ADMIRABLE SITES FOR WORKS, FACTORIES, ETC.

THE GREAT CENTRAL RAILWAY passes from the Metropolis Northward through the centre of industrial England, throwing out its branches Eastward and Westward to the Coast. Its lines run over the great Coalfield which extends into the Counties of Yorkshire, Nottinghamshire, Derbyshire, and Lincolnshire, thus affording an easily accessible source of fuel supply.

THIS COALFIELD IS THE LARGEST IN THE BRITISH ISLES, and was estimated by the Royal Commission of Coal Supplies (1905) to cover not only an area of approximately 4,066 square miles, but also to contain not less than forty-nine thousand million (49,000,000,000) tons of Coal. The Lancashire and North Wales Coalfields are also traversed by the Company's lines.

THE NEW EASTERN PORT OF IMMINGHAM should particularly attract traders, as its modern equipment and accessibility at any time of the day or night, irrespective of tides, are important time and labour saving factors.

ADJOINING THE GREAT CENTRAL RAILROAD at various parts of the system are situated VALUABLE SITES FOR WORKS, where, by the introduction of siding accommodation, goods can pass right into and directly out of the works, which GREATLY ASSISTS THE MANUFACTURER to attain his desired position in the World's Markets.

For information, please communicate with the G.C.R. Publicity Office, 216, Marylebone Road, London, N.W.

Owners and Agents of LAND AND BUILDINGS FOR SALE OR TO BE LET near the Great Central Railway are requested to send particulars to the G.C. Estate Office, 12, Paton Street, Piccadilly, Manchester.

SAM FAX, General Manager.

BOOKS on the NEAR EAST.

THE TRUTH ABOUT THE DARDANELLES.

By SIDNEY A. MOSELEY. 5s. net.

"Largely because it is so controversial, Mr. Moseley's book makes excellent reading."—*The Times*.

"Holds that the Evacuation was a profound mistake, because, just when we had broken the moral of a brave enemy, we caved in first."—*Daily Graphic*.

"This is an extraordinarily interesting book. Mr. Moseley has given us plenty of stories of the fighting, finely told and often extremely dramatic."—*The Globe*.

THE WAVE : An Egyptian Aftermath.

Crown 8vo. 5s. net.

"Mr. Blackwood writes with unfailing grace and ease, and has once more made us his debtor for a novel which, while of absorbing interest, is even more remarkable for its inspiring quality."—*Daily Graphic*.

THE WAR IN EASTERN EUROPE.

Described by JOHN REED and Illustrated by BOARDMAN ROBINSON. 10s. 6d. net.

The authors set out from Salonika—when the Allies were tightening their hold upon the port—travelled through Serbia to the Danube; through Bukovina and Poland into the heart of Russia; back through Roumania to Constantinople; and from there through Bulgaria and Serbia, when the Bulgarian-German drive was just beginning. The book gives not only the shadows, but the lights of war, and abounds in humour and originality.

WITH GYPSIES IN BULGARIA.

By "ANDREAS" (Mui Shuko). 2s. 6d. net.

Its character is indicated by its title. The author travelled (in 1913) from Varna to Rusechuk with a party of gypsies in the guise of a Turkish peasant, and his experiences provide good material for an interesting book.

The above-mentioned books, or any other publications, may be obtained at the published price, plus 3d. postage, in the United Kingdom, or 6d. abroad, from

THE NEAR EAST (Book Department),
16-17, Devonshire Square, London, E.C.

ARMENIAN RED CROSS & REFUGEE FUND

FOUNDED DECEMBER, 1914.

President, VISCOUNTESS BRYCE.

Donations are earnestly entreated for the relief of sickness and distress among 250,000 destitute Armenian refugees in the Caucasus, whose condition is "pitiable in the extreme." Relief pay is less than 4d. per head a day. Food and all necessities of life are very dear. A copy of the Report for last year will be sent to inquirers. All work in connection with this Fund is voluntary. Contributions will be thankfully received and acknowledged by the Hon. Secretary and Treasurer, Miss Emily J. Robinson, 35a, Elsham Road, Kensington, London, W. Cheques may be made payable to the Armenian Red Cross and Refugee Fund; they should be crossed "London and South Western Bank, Holland Park Branch."

READY NOVEMBER, 1916.

All Orders filled strictly in rotation. Post yours to-day.

The "JOINT STOCK DIARY" for 1917

A Complete Reference Book, Legal Guide and DIARY for 3/6 net, postage 6d. extra. Invaluable to all concerned with Joint Stock Companies.

By H. C. EMERY, Solicitor.

Author of "The Secretaries' Guide," "Receivers and Liquidators," "Partnerships," etc.

THERE IS NO DIARY PUBLISHED LIKE THIS, AND IT IS WITHOUT EXCEPTION THE BEST VALUE EVER OFFERED

The Diary of Greatest Practical Value.

NOTES OF THE WEEK.

King Constantine's assertion to an American correspondent that within three weeks Roumania would have been overwhelmed in the same way as Serbia has not yet come true. A few days may still have to be allowed for the limit set by the King of the Hellenes to be reached; but it is safe to suppose that he is not as confident to-day of seeing his prophecy fulfilled as he was at the time of its utterance. While events in Roumania may not have progressed as rapidly as the Emperor William's brother-in-law might wish, they must remain a source of some anxiety to Roumanians and their Allies. During the past week the enemy's attacks both in the Carpathians and in the Dobruja have slowed down; in neither region are the Roumanians out of the wood, but the feeling grows that the days of more acute crisis are passing. We shall see.

In the Dobruja the Russo-Serbian-Roumanian troops have retired northwards, no doubt contesting the ground more and more stubbornly as they withdrew. The reinforcements they will have received and the lengthening of von Mackensen's line of communications will have added to the enemy's difficulties, while the country now reached by the contending forces favours the defence. But the position cannot be a satisfactory one for our Allies. If they fall back beyond a certain point, there will be no alternative to a withdrawal across the Danube under difficulties, and they must endanger the two important Danube ports of Braila and Galatz. On the other hand, if the battle line is allowed to become fixed for any length of time in one place, the enemy may dig himself in to an extent which may make it very difficult for the Roumanians to turn him out at a later stage, when presumably they will have received all the reinforcements they require.

The situation in the Carpathians, complicated as it is by the number of separate conflicts being waged at the various passes, is necessarily even more indeterminate than that in the Dobruja. In the north the Austro-German attempt to drive a wedge in between the Russian and Roumanian forces would seem to have definitely failed for the time being, all attacks on the Allied positions having been successfully repulsed. At the most vulnerable spot—the Praheva Valley—the Roumanians, according to German reports, have evacuated Azuga, a small village six miles south of Predeal. It contains a brewery and a few factories, but none of the things which the invaders are counting on securing in Roumania. Further to the west the

Roumanian Army has distinct successes to its credit. A Bavarian force had penetrated through the Vulcan Pass and was advancing on Tirgu Jiului, the railhead of the branch line joining at Craiova the main line from Orsova to Bucharest, when it was defeated with the loss of a thousand killed and some fifteen hundred prisoners and driven back towards the pass. Again, in the neighbourhood of the Roter Turm Pass, where the enemy had advanced six miles into Roumanian territory, he has been repulsed. On the whole, then, while there has been no important change one way or the other in the Carpathians, our Allies have held their own, and have certainly stopped anything in the nature of a "walk-over" that the enemy may have anticipated from the initial success of his counter-thrust.

As the days pass, the weather conditions in the Carpathians must hamper the attacking force, and will give the Roumanians the necessary respite for strengthening their positions and receiving reinforcements. What number of men Russia will be able to spare will, of course, not be known; but they should more than counterbalance the support that von Falkenhayn is understood to have received from the Eastern front. A no less welcome addition to Roumania's fighting strength will be the aircraft that the French and British have sent to her—128 French aeroplanes, it is said, and a handful of British. These will not only assist the military operations, but, it is to be hoped, will afford relief for Bucharest and other towns from the attacks of enemy aircraft. This Allied Flying Squadron ought to arouse a spirit of emulation among the Roumanians. Before the war they had made a successful start in aviation, and it is a matter for surprise and some disappointment that, in view of the part played by aircraft in this struggle, they should not have used the two years of neutrality to build up a strong Flying Corps. It may not have been easy to obtain machines; but if they have aviators already trained, the question of the supply of aeroplanes may now be solved.

Along the Macedonian front the Allied army has kept in touch with the enemy, but on the greater part of the line the weather has interfered with more serious operations. The Serbians to the south-east of Monastir do not seem to take kindly to inactivity, and few of the daily *communiqués* fail to attribute to them some action which is probably more galling to the enemy than the bald narrative implies. It is evident that the defences of Monastir are formidable, and the Bulgarians have been reinforced by German troops. But the Allied line is gradually closing in on the town. The occupation of

Koritza, about thirty miles south-west of Monastir and not far from the point where patrols of the Italian and Salonika armies established touch with one another, may have for the moment only political significance. On the other hand, if the Italians are able to push forward in any strength, the movement may be the preliminary to an attempt to turn the Bulgarian position at Monastir.

After many days of comparative quiescence the British troops on the Struma have made a fresh thrust. This move has placed them in possession of Barakli Juma, a village strongly held by the enemy, and playing an important part in his line of defence. An advance at this point, where the Bulgarian resistance has been most stubborn, ought to enable other parts of the British front to gain ground and a more substantial section of the railway north of Seres to be occupied. The first step in this direction is indicated by the capture of Prosenik, a village on the railway half-way between Demir Hissar and Seres. The news is welcome as a sign that the Allies are still bent on the offensive when weather conditions allow. On the other hand, it is impossible to contemplate the effort which a small advance in this region entails without recalling the fact that, but for the Greek Government's treachery in handing over this part of Macedonia to the Bulgarians, no fighting would have had to take place on ground as remote as this is from the Allies' real objective.

Allied bluejackets have been performing police duty in Athens, and *post hoc aut propter hoc* an improvement in the Greek situation is now officially reported. The various stages that have led up to what is theoretically a desirable state of affairs cannot be described with any degree of accuracy. All that is known to the public is that the Allied Ministers followed up the strong measures they took in landing a naval force in the capital and taking over the Piræus-Larissa Railway, as well as a number of forts, by calling upon and so recognising M. Lambros's Government and obtaining audiences of King Constantine. The most serious aspect of the situation at the moment was held to be the concentration of Greek troops and war material in Thessaly. These measures the Allies regarded as a menace to the safety of the Allied forces at Salonika, and they demanded the disbandment of the troops or their removal to another part of Greece. In so far as the improvement in the situation has to be attributed merely to King Constantine's acceptance of the Allies' demand, it might be regarded as a somewhat negative affair; but the audiences at the Palace appear to have cleared the atmosphere, and the Allied Governments make no secret of their satisfaction.

Clearly the Palace audiences and any agreements arrived at between King Constantine and the Allied Ministers are only the beginning of a new situation. It is understood that the arrangements then made provided for the disbandment of certain classes of the army, including the men called to the colours on September 10, the removal of the Thessaly Army Corps to the Missolonghi line and freedom of action for the Greeks who have joined or may wish to join the Salonika movement. At the same time King Constantine was given assurances that the Allies had no intention of pressing Greece into the war, but would be satisfied with her benevolent neutrality. Nothing could be more satisfactory than these terms. Their practical value, however, lies in the way in which effect will be given to them and in the solution of the present political *impasse* in Greece with two Governments functioning in different parts.

Whether the agreement between King Constantine and the Allied Governments was a verbal or a written one is not stated. If the latter, the text ought to have been published at once; if the former, a clear and comprehensive *communiqué* ought to have been issued on the subject. No agreement could deal adequately with the situation, unless it contained very definite provisions regarding the relations between the Provisional Government of Salonika and the Athens Government.

It was not enough to stipulate that Greeks wishing to join the Nationalist movement should be allowed to do so without let or hindrance. The subsequent course of events has drawn attention both to the inadequacy of the agreement and to the mistake of observing reticence with regard to it. In the first place there has been a collision between a battalion of infantry proceeding to join the National army at Salonika and troops belonging to a northern garrison who had remained loyal to the Athens Government. Secondly, it is reported that officers joining the Salonika movement are to be cashiered by court-martial. Finally, the anti-Venizelist Press was allowed to interpret the understanding between King Constantine and the Allies according to its own prejudices rather than in accordance with the letter. It indulged in paeans of joy over the downfall of M. Venizelos and the Allies' acquiescence in his eclipse. Not unnaturally this outburst has been received with considerable misgivings in Greece itself and especially in Great Britain, where M. Venizelos has made a strong appeal to the popular fancy.

The subject of the Allies' attitude towards M. Venizelos was raised in debate on Tuesday in the House of Commons. Speaking on behalf of the Government, Lord Robert Cecil strongly deprecated the view that King Constantine was being propped up at the expense of M. Venizelos. He pronounced a eulogy of the latter, and stated that where the majority of the population recognise him as their Government the Allies recognise him as *de facto* the ruler of that portion of Greece. Lord Robert Cecil also made it clear that the Government, desiring nothing more than the greatness and prosperity of Greece, would welcome anything that might promote the reunion of all the Greeks. But he made no attempt to reassure the public mind on the one point which is now agitating it: whether the Allied Governments have been careful to leave no loophole for King Constantine to treat M. Venizelos or anyone else associated with the Salonika movement as a disloyal subject. Here is the whole crux of the position. The idea that M. Venizelos is to be left in the lurch, while the Allied Governments pour unction upon their souls because King Constantine promises to be more reasonable, is abhorrent to the British mind. The King's infatuated antipathy to M. Venizelos is well known. It is hardly likely that, after the establishment of the Provisional Government, he will bury the hatchet, unless he is compelled to do so.

At first sight the *rapprochement* with King Constantine would seem to place the Entente Powers in an awkward position. They have now formally recognised the Athens Government, and have so far admitted the official position of the Provisional Government as to allow their representatives to call on its chief and to make it a loan. There would seem to be no reason why, because Greece chooses to indulge in a perfectly anomalous arrangement involving two Governments in the country, the Allied Powers should take shelter under the same umbrella. We fear, however, that they are there, and some watchfulness may be required to prevent them from emerging from a false position by the line of least resistance, regardless of the future peace of Greece and the personal safety of some of her foremost citizens. It is fair to add that in the absence of an authoritative statement regarding the negotiations between King Constantine and the Allies some misconception may have arisen over the details of the agreement. On the other hand, it is not disputed that when the "improvement" *communiqué* was issued no steps had been taken to make M. Venizelos a party to the agreement. It would have been thought that the Allies' responsibilities to the Greek people would make them press for the immediate settlement of the nation's domestic troubles.

The views of the Provisional Government on the agreement between the Allies and King Constantine are given in an official statement issued at Salonika. They are not enthusiastic. On the contrary, M. Venizelos' Government is inclined to adopt a cynical attitude towards the whole affair. It draws attention to the

anomaly of allowing the Athens Government to continue to exist "with a shadow of power," and adds: "The demands of the Entente will certainly not be loyally carried out. The army in Thessaly will doubtless be withdrawn, but several regiments will be left behind in that province on the pretext of maintaining order, but in reality to form centres of new concentrations. The maintenance of order is only a falsehood and a pretext. . . . The Provisional Government hopes that the Allies will not allow themselves to be easily duped, and will employ every means to maintain their security and that of the real Grèce, which is represented by the Government at Salonika." The statement ends with a note of confidence on the ability of the Provisional Government not only to safeguard Greek interests, but to look after the interests of those who join the movement. It must be admitted that the tone of the *communiqué* is not a happy one; but it is calculated to remind the Allied Governments that they have not solved the Greek problem by extracting promises of good behaviour from King Constantine.

The torpedoing by a German submarine of a Greek steamer within territorial waters on her way to Salonika may provide the first brick for the bridge which is to be the means of bringing about a reunion of the Greek people. Although there were some recruits for the Nationalist army on board, neither King Constantine nor the most bitter Germanophil among his subjects relishes the loss of a Greek ship and of Greek lives. That the outrage should have taken place within Greek waters is an aggravation of the offence, which seems a poor reward for Greek efforts to play the German game. The Athens Government proposes to lodge a protest with the German Legation. A far more practical protest will probably be made by the Provisional Government, when its troops meet Germans in the field. But in the meantime we can imagine nothing better calculated to blunt the enthusiasm of the pro-Germans in Greece.

A Mesopotamian Comforts Fund has now been started under official auspices, with Lord Lamington as chairman, and there is now a good chance of the British troops in Mesopotamia receiving comforts so long denied them. Apart from the organization which will be responsible for the supply of comforts at this end, donors to the Fund and the relatives of the men in Mesopotamia have the satisfaction of knowing that the arrangements for the despatch of parcels and their distribution are now in working order. In this connection we are glad to learn that the Director-General of Posts and Telegraphs in India has paid a personal visit to Mesopotamia, and has spent some time there in perfecting the postal arrangements. The War Office provides free transport for goods to bases in Mesopotamia, and the transport service up to the front, which has been so lamentably deficient in the past, is now said to be greatly improved. The least that can be done for those who have been neglected hitherto is to ensure that bumper consignments of comforts shall begin to reach them now. We could wish that there were the same certainty of the Kut prisoners of war, who seem to be interned for the most part at Kastamuni, receiving the parcels sent them from this country. There has been some deplorable muddling in regard to the despatch of clothes to these unfortunate men, but the chief trouble is the small percentage of parcels actually despatched that reach their destination. A request to the American authorities in Turkey would probably rectify the matter. They would at least be able to locate the point at which the goods sent went astray.

The Under-Secretary of State for War was able to give the House of Lords a reassuring picture of the situation in Mesopotamia in so far as supplies and equipment were concerned. Since the War Office took over on July 20 the daily tonnage sent up the river has been quadrupled—an eloquent testimony of the shortage from which the forces must have suffered in the past. Supplies were being accumulated at the base and at the advanced supply depots, and the troops were getting full rations with few exceptions. The quantities of munitions sent out were now regarded as ample. No

less important, the Flying Corps, which had been seriously reduced by sickness and other casualties, had now been reinforced by experienced officers and supplied with suitable aeroplanes—again a significant commentary on what had been the position of this Corps before. Similarly, the medical service had been reorganized and medical equipment, including everything from hospital ships to bandages, had been supplied to an adequate extent. The news will hearten the troops in Mesopotamia and the people in Great Britain. Lord Derby could not speak of reinforcements, but it is not too much to expect that the attention now being paid at long last to Mesopotamia heralds an early advance on a scale not possible before.

A despatch from the Sirdar and Governor-General of the Sudan on the conquest of Darfur supplies a full narrative of a small military operation crowned with complete success. Compared with the great conflicts in Europe and Asia, as the despatch points out, the expedition was of insignificant importance; but it was attended by considerable obstacles, which were all successfully overcome, and the conception and conduct of the campaign reflect great credit on Sir Reginald Wingate and Lieut.-Colonel Kelly, who commanded the force. The task resolved itself mainly into one of organisation. A makeshift motor-road had to be made, and special attention paid to the rapid convoy of supplies. The actual fighting was of the usual type of shock tactics common to desert warfare. The Egyptian troops were in square formation, the enemy attacked with great desperation, then wavered and broke and fled when our infantry advanced. A picturesque feature was supplied by the aircraft, which, the Sirdar reports, fully upheld the splendid traditions of the Royal Flying Corps.

The Times published a few days ago an interesting communication from a correspondent in Aden. The defence of this key to the Red Sea is described by the writer as well organised and in safe hands; and though a Turkish force is still at Lahej—twenty-five miles from the port and thirteen from our front line—the famous fortress is more than ever unlikely to change hands. It is interesting to learn that six months ago an attack was made on one of our outlying stations, at Imad, and that "a number of Germans from Java who had landed on the Arabian coast a long way from Aden took an active part" in this expedition. Such incidents serve to show that in the minor theatres of the war the spirit of adventure may still find scope, but it is difficult to understand what the enemy can hope to gain from such raids. Perhaps the most amazing thing about the whole situation at Aden is that it can still be regarded as worthy of note at all. But the article referred to shows clearly that such is actually the case.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galimani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Sheppard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamalli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cabane and Wilson, Nicosia.

Salonika. Librairie Francaise, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Sococ and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

ROUMANIAN LETTER.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, October 12.

Meatless Days.

As far as supplies are concerned, Bucharest is suffering little, if at all, as a result of the war. True, there are but three "meat" days out of the seven, but this does not affect the Roumanian as it would the beef-eating Briton, and it cannot be regarded as a hardship. Only the stranger within the gates is likely to find the restriction at all irksome. The present prices of meat, as fixed by the police authorities, are:—Beef, 1.50 per kilo; mutton, 1.40 per kilo; and pork, 2.10 per kilo.

In connection with this subject, it may be of interest to note that, according to statistics issued by the Ministry of Domains, there were in Bucharest on December 3 last year 58,116 foreigners, for the greater part Austrians, Hungarians, Bulgarians, and Turks. The population of the city at that time was 341,325, of whom 173,362 were males.

General Berthelot's Mission.

General Berthelot, former Chief of Staff to General Joffre, is on his way to this country with twenty-five officers of the French General Staff. By the time this letter reaches you they will doubtless have arrived. A suitable welcome is being prepared for them both at the frontier and in the capital; and it is generally recognised that, whether they take an actual part in directing the campaign, or merely act as advisers, their presence here will be of great service to the country and to the Allied cause.

War Correspondent's Troubles.

So far, as regards war correspondents, Roumania has followed closely on the lines of Japan, and the military authorities have not allowed any of the "specials" anywhere nearer to the front than the vestibule of the Hotel Athénée Palace or the Boulevard Restaurant. Nor will those whose duty it is to impart news give out anything more than appears in the bulletins issued to the local journals. Last Sunday, however, a number of special correspondents, who had been chafing under these conditions, were suddenly rejoiced to learn that they would be allowed to go to the Dobrujan front; and the following morning, at an early hour, they left.

At Constanza—well, they were at Constanza; and had the wind only been blowing in the right direction they might have heard the sound of the Russo-Roumano-Serbo-Bulgaro-Germano-Hungaro-Turko guns. As it was—Well, all the world knows that "a hungry man is an angry man": and the correspondents were entertained at luncheon by the military authorities. The lunch was excellent; the supply of wine was liberal. Then the party were shown a Russian battleship, which was, it is understood, launched in 1885, and had the difference between a 40-pounder and a machine gun carefully explained to them.

"But when," they asked, "are we to leave for the front?" "Oh," came the reply, "we are extremely sorry, but we quite forgot to inform the Russian Staff. The General is greatly annoyed, and says that if you go down you will all be placed under arrest. We are desolated; but—" There followed a mournful stroll on the Constanza front and a dip in the Black Sea, which was enlivened by an aeroplane attack—one German aviator playfully dropping a bomb into the sea quite close to the party. Another excellent meal and promises that all should—or might—be well on the following day got the correspondents to bed. At five o'clock the next morning knocks at their doors aroused them, and they were informed: "Gentlemen, be quick, or you will miss the train for Bucharest." It was very sad. But "they mismanage these things much better in Roumania."

The Board of Trade has awarded a piece of plate to Captain Dionysios Mousouris, master of the Greek steamship Nicolaos Athanassulis, of Cephalonia, for rescuing a portion of the crew of the steamship Antiope, of London, in the Mediterranean on August 10.

HELP FOR SYRIA.

(FROM OUR CORRESPONDENT.)

CAIRO, October 11.

The hope expressed in my notes of October 6 in regard to hurrying the formalities in connection with the individual remittances to Syria has been realized. A good number of applications has just been approved by the Licensing Officer, and the remaining applications are expected to be authorized shortly. In this connection it is highly gratifying to learn that the work done by the various relief committees formed by Syrians abroad has surpassed all expectations. The number of these committees runs into a few hundred, and the subscriptions raised by them have attained a very considerable amount. The New York Committee alone, composed of Syrian and American notabilities, expects to realise over 200,000 dollars, while the total amount of subscriptions being raised in the United States is expected to reach one million dollars.

In the South American States, where the Syrian colonies are important in numbers and wealth, the same munificent spirit is manifested. It is reported that in one of the Syrian churches there £4,000 was raised in one day. The committees formed in Africa have not been behindhand. Even in such outlying places as the French Congo, the Transvaal, and the Orange Free State committees have been formed, and have been very energetic. As an instance may be cited the fact that in Kronstad the Syrian colony, in spite of the paucity of its numbers—about fifty in all—has been doing most praiseworthy work.

THE MANCHESTER FUND.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We wish to draw your attention to the pitiful condition of the inhabitants of Syria and Palestine, and to enlist your active sympathies on their behalf.

Accounts have appeared in the newspapers for some months past showing how, in consequence of the isolation of the country from the outside world, as well as from the ravages of locusts and other causes, the people are dying in thousands for want of food, and are threatened with extermination if they are not rescued in time. All this is unhappily confirmed, as is shown from the following extract from an article which appeared in *The Times* of September 15, written by an American lady who has recently returned from Beyrout, Syria:—

"The Levant is starving. This is no figure of speech, but the literal truth. . . . Towards spring cases of starvation began to be known. People were found in the streets unconscious, and were carried to the hospitals," etc., etc.

In a letter addressed to the Lord Mayor of Manchester on this subject, Lord Bryce says:—

"The information which has reached me from Syria, and of whose correctness there can, unfortunately, be no question, describes the condition of the Christian, and to some extent of the Jewish, population there as most deplorable. . . . All the help that English charity can send will be needed to relieve their suffering. I trust this help will be forthcoming."

The Government of the United States has now obtained the consent of the Turkish Government to administer relief through the various American missions and agencies in that part of the world, and as a proof of their practical sympathy, Congress has just passed a unanimous resolution recommending that a day be set apart throughout the United States for collecting funds for distressed Syria.

The committee which has been formed in Manchester for the relief of distress in Syria now appeals for your sympathy and help. Lebanon, Syria, and Palestine, by reason of their sacred association, are dear to all hearts, and surely, in its darkest hour, the Holy Land will not appeal in vain. All contributions received will be sent through the same channel as the funds collected in America. The need for immediate assistance of these starving and destitute people is so urgent that the committee earnestly request a prompt and generous response to their appeal.

Cheques may be made payable to the hon. treasurer, Mr. E. E. Rigby, and sent to the Lancashire and Yorkshire Bank, Ltd., Mosley Street, Manchester, or branches, who have kindly consented to receive subscriptions.

We are, etc.,

THOMAS SMETHURST

(Lord Mayor of Manchester), President.

E. TOOTAL BROADHURST, Chairman.

E. E. RIGBY, Hon. Treasurer.

K. JERARA, Hon. Secretary.

GORDON MEMORIAL COLLEGE.

FOURTEENTH ANNUAL REPORT.

The fourteenth annual report of the Gordon Memorial College at Khartoum, of which we have received a copy from the honorary secretary, constitutes a record of much good work done in spite of difficulties caused to the staff and the authorities by the war. As Sir Reginald Wingate writes in his covering letter: "It is very satisfactory to note that inevitable war economies have been made without detriment to the efficiency and the higher interests of the college, although the effects of war conditions have necessarily limited research work and curtailed the profits of the industrial workshops." Sir Reginald notes with satisfaction that "a number of pupils have been found competent to fill vacancies in private firms and elsewhere caused by the disappearance of most of the foreign employés"; and in referring to the reorganisation of the Upper School he remarks: "The importance of introducing a leaven of practice to meet the shortcomings of a purely literary education needs no emphasis from me."

A note preceding the report records the deep regret of the Committee and Trustees of the College at the death of Lord Kitchener, its president and founder. An appeal, signed by Sir Reginald Wingate, is addressed not only to "past and present members of the Sudan Government and the Egyptian Army," and to the people of the Sudan, but also "to all others interested in the work initiated here by Lord Kitchener," for funds for the proposed memorial to him, which "will take the form of a school of medicine, a project which was very close to Lord Kitchener's heart, and frequently advocated by him in conversation." The committee also pays a tribute to the memory of the Hon. Charles Mills, M.P., who was hon. treasurer of the college, and who met his death in action in October, 1915.

The report, as explained by the principal, Mr. John Crowfoot, M.A., "covers the work of the school and research departments for the last year and a-half," in accordance with the change announced in the preceding report, which dealt with the work of the twelve months ended in June, 1914. The change was due to the alteration from June to December of the date of the final examinations. The period covered thus begins practically at the time the war broke out; and as already indicated, the college very early felt the effects of the calamity. Mr. Crowfoot writes:—

In August, 1914, as soon as war broke out, all members of the staff who happened to be on leave were recalled to Khartoum, and the school was re-opened in the beginning of September, a month earlier than usual. From that date there has been no question as to the policy which the circumstances of the time demanded. It was our obvious duty, so long as the war lasted, to make every economy possible without permanently impairing the usefulness of the College. Vacant posts were not filled, the number of free scholars and bursaries was reduced, and officials engaged in researches which were not of an urgent character were allowed temporarily to join the Censorship office and other war services, a privilege extended during the vacation to officials on the educational side. From our own standpoint a real economy much greater than is shown by the accounts has been effected in this way without the dispersal of an expert staff, which it has taken years to collect.

These economies have naturally reduced the output of the Research Departments and they have increased the work of some members of the teaching staff, but no real detriment has resulted to the usefulness of the College, and this fact is of capital importance, more even to-day than at any previous time in its history. From the very outbreak of hostilities the leaders of native opinion rallied unanimously to the Government and expressed their loyalty in a series of reasoned manifestoes. These manifestoes with unflinching regularity instanced the educational work of the Government as one of the principal grounds of that loyalty, and these tributes, which are comforting to a profession that is frequently charged with fomenting unrest, have rightly met with a generous response from Government. We have been like other Departments asked to make economies and we have made them, but we have not been asked to make any economies which are detrimental to the highest interests of the College.

The numbers enrolled in the various sections of the college in December, 1915, show a decrease of 73, as contrasted with those of October, 1914. This "apparently exceptional leakage," it is explained, is "due

merely to the exceptional length of the school year," which included "two of the half-yearly periods when the Government Departments usually fill up vacancies in their establishment." (It is pleasing to note that all the students who left the Upper School found satisfactory employment.) The same reason, it is stated, has considerably improved the class work, and the final examination papers in both schools "have reached a standard which reflects all credit on Mr. Simpson and his staff."

The organisation of the Upper School, says Mr. Crowfoot, was based on anticipations which have not been realised, and which are not likely to be realised for many years.

So recently as 1912 it was expected that the Upper School would before long contain some 250 pupils, and sections, classes, and staff were arranged on this estimate. Events which no one could foretell have falsified this hope. In the first place, a succession of lean years from 1911-1913, when the rains failed over large areas of the Sudan, and, in the second place, the war and its concomitants have re-acted on all our schools in two ways: on the one hand, parents have been obliged to reduce their expenses and beg for the employment of their sons before they had completed the full course; on the other hand, Government, confronted first with the prospects of a famine and then with the financial situation created by the war, has been unable to devote capital to the new projects which alone will call for a larger output from the schools. . . . Our altered situation clearly justifies a revised organization. It has been decided, accordingly, to amalgamate the Engineering Section, the Literary Section, and the Sheiks (Teachers) for the first two years of the Upper School Course, and to postpone specialization until the Third Year.

The new curriculum, of which particulars are given, has been planned with a double object:—

It should serve as a good foundation for specialized engineering courses on the one hand, and on the other it should give a balanced training of hand and eye and mind such as will fit boys, with or without further specialization, for the occupations, clerical, administrative and educational, which are open to them in this country. The criticisms which have been so rightly levelled at the purely literary education popular in both East and West are only partially met by the institution of technical schools, so long as the literary schools by the side of them remain purely literary in character: the curriculum newly adopted represents an attempt to remedy this acknowledged weakness.

The attempt, we trust, will prove successful. The fact that the change will give the English masters a larger share in the class-work is certainly a point to the good. Another innovation likely to have good results is the proposed extension of the range of subjects studied in the Arifs' Training College.

The Primary School "continues to do good work," and serves a very wide field, a fair proportion of its scholars coming from distant provinces. The financial depression caused by the war has hit the Instructional Workshops rather hard. The staff has, however, risen to the emergency, and in the carpenters', fitters', founders', and blacksmiths' shops good work has been done in spite of the rise in cost of materials and the absence of the usual large orders from Government Departments.

Referring to the internal economy of the college, the principal pays a well-merited compliment to Mr. Simpson, who contributes an interesting note on the boarding and health of the students. The good bill of health, says Mr. Crowfoot, "is largely due to the part which games play in all sections of the college."

Owing to considerations of space we can only refer briefly to the sections of the report which refer to research work. This department also has suffered severely as a result of the war:—

For a large part of the year Dr. Chalmers has been left single-handed to cope with the work in the Bacteriological Section: the list of papers published and the number of routine examinations will show the energy and devotion which he has brought to the task. The striking increase in routine work shows also the position in the medical practice of the country to which his labours and those of Dr. Balfour have raised the Laboratories. Since Mr. King's illness last August Dr. Chalmers has further

had direct charge of the Entomological Section. In the Chemical Section similarly either Dr. Beam or Mr. Freak has been working single-handed for half the period under review.

In the circumstances, the amount of work accomplished is truly remarkable. "Original research," as Sir Reginald Wingate writes, "has been confined to urgent diseases and entomological problems of vital importance to the Sudan"; but in these fields much has been done. The report as a whole is one upon which the Principal and Staff of the College and its Committee and Trustees are to be heartily congratulated. The institution is young, but it is extremely vigorous. It has already played a considerable part in the development of the Sudan, and it is undoubtedly destined to play a yet more considerable part in the future.

THE JUGOSLAVS IN FUTURE EUROPE.

At Burlington House last Monday, in connection with the Fight for Right movement, Professor Hinkovitch delivered an address on the Jugoslavs in future Europe. M. C. Miyatovitch presided, and in introducing the lecturer said that beyond the trenches covered with slain and wounded heroes, and the clouds made by such artillery as had not been dreamed of in earlier times, might be seen clearly arising the goddess Victory smiling on the Allies. After the war would come the task of reconstructing Europe on the basis of nationalities, and then the Jugoslavs would realize the ideal of union. The movement to that end was not an artificial one, but absolutely natural and inevitable. More than that, it was a necessity of Europe to have a union of the South Slav nations.

Professor Hinkovitch said that of the fourteen million Jugoslavs five millions lived in Serbia and Montenegro, seven and a half in Austria-Hungary, and the rest in various parts of the world. The Austro-Hungarian policy was "divide and rule," and the Jugoslavs under her authority, while territorially and linguistically one with another, and with their kinsmen across the border, were divided among eleven administrations with fourteen different legislative bodies. They were also divided judicially and ecclesiastically and in railway matters. There was no railway communication between Croatia-Slavonia and Dalmatia. Yet, despite all this, the idea of Yugoslav unity was overwhelming. It was an idea necessarily opposed to the notion of a German domination and exploitation of all the peoples of the Balkan peninsula and beyond to the Persian Gulf. In the hour of victory it should be the aim of the Allies to deprive Germany of all her non-German population, and the Austrian Empire should be dismembered, leaving only the German and Magyar elements. Bulgaria should be reduced to a small State lying between the Danube and the Balkans, where only the true Bulgar was found. The "zone of transition" inhabited by a mixed population, partly Serb, partly Bulgar, should go to Serbia. This could be done without any derogation from the principle of nationality for which the Allies were fighting. Of course the Coburg dynasty should be removed. Probably if the national existence of Bulgaria were rendered secure, she would consent to form part of the Yugoslav State having her own legislature, but under the same king.

The more complete the Yugoslav state of future Europe the stronger would be its resistance against any renewed attempt at German aggression; and if, out of a regard for a mistaken diplomacy, the Powers should insist on tearing off a limb from its national body, the Jugoslavs would still struggle on, and the Balkans would remain a powder magazine. The mysterious forces of the nation longing for union for a thousand years would no more cease working than a river would cease to flow.

CHRISTIAN CHURCHES IN JERUSALEM.

Speaking at a meeting held in the Church House, Westminster, on October 24, the Rev. A. C. Headlam said that it would not be fair to judge the Turk's traditional attitude towards his Christian subjects by the atrocities committed during and since the reign of Abdul Hamid. Generally speaking, the Turk had been in a curious sort of way a harsh but just ruler among many warring creeds; and one reason why the various bodies of Eastern Christians had submitted to his rule had been that they had feared that a Christian ruler would mean the giving of political power to some sect not their own. What the Churches had suffered from was not persecution, but the deadening influence of being deprived of all possibility of missionary enterprise; for it would have been at the peril of the life alike of teacher and convert if any Mohammedan had been brought to accept the Christian faith. At Jerusalem there were great ecclesiastical buildings occupied by Greeks, Franciscans, Armenians, Copts, Abyssinians, Anglicans, Lutherans, and others, all without any really useful occupation; but occupied with what he would call the luxuries and unrealities of religion, and most of them spending a good deal of time making proselytes from one another.

According to the latest information 64,000 Jews in Palestine require financial support on account of the increasing economic crisis, says the *Jewish Chronicle*. The harvest has not come up to the expectations. There is also a great lack of medical appliances in the country.

TANGIER TO TEHERAN.

Now that it is all over I am free to admit that I was a little anxious about the success of the Roumanian Flag Day. London has had rather a lot of "flag days" and "flower days" of late, and certain unfortunate incidents connected with some of them have, not unnaturally, served to make people rather chary about supporting them. So I was wondering how the appeal on behalf of our newest Ally would fare. I need have felt no anxiety, however. It is true that the number of flag-sellers about the streets seemed to be far smaller than on similar occasions; but the Londoners were keen on showing their sympathy; and if the flag-sellers did not waglay them, they went in pursuit of the flag-sellers. The blue, yellow, and red was to be seen everywhere, and I understand that in many cases the supply of flags was quite inadequate to the demand, so that the sellers had to cut up their tricolour sashes and ribbons to satisfy their "customers." I do not know what the financial result may have been, but it is safe to say that as a demonstration of friendly feeling for Roumania and of sympathy with her in the trying time through which she was passing the Flag Day was an unqualified success.

By the way, in connection with the attractive posters used for advertising the Flag Day I noticed that King Ferdinand was depicted with a brown, or auburn, beard, whereas it is really the blackest of blacks. The inaccuracy was doubtless due to artistic requirements of some kind; and I may lay myself open to a charge of Philistinism in drawing attention to such a detail. Nevertheless, it seems to me to be a pity that the error was allowed to pass. Many thousands of London's citizens are to-day carrying round a mental portrait of Roumania's gallant Sovereign that is based on these posters, and it might just as well have been a truthful one as not.

After all, the Egyptian "Tipperary" case did not sizzle out, as it bade fair to do, without the judge having a chance of hearing Sheikh Ashur's Arabic version of the famous song. On the contrary, I learn from the Egyptian papers, the Court held a special sitting at the "Egyptian Conservatoire of Music," when the Sheikh's version was sung to the accompaniment of an "orchestra" consisting of two zithers and a violin. The Sheikh's supporters, says one report, "cheered him and congratulated him on his success" as soon as the performance—or should it be "evidence"—was concluded; but the impression left on my mind after comparing all the reports is that the judge evinced no great enthusiasm. He appears to have made an attempt to get the litigants to compromise; but the Sheikh stood out stoutly for his pound of flesh—or his two pounds—and the case was once more adjourned. It is not only in England, therefore, that litigation over trifles can spread itself over long periods and, presumably, entail a great waste of time and money.

Philhellenes the world over—save those in Austria, Germany, Bulgaria, and Turkey, if any such there be!—have been passing through a rather trying time lately, and I gather from letters received that those of them who have been serving with our force at Salonika have been feeling very sorry for themselves. Thus, one, an officer who is well placed for observing the course of events, declares: "I am afraid it is a case of *fuil Hellas*. The Bulgars mean to keep what they have got in Eastern Macedonia, if we will let them, and the Serbians should get the rest of Macedonia. The Greek Army has gone to pieces, and is in practical revolt. Altogether it is a lamentable spectacle for Philhellenes like me, and it is now too late for the position to change in their favour. I am thoroughly disgusted," etc. Of course, things have taken a turn for the better now, but at the time the letter was written no Englishman could have felt anything but "disgusted."

At the same time, I hope that Brother Bulgar's fond hopes in regard to Eastern Macedonia are doomed to disappointment. Greece, as a nation, has not come up to our expectations. Her aspirations regarding Constantinople have proved a sad stumbling block, and have made her fall a ready prey to the wiles of the German and pro-German charmers; her treatment of her Serbian ally has been unspeakable; and the painfully obvious anxiety of her "reservists"—and others—to avoid fighting, at any cost, is not calculated to win respect. But, at least, she has not ranged herself openly on the side of our enemies, as Bulgaria has done. Let us remember that. And, in fairness, let us put the Venizelists and the "revolutionaries" in the scale against those others.

CORSAIR.

NEAR EAST BOOKSHELF.

IN THE JAWS OF THE TEUTON MONSTER.*

Since the publication, last year, of Friedrich Naumann's "Mittel Europa," much has been written around and about the subject, but, lest some of our readers have forgotten the main thesis exposed by the author, we shall do well to recapitulate it as concisely as possible, following the line of argument adopted by Naumann himself.

In the first place, then, we must be prepared to accept as axiomatic the assertion that, as a result of the evolution of political intercourse among modern States, there have emerged from the chaotic pages of the world's history three gigantic world Powers—namely, the British Empire, Russia, and the United States. Their combined might is tremendous; together they control the great world markets and have the largest share of the world's products and supplies. They cannot be opposed except by a Power as great, or almost as great, as they are themselves, and that Power does not exist. Can it be created? According to Naumann, it can: it is the Empire of Central Europe, stretching from the Lower Rhine to the Alps, from the Baltic to the Adriatic, from the Vistula to the Danube and the Black Sea. Will it be created? Again, the author is optimistic, and answers his own question in the affirmative. His reason is distinctly characteristic of Prussian bombast: it will be created because it *must* be created, because otherwise there would be an end of the God-inspired "Deutschland über Alles," which is impossible—certainly a line of argument that makes us smile whimsically the while we pity the German for having only five senses, and totally lacking the sixth, which is humour.

Having given us the reason why the Central European Empire must be born into a world of strife as the illegitimate offspring of the great war and of Prussian ambition, Naumann proceeds to let us into the secret of the process. Germany, Austria, and Hungary, unable each by itself to oppose the wiles and wickednesses of the three world Powers, must combine and amalgamate into one. Admittedly, the Magyar is not going to join in the Deutschland chorus. Vienna will not openly acclaim Berlin as her master (secretly she has done so for a long time past). The Slavs—we are told that they hate the Russians more than they do the Germans—will not be enthusiastic members of the new-born Empire, nor will the Germans themselves be inclined to sacrifice any of the outward and visible signs of their hegemony for the welfare of the new empire. However, these are only some of the difficulties to be overcome; in the eyes of Naumann they can all be overcome: the Magyar, living in dread of the Russian, will become one of the three great members of the Central European Empire; his country will be the granary thereof, and Buda Pest its corn market. Galicia, its constitution altered, will be the oilfield. The Southern Slav States will become practically autonomous, and this will satisfy them. Vienna will surrender her power and influence and retain only their glamour—her traditions and the bitter dregs of a dead history; while the Germans will condescend to waive in public some of that super-patriotism which has made them so obnoxious to the rest of the world. Perhaps even, in hours not occupied with running the empire, they will dance Czech dances and sing Magyar songs. Utopia all round!

