £963,444, of which 1,188 were completed, assuring £765,988 at single and full annual premiums of £37,686. Reassurances for £60,600 were effected at single and annual premiums amounting to £5,128. Total premium income (after deducting reassurance premiums) was £389,984, an increase of £10,010 over 1915. Interest earned was £170,482, being £4 11s. 7d. per cent. on the life funds. The total income from premiums and interest (less tax) amounted to £526,171. Claims paid and outstanding (excluding endowments matured) amounted to £225,824, against £224,949.

Losses paid in respect of 1916 and previous years amounted to £800,932, against £488,200. Expenses of management were £60,558. The marine fund amounts to £1,010,110; £130,000 has been transferred to profit and loss account, out of which £55,000 has been carried to the marine fund. In the general accident department, the net premiums amounted to £325,988, which, with interest, gave a total income of £331,373. Losses paid amounted to £119,175. Commission and expenses of management, after making full provision for outstanding items, were £131,665. The general accident fund, after transferring £52,864 to the profit and loss account, amounts to £231,521.

The governors and directors call attention to the fact that this is the first year in the history of the corporation in which the net premium income of any department has reached one million pounds, an amount which has been exceeded by both the fire and marine departments.

The court of directors having been paid a dividend of 5 per cent. on account of the next accruing dividend, recommend the annual general court to be held on May 2, to order the payment of a further dividend of 7 per cent. (less income-tax), against 6½ per cent., making 12 per cent. (less tax) for the year, against 11 per cent.

The Financial Adviser of the Egyptian Government reports that, despite the impossibility of importing flour, the country's resources will suffice until the spring of 1918. Cotton has doubled in value, and the addition to Egypt's capital resources since the war is estimated at £30,000,000. Public revenues have not, however, increased at the same rate, and after the war the basis of taxation may have to be enlarged.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flax, Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

COMPANY MEETING.

THE NATIONAL BANK OF EGYPT.

The seventeenth ordinary general meeting of the shareholders in the National Bank of Egypt was held on April 7, at the Head Offices of the Bank in Cairo, Mr. F. T. Kowlatt (the Governor) presiding.

The directors' report was as follows:—

The Directors present to the shareholders the Balance sheet and Profit and Loss Account for the year ending 31st December, 1916.

The Gross Profit for the year, after providing for depreciation on the Bank's buildings and furniture, for rebate of discount and for bad and doubtful debts amounts to..... £ 624,890 2 9

After deducting from this sum:—
For Directors' Fees .. £ 6,700 0 0
For Current Expenses 189,547 9 5 196,247 9 5

There remains an amount of £ 428,642 13 4

The Directors propose to allocate:—

For depreciation of Securities and loss on conversion of Government Securities..... £ 59,742 15 2

For depreciation of Securities deposited in guarantee for the Note Issue £ 55,366 12 0 115,109 7 2

Leaving a net profit of £ 313,533 6 2

In conformity with Article 49 of the Bank's Statutes a dividend of 4 per cent. is payable on the Share Capital..... £ 120,000 0 0

And 10 per cent. of the net profit must be passed to the Statutory Reserve Fund..... £ 31,353 6 7 151,353 6 7

After these statutory deductions there remains £ 162,179 19 7

The Directors consider it prudent to allocate to Special Reserve (Fonds de Prevoyance) to meet contingencies a sum of £ 80,000 0 0

which leaves £ 82,179 19 3

From this amount the Directors recommend the payment of an additional dividend of 2½ per cent. on the Share Capital, which will absorb £ 60,000 0 0

and leave a balance to be carried forward of £ 22,179 19 7

Each share will thus be entitled to a dividend of 12½, equivalent to 6½ per cent. on the Share Capital.

BALANCE SHEET, DECEMBER 31, 1916.

(Continued on page 595.)

ENGINEERING NOTES.

Public Works in Morocco.

The British Consul-General at Tangier (Mr. H. E. White, C.M.G.), has forwarded to the Board of Trade an extract from the *Bulletin Officiel* of the French zone which contains a Presidential Decree, dated December 5, 1916, authorising the execution of certain works, at a cost of 81,000,000 frs. Of this amount 66,710,000 frs. are for the improvement and construction of roads, whilst other large sums are for the provision of telegraphs, irrigation works, experimental farms, buildings, etc., for the establishment of public services in the country. The total length of roads, exclusive of municipal roads, provided for by this and by a previous Decree is 1,190 miles, including the following main roads: (1) A coast road from Mogador, *vid* Saffi, Mazagan, Casablanca, Rabat, and Kenitra, to the frontier of the Spanish Zone near Alcazar, where junction will be made with the road to Larache and Tangier; (2) a road from this point to Fez direct; (3) a road from Rabat to Mequinez and Fez (*a*) direct, (*b*) *vid* Kenitra; (4) portions of the road from Fez to Oujda, *vid* Taza; (5) roads from Marrakesh to (*a*) Casablanca, (*b*) Mazagan, (*c*) Saffi, and (*d*) Mogador; and (6) a road from Casablanca to Tadia.