Naumann takes his scheme seriously, and seriously thinks it feasible. So it might have been in the event of Germany emerging triumphant from the present war; but, even so, the form in which it would have appeared on the map of Europe would have differed from that given it by the plausible member of the Reichstag. Of course, we must remember that Naumann wrote to please his Austro-Hungarian readers, to convince them of their worth, and to prove to them that in the Central European Empire their lights would shine brilliantly, not dimmed by the great flare emanating from Potsdam. Hence his lavish generosity of sweetmeats to Magyars and Slavs; hence, also, his advice to his countrymen to pretend to be less German than "Central European." And it must be confessed that, with skill and dexterity, he was able to surround the empire of his making with a roseate halo which succeeded perfectly in disguising the iron fist of the Hohenzollern dictator. "The great thing is," the writer must frequently have said to himself whilst painting his sunny pictures, "to get the empire on its feet; that done, I can trust to our military heroes to keep it going." A Central European Empire controlled from and by Berlin was really the scheme, and we must admit that, if Germany had won this war, in all probability she would have forced Austria and Hungary into an offensive-defensive alliance which would eventually have led to the creation of an empire of confederated States, protected by preferential tariffs, self-supplying, and surrounded by a network of trenches similar in object to the old walls of China. The German

colonies regained, and such other colonies as could have been snatched here, there, and everywhere, would have added in acreage, population, and produce to the empire, which would then have been in a position to hold its own against any one of the three world empires already named. Moreover—and this is, perhaps, one of the most important admissions to be made by the author—the smaller States (such as Holland, Switzerland, Denmark, and Roumania) surrounding the mid-European Empire would ultimately either have been convinced that their welfare (*sic*) lay with the confederation, or— For such is the ruthless might of the triumphant Hun! Verily, this is, and has been, a war for the preservation of smaller European nationalities from the jaws of the Teuton Monster. Naumann, the prophet of the Pan-German control of Europe, stands confessed: drugging Austria and Hungary with fair words because they are big, he threatens the small States and warns them of his country's wrath. Roumania has already answered him; and, judging by an article which appeared recently in his organ, *Die Hilfe*, her reply has pained him grievously. His lord and master will have been similarly pained.

From the foregoing it will have been gathered that, thanks to the success of our arms, the whole question of the Mid-European Confederation, proposed by Germany with a view solely to furthering German interests and giving her the whip hand on the Continent, is to-day merely an academic question, and, as such, of little consequence. Like so many other Utopian dreams, it can be disregarded because unrealisable. Nevertheless, the Pan-German spirit which invented it remains, and unless precautionary measures are taken at the Peace Congress there is no reason why that same spirit should not continue to create trouble for us and for smaller nationalities when some of the losses resulting from the war have been made good. This is not the place to discuss those measures, but this much can be said: they must render impossible any realization of Naumann's empire. Even to-day, when, in view of Germany's growing troubles and our continual successes, we might have expected a somewhat more chastened mood in the ranks of the Pan-Germans, Press articles continue to appear on the subject of the Central European Empire, to which will be attached, or wherein will be included, both Bulgaria and Turkey—according to these scribes who out-Naumann Naumann himself. Their attempts must be rendered futile, and the Germans, together with—or without—their kith and kin in Austria, must be so tightly surrounded on the east by Russia and a strong Southern Slav State, as to be obliged to abandon their dreams of territorial and economic extension in the Near East, their sordid intrigues in Balkan palaces and pavilions, their intransigent policy of the "Drang nach Osten" which, with much advertising and publicity, they have been able to foist on an unthinking Europe until it has almost become persuaded into believing that policy to be a divine right and privilege of the Huns, incontrovertible and not to be contested. Further—and this point cannot be too seriously emphasised—all questions relating to the control of the Straits and Ottoman finances, to the future of Turkey-in-Europe, Bulgaria, Albania, and the Adriatic, will have to be decided by Great Britain and her Allies alone, the Teutons and their friends having no vote or voice in the matter. Only by these means can we successfully oppose the realisation within a measurable space of time of the Pan-German ideal so eloquently developed by Naumann.

We have refrained here from delving into the economic aspect of the Mid-European Empire. Naumann, it is true, devotes fully two-thirds of his interesting book to its analysis, and arrives at the conclusion that the prosperity of the great industrial centres of Germany and Austria, and of the huge Hungarian and Galician sources of supply, depends on the realisation of his dream. Some of these pages are intensely interesting and instructive, but we are concerned here mainly with the political aspect, because we maintain that, politically speaking, the Mid-European Confederation, created under Prussian tutelage with a view to further Teuton greed and ambition, constitutes a menace to the life of smaller Continental nationalities, and is fraught with continual danger to the peace of Europe. Therefore, for this, if for no other, reason, the empire must not be created, and we must continue to fight the Hun as we would a pest and a curse, and oblige him to sign a lasting peace, thereby delivering neutral States from the jaws of the Teuton monster.

THE PRESS ON THE NEAR EAST.

Roumania's Service to The Cause.

In an interesting communication published in the *Morning Post* (October 26) a Roumanian correspondent points out that the recent heavy fighting on the frontiers of his country "will at least serve the purpose of dispelling the view that she has joined the Allies at a time when serious fighting would be unnecessary." He goes on to say:—

Had she come in earlier it would have been impossible for her to exact the price which she is now exacting from Germany. She came in immediately she was adequately equipped and was able to return an eye for an eye and a tooth for a tooth. It has to be kept in mind that she is killing Germans and is drawing forces which might have been used on other fronts, thereby dissipating the energies of the enemy. Germany has paid Roumania a great compliment in sending her best generals to meet the Roumanian Army. It is now generally recognised that the road to Berlin is through Vienna, and Germany has realised that her death-blow may come from Roumania, and is therefore making a desperate effort to ward it off. . . . Another consideration which has entered into Germany's policy is the question of retaining the confidence of her satellites—Austria-Hungary, Bulgaria, and Turkey. Roumanian intervention on the side of the Allies was an indication to these Powers that they had staked their money on the wrong horse by backing Germany. Germany feels that by knocking out Roumania she would impress her hirelings with the fact that it was Roumania who had backed the wrong horse.

King Constantine and the Intriguers.

In a leading article, "The Enlightenment of King Constantine," *The Times* on Saturday expressed the belief that M. Guillemin, Sir Francis Elliot, and Admiral du Fournet "have now made plain" to the King "the utterly mistaken character of the conceptions of Allied policy and of the aims of M. Venizelos which intriguers like the ex-Premier, M. Gounaris, Dr. Streit, and General Dousmanis had foisted upon him." After touching upon various signs of improvement in the situation, the article concludes:—

It must be assumed that King Constantine and his Government will now no longer countenance the action of the Reservist Leagues, and that the reservists who may in good faith have joined these anti-Venizelist and anti-Ally organizations will be instructed that any "defence" of the King against M. Venizelos is worse than superfluous. It should be the first care of King Constantine and of the official Greek Government to make it clear to the people that the movement directed by M. Venizelos has no anti-dynastic tendency or ambition. It is, as we have repeatedly explained, purely patriotic. Its object is the expulsion of the Bulgarian invader from Greek territory in collaboration with the Allied forces. It is therefore entitled to receive, and will assuredly receive, full help from the Allied Powers. Any officers or men in Greece whom patriotism may prompt to join their comrades in Macedonia may now feel that, in so doing, they would be in reality helping to protect their Sovereign and their country from the worst enemies of both. They should also be persuaded that only by the success of the national movement can Greece be restored to the position she held at the outbreak of war—before she became a prey to interested intrigues and dissensions which had come to threaten her very existence and were within measurable distance of wrecking the dynasty.

On Standing by One's Friends.

The Spectator (October 28), in an article, "The Tragedy of a People," dealing with the situation in Greece, gives expression to views which are undoubtedly shared by most people in this country. The article begins:—

It is not only the most honourable but the safest of rules to stand by one's friends in dangerous times. We think the time has come for Great Britain to state with no uncertain voice that she knows who her friends are in Greece, and that she means to stand by them and see them through at whatever cost to those who are not her friends. Those Greeks who support the cause of the Allies need all the help they can get. Those who have plotted against us, trying to do us every kind of mischief while pretending to be friendly, have quite ceased to deserve our sympathy.

Even if we still desired to treat the latter with patience and indulgence (in the spirit in which Britain always has treated Greece), it would not be possible to show them much consideration if we really mean to help our true friends to the top of our powers. We cannot encourage two contradictory principles at the same time. And since it is impossible to place trust and confidence in both the Government of M. Venizelos and the Government of King Constantine, let us not waste time and energy in maintaining an unfruitful fiction.

It would be foolish, says the writer, after all that has happened, to build upon King Constantine's "offers to return to the policy (never practised, by the way) of benevolent neutrality," though "we need not reject such assurances."

We cannot be wrong in saying that the time has come to side boldly and unequivocally with our friends, for we have all

watched the gradual steps by which M. Venizelos has reached his present position, and noted the reluctance with which he has organised his counter-movement to the Government at Athens. Never has a revolution been more reasonable, more cautious, and more considerate. If we do not go out of our way to express our approval of such conduct, if we confine ourselves to merely frigid phrases of commendation, we shall not prove that we are good people to be with in a tight place. Greatheartedness and loyalty are to be found more freely among the Cretans and the islanders who follow the National Government than among the merchants and café-politicians of the mainland towns. In helping the best elements of the people we shall be helping Greece most certainly back to rehabilitation. The Venizelists are the men who have the future of the country in their keeping.

The Morning Post, also, in a leading article ("The Danger in the Balkans," October 30), protests against "any policy of coquetting with King Constantine at the expense of our friends."

M. Venizelos is for us: King Constantine is against us. Let the sentimentalists and idealists who blink facts in our Foreign Office pretend as they may, the facts remain. In this great Roumanian crisis our assistance from the South has been paralysed because the situation in Greece has never been cleared up. And it ought to have been cleared up, if necessary, by a complete breach with the official Government of Greece. Instead of this we seem still to be coquetting with a Court which is obviously bound hand to foot to Germany.

Two Alternatives.

Discussing the two alternatives of which the Roumanian and Russian Staffs had the choice when Roumania joined in the war—operations against Bulgaria or against Hungary—the Military Correspondent of the *Morning Post* (October 27) points out that in the former case "it would have been necessary to hold the Transylvanian frontier defensively, and a failure at any point would have laid the main territory of Roumania open to invasion. The latter course, which was adopted, required a defensive attitude on the Danube-Dobruja front. The Danube might fairly be considered secure, while the Dobruja has a width of only 100 miles at the frontier, narrowing to less than 40 miles at the Constanza railway, and even if the defence were to fail in this section the invading force would still be on the further side of the Danube." He then proceeds:—

Those who think that it would have been better to invade Bulgaria do not say how they would have proposed to direct the campaign on the two fronts, but it would seem that they have neither appreciated the difficulties involved nor the objects which the Allies had in view. The invasion of an entirely hostile country of such an extent, and characterised by such topographical difficulties as Bulgaria, with the Turkish Army on the flank, would have been an operation of no small difficulty; and it could promise no decisive results in a reasonable time, even so far as the defeat of the Bulgarians was concerned. How the 360 miles of mountain frontier could have been held against Falkenhayn in the meantime is not evident in view of what has happened in the Dobruja and in Transylvania. Moreover, it was doubtless thought more advisable to follow up the advantages gained by the Russians in the Carpathians by attacking the flank of the Austro-German armies than to embark on isolated and divergent operations against a secondary enemy.

It may be conjectured that the plan miscarried because the promptitude of Mackensen's attack with an unexpectedly large force caused the vacillation which has often marred plans which might otherwise have succeeded.

Disquieted by Mackensen's irruption, Roumania diverted troops from the principal scene of action, and in the result Falkenhayn succeeded in obtaining possession of the Maros railway, and was thus enabled to concentrate his forces at Hermannstadt and Brasso more quickly than our Allies, and to distribute reinforcements at the various points of attack on the Moldavian frontier. The situation would have been reversed if the Roumanians had gained possession of the railway. The writer, however, indicates that the plan itself was not necessarily the worst of the alternatives, though, as usual, critics in plenty are to be found to declare that the other would have been preferable.

A Glorious End.

Under the dramatic heading "Sunk," "R.N.V." describes in *Blackwood* (October) the torpedoing of one of our old battleships in the Dardanelles last year. The name of the ship is not given, and though it is not very hard to guess, we will respect the author's apparent desire to preserve her anonymity. "An old battleship whose day of power was long past," she was, when war broke out, "a neglected unit at the very tail of British Sea Power, almost ready for the ship-breaker's yard."

War brought her to life again and to a glorious end. . . . In company with others of her age and kind she made part of that strange squadron, a motley of ancient and modern, headed

by the greatest ship in the world, which won renown at the Dardanelles. Written off by the callous Lords Commissioners of the Admiralty as "of no military significance," she yet told her tale of shelling sound and fury to the Turkish enemy in such a fashion as to make it signify some considerable damage to him, and to show that even the tail of our Sea Power had a good deal of nasty sting left in it.

The story of her last day's activities is told simply, and then we get in detail a description of her glorious end: the quiet night, the sudden realisation—as by some sixth sense—of danger, the hurried debate as to the nationality of the destroyer, the call to "Action Stations." Then the officer of the watch heard a faint splash in the darkness away on the port beam. "God! A torpedo," he exclaimed.—

He waited for the torpedo to strike—another long suspense; but within thirty seconds the splash was answered by a roar from the 4-in. port battery of his own ship. Tongues of flame leapt up from the muzzles, lighting up the night, and the shells whistled to their all but invisible mark. But before they could fire another round the torpedo struck. The ship quivered, a tremor running through every plate and rivet: her stern quivered like the hindquarters of a dog coming out of the water. Then she was heaved upwards by some monstrous power beneath. A great spout of water rose, and a great flame leapt out of the ship's belly with a deafening roar, sending its licking tongues high in the midnight sky. And all this was simultaneous: the quiver, the heave, the spout, and the flame were all blended in one vast, hot, terrifying chaos. A second explosion followed, rending the ship to her very vitals. Guns, boats, men, all were flung into the air like leaves in a whirlwind: one of the steamboats was seen spinning like a blazing top a hundred feet up in the air. The great ship herself reeled over to port, hung awhile with her decks steep aslant, and then plunged with a terrible hiss and roar to the bottom.

Even so, if ships had any consciousness, she would surely have preferred this end to one in the ship-breaker's yard. The effect upon the survivors of her ship's company is cleverly conveyed, and the article as a whole fills us with pride in the work done by our Navy at the Dardanelles, as elsewhere in this war.

"The Darfur Expedition."

In a leading article, entitled as above, the *Daily Telegraph* on Monday paid some well-deserved compliments to the conduct of the Darfur Expedition, the official report upon which was published last week. As the writer says, "among the many 'side-shows' in connection with the war, few have attracted less attention, and none has been, on its merits, more deserving of it, than the Darfur Expedition, launched in March of this year by the Sirdar and Governor-General of the Soudan, General Sir Reginald Wingate."

The expedition was, indeed, a model of those enterprises by means of which the prestige and authority of the British power are maintained, year by year, upon the confines of the Empire, and which have grown tenfold in importance since the knowledge that that power was threatened by collision with Germany spread throughout the disaffected or hostile tribes upon all our Asiatic and African frontiers. The difficulties involved were enormous, and the success with which they were overcome redounds greatly to the credit of the Sirdar's administration in the Soudan and of the native Egyptian army, upon whose shoulders the fighting work was laid, the British Army in Egypt being fully occupied with the defence of that country against the Turkish and Arab attack. The whole expedition, carried out in the face of extraordinary difficulties, and against "a numerically superior and fanatical enemy, armed with modern rifles and of no mean fighting spirit," stands as a shining example of what British organization and leadership, working with native troops, can accomplish under the most testing conditions.

A Question of Communications.

Reviewing the position in the Dobruja, in the *Birmingham Post* of October 27, Mr. Edgar Wallace points out that Mackensen and Falkenhayn can render no direct assistance to one another; though they have a single purpose, they are influenced by widely different circumstances. But the Roumanian, "who is fighting on interior lines, would be considerably benefited by an offensive either in the north or in the south, or, for the matter of that, in the south-west, because he could in a short space of time transfer troops from one front to the other."

Mackensen and von Falkenhayn are fighting to secure a single front in Roumania, and so long as that is denied them a slight advantage rests with the defence. The fall of Roumania would be brought about by Mackensen and von Falkenhayn joining hands. As it is, though as the crow flies they are separated only by a little over a hundred miles, they are in reality divided by over 700 miles of indifferent communications.

The Allies' task is, therefore, to retain that wedge between the two armies. We learn from Roumania that there has been a War Council at which the French mission was present, when certain steps were decided upon for the defence of Roumania,

and those defensive measures are now in course of formation. It will take some time to adjust matters, but if the German offensive can be held for a fortnight then the German is defeated, for obviously he has not sufficient troops to hold the line of the Danube in the rear of Mackensen, and (as the Roumanian has already proved) he cannot prevent the crossing of the river in Mackensen's rear. All that is wanted now is the time necessary to bring the troops into line and allow Russia, which is the only Power that can directly help Roumania, to send her divisions to strengthen the Roumanian front, and possibly to develop an offensive.

The Day of Reckoning.

Major Claude Askew contributes to the *Englishwoman* (October) an article, entitled "Round the Serbian Camps," which gives a vivid description of the rejuvenated Serbian Army in its quarters at Salonika. Here is a passage that helps us to realise the feeling that animates our gallant Allies:—

Of one thing I am sure; not a man regretted the comparative comforts of Corfu, when he exchanged them for the much more martial conditions of Salonika. For it was a great step forward to set foot upon Macedonian soil; there were men—and this is no exaggeration—who upon being landed from the transport which had borne them in safety to their destination, threw themselves down and kissed the earth—for Macedonian ground is Serbian ground as well. And I have seen in the camps how the men's faces have lit up when it has been announced to them that yet another step had been taken—that they may move forwards to their destination upon the front—almost, indeed, to the very gates of Serbia, and where but a little tract of land divides them from the enemy with whom they long to come to grips.

They face him under different conditions this time. The odds are no longer three to one, as they were upon the Austrian and Bulgarian frontiers; the day is at hand when Serb and Bulgar will meet man to man, and when victory will be to the right. It is a fact that the Bulgars know of this great force of revenge that is even now clamouring at their gates, and are disturbed in spirit. The whole tone of their Press indicates it. Latterly, they have been trying to console their people by assuring them that there is no Serbian Army at all.

The "non-existent" Serbian Army appears to have done something already to shake the confidence of the Bulgarians in their own Government and their Press!

Articles to Note.

"Gheorghe Lupu: A Roumanian Peasant Hero of the War," by Hamilton Fyfe, in the *Daily Mail* (October 27).

"The Betrayal of Venizelos," in the *Morning Post* (October 31).

"Present-Day Pessimism: Recent Events in the Balkans," by Colonel F. N. Maude, in the *Field* (October 28).

"General Judenich: The Man and His Task," in the *Times* (Russian Supplement) (October 28).

"Roumania and Verdun," in the *Spectator* (October 28).

"The Queen of Roumania," by the Princess Margaret Ghika, in the *Sphere* (October 28).

"King Constantine of Greece and Frederick William of Prussia III.: A Parallel," by Brigadier-General F. G. Stone; "Mitteleuropa and the Meaning of the Paris Pact," by J. A. R. Marriott, in the *Nineteenth Century* (November).

"The One Thing Wanting," by Dr. E. J. Dillon;

"The Position of Roumania," by "Politician";

"Places and Peoples on the Roumanian Danube"; and

"Zionism," in the *Fortnightly Review* (November).

7	25	Monday	10	10
8	26	Tuesday	11	11
9	27	Wednesday ..	12	12
		Thursday	13	13

Sunday is the birthday of Princess Helene, wife of Prince John Constantinovich of Russia, and daughter of King Peter of Serbia. The Princess was born at Rieka in 1884, and married at Peterhof in 1911.

Prince Mircea of Roumania is seriously ill with typhoid fever. His illness is reported to be following the normal course, but his condition causes serious anxiety.

A semi-official statement issued in Bucharest describes as "utter nonsense" a report spread in Germany that an attempt has been made on the life of the Queen of Roumania.

The Serbian Legation has received news from Salonika that the Serbian Crown Prince recently paid a visit to the British front on the Struma. His Royal Highness was received at the British Headquarters by the Lieutenant-General Commanding the Corps. After having seen several English battalions and a certain number of the artillery positions, the Prince visited certain villages recently conquered from the enemy by the British forces. He lunched with the Commander of the Corps, to whom he expressed with satisfaction the excellent impression left upon him by this visit to the British front.

Lady Maxwell has recovered from the fatigue of her journey to Ireland, and latest reports state that she is making slow, but steady, progress towards health.

H.E. the Roumanian Minister and Madame Misu called upon the Serbian Minister and Madame Yovanovitch on Saturday.

Mme. Camarashesco, daughter of M. Blondel, formerly French Minister at Bucharest, has been decorated with the Russian Cross of the Order of St. George for bravery under the enemy's artillery fire while attending to the wounded.

Lady Howard de Walden arrived last week in London from Chirk Castle, North Wales.

Comtesse Carton de Wiart arrived last week in town from the Continent.

M. P. Psycha, the Greek Minister in Bucharest, and Madame Psycha arrived in London from Roumania last week. M. Psycha has been at Bucharest for two years.

During the absence of M. Psycha, M. Rangabé, who was formerly First Secretary of the Greek Legation in London, is acting as Chargé d'Affaires at Bucharest.

Mr. E. A. Harrison, managing director of Messrs. Thomas Cook and Son (Egypt) Ltd., left London to-day on his return to Egypt, via Marseilles.

RELIEF OF DISTRESS

IN
PALESTINE AND SYRIA.

Bishop MacInnes will be glad to receive CONTRIBUTIONS made payable to the Rev. E. M. Bickersteth at the Church House, Westminster, S.W.

Mr. Asquith gave evidence at Tuesday's sitting of the Dardanelles Commission at the House of Lords, Lord Cromer presiding. Admiral Carden was also examined. The Mesopotamia Commission also met, under the presidency of Lord George Hamilton.

The Agent-General for Victoria, Australia (the Hon. Sir Peter McBride), has received authority to make a payment of £500 to the Serbian Minister for the relief of the Serbians, being a further contribution from the Lord Mayor of Melbourne's Serbian Relief Fund.

An engagement is announced between Humphrey Ernest Bowman, Egyptian Civil Service, Captain Royal Fusiliers, elder son of the late John Frederick Bowman and Mrs. Bowman, of 25, Young Street, Kensington, and Garramor, Arisaig, N.B., and Frances Guinevere ("Bobby"), youngest daughter of Colonel Armytage, late R.H.A., and Mrs. Armytage, The White House, York.

The marriage took place at Christ Church, Chelsea, on Saturday, of Lieutenant Ernest Arthur Charles Lloyd, Lovat's Scouts, son of Mr. Ernest Lloyd, of 68, Warwick Square, S.W., to Miss Charlotte Troubridge, second daughter of Vice-Admiral E. C. T. Troubridge. The bride was given away by her uncle, Sir Thomas Troubridge. Captain Ian Maxwell, Cameron Highlanders, was best man, and the bride was attended by her sister Miss Andrea Troubridge.

Colonel Sir David Salomons, accompanied by Lady Salomons, on Saturday unveiled, at the Drill Hall, Southborough, Tunbridge Wells, a marble memorial to Captain Salomons and the 128 rank and file of the 1/3 Kent Field Company, Royal Engineers, who lost their lives a year ago that day in the sinking of H.M.S. Hythe off Mudros. Major the Marquess Camden, in the name of the Kent Territorial Association, accepted the memorial, and Colonel Langridge, the Commanding Officer, placed a laurel wreath on the memorial.

It is not often that father and son are on the same front, but Dr. R. Cunyngham Brown, who graduated from medical work at Parkhurst Prison to the Lunacy Board in Scotland, has, together with his son, Lieutenant Gifford Brown, been in Macedonia for some time, says the *World*. Dr. Brown, who is engaged in Red Cross work with the Serbian Army, has been in hospital with malaria, while his son has also been ill but has been sent to Malta to "convalesce."

A marriage has been arranged and will shortly take place between Mr. Trevor M. Shakoar, of the P.W.D., Egypt, son of the late Milhem Shakoar Bey, of the Egyptian War Office, and Mrs. Shakoar, of Liphook, Hants, and grandson of the late Richard Chute, Esq., J.P., D.L., of Chute Hall, County Kerry, Ireland, and the Hon. Rose Chute, daughter of the third Baron Ventry, and Maud, fourth daughter of the late Deputy Inspector General W. G. Ridings, R.N., and Mrs. Ridings, of Havant, Hants, and granddaughter of the late Edward Warrington, Esq., of Dengie, Essex.

Mr. Matheson Lang is giving the proceeds of his first-night performance of "Buxell" at the Strand Theatre, on Tuesday next, to the Scottish Women's Hospitals at present in the Dobruja, Roumania.

For the purpose of raising funds for the purchase of another motor hospital boat for Mesopotamia, a house-to-house collection was made in Wimbledon last week, in connection with the Wimbledon "Silver Thimble" motor ambulance movement, which was inaugurated by Lady Maud Wilbraham. As a result of the effort, several thousand gold and silver articles—old thimbles, bracelets, brooches, watches, coins, curios, and trinkets, many of considerable value—were contributed. On Saturday the more valuable articles were offered for sale at the Wimbledon Town Hall, and found a ready sale. With the price to be given for the articles

set apart to be melted down, it is estimated that the £1,000 required for the purchase of the boat will be secured.

Two lectures will be given by the Rev. Father Nicholas Velimirovitch, Professor of Theology in the University of Belgrade, in the Large Hall, King's College, Strand, at 3 p.m., on Saturdays, November 4 and 11, in aid of the funds of the Workers' Educational Association (London District). The subject of to-morrow's lecture will be "Serbian Architecture and Poetry, and their Influence on a People's Education," and the chair will be taken by Dr. R. M. Burrows, Principal of King's College. On November 11 the subject of the lecture will be "The Russian Democracy, its Foundation and its Future," and the chairman the Very Rev. Dean of St. Paul's. Tickets—5s. and 2s. 6d. for one lecture, 8s. 6d. and 4s. 6d. for both—may be obtained from Mrs. Hugh Dalton, 39, Cheyne Walk, S.W.

SUDAN APPOINTMENTS.

(FROM A CORRESPONDENT.)

Captain F. J. M. Postlethwaite, who formerly occupied the position of Second Inspector at Gedaref, has, as announced in your columns, now left the service of the Sudan Government. During his tenancy of the Inspectorship at Gedaref Captain Postlethwaite brought about a complete transformation, both in appearance and in the conditions of the town and district, a very large one, necessitating the closest and most careful official supervision. It is satisfactory to know that Captain Postlethwaite's services have been suitably appreciated in high quarters, the Sultan of Egypt having conferred upon him the Order of the Nile.

Mr. F. C. C. Balfour, whose appointment as Second Inspector of the Kassala Province has also been announced by you, was formerly Second Inspector of the Nuba Mountains Province. He has seen exactly ten years' service under the Sudan Administration, having first joined the Government in the early days of November, 1906.

The long official services given by Mr. A. N. Wilkinson to the Sudan Administration have now come to a close, he having been placed on pension, dating from September 17 last. Mr. Wilkinson was latterly one of the four Inspectors in the Department for the Suppression of Slave Trade, the present staff of which consists of the following:—Captain F. Atterbury, who is stationed at El Fasher (Darfur), on temporary duty; Captain H. E. Dumbell, stationed at Khartoum, and formerly First Inspector of the Kassala Province; Captain D. S. B. Thomson, who is at present absent on leave; and Mr. A. Wylly, whose headquarters are at Sinkat. Mr. Wylly's appointment as Inspector under this Department dates from September 18 last.

Captain G. B. Wauhope, who was for several years Inspector in the Kassala Province, has rejoined the Egyptian Army, and in recognition of his services he has received, at the hands of the Sultan of Egypt, the Order of the Nile.

Mr. T. A. Leach, formerly First Inspector in the Kassala Province under the governorship of Major C. H. Townsend—who, by the by, has been absent on leave but returned to duty in October last—has now been promoted to be Senior Inspector in the same Province. Of the four Second Inspectorships, three alone are at present filled, the occupants being Messrs F. C. C. Balfour, A. H. Home, and C. H. Thomson.

The Governorship of the Upper Nile Province has become vacant by reason of the transference of Captain J. R. Bassett to the Army. In the meantime, Captain C. H. Stigand, the Senior Inspector, is Acting Governor, and it is believed that in due course he may be appointed to the full governorship. Captain Stigand has seen six years' service under the Sudan Administration and is very popular in Malakal, the seat of the Provincial Government.

Mr. G. E. Seabright, who for some time has filled the position of Assistant Engineer under the Government to the Kordofan Province, and who has had more than eleven years' experience as a Sudan Government official, is now employed with the Western Frontier Force, and has been temporarily endowed with the rank of Bimbashi.

OBITUARY.

The death took place on Thursday, October 26, at Hamel Hempstead, of Dr. James Vaughan-Hughes, aged 95 years. He was the author of "Seventy Years of Life in the Victorian Era," which records his work with Florence Nightingale, when he was attached to the medical staff in the Crimea. He was for a time in charge at Balaclava Hospital, and attended Florence Nightingale when she was suffering from camp fever. When she recovered he secured the loan of Lord Dudley's yacht to convey her back to Scutari. Later he himself contracted Asiatic cholera, and he attributed his recovery to the attention of Miss Nightingale and her nurses. Despite his great age, he rode on horseback and drove a carriage and pair and his own motor-car till a few months ago.

It is announced that Captain F. G. R. Mockler, M.C., Royal Irish Regiment and Machine Gun Corps, was killed in action on July 1. He was the younger son of Major-General Mockler, I.A. (retired), who was formerly British Consul-General at Baghdad, and of Mrs. Mockler, was educated at Elizabeth College, Guernsey, and Sandhurst, and was twenty-six years old. Letters from his brother officers testify to his popularity with them, and he was much respected and looked up to by his men. He was mentioned in despatches, and was decorated with the Military Cross by the King in May of this year.

It is announced that Captain Charles Mill Nicol, M.B., Royal Army Medical Corps, has died of wounds. A son of the late Mr. John Nicol and Mrs. Nicol, of Brisbane Street, Glasgow, he was born in 1837, and graduated from Glasgow University, with the degrees of M.B. and Ch.B. He entered the R.A.M.C. in 1909, and was promoted in 1913, and was gazetted to the staff as Deputy Assistant Director of Medical Services. He was stationed in Egypt when the war broke out, but was transferred to France at the end of 1914. He was mentioned in Viscount French's despatches, and was regarded as a brilliant officer. His youngest brother was killed in the Gallipoli operations.

Second-Lieutenant Allan George Condi, Border Regiment, who (as already announced in these columns) was killed in action on October 1, was the only son of the late Frederick Condi, of Corfu, and Mrs. Condi, of Mulcaster Crescent, Carlisle. Born in 1896, he was educated at St. Bees School, where he was in the O.T.C. He left school in August, 1914, and shortly afterwards was articled as a solicitor to his cousin, Mr. C. W. Allan Hodgson, clerk of committees to the Cumberland County Council. He obtained his commission in September, 1915, and went to the front last February. His commanding officer writes:—"He was gallantly leading his men in an attack on the German trenches. . . . His comrades mourn your son's loss very deeply."

Second-Lieutenant Philip Harold Ziegler, East Kent Regiment, who is reported to have died of wounds on September 23, was a partner in the firm of Ziegler and Co., of Manchester and Persia, and was the only son of Mr. and Mrs. Ziegler, of Victoria Park, Manchester. Aged 23, he was educated at Tonbridge School and Neuchatel, and soon after the outbreak of war he enlisted as a private in the U.P.S. Brigade. After active service in France, he returned to England, and was granted a commission last July.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.

SYRIAN RELIEF FUND.

The Syrian Relief Fund which—as reported in THE NEAR EAST of October 20—was inaugurated in Manchester in the middle of last month, has already met with generous support. We publish below a first list of donations, received up to October 28. In forwarding this list the hon. secretary (Mr. K. Jebara) expresses the hope that by the end of this week the amount received will be £4,000 or over. "It is," he writes, "really marvellous how nobly the British public have responded to the numerous appeals put before them during this terrible war." We heartily congratulate those responsible for the promotion of the fund, and have much pleasure in commending it to the generous notice of our readers. Further subscriptions are earnestly invited, and may be made payable to the hon. treasurer, Mr. E. E. Rigby, and sent to the Lancashire and Yorkshire Bank, Limited, Mosley Street, Manchester, or its branches.

PRELIMINARY LIST OF DONATIONS,

Received or Promised up to October 23, 1916.

Halil Bey, the Turkish Minister for Foreign Affairs, has returned to Constantinople. Captain Trumpeldor, who won distinction in the Zion Mule Corps, has arrived in London with the view to furthering the enlistment of Russian-born Jews in the British Army.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

PENNELL.—On October 23, at Port Said, to R. H. and Mrs. Lee Pennell—a daughter.

MARRIAGE.

STATHER HUNT—TURNER.—On October 20, at Lausanne, the Rev. William Robert Stather Hunt, M.A., eldest son of the Rev. Canon Stather Hunt, C.F., and Mrs. Hunt, of Tunbridge Wells, to Bridget, third daughter of the late Charles Turner, of Suez, Egypt, and Mrs. Turner, of Mundesley, Norfolk.

DEATH.

STRICKLAND.—On October 31, Paul Strickland, second son of the late Captain Walter Strickland, R.N., and of Mrs. Strickland, of Valetta, Malta, of Lincoln's Inn, Barrister-at-Law, aged fifty-four. Funeral at St. Patrick's Church, Conway Street, Plumstead, Friday, the 3rd, at 10.30.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.5; Room, P.T.2; Lunch, P.T.18; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL, Glymenopoulo, Ramleh.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOUY'S CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troodos.

For Tickets and further Particulars, apply to **NAJEM HOUY & SONS, LIMASSOL, CYPRUS.**

Proprietors of "The Army and Navy Stores." Branches—Polymedia, Troodos, Nikosia, Famagusta, Larnaca and Platres.

Head Offices and Central Stores: LIMASSOL. All arrangements for Transport, &c., are made by the above Firm.

FRIDAY, NOVEMBER 3, 1916.

THE GREEK TANGLE.

In the prevailing uncertainty in regard to the situation in Greece we can but hope that the Allied Governments are doing the right thing. It is by no means clear, however, that, if they are, they are doing it in the right way. We do not subscribe to the theory of democratic control of foreign policy, for in practice such a system is impossible; but this fact imposes upon those who conduct the nation's foreign affairs the responsibility of availing themselves of every opportunity to carry public opinion with them. In the case of Greece at the present moment there can be no excuse for allowing any wrong impression to gain currency either in Greece itself or in Great Britain regarding the plans of the Allies. If it be contended that the Allied Governments cannot be held responsible for misrepresentations in the Greek or any other Press, the answer is that there are very obvious ways of ensuring that the public shall have accurate knowledge of the Allies' actions. Much more is at stake than the time-honoured controversy between official reticence and Press publicity. Some of the Entente Powers, it is to be feared, fail to appreciate the advantage of having popular feeling solidly behind them in this war. Nothing is more calculated to blunt the national resolve to win than the thought that things are being badly handled, that errors of judgment and avoidable mistakes are continually being made. If the tradition of muddle is not being perpetuated in the Allies' dealings with Greece, there can be no reason why the Greek people should have taken it into their heads that the Entente Powers in deciding to make their peace with King Constantine are by way of ignoring their understanding with M. Venizelos or, in common parlance, of "letting him down." The Greeks apparently base their view on a semi-official statement published in *Le Matin* to the effect that France will henceforth take no action in connection with Greek affairs except in common with her Allies and in complete harmony with the very respectable sentiments of the Sovereigns allied to France. We do not pretend to know what this cryptic utterance means; but in Greece it has not unnaturally been interpreted as an intimation that King Constantine has been able to hold his own in his struggle with the Allies and is to retain his autocratic power unimpaired. The anti-Venizelists have not been slow to indicate the inevitable corollary to such a decision, and are already celebrating the political demise of M. Venizelos and the collapse of the Salonika movement.

In all probability the wish is here father to the thought. But apart from the statement in *Le Matin* there has been much to encourage the belief that the Allies' policy in the Near East was once more undergoing the familiar process of vacillation. The sudden recognition of the new Ministry, which, whatever the attitude it might affect towards the Entente Powers, could not be termed the Cabinet of affairs which they had demanded of Greece, and the precipitancy with which a single audience of King Constantine produced a *communiqué*, manifestly intended to reassure everyone except the Greeks who had proved themselves ready for action on the side of the Allies, seemed almost like apologies for the very measures which alone had prompted the Greek Government to adopt a more reasonable frame of mind. The Allies, we believe, have very properly kept one aim in view in their dealings

with Greece—they have desired the minimum of interference with Greek affairs compatible with the safety of the Salonika force and the interests of the Allies as a whole in the Near East. But the methods adopted to secure this end—praiseworthy though they may have been from the point of view of tolerance in the face of the hostility of those in authority in Greece—have been directly responsible for a state of political chaos in the Greek world. It ought to be a self-evident proposition now that the Allies, having brought into existence the two camps into which Greece is divided, and having encouraged, if only by their silence, M. Venizelos to the top of his bent, cannot leave the Provisional Government in the lurch, or indeed come to any understanding with King Constantine and the Athens Government which does not take the Salonika movement into account. It is true that this movement has never repudiated allegiance to the King, and has been careful to leave the door open to reconciliation; but, to judge by the insight into his character and disposition which King Constantine has recently allowed the world to obtain, it is not likely that he will accept in its entirety the "Provisionalists'" view of their own action. *Prosperum ac felix scelus virtus vocatur.* To prevent the ugly name of treason being applied to the Salonika movement the Allies have to make sure that it prospers, and that the Provisional Government is completely justified in the eyes of Hellenism. They cannot divest themselves of responsibility in the matter; for they seem to have provided money as well as hospitality for the Government, and have by various means collected supporters for it.

As we have urged before in these columns, there is no reason why Greece should not emerge from her present crisis at peace with herself. One course to adopt would be to leave the nation to its own devices, even to the possibility of civil strife. Such a solution would not be in keeping with British traditions, and would hardly commend itself to the civilised world. A better course in view of all that has happened is surely for the Allies to bring the whole people together again by a definite process of reconciliation. What can only be regarded as an intolerable solution would be that King Constantine and the Athens Government should in some way be left masters of the situation, so that they can impose terms or even wreak vengeance, if so minded, on those who, realising that Greece's interests coincided with those of the Allied Powers, have sought to promote both by honourable action. Already there are reports of harsh disciplinary measures being adopted to meet the case of officers of the Army and Navy who have thrown in their lot with the Salonika movement. The position is admittedly anomalous, or would be in any other country which has not been accustomed, as Greece has, to see Army officers taking part in unofficial military operations just over the frontier. It is, however, one thing to record formally the resignation of officers so engaged, another to threaten to cashier them by court-martial. The Allies, it would be thought, can be under no illusion regarding the spirit in which King Constantine is meeting them, if simultaneously he authorises a malevolent persecution of all those who have thrown in their lot with or are suspected of wishing to join the Greek forces in Macedonia. If it be true that there is documentary evidence to prove that, in spite of the Greek Government's denial, instructions were issued to the commander to surrender Fort Rupel to the Bulgarians, then the Allies will be justified in looking for Greek "slimness" in other directions. The prospect of being able to pay off old scores against M. Venizelos and his followers may have helped to reconcile King Constantine to having to make his peace with the Entente. Unless care is taken by the Allied Governments to safeguard the Nationalist party, permanent injury will be done to the cause of constitutional liberty and progress in Greece. Having gone so far in their intervention in Greek affairs, the Allies cannot now withdraw unconditionally at the first sign of a more reasonable attitude on the part of the King. Even if there is a feeling that some of the measures adopted have been unduly severe, these cannot be atoned for by half-measures at this stage. It is a case not only of standing by one's friends, but of seeing them duly reinstated without prejudice to their future.

THE RUSSIAN ADVANCE IN THE CAUCASUS AND THE TURKISH COUNTER-STROKE.

III.*

(FROM A CORRESPONDENT.)

The main line of advance of the Russians, as we have seen, followed the valley of the Phrat from Erzeroum to Erzinjan, which was captured in the end of July, while at the same time their right wing, pressing along the Trebizond road, took possession of Baiburt and Gumushkaneh. The Turks, while obstinately contesting this advance, as they still continue to do, prepared by way of counter-stroke a vigorous offensive against the southern flank of the enemy's long line of communications, hoping to delay his progress by the menace to his rear. This counter-offensive, which is said to have been planned by a young German officer, Major-General von Gresman, comprised a variety of skilfully co-ordinated movements, designed to operate against the scattered Russian forces to the south of Erzeroum from as many directions as possible. It met at the outset with considerable success, and created, as Petrograd subsequently admitted, a serious situation.

Apert from the movements in Central Persia, which have already been dealt with, the Turkish means of access to the uplands on which it was intended to operate may, as stated in the preceding article, be classified under three heads, and are so classified in the Russian *communiqués*.—(a) *Via Rowandiz and the Persian Frontier*; (b) *via Bitlis and Mush*; (c) *via Kighi and Oghnut*; and the operations which preceded or accompanied the offensive in each of these regions, so far as information has been vouchsafed regarding them, may be treated separately.

* Previous articles of this series appeared in *THE NEAR EAST* of October 20 and 27.

(a) Via Rowandiz and the Persian Frontier.

Rowandiz lies on the Turkish side of the Turco-Persian frontier 100 miles east of the important city of Mosul on the Tigris; hence the Russians frequently refer to operations in this neighbourhood as being "in the direction of Mosul." The conjecture has already been hazarded that it was not found necessary to move troops in force to guard this approach at the time of the original advance on Erzeroum. The Russians already dominated this part of Persia; their communications were better than those on the Turkish side; they could concentrate on the frontier more quickly than the Turks, even in the unlikely event of the latter being at this time in force at Mosul. They waited, therefore, till the spring, when, in pursuance of their policy of threatening the Turkish communications on the Tigris, they moved across the frontier, and took possession of Rowandiz in the first half of May, simultaneously almost with their capture of Kasr-i-Shirin on the frontier 200 miles to the south.

For the next two months no change in the situation was reported, but in the end of July the Turkish preparations for the counter-offensive were complete; they crossed the frontier and advanced rapidly into Persia. Until further information is available we can only conjecture what happened; but it would seem that the Turks attacked in two independent bodies, one of which, based probably on Baghdad, and transported by rail to Samarra on the Tigris along the completed section of the railway that links those two places, crossed the frontier well to the south of Rowandiz, and, meeting with little opposition, pushed forward for 70 miles past Sakiz in the direction of Lake Urmi (south-east of Lake Van), threatening to cut the communications between Rowandiz and Tabriz. The other, consisting of or including the 4th Division, made a frontal attack on the passes above Rowandiz, was led into an ambushade, surrounded, and almost destroyed, in the latter half of August. The greater part of two regiments surrendered, 2,300 prisoners were taken, and the shattered remains of the division were driven back over the frontier. The

SKETCH MAP SHOWING FIELD OF RUSSIAN OPERATIONS
(The shaded portion indicates area in which the ranges run mostly North and South.)

force that operated further south was less easily disposed of. In the beginning of September it was still near Sakiz, 60 miles within Persian territory, but by the end of the month it had been driven back, fighting obstinately, to the border. Desultory fighting still, however, continues in this region.

The chances of a successful Turkish attack in this neighbourhood were small from the start. The Russian hold on North-Western Persia is almost certainly too strong for any forces that the Turks can bring to bear. An account has recently appeared of the completion of railway communication to Tabriz, whence a branch line leads to the frontier; and we may assume that in other directions also communications have been improved. The success of our Ally in August and September effectually dissipates any danger of a Turkish attack from Mesopotamia by way of the northern part of the Persian plateau. It is possible that the Turkish offensive in this direction may have forced the Russians to withdraw some of their forces from the Hamadan country to the south. In all other respects it was a failure.

(b) Via Bitlis and Mush.

The next staircase from the plains to the uplands is by the Bitlis Pass, and here the Turks made their second assault, combining it with a movement on Mush, probably based on Diarbekr. From the outset of the campaign the Grand Duke had taken precautions against such a danger. The advance on Erzeroum was accompanied by a sweeping and simultaneous movement over the plains north of Lake Van. This may have come across the Persian frontier, or the troops employed may have started from the railhead at Erivan. In any case the advance was independent of the main army, and was not a mere movement to the south of a detachment from the troops engaged in the assault on Erzeroum. The rapidity with which it was carried out shows at once the completeness of the Russian plans, the remarkable aptitude of their troops for campaigning in winter, and the unpreparedness of the Turks. No organised opposition seems to have been encountered, and there were probably no troops at hand to offer it. The only garrison town in these parts—Van—lies away to the south, at the eastern end of the lake, and the few troops ordinarily maintained there would be incapable of obstructing a Russian advance in force. The majority of the inhabitants of the plateau are Kurds, who have been freely recruited as irregular cavalry; but the Kurds have no enthusiasm for their masters, and their irregular troops have always been despised by the professional soldiers of Turkey. Their attitude to the Russians seems at the outset to have been almost friendly, certainly not actively hostile. From Mush to the nearest point on the Persian frontier the distance is 100 miles; to Bayazid, in the direction of Erivan, it is half as much again, yet so rapid was the Russian advance that on February 19, only a few days after the capture of Erzeroum, it was announced that Akhlâ, a town on the northern coast of Lake Van, and Mush had been occupied. The Russians then closed in on Bitlis, which lies between these two places, a little to the south, where they met with the first opposition that they considered sufficiently important to chronicle. They were obliged to storm the town, which they captured in the first days of March.

It is improbable that the Russians continued to hold either Bitlis or Mush in force. The question of supply would of itself prevent the concentration of large forces, and such troops as were maintained in this region would be dispersed in quarters convenient for supply and for overawing the country. There they remained unmolested until, towards the end of July, the Turkish counter-stroke in this direction was launched. The *communiqués* indicate that it came from the direction of Diarbekr, whence communication with the railway is easy; but much must for the present remain obscure. A Russian report on August 9 that their troops had fallen back after heavy fighting prepared the way for the announcement by the Turks that both Mush and Bitlis had been reoccupied on the 8th. The Turks were in considerable strength. Their forces, which were estimated at from one and a-half to two corps, advanced up the valley of the Murad, threatening the Russian communications some ninety miles to the

north, and succeeded in covering one-third of that distance before the Russians could concentrate a sufficient force to check them. The distance of the scene of fighting from the main Russian Army at Erzinjan has been referred to in explanation of the time required for reinforcements to arrive, but it may be doubted whether the Russians allowed this sudden thrust of the Turks to interfere with their dispositions in the main theatre of operations. The *communiqués* rather suggest that they fell back to the north of Lake Van for the purpose of concentrating their scattered troops in that region, an operation which took some three weeks. On the 23rd they announced that they had gained the day in fighting west of Lake Van, taking prisoners and guns, on the 24th that they were pressing on, on the 26th that they had re-entered Mush, whence they made a further advance into the hills beyond as far as the Kozma Geduk, a pass over the mountains on the road to Diarbekr. The worst danger was then past, and Petrograd felt free to admit how serious the situation had been. The Turks, however, still occupied the country from Bitlis to Mount Nimrud (an extinct volcano, the crater of which is occupied by a lake) and so on to the shore of Lake Van. An attack on this line was assisted by an armed ship on the lake and by British armoured cars on land; and the Turks were driven back to the heights above Bitlis, which they still appear to hold. The Kurds meanwhile have developed a hostile attitude, and the British cars have been usefully employed in holding them in check, as well as in attacking the regular Turkish troops, overcoming by ingenious and laborious expedients the difficulties of operating in such a country.

It does not appear that any decisive blow was struck at the offensive of the Turks in this sector of operations. On the contrary they seem to have made good their retreat with only small losses in prisoners and guns, and to have been able to establish themselves on the crest of the Bitlis Pass, as well as on the passes which the road to Mush from the plains traverses. Their position still constitutes a menace to our ally, whose line of communication between Mush and Lake Van is threatened, and she must find it increasingly difficult, as winter sets in, to maintain a large force within striking distance of Bitlis. The recapture of that place would bring the operations to a satisfactory close, but the latest reports indicate that the Turks not only maintain their hold on the town, but have gained possession of parts of the road between Bitlis and Mush.

(To be continued.)

BULGARIA BEFORE THE RUSSO-TURKISH WAR.

Lecturing recently at King's College, Dr. Seton-Watson traced the history of Bulgaria from the earliest times to the period immediately before the Russo-Turkish War. The State founded by the first Bulgar invaders of the Balkan peninsula was destroyed by the Emperor Basil in 1018, and nearly two centuries passed before the Bulgars had revived and united with the Vlachs to form a Bulgaro-Rouman State, which, at its prime, stretched over a large part of the Balkan peninsula. The new Bulgaria fell before Stephen Dushan in 1330, and became a vassal state of Serbia. The quarrels of this time between the various Christian peoples were largely responsible for the entry of the Turks into Europe. Kossovo was fought in 1389, and a few years later the Turks overran the whole of Bulgaria, killed its Tsar, removed its Patriarch to Asia Minor, and subjected its Church to the Greek Patriarch, who thenceforth was to act as intermediary between the Porte and all its Christian subjects. By the middle of the fifteenth century Bulgaria, with Serbia and Bosnia, was completely under the heel of the Turk, the people crushed, and many of their children taken to be trained as janissaries. Still, they managed to exist through the centuries. When, about the end of the eighteenth century, the national idea began to revive, the influence of the Greek Church authorities was one of the forces against which it had to contend. These set themselves to destroy all monuments and manuscripts that had any connection with the Slavs, and only eighty years ago the Greek Metropolitan of Tirnova made a bonfire of the old library of the former patriarchs of Bulgaria. Nevertheless, the national idea grew, schools were founded, an underground revolutionary movement with headquarters at Bucharest came into being, and the Porte, in pursuance of a policy of playing off one section of its Christian subjects against another, consented to the establishment of a Bulgarian Exarchate. In the 'sixties a reforming governor, Midhat Pasha, was appointed, but his administration only lasted a few years; and after he was gone the *régime* of corruption and oppression was resumed.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Cast Army Horses.

Oct. 26.

The Earl of DERBY informed the Earl of Mayo that all cast Army horses in Egypt, Salonika, and Mesopotamia were slaughtered. In France they were all to be sold for meat slaughter in the presence of an officer of the British Army. There was a reservation in the case of mares that might be capable of breeding in France a good stock of horses for the future.

Our Forces in Mesopotamia.

Oct. 31.

Viscount MIDLETON asked the Under-Secretary for War whether he could make any statement as to the condition of the Forces in Mesopotamia in respect of supply and transport, whether he could give any assurance that all necessary supplies and hospital comforts were available in the various camps, and whether he could give any statistics of sickness and invaliding during the first eight months of this year.

The Earl of DERBY said that if he did not give statistics on any particular points the sole reason was that they might be of assistance to the enemy. As to the improvement that had taken place in Mesopotamia since the War Office took over that region, he would read a telegram received by the Colonial Office from Colonel Godfrey Collins at Busreh, dated October 29:—“Without exaggeration, Busreh presents a hive of industry with American hustle and British adaptability. A port is being created and a town erected. The last five mixed steamships cleared in twelve days. Each troopship emptied on arrival. Supply situation well in hand; no necessity for anxiety.” Our difficulty had been the transport of stores from the base to the advanced posts. Shortly before the recess he had warned their Lordships that it would be well towards the end of October before any great improvement would be shown, and he thought that improvement would be shown to have taken place; though what had been done so far was not perfection. It was very far from that. Such instructions had been given and such preparations made as will bring us as near perfection as we can possibly get in such a region. In a letter, written to the Quartermaster-General, General Maude said:—“Colonel Gray has taken over the inland water transport, and I hope we shall now get a move on. I was down at Abadan yesterday, where we have a dock-yard for putting barges together, and there will be a steady output in the way of barges. The square-ended barge sent out has been found to be practically useless, as it is unable to pass the narrows. Therefore from these barges from which we had hoped a great deal we have received little assistance. We had a windfall yesterday in the arrival of a ship from Singapore, which brought a couple of stern-wheelers, and some barges, and tugs which were not expected, and these will help to speed up matters. Barges are what we want most. Some more are, I understand, already on the way, and the stream will soon begin to arrive. With the matter now in Gray's capable hands I think we may look forward to the future with confidence. . . . The supplies and ordnance stores are coming along well. The quantity accumulated here is very gratifying, and, providing that a steady stream of all requirements keeps on arriving here, things should be all right in these respects.” The letter also pointed out that labour is a great difficulty, but it was hoped to get over that difficulty by the porter and labour corps promised from India. On July 20, the date on which the War Office assumed control, the average tonnage carried daily up the river was 222 tons, while on October 9 it was 680 tons, and it was estimated that by October 31 it would be 860 tons. The supplies sent out included 4,800,168 rations of preserved meat, 3,925,580 lbs. of biscuits, 1,387,665 tins of condensed milk, and 2,155,787 lbs. of lentils. The Quartermaster-General's report was that the supply situation in Mesopotamia is clearly more satisfactory. General Scott, who had been sent out to supervise these matters, stated in his report that ample supplies were arriving at Busreh, that no difficulty was anticipated in getting all the supplies of forage required from India, that the reserves were greatly accumulating at the advanced supply depots, and that the troops were getting full rations. The War Office now received from the Director of Supplies and Transport of the Mesopotamia Force weekly telegraphic reports, stating what stocks of the principal items of supply are at hand at the front and at the base, and also whether there is any shortage of any description. The stocks were not quite as ample as one might wish, but they were quite adequate. The force was at present being fed on fresh meat, but tentative arrangements had been made for the supply of frozen meat.

As to munitions, in the opinion of the military authorities the munitions sent out to Mesopotamia were in every way ample. There was no remount difficulty in Mesopotamia; we had all the horses we required, and by strengthening the veterinary department it was hoped to keep both horses and mules in good condition. The Royal Flying Corps in Mesopotamia, which had been seriously reduced owing to sickness and other casualties, had now been reinforced with experienced officers and suitable aeroplanes.

The floating hospitals had been considerably augmented, and it was now possible to transport sick and wounded without delay and in reasonable comfort. A fleet of hospital steamers was being built, but they would not be available until next year. Men of skilled trades had been sent to Mesopotamia, and also unskilled labourers from West Africa and Nigeria. We had despatched to Mesopotamia and India several general and stationary hospitals, casualty collecting stations, field and motor ambulances, with 323 officers, 500 nurses, and 2,885 other ranks. In addition, we had sent out assistant surgeons, dental surgeons, and dental mechanics. The War Office had relieved the India

Office of the responsibility of meeting the demands for the medical and surgical stores and equipment required for Mesopotamia, which India was unable to supply, and arrangements had been made for the Commander-in-Chief in India to intimate his requirements in the matter of medical stores direct to the War Office. It was extremely difficult to give trustworthy figures of the amount of sickness in Mesopotamia. Some figures received, which were admittedly incomplete, showed that from April 27, 1916, to July 29, 1916, the admissions to hospitals of British troops were 2,739 per week, the number of deaths 108, and of evacuated 1,048. From August 5 to September 23 the admissions were 1,705 per week, the deaths 39, and the number evacuated 738. A debt of gratitude was due to Sir A. Keogh for the way in which he had met the medical demands, and also to the Quartermaster-General and his department for the manner in which they had endeavoured to meet the requirements of the Mesopotamia Force. As far as possible, we were relieving entire units in Mesopotamia by fresh troops.

HOUSE OF COMMONS.

Our Roumanian Ally.

Oct. 26.

Sir E. CARSON asked whether the Prime Minister could make a statement regarding the position of affairs in Roumania.

Mr. ASQUITH: I do not think it is possible, or at any rate desirable, to say more at the moment than that the military situation in Roumania is engaging the most anxious attention not only of His Majesty's Government, but of all the Allies. They have taken now for many weeks past, and are taking, every possible step to support our comrades in Roumania in the splendid struggle they are making. I hope we shall not take an unduly pessimistic view of the future. Russia, France, Great Britain, and Italy have been and are concerting measures in which each of us are doing all in our power to support Roumania in her struggle.

Cyprus, Malta, and Man Power.

Colonel YATE asked the Secretary of State for the Colonies whether, in order to enable the various colonies to contribute their quota to the man-power of the Empire, measures will now be taken to make the Military Service Act applicable to Malta and Cyprus.

Mr. BONAR LAW: His Majesty's Government do not consider that such an extension of the application of the Military Service Act would be useful.

The Situation in Greece.

Oct. 31.

Mr. R. M'NEILL said that at the present time there was something like a climax of misgiving in the country with regard to the whole of our position in the Near East, and especially with regard to our position in Greece. We had an Army of undefined size at Salonika, where we were on neutral soil, but we were there on the invitation of the Constitutional Government of Greece. That Constitutional Government had been replaced, and M. Venizelos, the statesman who had issued the invitation to the Allies to use Greek territory as a base, had been dismissed from office, had been driven into opposition, and had now formed a Provisional Government. We were therefore confronted with the extraordinary state of affairs of a *de jure* Government presided over by a King openly hostile to the cause of the Allies, and at the same time a rival Government presided over by a constitutional statesman who was responsible for our presence there. The question arose what should be the attitude of our own Government towards these rival authorities. We were taking up an attitude which did not appear to be pronounced on one side or the other, and news was now published, not officially, which added to the disquiet and misgiving with which the attitude of our Government was regarded in the country, and, he believed, in that House. He felt that unless the Foreign Office could devise some way of taking the House, or a portion of the House, more into their confidence the disquiet which was existing might grow and it might become impossible to restrain criticism of a very different type from that he was advancing.

Mr. LYNCH warmly resented the action and policy of his Majesty's Government in protecting and propping up the tottering throne of an enemy King whose attitude showed that he was one of the outposts of Germany and sacrificing the great man who had done so much in the cause of the Allies and was the true representative of the sentiments of his fellow countrymen.

Lord ROBERT CECIL—My hon. friend told us, and quite truly, that the course of events which had taken place in Greece invites attention, and has caused some misgiving in this country. I am not aware of the terms of the publication at Athens to which he referred, but I think we should do well to treat with some caution all reports from Athens. I am not saying anything offensive about the Athenian people, but they were undoubtedly somewhat excitable, and the reports which reach us from that capital are not always moderate. As to the substance of the matter, I desire to protest in the strongest possible way against the allegation made by the hon. member for Clare (Mr. Lynch). I do not know what he means by saying we were propping up King Constantine to assist the German propaganda in Greece. I am sure King Constantine would not take that view. I say quite frankly that I believe anything that makes for the reunion of all the Greeks would be a very desirable thing. I hold the view very strongly that we, who have a very special position in regard to Greece, can and do desire nothing more than its greatness and prosperity. We believe that that greatness and prosperity can be achieved only by a close association of the Western Powers. We believe that the old phrase of a benevolent neutrality conveys a great deal of truth as to the proper attitude

to be assumed. But we believe strongly that whatever her attitude towards the Entente Powers might be, anything which separates her from them must end in disaster to Greece and lead to a serious state of things, which will last far beyond the present war. It has been suggested that we were under special obligations to M. Venizelos, because we went there at his invitation. I suppose everybody who has followed the career of M. Venizelos has the profoundest admiration for that statesman: we all know his deep patriotism, his great courage, his unerring sagacity, and the fine public spirit and single-mindedness which he has shown, not only on this occasion, but on previous occasions. But I do not think it is a true statement or a useful statement to say that we went there at his invitation. It was at the invitation of the Greek Government, of which he was the head. It was the Greek Government that invited us.

The hon. member for Clare expressed the view that the French people and the French Government thoroughly disagreed with our policy. I am in a position to assert in the strongest way that that is utterly untrue. We have acted throughout in closest concert with all our Allies. At the Boulogne Conference, the other day, I am assured by those who were there that there was absolute and complete unity of opinion between the French and English Governments as to the policy to be pursued in Greece. There was not a shadow of difference between them and there is not at the present day. Therefore any statement which is made that we in this respect are diverging from the policy of our Allies is absolutely without the slightest foundation or basis, and is one which ought never to have been made. As to our attitude towards M. Venizelos, the House will recognize the extreme delicacy of saying anything about it. I only say this: that wherever we find a part of the Greek community which is in fact under the government of M. Venizelos or his Provisional Government, where the great majority of the people recognize him as their Governor, we recognize him as *de facto* the ruler of that part of Greece.

Mr. R. McNEILL: Has that been conveyed to M. Venizelos?

Lord R. CECIL: I should not like to answer that without looking up the actual facts. I have said all I think that I can usefully say at the present time about M. Venizelos.

Mr. ELLIS GRIFFITH said the noble Lord had told them, he thought for the first time, that where as a matter of fact Venizelos exercised the functions of government the British Government so far recognized his authority.

Lord R. CECIL: *De facto*.

Mr. GRIFFITH asked whether that meant that where M. Venizelos was in supreme command, where his forces were in control, where the King exercised no functions and had been deprived of them—as in the Island of Crete—the position of the British Government was that King Constantine is *de jure* King of Greece and M. Venizelos is *de facto* ruler of Greece? If so, it was an extraordinary position. It really meant, if anybody could hold those two inconsistent views at the same time, that the Government recognized the authority of King Constantine, and at the same time they recognized the authority of a traitor to King Constantine. What threw a good deal of light upon the subject, and, he thought, justified the feeling of great anxiety and misgiving which there was in this country, was that Lord R. Cecil, after some hours' notice of that debate, told them upon the authority of the Foreign Office, that although that was the fact, he did not even now know whether Venizelos had been made cognizant of that fact. He hoped the noble Lord would take the very earliest opportunity of conveying to Venizelos the fact that we did recognize his authority in places under his control. The noble Lord had in words beyond praise passed an eulogy on the character and achievements of Venizelos. What M. Venizelos wanted, however, was not praise, but recognition. We gave him our praise, we gave him our money, but we did not give him our recognition. M. Venizelos had not only sacrificed his reputation and his career, but he had risked his life in order to prove his bona-fides and his allegiance to the cause of the Allies. We declared ourselves the champions of small nations. Greece was a small nation. She was struggling against her King. We must choose between King Constantine and M. Venizelos, not because one was a King and the other a statesman, but without any regard to Kingship or statesmanship, as between two men each of whom said he represented Greece. If the Government came to the opinion that King Constantine represented the Greeks, let them have nothing to do with M. Venizelos; if they thought M. Venizelos represented the Greek people, they ought not to negotiate any longer with King Constantine, who had turned out to be a very poor friend of the Allies, and who had done all he could to support our enemies. There was a feeling of great disquiet in this country that the Government was not doing the right thing by their friend M. Venizelos. That was a very serious feeling to get abroad. He hoped that after this short debate the country would be reassured, at any rate to this extent, that the Government would not only give money and eulogy, but would also give actual and definite recognition to M. Venizelos in Greece. Nothing else was worthy of us.

Sir H. DALZIEL believed that Mr. Ellis Griffith had stated the views entertained not only by the vast majority in the House of Commons, but by the vast majority of the public outside. We had seen King Constantine practically holding us at bay month after month, and the whole Eastern situation absolutely governed, as it were, from Athens. Did the Government think the British public were going to stand this much longer, and see Ambassadors going cap in hand to this King who had defied the Allies at every point, and who was an agent of the German Government? They could not go on day after day seeing British diplomacy getting slapped in the face. He hoped the Government would make it clear that we were going to stand by M. Venizelos. If we did not do that we would not deserve to have any friends in Greece, and it would be a lasting disgrace to this country.

The Mesopotamia Command.

Nov. 1.

Mr. FORSTER informed Sir E. Cornwall that the forces in Mesopotamia were under the command of Major-General (temporary Lieutenant-General) F. S. Maude. The campaign in that theatre was now under the full control of the War Office.

Commander WEDGWOOD: Is it not a fact that the forces in Persia and India, from which the necessary drafts must come, are not under the direct control of the War Office?

Mr. FORSTER: That is another matter.

A REMARKABLE EXODUS.

Mr. George F. Gracey, of Belfast, who for many years has been working in Armenia under the American Mission, and has recently administered a part of the Lord Mayor's Fund, tells a remarkable story of how he was able to carry through a retreat of 25,000 unarmed civilians from the zone of danger by Lake Van to a region of safety, 150 miles distant, at Igdlah. Mr. Gracey was the only Western European in the district, and he managed the entire exodus singlehanded.

During the spring the Russian authorities had entrusted him with the resettlement of the vilayet of Van. The city itself, which recently held 80,000 inhabitants, had lost 95 per cent. of its dwellings, but sixty families were installed afresh in small shops. A pair of oxen was allotted to each three farmers, with seed and implements, while the widows in each village were given half-a-dozen cows, with which to make a living by serving milk. A community of 300 Turks—starving and practically unclad—received similar attention; indeed, they were also granted clothing.

Early in August, while thus engaged on relief work, Mr. Gracey learnt that Mush had been retaken by the enemy. He heard, across the lake, the guns of the Turkish advance, and was warned by the glare of burning buildings. The military authorities told him that the Armenians under his care should be withdrawn. Seldom has a more formidable task fallen to a British subject. The only available line of retreat lay through the Pass of Bekri-kala—a lonely mountain outlet, infested by Kurds and other marauders. No Russian soldiers guarded this gateway to safety, and Mr. Gracey began by hastily arming with rifles 250 volunteers. This improvised force seized the pass, dealt with the Kurds, and secured the retreat of a hundred times their number from interruption. In the guerilla warfare there were a number of casualties and some deaths, but worse was avoided. It was next arranged that Armenians of the better class should cook food during the night and slip away first, so avoiding a panic and relieving possible congestion.

Next, the Russian troops at Van were, at Mr. Gracey's request, drawn across the route in a cordon, through which only 1,000 of the refugees were permitted to pass every two hours. By this device the column was distributed automatically over many miles of road, a halt of two hours being arranged every five hours. For five days the march continued. The average distance covered was thirty miles a day, and the 25,000 refugees, with their 6,000 cattle, took two days to pass any given point. There were practically no mishaps. Many children got separated from their parents, but were "sorted out," at Igdlah. Five babies are known to have been born en route, and all survived.

The rations were flour and sugar. The refugees improvised stoves out of flat stones, heating them with dry refuse. On these stoves they set metal plates, on which hard cakes were cooked into unleavened bread. For four days Mr. Gracey lived on bread and water, with the help of one military meal at a Russian station.

The final stages of the march lay through waterless plains. Dr. Macallum and Mr. Backhouse (of the Lord Mayor's Fund) arranged for the refugees to be met with soup, bread, water, and fodder. Subsequently the trekkers were dispersed in Alexandropol, Erivan, and other districts, where their resettlement continues.

Happily the Russians were able to hold their line strongly around Lake Van, and our Allies have now again obtained possession of Mush, where they inflicted a very heavy defeat on the Turks. But the march of the 25,000 Armenians will long illustrate the invaluable work, assisted by the Lord Mayor's Fund, to appeal for which Mr. Gracey has paid a brief visit to London.

Prince Waldemar of Prussia, accompanied by Field-Marshal Liman von Sanders and Admiral Rustem Pasha, the Turkish Minister of Marine, has visited Gallipoli.

The Governor of Bessarabia and representatives of the Zemstvos have gone to Reni, on the Russo-Roumanian frontier, to arrange for the distribution of Roumanian refugees.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Without wishing to be in any way pessimistic, I think we must admit that the cutting of the railway between Bucharest and Constantza is a serious set-back. The military significance of Mackensen's thrust is doubtless great, but even greater is the economic effect of the operation. Constantza, the only warm-water port of Roumania—that is to say, the only port available for shipping throughout the year—was entirely dependent on the railway connecting it with the capital and Ploeshti beyond. The railway itself was no ordinary one, resting on dry earth. On the contrary, it was an engineering marvel, built for miles across bogs and swamps (the northern approach to the Danube), and resting on dykes, dams and bridges, the greatest of which, the King Carol Bridge at Cernavoda, was one of the longest bridges in the world. It has been blown up, and its reconstruction will cost millions of lei. Moreover, as has been shown in the present campaign, the line between Cernavoda and Constantza is extremely vulnerable. It is, therefore, an open question whether any great efforts will be made to reconstruct the line after the war, more particularly if its vital parts have been totally destroyed, or if a similar fate has fallen to the best of the quays, elevators, and wharves at Constantza.

Better situated and much more easily defended, are the ports at the mouths of the Danube—Sulina and Braila. But they are at times ice-bound, which is a serious disadvantage. Moreover, like Constantza, they are in the Black Sea, and as long as they are Roumania's only ports, her shipping will be dependent on the free passage of the Dardanelles. If Roumania's seagoing shipping is to thrive, a port on the Mediterranean becomes imperative, and I should not be surprised if, after the war, such a port is allowed her. This would be the end of Constantza's short, but withal, brilliant career in modern times as a port, and there would be little to gain in reconstructing the Cernavoda line. But, whichever way we look at it, it must be admitted that the financial loss to Roumania is considerable, and that she will be hampered in her mercantile intercourse with certain European countries for some time to come. On the other hand, she can retaliate: the enemy capital invested in her oilfields, banks, etc., is enormous, and there is no reason why it should not be expropriated by the State by way of indemnity due to the Cernavoda line. It will partly compensate for a grievous material loss, which we are the first to mourn, and partly pay for the reconstruction of the line in question, or for the building of a new port on the Ægean. I think it advisable in future, however, to consider the possibilities of a tunnel under the Danube,

rather than a bridge over it, which is always liable to attack.

Mr. Thomas Curtin's articles in *The Times* are of exceeding interest, and none more so than that which appeared on Monday last on the German submarine policy. This policy, the "ruthless policy," is founded, it would appear, on the following belief: That by building ships in Germany at top speed, and destroying all enemy and neutral shipping, the Germans will be the world's shipping masters at the termination of the war. At first sight it would appear that the belief is a hope rather than a probability, a dream rather than a possibility. But, on second thought, there is method in the Boche's madness, and the recrudescence of submarine attacks within the past few days seems to indicate that the party advocating the "ruthless policy" is again grasping the rudder.

In other words, the war is to give Germany what she strove to acquire before the war broke out. The whole history of the Continental shipping pool was nothing if it was not a German scheme to control the Atlantic passenger traffic. The Huns disdained no means or methods, however ingenious and unscrupulous, to this end; what is more, they were fairly on their way to attain the goal when war broke out. In German shipping circles it was then thought, in the autumn of 1914, that the European conflagration might be turned to good account, and hence we have this "ruthless policy" which is to give the Fatherland, whatever the result of the war, the control of the world's shipping.

Needless to say, this can never be allowed. Whatever the means adopted by us, they must be Draconic. We must organise ourselves, and take stringent prohibitive measures to prevent at all costs the realisation of the German shipping dream. Not for one moment, with our prestige to uphold in the Atlantic, the Mediterranean, the Indian and the Pacific Oceans, can we permit Germany to overrule the world's mercantile shipping. We must, in the first place, take all preventive measures to minimise our losses and help neutrals to do likewise. This regards the Admiralty, in whom we have absolute confidence. Secondly, we must organise our forces at home, within the Empire, and help our Allies and friendly neutrals to do likewise. This will prevent anything like the formation of a Continental pool after the war. Finally, we must ruthlessly take the severest prohibitive measures against enemy shipping that it is possible to take with a view to reduce its radius of action and to cripple it so that it cannot become a menace to us. This can be done, if all who are interested in the growth, let alone the independent existence, of British trade and shipping, will continually urge the Government unflinchingly to take the requisite measures. We dare not hesitate. If so, not only do we lose our pride of place in all seas, but we risk the shrinking of British-borne trade in home waters as well as in the Mediterranean and seas farther east and west.

Apropos my reference to the C.P.R. in these notes last week, it may be pointed out that practically ever since the war began the C.P.R. has placed most

of its ocean steamships at the disposal of the Admiralty. Some, it is admitted, have been lost, but on the whole the company has been singularly fortunate. This is, above all, most welcome news, because I firmly believe that after the war the company's ocean service, already known in the Mediterranean and in some African and Middle Eastern ports, will be greatly extended in those waters which interest us more closely. Further, in the great shipping war which is bound to result from the dislocation (let us hope it will be permanent) of the Continental "pool," the C.P.R. will, if I am not mistaken, play an important part; and the more important it is, the smaller will be the Teuton's "look in." With such enormous cash resources at its disposal, the C.P.R. is one of our most valuable assets, as the Hamburg, Bremen, and Trieste Huns will learn to their cost and regret. I do not think it is at all likely that the dirty Viennese tricks of 1913, to which the Canadian Pacific fell an innocent victim, will ever be repeated—certainly not successfully.

If it had been suggested a few years ago that an agreement between Russia and Britain regarding Persia and Afghanistan was a matter with which Japan would concern herself, a good deal of ridicule would have resulted. But that is exactly what Japan is doing to-day. The war has effected many changes, and the thorough manner in which Japan has observed her treaty obligations towards Britain—and at considerable sacrifice—has brought the great new Oriental Power into closer communion with us than was ever thought possible. So we find the important paper *Asahi* (Tokyo) declaring that the new Anglo-Russian agreement regarding Persia "is an important guarantee, both for the present and the future, and concerns Japan indirectly to some extent."

A question which concerns us is the relations which will exist between England and Russia after the war. Will the present friendship be maintained? Some Japanese doubt it, and so do a few people in Russia. These persons think that the Germans, who have in the past enjoyed great facilities in Russia, will re-establish friendly relations after the war and cause estrangement between Russia and England. The new agreement puts an end to this idea. . . . No doubt any longer remains that henceforth England and Russia will stand together in close co-operation against Germany in Persia and Central Asia, and that Japan, England, and Russia will stand together in close co-operation for the maintenance of the security of the Far East. A new meaning has, therefore, been given to the phrase in the Anglo-Japanese Treaty of Alliance concerning the contingency of the invasion of India by a third Power. It is consequently clear that the conclusion of the new agreement is indirectly of great interest for Japan." Banzai!

The Egyptian Cotton Crop in 1916.

Serious Situation in the Fields—High Prices in the Liverpool Market.

By Professor Todd.

There is always a certain satisfaction in being able to say "I told you so," but when one's mildest attempt to throw a little salutary cold water upon over-optimistic estimates is followed by a serious failure of the crop which sends prices sky-high, the feeling of satisfaction becomes sadly mixed. The writer felt it necessary to comment in these columns (June 9, 1916) upon the very rosy estimates of the Egyptian crop which were then gaining currency, and to point out that they were not justified by the recent history of the crop. A record area and a bumper crop were predicted, which in the present circumstances would have been very desirable, but did not seem at all likely to be realised. Since then the cold light of facts has played unmercifully upon these rosy anticipations.

The area, instead of being "normal again this year," which would have meant presumably about 1,750,000 feddans, was stated a few weeks later by the Department of Agriculture at only 1,655,512. The expected yield, too, has shrunk from something which would have given a record crop—8,000,000 kantars was mentioned as "an unofficial estimate"—till now the trade will be thankful indeed if the actual yield is as good as last year, say four kantars per feddan, which would give an estimated crop of only 6,622,048 kantars. As a matter of fact considerably less is now expected.

The Pink Boll Worm.

This failure is understood to be chiefly due to the depredations of the pink boll worm, or seed worm as it is now called, which has apparently become a thing to be reckoned upon annually in Egypt to mar the prospects of the most promising crop as the autumn advances.

The situation is serious, and will require the most serious attention of the authorities in Egypt if the Egyptian crop is ever again to equal its own records of the years immediately before the war.

But what has attracted so much attention to the conditions of the crop in Egypt this season is the dramatic rise of prices which has taken place during the last few weeks, and which has been so extreme as to call for very drastic action by the Alexandria General Produce Association, followed by a threat of equally abnormal measures by the Liverpool Cotton Association. It becomes necessary, therefore, to review the whole position of the market for the Egyptian staple, and find out what has really been happening.

Record Spot Price.

The first fact to be noted is that on Friday last, October 27, F. G. F. Brown Egyptian touched 17d. for spot, which beats the previous highest price of 1910 by nearly a penny. But this of itself does not give a true perspective of the facts. It must always be remembered that the price of Egyptian cotton depends mainly, not on the conditions of supply and demand in the Egyptian market alone, but on those which determine the price of cotton in general, which in this connection practically means the price of American.

The true test of the value of Egyptian cotton at any time is not so much the actual figure of the quotation as the percentage which that figure bears to the price of American, and on applying this test to present conditions one is almost surprised to find that the price to-day is hardly above normal. As will be seen from the table given below, the average premium of F.G.F. Brown over Middling American since 1899 has been about 45 per cent.; and the premium on Friday last

was only 52 per cent. This is very far below the record, which was no less than 102 per cent. in the first week of April, 1910.

AMERICAN AND EGYPTIAN CROPS AND SEASON'S AVERAGE PRICES WITH PERCENTAGES.

Season.	Crops.		Egyptian.	Season's Av. Prices		
	American.	Egyptian.		American.	Egyptian.	Premium.
	(In bales of 5000 lbs. —000's omitted)	(5000 lbs. omitted)	%	Middling.	F. G. F. Brown.	%

* Sully's Corner.

This table is of interest as showing how the premium of Egyptian over American varies from year to year roughly in proportion to the relative amounts of the American and Egyptian crops. Anyone who cares to plot out these figures in parallel lines on a diagram will find, as is of course only natural, that the premium varies (inversely of course) in close correlation with the percentage which the Egyptian crop bears to the American. Thus in 1909-10 the American crop was short but the Egyptian was a disastrous failure, and the effect upon the price of Egyptian was heightened by the fact that up till quite late in the season everything looked particularly promising for a record crop, so that when the complete failure of the crop came unexpectedly on the market in October the effect on prices was tremendous. The Alexandria market had oversold very heavily on the prospects of a record crop, and were caught short to an unprecedented extent, with the inevitable effect towards the close

of the contract season in Egypt, which is the end of March.

1910-11 Crops.

In 1910-11 the Egyptian crop was a record and the American crop comparatively short again, with the result that the premium on Egyptian fell below normal; but in the following season the American crop beat all records and the Egyptian was not so good, with the result that the premium again mounted to 57 per cent. 1912-13 was more normal in respect of the relative size of the two crops, and the premium was just over the average, or 46 per cent.

But since then the course of prices has been distinctly abnormal. In 1913-14 the Egyptian crop was slightly smaller relatively to the American than in 1912, yet the premium fell to only 30 per cent. In the first war season, 1914-15, the Egyptian crop made a very poor show compared with the bumper American crop, yet the season's premium was only 40 per cent.; and in 1915-16 the proportion of the Egyptian to the American crop was the lowest recorded in the table, yet the premium averaged only 39 per cent. for the season.

A Break-away.

Thus it will be seen that for the last three seasons the price of Egyptian seems almost to have broken away from the leading strings of American, and in the wrong direction. It has been much too cheap relatively to American.

This impression is confirmed by an examination of the two prices from month to month during these seasons. The premium of Egyptian over American has fluctuated widely, as will be seen by a glance at the well-known chart of weekly cotton prices in Liverpool, which is just issued. The price line for Egyptian, instead of following that of American more or less closely (though with a varying distance between them), seems to have gone off to an unusual extent "on its own," with the result that when the prices are plotted down as percentages of American, it is found that the premium has been fluctuating very widely and the line shows very marked peaks and hollows instead of the usual fairly regular line.

A Comparison.

But the chief point to be noted in the comparison is that during these three seasons the premium of Egyptian over American has only three times exceeded the normal 45 per cent., and in each case only for a very short time. Detailed monthly figures for the last Friday of each month from August, 1913, to October, 1916, are given in the following table, which will enable anyone to plot this out for himself.

PRICES OF AMERICAN AND EGYPTIAN COTTON ON THE LAST FRIDAY OF EACH MONTH, 1913-17, WITH PERCENTAGES.

Month.	1913-14.			1914-15.			1915-16.			1916-17.

July	6.86	8.70	27	5.30	7.30	38	8.15	11.90	46	—	—	—

The bearing of this on present prices is obvious. At the end of August last the premium of Egyptian over Americans was only 28½ per cent., and the apparently rapid rise from then till to-day has only resulted in bringing the relative price of Egyptian up to something like its normal level.

The Moral.

One can hardly help pointing a moral from these facts. Why should the market have been so taken aback by the recent sharp rise of Egyptian prices? Why was it not realised that Egyptian prices, having been relatively much below normal for some time, were liable to make a sudden spurt at any moment, and especially, judging from past experience, just at the time when prices in general began to mount sky high, for it has been observed before that when American goes high Egyptian very frequently goes higher? Further, the danger of those parts of the American Belt which are Egypt's chief rivals, namely Georgia and Florida, being invaded by the boll weevil ought to have been in view, and no one could be surprised at a sharp rise of Egyptian prices.

Why the Market was Upset.

Why then was the market so upset as it apparently was? The writer can suggest only one explanation. The history of the 1909-10 crop has repeated itself. The Egyptian market was deceived by the rosy estimates issued early in the season, and was led into committing itself very heavily by sales against the expected bumper crop. At first the prospects did look like justifying these estimates, and apparently the market forgot the inconvenient habit which the Egyptian crop has developed in recent years of playing ducks and drakes with the most glowing prospects as the later months come on. They forgot to make due allowance for the dangers of the Nile flood and the pink boll worm; and the result was that when the estimates of the crop began to go from bad to worse they were very badly oversold.

It is hardly to their credit that, as far as one can judge by the information available on this side, they were not prepared or not able to face the music, but thought it necessary to adopt restrictive measures which can hardly escape the accusation of being intended to save themselves at the expense of the owners of the crop. It is not surprising that these measures caused a good deal of heartburning among the fellaheen.

Speculators Warned.

There is no use crying over spilt milk, however. The only moral one can draw is, first, that in future, speculative dealers on the Egyptian market should be more chary of high estimates of their crop made early in the season and without sufficient reference to the experience of previous years; and, second, that the sooner something is done seriously to tackle the pink boll worm question the better for all concerned. Boll weevil in the Sea Island districts would mean a golden opportunity for the growers of Egyptian cotton, especially the best varieties. It would be worse than unfortunate if they found themselves prevented from taking advantage of that opportunity by the presence in their own crop of an almost equally serious pest, which, if all accounts be true, might have been more easily handled if it had been tackled with energy and resource when it first appeared a few years ago.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, November 1.

The market has continued to present a healthy appearance. The easier tendency in raw cotton at the beginning of the week caused a little uncertainty, but since then prices have hardened again. There is not much anticipation of values in the near future being on a decidedly lower level. In piece goods the feature of interest has been the increased activity in standard grey cloths for India, a substantial business having been done for Madras, with occasional lines of weight for Calcutta. Relief in this section has been badly wanted for a long time back, and producers are now presenting a stiffer attitude to buyers. A fair miscellaneous trade has transpired for China. One of the best markets at the moment is undoubtedly Egypt, and numerous makers have large contracts on the books which will not be completed for many months ahead. Some re-buying has been necessary during the last week or two owing to goods being lost on their way abroad. The bulk of the demand has run on sized goods, but other fabrics continue to be purchased on an encouraging scale. Clearances on the other side are said to be healthy, and there is nothing to complain about with regard to remittances. Quite apart from raw cotton values there is a tendency for prices in piece goods to harden, as weaving generally is in a better position than a few weeks ago. American and Egyptian yarns have been stiff in quotation, and steady buying has occurred from day to day. Much difficulty is experienced in obtaining early delivery in certain counts and qualities.

NEWS FROM ALL SOURCES.

A Budapest telegram published by the *Kölnische Zeitung* states that the Bulgarian Minister of Finance, M. Tontcheff, declared to a representative of the journal *Az Est* that it would be necessary to create new taxes.

Business houses in Roumania, and especially Credit Societies and the National Bank of Roumania, says a Bucharest message, are adhering to the English black lists, and have asked to be supplied with additional copies.

Mr. Herbert Allen, chairman of the London group of Baku Oil Companies, has been compelled to postpone his intended visit to Baku. Mr. Richard R. Tweed, a director of the Baku Russian Petroleum Company (1909) and the Russian Petroleum Company, has left London for Baku on the business of the two companies. Mr. Tweed is expected to be absent about two months.

The Roumanian Commission for the Control of the Petroleum Industry, at its second sitting, fixed the following prices for the export of petroleum products:—Benzine, light (with a density of 0.760), 4,000 lei per wagon of 10,000 kilos; benzine, heavy (with a density of 1.760-770), 3,000 lei per wagon; lamp oil (refined), from 1,500 lei per wagon; residues (pacura combustibil), 850 lei per wagon.

RUSSIA AND ROUMANIA.

At the last sitting of the Union of Russian "industriels" and business men, the question of an economic *rapprochement* between Roumania and Russia came under discussion. Several speakers insisted upon the necessity of eliminating once and for always German goods from the Roumanian markets. Up till the outbreak of war these competed seriously with the produce of Russia.

Statistics laid before the Union established the fact that Roumania imported annually from the Central Powers merchandise to the value of over 300 millions of roubles, principally manufactured articles and textiles.

Russia could very well occupy the place of Germany if she took the necessary measures to revive and increase her industrial output, it was pointed out, and the Union decided to demand prompt measures for increasing and developing Russian industries.

It was decided also to approach the various industrial institutions in Russia, and to propose that tours for the study of the Roumanian markets should be organized.

TRADE NOTES.

Openings.

The Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), invites tenders for the supply of uniforms, cloth, white and khaki drill, saddlery, accoutrements, furniture, enamel ware, leather, boots, paints, oils, tarbrushes, cotton shirts and drawers, blankets (woollen), and miscellaneous stores. (December 10.)

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs, dressings, sundries, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (November 25.)

The same Department invites tenders for the supply of equipment, clothing, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (Nov. 30.)

Sealed tenders, on the proper forms, will be received by the Postmaster-General, Alexandria, for the supply and delivery of the following supplies required during 1917-18.—Mail bags; boots; fuel; ready-made furniture; letter boxes and accessories; keys and other hardware articles; lamps and electric fans; enamelled plates; safes, strong cupboards and safety locks; stamps; special postal stationery; and miscellaneous articles. (November 15.)

The Sanitary Commissioners of Gibraltar invite tenders for the supply and delivery of the following coal in such quantities as may be required during 1917:—Best Cardiff steam; South Wales small; Newport large; best quality Durham unscreened; anthracite large; and anthracite nuts. Specifications, conditions of contract, etc., may be obtained from the Sanitary Commissioners' Office, Gibraltar, at which address sealed tenders, on the proper forms, will be received up to the dates mentioned. (November 21.)

For the supply and delivery of the following stores in such quantities as may be required during 1917:—Engineer's stores; galvanised iron pipes; lead pipes; chemist's stores; drapery; fire brigade clothing; ironmongery; oilman's stores; Welsh or Stourbridge fire bricks and fire clay; English-shaped stock bricks; white glazed bricks and ventilating bricks; tiles, Marseilles, white glazed, etc., of various descriptions; Puzzolana slates, W.C. pans, intercepting traps and kitchen sinks; glazed sanitary pipes and half-pipes; timber; flags and kerbstones; engine oils; special paints; oilskins; petroleum; creosote; coal-tar pitch; and benzoline. (November 14.)

Licence Withdrawn.

The licence granted to J. M. Lichtenstern for the purpose of liquidation only, dated December 11, 1915, has been withdrawn. (*Journal Officiel Egyptien*.)

GREEK CURRANT HARVEST.

The 1916-17 currant harvest is now over, and all the fruit has been safely stored. Official and commercial estimates agree in putting the yield at about 100,000 tons of dried fruit, as contrasted with a normal crop of 150,000 tons. The shortage is attributed to the presence of peronospora and oidium in the vineyards, also to the extremely hot weather that prevailed throughout the country in June, when a new high-temperature record was set. The quality of the fruit is reported to be good. No rains fell during the harvest season, and consequently there is no rain-damaged fruit. The harvesting was effected in good time and order. The shortage of fruit is not confined to any one province or district, but is general and affects all grades of currants.

Owing to the short crop and, no doubt, in part to the belief of growers that the world markets will be willing to pay fancy prices for fruit, prices are higher locally than they have been for more than ten years.

PRODUCE REPORT.

LONDON, November 2.

Currants.

The market has been somewhat quiet this past week, but prices continue very firm, and in some instances are dearer. Pyrgos and Provincial are very scarce. Amalias of indifferent quality, in bags, were sold at 69s., and good at 76s. Patras, cleaned, sold at 78s., and Vostizza in bags at 78s. to 79s., with same in quarter-cases at 80s. to 85s. Gulf is quoted 79s. to 82s., while siftings are selling well at 80s. to 82s.

Sultanas.

There has been more activity in the market, and prices are dearer. Afghanistan fruit, red, sells at 83s., and North Indian at 88s. to 92s.; Australian was sold from 102s. to 104s., while Greeks sell slowly at late rates. Cretan raisings, old, in bags, are quoted 42s., with boxes at 42s. to 45s.

Figs.

Spanish and Lepe, in boxes, new, are selling from 49s. to 50s., while old bags are offered at 40s.

Dates.

Steamers with new crop are just due, but prices are considered high. New Egyptians were sold at 50s. to 52s.

Seeds.