500 Miles of Roads Ready.

Of these roads over 500 miles have already been made, whilst work is being actively carried on in the more important sections of the others. Liberal provision has been made in the new Decree for the public health service (including hospitals and dispensaries where free treatment

and medicine are provided for the natives) and for schools; 1,108,400 frs. are provided for telephones, 2,293,000 frs. for telegraphs, and 3,070,000 frs. for the building of post offices. The municipalities of the various towns receive grants amounting altogether to 17,645,853 frs. for municipal public works, including local roads not comprised in the programme of main roads referred to above.

Farming in Palestine.

The High Commissioner in Egypt has, writes the Board of Trade *Journal*, forwarded to the Board a memorandum prepared by the Arab Bureau on the subject of agriculture and supplies in Palestine, from which the following particulars have been taken:—In the neighbourhood of Jerusalem a good deal of scientific dry farming is carried on, the ground being kept loose by continual tillage. The Arabs do not use harrows, but the Jewish colonists have introduced the harrow and American pulverisers with very beneficial results. The ploughs chiefly in use in Palestine are the primitive Arab plough, and the German ploughs used throughout the Jewish and German colonies. British ploughs are said to be too heavy and the shape not quite suitable. In the orangeries and other plantations American ploughs are used exclusively, and American zig-zag harrows are also employed.

Orange Culture.

In the Jaffa orange district the irrigation of the new groves is effected by means of pumps operated by oil engines, which were first introduced by the Jews. Most of these engines are of British make (3 to 8 h.p.), and it is estimated that there are about 300 of them in the orange groves. There is a great shortage of spare parts. The water is raised

by small bore (4 in.) tubes sunk vertically into the sand strata to a depth of between forty to sixty metres, the water rising to a height of twelve metres in the pipes. The pumps raise from twenty-five to forty cubic metres per hour. A grove of twenty acres is the minimum economic size for a separate pumping plant. In 1915 the above-mentioned engines were transformed into charcoal gas engines, as no supplies of oil were available. Of the pumps employed from 80 to 90 per cent. are of local manufacture, mostly at two factories in Jaffa (one of which is German, and the other Jewish) where there are a number of good Jewish mechanics.

Agave Spirit.

Readers will recall that in these notes on March 30 we discussed the possibilities of a new fibre decorticating machine and its application to the agave plant (American aloe). The utility of the machine has been enhanced by the result of experiments which have been made recently with agave juice. It has been established that from the juice a spirit of 96 degs. strength can be obtained. Agave, therefore, comes into the field of potential important industries, and makers of decorticating machinery will do well to bear this fact in mind. Distilling plants are also suggested by the new development. Experiments in Mexico some years ago proved that 1,000 leaves produced nearly five gallons of absolute alcohol. These figures refer to the rainy season; for the dry season the production of alcohol per thousand leaves was about three gallons. The net result of these experiments was that the Government set up a factory capable of dealing with 175,000 leaves a day. After the juice has been extracted from the fibre the final refuse is dried and used as fuel. The filtered juice is sterilised after one-thousandth part of sulphuric acid has been added.

£18,000 expenses on Bank Note Issue due to increased circulation.
£8,500 extra taxation, etc., at London Agency.
£5,500 bonus to staff.

Report of the Auditors.

We have examined the books of the National Bank of Egypt and in our opinion the above balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs as shown by the books. We have also verified the Cash, Notes, and Securities at the Head Office and the Cairo and Alexandria Branches, and have found the same correct. The London returns have been audited and certified by Messrs. Deloitte, Plender, Griffiths, and Co., Chartered Accountants.

Cairo, March 10, 1917.
F. H. RUSSELL.
J. GIBSON HARRIS.

The Chairman said:—Gentlemen,—We have the pleasure of laying before you the Balance Sheet and profit and loss account for the year 1916.

After providing for general expenses and depreciation on securities the net profits amount to £313,533 6s. 2d., against £120,000 for the previous year.

If you approve of our recommendations this sum will be disposed of in the following manner:—To statutory reserve, £31,353 6s. 7d.; to extraordinary reserve, £80,000; for a 6 per cent. dividend to the shareholders, £180,000, leaving a carry forward to next year of £22,179 19s. 7d.