Linseed, owing to scarcity of sellers, has again advanced; Calcutta to London, spot, sold to-day at 90s., Oct.-Nov. also 90s., and Nov.-Dec. 93s. Bombay, small, Oct.-Nov. is quoted 90s.; Bombay to Hull, Oct.-Nov. 94s. Rapeseed is firm, with an active demand; brown Cawnpore, to London, afloat, was sold at 69s.; bold Ferozepore, prompt 75s.; and Toria, to Hull, Oct.-Nov. 75s. 6d. Cottonseed, Sakelarides to London, afloat, was sold at £15 10s., and prompt at £15 15s. f.a.q.; prompt is offered at £16. Egyptian, to Hull, spot is quoted £16, and prompt was sold £16, while Sakelarides Oct. was disposed of at £15 15s. Rangoon beans are again dearer. Spot and afloat quoted £28 5s., Oct.-Nov. £29 10s., and Nov.-Dec. £30.

Oils.

Linseed oil: With the bad news from Argentine of the linseed crop, and the high freights from the East, prices are dearer; spot pipes sold at £45, and barrels £46; Nov.-Dec. is quoted £46 12s. 6d., and Jan.-April £48. Rape oil is firm; refined English, in barrels, spot £52 to £54. Cotton oil is steady; crude pipes and refined, nominal; sweet barrels £50 to £54. Olive oil is very firm for Spanish and Levant at £62 to £64.

Oilcakes.

Linseed cakes: There is a much better demand, and the prices have again been forced

up to the extent of fully 5s. per ton, both as regards spot and forward positions. Best London-made are quoted £15 to £15 5s. per ton ex-mill, and East India Seed pures at £14 15s. to £15. Cotton cakes: There is still a scarcity of Egyptians, which are quoted, for Oct.-Nov. shipments, at £10 17s. 6d. to £11 2s. 6d. ex-ship terms, with English makes at £12 10s. to £11 15s. per ton. English from Bombay seed £10 15s. to £11 5s. per ton.

Various.

Egyptian eggs, good quality, have been sold at 14s. to 14s. 6d., and business was done at 13s. 6d. Locust beans, Cyprus, quite unobtainable. Beeswax in good demand; East Indian, yellow £6 to £6 10s., and white £8 10s. to £8 12s. 6d.

The Department of Commercial Intelligence of the Board of Trade is in receipt of copies of the judgments given as a result of proceedings in the Prize Court at Malta in respect of the sailing vessels Zoodochos Pigi, Ayia Nicola, Panayia, Cleopatra, Taxiarchi, and the motor boat Enterpe; and also in respect of part cargo ex the vessels Virginia, Memphis, Cleopatra, Panayia, and Ayia Nicola. The judgments referred to may be consulted by British firms at the offices of the Department.

ENGINEERING NOTES.

Standard Test for Gasoline.

A statement has been issued by the United States Bureau of Standards with the object of removing any existing impression that the bureau would formulate a test which might be applied by any purchasers to detect at once an inferior product in the gasoline market. "No such simple test is known in the present state of the science of petroleum technology," the bureau states. "In the early days of the petroleum industry, when all our gasolines, kerosenes, fuel oils, and lubricating oils were derived from one source—viz., Pennsylvania crude petroleum—a simple measurement of the specific gravity, or what amounts to the same thing, the Baumé number, by means of a hydrometer, served as a fairly reliable indication of the qualities of these products. To-day, however, the specific gravity test is practically worthless as a check on the suitability of a gasoline, for example, for a given motor equipment." In giving the reason for this change and discussing present conditions, the bureau states:—

Different Methods of Manufacture

Many new oil fields that have been opened up in recent years yield petroleum of very different physical and chemical properties, and new methods of manufacture have been introduced that yield products having very different properties in no way related to the specific gravities. The problem is an extremely complicated one, and presupposes a definition of gasoline. It is highly probable that the specification or definition of standard gasoline and the tests that will be necessary to determine whether the gasoline complies with the specifications will be quite complicated, and will require the services of a trained chemist to make them. It seems most probable that the definition of gasoline will have to be based on the percentage that distills over between specified temperatures, when the distillation is carried out under specified conditions. This distillation test, speaking in non-technical terms, is a measure of the freedom with which the gasoline will vaporise. The gasoline must not vaporise too freely for two reasons—one, that it would not be safe; and, secondly, its loss in storage by evaporation would be too great. Hence, the specification may have to contain limitations of the percentage distilling over below a certain temperature, coupled, perhaps, with a proviso that certain percentages shall distil over below other fixed temperatures, in order that requisite amounts of low-boiling constituents shall be present to ensure easy starting of an engine. Likewise, the specification must contain a provision that all must distil over below a certain maximum temperature in order to exclude from the gasoline the heavier petroleum distillation, such as kerosene.

Other Tests.

Complicated as such a specification as has been briefly outlined may seem to the layman, it is not at all improbable that other tests must be devised to limit the percentage of so-called aromatic and unsaturated hydrocarbons that may be permitted in a good motor gasoline. The question still remains whether or not it may be necessary to define two or more grades of motor gasoline. Enough has been said to show that no simple tests can be used to fix the composition of such complex mixtures of hydrocarbons as are represented by gasolines. The popular opinion that specific gravity (or degrees Baumé) will suffice as a test for gasoline is unfortunately erroneous. For example, a gasoline of 70 deg. Baumé from some oil fields is no more volatile than a gasoline of 65 deg. Baumé from other oil fields. Another point about which there is often a misunderstanding is the relative efficiency of high and low density gasolines. It the

common opinion of gasoline users that gasoline of low specific gravity (or high Baumé reading) is more efficient, in that they can get more miles out of a gallon. This is not true if the motor equipment is adapted to the fuel used.

Caution Required.

The message which it is particularly desired to convey is that the public should not expect hasty action. It is extremely important that we proceed with the greatest caution and in the light of the fullest technical information. There is only one way, or at most a very few ways, of doing the right thing, while there is an infinite number of ways of doing the wrong thing. A mistake of any kind, such as a specification that is unnecessarily restricted and which might unduly limit competition, will disturb economic and manufacturing conditions, and might only result in imposing greater burdens on the consuming public. There are two aspects to the question under consideration, one local, the other national. There is no doubt that the advantages that would result from a satisfactory standardisation of gasoline by the National Government are many. Not the least of these would be its influence on State and municipal legislation relating to this question, and its effect in making such legislation more nearly uniform throughout the country. Legislative bodies are beginning to take up this question, and much of this legislation is certain to be ill-advised, although enacted with the best intentions, because it cannot in the nature of things receive the careful consideration of technical experts that is required for the satisfactory solution of questions of this kind. It will readily be seen that the effect of indiscriminate legislation might produce conditions nothing short of chaotic.

Inspection Service Needed.

The question that very naturally arises at this point is—with such a complicated specification for gasoline, for which the user cannot make the necessary tests—how it will be possible to protect his interests and to assure himself that he is actually getting standard gasoline. The answer is, he cannot possibly do so; in the United States it is held that the Government must protect him by a suitable inspection service, just as it protects him in matters relating to weights and measures, pure foods, etc. National legislation relating to interstate commerce, making it unlawful to sell a product under the name of "gasoline" that does not come within the specifications, with a suitable inspection service, would be an important contributing factor in safeguarding the consumer's interests. Other products, which might be just as good motor fuels for motor and carburettor equipments adapted to them, could not then be sold in interstate commerce under the name of "gasoline," but would have to be called motor fuels, or by some other name which would distinguish them from the standard "gasoline." To protect the interests of the consumer in interstate commerce it would be necessary for States and municipalities to adopt similar legislation and to increase their inspection service to provide for this new work, just as they have provided for weights and measures and pure food regulations in the past. The Bureau of Mines has done a great deal of work on gasolines derived from different oil fields and by different methods of manufacture. Any experimental work incident to the use of gasoline as a fuel belongs primarily to that bureau. The Bureau of Standards, on the other hand, is primarily interested in questions relating to its standardisation. That bureau is accordingly entering into co-operation with the Bureau of Mines with a view to arriving at a satisfactory answer to the question as to what recommendations are possible at this time, and what should be done. Before any final decisions are reached all interested parties will be given a hearing.

SHIPPING NOTES.

It was notified by the Military Administration of Busreh, on October 4, that no mercantile steamship will be permitted to enter the port of Busreh or to load or unload there which, before clearing from the last British port, has not obtained from the Military Administration, Busreh, a special permit to enter the port. Such permit will be good for one voyage only. Applications for permit should be made to the Military Administration on special forms obtainable from the Chief Political Office by the agents of the steamer for which a permit is desired. The grant of a permit will be telegraphed by the agents to the captain of the steamer, and will be notified by the Examination Officer at Fao. Military store ships and privately owned ships, the whole of whose cargo consists of stores, are exempted from the requirement.

In a recent report on Moroccan trade in 1915 it was stated:—"There was a considerable increase in small Spanish vessels plying to the neighbouring ports on the Spanish coast, and this kept the total number of vessels entered at Moroccan ports in 1915 much higher in proportion than the total tonnage, for whilst the total tonnage was actually smaller, the number of Spanish vessels which entered was increased by nearly 40 per cent., as compared with 1913. As regards British shipping, there was a slight increase in the number of vessels, and a considerable fall in total tonnage, whilst in French shipping there was a fall, both in the number of vessels and tonnage. German and Austro-Hungarian shipping, which in 1913 were together represented by 422 vessels, with a total of 512,510 tons, entirely disappeared in 1915. Dutch shipping showed a heavy fall, especially in total tonnage."

Announcement is made that the goodwill of James Moss and Co., of Liverpool, and the share capital of the Moss Steamship Company, Limited, have been acquired by "Sir Owen Philipps's group of companies." Presumably the companies interested in the purchase are the Royal Mail Steam Packet Company, Limited, Elder Dempster and Co., Limited, and Lamport and Holt, Limited. The Moss Steamship Company, Limited, which has been managed by Messrs. J. Moss and Co., now owns ten steamers, ranging from 1,200 to 4,600 tons gross each, and is largely interested in the trade between Glasgow and Liverpool and Mediterranean ports. No price is mentioned, but it may be assumed, in view of the present level of values, that a very considerable sum is involved in the transaction. Mr. William H. Moss, whose grandfather founded the business in the early part of last century, and Mr. Walter Harding, two of the three managers, will continue to be closely identified with the business, and it is intended that there should be no break in the management or policy. There was in the early days of its existence an association of interests between the firm and Lamport and Holt, to which it now becomes affiliated.

More British steamers have to be recorded as lost, in the Tornio and the Meroe, both Liverpool-owned. The former, an 1895-built vessel of 1,860 tons, her owners being the Atlantic and Eastern Steamship Company (Messrs. J. Glynn and Sons), and the Meroe was a 3,522-ton steamer, built in 1911 for the Moss Steam Shipping Company. The Meroe had on board a cargo of Egyptian cotton. An Athens message of Tuesday states that the Greek steamer Kiki Isaia, 5,000 tons, was sunk by a submarine at the spot where the Angheliki was torpedoed. The ship was bound for Cyprus, and carried no passengers. With the Angheliki, it will be recalled, several lives were lost, including those of a party of Volunteers.

IRRIGATION IN ASIA MINOR.

Four Million Project for the Adana Plain.

A project for the irrigation of the Adana Plain (the Cilicia of antiquity), at a cost of £4,000,000, and requiring eight to ten years for completion, has been undertaken by the Ottoman Government. This project contemplates the regulation of the three rivers which water the plain—the Saihun, the Shihan, and the Berdan Shah—and will open up to agriculture 200,000 hectares (494,200 acres) of land, much of which is at present arid. It is estimated that the completion of this irrigation project will increase manifold the Turkish production of cotton, sugar cane, lemons, oranges, and olives. A part of the irrigation works will be put in operation within the next eighteen months.

When these irrigation works are completed the Adana Plain will be the most favoured portion of the Ottoman Empire, for it already possesses splendid transportation facilities. The plain is traversed by the Baghdad Railway, and, in addition, Adana is connected with Mersina by rail. Further, the port of Alexandretta lies at a distance of only thirty miles from the mouth of the Shihan, which river, as well as the Saihun and the Berdan Shah, will, after the completion of the contemplated regulation projects, be navigable and offer a cheap means of transporting the products of the plain to the sea. The regulation of these rivers will also render available abundant water-power for industrial purposes, such as the generation of electricity.

WORLD'S CEREAL CROPS.

The British Board of Agriculture, in a statement issued this week, notifies having received the following information from the International Agricultural Institute:—

The production of the undermentioned cereals in the countries named is estimated as follows:—

Roumania—Wheat 42,065,000 cwts., barley 12,874,000 cwts., oats 8,267,000 cwts. European Russia (forty-eight Governments)—318,980,000 cwts. of wheat, 420,368,000 cwts. of rye, 189,596,000 cwts. of barley, 248,665,000 cwts. of oats and 35,995,000 cwts. of maize. United States—Wheat 235,485,000 cwts. and of maize 1,358,968,000 cwts. Egypt—19,577,000 cwts. of wheat and 5,650,000 cwts. of barley. Italy—39,369,000 cwts. of maize.

Compared with the corresponding production in the period 1909-13, the above estimates give the following increase (+) or decrease (−) per cent. :—

	Wheat.	Rye.	Barley.	Oats.	Maize
Roumania.....	-10.6	—	+20.2	-0.4	—
European Russia (48 Govts.)	-4.7	+15.6	+5.9	+4.6	+2.5
United States	-11.5	—	—	—	+0.4
Egypt.....	+3.0	—	12.1	—	—
Italy	—	—	—	—	-21.5

The total production of wheat in Canada, United States, India, European Russia (forty-eight Governments), United Kingdom, Roumania, Italy, Switzerland, Spain, Japan, Egypt, Norway, Netherlands, and Tunis is given at 1,192,254,000 cwts., and of barley for the same countries, with the exception of India, at 413,241,000 cwts., while in the countries mentioned for wheat the total production of rye, with the omission of Roumania, Egypt, India, Japan, and Tunis, is estimated at 468,476,000 cwts., and of oats, with the exception of Egypt, India, Japan, and Canada, at 784,238,000 cwts. These estimates represent increases of 14.8 per cent., 3.2 per cent. and 5.3 per cent. for rye, barley, and oats respectively, and a decrease of 7.3 per cent. in the case of wheat as compared with the corresponding average production in the years of 1909-13.

COMPANY REPORT.

GHARBIEH LAND CO.

The following is a translation of the report of the directors, which was submitted to the shareholders at the ordinary general meeting, held in Cairo on July 31 (adjourned from May 31) last:—

The annual general meeting, which, as usual, was held at the end of May last year, decided, by reason of the general situation, without discussing the subjects placed upon the agenda, to adjourn the meeting to a date to be fixed as soon as circumstances permitted. Your directors have accordingly to give an account of the company's affairs during the two financial years, 1914-15 and 1915-16, i.e., the period comprised between March 1, 1914, and February 29, 1916. The position shown by the accounts for the year 1914-15 underwent considerable modification the following year owing to the cancellation of the exchange of the company's Sawalem property. Hence it was deemed unnecessary to prepare a balance-sheet for each of the two financial years referred to above, especially as the single balance-sheet annexed hereto possesses the advantage of showing the results definitely obtained during the two-year period now under review. Care was, however, taken to show in the profit and loss account the income and expenditure of each financial year separately, excluding, of course, the 1914-15 entries, which, by reason of the above-mentioned modification, were of no effect.

The Sawalem Estate.—In 1914 the company entered into a transaction consisting in the exchange of its Sawalem property (ex-Wilson) and of one of the estates owned by the Egyptian Enterprise and Development Company for two residential premises at Alexandria in part payment, the balance due to the companies being payable in six annual instalments, free of interest. The principal advantage of this transaction was that it enabled the company to provide for all its immediate and near cash requirements, and, at the same time, considerably to reduce its debenture liability. The realisation of this advantage depended simply on the carrying out of the conditions of the deed of exchange, which had been fully discussed and settled so as to reduce to a minimum the possibility of unforeseen contingencies. Contrary, however, to expectation, the purchaser did not fulfil his engagements, and, as soon as the first instalment fell due, made it clear that he definitely intended to evade the contract. Indeed, soon afterwards, as a last resort, he brought an action against the companies to have the deed of exchange set aside. The first result of this step was to suspend the execution of the contract. The companies could thus no longer rely on the punctual receipt of the annual instalments due to them. In fact, so long as legal proceedings, which might be protracted, were pending, the companies would be deprived of the immediate advantages which had induced them to conclude the exchange, and, whilst the purchaser would continue to have the usufruct of the lands received by him without being bound to pay for them, the companies would be dispossessed not only of their landed property, but also of the Alexandria buildings, against which their former owner had allowed expropriation proceedings to be taken, in spite of his most formal obligations. Moreover, the two buildings had been affected, as had all urban house property, by the disturbing influences of the war, and consequently their realisable value had greatly diminished, as likewise the income derived therefrom. In these circumstances, it was no longer in the interest of the companies to retain the ownership of the buildings.

The prejudice sustained by the companies was, therefore, undeniable, especially in the case of the Gharbieh Land Company, which had suffered more than the Egyptian Enterprise and Development Company from the effects of the war, its revenue having been most adversely affected by the collapse in cotton prices. The company, finding itself in this predicament, and no longer able to rely on the immediate resources which the exchange was intended to provide, deemed it inadvisable to incur the delay and uncertainty of legal proceedings before having

carefully examined every possible means of settling forthwith the dispute to the company's best advantage. A settlement was found in the proposals made to the company soon after the lawyers had delivered their preliminary pleadings. The negotiations were particularly difficult, but, after several months' discussion, a compromise was arrived at in September, 1915, which put an end to the lawsuit. In virtue of this compromise, the Gharbieh Land Company withdrew from the transaction, the Egyptian Enterprise and Development Company maintained the transfer of its Dakahla estate, converting it into an ordinary sale, and the two Alexandria buildings reverted to their former owner. This settlement, the best it was possible to obtain, also secured to the Gharbieh Land Company, by way of compensation, the financial assistance of the Egyptian Enterprise and Development Company. It is thanks to this assistance that the company was able to overcome the difficulties due to the insufficiency of its income in the years 1914 and 1915, which, as will be explained later, were mainly consequent on the war.

Lands.—The area of the company's estates, which was reduced in 1914-15 to 5,764 feddans, 4 kirats, 17 sahms, was, on the cancellation of the Sawalem exchange, restored to 7,929 feddans, 20 kirats, 3 sahms, as at February 29, 1916. The cost price of these lands is given in the balance-sheet at £E439,324.347, and includes, in addition to the purchase price, the total expenditure on improvements, buildings, irrigation and drainage works, etc., up to the date of closing the books, but is exclusive of interest on capital expenditure.

Irrigation and Drainage.—Since the outbreak of the war, one of the most serious problems the company has had to solve has undoubtedly been that of fuel supplies. The price of coal increased considerably since August, 1914, and it soon became exceedingly difficult to obtain supplies locally in sufficient quantities for working requirements. It, therefore, at once became necessary to avert the crisis by finding a means of utilising a fuel obtainable more readily and at a less prohibitive price in substitution for coal and anthracite, which had hitherto been used with nearly all the company's lift machinery. This substitution was rendered practicable by modifying the pumping plant, and thus adapting it for either coal or liquid fuel. Steps were also taken to clean the cotton wood of the 1915 crop and thus provide an important reserve of fuel, some of which was employed before the end of the period under review. Further, to reduce to a minimum the work of the drainage pumps, the company carried out, at a small cost, certain minor drainage works by means of which it will be possible to drain by gravitation a large part of the area reserved this year for rice cultivation.

Cultivation.—The war took Egypt unawares in the midst of the cotton season, and almost on the eve of getting in the harvest. The sudden curtailment of credit which then took place, the disorganization of maritime transport, the partial or total closing of most of the important markets of the world, threw the cotton market into confusion and caused a collapse in prices. The equilibrium between demand and supply was temporarily disturbed, the cotton crop was about to flood the market, and it was impossible to react effectively against the unprecedented crisis which had just broken out and which eventually caused Egypt a loss of about £E13,000,000. This loss fell especially, if not exclusively, upon cultivators and landowners, among whom the most to suffer were undoubtedly those in the northern districts of Egypt, who had, in addition, to bear the consequences of the prohibition of rice cultivation decreed in the early months of the agricultural year, in anticipation of an insufficient water supply. This twofold cause of failure was bound to have a most prejudicial effect on the cultivation of the company's lands. The position had been satisfactory in every respect until the war broke out. The absence of rice was counterbalanced by an abundant cotton crop which gave promise of a much larger yield than that of the previous year. The company could therefore look forward to a substantial income, and the prices then ruling even encouraged the hope that the estimates would be exceeded. The sudden outbreak of the European War, which abruptly changed the normal course of things, upset all one's calculations. Taken unawares at a time when it

31, CHRISTOPHER STREET, LONDON, E.C.

had no available resources, the company found itself confronted with the greatest difficulties. If it succeeded in surmounting them, and was nevertheless able to meet its engagements, it was thanks, on the one hand, to the rigid economy which from the outset it hastened to enforce, and, on the other, to the valuable assistance it received from local establishments, although the financial crisis was at the time raging throughout the country.

The results of the year 1915-1916 were scarcely any better in the aggregate than those of the previous year. To counter-balance the depreciation of cotton, the Government had decreed a general reduction in the cotton area for 1915. (This remedy, however, whilst tending to harden prices, did not raise them again sufficiently to compensate for the resulting shortage in the crop, which was meanwhile intensified by the unfavourable climatic conditions and the ravages of noxious parasites. It will thus be seen that the company's reverses were mostly due to the depreciation in cotton values in 1914 and the reduced cotton area in 1915. Your directors were, therefore, right in stating at the beginning of this report that the difficulties and disappointments which have marked the course of these two critical years were to a great extent due to the war.

Share Investments.—In the absence of sufficient data the company's share investments have hitherto been taken into the balance sheet at their par value. But the anomaly of the present situation and the influence which it will necessarily have on investments in general, and notably on those investments which are not quoted officially, induced the Board this year to write down considerably this part of the company's assets. Your directors have, however, every reason to believe that the value of the company's share investments, as now appearing in the balance sheet annexed hereto, is below their intrinsic, or even their realisable, value.

Trustees: Deposit Account.—This account represents the sums retained for the company's account at February 29, 1916, by the trustees for the debenture holders. Under the terms of the trust deed these sums remain at the disposal of the company for the redemption of debentures or for re-investment on mortgages.

Purchasers of Lands—Instalments Mortgaged.—These two items really form one account, and show the balance at February 29, 1916, due by purchasers on the instalment system. The items are given under two headings in order to show separately that portion of the balance given as security to the holders of the debentures issued in 1912.

Sundry Debtors.—These accounts comprise arrears of rents, loans to cultivators, interest accrued, sundry advances, suspense accounts, etc. The losses incurred by the majority of the company's tenants and cultivators during these two years of the war will, it is feared, practically render irrecoverable most of the arrears of rents, etc., at February 29, 1916. Accordingly an important reserve has been placed to the debit of profit and loss account under the heading "Reserve for rents in arrear, etc."

Accounts to be written off.—The same percentages as in former years have been written off the items under the above heading. It will, however, be seen that the item "Issue and redemption expenses of the 5½ per

cent. mortgage bonds," which figured in the balance-sheet at February 28, 1914, for £E6,638,575, no longer appears in the balance-sheet, having been written off during the two years under review.

Unpaid Calls.—A sum of £E300 has been paid since March 1, 1914, on account of calls in arrear.

Sundry Creditors.—These accounts comprise, in addition to bank credits, sundry suspense accounts, etc., the amount advanced to the company by the Egyptian Enterprise and Development Company at February 29, 1916. Your directors believe it needless to reiterate the importance to the company of the assistance received, and still being received, from the parent company in the exceptionally difficult circumstances of the moment.

Unpaid Debenture Interest Coupon.—Owing to the insufficiency of the company's income, it was found impossible to meet the half-yearly interest coupon due December 15, 1915, on the 1910 debentures. The company is at present negotiating with the trustees for the debenture holders, and has every reason to hope that, thanks to the assistance of the Egyptian Enterprise and Development Co., sufficient time will be given for the payment of the above interest and that accruing this year.*

Profit and Loss.—The deductions made during the period under review in respect of bad debts, writing down investments, and writing off the cost of issue and redemption of the old mortgage bonds, amount to a sum of £E103,831.988 out of a total of £E111,356.172, the debit balance of profit and loss account at February 29, 1916, after deducting £E631,242 brought forward from the year 1913-4. It follows that the excess of expenditure over income during the past two financial years is in reality £E8,524.184, and is due to the diminution in the company's income, as already explained, and to the high prices of coal. General expenses, on the other hand, show an appreciable decrease. Every effort is being made to keep the company's expenditure within the limits of the most rigid economy, and there is every reason to anticipate that during the current year this item will not exceed £E3,500. In fact, despite the rise in food prices and the continually increasing cost of living, the company has appealed to the self-denial of the members of its staff, requesting them to relinquish part of their salaries. It might also be added that, although the general meeting of June 10, 1905, decided to grant the board of directors a minimum remuneration of £E1,000 a year, your directors have not drawn upon this allowance since the year 1912-13.

Board of Directors.—In terms of the statutes, Messrs. Wacyf Bey Boutros Ghali and Léopold du Monceau retired at the end of 1914-15, and M. Ernest Rolin at the end of 1915-16; they are eligible for re-election. During the current financial year Mr. H. E. Garle was appointed as a director in place of Mr. G. P. Foaden, who had resigned; you are requested to confirm this appointment. You are also requested to ratify the appointment of M. Léon Rolin, in place of the late M. Edouard Thys, and of M. Albert Nourrisson Bey, as an additional director.

Election of Auditors.—Mr. F. H. Russell, one of the retiring auditors, offers himself for re-election in terms of the statutes, and it is necessary to appoint another auditor to replace M. Léon Rolin, who has joined the

*Agreement on this matter has since been come to.

board. Your directors would suggest that one or more substitutes be elected to replace the auditors in case of need.

Auditors' Report.

We beg to report that we have audited the annexed balance sheet of the Gharbieh Land Company at February 29, 1916, with the books and vouchers relating thereto, and certify it to be in accordance therewith. We desire to draw your attention to the report of your directors dated May 1, 1916, regarding the balance sheet of the company at February 28, 1915, which, for the reasons stated in that report, was not submitted to the shareholders for approval. We have, however, verified the accounts for the two years ending February 29, 1916. We have verified the cash on hand and the balances at the banks, with the exception of various sums amounting in all to £E974 included in the item "bank credits, etc.," with certain banks in Belgium, from which, owing to the war, it has not been possible to obtain certificates. We have verified the deposit of directors' qualification shares. We have not been able, owing to the war, to verify the existence at February 29, 1916, of 4,000 shares in the "Société Agricole de Kafr-el-Dawar" and 8,750 shares in the "Koubbeh Gardens," which, before the war, were deposited with the Crédit Mobilier de Belgique, at Antwerp.

Subject to the above remarks, we certify that the balance sheet is in accordance with the books and statutes of the company.

Resolutions Passed at the Meeting

This meeting approves unanimously the balance sheet and accounts of the ninth and tenth financial years closed on February 29, 1916, and grants a discharge to the board of directors in respect of their administration of the company's affairs.

It resolves to carry forward to the next account the debit balance of profit and loss account.

It re-elects Messrs. Wacyf Bey Boutros Ghali, Léopold du Monceau, and Ernest Rolin as directors.

It confirms the appointment as directors of Mr. H. E. Garle, in place of Mr. G. P. Foaden, who has resigned, and of M. Léon Rolin, in place of the late M. Edouard Thys.

It appoints as an additional director M. Albert Nourrisson Bey.

It appoints Messrs. F. H. Russell and J. C. Sidley as auditors for the current financial year, and fixes their joint remuneration at £E100.

FRUIT IN MACEDONIA.

"Macedonia is at present (the end of August) a land of fruit," says a correspondent in the *Scotsman*. "It is a perfect wild market garden, in which anything might be grown, and I am sure there will be some fortunes made here—*après la guerre*. Imagine acres and acres of tomatoes and melons, the latter as sweet as honey; the water melons, with red inside and black seeds, are very large, sweet, and juicy. Then there are fields and fields of grapes, small and black, but very sweet (currants when dried), tons of peaches, apricots, and figs on their trees—all to be had for the picking—also any amount of black, juicy brambles. Here and there are patches of maize, which grow very high, like heavy wheat, only the ears are as big as cucumbers. There is, too, any amount of cotton growing round about—also to be had for the picking, most of it, I believe, being wild."

ON 'CHANGE.

(By Our City Correspondent.)

THROGMORTON STREET, E.C.

There has been a little more activity this week, thanks to a revival of demand from Egypt for Agricultural Banks, and a further increase in the demand for Salt and Sodas. The former, on persistent buying orders, have risen 3-16 to 4½, but owing to the scarcity of sellers only about 500 shares have changed hands. As regards Salts, the price has risen 1s. to 20s. 6d., but here, again, holders have been disinclined to sell, expecting higher prices later on, and the business done has therefore not been very extensive. Alexandria Water continue in demand for Egypt, but in the absence of sellers no business can be carried through. In Delta Light a few small transactions have taken place in the neighbourhood of 5 3-16. Markets have further improved 6d. to 26s. 6d., some few hundred shares changing hands. In Khedivial Mails there has been a renewal of demand, and the price has improved about 1s. to 27s.; but the Preference remains a dull market at 3½. National Banks have been exceptionally dull, and are about ½ lower at 12½, after business covering about 300 shares. In Union Foncière there has been a small transaction in the neighbourhood of 20s.

Greek Bonds, after several weeks of idleness, have again come into demand for Athens, and the market is one to two points higher all along the line. Monopoly have been done up to about 50, and Rentas at 42. There are further buyers, but the scarcity of sellers renders business very difficult.

COMPANY NOTES.

Oil Outputs.

Anglo-Egyptian.—Gemsah, week 22 tons (previous week, 17 tons); Hurgada, 829 tons, against 508 tons.

Bibi Eibat Oil.—Week ended October 22, 54,467 poods.

Black Sea Amalgamated.—Week ended October 21, 20,185 poods.

British Maikop.—Week ended October 28, 2,574 poods.

European Oilfields Corporation.—Week ended October 22, 80,000 poods.

Maikop Combine.—Week ended October 21, 17,382 poods.

North Caucasian Oil Fields.—Week ended October 11-24, 609,037 poods.

Russian Petroleum.—Week ended October 21, 56,400 poods. Week ended October 23, 57,600 poods.

Spies Petroleum.—Week ended October 22, 149,580 poods. The total production for the year from January 14 to 22nd inst. was 6,773,845 poods. The total production for the corresponding period last year was 11,079,180 poods, or about 178,696 tons.

Ural Caspian Oil Corporation.—Week ended October 19, 162,637 poods.

Dividends, etc.

Egyptian Hotels.—A dividend of 5 per cent. on the preference shares for the year ended April 30, 1915, was declared on the 20th ultimo, payable on and after 30th instant. Holders of preference share warrants to bearer should present coupon No. 11 for payment at one of the undermentioned places:—Anglo-Egyptian Bank, London and Cairo; Banque Commerciale de Bale, Basle, Switzerland; Comptoir National d'Escompte de Paris, Cairo, Port Said, and Alexandria. In our report of the meeting of shareholders of the company, published on September 29, it was stated that a dividend of 5 per cent. on the preference shares for the year ended April 30, 1916, was declared payable. It will now be seen that the dividend is in respect of the year ended April 30, 1915.

The European Oilfields Corporation announces that 14,531 profit sharing notes of the nominal value of 5s. each have just been purchased and cancelled in accordance with the terms of issue. The original issue of 197,480 notes (£49,370) has now been reduced to 97,064 notes (£24,263 10s.).

THE EASTERN BANK.

The Eastern Bank, Limited, have opened a branch at Amara, in Mesopotamia, where they have been appointed bankers to the Government of India.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to August 31, 1916 (New Style: January 14 to September 13, 1916):—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross Receipts, Aug., 1916.....	Drachmæ. 2,957,941	Drachmæ. 1,763,000
Do. do. do. 1915.....	2,946,645	1,749,000
Estimated Receipts for 8 months (Law of Control).....	19,266,666	7,133,333
Actual do. do. 1916.....	20,118,060	18,185,000
Do. do. do. 1915.....	24,174,147	16,097,887
Difference between estimated and actual receipts for 8 months.....	1916 + 3,849,394	+ 11,051,666
1915 + 4,907,480		+ 8,964,563

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49.15 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is at or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

The tenacity of the Roumanian troops, helped in no small measure by the weather, has availed to check the enemy in the Carpathians at a moment when everything depended on the rapidity of his advance. Beyond this it would not be safe to go in appraising the general situation. The Roumanians have received reinforcements, in men and material; but big guns remain an important factor, and until the Austro-Germans have had time to bring theirs up to the new positions, it is not possible to tell whether our Allies are now equally strong in this arm. Of one thing we may be certain, that more confidence exists at Roumanian headquarters than was the case when the double thrust in the Carpathians and in the Dobruja found the Roumanian General Staff in two minds. The requirements of the two fronts must have been accurately gauged, and whatever steps are being taken to meet them will at least be free from the anxiety accompanying the earlier attempts to strengthen one at the expense of the other.

The expectations raised in enemy countries by the Roumanian campaign are clearly shown by the prominence given to it in the Press. An army of special correspondents had been attached to von Falkenhayn's headquarters, and all the stage-management for a successful expedition had been carefully arranged. One of the first *mots d'ordre* given to the Press representatives was to "write up" the atrocities alleged to have been committed by the Roumanians during their advance into Hungary. As the German public will have heard little or nothing of German atrocities in Belgium or German connivance in outrages in Turkey, it will no doubt be impressed by the recital. Together with neutrals it will be expected to regard the *ex parte* statements emanating from von Falkenhayn's Press Bureau as an adequate counterblast to the judicial investigation into the excesses in the territories overrun by Germany's soldiery. Most people will be inclined to think that the Germans are overstating their case when they are reduced to recording that the Master-baker Bronovitch "was robbed of his watch and money in the open street." The Roumanians, however, should take note of the systematic efforts made to embitter the people of Transylvania against them.

Further instructions will have had to be issued from von Falkenhayn's headquarters to meet the lull in the Austro-German advance. These, so far as the unanimity of the German press is a criterion, will have taken the form of a hint to vary descriptions of the country

with articles insisting on the military importance of the Roumanian campaign. Some newspapers, greatly daring, have compared Verdun with the Dobruja, entirely to the advantage of the latter. In February, so runs the line of argument, it was important that the French should be dealt a stunning blow at Verdun. That accomplished, there is nothing to distinguish the fortress from any other point in the Western theatre, and in view of events in south-eastern Europe the region has lapsed into comparative obscurity. A small French gain there means nothing, it is contended, when the vital issue is being fought out elsewhere. In due course we may expect the same to be said of the Roumanian campaign. Meanwhile, the employment of such artless reasoning at this stage is not without significance.

That Roumania's time of crisis is not yet at an end is shown by the daily reports of the struggle in the Carpathians. Nowhere has the situation undergone any considerable change; but the announcement that in the Prahova Valley our Allies have been subjected to an intense bombardment indicates that the enemy has succeeded in bringing up some at least of his heavy artillery. If the Roumanian guns are still outranged as they were in Transylvania, a further withdrawal will be difficult to avoid. But it is just at this point that King Ferdinand's order to his Army becomes applicable: "Let no unit retire, but maintain its positions at all costs. . . . Our mountains, which for thousands of years have been the cradle and shield of our race, should be an impenetrable wall." Having reached Azuga, the enemy is uncomfortably close to Sinaia, the summer resort of the Court and Government and of Roumania's Upper Ten. The fate of the Royal Palaces, built by German architects and decorated by the foremost of German artists and woodworkers, is a foregone conclusion, if they should fall into the hands of the invaders. The stories, so carefully circulated, of Roumanian atrocities in Transylvania are an earnest of what the Germans have set themselves to do when the "treacherous" Roumanians are in their power. Something of this presentiment will have prompted King Ferdinand to appeal to his Army, and will steel the Roumanian troops in their resistance at such a vulnerable spot in their mountain barrier.

Next to the Predeal Pass, the enemy's main pressure is being directed in the Aluta Valley. Here again the Roumanian line is directly guarding a sacred portion of Roumanian soil. A few miles down the Valley is situ-

ated Curtea d'Argesh, formerly the capital of Wallachia. It is the burial-place of King Carol, and contains a famous cathedral, dating from the sixteenth century, but restored in the nineteenth, which is regarded as the finest monument in Roumania. The Austro-German forces have already penetrated some distance into Roumania through the Roter Turm Pass and the Törzburg Pass, which lie respectively north-west and north-east of Curtea d'Argesh. At the latter place and at Campolung, half-way between it and the Törzburg Pass, the invaders reach railheads of two branch lines which connect further south and offer a second avenue of approach to Bucharest. For the present, therefore, we may expect von Falkenhayn to concentrate his efforts at these two passes and in the Prahova Valley. But unless the fortunes of war favour him at other points as well in the Carpathians, he will be adopting rash tactics in allowing his troops to advance too far in the centre of his long line.

Roumanian reports speak of an advance on the whole of the Dobruja front. The vagueness of the statement suggests the arrest of von Mackensen's spectacular thrust and a prospect of the passing of the offensive into Russo-Roumanian hands. Constantza has been bombarded by a Russian squadron, but the enemy has replied by shelling Giurgiu, the Roumanian port opposite Rustchuk. Perhaps the most important development in the Dobruja is the arrival, to take command of the Allied forces, of General Sakharoff, the commander of the Russian Army operating in Northern Galicia, who was associated with General Brusiloff's conspicuous successes in the summer. The transfer of General Averescu first from the Carpathians to the Dobruja and then back again to the Carpathians pointed to a shortage of commanding officers of note in the Roumanian Army. General Sakharoff's presence in the Dobruja will offset the glamour attaching to von Mackensen's name, and will reassure the Russo-Roumanian troops who are upholding the Allied cause in this theatre of the war. The enemy has already paid him the compliment of withdrawing some distance before an Allied offensive could be launched.

The past week has witnessed no marked development in the situation in Macedonia. Artillery duels have taken place over the greater part of the front. On the Serbian sector the Bulgarians have launched some unsuccessful counter-attacks, but the Allies have made no serious attempt to advance their line. General Sarrail, no doubt, has good reasons for the slowness of his offensive. Into these the public in the Allied countries will not seek to probe for the present; but it will, we hope, preserve its sense of humour sufficiently to appreciate the German attempt to improve upon the situation. The form this has taken is the publication in the German press of a letter alleged to have been written by General Sarrail to a "very trusted friend" in Paris, who showed it to a neutral, who "on his return home wrote down from memory the contents of the letter," and promptly handed the document to a German newspaper correspondent. In this letter General Sarrail is represented as explaining the reasons for deferring his offensive. They were, in brief, the length of his front and the character of his army. Not content with summing up his troops in general as "the scum of all the armies," General Sarrail, in the alleged letter, proceeds to describe each nationality in detail. The "biggest rabble" of all are "the white and coloured Englishmen"; the Italians are "a cowardly rabble"; the Portuguese make no good impression; the Russians are disappointing; the Serbians alone are of any use. But the German humorist has fallen into the error of imagining that General Sarrail has been watching the war through German eyes. The forgery is almost too clumsy to call for a formal contradiction.

So far there has been nothing in the attitude of King Constantine and his Ministers to confirm the optimism of the *communiqués* issued by the Entente Governments

after the audiences given a week or more ago to their representatives. On the contrary, much has happened to justify the supposition that Greece's rulers have felt encouraged to persevere in their policy of flouting the Entente Powers. No attempt has been made to abandon the system of arresting and imprisoning officers and men who are suspected of a desire to join the Nationalist army at Salonika, although complete freedom of action for these men was part of the pact with the King. A glaring case of assistance being given to German submarines by a Gounarist deputy within sight of the Acropolis has been brought to light. In this connection an interview given by King Constantine to a correspondent will be recalled, in which he denied that German submarines were afforded any help or shelter in Greek waters. Further, the censorship has allowed the publication and transmission by telegraph of a statement to the effect that plans of the defences of the Suez Canal and compromising letters from the King and Queen of the Hellenes to the German Emperor have been found on a German officer arrested at Larissa when on his way to the Bulgarian lines. This report, whether true or not, is symptomatic of the state of feeling in Greece regarding the genuineness of King Constantine's conversion.

In the meantime the Allied Governments maintain the fiction of recognising two mutually incompatible authorities in Greece. King Constantine is allowed to break his agreement to allow his subjects complete liberty to join the Salonika movement, if they wish to do so; but when some officers are cashiered and deprived of their pensions for taking the step, the Allies, instead of settling the question once and for all with the King, inform M. Venizelos, according to the statement of the Under-Secretary for Foreign Affairs in the House of Commons, that they "will not lose sight of the interests of those Greek officials and officers who might desire to offer their services to the Provisional Government at Salonika, and that care will be taken that the interests of these officials and officers do not suffer in the future." Whether such a weak policy is good for any of those concerned—for King Constantine himself, for the Allies, or for the Greek people—must be open to grave doubt. The indefinite prolongation of an impossible state of affairs can only spell greater disaster for someone in the long run.

Sir Reginald Wingate, whose appointment to the High Commissionership of Egypt is dealt with elsewhere, will enter upon his new duties at an interesting point in the country's history. In spite of the war, it is in a prosperous condition, so much so that it has been found possible, we understand, to proceed with certain irrigation works which were postponed two years ago. At the same time other interests than those which directly concern Egypt's material welfare are not being neglected. No feature of the new régime is more prominent than the increased attention given to educational matters, at the direct instigation of the Sultan himself. Provided that the pace is not made too rapid and the real needs of the people are kept steadily in mind by those responsible for educational policy, there can be no more useful partner for material progress.

News from Mesopotamia continues to be scarce, although conditions for the resumption of hostilities must be favourable by now. It is to be hoped that the fierce light thrown upon this theatre and the fact that a Commission is at present engaged in investigating the circumstances of the campaign will not lead those in authority to suppose that their safest course is to do nothing until they are ordered to do it. No more fatal blow could be dealt to our prestige in these parts than to allow the Arabs to see a British force numerically stronger and better equipped doomed to inactivity in the face of a comparatively insignificant force of Turks. No offensive should be undertaken until there has been adequate preparation; but the Allies are falling short of their maximum effort, if one of them holds back from pressing the enemy, whenever opportunity offers, to the utmost of his capacity.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, October 18.

(Delayed in transmission.)

The High Commissioner's Return.

H.E. the High Commissioner came up to Cairo from Alexandria on Thursday last. Sir Henry McMahon, who travelled by special train and was accompanied by the members of the Residency staff, was received at Cairo station by General Sir Archibald Murray, the Ministers, and the senior Government officials, as well as an unusually large number of European and Egyptian notables. With the return of his Excellency to Cairo the seat of Government has been transferred back to the capital from Alexandria, where it has been, as usual, centred for the summer months. The Ministers are already back in Cairo, and H.H. the Sultan, who is at present slightly indisposed, is expected to come up from Gabbaris next week. Sir Henry McMahon proceeded to Ismailia on Saturday, and thence went on to Port Said, where he met Lady McMahon, who was a passenger in the P. and O. Malwa. Quite a number of prominent Anglo-Egyptians arrived by the same steamer. They included Sir William and Lady Brunyate, Dr. Douglas Dunlop, Sir Murdoch and Lady Macdonald, and Judge Vaux.

The Sultan has now signed the decrees appointing Sir William Brunyate Judicial Adviser in succession to Sir Malcolm McIlwraith, Mr. James Haines Adviser to the Interior in succession to Sir Ronald Graham, and Mr. John Langley Under-Secretary of State for Agriculture in succession to Mr. Haines. Mr. H. M. Anthony, Deputy Director-General, succeeds Mr. Langley as Director-General of the State Domains.* All these officials took up their new duties on Monday.

My more recent information with regard to the Vice-Presidency of the Native Court of Appeal is now confirmed. It is announced that Judge H. W. Halton, Counsellor of the Mixed Court of Appeal, has accepted the offer made him, and the decree appointing him in succession to Judge Bond has just been signed. I understand that his place will not be filled by promotion of an English judge from the lower courts, but that a distinguished member of the Supreme Consular Court will in all probability be selected. At the same time the Government has found a means of overcoming the somewhat serious situation set up by the shortage of judges in the Mixed Courts of First Instance, and I understand that it has been decided to appoint Judge W. H. H. Thorne, at present President of the District Court of Larnaca, to the vacancy left in Alexandria by the transfer of Judge Bateson to Cairo. Judge Thorne, who speaks Turkish and Greek, as well as several European languages, comes to Egypt with an excellent record, and he should prove a very valuable addition to the English magistracy of this country.

Sir Ronald Graham.

Sir Ronald Graham, the retiring Adviser to the Interior, has been the recipient of a remarkable demonstration of regret at his departure at the hands of the Egyptian community. As foreshadowed in this correspondence a fortnight ago, he decided to make a farewell tour of certain of the Lower Egypt provinces. Accompanied by Lady Graham, he visited Shibin-el-Kom, Tanta, Mansura, and Zagazig, at each of which towns they were entertained by the Mudir and the notables. On the afternoon previous to their departure they were entertained at a farewell tea-party organised in the Esbekia Gardens by prominent Egyptian notables, under the presidency of H.E. Ahmed Mazloun Pasha. The reception was a very successful one, and H.H. the Sultan specially lent his band for the occasion.

* According to the *Egyptian Gazette* of October 18:—"The successors to Sir William Brunyate and Mr. Anthony have not yet been selected, but among those in view are Mr. Vaughan Williams, of the Contentieux Department, for the first vacancy, and Mr. Goschen, Controller of the Secretariat in the Ministry of Finance, for the second vacancy." The *Gazette* also reports (October 20):—"It is understood that the seat on the bench of the Mixed Court of Appeal, rendered vacant by the appointment of Judge Halton as Vice-President of the Native Court of Appeal in succession to Judge Bond, has been offered to Judge Cator, and that he has accepted it."—[ED.]

The British, European, and Egyptian communities gave them a rousing send-off at Cairo station, and Lady Graham was the recipient of a delicate attention on the part of a committee of Egyptian ladies, on whose behalf Mme. Rushdi Pasha presented her with a diamond pendant of old Egyptian design, in recognition of the great interest she had taken in and all she had done for the welfare of the women of Egypt.

The Mecca Pilgrimage.

News has just been received that the Mahmal and its escort have arrived with the pilgrims at Tor on their way back to Egypt. The pilgrimage has been carried out without any untoward incidents, and the Shereef has thus fulfilled his guarantee. The pilgrims are reported by the medical authorities to be in good health; but as the International Quarantine Board, for precaution's sake, declared the pilgrimage at its outset to be infected, the pilgrims will all have to spend the regulation ten days in quarantine at Tor. They will, therefore, not be back in Egypt until the 28th or 29th inst.

The Prime Minister.

H.E. Hussein Rushdi Pasha, the Prime Minister, has now completely recovered from his illness, and has resumed his duties at the Ministry of the Interior. He presided last Tuesday at the Council of Ministers, which owing to his indisposition was the first to be held for several weeks.

October 26.

"Our Day."

"Our Day" was celebrated on Saturday last by a very successful garden fête at the Red Cross Hospital at Giza, which was attended by H.E. the High Commissioner and Lady McMahon. All day long ladies of the various Entente colonies carried out collections at important centres of the city, and very substantial sums were obtained by them. The "Our Day" accounts will remain open until the 31st inst., to enable the provincial subscriptions to be got in. The general list is already very large, but it is doubtful whether the splendid result of last year will be repeated. This is not due to any lack of appreciation of the work done by the Red Cross or of any slackening of interest in the Entente cause on the part of the Egyptian community, who collaborated so generously in making up last year's record total. The reason of any diminution will undoubtedly be found to repose in the fact that this year the Egyptian masses have another and, to them, far more important appeal looming ahead—the appeal for the Kitchener Memorial, to which, more than to any other object, they would perhaps not un-naturally prefer to give the contribution, which, whether it goes to that memorial or to the Red Cross, may be rightly regarded as the practical demonstration of their loyalty to the Protecting Power.

The New Coinage.

As was foreshadowed a week or so ago in this correspondence, the new coinage bearing the monogram or Toughra of Sultan Hussein in the place of the Toughra of the Sultan of Turkey has now been put into circulation. The decree authorising the issue and the letter from the High Commissioner to H.H. the Sultan, conveying the British Government's approval of the changes made in the design and lettering, appeared in last Thursday's *Official Journal*. The new silver coins have been minted in India; they are somewhat lighter than the last issue, but, as far as can be gathered, the people are making no trouble on this score about accepting them.

The Australian Referendum in Egypt.

On the 16th and 17th inst. the votes of the members of the Australian Imperial Force at present in Egypt on the question of the introduction of compulsory

FOR INSURANCES OF ALL KINDS.

F. W. CUMING & CO., LTD.,

THE GENERAL INSURANCE OFFICE OF EGYPT.

ALEXANDRIA:
5, RUE AVEROFF.CAIRO:
23, SOLIMAN PACHA.

foreign service in Australia were collected. The poll was taken at each important centre and polling stations were established at Cairo and Alexandria for the Australians who might be absent from their units. Lieutenant-Colonel J. J. Paine, V.D., Commandant of the Australian Headquarters in Egypt, acted as Deputy Returning Officer for Egypt and the Sinai Peninsula, and, as far as can be ascertained, the poll was taken everywhere without any trouble or hitch. From conversations I have had with individual men, and from what I have heard indirectly, there is little doubt that the vote from the A.I.F., wherever its members are situated, will be an unanimous one in favour of the Australian Government being given the power of compulsion which it seeks.

The 1917-1918 Budget.

At the present moment all Government departments are hard at it framing their estimates for the next financial year. All proposals involving new or additional credits have to be submitted before the 1st. prox., and the final budget for each administration has to go in before the end of the year. It is understood that within a limited degree somewhat more liberal credits for new and current works may be allowed, but only for the most urgent, and that promotions and increases will be accorded to the categories of small officials who did not benefit by the recent concessions made by the Ministry of Finance, as well as to certain of the medium-paid *personnel*. Whilst the possibility that the cessation of the war may bring about a reduction in certain heads of revenue has to be faced and provided for by the strengthening of the Reserve Fund, the Anglo-Egyptian financial authorities are quite right to spend more than they have done since the outbreak of war on public works, etc., since by such outlay they are also improving the country's prospect of being able to withstand any economic or agricultural set-back if and when it comes. At the same time their decision to increase the salaries of certain categories of Government officials is fully justified by the rise in the general cost of living, which has been very substantial during the past two years, and which falls far more hardly on these categories than on the more highly paid members of the service.

The Sale of "Cast" Horses.

The letter which recently appeared in the *Westminster Gazette* and the correspondence which has been carried on in the local English Press with regard to the sale of cast horses in Egypt deals with a subject that merits most urgent and earnest attention. Even in the piping times of peace, when only a cavalry regiment, a battery or so of artillery and other mounted details were stationed in Egypt, one not infrequently came across ex-Army horses which the Arabs were treating in their own inimitable cruel way, just as if they were locally bred and accustomed to the jerky rein, flicking whip, and hard and spare food of the country, instead of having been, as so many of them were, accustomed from their breaking-in days to decent fodder and handling. The sight of these poor brutes, plodding along courageously in spite of their privations, was sufficient to make the heart of even the most casual of horse lovers sick with compassion and his blood boil with rage. What went on three years ago, however, is as nothing compared with the state of affairs to-day, when, as a consequence of the vast numbers of horses brought into Egypt for military purposes during the past two years, the "casts" have increased to an enormous extent, and one can rarely pass any cab-stand without seeing several *arabes* drawn by "walers" and other non-Egyptian horses, whose former career it is impossible to mistake and whose future fate in the hands of the ignorant but cruel *arbuggis* it is easy for anyone knowing his Egypt to foretell. My remarks refer only to Cairo, though I am creditably informed that numbers of "casts" are also sold into the districts, where the life awaiting them is just as bad. By continuing to countenance a procedure which certainly clashes with humanitarian ideas, the British military authorities are shouldering a great moral responsibility, and the sooner they put a stop to the practice of selling "cast" horses wholesale into Egyptian bondage the better.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, October 21.

The High Commissioner.

The High Commissioner, on returning from Government House, Troödos, to the capital, visited Papho as well as Limassol. At the former place there were various petitions for consideration, as the district of Papho, which was once so famous as the birthplace of Aphrodite, now generally regards itself—though, perhaps on insufficient grounds—as rather a neglected corner of the island.

Departures from Cyprus Prohibited.

By order of the High Commissioner and Commander-in-Chief, the Commissioners and Provost Marshals of districts have notified the public that, until further notice, no men of military age who may be considered fit for service are allowed to leave the island without special permission. This involves postponement, not only of some would-be emigrants to the United States, but also of a number of Cypriot artisans and labourers who were contemplating work elsewhere.

The Legislative Council.

Great interest has been taken in the election of members, which has been carried out without any friction. The following candidates have been elected by majority of votes for the Nicosia-Kyrenia Division:—A. Sevéris, N. Pascális, and Th. Theodótou; for Larnaca-Famagusta, I. Emphietzis, L. Loizou, and Dr. Zannettos; for Limassol-Papho, N. Nicolaides, E. Zeno, and N. Laníti. Six of these are new members. Amongst those who have failed to secure election are Mr. A. Liassides, Mayor of Nicosia, and Mr. E. Hajji-Ioannou, of Larnaca, both of whom have had long experience in the Council and of local affairs. Their presence will be missed. The Mohammedan member, unopposed, for Nicosia-Kyrenia is Irfan Bey, and for Larnaca-Famagusta, Hami Bey.

Bribery in Village Elections.

Sentences of imprisonment for various terms have been pronounced by the Assize Court of Nicosia against certain villagers convicted of having accepted bribes in connection with the election of Mukhtars (village headmen). Offences of this kind have, it would appear, become far too common, and it is hoped that the sentences will have a deterrent effect. Owing to the improved status of Mukhtars under recent laws, the post of headman, which had become very unpopular, is now eagerly sought in many cases.

The Archiepiscopal Election.

Hope now prevails that the duties of the sixty-six elected voters, whose decisions will settle who is to be the new Greek Archbishop of the autocephalous island church, will be carried out without manifestations of ill-feeling, of which there has been recently no little danger. The action for libel instituted by the Holy Synod against the Greek paper *Kypriakós Kýrx*, which came before the Nicosia District Court on October 7, has been adjourned *sine die*; and the movement, supported by the Press, in favour of concord and union, which has endeavoured to prevent the drifting of matters touching the ecclesiastical body into the law courts, has gained ground. The election of the "general electors" is fixed for October 22, and that of the Primate should take place on November 15.

Winter Railway Arrangements.

From October 23, only one passenger train will run each way daily between Nicosia and Famagusta, and between Nicosia and Evríkou, except on Thursdays, when there will be two services between the capital and the eastern port. Economy in coal is still needed.

Officials and the War.

Of the six British Presidents of the District Courts there are now only two in the island. Each one is acting for three districts. Mr. McCaskie, of Famagusta, is on leave. Mr. Porter, of Papho, has accepted an appointment in the Gold Coast. Mr. Thorne's appointment in Egypt is that of Judge in the Mixed Courts of Alexandria. Mr. Bros, of Kyrenia, is joining the army.

NEWS FROM SYRIA.

(FROM AN OCCASIONAL CORRESPONDENT.)

CAIRO, OCT. 25.

Gloomy Reports.

After an interval of comparative silence, during which such news as reached us from Syria was of such a nature as to lead us to believe that the situation there was not, after all, so utterly hopeless, bad reports are again being received. An American, recently arrived from Syria, and interviewed by the editor of an Arabic paper in New York, is said to have confirmed the reports, published a few months ago, about the appalling havoc that famine played in Syria, and especially in the Lebanon, his estimate of the total number of deaths attributable directly or indirectly to this cause being about 150,000.

The students of the American College preferred to remain there during the summer vacation rather than go to their homes and see famine staring them in the face. It seems that the Government has requisitioned all primary articles of foodstuffs, and actually sent part out of the country. In this American's opinion the purpose of relief would be better served if personal remittances were made to one's own people, in small but regular amounts, and if each group sent its remittances to its own village. It would be a mistake, he thinks, to send large collective remittances for wholesale distribution, unless this were to be entrusted to an American committee. The Cairo Central Committee was, therefore, well advised in having refrained from entrusting its funds to the joint committee of the American Red Cross and Ottoman Red Crescent, which the Turkish Government proposed. The same American gentleman further stated that the remittances made by the Syrian emigrants through the American Missions in Syria were being cashed, for the account of the addressees, by the manager of the American Printing Press and Secretary of the American Mission at Beyrout from the Ottoman Bank in paper money. This paper money, however, is accepted by the shopkeepers and those in charge of the ticket grain stores only at one-third of the gold value. Thus, the Government not only lays its hands on the produce of the land, but further exploits the population by reselling it to them at treble the price through its depreciated paper currency.

Druse Deserters.

It is reported from other sources that most of the Druse young men of the Lebanon who have been led into volunteering have not been long in deserting and seeking refuge with their co-religionists in Jebel Hauran, who have risen against the Government and stopped all communication with Damascus. If open rebellion has not broken out there it is simply because the Government has too much on its hands at present to be able to send a punitive expedition, as it did in the palmy days following the proclamation of the Constitution.

"Commissions."

It is reported that the commissions charged with the sale of the property of persons condemned to death and of other property confiscated by order of the court-martial are composed chiefly—especially in the case of Beyrout—of illiterate persons of the boatmen and contrabandist class, who even in pre-war times used to be the terror of the city and neighbourhood. It may be well imagined what sort of work such commissions do, especially when it is known that great powers have been given to them by Jemal Pasha.

THE POSITION IN PALESTINE.

(FROM A CORRESPONDENT.)

News from Turkey is extremely hard to come by now, or, rather, reliable news is, for of rumour we can have our fill any day. It is certain that there is great scarcity of foodstuffs, and, consequently, much distress. Palestine could be not only almost self-supporting, she could also supply other countries, but she has been so long and so grievously neglected by the Turkish Government that she is very dependent on foreign supplies; these are now almost entirely cut off, and the pangs of want cannot be stayed until the country is open once more to assistance from outside. The corn supply, as a rule, was so plentiful that only 20 per cent. sufficed for the needs of the small population of Palestine and Syria, and the rest was exported; if, therefore, bread and flour have indeed risen to the fabulous prices reported, and the people have gone hungry, it can only be that Germany and Austria have taken with greedy hands to cover their own shortage at home. It is hoped that the economic situation will be really bettered by the help that America is now to be allowed to give. Syrians everywhere are rejoicing at the thought of what this will mean to their people at home, though many agree in saying that things in Palestine are far better than in the Lebanon—a country for which the Porte has always seemed to have a special animosity.

Jerusalem "Improvements."

We hear from time to time of wonderful "improvements" at Jerusalem under German rule—of new streets made and old ones widened, of better sanitation, and so on. No one who remembers the ancient beauty of Jerusalem can help a shudder of apprehension at the thought of her "improvement" at the hands of the German and the Turk. The only improvement possible would be a clean sweep of both as ruling Powers. I should be far from denying that the sanitation of Jerusalem could be improved, if there were any system existing to improve on; but if the Germans are going to dig up old drains in the Holy City they will probably start a series of horrible epidemics, such as one that occurred some years ago, when what is known as the New Greek Market was being built near the Church of the Holy Sepulchre. Some old shops and houses were then pulled down to make way for the new, and in the course of digging down for the foundations the workmen broke into a pit from whence proceeded a most appalling smell. The workmen who actually dug it died, others fell ill, and several passers-by also suffered. The curious part was that the two who died showed every symptom of the "black death," and it was supposed that they had unwittingly opened one of the old plague burial-pits. The place was hastily smothered in lime and disinfected by a terrified municipality, and after a little excitement the incident was forgotten.

Jerusalem itself is described as a perfect arsenal; troops and military stores pass through it constantly; the Mount of Olives is well fortified. There was good authority for believing that the philanthropic guest-house on the Mount of Olives was in process of arming early in 1912. Certainly there was no reason why a house of rest for missionaries should be endowed with a particularly strong searchlight, seen well out at sea beyond Jaffa; and it is a fact that the Kaiser insisted on being kept informed weekly of everything that took place at the *Stiftung*, to the smallest detail. It has a glorious view over the country on all sides, and commands the city. New roads and railways for military purposes are being pushed forward with haste, yet not carelessly. We know that Germany excels in her planning and execution of railway strategy. It is possible that we may one day find the railways of Palestine are a fact to reckon with.

The Political Executions.

There have been several accounts in the Press of executions, all political, of course. No doubt there have been some, especially in the Lebanon districts, but there is good reason for believing that the number has been overstated. Capital punishment was one of the first "improvements" introduced by the New Constitution of 1908. There were two or three at Jerusalem, and one, early in 1914, took place just outside the Damascus Gate under circumstances so horrible that the foreign consuls protested to the Pasha. No one in Jerusalem knew how to hang a man, and no one could be persuaded to try until at last a gipsy—or one of those very low and disagreeable vagrants who go by that name in Jerusalem—undertook to do it for the modest sum of one *mejideh*, say, 4s. 6d. But he, though willing, was inexperienced, and the unfortunate victim died of slow suffocation. Jerusalem was horror-struck, and up to the beginning of the war there were no more such dreadful scenes.

Worse than the most flagrant political executions are the wholesale massacres of Armenians which have yet again

soaked that unhappy land in blood. The actual assassins were, of course, the Turks, but German officers beheld what was done and forbore to interfere, even when besought to do so by American missionaries. For every Armenian death Germany is as guilty as she is of the murder of Belgian civilians, the sinking of the "Lusitania," and the no less ghastly deportation of the women of Lille.

Fate of Allied Buildings.

We know that the buildings of the Allies were taken into use early on, for hospitals, schools, or military purposes, and in *The Times* of October 28 it was stated that all the buildings of the Imperial Orthodox Society at Jerusalem and elsewhere had been requisitioned for barracks for Turkish and German troops. One of the first establishments to be thus used was the beautiful French possession in the city known as St. Anne's, where is the traditional Pool of Bethesda; but the Turkish soldiers said they could not sleep on account of the spirits, and begged to be removed. The Turks then tried to restore the buildings to the French monks, who very properly refused to receive them except through their Government. It would be interesting to hear the sequel to this strange little story. Were the soldiers removed to quieter places, or are they still there, troubled by the jealous dead? There is no report that the churches, which were closed at the beginning of hostilities under the American Consular seal, have been touched. This honourable distinction between buildings sacred and common, made by Moslem Turks, might be commended to the attention of "Christian" Germany, the ravager of Louvain and the wanton destroyer of Rheims.

LORD KITCHENER SUDAN MEMORIAL.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I desire to bring before you an appeal that has been issued by Sir F. Reginald Wingate, Governor-General of the Sudan, to found a permanent Memorial to the late Lord Kitchener in Khartoum. It has been decided that this should take the form of a School of Medicine, to be affiliated to the Wellcome Tropical Research Laboratories, and thus become part of the Gordon Memorial College. Students who have passed through that institution will therefore be fitted to serve as officers in the Egyptian Army Medical Corps, as officials in the Medical Department, and as general practitioners in that country.

Lord Kitchener's association with the Anglo-Egyptian Sudan, and the keen interest he took in its development, are so well known in this country that nothing further need be added to the appeal of the Sirdar, which I have pleasure in enclosing you herewith.

Subscriptions to the Memorial should be forwarded to Mr. Baldwin S. Harvey, Hon. Secretary, Gordon Memorial College, 67, Lombard Street, London, E.C.; and communications on the matter should be addressed to Mr. C. J. S. Thompson, Hon. Secretary, "Lord Kitchener Sudan Memorial," 54a, Wigmore Street, Cavendish Square, London, W.—Yours, etc.,

CROMER,

President of the Gordon Memorial College,
Khartoum.

36, Wimpole Street, Nov. 7.

SIR REGINALD WINGATE'S APPEAL.

Lord Kitchener's services in the present war have been so much greater and wider in their appeal than any which even he had previously rendered that the National Memorial Committee rightly determined to dedicate all funds they collected exclusively to the use of those disabled in this war.

But it is equally right that Lord Kitchener's earlier achievements in Egypt, India, and the Sudan should be commemorated in local ways by those who owe to these episodes in his career their most precious possessions or memories. It has been decided accordingly to found in Khartoum a special Sudan Memorial to Lord Kitchener, as the Sudan was the theatre of Lord Kitchener's first great successes, and Khartoum will be for ever linked with his name. The proposed Memorial will take the form of a School of Medicine, a project which was very close to Lord Kitchener's heart and frequently advocated by him in conversation. The School will be, as he wished, directly affiliated to the Wellcome Tropical Research Laboratories; it will be, in consequence, an integral part of the Gordon Memorial College Foundation, and all moneys now collected will be spent upon building and equipment.

As the immediate successor of Lord Kitchener both as Governor-General of the Sudan and Sirdar of the Egyptian Army, I confidently appeal to past and present members of the Sudan Government and the Egyptian Army, to the people of the Sudan, and to all others interested in the work initiated here by Lord Kitchener for funds sufficient to provide a building appropriate to our requirements and worthy of the name it will commemorate.

REGINALD WINGATE.

Khartoum, September 27, 1916.

Beginning on the 15th inst., parcels for Gibraltar, Malta, Egypt, East Africa, India, Australia, the Straits Settlements, Hong Kong, China, and other destinations served by Peninsular and Oriental Steam Navigation Company's Packet must reach the General Post Office, London, not later than five o'clock on Wednesday afternoon, in order to be in time for the same week's mail.

SIR REGINALD WINGATE.

The Foreign Office announces that the King has been pleased to approve the appointment of General Sir Francis Reginald Wingate, G.C.B., G.C.V.O., Sirdar of the Egyptian Army and Governor-General of the Sudan, to be High Commissioner of Egypt in succession to Lieutenant-Colonel Sir Arthur Henry McMahon, G.C.V.O., K.C.I.E., C.S.I., to take effect on January 1, 1917.

Sir Reginald Wingate is the one man whom the Egyptians themselves would have chosen to fill the post. His experience of the country and of its people dates back for thirty-three years; for it was in 1883 that, as a Lieutenant R.A., he joined the Egyptian Army after serving for a couple of years in India and Aden. Honours came to the young officer in the very first year of his service in Egypt; for the 4th Class Order of the Osmanieh was bestowed upon him in recognition of his services as commandant of the cholera hospital immediately after his arrival in the country. In the following two years he acted as A.D.C. and Military Secretary to General Sir Evelyn Wood during the expeditions of that period, and was again decorated, this time with the Order of the Mejdieh, and was mentioned in despatches. He left the country for a few months in 1886, when he was appointed A.D.C. to the G.O.C., Eastern Command; but he returned to the Egyptian Army in the same year, and was promoted captain and brevet-major three years later.

During the expeditions which followed Major Wingate's record was a remarkably distinguished one. He was at the battle of Toski as A.A.G. Intelligence, and was on this occasion again mentioned in despatches and awarded the D.S.O. and clasp. Two years later he was again on the battlefield, when his services at the action at Arafit and at the recapture of Tokar earned him a higher grade of the Order of the Mejdieh. Major Wingate acted as Governor of the Red Sea Littoral and O.C. troops Suakim in 1894, and during this period he received the civil Order of the C.B. He subsequently served through the Dongola campaign, as Director of Military Intelligence, and again covered himself with distinction; for he was mentioned in despatches, and was promoted brevet lieutenant-colonel. His later services in the country included the Nile Expedition of 1897, when he was appointed A.D.C. to the Queen and was promoted brevet-colonel, and the Battles of Atbara and Khartoum, and the expedition to Fashoda. He was twice mentioned in despatches in connection with his services on these occasions, and received the K.C.M.G., in addition to being thanked by both Houses of Parliament. He was in command of the operations which resulted in the death of the Khalifa, and at their conclusion he was awarded the K.C.B. and the 2nd Class of the Order of the Osmanieh.

Since those days the General has become possessed of the highest decorations which Egypt had to offer, and during all his long years of service there has been no failure to write against his name. It is not only as a soldier, however, that Sir Reginald Wingate has so greatly distinguished himself. Since his appointment as Sirdar of the Egyptian Army and Governor-General of the Sudan he has had some awkward situations to deal with, and he has met them each and all with tact and firmness. As a consequence of his popularity with the natives of the Sudan he has been able on more than one occasion to smooth over difficulties which might have become really serious in the hands of a less able man.

Since the present war began we have heard little of the Sudan or of Sir Reginald Wingate, merely because the Sudan and her Governor-General were pursuing their accustomed rounds of life unperturbed. Only one chieftain of the Sudan gave any trouble, and he was dealt with swiftly and surely, and a menace of years was removed in a few weeks.

Sir Reginald, who has as many medals and bars to his name as any general in the British Army, has also many foreign decorations. He has been honoured by the University of Oxford, and has received the Freedom of the Royal Borough of Dunbar. The Sudan will lose by the promotion of her Governor-General, but the nation will gain as a whole.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Prisoners in Turkey.

Nov. 7.

Lord SANDHURST informed the Earl of Portsmouth that the Foreign Office knew of no prohibition against sending blankets to English prisoners of war in Turkish hands. It was inadvisable, however, to send articles to prisoners of war unless it was certain that they would receive them.

HOUSE OF COMMONS.

Mesopotamia Wounded.

Nov. 2.

Sir C. KINLOCH-COOKE asked whether Mr. Austen Chamberlain was aware of the privations and hardships undergone by the sick and wounded from Mesopotamia in last July.

Mr. CHAMBERLAIN: A report reached me (from a private source in August last) that the provision made for soldiers at Wellington had been inadequate, and I at once telegraphed to the Viceroy a request that he would make full inquiry. The Viceroy was satisfied by an exhaustive inspection carried out by the G.O.C. in company with the Governor of Madras that there were nothing more than inconveniences of a temporary character, which were quickly dealt with. The Viceroy added that there was no dearth of comforts or stores, and that private relief was merely supplementing official resources. In particular I am informed that with some 1,500 patients arriving at short notice the deficiency of beds was limited to three men for one night each; that the shortage of crockery affected only twenty men for a few days, and that there was no lack of medicines at any time. All articles of clothing, bedding, or other equipment of which the patients were found to be in need were at once drawn from the reserves, hired or purchased locally, or ordered by telegram from the nearest source of supply. The House is aware that I have not sought to conceal or excuse faults of administration where I believed them to exist, but I do earnestly deprecate uncritical condemnation of the Indian Government and of officers serving under it, who feel deeply the unjust aspersions cast upon them to which it is not open to them to make any reply.

Sir C. KINLOCH-COOKE: Does the right hon. gentleman mean the House to infer that the statements made in the question are not common knowledge in India itself?

Mr. CHAMBERLAIN: They are common gossip and rumour, but I mean to imply that they are not facts. They are gross exaggerations. I am satisfied the shortage was purely temporary, and that the position is now satisfactory.

Berlin to Constantinople.

Nov. 3.

Sir EDWARD GOULDING, having inquired if the Government is aware that a restaurant train runs from Antwerp via Berlin to Constantinople with unfailing regularity; and, seeing that such railway facilities increase the sources of supply of the enemy, what steps it is proposed to take, by aircraft attack or otherwise, to destroy such connection and interrupt this means of communication.

Mr. FORSTER, in a written reply, stated: I have no reason to doubt the statements made by the hon. member, but it is obviously impossible to give any information as to future military operations.

The Allies and Greece.

Nov. 7.

Lord R. CECIL, in reply to Commander Bellairs, said he understood that several military and naval Greek officers who joined M. Venizelos had been dismissed from the service of the Government and deprived of their pension rights. The French and British Governments had meantime informed M. Venizelos that the Allies would not lose sight of the interests of those Greek officials and officers who desired to offer their services to the Provisional Government at Salonika, and that care would be taken that the interests of those officials and officers did not suffer in the future.

Commander BELLAIRS: Has the right hon. gentleman seen a telegram in the *Morning Post* giving specific cases of officers being imprisoned in the common prisons at the Piræus?

Lord R. CECIL: I have heard of the telegram referred to. If M. Venizelos will bring any such cases before the notice of the Governments of the Entente we will be very glad to take any action in our power.

Mr. R. GWYNNE: Has the right hon. gentleman communicated with King Constantine's Government on the subject?

Lord R. CECIL: I should like notice of that.

Mr. PRINGLE: Can the Government not act on the principle that prevention is better than cure?

Lord R. CECIL: I do not know what prevention the hon. member means.

Mr. PRINGLE: The prevention of King Constantine doing it.

Mr. ASHLEY: Will the right hon. gentleman consider the desirability of having nothing more to do with King Constantine?

Lord R. CECIL: I can assure my hon. friend that we desire to take the strongest possible action to prevent any proceedings of this kind.

Lord R. CECIL informed Commander Bellairs that the Allied Governments had no reason as yet to be dissatisfied with the manner in which the Greek authorities were carrying out, in conjunction with the French and British officers designated for the purpose, the pledges in regard to safeguarding the Allied communications. If there should be any reasonable apprehension on the point he presumed the Allied Governments would not hesitate to take effective action; but the House would realize that definite statements as regards the future could not be made except in consultation and agreement with the Allies.

The Serbian Legation at Sofia

Replying to Mr. C. Wason, Lord R. CECIL said:—I understand that the Bulgarian Government not only seized the Serbian Legation house at Sofia, but sold the furniture, confiscated the archives, and arrested and detained as a prisoner of war the former archivist of the Legation, who had been left in charge of the premises. Although his Majesty's Government share the indignation of the Serbian Government at this gross offence against the comity of nations, they nevertheless consider that the treatment of the houses formerly occupied by enemy diplomatic missions in London should rather depend on that accorded to the British Embassy and Legation houses in the enemy capitals. The Bulgarian Government had not so far interfered with the British Legation house at Sofia, though at one time they threatened to requisition it. They subsequently withdrew the threat.

The Greek Tangle.

Nov. 8.

Mr. SWIFT MACNEILL asked whether, having regard to the fact that wherever a part of the Greek Dominion was under the government of M. Venizelos or his Provisional Government, he was recognised by his Majesty's Government as the ruler of that portion, diplomatic relations had been established between the Provisional Government of M. Venizelos and his Majesty's Government, with full recognition of its status as the Government of an independent and belligerent State, in accordance with the attitude of Great Britain to the Confederate Government in the American Civil War; whether, if such recognition was not accorded to the Greek Provisional Government by his Majesty's Government, while acknowledging its existence, there was any precedent for such a course; and what were the reasons which prevailed with his Majesty's Government for its adoption.

Lord ROBERT CECIL: The answer to the first part of the question is in the negative. As regards the second part, it is of common occurrence that relations should be opened for purposes of convenience with a *de facto* Government. With regard to the last part, I would refer the hon. member to the debate which took place on this subject on the 31st ult., and I would ask hon. members generally not to put questions that appear as if the attitude towards Greek questions was one in which his Majesty's Government were acting, or were expected by the House to act, alone and independently of their Allies.

Lord R. CECIL, answering Sir E. CORNWALL, who asked for a statement as to the nature and result of the Boulogne Conference so far as it dealt with Greece, said that the Conference showed that there was complete agreement between the two Governments as regards M. Venizelos and Greek policy generally.

Lord R. CECIL, answering Mr. LYNCH, said he must ask the House to be content with the assurance that British troops were landed at Salonika in consequence of an invitation given by the then Greek Government.

Mr. LYNCH asked the Prime Minister whether the proposal to give full recognition to the government of M. Venizelos as the Government of Greece and all the islands had been abandoned; or, if not, whether, in consideration of the dangers of intrigue, espionage, or military or naval aid to the German Emperor, he would announce without delay the recognition of M. Venizelos.

Mr. ASQUITH: As regards the first part of the question, I would refer my hon. friend to a former reply. As regards the second part, I can assure him the Allied Governments are fully alive to the dangers to which he refers. We are in constant consultation with our Allies, and the hon. member will recognise that a public statement can only be made in agreement with the Allies.

The Allies and the Balkans.

Sir H. DALZIEL asked whether steps had yet been taken for the creation in some Allied European capital of a permanent committee, composed of one political and one military delegate from each of the Allied Powers, so as to secure rapid and unanimous decisions with regard to diplomatic measures and military operations in the Balkans.

Mr. ASQUITH: The answer is in the negative. Diplomatic measures and military operations in the Balkans are concerted through the ordinary diplomatic and military channels, supplemented as necessary by political and military conferences.

GREECE'S RELATIONS WITH GERMANY

A Reuter's message from Athens, dated November 7, reports: A highly placed foreign officer at Salonika states, in an interview published in the *Eleftherios Typos*, "Since the outbreak of war Greece has been in German hands. Pamphlets have been distributed by German agents to all soldiers under treatment in Athens hospitals. The Greek nation does not know that all the Greek public services have long since been placed in Germany's service. The nation is also unaware that German official correspondence is enclosed in the bags of the Greek frontier forces. Does that nation know that a number of German officers, knowing Greek and wearing Greek uniforms, were provided with passes for entering the Allied ranks? The above are not simple episodes, but the result of special orders given in virtue of a secret treaty, of which the nation does not know the existence. Greece is bound by treaty to the Central Powers and the Allies of Turkey and Bulgaria. This document was taken to Athens by Doctors Krauss and Esselberg, who were hidden for four days in an officer's house at Drama and subsequently travelled via Eastern Macedonia under the protection of the Greek authorities."

TANGIER TO TEHERAN.

The Balkans are still as full of piquant situations as ever they were, and the presence of armed forces representing the might and majesty of most of the European nations does not appear to have interfered seriously with some of the native manners and customs. Thus at one point, which shall be nameless, the time-honoured way of earning your living as a member of a "band"—not of the musical variety—is going very strong indeed. There is a "Royalist" band, a "Rebel" band, a "Francophile" band, and even an "Anglophile" band! These bands, it is hardly necessary to point out, are "political." But there is yet a fifth organisation of the kind, which is frankly non-political, and is run by some enterprising souls who are making a good thing out of smuggling. The correspondent who sends these particulars from the scene of action writes:—"As far as I can make out, all the political bands stalk and kidnap one another on the mountains, and raid each other's villages, but all are shot at by the non-politicals if they interfere with the smuggling." The district is apparently not one that even the most hardened House Agent could describe as a "good residential" one, but it would appear to possess a certain charm for those who thirst for a life of adventure. If I lived there I should certainly be a smuggler, or a non-political, which would give me a four-to-one chance.

Another custom of the country which has not been interfered with to the extent one would expect is the migration of the Kutzo-Vlachs. These interesting folk, as you doubtless know, move down from the hills to the plains each autumn, and apparently it will take more than the War to stop them. At any rate, an officer writing home the other day mentions that on a certain journey, which he made in the pursuit of knowledge of a particular description, he passed through a large body of Kutzo-Vlachs migrating from their summer to their winter quarters. The sight he describes as "most interesting," and he mentions that the "boy children were wearing Christian, Moslem, and Pagan charms against the evil eye." The Vlach, he it noted, is not going to run risks of any serious trouble, though he declines to be put about by such trifles as the presence of strange fighting men and the appearance of many weird engines of war.

Apropos of the references to fishing and sport on the Tigris which appeared in these notes a fortnight ago, I have received the following communication from a correspondent:

Thevenot, the French traveller who in 1664 passed through Baghdad on his way to Persia and India, had something to say about fishing in the Tigris. He descended the river from Mosul in a *kelek*, and at Kizil-Han, a few miles above Tekrit, one of his boatmen hooked a fish above five feet long, with a mouth into which the Frenchman could easily have put his head. Its captor declared that it was only a young one; fish of this sort being commonly much bigger. The Tigris fish that got hold of Tobias, son of Tobit, as related in the "Apocrypha," and would have swallowed the young man had an angel not told him how to land the monster, was doubtless full grown. Mrs. Bishop, when she was in Baghdad, saw strings of donkeys going to the bazaar, each with one of these enormous fish slung across its back. The country about Kizil-Han, Thevenot states was infested with lions, which could be seen going about in flocks like sheep. There are none to be found so high up the river now, but in the days of Tamerlane, Arab historians tell us, five were killed near Tekrit in one day. Thevenot says that the Tigris lions possessed little of the courage of their breed, and that an Arab, if he had no better weapon than a stick, would always go for one, and kill the beast if he could catch him.

My correspondent is well within the mark when he states that no lions are now to be found "so high up the river" as Tekrit. I doubt whether the most careful "beat" of Mesopotamia, Upper and Lower, would put up a single specimen of the king of beasts; for, as a result of personal inquiries while in the country, I was unable to find anyone, native or European, who had seen a real lion wild. One American archaeologist, who was in the Affej marshes in the late eighties, thought he *might* have seen one; but it was in the poor light just before daybreak, and he could not be sure about it. All he knew was that he saw "a big beast on top of a low mound," and that when he waved his arms at it it turned and fled. This would certainly bear out Thevenot's report of the lack of courage of the Mesopotamian lions; but it is unsatisfactory evidence at best, and the "big beast" may have been a hyena, a wolf, or even a stray dog. What is certain is that the Affej Arabs of

to-day have no correct idea of what a lion is like. They called a wild cat which I shot "a lion," and this, though flattering to a would-be big-game hunter, is not valuable testimony to their knowledge of the subject. Similarly, they declined to believe that a boarhound was a dog, and asserted stoutly that it was "a lion."

All this leads me to wonder whether these old Assyrian monarchs, who delighted to have themselves represented in sculptures as slaying lions by the dozen or the score, were, after all, such mighty hunters. If an Arab armed only with a stick would tackle one of these Mesopotamian lions—and here, at least, I am quite ready to accept the old-time traveller's statement; for I myself have seen an Arab lad tackle a big wolf with no better weapon than his *magwarr*, and defeat the brute, too—it can have required no great courage for a monarch, armed with spear, bow and arrow, driven in a chariot, and surrounded by well-armed guards and servants, to risk a similar encounter. Like the Prussians, the Assyrian kings were, in fact, expert advertisers of their own achievements and victories, as Professor Paton pointed out in his remarkable article in the October *Hibbert's Journal*; and in old times their boasting was equalled only by that of their rivals, the vainglorious Pharaohs, who, as Mr. D. G. Hogarth remarks, were given to magnifying: a promenade to the Cataracts into the conquest of the world when it came to recording it for the benefit—or deception—of future generations. CORSAIR.

THE BALKAN LEAGUE.

The story of the various attempts to unite the Balkan peoples into one league, and of the events which led up to the first Balkan war, was the theme of a lecture given by Dr. Seton-Watson at King's College last week. He said that Prince Michael of Serbia endeavoured to bring about a union of Serbia, Montenegro, and Roumania, but his death in 1868 put an end to such schemes; for Milan, who succeeded him, worked in the opposite direction and was a mere agent of Vienna. In 1884 he declined the overtures which came from Bulgaria for a Customs union, and in the following year went to war with her. In 1891 Tricoupis, the famous Greek statesman, put forward a scheme for a joint attack on Turkey by the Christian States of the Balkans, but this was given away by Stambuloff, and the whole thing fell to the ground. In 1907 the endeavour of Serbia to form a customs union with Bulgaria was wrecked by the action of Austria-Hungary. Then, in 1908, came the events of the Young Turkish revolution, and these revived the idea of a Balkan confederation. This time the idea was able to be embodied in the league of Serbia, Greece, and Bulgaria. Reforms were demanded in Macedonia such as it was never expected would be granted, and war followed. At the time it was believed by all the great Powers that the Turks would be rapidly and overwhelmingly victorious, and if this had not been the anticipation, probably the war would not have been allowed to take place at all. Austria, in particular, was glad to see Serbia rushing into a fatal adventure. The Turks, however, proved to be in a state of hopeless disorganisation; the troops they put into the field were a militia without discipline, almost without equipment, often without food, and further weakened by the fact that Christians had been introduced into their ranks.

ARMENIA ON THE SCREEN.

A sad picture of a desolated land was presented by the lantern slides of the lecture on Armenia which Professor Hagopian delivered at Fulham Library last week. The ruined walls of Ani, the capital of an Armenian kingdom which flourished nine hundred years ago, the cathedral of the same city, the monastery of Nareg, and many other fine buildings, showed to what a height architecture and kindred arts had been raised. Ani, said Professor Hagopian, was built in 1010; it passed into the hands of the Byzantines, and was soon after lost to the Seljuk Turks. Its ruin was completed by the Mongols. In recent times it passed into Russian territory. When this happened the Armenians immediately cleared the sanctuary, and began to celebrate the Holy Communion there again. The Christian worship thus revived continues there, and the building has been restored now by French architects. After the destruction of the kingdom, of which Ani was the capital, a lesser Armenia was formed, near the head of the Gulf of Alexandretta. This was the Armenia that was so useful to the Crusaders in the Middle Ages. From the time when, in 302 A.D., Armenia embraced Christianity until now, she had been true to her faith.

PRISONERS FROM KUT.

The Central Prisoners of War Committee of the British Red Cross Society and the Order of St. John will be very grateful if all relatives and friends who have received postcards from prisoners taken by the Turks at the fall of Kut, would communicate at once with the Secretary, Central Prisoners of War Committee, 4, Thurlow Place, S.W.

The Committee are extremely anxious to know as soon as possible the names of all such prisoners, as they can then arrange through the Regimental Care Committees for the despatch of parcels of food and clothing.

NEAR EAST BOOKSHELF.

A GALLIPOLI CASUALTY.*

The author of this book took part in the fighting at Gallipoli, and here records his own experiences of the great campaign with much vividness and force. Regarded as a personal narrative, his book is of real value, for it enables us to enter into the feelings of at least one of the men who went through that terrible experience; and the last chapter helps us to understand what such an one thinks of it all when he has time to think of it collectedly.

Frankly, this last chapter is terribly depressing, and leaves us inclined to think that the Dardanelles Commission was very urgently needed indeed. The author, however, is not a depressing person in his earlier chapters. He "grouses" now and then, it is true—at the quality of the food, the absence of decent smokes, and the non-arrival of parcels. But it is only when he returns to England and runs up against several people, who—we sincerely hope—are not at all representative of the class that usually visits our wounded in hospital, that he permits himself the luxury of a real downright grumble. And then we sympathise with him most heartily. To find the hospital "parson" remarking that "it was really high time the troops left the Peninsula after doing nothing there for the last four months" is surely amazing. No wonder that the author comments: "*Doing nothing!*" Again, is it not pitiable that a man who has been through it all should be able to write:—"That fact that the Suvla and Anzac forces failed in their endeavour should not be detrimental to realisation in this country of the fortitude and endurance shown there in the face of overwhelming odds." The bare fact that it is written does small credit to the imagination—and other qualities—of those whose attitude was responsible for the paragraph.

The description of the conditions amidst which our men "stuck it out" so long in the trenches is very vivid; and though it cannot, naturally, make exhilarating reading, it is enlivened by many touches of real humour. The author's estimate of the Turks as fighters is interesting:—"Taken by surprise, the Turk is a human being; otherwise he is a devil to fight." He records, too, that "the only occasion on which to my knowledge the Turks sent a shell into the Red Cross" was when one of our aeroplanes, partially disabled, descended at the back of one of the hospitals

on the beach. Apparently he did not form a high opinion of the Greeks on the Peninsula, for he writes:—"Luckily we had no Greeks at Suvla. There I suppose the authorities had heard the new rendering of 'Timeo Danaos . . .': 'I fear the Greeks, even when running canteens.'"

BOOK NOTES.

Messrs. Smith, Elder and Co. have published "*A Balkan Freebooter*" (7s. 6d. net), by Jas. Gordon.

Messrs. Kegan Paul have published "*A Little Serbian Phrase Book*," compiled by E. Chivers Davies. (6d. net.)

In view of the present struggle in Mesopotamia, a brief description of the ancient empire of that land is of much interest. In "*Ancient Assyria*," which Messrs. Black have just issued in their popular "Peeps" series, the object aimed at is to give a clear and simple picture of the country, the civilisation and the spirit of what was probably the greatest nation of the ancient world. The "*Land Between the Rivers*" is first sketched, and the story of the resurrection of its ancient cities is then told. Subsequent chapters describe Assyrian city life, royal sport, and the merciless warfare of this great robber nation, and, finally, the books and legends of the Assyrians and Babylonians are dealt with, the chief legends being told in detail. The book is illustrated with photographs of sculptures in the British Museum and with sketches in colour.

SERBIAN ARCHITECTURE AND POETRY.