The high prices realised for produce, especially cotton, have led to a large increase in the moneys lodged with the Bank and to a considerably extended circulation of our Bank Notes. With the present high rates of interest ruling in London and elsewhere we have been able to make profitable use of the funds at our disposal.

Turning to current expenses, you will notice they are £32,000 higher than those of the previous year, but, as you will observe from a foot-note to the profit and loss account, £18,000 of this is accounted for by extra

expenses of the Note Issue, £8,000 is due to taxation in London, and a little over £5,000 was a bonus to the staff of one month's salary owing to the high cost of living, a bonus which we have no doubt will meet with your entire approval, especially as the staff have worked extremely well.

The next point to which we would draw your attention in the profit and loss account is £115,000 for depreciation of securities and difference on conversion of Government Securities. This brings the value of our securities down to a quotation not exceeding that on December 31 last. The £115,000 includes £40,000, the difference on conversion above referred to, on 3 per cent. British Exchequer Bonds, which we sold and reinvested in 5 per cent. and 6 per cent. Exchequer Bonds, yielding a better return. The rest of the depreciation is almost entirely represented by a further drop in the value of our pre-War holdings in Government Guaranteed Securities, the repayment of which at par is either by yearly drawings or at a certain date.

With reference to our proposal to put £80,000 to the special reserve, we are not in any way pessimistic, but so long as the War continues, and bearing in mind our balances with banks in enemy countries, one cannot be wrong in action on conservative lines.

Bank Note Issue.

The Bank Note Issue on December 31, 1916, amounted to £E21,200,000, against £E11,550,000 on December 31, 1915.

The securities held in guarantee of the Note Issue on December 31, 1915, amounted to £E1,500,000 of Government Securities, on which the Bank receives the whole of the interest, and £E2,900,000 in round figures of Egyptian Government Treasury Bills. We informed you in our report last year that these Bills were discounted at 1 per cent. per annum in return for the privilege of "cours forcé."

As the Note Issue further developed we deposited British Treasury Bills in guarantee of further issues, and it was agreed, at the request and under the guarantee of the Egyptian Government, that the proportion of gold which under the statutes should represent half the Issue could be diminished against the deposit of British Treasury Bills.

The Bank's participation is arranged on the following lines. On the first £E3,000,000 of Issue the Bank takes all the interest on £E1,500,000 of securities as in normal times, and on the extension of the Issue beyond £E3,000,000 and up to £E13,000,000 the Bank's participation which varies according to the London money market, comes ordinarily to a little over 1 per cent. per annum on the amount of securities representing half the issue. On the Issue exceeding £E13,000,000 the Bank takes ½ per cent. per annum calculated on the amount of such excess Issue.

The present arrangements with the Egyptian Government as to our Note Issue are of a temporary nature, due to abnormal circumstances, and as these circumstances may change are subject to rearrangement.

The maximum issue of £E22,700,000 was reached on December 2, 1916. This compares with a maximum issue for the previous cotton season of £E12,650,000 on January 29, 1916. The following table shows the amounts of the various denominations:—

	December 2, 1916.	January 29, 1916.
Notes of P.T. 50	£E. 2,117,045	£E. 1,498,337
" " £E. 1	3,918,830	2,023,973
" " 5	4,737,885	2,326,740
" " 10	5,056,840	2,759,670
" " 50	2,974,200	1,416,570
" " 100	4,395,200	2,624,800
	£E. 22,700,000	£E. 12,650,000

The minimum issue touched in 1916 was £E10,350,000 on July 12.

Balance Sheet.

We alluded above to the increased amount of money lodged with the Bank owing to the present economic conditions. You will notice that the deposits, including those of the Government, are approximately £5,500,000 more than on December 31, 1915.

On the other side of the balance-sheet there

is a marked increase of £3,500,000 in Government securities, of £2,000,000 in Bills of exchange, being cotton export bills, and of £1,800,000 in cash, money at call, and with bankers.

Of the total of £5,600,000 Government securities, over £5,000,000 are British Treasury Bills, British Exchequer Bonds, and War Expenditure Certificates.

Of the £279,000 in Sundry Securities, over £200,000 represent our holding in the Agricultural Bank of Egypt. The 50,000 ordinary shares still remain in our books at £3½, whereas the market price is now over £5.

Although the advances on merchandise, £1,900,000 on December 31, 1916, are a little less than at the same date in the previous year, they touched a maximum at one time of £3,331,000, which was considerably in excess of the maximum in 1915.