Last Saturday, at King's College, London, the Rev. Father Nicholas Velimirovitch showed a number of lantern slides illustrative of Serbian architecture, and told some quaint old stories and legends. With regard to the latter, he said that the Serbian bard who recounts them accompanies himself on the gusler, and usually concludes: "God only can know if these things were so, but, my brothers, it makes us rejoice."

Mediaeval Serbian architecture, he pointed out, was in a quieter and more reposeful style than that of the West. To him Gothic architecture spoke of crucifixion, while Eastern styles suggested thoughts of the Resurrection. The Serbian churches were usually built in courses of red brick and white stone—in some of the finest in courses of red and white marble—were circular, not cruciform, and were surmounted by domes, not steeples. In their decoration very little use was made of the figures of plants or animals; imaginative geometrical designs, and tracery were used instead, as in the Byzantine and Moorish styles. The style of the paintings with which they were adorned was not so stiff as that of the Byzantine painters, nor so free and realistic as that of Raphael or the other great painters of the West. Of the Serbian poetry one feature was the friendly feeling towards plants and animals. This was shown in the following dirge by a lover over the woman he was to have married, but who died on the way to the church and was buried in the forest: "Oh thou shady forest be not frightful to her. Oh, black earth, be not heavy over her. Thou chaming pine-tree, let thy branches grow longer to make a cool shadow for my bride; and thou cuckoo bird do not wake her early: let her rest under the earth." The Serbian folklore showed that of all vices ingratitude was the most condemned. There was a story of a mother and nine unthankful sons. After she had brought them up and found wives for them, they said to her: "Our mother, thou art our shame; thy ugliness frightens our guests; therefore, go from here." She went weeping and broken-hearted, but in the forest met an angel, who bade her return. She did so, to find in place of the nine sons and their wives, nine stones and nine snakes creeping over the stones.

The poetry of war and valour has no finer example than Lord Tennyson's sonnet on Montenegro which first appeared so many years ago in the *Nineteenth Century*. King Nicholas of Montenegro having recently expressed a desire for a copy of this wonderful expression of Montenegrin character and history, Sir J. Roper Parkington, the Consul-General for Montenegro, and Chairman of the Montenegrin Red Cross and Relief Fund, has sent on to his Majesty a complete edition of Tennyson's poems, containing the sonnet which is the source of so much admiration in the Royal household and amongst the sorely distressed peoples of the Land of the Black Mountain.

A new series of the war charity stamps, called "*Timbru de ajutor*," or aid stamps, is being prepared in Roumania, says the *Daily Telegraph*. These stamps are sold at a premium, the extra amount over the ordinary postal value going to a fund for the assistance of refugees and the dependents of Roumanian soldiers. The first three stamps in the new series will depict a Roumanian woman spinning, and will be of the denominations 5 bani, black; 10 bani, red-brown; and 50 bani, blue. On the 1 leu, red, and the 2 lei, chestnut, a hemp-dresser will be shown at work; and on the 5 lei, lilac, and 50 lei, orange, will be represented the Roumanian standard, forest met an angel, who bade her return. She did so to find in Tennyson's Sonnet on Montenegro which first appeared

By order of the Tsar the Russian officer who is attached to the Roumanian General Headquarters has presented to the Queen and the Princesses Elizabeth and Marie the medal of St. George, in recognition of the services rendered by them in the hospitals during the air raids by German airmen.

Under date of the 3rd inst., Reuter's Paris correspondent reports:—The following official communiqué has been issued by the Montenegrin Legation: "The King of Montenegro, accompanied by Colonel Le Roy-Lewis, Military Attaché at the British Embassy, and M. Delaroché-Vernet, French Minister to Montenegro, with the members of his suite, has paid a four-days visit to the British front. His Majesty, who was delighted with the journey and the reception accorded him, expressed the greatest admiration for the gallant British troops. The King conferred on General Sir Douglas Haig the highest military distinction of Montenegro, namely, the Obilitch gold medal, and also bestowed Montenegrin decorations on British officers and men who had particularly distinguished themselves during the recent fighting."

Our Cairo Correspondent writes (October 26):—I understand that the engagement will very shortly be announced of one of the daughters of H.H. the Sultan to one of the first-class Mudirs in Lower Egypt, who will then be appointed to an important post in Cairo.

Prince Andrew of Greece arrived in Copenhagen from Berlin on Monday evening.

News has been received at the offices of the Jerusalem and the East Mission that the Bishop in Jerusalem, Bishop MacInnes, and his family arrived safely at Port Said on Monday evening.

Colonel Sir J. Roper Parkington, Montenegrin Consul-General, has disposed of the lease of 58, Green Street, Park Lane, and is now residing at Claridge's Hotel, Brook Street, where all private communications should now be addressed.

Madame Slavko Grouitch is expected to return to England shortly from the United States.

Dr. F. G. Clemow, C.M.G., who recently left this country in charge of two hospital units to help the Serbian forces operating in the Dobruja, arrived safely in Odessa at the end of September. His friends will be glad to learn that he was then quite well. A telegram received on Tuesday from Dr. Clemow states that the units are temporarily established in a hospital at Galatz. Having visited the Dobruja front, Dr. Clemow found the requirements of the 1st Serbian Division fully supplied, and is, therefore, taking Roumanian wounded, as they are numerous and not so well provided for.

General Sir C. Monro, the Commander-in-Chief in India, who on his appointment proceeded direct to the Persian Gulf, arrived in Bombay on the 2nd inst. from Mesopotamia.

General Sir John Maxwell left London for Dublin last Friday.

Last Saturday the *Morning Post* announced that General Maxwell was about to relinquish the Irish Command, which he had held since the rebellion at Easter, and that he was to be succeeded by General Sir Bryan Mahon. This announcement was confirmed on Monday, when the Secretary of the War Office issued the following for publication:—"The King has approved of the appointment of Lieutenant-General Sir Bryan Mahon, K.C.V.O., C.B., D.S.O., to be General Officer Commanding-in-Chief of the Forces in Ireland, in succession to Lieutenant-General Sir John Maxwell, K.C.B., K.C.M.G., C.V.O., D.S.O., who is being appointed General Officer Commanding-in-Chief, Northern Command."

At the same time it was announced:—"His Majesty has been pleased to confer the distinction of Knight Grand Cross of the Most Honourable Order of the Bath on Lieutenant-General Sir John Maxwell." The bestowal of this honour will cause sincere pleasure to Sir John Maxwell's many friends and admirers both in this country and in Egypt, as marking the official recognition of the splendid service he has rendered in a position of extraordinary difficulty. That service was all the more remarkable because at the time when he went to Ireland General Maxwell was not in the best of health—there was, in fact, a prospect of his undergoing an operation; and Lady Maxwell's serious illness might also have been regarded as a sufficient reason for his wishing to be free from care and responsibility at the time. General Maxwell, however, is not the man to turn a deaf ear to the call of duty, and he answered it on this occasion as promptly as he had always answered it before, to the great benefit of his country.

Like General Maxwell, Sir Bryan Mahon, his successor in Ireland, is well known in Egypt and the Sudan. He served with the Egyptian Army from 1893 to 1900; took part in the Dongola Expedition (1896), when he won the D.S.O., and served in the Nile Expedition of '97, '98, and '99. From 1901 to 1904 he was Military Governor of Kordofan. He has also seen much service in India and in South Africa, while his services in the present war will be too fresh in the memory of our readers to require recapitulation.

It is proposed by some friends of the late Lieutenant-Colonel O. Fitzgerald, personal military secretary to Lord Kitchener, to institute some permanent tribute to his memory, and it is suggested that a fund should be raised privately for the foundation of a scholarship at Wellington College, his old school. Lord Derby is chairman of the committee. Donations may be sent to the Hon. Mrs. Maguire, 3, Cleveland Square, St. James's, S.W. (who is also acting as hon. secretary), or to Messrs. Boulton Bros., 39, Old Broad Street, E.C.

Baron de Kusel has arrived in London on his return from Egypt.

The departure for Egypt of Mr. and Mrs. John Ross and Miss Ross, who are accompanied by Miss Rea Ross, has been unavoidably postponed. They are for the present at Bournemouth.

General Roques, the French Minister of War, arrived at Salonika at the beginning of the week.

Mr. George Boncescu, Commercial Attaché to the Roumanian Legation, has returned to London from France.

We notice that Captain George E. Whittall, Oxford and Bucks Light Infantry, has been mentioned in despatches (under the heading of "desire to bring to special notice") of General Sir Percy Lake, K.C.M.G. This is the third time that Captain Whittall has been mentioned in despatches, having been recommended on two former occasions by Sir John Nixon, K.C.M.G. Captain Whittall was invalided to Bombay with an attack of paratyphoid, from which, however, he has recovered, but he is still in quarantine. We learn also that he has been

offered a staff appointment at Bombay, which he will take up as soon as his health permits.

News has been received in London this week that a daughter was born to Mr. and Mrs. Arthur Leavitt in Constantinople on September 4.

A marriage has been arranged, and will take place in Glasgow on Saturday, November 11, between Lieut.-Colonel J. S. Liddell, D.S.O., Inspector-General of Telegraphs, Cairo, son of the late Captain J. Liddell, R.N., of Rodlease, Lymington, and Theresa, elder daughter of Paul Rottenburg, Esq., LL.D., Glasgow.

Our Cyprus Correspondent writes (October 23):—The marriage of Mr. Russel, King's Advocate, with Miss Gordon took place at Papho, the civil ceremony being in the office of the Commissioner, and the religious service in the house of Captain Fleury, Acting Commissioner.

It was announced in the official casualty list last Friday that Lieutenant-Colonel Adrian Carton de Wiart, V.C., D.S.O., Dragoon Guards, attached Gloucester Regiment, has been wounded again. He was awarded the V.C. last month for "most conspicuous bravery, coolness and determination during severe operations of a prolonged nature. It was owing in a great measure to his dauntless courage and inspiring example that a serious reverse was averted." Lieutenant-Colonel Carton de Wiart has seen much active service. He was twice wounded in South Africa; in Somaliland in June, 1914, he lost an eye; and while serving in Flanders he lost his left hand.

The *Times* correspondent in the Balkan Peninsula reports (November 3) from Bucharest:—The British Vice-Consul at Constantza, Mr. A. A. Adams, has arrived safely at Odessa on board a British steamer after a narrow escape from the incoming Germans and Bulgarians. The enemy mounted batteries on the shore at the moment of their arrival at Constantza and fired on the steamer, which they fortunately failed to hit. While on the way to Odessa the steamer was attacked unsuccessfully by a German submarine.

At St. George's Chapel, Windsor Castle, last week, the banners, swords, helmets, and mantles of Lord Kitchener and Lord Abergavenny were taken down, and those of Lord Curzon of Kedleston, the Duke of Devonshire, and Lord Hardinge were subsequently put up in the Choir.

Dr. Robert Brindle, D.S.O., Roman Catholic Bishop of Nottingham, who was present at the battles outside Suakim in 1884, and served under Lord Kitchener in the Khar-toum Expedition in 1898, and who died on June 27 last at Sheffield, left estate of the gross value of £22,254.

A Red Cross Unit organised by the Joint War Committee of the British Red Cross Society and the Order of St. John is leaving for Roumania this week. This unit is a gift from the miners of Great Britain, who voted funds to meet the expenses of its formation and equipment. There will be four ambulances and one touring car. The unit will be in charge of Dr. O'Leary, and the other members of the personnel will be:—Surgeons.—Mr. G. H. L. Fitzwilliams, F.R.C.S. (Edin.); Mr. D. C. L. Fitzwilliams, F.R.C.S. (Edin. and Eng.); Mr. T. Scott Shepherd, F.R.C.S.; Dental Surgeon, Mr. M. Warrack. Nursing Staff.—Miss E. Sheriff-MacGregor (matron), Miss H. M. Coleman, Miss F. E. Barrow, Miss E. Hyde, Miss F. E. Jacobs. Cooks.—Miss E. Barber and Mrs. M. J. Condon. Orderlies.—Messrs. R. Douglas, F. E. Gunn, C. Bingham, S. H. Smith, C. Ruggles, R. Price (secretary and storekeeper), S. D. Neal (radiographer), and J. C. Neville (carpenter). Transport Officer.—Mr. T. E. Preston Gardner. Drivers.—Messrs. E. N. Lawley, C. V. Deakin, L. Dyer, L. R. Parsons, and R. Lapworth. The cars, together with 120 tons of stores and supplies, are being sent in advance of the staff from the Red Cross Headquarters, 83, Pall Mall, S.W.

APPOINTMENTS, PROMOTIONS, ETC.

Our Cyprus Correspondent writes (October 22):—Mr. Fenn, of the Financial Department, is acting Chief Secretary to Government during the absence on leave of Captain Orr.

It is notified in the *London Gazette* that the King has granted authority for the wearing of the following decorations:—

Grand Cross of the Order of the Crown of Italy (conferred by the King of Italy).—Vice-Admiral Sir A. H. Limpus, K.C.M.G., C.B.

Second Class of the Order of the Nile (conferred by the Sultan of Egypt).—Mr. G. C. Dudgeon, of the Egyptian Ministry of Agriculture, Consulting Agriculturist.

Third Class of the Order of the Nile.—Mr. W. Littlewood, Director of the Veterinary Service.

Fourth Class of the Order of the Nile.—Mr. L. H. Gough, Entomologist; Mr. W. Cartwright, Inspector; Mr. F. E. Mason, Sub-Director of the Veterinary Service; and Mr. T. W. Brown, Director of the Horticultural Section.

The grade of Commander of the Nile has been posthumously bestowed by the Sultan on the late Miralai Snow Bey, formerly Director of the Western Districts of the Egyptian Coastguards Administration.

Mr. H. A. Humphreys, formerly of the Survey Department, Egyptian Government, has been made a Commander of the Nile on the occasion of his retirement.

The *Sudan Times* announces that Bimbashi R. G. MacLaine, Camel Corps, has been transferred to the 13th Sudanese, and Bimbashi D. H. Thorburn, 3rd Battalion, has been transferred to the 10th Sudanese.

At a levée held on the second day of the Kourban Bairam at the Palace, Khartoum, the Governor-General of the Sudan announced that the Sultan of Egypt had been pleased to confer the following honours:—

The Order of the Nile (Second Class) on Lewa M. Coutts Pasha, Director of Stores and Prisoners, S.G.; Lewa E. C. Midwinter Pasha, C.B., C.M.G., D.S.O., General Manager, S.G. Railways; and Lewa M. R. Kennedy Pasha, C.M.G., D.S.O., Director of Works, S.G.

The Order of the Nile (Third Class) on Dr. Chalmers, Director of the Welcome Research Laboratories, Gordon College; Dr. E. S. Crispin, Director of the Sudan Medical Department; Mr. J. W. Crowfoot, Director of Education; Mr. R. H. Dun, Advocate-General; Miralai H. D. Pearson Bey, Director of Surveys, S.G.; and Miralai E. O. A. Newcombe Bey, Traffic Manager, S.G. Railways.

The Order of the Nile (Fourth Class) on Kaimakam D. S. B. Thomson Bey, Kaimakam P. C. Lord Bey, Kaimakam F. J. Atterbury Bey, Bimbashi R. Chenevix Trench, Mr. A. P. Bolland, Mr. T. J. Morris, Mr. (temporary Captain) H. Claxton, Mr. E. W. Drummond Hay, Mr. R. Hewison, Mr. F. J. Osborne, Mr. C. F. Ryder, and Mr. C. H. Walker.

Under date of the 5th inst., Reuter's Bucharest correspondent reports:—The Swiss Confederation has created the Legation at Bucharest which has been contemplated for some time past. M. Gustave Boissier, formerly First Secretary of the Swiss Legation in Paris, has been appointed Chargé d'Affaires. The Roumanian public views with much satisfaction the establishment of serious diplomatic relations with Switzerland, which has hitherto been represented at Bucharest only by a Consulate.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

OBITUARY.**PRINCE MIRCEA OF ROUMANIA.**

A Reuter's telegram received in London last Friday announced the death of Prince Mircea of Roumania the previous day. As reported in these columns last week, the little Prince had been suffering from typhoid fever, and though the illness was at first stated to be taking a normal course, his condition gave rise to great anxiety. Very sincere sympathy is felt for the King and Queen of Roumania in their great loss, not only in their own country but by the peoples of all the Allied nations, where Roumania's gallant fight against her powerful enemies has aroused intense admiration, and where King Ferdinand's conduct in putting aside all thoughts of family ties and associations, and in completely identifying himself with the aims and aspirations of his people have won him unbounded respect and admiration. In this country the sympathy is quickened by the fact that Queen Marie is of British extraction and that her love of England and the English has never been in question.

Prince Mircea was born on January 3, 1913 (December 21, 1912, o.s.), and was thus not quite four years old. He was the third son and the sixth child of King Ferdinand and Queen Marie.

A requiem service was celebrated on Friday at Bucharest, in the presence of the Royal Family and members of the Court. On Saturday morning the funeral took place, very quietly at the Palace of Cotroceni, where the body of the Prince was interred in the Palace Chapel in the presence of the Royal Family, State dignitaries, Allied and neutral Ministers, and the military missions of the Allies.

The Roumanian Court has gone into mourning for three months.

CAPT. L. H. KING-HARMAN, R.H.A.

Captain Lawrence Hope King-Harman, R.H.A., attached Royal Flying Corps, who has been killed on active service, was the elder son of Sir Charles Anthony King-Harman, K.C.M.G., formerly High Commissioner of Cyprus, and Lady King-Harman. His grandfather on his mother's side was General Sir Robert Biddulph, who served in the Crimean War. He was H.M. Commissioner, Constantinople, in 1879, and High Commissioner of Cyprus from 1879 to 1886. Captain King-Harman was born in 1889, and educated at Bradfield College and the Royal Military Academy, Woolwich. He obtained his commission in the R.F.A. in July, 1909, and joined his battery in India. In June, 1915, he was selected for the R.H.A., and took part in the Mohmand Expedition on the North-West Frontier, for gallant conduct in which he was mentioned in despatches. Early in this year he responded to a call for volunteers for training as observers in the Royal Flying Corps in India, and proceeded to the front in June last, attached to that branch of the service. On arrival at the front he was placed in temporary command of a field battery, and rejoined the R.F.C. shortly before his death. He was killed in an accident while flying on October 26.

Egyptian papers received by the last mail contain the announcement of the death of Mr. Frederick William Cuming, head of the firm of Cuming and Co., of Alexandria and Cairo. Mr. Cuming had been in very indifferent health for some time, and his death, which took place in Cairo on October 18, was not unexpected. He belonged to an English family established for many years in Constantinople, and settled in Egypt in 1902. He was forty-one years old.

A Bucharest message states that the celebrated Slav poet, Svetozar Hurban Vajansky, has died. He had served two years in prison for an anti-Magyar article.

A Cairo correspondent informs us that the real name of the Grand Shereef of Mecca's Agent in Cairo is Mohammed Shereef Bey El Faruky. The name "Omar" was assumed by the Bey when he left the Turkish army, and he retained it until he was definitely appointed as the Agent of the Grand Shereef.

DOMESTIC ANNOUNCEMENTS

The Charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

GREIG.—On October 28, at Salonika, the wife of Temp. Lieut. Charles Alexis Greig, of his Majesty's Consular Service in the Near East—a daughter.

SPARKS.—On October 19, the wife of F. T. Sparks, Heliopolis, of a son.

DEATHS.

ELDRIDGE.—On October 30, at Canea, Crete, suddenly, Edmund J. Eldridge, Acting British Vice-Consul, son of the late George Jackson Eldridge, C.M.G.

SPARKES.—On November 5, at Streatham Hill, Thomas Camps Sparkes, late superintendent, P. and O. S.N. Co., Egypt, after a long and patiently-borne illness, aged 71.

WHERE TO STAY.**Cairo's Hotels de Luxe.****SHEPHEARD'S HOTEL.**

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

THE NEW HIGH COMMISSIONER OF EGYPT.

The appointment of General Sir Reginald Wingate as High Commissioner of Egypt does not come as a surprise. Sir Henry McMahon's tenure of office was known to be of a temporary nature. As a former Foreign Secretary to the Government of India, a man of proved sympathy with the Moslem world, a tried diplomatist and a capable administrator, he had special qualifications for the Cairo post, and during the past two years his political experience has enabled him to carry out with marked success the work which devolved on the representative of his Majesty's Government as a result of the change in the status of Egypt. The menace of a Turco-German attack on the Suez Canal kept the hands of the military authorities full, and the High Commissioner was left to deal with the many administrative problems which the new order entailed. Now that the danger of any large enemy force being able to threaten the safety of Egypt has been eliminated, it becomes possible to adjust British representation in the country to the changed conditions. For obvious reasons martial law must remain until the end of the war, if only as a check to the recrudescence of enemy intrigue. But it is desirable that the military and civil régimes should be so dovetailed one within the other as to secure the smoothest possible running of the Government machinery. Considerable advantages are to be expected, therefore, from the appointment as High Commissioner of an administrator with the military prestige of General Wingate. His peculiar knowledge of Egyptian affairs and his great personal popularity among Egyptians will relieve him of the suspicion that he might allow the country's interests to be subordinated to any unnecessary misgivings in the military mind; his record as Sirdar will give the military authorities the fullest confidence in his judgment on all military matters. There is, moreover, further ground for welcoming an eminent soldier to the post of High Commissioner at the present moment. Egypt has acquired added importance during the war; her influence has become extended west, south, and east. That influence, it is true, will always be exerted for peace; but by choosing as British representative a general whose name comes next to the late Lord Kitchener's as a household word among widely scattered native populations the Imperial Government has adopted the surest way of attaining the peace that it desires.

There is a double fitness in Sir Reginald Wingate's assumption of the post of British Representative at Cairo. He follows a brief but distinguished tradition, which has caused the Sudan to be regarded as a successful training ground both for Egypt and other spheres. At the same time the Sirdar and Governor-General of the Sudan has established for himself special claims on the promotion now accorded him, and there can be little doubt that he would have succeeded Lord Kitchener directly, if the exigencies of the war had not rendered his undivided attention in the Sudan necessary. The recently published despatch on the Darfur operations is a reminder of one aspect of the work which Sir Reginald Wingate has had to perform. From

a military point of view, especially at this time of world conflict, the expedition was of minor importance; but it called for the exercise of two qualities which are a criterion of military ability—a readiness to accept responsibility and swiftness of execution, combined with thoroughness. These qualifications will stand the new High Commissioner in good stead. The Sudan, however, testifies quite as eloquently to his capacity for administration as to his success as a soldier. Nineteen years have not yet elapsed since the Battle of Omdurman; but in this short period the country has both accustomed itself to settled government and acquired a firm appreciation of its advantages. No severer test could have been imposed upon its loyalty than the outbreak of the war between Turkey and Great Britain and the determined efforts of Turco-German agents to proclaim a *jihad* throughout the Moslem world. Those efforts, as we know, met with no response in the Sudan, with the exception of the belated rising on the part of the Sultan of Darfur. It will not have been overlooked that in practically all the protestations of loyalty to the British connection that were received from the notables and people of the country in the earlier stages of the war reference was made to the feelings of devotion entertained towards the person of the Governor-General. There can be no question that the Sudanese realised what they owed to the exercise of Sir Reginald Wingate's personal interest in the country committed to his charge. From the first he had taken the people into his confidence, both in regard to the extent of the war area and to the possibility of Turkey being implicated. When war was declared against the latter a great gathering of notables was convened at Khartoum to discuss the new development, and other meetings were addressed by the Governor-General. He decided that it was not enough that the Sudanese should be actuated by a spirit of loyalty, but that there should be no room for the least misunderstanding in regard to the origin and issues of the war. Under a less conscientious administrator, or one not possessing Sir Reginald Wingate's intimate knowledge of the country and people, the Sudan might not have preserved so easily its equanimity during the war.

Whatever arrangements may ultimately be made in regard to the Sudan—it will not always be easy to find a soldier to combine the duties of Sirdar and Governor-General—Sir Reginald Wingate's appointment to Cairo will not deprive the country of his personal interest nor, in view of the near relationship between it and Egypt, materially affect for the present the closeness of his touch with it. Rather we may expect that the popularity which the Sirdar has gained in the Sudan will bespeak for him similar prestige in Egypt itself and be a lively factor in promoting both Egyptian and Imperial interests in the Land of the Nile. In the new High Commissioner the Sultan has a personal friend whose co-operation and advice he can be relied upon to welcome eagerly at a time when the responsibilities of Egypt are increasing. The war has revealed the danger of leaving the countries bordering upon Egypt too much to their own devices. Such a policy is a testimony to the non-aggressive character of British rule in Egypt; but it has proved in the long run unfortunate for the Senussi, the Sultan of Darfur and the ruler of Abyssinia. Although it has been found necessary to incorporate Darfur in the country to which it properly belonged, there can be no desire to extend Egyptian jurisdiction in general. Common prudence suggests, however, that the neighbouring peoples should be brought to realise that their interests are linked up with the maintenance of good relations with Egypt, and that they cannot be allowed to become a forcing ground for intrigues against the British Empire. It is to be hoped, therefore, that before Sir Henry McMahon hands over the High Commissionership to his successor at the end of next month he will have found time to evolve solutions for the major political problems which a protectorate over Egypt presents, and will leave Sir Reginald Wingate the greater liberty for adjusting the relationships between the Egyptian or the Sudan Government and the adjacent territories—a work for which his personal prestige in the native world makes him peculiarly well fitted.

THE RUSSIAN CAMPAIGN IN THE CAUCASUS AND THE TURKISH COUNTER-STROKE.

IV.*

(FROM A CORRESPONDENT.)

The third and last sector in which the Turkish counter-attack in the end of July and beginning of August was made is referred to in the reports under the names of Ognut and Kighi, and it was here that the most obstinate and sanguinary fighting occurred.

Ognut is a village some 60 miles south of Erzeroum, in a direct line almost to Diarbekr, and the operations here are, as in the case of Mush, occasionally referred to as being "in the direction of" that place. Ognut lies in the valley of one of the tributaries of the Murad, and 30 or 40 miles further to the west is Kighi, on the head waters of another tributary, at the foot of the high ranges that run east and west between Erzeroum and Erzincan. The two places are so frequently mentioned together that the operations in their neighbourhood would seem to constitute an entirely separate thrust, connected with that at Mush, but independent of it, and probably under a different command. The natural base for an expedition to Kighi would be the important city of Kharput, whence an easy road leads up the valley of the Murad as far as Palu. Ognut might be reached by way of Diarbekr, but there are some indications that when the Turks were pressed back from that place their line of retreat was towards Kighi, to the west: and it is possible, therefore, that the whole of the Turkish forces employed in this region moved from Kharput as their starting-point. Similarly, on the Russian side a comparison of dates shows that the troops employed were independent of those operating about Mush, and it may reasonably be concluded that they were detached from the army guarding the main line of communications at Erzeroum rather than from the troops operating in the Lake Van plateau. There was no news of military operations in this neighbourhood till August 1, but since then fighting has been incessant, and the crests and passes have been the scenes of sanguinary conflicts, in which victory has inclined now to one side, now to the other. The official reporters, following a system that has now become universal, have ignored the failures and magnified the successes of the side they represent.

At Ognut the Russians claimed on August 3 to have driven the Turks out of strong positions at the point of the bayonet, and to have captured prisoners and guns. The Turks admitted a slight withdrawal, but only as the result of five days' heavy fighting, which had cost the Russians a loss of 3,000 men in dead alone. The Turks had certainly not been broken; by the end of the month they had been reinforced, and a fiercely contested battle followed, in which their troops swept through the lines of a Turkestan regiment and temporarily captured its guns. The Russians rallied, retook the guns, and drove back the enemy with great losses, which, if the tales of prisoners could be believed, included one divisional general killed and one wounded. The Commander of the 2nd Turkish Army Corps was also reported to have been either killed or severely wounded. The Russians pressed on to the west of Ognut; but the prisoners had probably exaggerated, as prisoners do, the casualties in the Turkish higher command: and it is clear that neither the resources nor the spirit of the Turks were exhausted. A week later they attacked in force, and the continuance of desperate fighting was admitted by the Russians, while the Turks claimed to have repulsed all attacks made on them "with extraordinary losses." During the same period fighting of a minor character was in

progress at Kighi, where both sides claimed victories, with the capture of men and material. The general result was, however, favourable to the Russians, and the Turks fell back gradually to the south-west of that place. A feature of the fighting in this neighbourhood which calls for notice was the intense activity of hostile Kurds. To the west of the Erzeroum-Diarbekr road the Kurds differ in many respects from the tribesmen near Lake Van. They speak a different dialect; they follow a different religion. Nominally Mohammedans, they reject many Mohammedan precepts; their religion includes traces of Christian influence and relics of pagan observances. In the mountain fastnesses west of Kighi they long maintained a rugged independence, and the establishment of Turkish authority was a tedious and difficult process. Even then the rule of the Turk sat lightly on the mountaineers, but they would seem to have rallied to his side at the approach of a more powerful enemy, whose success would more quickly bring about the enforcement of law and order. Their hostility may in the long run give more trouble than the organised opposition of regular troops.

The most that can be said of the operations in this sector is that after sanguinary fighting the Turkish offensive has been definitely checked, and, in the circumstances, at this season a check is equivalent to defeat. The main avenues of approach from Ognut and Kighi to Erzeroum lead over a pass some 9,000 ft. above sea level; and while the winter lasts the menace of an advance of the Turks in this direction is reduced to very small proportions. It will be interesting to see whether the Russians decide to maintain their positions south of the pass or to withdraw nearer to Erzeroum. If they should announce a retirement "for strategic reasons," we may for once accept that discredited phrase as meaning no more than it says.

It is only by this piecing together of reports and by reference to the maps that some idea, however imperfect, may be gained of the intention and results of recent operations in Armenia, and especially of the strong counter-offensive on which the Turks embarked in July. The intention was, by a threat against the enemy's communication between the Russian frontier and Erzeroum, to oblige him to weaken his forces on the main line of operations in Northern Armenia; the result was almost everywhere failure. In only one direction did the counter-stroke lead to a definite advantage which the Turks have been able up to the present to maintain. In Persia they were repulsed, and one of their columns was shattered. Desultory fighting still continues there; but the Russians are too firmly established to give any chance of a successful attack in that quarter. On the west, in the country of the Murad and its tributaries, the Turks have been held back until the approach of winter has deprived them of all hope of seriously menacing the Russians' communications, even should the latter now retire towards Erzeroum. Only in the centre, where the Turks still maintain their hold on Bitlis, have they secured a definite advantage. Their position there may be compared to the possession of a bridge-head on the enemy's side of a river. Their communications are better than the Russians', they can draw supplies from the plains, and can, if necessary, be reinforced and munitioned by way of the railhead at Nisibin. The retention by them of Bitlis constitutes a standing menace to the Russian occupation of the country round Lake Van, and we must hope that ere long news of the recapture of this place may be received.

Speculation on the future of military movements is an interesting but unprofitable occupation; for the speculator, looking at his maps, is almost invariably wrong, unless specially skilled in the gentle art of hedging. The result of the summer's campaign, if

these jottings have correctly interpreted it, has been to leave the Russians free to continue their forward movement in the main theatre of operations, unhampered for the next five months by any serious fear of organised attack on their communications. How far they are in sufficient force to break through the Turkish forces directly opposed to them is a point on which no information is available. Both Russia and Turkey have heavy commitments on other fronts, and either may at any time be obliged to weaken its forces to an extent that may affect the whole situation. For both parties, but especially for the Russians, the question of supply may well prove to be the determining factor. The difficulty of maintaining large forces in an inhospitable country at an ever-increasing distance from their base must be immense; and their progress must be dependent on their power of overcoming this obstacle. They will no doubt use their command of the sea to secure fresh bases of supply as their advance proceeds. At present their right wing on the Black Sea coast is pushing steadily forward, keeping a little in advance of the left near Erzinjan. It has now occupied the line of the Karshut river, which flows into the sea near Tireboli, but there does not appear to be any good road to the interior until Kerasund, forty miles further west, is reached. From Kerasund a fairly direct road, which could probably be improved, leads south to Kara Hissar, north-east of Enderes. The possession of this road would facilitate supply, and further west still better lines of communication between the coast and the interior will be available. At present, however, the most westerly point reached by the main Russian advance is sixty miles from Kara Hissar, and if the resistance of the Turks continues to be as obstinate as it has been in the past, we must not look for the early capture of that place.

Meanwhile the Russian Fleet maintains a close surveillance over the various port towns. Raids have been made far to the west on Samsun, Sinope, and Ereoli, and recently Tireboli has been bombarded from the sea. As the advance proceeds, we may look for a continuance

of this close co-operation between the fleet and the army. Without the command of the sea the Russians would find it difficult to maintain the positions they have occupied, and the continuance of their advance would become impossible.

MESOPOTAMIA COMFORTS FUND.

In a letter appealing for support for the above fund, Lord Lamington, the Chairman of the Committee, writes — "The Committee trust that the response will be prompt and generous. With the funds in their hands they have already given instructions for purchases of goods in India, which it is hoped will very shortly be distributed; but much is required to provide comforts approximately adequate to the needs of our men. The Committee understand that the difficulties of transport up-country have been largely overcome, and every month will mark an improvement in this respect. Articles sent by the Committee will have the advantage of being forwarded under the supervision and with the assistance of the military authorities on the spot, and will be conveyed by the regular steamers that go up the river constantly. Thus, if the public afford the Committee the means of creating the supply they may be confident that the comforts will reach those for whom they are intended, and by whom they are sorely needed."

We earnestly hope that the appeal will meet with a prompt and generous response. Our men in Mesopotamia have felt that they have been badly neglected in the matter of "comforts," and it is impossible to avoid the belief that they have had some reason for so feeling. Yet, if ever troops deserved well of their country, those of our Mesopotamian Force certainly do. They have worked and fought under conditions that cannot be conceived by those unacquainted with the country and its climate; and everyone who has had the opportunity of judging is loud in praise of their conduct throughout. The British public has now an opportunity of showing its appreciation of the efforts that have been made by this force, and it can hardly be doubted that it will gladly avail itself of that opportunity.

The Rev. T. R. Hodgson, who has been agent of the British and Foreign Bible Society in Constantinople for a quarter of a century and has remained at his post there ever since the war began, writes:—Our Bible work goes quietly on, so far as I can keep in touch with it. Our colporteurs here, and in Bulgaria, are working quietly and steadily, with quite encouraging results.

SKETCH MAP SHOWING FIELD OF RUSSIAN OPERATIONS.
(The shaded portion indicates area in which the ranges run mostly North and South.)

THE PRESS ON THE NEAR EAST.

The Allies and M. Venizelos.

A view of the puzzling situation in Greece which is often lost sight of is put forward by the *Spectator* in an article, "M. Venizelos and King Constantine." Referring to the charge that the Allies have played M. Venizelos false, the *Spectator* says:—

We are bound to express our opinion that the autocratic persecutions of the King are no sort of evidence that the Allies have been unfaithful to M. Venizelos. Is it, or is it not, true that the best way to help a man is to help him in the manner he himself desires? Surely it is true. In that case the Allies are right to be guided by the obvious desire of M. Venizelos that no disabling blow should be struck at the Greek monarchy. We do not pretend to knowledge of any official secrets. We are simply judging by the information sent from Greece to the newspapers, which is all to the same effect—that M. Venizelos wishes to keep the Greek dynasty in existence. In recognising the King's Government the Allies are therefore only doing what M. Venizelos has all along hoped that they would do. Of course, if the King takes this recognition as a sign that he is free to attack the Venizelists he is making a vast mistake, and the Allies must prove to him most plainly and at once that such conduct will not be tolerated. But to say this is not to admit that the King's excesses are any evidence of insufficient regard on the part of the Allies for M. Venizelos. The mistake is the King's, it is not that of the Allies. Error can be charged against the Allies only if they fail to insist that the arrested officers and Civil Servants must be released forthwith. The King, in fact, had promised not to interfere with the personal liberty of any man to attach himself to the National Government. He must be held absolutely to his word.

Later, the article expresses the opinion that M. Venizelos probably believes that "it would be an unwise policy to unseat the ruling House. Very likely he is right."

Small nations, where gossip about officials is contained in too small a compass and is too intimate to be harmless, are most easily ruled by Kings or Princes. So long, therefore, as M. Venizelos believes the present monarchy to be necessary we shall behave very foolishly to imagine that we are helping him by refusing formally to recognise that monarchy. Civil war in Greece would be a new and serious embarrassment to us. Yet such a thing might come about if we set the factions against one another.

The article concludes:—

Of course, it is possible to imagine circumstances in which for military reasons it would be essential to remove King Constantine. The Allies would be better judges than M. Venizelos of those circumstances, and might have to act against his sentiments. But at present the evidence shows that we have acted in accordance with his wishes. He has means of expressing his views, and he has uttered no word of reproach. Once more let us say that it is imperative to back him up in every way. When he says that we are doing it in the wrong way we shall confess that the Allies have blundered, but not before.

A Labour View.

The situation in Greece and Lord Robert Cecil's statement regarding it in the House of Commons last week form the subjects of an article, entitled "Greece and the Entente," in the *British Citizen* (November 4). The opinion is expressed that "the British Parliament and the British Democracy have a right at this stage to have a much clearer explanation from our Government than that vouchsafed by the Under-Secretary with regard to a situation which is giving rise to suspicion and dread." The article concludes as follows:—

We think that the Labour Party should now intervene in the discussion—and intervene with resolution and determination. M. Venizelos is the incarnation not only of Hellenic national aspirations, but of the Liberal opinion of Western Europe. We warn Lord Grey that democratic sentiment in this country is profoundly disturbed by the news that has reached it from Greece. Europe has already suffered enough through the existence of a string of kinglets associated mainly but not entirely with the family of the Hohenzollerns. The workers of Britain are prepared to fight and to die in defence of national interests, but for nothing less or meaner.

Are we to be the friends of our friends, or are we to betray them?

Views from Athens.

The situation in Greece has continued to occupy public attention very largely throughout the past week, and, whatever the official view may be, it is obvious that the British public is becoming more and more dissatisfied with the state of affairs and, more especially, with King Constantine's policy of shilly-shallying. The same sentiment is obviously shared by the English correspondents in Athens. The following extracts are taken at random from various despatches from that capital. The *Daily Telegraph* on Monday published a series of

messages received from Mr. G. J. Stevens, in Athens, who on the Friday telegraphed:—

King Constantine is responsible for letting loose civil war by the large military force he despatched from Larissa. He is playing for moral effect in an attempt to stem the stream of desertions that is going on from his camp to that of M. Venizelos. The apparent attempts which the Entente Ministers are making in Athens to bring about an arrangement and avoid further bloodshed are loudly proclaimed and are construed as meaning that we are taking sides with King Constantine. As no public statement to the contrary is forthcoming this belief is unfortunately gaining ground.

On the following day the *Daily Mail* correspondent in Athens (Mr. J. M. N. Jeffries) telegraphed:—

It is not unreasonable to suppose that once more our real interests and general equity have been subordinated to the necessity of meeting King Constantine half way. If this be so we are farther than ever from grappling with the situation here.

Panic was caused both at the Palace and in the anti-Venizelist newspaper offices by the news of the Greek debate in the House of Commons, and the idea of a mission to London has been conceived to try to stem the tide. The suggestion is in itself ridiculous and futile, but it is interesting as showing that it is recognised that in England's hands lies the fate of this country. The gratitude of patriotic Greeks for the speeches of Mr. Lynch, Sir E. Carson, Mr. Ronald McNeill, and Sir Henry Dalziel is extraordinary. I can testify that their hands were being wrung by proxy all day. The *Nea Hellas* says: "In the representative Chamber of the most practical people in Europe no empty words were heard. When the national struggle of the Greek people is supported by the British people it is certain that the struggle will succeed."

This message was published on Monday, on which day also the *Daily Chronicle* published a despatch sent from Athens on November 4 by Mr. G. Renwick, which concluded:—

I have the highest authority for stating that M. Venizelos himself not only desires but expects fuller recognition than that his Government is a mere de facto concern, which always keeps it under the stigma of being simply a temporary recruiting agency for the Allied Balkan Army. That full recognition means that his Government should have its representatives in the Allied capitals, and that the Entente should have its representatives at the seat of his Government.

It is due to the statesman who has thrown himself so wholeheartedly on the side of the Allies, and to his compatriots who are sacrificing so much for their own cause and ours, that this recognition should be given, and given at once. It is also due to British public opinion, which can accomplish so much, that this should be thoroughly understood. Nothing less will meet the case and nothing less can do elementary justice to the great patriotic movement which is finding spontaneous and practical expression in Greece—a movement which may yet largely redeem past errors, and which is capable of exerting a profound influence on events in a highly important theatre of the gigantic world struggle.

The Fate of Constantinople.

The following passages are taken from a despatch (dated November 1) forwarded from Petrograd by Dr. Harold Williams to the *Daily Chronicle*, and published on November 4:—

The Germans are again intriguing very actively with the object of splitting up the Entente Coalition, and their efforts are increasing in vigour in the degree that the Allies are gaining the upper hand in the military operations. Their attention is now particularly directed to Russia, where their intrigue takes the form of malevolent insinuations against England. It is a desperate move on the part of the Germans, and is only to be explained by the hopelessness, for them, of the military situation.

The latest move is to suggest that Russia does not need Constantinople, that England is the only Power interested in opposing the freedom of the Straits, and that the freedom of the Straits could be guaranteed by Germany. Ironical comments on these suggestions are made to-day by the *Noroe Vremya*, which points out that they are a symptom of the extraordinary desperation with which the Germans are seeking an issue from an intolerable situation. "But," adds the *Noroe Vremya*, "let the Germans grasp firmly the idea that the question of the fate of Constantinople will be decided without their knowledge and participation."

Hungary and Roumania.

The Budapest correspondent of the *Morning Post* continues to send most interesting reports from that city, and on Saturday the *Post* published one of his letters, dated October 25, in which he describes the feelings aroused there by Falkenhayn's advance into Roumanian territory. "Some of the newspapers," he says, "go so far as to predict what will be the fate of the 'war makers' if the enveloping movement should succeed and the whole Roumanian Army, with its stores, leaders, and even the King himself, should fall into the hands of Falkenhayn and Mackensen. An endless stream of nonsense on this subject is poured out daily,

and it is only here and there that one finds an article worth reading."

The most conspicuous feature about the articles are the numberless reports from headquarters in which the correspondents, who are evidently officially inspired, describe the alleged atrocities and barbarities committed by the Roumanians who invaded Transylvania. These stories are circulated in thousands of copies among the soldiers on the Roumanian frontier who are expected to invade Roumania, with the obvious suggestion that they should distinguish themselves as the exponents of German ruthlessness once they get into enemy territory.

But if the correspondents of the yellow Press indulge in this kind of writing, "the more respectable papers adopt quite a different tone."

Their correspondents, who have travelled extensively throughout the evacuated regions of Transylvania, state that the "Roumanian officers took every precaution against illegal acts on the part of their men," and they record cases where Roumanian commanders dealt most severely with offenders. Soldiers who looted houses, they say, were shot down by their officers, and the same correspondents quote orders of the day in which commanding officers threaten to have any man shot who is caught red-handed, and so forth. It is clear, therefore, that even if individual soldiers did commit excesses, these formed no part of the Roumanian system.

This testimony from an enemy source is of great value. It is to be feared that the Bulgarians will find it hard to get any evidence on *their* behalf from any of the Allied nations. But that is by the way. The *Post's* correspondent goes on to say:—

After the official incitements to hatred and outrage, there is little doubt that should Roumania succumb to the frenzied attack that is being made upon her, her population will suffer a fate compared with which that of the Serbians was mere child's play. The Germans regard their war against Roumania as a kind of "war of brothers," one Hohenzollern against the other, and they say that fratricidal wars have always been more desperate and ruthless than between natural enemies. While the Hungarian divisions are artificially incited against the Roumanians in the manner described, the Germans and Bavarians who are fighting for the passes just now need no incitement. Every one of them is a child of "Kultur," and regards the entry of Roumania into the war as a special insult to his Emperor, who weeps tears when speaking to them of the innumerable enemies confronting him, and says: "Here you see even a Hohenzollern committing blood treason against your Emperor." Never since the beginning of the war have such hatred and lust for revenge been displayed by the soldiers on any front as is manifested by the men who are fighting against the Roumanians. This is the result of German policy. The seeds of hatred are deliberately sown among them with a view to increasing their energy and fighting power.

The Hungarians are told by their Press that the doom of Roumania is sealed. "The leading and special articles in the Budapest and Vienna newspapers seem to have been diverted from all other subjects." But, fortunately for Roumania, these things are not settled entirely by the journalists!

The Roumanian Magnet.

On Saturday the *Daily Telegraph* published an article, "Roumania: 'Pivot of the War,'" by Dr. E. J. Dillon, who emphasizes the need for energetic action on the part of the Allies. Referring to "the enormous power of attraction" which the invasion of Roumania has for the Kaiser and for Hindenburg, Dr. Dillon writes:—

It is no exaggeration to affirm that for them it connotes a definite victory over all the Allied nations, and everything else which that would involve. We may laugh this notion to scorn, but we cannot gainsay that it is the conviction of the Germans, and supplies them with an astonishing driving power, of which, at this stage of the campaign, they were deemed incapable. However difficult the invasion of Roumania seems, and is, Hindenburg may deem it well worth while to attempt it repeatedly at a seemingly prohibitive cost, and for this eventuality, it behoves the Allied nations to be prepared. Unwonted promptitude and thoroughness on their part are essential to success. Russia, having discerned this, is now doing her part, and during the past few days has been despatching troops which the enemy hoped would never come. It would be contrary to public interest to disclose the number, but it may be permissible to say that it represents a very liberal contribution to the undertaking. Italy's effort is already known. In short, all the Allied Governments are strenuously exerting themselves to belie the popular proverb that prevention is better than cure. And this is as it should be. For to frustrate Hindenburg's scheme no efforts can be too strenuous, no sacrifices too costly, because, as already stated, the bearings of the Roumanian campaign are become so far-reaching and varied that they can no longer be gauged by the standards of strategy, nor by those political criteria still in vogue which were hitherto looked upon as infallible.

Germany's Turkish Dupes.

In an article entitled "Prolonging the War," the *Spectator* (November 4) thinks that the time has come

to let it be known that those who prolong the war in the hope of securing more favourable terms will certainly be punished; and "the fact that such punishment will certainly ensue ought not to be concealed out of some morbid punctilio against boastfulness." Germany is, of course, the chief offender, but her allies must also be warned, and the *Spectator* thinks it possible "without injury . . . to indicate the various directions in which the screw may be applied." The following passage will be of interest to our readers:—

In the case of Turkey, we must warn those who hitherto have taken pride in the feeling that, through the claims of the Caliphate, they led the Moslem world, how terribly the position of Ottoman Mohammedanism is being compromised by their craven dependence upon the German Emperor. The Entente wish no ill to the Moslem faith, but on the contrary are determined to place it in a position of real independence and make it impossible for even its most timid adherent to imagine that there will be Christian interference with or Christian control of his religious practices and beliefs.

At the same time punishment for the prolongation of the war must of necessity fall to a very great extent upon the Turkish Empire and upon those Mohammedans who were bribed to bow the knee to Germany by the plea that Turkey was to become once more the great centre of Mohammedan power. They must be sharply reminded that they are going the sure way to leave the Turks no share whatever in the re-establishment of the faith . . . but Mohammedanism as a whole is not going to be injured by the results of the war, whatever they are. Ottoman influence in the Moslem world, an influence which has now lasted for well-nigh five hundred years, may, however, be obliterated through the madness of those who have bowed the knee to, and taken the gold of, the pinchbeck autocrat of Potsdam.

The Roumanian Peasant.

Writing in the *Graphic* (October 28) of "Roumania's Peasant Defenders," Miss Edith Sellers says:—

There are other peasants, no doubt, who love their country every whit as devotedly as these Roumanians love theirs; but there are no other peasants whom I have ever met who have the same feeling of responsibility for their country as they have. They look upon Roumania as belonging to them, the peasants, a sacred trust, under their special protection. She is their own possession, one of which they must take care, over which they must watch lest harm befall her. They are a shrewd race; and they lived too long in bondage to be trustful. They have no faith at all in Boyards, no faith in politicians, no great faith in priests, though them they fear. They have faith, it is true, in their King, although even in him less than in themselves, when the safety of Roumania is in question. For they look upon themselves as their country's natural protectors, born defenders.

Articles to Note.

"A Review of the Greek Situation," by T. Constantines, in the *New Age* (November 2).

"King Nicholas at the Somme Front," by Percival Gibbons, in the *Daily Chronicle* (November 6).

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The loss of the Arabia has had no adverse effect on P. and O. shares, a fact which proves very clearly how great is the public confidence in our premier shipping concern. On the day of the publication of the news of the disaster to the Arabia the final dividend and bonus were announced, bringing the return to shareholders up to 18 per cent. free of tax on the deferred stock. This is 3 per cent. better than the result of the previous year, and proves, I think, that the increase in the earnings of the company must have been very great. The report will be coming along presently, and we shall then know the extent of the company's turnover.

Anglo-Egyptian Oil shares ("B") have done well this week. As will be seen by reference to our Company Notes a new well came into production on November 1, giving a steady production of 600 tons per day. This caused a big increase on last week's output from Hurgada, which led to continued speculative dealings in stock, which had bargains up to 12s. 6d. Egyptian oils have not had a rosy time in recent months, and this indication of prosperity will be welcomed by all who are interested in the fields.

Greeks in Manchester—who are, I understand, Venizelists to a man—appear to be falling between the devil and the deep blue sea, and declare that they have been penalised for their loyalty to constitutional ideals in Greek politics and for their adherence to the cause of the Allies. To a representative of the *Manchester Guardian* a few days ago one of them said: "In Greece we and our customers are 'black-listed' in the Royalist papers as something like traitors, and many obstacles are put in the way of our trading. On this side we receive no help from the British Government. We are given export licences freely, and are thus encouraged to trade, but when we have bought goods and paid for them and committed ourselves to further contracts we find that the authorities will not allow steamers to leave for Greece. We have then to store the goods anew and insure them until they can be shipped."

It is a curious and uncomfortable position, but one which, I fear, must be borne for some time to come. The treatment of which our friends complain has not been invented for them alone. There are many British firms trading to the Near, Middle, and Far East—and, indeed, all over the world—who would give gladly and cheerfully any money in reason for freight space. I believe I am right in saying that goods have been "held up" for some neutral countries for months—Holland and Scandinavia, for example. I am ready to admit that the British Government have not handled the shipping problem with very conspicuous distinction; but I should be very surprised indeed if, in respect of sailings for Greece, they could not put up a very good defence of their policy.

Recently the special courts in Cairo instituted to deal with cases of trading with the enemy have been called upon to

sit very infrequently, I learn from a local correspondent. In the early part of the year, however, they had a considerable amount of work to do. It is, indeed, remarkable how ignorant and slack some business people are at times, when it comes to interpreting licences and proclamations, and how ingenious others can be in trying to evade the terms of those very necessary regulations. From the fact that very few cases have of late come up before the courts, it would appear that the sentences inflicted have had the requisite deterrent effect on the section of the local commercial community most affected by the enemy trading regulations.

According to the report of the Administration of the Ottoman National Debt, a summary of which appeared recently in a German paper, the revenue for the first five months of 1914-15 was actually 11.45 per cent. less than for the same period of 1913-14, but would be 4 per cent. more if both years are considered on the reduced territorial basis of 1914-15. From August to February the revenue gradually declined, so that for the last seven months the 1913-14 total fell short of the previous year's by 54.30 per cent., or 48.30 per cent. for the reduced territory. In 1913-14 the general revenue amounted to £T5,378,872, in 1914-15 to £T3,581,433, a decrease of £T1,797,439, or 33.41 per cent.

The explanation of this deficit is somewhat laboured. The report states that the Turkish Government is owed £268,000, including the £114,000 tribute of Eastern Roumelia, which could not be levied for lack of ingress, and £130,000 due on account of the Cyprus surplus, but not paid. The compensation due to Turkey from the Balkan States for ceded territories could not be determined owing to the adjournment of the International Financial Conference at Paris. The report makes special reservations with regard to these points, and the tributes formerly paid by Greece, Serbia, and Montenegro. The tobacco monopoly administered since April 15, 1914, under the new concession, has brought in £887,000. Since October 1, 1914, the Government has raised the *ad valorem* import duty from 11 to 15 per cent., bringing the share which falls on the National Debt up to 7 per cent. The general expenditure was reduced from £681,656 to £619,094, a decrease of £62,562, or 9.18 per cent.

Readers of THE NEAR EAST will recall the series of articles in which were set out the defects of the British Consular Service, particularly in the Balkans and certain Mediterranean countries. In the Imperial and Foreign Trade Supplement of *The Times* for this month I observe an exhaustive statement, compiled by the Secretary of the Association of Chambers of Commerce, showing the number of British Consular representatives in various foreign countries prior to the war, the number paid and unpaid, the expenditure, and the cost of the service per million pounds of imports to each country from the United Kingdom. From this table have been extracted the details relating to eight countries, and these are published elsewhere in this issue. The figures are so illuminating that comment

is not necessary; but I would like to draw attention to these details, if only to suggest that in the grave neglect of our Consular Service in the past we may find the reason for British trade backwardness and German predominance in the Balkans and other countries in which we are particularly interested.

The "tobacco crisis" in Egypt appears to be completed. I hear that no Greek leaf has been imported into Alexandria for nearly two months, the last consignment received being about 5,000 small packages. During August, I am informed, there was no importation at all, and as a result there is a general shortage. Greek tobacco is the only leaf in the Egyptian market at present, and prices have more than doubled during the last few weeks. My correspondent adds that "in September last the price of a certain sort of tobacco varied between P.T. 12 and P.T. 15 per oke, and the same stuff is now being sold at the rate of from P.T. 25 to P.T. 30 per oke. In some cases prices are going up to P.T. 32 and even to P.T. 35, showing that a tobacco crisis has begun to show itself."

Stocks are not altogether depleted, of course, but Egyptian merchants are said to be withdrawing large quantities of tobacco from the Customs warehouses at the rate of 500 to 600 packages per day. If new stocks are not available—and it is difficult to see where they can come from at the moment—the tobacco stock now in hand will not last more than five or six months.

It seems likely that Cyprus will come to the rescue of Egypt in the matter of the meat supply, a question as acute in its way as that of tobacco. A recent issue of the *Cyprus Gazette* contained a proclamation by the High Commissioner that special licences to export sheep may be granted subject to the following conditions:—"No ewes may be exported, save such ewes as the Customs authority shall be satisfied cannot be used for breeding purposes. Every licence to export sheep shall be upon the condition that the exporter of such sheep shall export at the same time an equal number of goats or such other proportionate number of goats as the Provost Marshal shall from time to time prescribe." Meanwhile prices have risen at Alexandria, and the Municipal Food Tariff Commission have decided to consult the director of the slaughterhouse at Mex before introducing any change in the tariff. It is expected that considerable consignments of live stock will come from the Sudan before long, which, with supplies from Cyprus, should ameliorate the situation.

I have frequently called attention to the great efforts which American merchants and manufacturers are putting forward in the Near East to improve their position and to the success which they are achieving. From Salonika comes the news that our American friends are doing large lines in silk stockings, perfumery, expensive toilet soaps, hair oils and similar goods—a somewhat astonishing catalogue, unless the presence in the town of large allied armies offers the explanation. I am told that provision merchants in the town are anxious to purchase bacon, beans, margarine, sugar, and coffee, and are able to offer therefor considerably advanced prices.

COMMENTATOR.

Cyprus Trade Report for 1915.

Highest Revenue Record Reached Since the British Occupation of the Island.

In THE NEAR EAST of October 27 we quoted statistics relating to the trade and industry of Cyprus for the year 1915, extracted from the report of the High Commissioner in the Blue Book.

The surplus on the year's revenue transactions amounted to £26,574, the figures being as follows:—

Local Revenue, 1915-16	£363,692	
Imperial Grant-in-Aid	50,000	
		£413,692
Local Expenditure	294,318	
Share of Turkish Debt Charge	92,800	
		387,118
Surplus		£26,574

The local revenue, says the report, was the highest on record since the British occupation, exceeding that of 1913-14, hitherto the highest, by £21,886. It exceeded that of 1914-15 by £73,582, or over 21 per cent., and the average of the last preceding five years by over 15 per cent. The increase is mainly attributable to the high prices obtained for the sale of the Government tithe grain and to large increases in the sale of forest produce. Fifteen of the nineteen heads of revenue show an increase over the figures of 1914-15.

The tithe, etc., wheat stored in the Government grain stores was retailed at regulated prices for the purpose of maintaining a 3 cp. loaf in the towns, and the usual wholesale sales of wheat did not, accordingly, take place. Likewise, a portion of the Government barley was disposed of by retail sale at fixed prices with a view to controlling the market prices. The wheat harvest of 1915 was the smallest in quantity since the famine year 1902, and the barley harvest was the smallest since the same year, with the exception of 1912. During February and March, barley reached the enormous price of 6s. per kilo, and even more in certain hill villages. Oats yielded an average crop, while vetches fell far short of the last few years.

Expenditure.

The local expenditure (exclusive of the share of Cyprus of the Turkish Debt Charge, £92,800) was £294,318, as against £316,414 in the previous year, which represents a decrease on the preceding year of £22,096, mainly due to decreased expenditure on Vote 29, Expenditure Chargeable to Surplus Balances. Abnormal expenditure has been incurred in the maintenance and repatriation of distressed Cypriotes abroad, and considerable sums have been placed at the disposal of the United States representatives in Ottoman dominions for this service. Expenditure was likewise incurred under the heading of "War Expenditure," which, besides covering various miscellaneous expenses in connection with the war, such as passages of officers going to join the forces, included the supply of wood fuel as a gift from Cyprus to His Majesty's troops in Egypt.

At the end of June the notes issued in pursuance of the Proclamation of December 2, 1914, were demonetised, following the discovery of forgeries of the £1 notes. In consequence, however, of representations from the banks and leading merchants to the effect that the supply of currency in the island might prove inadequate to meet the movements of the carob crops in the anticipated event of the simultaneous charter of a number of vessels, it was decided to remonetise the Government currency notes of the value of £5, 10s., and 5s., and to place a limited quantity of paper money at the disposition of the leading banks. Little advantage was, however, taken of the facilities afforded, as the supply of metallic currency eventually

proved to be practically sufficient, and consequently the small quantity of notes placed in circulation had gradually been withdrawn.

TRADE AND INDUSTRIES.

Asbestos.

All the available statistics relative to the trades and industries of the Island have been given, and it will be recalled that these showed an increase in the total value of imports of merchandise for the year of £91,275, and of exports of £153,714. No real purpose is to be served by going over this ground in detail again; but some of the notes in the report are of interest.

Thus we are told, in reference to mines and quarries, that although the war and a serious fire in May, 1914, which destroyed a large part of the factory, have adversely affected the operations of the Cyprian Mining Company's asbestos mine at Amiaundos, the company was able to work throughout the year, and materially to increase its output.

Cyprus benefits from the company's operations not only by the royalty paid to Government, but by the fact that many mountain villagers, who otherwise might be unemployed, find work at the mine. In the year under review the company employed in day labour 59,309 men and 17,523 women.

Copper, Magnesite, etc.

A considerable amount of prospecting and development work has been done at the Foucassa Hill Copper mine near Skouriotissa, for which a mining lease was granted in November, 1915; 934 feet of main tunnel and 3,015 feet of cross cuts and drifts have been bored, and 382 feet of shafts sunk; 730 tons of first-class ore and 11 tons of second-class ore were extracted during the year. Work on the railway, which will connect the mine with the sea at Karavostasi, in length about four miles, has made appreciable progress. In the year under review the mine employed in day labour 41,467 men and boys, and 10,279 women.

The Cyprus Development Company extracted from the Akamas mines for export to England 14½ tons of magnesite. Eighteen fresh prospecting permits were issued during the year, and six were extended for six months.

3,890 tons of terra umbra, to the value of £4,991, were exported during the year; the Government royalty amounted to £681. Gypsum is extensively quarried, and is exported, principally to Egypt, for use in the manufacture of plaster of Paris; the quantity exported in 1915 was 2,635 tons, of the value of £1,575, the Government royalty being £44.

Agricultural Interests.

The industries of Cyprus are mainly agricultural, and manufactures are few. The wine industry, however, is of some importance; and in 1915, commandaria (a heavy dessert wine) to the value of £654, and other Cyprus wines to the value of £37,504, were exported, also Cyprus spirits valued at £5,431 and vinegar at £1,697.

2,881 okes of cigarettes, valued at £2,400, were exported, mainly to the United Kingdom; and cotton manufactures, being produce and manufacture of Cyprus, to the value of £12,874.

Sponge Fishing.

During the year Cyprus waters were fished for sponges by seventeen harpoon boats, and seven machine boats, fitted with diving apparatus, the fees being £1 and 25 per cent.

in kind of the total catch in the case of each machine boat, and 10s. with 20 per cent. in kind in the case of harpoon boats.

The number of sponges fished was 229,216, weighing 4,819 okes, as compared with 67,734 sponges, weighing 1,800 okes, fished in the previous year. The Government share is expected to realise about £1,500, which will bring the sum derived by revenue from this source since Government took over the supervision of the fisheries in 1903 to £15,875.

Shipping.

The total number and tonnage of steam and sailing vessels entered and cleared in the foreign trade were:—

	Vessels.	Total. Tons.
Entered	492	155,152
Cleared	481	153,159
Total	973	308,311

The total number and tonnage of steam and sailing vessels entered and cleared in the coasting trade of Cyprus were:—

	Vessels.	Total. Tons.
Entered	2,183	267,944
Cleared	2,221	274,878
Total	4,404	541,822

Altogether an interesting and encouraging review, which will lead those interested in the affairs of the Island to hope for an era of steady development and progress when peace has returned to the earth.

EGYPTIAN COINAGE CONTRACT.

The contract between the Government of India and the Egyptian Government, under which it was arranged that the Indian mints should coin about £600,000 worth of silver coins for the Egyptian Government, is rapidly approaching completion. The coins required by the Egyptian Government were pieces of the value of 5, 10, and 20 piastres, as there has been for some time an extraordinary scarcity of silver coinage in Egypt, so much so, indeed, that some months ago the Government of Egypt obtained from the Government of India a large quantity—about 30 lakhs—of silver rupees which were declared legal tender for the time being, the intention, no doubt, being to withdraw the rupees from circulating as soon as it became possible to substitute their own legitimate coinage.

As soon as the silver coinage has been completed, the Indian mints will proceed to coin a large quantity of nickel coins for the Egyptian Government, as these coins are also in great demand, and the supply is very limited.

The Indian mints have been, and are, exceedingly busy, as, in addition to the large number of rupees and nickel annas which have been required for the Indian currency, the mints have manufactured a large consignment of bronze pennies for Australia.

A Cairo message of the 7th inst. states:—The Government's October bulletin on the cotton crop gives the condition as 12 per cent. below the average in Lower Egypt, and 7 per cent. below the average in Upper Egypt. The report for September was 10 per cent. and 4 per cent. respectively below the average. This is the final result of the observation of the crop in the field. It is announced that the ultimate crop estimate will be published in five days, after adjustments necessitated by the decrease in the ginning outturn have been made.

EGYPTIAN TRADE.

Continued Expansion in External Operations in September.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, October 22.

The Customs returns for September show a continuation of the expansion of the external trade of Egypt. During the month imports amounted to £E2,715,175, and exports to £E1,518,688, as compared with £E1,782,948 and £E1,273,184 respectively in the corresponding month of the preceding year. For the nine months imports total £E22,380,908, and exports £E19,952,534, respectively £E9,148,574 and £E3,081,025 above the figures for the end of the third quarter of 1915. How satisfactory this is can be gauged from the fact that during the same period in 1913 the totals were respectively £E19,725,698 and £E17,661,741.

The principal imports during the month were:—Preserved meat, £E214,164; cereals, £E1,113,623 (of which £E44,118 was flour); mineral oils, £E48,228 (mostly from the States); liquid fuel, £E38,704 (from Borneo); beer, £E35,745; stationery, £E89,459 (of which Italy and England each sent 35 per cent.); coal, £E472,309 (the quantity was, however, 16,401 tons less); cotton threads, £E77,416 (an increase of £E50,648 over 1915, and of which India has sent nearly 50 per cent.); cotton tissues, £E525,084 (of which 80 per cent. was from England); sacks, £E71,346 (India); ready-made linen and millinery, £E57,821; and worked iron and steel, £E97,893. New coinage to the tune of £E193,300, of which £E175,000 was made in India, was imported during the month.

On the other hand, the chief exports were:—Skins and tanned goods, £E52,893; cereals, £E72,289 (there has been a large falling off in wheat, beans, and lentils, the while a substantial increase has taken place in maize, flour, and rice); refined sugar, £E20,091 (half of which went to India); cotton, £E1,042,630 (an increase of £E276,074 over the figure for September, 1915, although the quantity was 61,544 cantars less); cotton seed, £E131,702; and cotton-seed cake, £E62,540. Cigarettes to the value of £E26,153, or approximately the amount of September, 1915, were exported, the figure for the nine months being £E198,203, or £E18,204 more than in the preceding year.

Amongst the nations sharing in the trade of Egypt, Great Britain comes out with just under 50 per cent. of the imports and 70 per cent. of the exports during the month in question—on the nine months an all-round proportion of 50 per cent. on both sides. Australia's shipments to Egypt rose from £E30,688 to £E214,968, mainly due to the increase in preserved meat, and India increased hers by £E58,439 to £E178,188, mainly due to cotton tissues, flour-sacks, and indigo. Imports from the States went up by 70 per cent. to £E198,963 (mineral oils and coal), from Spain by £E14,175 to £E21,262, from Italy by 25 per cent. to £E215,634 (cotton tissues and stationery), and from Japan by 140 per cent. to £E29,727 (mostly ready-made millinery and linen). The other countries showed practically no change in their sales to Egypt. As regards exports, Great Britain absorbed more than the extra amount exported during the month, for the figure recorded against her rose from £E613,876 to £E1,143,365, whereas the increase in the total for the month was only £E245,504. As a natural consequence, the other countries all took less, Japan dwindling down to £E4,321, Russia to £E10,628, the States to £E35,822, and Italy to £E48,928. Greece was the only other country which improved her share, in this case by 100 per cent., her purchases being mostly skins, tanned goods, and maize.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, November 9.

Prices in the market during the past week have again gone against buyers, and the tone throughout has been strong. As values advance the confidence of buyers seems rather to increase, and it is remarkable that such a healthy trade can be done at such high prices. Spinners of yarn have been doing well for many months, and an improvement is now showing itself in the position of manufacturers of cloth.

The Egyptian cotton market has been excited with a big rise in quotations, the bullish tone being accentuated by the loss of two or three boats in the Mediterranean. Business in Egyptian yarns and fabrics made from fine counts has been demoralised. In cloth for Egypt the undercurrent of demand has continued healthy.

According to a telegram just received by a leading firm clearances on the other side are on a free scale, and Manchester buyers are being instructed to purchase goods on the best terms possible, as it is absolutely necessary that further supplies should be sent out without delay. The bulk of the buying has been in sized goods, but printing cloths and fancies have also attracted a good deal of attention.

The larger inquiry for India mentioned a week ago has been maintained with a rather increasing turnover in shirtings, jaconets, and dhooties, and producers are in a stronger position than for some time back. Some exporters to China have been stimulated to act with more freedom. If the present brisk demand is maintained it will not be an easy matter to obtain early delivery of certain cloths in a week or two. Prices in American yarns have advanced, and spinners have held firmly to the higher rates. A healthy trade has been done in both twist and weft.

We take the following from the *Manchester Guardian*:—

Attention was drawn in our columns some weeks ago to the serious difficulties which spinners have experienced through string and other material being mixed with Egyptian cotton. The British Cotton-growing Association took up the matter with the Ministry of Agriculture in Egypt, and forwarded nine samples of waste which had been found in bales of cotton. Mr. Gerald C. Dudgeon, consulting agriculturist to the Egyptian Ministry of Agriculture, now informs the Association that he has addressed the following letter to the President of the Alexandria General Produce Association:—

"SIR,—The attention of the Ministry has been called to the repeated occurrence of pieces of string in bales of Egyptian cotton arriving in England, the effect of which seems to be serious at the present juncture, as, owing to complaints of bad spinning, due to the presence of these fibres in the cotton, operatives seem readily to leave the employment of the mills and to take up other work, which at the present time is easily obtainable. I am submitting to you a copy of the letter received from the chairman of the British Cotton-growing Association, with a number of attachments, complaining of the presence of twine or string in the bales, and I recommend to the notice of your Association the great importance of this matter and the suggestions which have been made by the spinners to alleviate difficulties in this connection in future.

"The pieces of string are supposed to enter the cotton when the seed-cotton bags are being opened for ginning, and perhaps if ginners were circularised, pointing out that steps should be taken to prevent the string being cut into small pieces, better conditions would be obtained in the final bale. One spinner mentions that if the string used were coloured black it would assist, as these black pieces could be more easily detected before spinning. A recommendation has also been made for the employment of cotton twine instead of the ordinary hemp string, and it is even demanded that the Government shall legislate to prevent the use of any but cotton twine. The action would not appear to be called for at present, but, as will be seen from the correspondence, the loss to spinners is in some cases so great that it seems incumbent upon everyone in Egypt to take special

steps to render complaints re the adulteration of Egyptian cotton impossible in the future. I would be very grateful if you would put this matter before the members of your Committee."

TRADE NOTES.

Openings.

The Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), invites tenders for the supply of uniforms, cloth, white and khaki drill, saddlery, accoutrements, furniture, enamel ware, leather, boots, paints, oils, tarbushes, cotton shirts and drawers, blankets (woollen), and miscellaneous stores. (December 10.)

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs, dressings, sundries, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (November 25.)

The same Department invites tenders for the supply of equipment, clothing, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (Nov. 30.)

The Director of Stores, Coast Guard Administration, Arsenal, invites tenders for the supply of petroleum and benzine required by the service at Alexandria, Port Said, and Suez during year 1917. (December 1, 1915.)

Sealed tenders, on the proper forms, will be received by the Postmaster-General, Alexandria, for the supply and delivery of the following supplies required during 1917-18:—Mail bags; boots; fuel; ready-made furniture; letter boxes and accessories; keys and other hardware articles; lamps and electric fans; enamelled plates; safes, strong cupboards and safety locks; stamps; special postal stationery; and miscellaneous articles. (November 15.)

The Sanitary Commissioners of Gibraltar invite tenders for the supply and delivery of the following coal in such quantities as may be required during 1917:—Best Cardiff steam; South Wales small; Newport large; best quality Durham unscreened; anthracite large; and anthracite nuts. Specifications, conditions of contract, etc., may be obtained from the Sanitary Commissioners' Office, Gibraltar, at which address sealed tenders, on the proper forms, will be received up to the dates mentioned. (November 21.)

For the supply and delivery of the following stores in such quantities as may be required during 1917:—Engineer's stores; galvanised iron pipes; lead pipes; chemist's stores; drapery; fire brigade clothing; ironmongery; oilman's stores; Welsh or Stourbridge fire bricks and fire clay; English-shaped stock bricks; white glazed bricks and ventilating bricks; tiles, Marseilles, white glazed, etc., of various descriptions; puzzolana slates, W.C. pans, intercepting traps and kitchen sinks; glazed sanitary pipes and half-pipes; timber; flags and kerbstones; engine oils; special paints; oilskins; petroleum; creosote; coal-tar pitch; and benzoline. (November 14.)

Liquidations.

It is announced that the Board of Trade has ordered the winding-up of the business of Moritz Feldman, trading under his own name and as The Anglo-Oriental Agency, at 5, New Street, Bishopsgate, London, E.C., dealer and broker in carpets and rugs. Controller: Horace Evelyn Sier, 99, Cheapside, London, E.C.

The Public Custodian (Egypt) has been instructed to liquidate the business of W. Schimmelpfing.

Mr. R. Colley, Khedivial Buildings, Cairo, has been appointed Receiver (on instructions to liquidate) of the affairs of Mr. George Hess, Zifta.

Trading Licences.

A licence to trade in Egypt, with the British Empire and with Allies of Great Britain, in accordance with the terms stated in Section B of the notice published in the *Journal Officiel* of January 13, 1916, No. 4 bis, has been granted to Mr. Adrien Engel, 68, Rue Rosette, Alexandria.

The following have been granted licences to trade without special restrictions, in place of the restricted licences granted to them, as stated in Section B of the *Journal Officiel* above mentioned:—Adda, Jacques V.; Filature Nationale d'Egypt, S.A.

SMYRNA CIGARETTE Co.

Genuine Turkish and Egyptian Cigarettes.

SPECIAL BLEND FOR NEAR EASTERN SMOKERS.

Premières	-	7s. 6d. per 100.
Deuxièmes	-	6s. " "
Bourdelakis Bros.	4s.	" "
Do. (Gold-tipped)	5s.	" "

Packed in boxes of 50 and 100. 5 per cent. discount on orders for 500 and upwards for Near East Readers.
22, Great Chapel Street, Oxford Street, W.

PRODUCE REPORT.

LONDON, November 9.

Currents.

There has been a good demand this past week, and prices are, more or less, unchanged. Provincial quoted at 67s. to 71s., Amalias 74s. to 75s., Patras 74s. to 79s., Gulf 78s. to 82s., Vostizza 80s. to 86s., Zante 76s. to 82s., and smalls 78s. to 84s. There is only one cargo reported afloat and on its way here, and no other is expected to arrive before the end of this month. The stocks of currents in London on October 31 were 5,960 tons, against 5,960 tons the same period last year.

Sultanas.

Only moderate business is passing in Afghanistan and Greek (old crop) fruit, at late rates. The stocks of sultanas, of all kinds, in London on October 31 were 1,875 tons, against 873 tons the same period last year.

Figs.

There has been only a moderate inquiry for this article during the week, but quotations are unchanged.

Seeds.

Linseed is firmer, London-Calcutta spot being quoted at 95s., with afloat and October-November selling also at 95s. Bombay

ordinary, December-January, was sold at 97s. 6d.; Bombay small, December-January, 96s. Rapeseed is rather quiet, but firm; brown Cawnpore, November-December, 74s., Hull; Toria, November-December, 77s. 6d.; bold Ferozepore, November-December, 77s. Cottonseed is firm; London Egyptian, Sakelaries, afloat quoted at £16 15s., November ditto. Rangoon beans are firmer, spot selling at £33, afloat quoted £32 15s., October-November £34, November-December £34 10s., December-January were sold to-day at £35 c.i.f. New Mustard seed offered sparingly at recent rates.

Oils.

Linseed oil is firmer; spot pipes landed offered at £48, barrels ditto £49. Rape oil is firmer, ordinary brown naked spot quoted at £48 10s.; English refined barrels, £52 to £54. Cotton oil is firm; crude, spot and refined nominal; barrels sweet, £52 to £54, as to make. Olive oil is steady and in good demand at £62 to £64 for Spanish and Levant per tun, ex store in barrels, and shipments firmer.

Oilcakes.

Linseed cakes have shown during the week a tendency for higher prices. Best London-made are quoted at £15 10s. to £15 15s. ex mill. Cotton cakes: Egyptians are not offered on spot, but for October shipments there are sellers at £11 15s. ex ship terms, with only a limited quantity available.

COST OF THE CONSULAR SERVICE.

The following is extracted from a table showing the number of British Consular representatives in various foreign countries prior to the war, the number paid and unpaid, the expenditure, and the cost of the service per million pounds of imports to each country from the United Kingdom, compiled for the Trade Supplement (November) of *The Times* by Mr. R. B. Dunwoody, Secretary of the Association of Chambers of Commerce:—

Country.	Number paid.	Number unpaid.	Total cost.	Imports from U.K. Million £.	Exports from U.K. Million £.	Cost of Service per million pounds.
Bulgaria	3	3	£ 1,780	1½	1	£ 1,424
Egypt	7	5	6,256	8½	16½	736
Greece	2	10	2,355	1½	1½	1,570
Morocco	12	2	9,515	—	—	—
Persia	11	—	7,574	1½	—	5,049
Roumania	5	1	3,682	—	2½	1,052
Serbia	—	2	100	—	—	400
Turkey	26	27	23,161	—	—	—

Prominent Industries of India

CONTRACTORS TO GOVERNMENT.

ENEMY PROPERTY IN EGYPT.

Amendments to Previous Proclamations.

By proclamation in the *Journal Officiel* of October 19, the General Officer Commanding-in-Chief in Egypt explains and amends, in certain respects, the provisions of the Proclamations of January 25, 1915, and July 31, 1916. Article 5 of the former is amended by substituting payment to the Public Custodian of enemy property in Egypt for the method of payment into a bank. The text of the new order is as follows:—

1. The declaration required by Article 1 of the Proclamation of July 31, 1916, shall be made in respect of every debt or other obligation which at the time when it was contracted, or at any subsequent period, was payable to, or to be performed in favour of, an enemy person as defined in the aforesaid article, and all rights or claims in respect thereof shall be deemed to be the property of an enemy person for all the purposes of the said Proclamation, notwithstanding that any bill of exchange or other instrument may have been accepted or given in respect thereof, and notwithstanding that any such enemy person may have purported to transfer or assign his rights and claims in respect thereof, whether by endorsement of any negotiable instrument or in any other manner.

2. Where payment or satisfaction of any debt or obligation falls to be made to or in favour of the Public Custodian of enemy property by virtue of an order made under Article 6 of the Proclamation of July 31, 1916, such payment or satisfaction shall not be refused by reason of the fact that the Public Custodian is unable to deliver up any bill of exchange, promissory note or other instrument accepted or given in respect thereof. The receipt of the Public Custodian under such circumstances will constitute, to the extent of the payment made, a discharge of the liability of the debtor in respect of any such instrument.

3. Article 4 of the Proclamation of July 31, 1916, shall be read and construed as if the word "article" in the English version thereof had been printed in the plural.

4. From and after the publication of the present Proclamation no payment shall be made into a bank for account of a person or persons resident or carrying on business in enemy territory as provided by the third paragraph of Article 5 of the Proclamation of January 25, 1915, and no bank shall accept any such payment. In lieu thereof any payment due to an enemy person, as defined in Article 1 of the Proclamation of July 31, 1916, may henceforth be made to the Public Custodian of enemy property in Egypt, who will hold the same in accordance with the provisions of the last mentioned Proclamation; and every payment which has been, by any order or permit issued under the authority of the General Officer Commanding-in-Chief, directed to be made into a bank for account of any enemy person, shall henceforth be made to the Public Custodian accordingly.

SYRIAN SILK CROP.

(FROM OUR CORRESPONDENT.)

CAIRO, October 18.

With regard to the high prices at which the cocoons were reported to have been sold to German-Swiss agents, the bare quotation of the figures was misleading.* The facts of the case seem to be that the price of about 60 piastres was per oke of steamed and dry cocoons of the previous crop, which is equal to four okes of the freshly gathered cocoons. This, therefore, brings down the actual price of the latter to about 12 piastres, which is half of the normal price.

The last silk crop is said to have been, indeed, a very poor one, for the people, having been unable to dispose, at the time, of their last crop, and to procure also the scientifically tested eggs of the silkworm, which used to be imported chiefly from Corsica for breeding purposes, felt very discouraged and considerably reduced the breeding. The use of home-tested eggs, which give a poor breed, has further contributed to the reduction of the crop of 1916.

* Our Correspondent evidently refers to a previous communication which has failed to reach us.

THE SILK INDUSTRY.

Developments in Russia—The Position of Italy.

In Primorsk, according to the Press, the people are beginning to take up silk culture, and the first efforts in this direction have proved to be successful. China and Japan, that are immediate neighbours of this territory, are considered to be the classical countries for silk, and, as a matter of fact, the exportation of raw silk alone from Shanghai and Canton exceeds half a million pounds, and the exportation from Japan likewise exceeds that figure. In Russia only the Caucasus and Turkestan yield a more or less important quantity of silk—Caucasus 33,000 to 35,000 pounds, and Turkestan 25,000 to 30,000 pounds, which in point of quantity about equals the production of France, where the yield of raw silk in the Valley of the Rhone and in Provence makes about 35,000 pounds. Such figures must be considered very modest in presence of the considerable production by Italy, which amounts to about 275,000 pounds of raw silk, or one-sixth of the total world production, and which puts Italy at the head of the European Powers as a silk producer. At the same time, with a greater attention of the population to this branch of industry, Russia, with its territorial and climatic conditions, might also produce silk in enormous quantities. Every fresh extension of the area of silk production within the boundaries of Russia should be sincerely welcomed as progress in the national wealth and in the economic power of the Empire.

Silk culture, as is known, is closely connected with special botanico-geographical conditions, and particularly is it possible only in places where the mulberry tree grows somewhat easily.

The line from Volhynia to the Lower Volga, in the Caucasus, nearer Asia with Persia, and in Turkestan, all constitute a great area for the production of silk, served by the phito-geographical belt of mulberry. To feed every spring these incalculable armies of silkworms which produce their valuable cocoons is not a simple business. Large quantities of food are wanted, especially selected, and exclusively from the mulberry.

The mulberry tree grows easily in Russia to the south of the line between Volhynia and the Lower Volga, and a great development of the silk-growing industry is to be expected there. Bessarabia, Tiraspol, Kerson, the Lower Don and Volga, some parts of the Ekaterinoslaff, Karkoff, Poltava, and Kieff Governments all yield silk, the quantity of which could be largely increased.—*Financier*.

COTTON IN TURKESTAN.

The prospects of the cotton harvest in Turkestan are considered satisfactory, says the *Financier*. It is believed that the harvest will about equal that of 1915. The Fergana district is expected to yield an average, and rather better in parts, whilst in Syr-Darynsk the appearance is something better than satisfactory. This is the report also on Samarkand, some districts showing better and some showing worse than last year. But some reports indicate that here the record level of 1915 will not be reached. In Transcaspia the prospects are considered about average for quality, but the quantity is expected to be lower than last year's. The reports from Khiva suggest an average harvest, though inferior to last year's record. In Bokara appearances are satisfactory, and an average yield is looked for. It should be remembered in connection with these reports, which have certainly not a progressive aspect, that various factors have contributed to discourage a larger cultivation of cotton, such as labour difficulties and so on. The scarcity of labour has meant much higher wages, and has been particularly observable in Fergana, Syr-Darynsk, and Samarkand, and labour has proved to be particularly scarce just where in previous years it was abundant. The supply of labour from Afghanistan and Persia shows continued scarcity, and the cotton fields could only be maintained by offering local workpeople very high wages.

The provision of advances has not been so abundant this year as before, and has declined by 25 per cent. in Fergana compared with last year. In this respect the position is somewhat irregular in Syr-Darynsk and elsewhere.

NEWS FROM ALL SOURCES.

The officers of the Roumanian steamship Bistritza, which was torpedoed by German submarines on the coast of Norway, have arrived in London, and visited the Roumanian Legation.

It is reported from British Consular sources that the olive crop for this year in the Regency of Tunis, the harvest of which is close at hand, is particularly good. It is estimated that the yield will amount to more than 54,000 tons, as compared with about 29,500 tons in a good average year.

The Chilean Nitrate Committee announce the nitrate of soda statistics for October as follows:—Europe (including Egypt): Exported from Chile to Europe (including Egypt), October, 174,655 tons; arrivals in Europe (including Egypt), October, 157,379 tons. Owing to the war we are unable to compile the usual figures of deliveries and visible supply (stocks and afloat).

A provisional census has been taken at Busreh by means of a house-to-house visitation. It shows the population to be about 28,000, or, with the suburban villages, about 36,000. The population comprises: Arabs 20,498, Jews 3,347, Christians 1,350, European civilians 116, other nationalities 2,812. The last-named include Indians, Turks, Persians, Kurds, Sudanese, a few Levantines, Greeks and Russians.

Tobacco oil is likely to be put on the market within the next few months. Messrs. Salomas, of Ekaterinodar, Russia, have been experimenting for some time with oil produced from tobacco grain, and have succeeded in extracting a proportion of 34 per cent. of oil. The oil is of a fine colour, and when properly prepared and distilled may be used as olive oil and for preserving tinned fish, sardines, etc.

According to a Cairo message dated November 4, the Alexandria General Produce Association's October cotton report states that the first and second pickings are below the average, and the ginning yields are inferior to last year. The association estimates the 1916 crop at 5,850,000 cantars, which represents little over 3½ cantars per feddan over an area which is less than had been generally anticipated. The Government will publish an estimate shortly.

Mr. V. N. Deloff has been appointed general manager of the Russian Petroleum Company, in succession to the late Mr. T. C. Weskin. Mr. Deloff is a member of the Technical Committee of the Sovyet Siedz (Naphtha Producers' Association). Mr. S. Bagdasarian and Mr. S. N. Kvitashvili have been appointed joint general managers of the Baku Russian Petroleum Company in succession to the late Mr. T. C. Weskin. Mr. Bagdasarian for some time has held the appointment of chief engineer of the company. Mr. Kvitashvili has been for many years in the company's service and latterly has acted as chief commercial assistant to the general manager. The European Oilfields Corporation has received a telegram from Mr. Arthur G. Parker, the London manager, announcing his safe arrival at Baku. Mr. Parker expects to be back in England before Christmas.

ENGINEERING NOTES.

Developments on Egyptian State Railways.

Engineering (October 27) describes at great length by illustration and letterpress some third-class all-steel carriages for the Egyptian State Railways which have been designed by the Leeds Forge Co., Limited, in collaboration with Mr. R. G. Peckitt, chief mechanical engineer of the Egyptian State Railways. Thirty of these were built at Leeds under the supervision of Sir Arthur L. Webb, K.C.M.G., inspecting engineer to the Egyptian State Railways. The draw-gear, buffing-gear, breakwork, axle-boxes, wheels and axles, bogies, and general details, such as windows, louvres, seats, lavatory and other fittings, have been arranged to Egyptian State Railway standards. These carriages are in service in Egypt, largely in connection with movements of troops, and are much appreciated. The whole of the panelling and framing is of steel throughout, lined on the inside with asbestos. They can be freely washed out with a hose pipe, without any risk of water lodging so as to cause corrosion, the floor being of Decolite cement, provided with wash-out plugs. They have, after careful tests in Egypt, proved themselves to be quite as cool in hot weather as the wooden stock. They also have the advantage that they cool down more readily than the wooden carriages after sundown, owing to the system of air circulation between the outer and inner linings.

Special Features.

The following special features of the design may be noted:—The under-frame and body are incorporated into one structure. The body side pillars are connected at the bottom through the solebars to the boxed ends of the under-frame cross-bars, except at the bogie bolsters; and at the top direct to the car lines, this construction making several strong girdles completely round the body and frame. These are further stiffened by diagonal braces between the seats fixed to the pillars at the top edge, and to the cross-bar flanges at the bottom edge. A test load of 15 tons distributed along the floor caused practically no deflection. Free air circulation is provided throughout in the body between the outer and inner linings. The asbestos lining is carried inside the body sides and the lower roof with a free air space of 8½ ins. at the roof centre. As stated above, the design is so arranged that there is no place for lodgment of moisture in the panels and frame, and as a further means of preventing corrosion the bodies are arranged in such sections that they can be thoroughly stoved after they are prepared for erection.

Weight Advantages.

The ample proportions of these carriages will be much coveted by English railway engineers. Notwithstanding these sizes we find that the existing timber coaches have tare weights per passenger of from 836 lbs. to 992 lbs. Against these the steel coach has an average of 685 lbs. per passenger. This advantage in weight is due somewhat to the reduced thickness of sides, permitting an extra passenger on the transverse seats. Without thus utilising this extra seating space or by giving each passenger additional room, the tare weight would then show about 810 lbs. per passenger. The following summarises the advantages which have been obtained by the

use of these steel coaches as compared with timber coaches:—They are lighter in structure, with increased capacity. They are stronger and better able to resist wear and tear. They proved to be quieter in running. They are more economical in first cost and maintenance. There is no danger from fire. The strong construction of the ends, which have strong vertical girders with very stout corner pillar pressings, will prevent "tele-scoping."

The "Caterpillar" Tractor.