The Bills of Exchange in portfolio on December 31, 1916, amounted to £5,366,000. We responded readily and with pleasure to the extra demands made upon us owing to the high prices of cotton, which involved a turnover of much larger amounts than usual. We have every reason to be pleased with the relations existing between the big export houses and the Bank, and we have no doubt that they bear the same friendly sentiments towards ourselves.

Our other advances in Egypt have somewhat decreased since the previous year, and call for no special remark beyond the fact that the general inclination is rather to pay off than to borrow, and this for the same reason that I have alluded to before—viz., the increased value of produce.

General Remarks.

In our report last year we remarked that the balance of trade in favour of Egypt for the year ending August 31, 1915, was £E7,000,000, and for the year ending August 31, 1916, we see that it is £E2,300,000; but from the end of August, 1916, to the end of February, 1917, the balance in favour of Egypt is no less a sum than £E12,500,000.

The annual values of Imports and Exports are as under, commencing from August 31, 1913, for the sake of comparing a year before the war with subsequent years:—

	Imports.	Exports.
	£E.	£E.
1st September, 1913, to 31st August, 1914.....	28,325,000	32,446,000
1st September, 1914, to 31st August, 1915.....	15,327,000	22,642,000
1st September, 1915, to 31st August, 1916.....	27,545,000	29,882,000
1st September, 1916, to 28th February, 1917.....	15,872,000	28,106,000

It is not surprising, therefore, to find that agriculturists are paying off arrears of debts to a very large extent, and this policy of discharging debts is wisely urged upon the people.

There is a distinct revival in the land market and good land can be sold at satisfactory prices. A firm tone prevails on the local Stock Exchanges.

The high cost of living however comes hardly on the wage-earning and salaried classes, but consideration on the part of employers and Government control of the prices of necessities have not allowed this question to become generally critical.

We ventured last year to express our expectations of a good cotton crop and high prices, but we did not anticipate a price of about forty dollars the cantar, at which figure a great deal of the crop has been sold. On the other hand, the unfavourable climatic conditions in June last and the boll-worm largely damaged the crop. The yield will probably be about C6,000,000, whereas more like C7,500,000 were hoped for. The high Nile has promised us shortly a copious cereal harvest, and it looks as if for next season's cotton crop very high prices would again be secured.

The Egyptian Government have made and are already putting into force more complete measures to deal with the boll-worm pest, by destroying cotton sticks and effected bolls left on the fields, by wire netting stores to prevent the flight of the moth from unginned cotton and seed, and finally by disinfecting the seed itself. To see that all the regulations are strictly carried out is no easy task, but it is hoped that the pest will be mastered.

Our business in the Sudan continues to develop satisfactorily.

The following table shows the Imports and Exports for the last four years:—

	Imports into Sudan.	Exports from Sudan.
	£F.	£F.
1913	2,109,000	1,185,000
1914	1,891,000	1,020,000
1915	1,704,000	1,577,000
1916	2,661,000	2,288,000

You will see that the Imports and Exports have reached record figures, due to certain increases both in quantity and value. As is to be expected, the Imports surpass the Exports, for capital is still being drawn from abroad.

The marked increase in Exports is in millet, sesame, and gum. These articles figure for £E350,000, £E173,000 and £E586,000 respectively, while the cotton exported was less, although of greater value—viz., £E269,000, against £E236,000 the previous year. Another important item of export is cattle for £E104,000.

Cotton fabrics represent £E655,000 of the Imports, sugar £E330,000, coal £E291,000, coffee £E115,000, machinery and ironware £E104,000, all showing an increase both in quantity and value.

Not only have we to be truly thankful in Egypt that we have been spared the horrors of war within our borders, but that moreover we have enjoyed, as I have attempted to show, great prosperity. This is, I think, a fit opportunity to put on record our grateful appreciation of the work of both the Civil and Military Governments, nor must we forget the brave men who have fought and protected us.

Both in London, in Egypt, and the Sudan, the men of our staff have responded with enthusiasm to the call. Seventy-eight have joined the Allied Armies, and we have to recall the following names on our Roll of Honour:—E. G. Chapman, H. L. Dallemagne, D. G. Garwood, G. Luri, C. Mancini.

To their bereaved families we beg to express our sincere sympathy.

Forty vacancies have been filled by women clerks, who, in Egypt and elsewhere, were prompt in coming to help us.

The members of our staff have again had a heavy year, with little or no holidays, and we cannot better conclude these few remarks than by expressing to the Sub-Governors, Managers, and Staff our sincere appreciation of their services.

I wish to take this opportunity of mentioning to you a small matter that concerns the London Directors. It is, I believe, becoming the practice in London now for banks to pay the income-tax on their Directors' remuneration. I think, therefore, that you will agree with me that we can follow the same system.

The Directors who retire this year and offer themselves for re-election are:—The Hon. Algernon Mills and Mr. Léon Suarez.

By the death of Baron Jacques de Menasce, which occurred last year, we have lost a good friend and a man who for many years rendered signal services to the business community and the country. He was a member of our Board from the commencement of the Bank up to a few months before his death.

THE ANGLO-EGYPTIAN BANK, LIMITED.

Notice is hereby given that the TRANSFER BOOKS of this Company will be CLOSED from the 18th to the 31st May, both days inclusive.

By Order of the Board,

GEO. H. SOUL, Secretary,
27, Clements Lane, London, E.C.4, 24th April, 1917.

ON 'CHANGE.

By OUR CITY CORRESPONDENT.

Throgmorton Street, E.C., Thursday.

There has been a continuation of inquiries for Egyptian securities this week, but business has not been very active owing to lack of sellers. The demand for Government stocks has also continued, but business has been practically out of the question for the same reason. The 3½ per Cents. are a point higher at 50 nominal.

National Bank of Egypt shares are firmer at 13 7-16, at which price some business has been done. Agriculturals are harder at 5½ round which price a few hundred shares have changed hands. There has also been an improvement in the 4 per Cent. Preferences of this bank, which have advanced ¼, to 7½, some business being done at the higher level.

Anglo-Egyptian Banks made a smart jump to 12 on the good business this bank is doing and the declaration of the usual interim dividend, but free of income-tax this year instead of less tax. Some 200 Land Banks have also been done at 5.

Aboutkirs have been a dull market on the report (published in THE NEAR EAST to-day), but the forthcoming meeting will no doubt encourage a more favourable view, as the immediate prospects have considerably improved. Behera shares have been done at 7½. There is some inquiry for Delta Lands, and the price is a trifle firmer at 9s 3d. New Egyptians are in strong demand at about 9s 6d., but there are few shares offering.

Alexandria Waters continue to be sought after at 12, and both Egyptian Markets and Salts and Sodas are harder at about 27s. and 21s. respectively. City of Alexandria are two points higher at 77.

There has been continued demand for Khedivial Mails, with a steady business, and the price is 2s. higher at 32s.

In Greek securities, the market remains strong, with a rise of one point in 1881, 1884, 1890, and 1893. Some business was done in 1890 at 53, and in Rentes round 44½. Current Bonds have jumped another two points to 90, at which price a fair quantity changed hands.

Oil Shares.

There has not been much doing in Oil shares, and the tendency has been towards uncertainty. North Caucasians rose to 29s. yesterday, but Ural Caspians are easier at 1 23-32. Anglo-Egyptians range from 10s. 9d. to 11s. 9d., and Anglo-Persian Prefrs. from 21s. 9d. to 22s. 9d. Roumanian Consolidateds have been quoted from 9s. 9d. to 10s. 9d.

Paris Bourse.

On the Paris Bourse closing prices on Wednesday included:—Egyptian Unified 93 (unchanged), Credit Foncier Egyptian 649 (against 651), Ottoman Bank 421 (against 420.50), Suez Canal shares 4,300 (against 4,325). Serbian (1895) were not quoted, but on the previous day marked 55.50. Turkish Unified has been quoted at 62.

COMPANY NOTES.

Dividends, Payments, etc.

The coupon number 8 of the ordinary shares of the Anglo-Egyptian Land Allotment Company is payable at the Anglo-Egyptian Bank, Ltd., 27, Clements Lane, London, E.C., at piastres 14 per share, less income-tax.

The final drawing of ninety-three debenture bonds of the Land and Mortgage Company of Egypt, Ltd., 5 per cent. issue of £300,000 (1881), to be paid at par on May 15, took place at the offices of the Company, Suffolk House, Laurence Pountney Hill, London, on April 19. The bonds were 78 of £100 each, eleven of £500 and four of £1,000.

A meeting of the 4½ per cent. debenture-holders of the Mortgage Company of Egypt, Ltd., will be held at 8, Bishopsgate, London, E.C., on May 1, when a resolution to appoint Lord Milner to be a trustee in the place of the late Lord Cromer will be submitted.

Egyptian Delta Land and Investment Company. Dividend, 4d. per share for 1916.

The directors of the Anglo-Egyptian Bank have declared an interim dividend of 5s. a share free of income-tax, being at the rate of 10 per cent. per annum for the half year ended February 28, payable on June 1.