When, in an issue of *THE NEAR EAST*, exactly fifteen months ago, we gave a detailed description of the "caterpillar" tractor, and alluded to its remarkable efficiency in travelling over soft or sandy soils, which ordinary vehicles could not do, we mentioned that among the most important uses to which, it was claimed, it could be applied with success were rooting up trees, pulling stumps, ploughing, harrowing, harvesting, threshing, and running flour or saw mills. The "caterpillar" tractor's usefulness in peaceful landwork is increasing. Its latest achievement is in the excavation of drainage channels. Hitherto drainage channels, of sizes too small to be economically handled by a dredge, were opened by a drainage channel plough of special construction. Horses were attached four abreast, and, according to authentic information, frequently fifty miles of channel 8 ft. wide on top, 3 ft. deep, and 18 in. at bottom width, were let on contract prices at from 5s. 2d. to 8s. 4d. per rod. The machine which is now replacing these outfits consists of an engine supported on two long caterpillars 30 in. wide, which carry a 16 in. diameter cable drum 24 in. long. The drum is driven from the main shaft of the 60-h.p. engine, and is geared to give a rope

speed of 14 to 18 ft. per minute, depending on the amount of cable on the drum. About 1,000 ft. of $1\frac{1}{2}$ in. wire rope is used. When, on account of difficult ground, or for other reasons, the tractor must be set at greater distance from the plough, removable lengths of 500 or 600 ft. of wire rope are attached between the plough and the end of the cable. In operation, the plough, removed from its four-wheel carriage, is left at the starting-point of the channel, the cable attached to its beam. The tractor moves ahead to the proper point on the line of the channel, paying out the cable as it advances. The traction gear is then released and the drum thrown in. As soon as a strain is taken on the cable, two other anchor flukes drop to the ground and bite in as the tractor moves backward, until the latter is securely anchored. When the plough is drawn to the end of the cut the drum is thrown out of gear and the tractor thrown in. As the tractor advances, the anchors ride up from the ground, and are hooked up in the clear by power. One man and a helper are required to operate the tractor, while another man rides the plough. The plough weighs four tons with its removable truck; and the tractor, although weighing fifteen tons, is able, owing to its large bearing surface, to travel over swamp land too soft to support a team. A plough of increased size, which will cut drains 2 ft. in bottom by 9 ft. in width, and 3 ft. 6 in. deep, is used with the tractor.

Agricultural Machines for Italy.

In a recent American Consular report it was stated that about 200,000 agricultural machines and implements are to be purchased by the Italian Government. These will be used to meet the difficulties caused by the shortage of farm hands. It is hoped, if the American report is correct, that the British market will have a substantial share in the orders.

Gas-Propelled Cars.

The restricted supplies and consequent high price of petrol, together with the official ruling that all petrol substitutes come under the same category as petrol, are evidently acting as a stimulant to the inventive propensities of automobile engineers and manufacturers, for it is evident that recent inventions, such as of liquid fuel, oil-engines, carburetors, and other devices for auto-cars, are more or less contrivances to evade or alleviate the difficulties and restrictions with which, at present, petrol vehicles are encumbered. One of the latest advances in automobile propulsion is the utilisation of gas, and some very interesting experiments are being carried on in that direction by a firm of garage owners. The gas is contained, to the extent of nearly 500 cubic feet, in a canvas and rubber bag, secured to the roof of the vehicle, the bag being filled direct from the gas main. From the reservoir the gas is conveyed to a point above the throttle of the engine, the supply being controlled by a lever coupled to the throttle valve lever. It is said that with an efficient driver about thirty miles can be obtained per 1,000 cubic feet of gas consumed, and as at the place where the experiments are carried on the gas costs only 1s. 4d. per 1,000 cubic feet, the motive power is very cheap when compared with the present price of petrol. In large cars of the char-à-banc type, with which the experiments are being made, there is said to be a saving, in the use of gas, of about 85 per cent.

THE DANUBE BRIDGE AT CERNAVODA.

A German Description of Roumania's Great Work.

The following description of the great bridge across the Danube at Cernavoda, known as the "Podul Regale Carol I.," which carries the Bucharest-Constanza railway, and has great military, political, and economic importance, appeared in the *Kölnische Zeitung* twenty years ago:—In its lower reaches the artery of the Danube acquires an imposing breadth. On the map you see a wide space coloured blue, where stand out a series of branches or channels. The whole of this tract, which in many places extends to over twenty miles, is flooded at high-water, and at many points has had here to be spanned by large bridges and viaducts, and elsewhere by a high stone barrage for a total length of fourteen miles. First comes a three-arched bridge 420 yards long, thrown from the left bank across the so-called Borcea channel or arm of the Danube. The bridge proper is continued by a viaduct with thirty spans, and 650 yards long, which carries the rails over the strong stone causeway. Then this causeway traverses for a great distance the space subject to inundations, which at low water forms a marshy island and, gradually rising, leads at last to a viaduct 900 yards long, which is disposed in fifteen 60 yard spans, and gives direct access to the Danubian bridge proper. This slender iron structure, spanning the main stream with a length of 750 yards, is disposed in five arches, of which the central is 150 and the others 140 yards wide. It has a weight of 4,000 tons, and rests on two mighty abutments on either bank and six stone pillars with ice-breakers. Of these, four are built in the stream and carried 30 yards above extreme high-water level, so that the tallest vessels ply freely under the bridge. The works were carried out by the French Fives Company, of Lille, and this bridging of the Danube has cost Roumania £1,360,000. But a work has thus been created such as had not been seen in this part of the world since the days of Trajan—a work to which King and people, and especially their engineer, may point with just pride in proof of a high creative faculty.

Many a traveller grows dizzy as he glides over the bridge and looks down more than 100 feet on the surface of the stream. Below, on its margin, lies Tchernavoda, a little riverside town of some 2,000 inhabitants, which presents a far from inviting aspect. It is an Eastern settlement, whose dreary surroundings remind one of some American and Australian diggings. Here in Dobrudja the country has the character of an elevated plain, without however attaining any great altitude. The railway track takes the direction pointed out by nature, through a long, very wide, and flat gully, which is at once recognised as the old, or an old, bed of the Danube. The supposition is that during long ages here in the East the Black Sea coastlands have been rising and alluvium deposited, just as on the German Ocean the seaboard is subsiding and the ground washing away. But it must be left to others to decide to what extent the gradual upheaval is progressing, or whether in Dobrudja other natural forces may not have shared in the

work in prehistoric times. In any case, the Danube may have once, perhaps many thousand years ago, here found no obstructions, and was thus able to take the nearest way to the sea. In this broad, flat, fluvial bed now graze numerous herds, partly owned by the descendants of those Tartars who, after the Crimean War, migrated thence into Turkey. Since the annexation of Dobrudja to Roumania many have again wandered into Asia in the wake of the Sultan's waning star. Their withdrawal is reluctantly witnessed, for they are esteemed doubtless not as a fine but as a stout and vigorous race and as a valuable section of a motley people now declining and difficult to replace. At present the population has fallen from over 250,000 to less than 200,000, of which the Roumanian element forms one-third, Turks and Bulgarians each a twelfth, and Tartars a sixth.

EGYPTIAN TARIFF CHANGES.

The Egyptian *Journal Officiel* of October 5 contains certain tariff valuations for hides, skins, sesame, flax, wool, ivory, wax, onions, eggs, cotton seed oil, caustic soda, and various other products exported from Egypt, which are to remain in operation from October 1 to December 31, 1916. The same issue of the *Journal* contains the following revised Tariff Valuations (No. 32) for use in assessing the duties on cotton yarns imported into Egypt from October 5, 1916, to December 4, 1916, or until denunciation, as follows:—

Articles.	Import Valuations per Kilogramme (2½ C46 lbs.).
Cotton single yarns, grey & bleached—	Millièmes.*
From India—	
Nos. 4 to 12.....	75
Nos. 14 to 20.....	98
From other countries—	
Nos. 4 to 12.....	120
Nos. 14 to 20.....	127
Knittings—	
From India—	
Nos. 3 to 12.....	105
From other countries—	
Nos. 3 to 12.....	136
Cotton sewings, grey or bleached—	
From India.....	127
From other countries.....	135
Cotton double yarns, grey and bleached, Nos. 40/2.....	170
Cotton cable yarns, No. 20.....	170
Turkey red cotton single yarns.....	135
Other coloured cotton single yarns.....	157
Gassed or mercerised or prepared yarns, grey, bleached, or dyed—	
From India.....	ad valorem
From other countries.....	ad valorem

* Dnty is leviable on the valuations shown at the rate of 8 per cent. The tare allowance for bales is fixed at 3 per cent.

It is also notified that in addition to the prohibition of the exportation of wheat and maize under a Ministerial decision of September 12, 1916, the exportation is prohibited of millet, and of all alimentary products, with the exception of bran, manufactured from wheat, maize, or millet.

A further black-list of enemy firms not resident in enemy territory with which trading is prohibited is given in a proclamation issued on October 5, and published in the Egyptian *Official Journal* of October 16.

GOVERNMENT COMMISSIONER - ATH MOSCHUNA.

ON 'CHANGE.

(By Our City Correspondent.)

THROGMORTON STREET, E.C.

Our market has continued firm this week, but there has not been very much business as sellers are scarce and buyers have not been generally inclined to pay the increased prices asked. The feature has been the rise in Khedivial Mail shares, which have spurted about 3s. to 30s. 6d. on a persistent local demand, evidently connected with favourable rumours as to the amount of the final dividend which is expected to be declared in a few days' time; but Khedivial Preference remains unexpectedly dull round 3½ to 3¾.

National Banks have firmed up ¼ to 12½, all the shares on offer having been absorbed between 12½ and 12 7/16, with further buyers at about these prices. Agriculturals are firm, but without business at 4½ to 4¾. Salt and Sodas are 3d. better at 20s. 9d.; but inactive, as buyers are not wanting to pay more than 20s. 6d. and sellers are more inclined to raise their prices than to lower them, a very satisfactory dividend being expected for the year ending August 31 last. A few Delta Lights were done at 5 3/16.

The news from Egypt regarding the financial position of the natives this year is very favourable, so that the mortgage companies expect very good encashments, and at the same time land companies are anticipating a revival in their sales of land. It is quite on the cards, therefore, that there will be a good amount of activity and higher prices in Egyptian shares in the near future.

As regards Greek stocks, the revival of demand reported last week has continued, but the absence of sellers has made business very difficult.

COMPANY NOTES.

Dividends, etc.

The coupons due on the 15th inst. on the Imperial Government of Persia Five per Cent. Sterling Loan of 1911 will be paid on and after that date at the offices of the Imperial Bank of Persia, or at Messrs. Glyn, Mills, Currie, and Co., 67, Lombard Street, E.C.

At the general meeting of the Peninsular and Oriental Steam Navigation Company, to be held on December 13, the directors, after providing for the usual dividend at the rate of 5 per cent. per annum on the preferred stock, less income-tax, will recommend a dividend on the deferred stock of 6 per cent. for the six months, together with a bonus at the rate of 6 per cent., both free of tax, making, with the interim dividend of 6 per cent., a total distribution on the deferred stock of 18 per cent. for the year. Warrants will be posted on December 16.

Oil Outputs.

Anglo-Egyptian. — Gemsah production, week, 26 tons (previous week, 22 tons); Hurgada, 3,534 tons, against 829 tons. The large increase in Hurgada production is owing to well No. 8 having come in on the 1st inst. and giving a steady production of about 600 tons a day.

Baku Russian. — Week ended November 4, 80,500 poods.

Cheleken. — Fortnight ended November, 4,538 tons.

Maikop Pipeline and Transport. — Week ended October 28, 61,864 poods (998 tons).

North Caucasian. — Week ended October 18 (31), 580,287 poods (9,359 tons).

Russian Petroleum. — Week ended November 4, 59,700 poods.

Spies. — Week ended November 5, including 4,310 poods from ambars, 170,935 poods (2,757 tons); total, 7,097,335 poods (114,473 tons), against 11,555,535 poods (186,380 tons).

Ural Caspian. — Week ended October 26, 167,391 poods (2,700 tons).

Meeting.

Land Bank of Egypt. — The general meeting will be held at the head office at Alexandria on December 5 at 4 p.m. Holders desiring to vote at the meeting must deposit their shares not later than 30th inst. at (among other places) the London branch of the Comptoir National d'Escompte.

NOTES OF THE WEEK.

Roumania, of all the countries that come under review in these pages, continues to claim chief attention. But as the tense anxiety felt on her behalf a short while ago diminishes it becomes more possible to fit both spheres of the Roumanian campaign into the war picture as a whole. For all the immediate significance that the enemy's thrusts in the Dobruja and the Carpathians have for the Allies as a whole and for the Roumanians in particular, they remain very closely connected with events in other theatres. Without attempting to apportion cause and effect we may note among other current features of the war at this time the slowing-down of the Austro-German advance in the central passes of the Lower Carpathians, the falling back of von Mackensen's forces in the Dobruja, the French gains at Verdun, and the further successes in the region of the Somme and Ancre. Taken collectively these separate episodes emphasize the condition of siege in which the Central Powers find themselves, and serve to remind us of the steady progress made by the investing armies, inasmuch as the situation at any one point responds far more readily than it did before to changing conditions at other points.

One effect of this development in the military situation is to engender an over-eagerness amounting to impatience in regard to the ordered course of events. The knowledge that a thrust in one place is likely to react on pressure which is being exerted by the enemy in another makes public opinion the more anxious for thrusts everywhere and all the time. Unfortunately, this ideal state of affairs cannot be realized. But the recent frequency of these thrusts has gone far to engender confidence that the co-ordination of the Allies' efforts is slowly bearing fruit in all the theatres of war. For the moment the outlook has particularly reassuring aspects. There is activity in Macedonia, there are signs of activity in the Sinai Peninsula and beyond the Egyptian frontier, while even from Mesopotamia comes in Sir Percy Lake's final despatch a specific reference to "more active measures during the coming cold weather."

Although the Austro-German advance in the Carpathians has been retarded, it has by no means been brought to a standstill. On the contrary, it would seem as if the menace at the Central Passes had caused a check to the Roumanian attack on the Moldavian front. Further withdrawals have taken place during the past

week at the Törzburg, Roter Turm, and Vulcan Passes. Fortunately, in the Predeal or Prahova Valley the enemy has gained little or no ground. At the three other points he is now from thirteen to twenty miles within Roumanian territory. The hilly country to which the fighting is still confined favours the defence; but with the offensive still in the hands of the Austro-German forces, they are able to change their point of attack more readily than the Roumanians can transfer reinforcements to the particular pass threatened at the moment. As far as is known, Roumanian public opinion remains confident that the measure of the enemy's strength has been taken and that he cannot hope to advance much further. It is not without significance that the present time should have been chosen by M. Marghiloman, the former leader of the Conservative Party, who was resolutely opposed to Roumanian participation in the war, to announce his conversion from a partisan of peace to a partisan of war, and his resolve to do everything for national unity.

In the Dobruja the Russo-Roumanian recovery has brought the fighting once more to the neighbourhood of the Cernavoda Bridge. Harsova, twenty-five miles to the north, was occupied a little over a week ago, and an official Russian statement issued on November 10 announced the occupation of Danube Station, two miles west of Cernavoda. More than 200 bodies, it was added, had been counted on the captured ground, a number of prisoners and a machine gun being also taken. This is the first intimation we have had of the enemy having crossed the Danube. The bulk of the Russo-Roumanian force retired to the north, and it is unlikely that any strong body of troops, after the cutting of the Cernavoda Bridge, would have remained in the marshy ground between the main channel of the Danube and Fiteshti. Accordingly, von Mackensen would have been able to throw across without much difficulty a few parties to reconnoitre. It is these who will have been surprised by the sudden Russo-Roumanian offensive. Von Mackensen, it is stated in the German Press, has been considerably assisted by his aircraft. These are not likely to have been very numerous, and will have probably followed the pursuit northwards. Profiting by the absence of the enemy airmen and by special knowledge of the ground, the Roumanians seem to have made good use of their opportunity. Their appearance at this point, even if they are in no great force, will have helped to keep the battle line in the Dobruja mobile. The fact that the Bulgarians are burning the villages they evacuate indicates that they regard their retreat as final.

The respite from air-raids which the Roumanians enjoyed after the arrival of a large number of Allied airmen with their machines has not lasted long. Bucharest has again been visited by hostile aircraft, and a number of bombs were dropped on the Palace, in the absence, fortunately, of the Royal Family. Other aeroplanes appear to have flown over a large part of the kingdom, dropping bombs indiscriminately or swooping down to fire with machine-guns at civilians in the streets or in the fields. No military purpose is served by these acts, but we can well believe that the methods of warfare practised by the Germans will make Germany, her people, and goods anathema to the Roumanians after the war.

The Monastir nut is proving a hard one to crack, but the pincers are steadily tightening their grip upon it. The heaviest fighting falls at present upon the Serbians, who are working their way towards the town from the east. Here beyond the Cerna River, that skirts the eastern edge of the narrow plain on the extreme west of which Monastir is situated, is a tangled mass of mountains, and it is across this that our Allies have to force their way. Since the capture of Kaymakalan they have progressed twelve or more miles westward, gradually spreading out to the north, until with the capture of the village of Iven they are at last due east of Monastir. At the same time they are nearing the end of the hill country, where it flanks the Cerna at a distance of less than ten miles from their immediate objective. The French, operating to the south and south-west, have equally difficult country to contend with, except on the actual road and railway running north from Florina, but are within eight or nine miles of Monastir at the nearest point. In the course of three days' fighting over 1,400 prisoners were taken by the Franco-Serbian troops, and to these have to be added, if we read the Serbian *communiqué* aright, another thousand captured on November 13. The majority of the latter were Germans, whose presence at this point may be taken as a sign that the Serbians are reaching the climax of their long struggle. In view of the fact that Monastir has been to a great extent evacuated by the enemy, it may be expected that when once the hill country is lost the Bulgarians will abandon the defence and take up fresh positions north of the town.

Any hopes entertained that Mr. Asquith would take the opportunity of the Guildhall Banquet to throw light on the situation in Greece were doomed to disappointment. It is true that he spoke at some length on Greek affairs, but for the most part his remarks were in the nature of a homily—very necessary, no doubt, but not calculated to explain how it came about that the Allied Governments are according their recognition to two mutually incompatible authorities in Greece. Mr. Asquith repeated the well-known fact that the Allies went to Salonika not as invaders and trespassers, but with the assent of the Greek Government and as the friends of both Serbia and Greece. Great Britain has a sincere and traditional friendship with Greece as one of the Guaranteeing Powers of her independence and freedom. "We desire," the Prime Minister went on to say, "at one and the same time to prevent her being enmeshed in the German net and to save her from the calamities of intestine strife. Whatever the measures, apparently of a drastic character, the Allies have taken they have been dictated solely by the necessity of preventing Athens from becoming, or rather I ought to say from continuing to be, the focus and centre of German propaganda and intrigue."

At one time the fear was expressed that in making their peace with King Constantine the Allies were virtually throwing over M. Venizelos and his Provisional Government. The British Government repudiated the suggestion, and Mr. Asquith returned to the charge. "I say quite frankly," he declared, "—it is no good mincing words about this—I say quite frankly, on behalf of his Majesty's Government, we are in hearty

sympathy with that great Greek patriot, M. Venizelos. He has assured us, and we fully accept his assurance, that his efforts and his organisation have no anti-dynastic purpose." But the fact remains that M. Venizelos does not recognise the Athens Government, King Constantine does not recognise M. Venizelos's Provisional Government, and the Allied Powers recognise all three. Questions in Parliament have elicited the information that the two Greek Governments are recognised in the territories over which they claim to exercise jurisdiction—an arrangement that simplifies an anomalous procedure without in any way justifying it. An attempt is now to be made to perpetuate the system by introducing in Northern Greece a neutral zone between the two unfriendly Governments.

The question exercising public opinion in Great Britain is why the Allied Governments have seemingly taken such elaborate pains to hamper their own movements and to give themselves additional trouble in Greece. That they have been exceedingly long-suffering with King Constantine cannot be denied; but whether this policy is the result of special considerations which it is not desirable should be revealed, or whether it is the outcome of a *laissez faire* attitude based on a failure to appreciate the situation in any of the many phases through which it has passed, there is no means of knowing. Whatever the answer to the question, King Constantine has played his game with wonderful confidence. Public opinion need not grudge him his security on the throne, but it does resent his easy victory over Allied diplomacy. It has watched a tedious struggle, in the course of which King Constantine has had taken from him a number of pawns to which he attached no importance, but in the end has been left in a commanding position. This at least would appear to be the present situation in Athens, if it be true that the King was the guest of the Russian Legation at a dinner last Monday.

It would have been a great relief to the British public if Mr. Asquith, when speaking at the Guildhall, had dealt less with the "immortal past" of Hellas, and, coming down to present time, had offered some explanation of Allied diplomacy. That this diplomacy should have been as ineffective as the published record of events represents it to be is almost incredible. We refuse to believe, until more conclusive evidence is forthcoming, that diplomatic acumen is confined in Europe to Greece. Outwardly, as far as the negotiations between King Constantine and the Allies are concerned, the latter would rarely seem to have gained a single point without accepting a compromise on their original demand. Perhaps the most glaring instance of their weakness is associated with the treatment of Greek officers and men who have elected to join the National Movement. After the earliest secessions from the Army and Navy had taken place the Athens Government arrested all those suspected of entertaining leanings towards the Provisional Government. The Allies protested and secured an undertaking from King Constantine that these men should be accorded complete liberty of action. The pact was not honoured; those who had been already arrested remained in prison, others continued to be rounded up in various parts of Greece. Again the Allies made representations; but instead of securing the immediate and unconditional release of the victims of the Athens Government's persecution, they agree to a compromise that the supporters of the Provisional Government who are officers must first resign their commissions in the Army or Navy. Not content with this abatement of their original demands, the representatives of the Entente in Athens are reported to have carried out the task imposed upon them by the Greek Government of visiting the officers in prison in order to secure their assent to the arrangement the Allies had so meekly accepted on their behalf. A more humiliating rôle for the Ministers of foreign Powers to take up must be unknown in the annals of modern European diplomacy.

While Greece is thus officially flouting the Allies, they are faring no better at the hands of the unofficial

Greek Germanophil. Reference has been made in a previous issue to the activities of a Gounarist deputy, living on the shores of the Bay of Phaleron, who carried out the duties of a purveyor of German submarines. This man is now stated to have supplied the Goeben and Breslau with coal off the Piræus, thus enabling them to reach the Dardanelles. In an interview with a newspaper correspondent, it will be remembered, King Constantine denied that the two ships had received coal from Greece. At Florina, near the Serbian frontier, a former Prefect is reported to have been the medium of regular communication between Greek Germanophiles and the Bulgarians and to have conveyed large supplies of foodstuffs over the border. Numerous other disclosures, even more sensational in character, are being allowed to be transmitted from Greece. One report declares that Greece is bound by a secret treaty not only with Germany but also with Bulgaria and Turkey; another that the Allies hold a copy of instructions given by a former Greek Minister of War to the officer commanding at Salonika ordering him so to locate the Allied troops that they would always be surrounded and dominated by Greek guns. The lay, undiplomatic mind argues that, if friendly relations exist between the Allies and King Constantine, these reports should not be allowed to be circulated in these days of censorship; if, on the other hand, it is held desirable that they should be circulated, then friendly relations ought not to exist between the Allies and King Constantine.

That the strange game between the King and the Allied Governments is still in progress is shown by the latest telegram from Greece, which states that the French Minister of War, General Roques, who is on a visit to Athens, had an audience of King Constantine on Tuesday, and requested him to furnish pledges of friendship to the Allies. Specific demands are said to have been made for delivery of the Greek artillery, the expulsion of a number of persons suspected of acting as agents for Germany, and the cessation of all action against the Provisional Government. King Constantine, it is said, referred General Roques to the Prime Minister, and accordingly a memorandum of the demands was submitted to the latter. We have it on the authority of M. Politis, formerly of the Greek Foreign Office, that no recent Cabinet in Greece has had any authority of its own, but has invariably taken all its instructions from the King. The fact must be sufficiently well known to the Entente Powers, and it would seem as if the wiser course to have adopted would have been either to present the demands in the first instance to Professor Lambros or, when they were submitted to King Constantine, to have insisted upon the pledges being given personally by him.

British aircraft activity in the Sinai Peninsula and beyond has been followed by a revival of the enemy's air raids on Egypt. This time Cairo was visited, and nine bombs were dropped on the business and residential quarters. The Egyptian public, we may hope, will not fail to note that the Turco-German idea of reprisals is to take vengeance on the civil population of the enemy's country, no matter what the nationality may be. The incident will cause the authorities to pay special attention to the protection of Egypt from these air raids, as they cannot be allowed to be repeated with impunity. No doubt the best precaution is to be found in the tactics which in this instance provoked the attack—the raiding of the enemy's air sheds and camps. A day or two previously two successful air attacks had been carried out on Maghdaba and Beersheba. At the former place the enemy's camp and store sheds were bombed; at the latter a 100-lb. bomb hit the aerodrome, others were dropped on the railway station, sidings, and rolling-stock. An aviatik whilst being brought from the hangar was directly hit, and two Fokkers were driven down in a damaged condition. The hangar was also damaged. The immediate reprisal on Cairo was a daring stroke, and it is a matter for regret that the hostile aeroplane was able to make good its escape. So far, however, the last word is with our

own Flying Corps, as a fresh air attack was made on Maghdaba during Tuesday night.

The final chapter in the record of one of Germany's dupes can now be written. Ali Dinar, the ex-Sultan of Darfur, who escaped when his capital, El Fasher, was occupied last May, has since been a fugitive at the head of a small band of rebels near the frontier of Wadai. A small force of the Egyptian Army, three hundred strong, was despatched during October to round up this band. From Dibis, 118 miles south-west of El Fasher, runs the official report, a sudden move was made to Kulme, forty-five miles west of Dibis, which was reached on November 3; but on the arrival of our troops it was found that the main body of the rebels had retired in a south-westerly direction. Our mounted troops went on, and caught up Ali Dinar's force after a night march on November 6. The attack was a complete surprise, our forces getting within 500 yards of the enemy's camp before they were discovered. In the pursuit which followed Ali Dinar's body, with those of some of his principal adherents, was found a mile away. These operations complete the conquest of Darfur, which has now been incorporated within the Sudan.

Sir Percy Lake's despatch covering operations in Mesopotamia from the fall of Kut until August, when he relinquished the command to General Maude, is the most informative communication on the situation in that region that has been made to the public for many months. As is known, there was practically nothing in the way of military operations during the period under review. The Turks were content to leave things as they were after the fall of Kut, and the British forces were only too glad of the opportunity of strengthening their position. It may be that the enemy suffered as much as we did from sickness; it is, we trust, quite unlikely that he should have been able to carry out preparations for a renewal of the conflict on the scale inaugurated by General Lake. Among the works undertaken by the Mesopotamian Expedition may be mentioned two railways; a series of bunds or embankments, some twenty miles in length from the Tigris at Magil to the higher ground at Shaiba, safeguarding an area of forty-eight square miles previously liable to floods; the construction of wharves, enabling ocean-going steamers to come alongside and unload, and the erection of a large amount of hutting for hospitals and troops. An interesting reference to aviation admits the superiority at one time of certain of the hostile aeroplanes over any of the British machines in the matter of speed. This superiority, combined with a large reduction in the number of our pilots due to sickness, "enabled the enemy in May and June to establish what was very nearly a mastery of the air." Finally, as already indicated, there is in the despatch the welcome and significant sentence announcing that "the work of preparation for more active measures during the coming cold weather assumed relatively great importance."

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 2.

The Return of the Mahmal.

We have had two public holidays this week, the Moslem New Year, which fell on Saturday, October 28, and the return of the Mahmal, which was celebrated to-day. No reception was, again, held on the former occasion at Abdin, where, however, the usual book was signed by everyone admitted to Palace ceremonies. H.H. the Sultan has sufficiently recovered from his indisposition to return to Cairo. He came up from Gabbaris by special train this morning, but was not present at the ceremony of receiving back the Mahmal from the Emir-el-Hajj, Lewa Ahmed Fathy Pasha, on its return from Mecca, being represented thereat by H.E. Hussein Rushdi Pasha, the Prime Minister.

The Western Desert Oases.

The reoccupation of the oases of Baharia and Dakhla settles for all practical purposes the question of the western front. With these points in our possession the Senussi can no longer menace the Mudiria towns of Upper Egypt with sudden raids, and incidentally our occupation of Dakhla seriously interferes with the communications of the enemy in the south. The force operating on the western front seems to have carried out its work exceedingly well; in fact, the whole of the campaign in both the northern and southern zones has been conducted in an admirable manner.

A Police Sensation.

Somewhat of a sensation has been created by the news of the suspension of a high Egyptian official in the Police. It is as yet not known what the exact accusation is. An inquiry is proceeding, and it is said that there may be some interesting developments.

The Kitchener Memorial.

The Egyptians have made up their minds to create some worthy memorial to the late Lord Kitchener, and a very influential committee has now been formed for the purpose of collecting the necessary funds. The committee consists of the most notable Egyptians in Cairo, Alexandria, and each of the Mudirias, and H.H. Prince Kemal Eddine, the son of the Sultan, has consented to act as president, with H.E. Ibrahim Fathy Pasha, Minister of Wakfs, as vice-president. H.H. the Sultan, who has accepted the patronage of the committee, offered some time ago to open the subscription list with £E500, and he has now been followed by H.H. the Sultana and H.H. Prince Kemal Eddine, who have given £E400 and £E250 respectively. It may be recollected that when the project was first mooted, H.H. the Sultan, who was supported in the matter by H.E. the High Commissioner, suggested that the best form which the memorial could take would be a maternity home and school for medicine for women, and it has been decided to adopt his suggestion. The amount of the appeal has been tentatively fixed on the basis of a percentage of the land tax paid by each district. It is expected that the sum asked for will be £E250,000, which is roughly 5 per cent. of the present land tax, and which, considering the present prosperity of the country and the fact that it represents but PT1 per head of the purely Egyptian population, should be raised without any difficulty whatsoever.

The Pink Boll-Worm.

Following on the recent legislation with regard to the destruction of immature cotton bolls and the pulling up and storage of cotton sticks, and as a result of the demonstration carried out at Kafr-el-Zayat with cotton-seed fumigation machinery in September last, a law has now been promulgated ordering all ginning factories to instal special apparatus, approved by the Ministry of Agriculture, for the fumigation of cotton-seed and to pass all seed handled by them through this apparatus; and forbidding the storage, between May 1 and August 1 in any year, of cotton-seed and unginned cotton in any warehouses, excepting those fulfilling the

requirements of the Ministry. The object of this law is the extermination of the pink (or seed) worm, which has committed such ravages in the past. This pest takes refuge in the seed, and its propagation has hitherto been favoured by the indiscriminate storing in the provinces of unginned cotton, from which the moth was able to escape into the cotton fields in the early summer months, and by the reintroduction of the worm into those fields by means of the sowing seed. It is hoped that the measures now taken will definitely stamp it out in a short time. The new law will not come into force until next year, firstly, because it must receive the sanction of the Mixed Court of Appeal to enable it to be made applicable to Europeans, and, secondly, because it is only reasonable to allow the gineries time to procure the requisite fumigation apparatus, which must be installed at the latest by September 1, 1917.

The Command in Egypt.

There has been another reorganisation of the command in Egypt. "Lines of Communication" has disappeared as a separate command under Lieut.-General Sir E. Altham. The change will in time mean a considerable reduction in staff, and it is undoubtedly from every point of view a step in the right direction.

The New Coinage.

Whilst the new coins have met with a ready reception from the general public, it must be admitted that they are encountering a good deal of criticism from the æsthetic point of view. On paper the new designs passed muster, but the actual coins leave very much to be desired. The old design was artistic in the extreme; the new one is more in the style of what is so often in Egypt called "nouveau art," i.e., gaudy and vulgar. A comparison of the ten-piastre pieces alone shows this difference in an unmistakable manner. It may have been found necessary to change the design, firstly, in order to permit of the insertion of the denomination and minting year in European characters, and secondly, so as to sever all connection with the former régime; but at the same time it should surely have been possible to produce a more elegant and worthy design than the one chosen for this new issue.

EGYPT AND THE RED CROSS.

The first instalment of Egypt's contribution to the British Red Cross for "Our Day" amounts to £60,000, and a cablegram received on Tuesday at the Red Cross Headquarters (83, Pall Mall) from Alexandria states that money is still being received. The sum of £60,000 does not include the gift of £8,400 from the Sudan, and the two contributions together bring the total collected in Egypt and the Sudan for the British Red Cross Society and the Order of St. John this year and last to close on a quarter of a million pounds. Such has been the response among the native population to the appeal of the Red Cross that, we understand, special steps had to be taken to acknowledge their receipt. Four volumes have been prepared, containing the names of 150,000 native subscribers, together with the amount given by each of them. These volumes, which were printed under the direction of Sir Ronald Graham, are circulated in all the villages, so that the native subscriber, who is difficult to reach through ordinary channels of acknowledgment, knows that his gift has been duly received.

The Post Office announces that the lost P. and O. s.s. "Arabia" would have had the following (amongst other) mails on board, all of which, so far as is known, have been lost:—Letter mails (containing, so far as is known, all correspondence posted at the various ports of departure between the dates mentioned) from:—Ceylon, October 13-21; India (Bombay October 16-24, Calcutta October 14-22); Aden, October 22-29; British Somaliland; Egypt (Port Said October 27-November 3, Cyprus October 19-25).

ATHENS LETTER.

(FROM OUR OWN CORRESPONDENT.)

ATHENS, October 3.

The Allies' Precautions.

The strict measures taken by Admiral du Fournet are but the natural consequences of the sordid intrigues of the Germanophile clique, which I have described in earlier letters, and which seriously menaced the security of the Allied forces in the Balkans. It was in similar conditions that France and England in 1854 occupied Athens and Piræus. At that time also the Government of the young King Otho, disregarding the strength of the two Powers who held the mastery of the Mediterranean, committed the blunder of defying them and favouring their enemies.

Two French detachments, landed immediately after the review of the crews disembarked from the Greek warships taken over by the Allies and the provocative incidents connected therewith, occupied the Piræus-Larissa railway, which was their principal objective. For, as is quite well known, the powers that be in Athens, while making a show of considering the abandonment of neutrality, in order to gain time, had been since the middle of September constantly sending war material into Thessaly. These movements, taken in conjunction with the calling to the colours of *exemptés* and untrained men and contingents of the 1913 and 1914 classes, could not fail to inspire the French and British Governments with uneasiness. After the order for demobilization, these steps were naturally strongly suspect in the eyes of the Entente, especially after the surrender of Fort-Rupel and in view of the Germanophile leaning of the majority of the Army officers. The concentration of troops in rear of their own forces constituted a military fact that the Allies could not ignore; neither could they accept the reassuring explanations offered them. Moreover, after the unacceptable propositions regarding the abandonment of neutrality put forward by the Kalogeropoulos Cabinet, and especially after the reception accorded to M. Briand's suggestion, the Entente must have become convinced that Greek neutrality will never be abandoned, at any rate in favour of the Allies, and that the only object of all the tergiversations and twistings is to gain time.

The Work of Mischief-Makers.

On the other hand, the Salonika movement called for a decision on the part of the Entente regarding its attitude *vis-à-vis* the Provisional Government and its relations with that of Athens. Face to face with all these considerations, the Entente Governments recognised the hopelessness of treating the Athens Government with too much consideration, and of tolerating a situation which they had unwisely allowed to arise, to develop, and to become consolidated by the long work of German propaganda which went on under the auspices of the authorities. The Entente, it must be added, has seconded this work to some extent by half-measures, as ill-advised as they have been ineffective, against Greek shipping, imports, and so forth—measures which have helped largely to lose the Entente that sympathy which it formerly commanded in the country. And yet the Entente decided to take more energetic action only when it saw that the security of its Eastern army was threatened. It then had to take severe measures, not to secure Greece's help, but to assure itself against action by her. Yet, however arbitrary these measures may seem at first sight, they are perfectly justified. They are the well-deserved punishment of those who have sown discord between the Greek people and its traditional supporters, and who have sought to separate them, lulling them into their present state of insensibility, which is so unworthy of their past.

For it must not be forgotten what the situation was on the outbreak of the war. Then, although Greek participation would have been much more dangerous than it would be at present, the Greek people twice gave M. Venizelos *carte blanche*, and the Chamber, by a large majority, approved his policy of intervention. It is only thanks to the injudicious tolerance and

magnanimity of the Entente in allowing German intrigue to work against it here in such a scandalous fashion that the change in public opinion has been brought about. Germanophile circles now naturally invoke the present indifference in support of their anti-intervention policy, and as evidence of the disapproval of the revolutionary movement. In these circumstances the stern measures that the Entente has at last been compelled to take are merely legitimate measures of defence against the scandalous intrigues aimed at its undoing and the persecution of the Venizelist party.

Such are the circumstances in which Admiral du Fournet has been charged with the execution of the measures deemed necessary by the Entente. After having sequestered the Greek Fleet and assumed control of the posts and telegraphs, in order to put an end to the espionage upon the Allies, he demanded the dissolution of the reservists' leagues, established to terrorise the Venizelists, and instituted a control of the police in order to assure the political liberty of the people, which had been quite destroyed, so that nobody dared to show any Venizelist sympathies.

The New Period of Neutrality.

The situation thus brought about, and especially the occupation of the Piræus-Larissa line by Allied detachments, which paralysed all action, led to the declaration made by the King to the British Minister. His Majesty assured Sir Francis Elliot of his willingness to withdraw the troops concentrated at Larissa, which was the principal reason for the adoption of the measures taken. He also consented to the disbandment of the contingents in excess of the ordinary effectives on a peace footing.

The Two Greek Governments.

On the conclusion of the Boulogne Conference, which decided the attitude of the Powers towards Official Greece on the one hand and the Provisional Government on the other hand, M. Guillemin communicated the decisions taken to King Constantine. As they announced so long ago as November, 1915, and again in their Note of June 23, the Allied Powers do not desire to force Greece to enter the war on their side. She is free to remain neutral. But she will not be allowed to hinder the anti-Bulgarian movement at Salonika, which is destined to benefit the Allies also; and this the more decidedly because Greece promised the Entente to preserve a benevolent neutrality towards them—even "a very benevolent neutrality," as M. Skouloudis phrased it. The Salonika Government being regarded by the Entente as an Allied factor, any reactionary move against the movement that it represents on the part of Official Greece will be regarded as if it were directed against one of the Entente's Allies. This is what has been explained to the King, with a formal assurance that neither M. Venizelos nor the Powers have any hostile intention against the dynasty, and that the movement is purely anti-Bulgarian. In these circumstances, any attempt against the movement, made on the pretext of defending the Throne or the country, will be severely dealt with.

It is reported that the King gave a formal promise that he would guarantee personally that the political liberty of the citizens should be respected henceforth, and that he offered an assurance of his personal friendship for the Entente. In this connection it may be noted that it is generally believed here that during their visits to Paris, London, and Petrograd, when they endeavoured to get the Salonika movement disowned by the Powers, Prince Nicholas and Prince Andrew received reassuring declarations concerning the intentions of the three Powers regarding the dynasty; but that they were at the same time given to understand that King Constantine must abandon certain anti-constitutional practices which rendered the situation very precarious.

The Germanophile Party.

Although the King's good faith cannot be called in question, there is nevertheless a good deal of scepticism regarding the observance of the undertakings given. It is felt that the clique which governs the country under cover of the Government of straw, assisted by M. Mercouris, a former mayor of Athens and now a fanati-

cal opponent of M. Venizelos, will not readily cease from their sordid intrigues. It is especially the leader of the Nationalists, who conceived the diabolical plan against the Entente's army which I have already reported, who has every incentive to stir up disorder so that he may fish in troubled waters. It was his party which, being in power, converted the guardians of public safety into spies upon the Venizelists and the Ministers of the Entente. For the moment the Germanophiles must, in appearance at least, conform to the decisions of the King; but it is felt that they will not very long conceal their true sentiments. Thus, the day before yesterday, they did their best to prevent any manifestation of the popular indignation at the torpedoing of steamers by German submarines; and they have endeavoured by their journals to make it believe that the two steamers torpedoed near the Piræus actually struck floating mines which had got adrift from the Allied Fleet. And it is through these despicable creatures that Greece has been subjected to so many humiliations! Had she maintained a sincere and loyal neutrality, and not become suspect in the sight of the Entente, none of these ills would have befallen her.

The Only Hope of Salvation.

In these circumstances it is to be hoped that the movement at Salonika will succeed in time. If, as is hoped, an army of 100,000 men—or even of 50,000 or 60,000 men—is raised, and if the operations on the Roumanian front take a more favourable turn, it may be regarded as certain that Greece would range herself on the side of the Entente. On the other hand, if the powers that be should persist in their Germanophilism, in order not to fall in with the policy of M. Venizelos, one can see no hope for the country. The Entente Powers will finish up by treating it as a hostile country, or at any rate with indifference, and will abandon it to its fate, lending their moral and material support only to the Salonika Government. The Protecting Powers would have every right to take up such an attitude if the people of Ancient Greece should abandon their aspirations in the Orient, and thus prove that they have degenerated.

A ROUMANIAN "GOD'S ACRE."

The following touching picture of a Roumanian burial ground is taken from an article (the second of a series entitled "Roumanian Pictures") written by the Queen of Roumania, and published in *The Times* :—

Nothing is more touching than the village cemeteries; the humbler they are the more do they delight the artist's eye. Often they are placed round the village church, but sometimes they lie quite apart. They are not tended and cared for as in tidier lands.

On a Good Friday morning I was roaming through one of these village churchyards. Each grave was lighted with a tiny, thin taper. The living had come to do honour to the dead. An old woman stood quite still beside one of those tapers, but I could perceive no grave at all. All that once had been a tomb had long since been trodden into the ground. "Who is buried there?" I asked. "One of my own," was her answer; "she was my daughter's little daughter; now she is at rest." "Why is the grave no more to be seen?" was my next inquiry. "What," was the resigned reply, "is the use of keeping a grave tidy if the priest of the village allows his oxen to graze about amidst the tombs?"

NATIONAL ROUMANIAN RELIEF FUND.

We understand that the Bank of Roumania, Limited, 27, Throgmorton Street, London, E.C., has been authorised to receive donations on behalf of the above Fund.

At Kingston on Saturday M. Mitzotakis, a nephew of M. Venizelos, applied as managing director of the Vine Products Company for the exemption from military service of his sales and business manager, who had been classified C3. The Mayor suggested that M. Mitzotakis should take control for the time being, but M. Mitzotakis explained that he expected to be called to Salonika to assist his uncle. The tribunal adjourned the case until the manager should be called up, when it would be reconsidered if in the meantime M. Mitzotakis had been called up for M. Venizelos's army.

THE SHEREEF'S COMMANDER.

(FROM A CORRESPONDENT.)

CAIRO, October 17.

It is no longer a secret that Aziz Ali Bey, the hero of Cyrenaica, is now the Generalissimo of the Grand Shereef's forces, and is destined to assume, in the forthcoming reorganization of the Shereef's Government, the portfolio of Minister of War. His record and experience qualify him to render invaluable service to the Arabian movement. As mentioned in former notes, his friendship with the Imam Yehya—who, indeed, owes to him the treaty whereby Turkish authority in the Yemen was reduced to a mere name—is likely to prove a valuable link binding more closely still the two great chiefs of the Hejaz and the Yemen; while his modern military education and the rare experience he gained in his campaigns against the *komitajis* in Macedonia, and later in the war in Tripolitania, are calculated to be of inestimable value to the Shereef, whose forces are still in a rather primitive state.

It is said that it was soon after his arrival that the decision to take the remaining forts of Taieff by storm was carried out. In Medina, where a large reinforcement of over a division is said to have arrived with the Mahmal from Damascus, Aziz Bey is said to have prudently brought together the scattered Arab forces that invested the town on three sides. Meantime, as the enemy is in considerable strength at Medina—about 24,000—and has again the advantage of the use of the railway, which, thanks to German activity, has been repaired—no attack is contemplated by the Shereef's Commander until the Arab troops have been well trained and the fullest preparations have been made.

Aziz Bey was one of the pioneers of the Committee of Union and Progress, but he dissociated himself from it as soon as he saw corruption creeping in and the high principles with which it started being flagrantly betrayed by the Turkish Chauvinists. Knowing, therefore, as few men do, the mind and tactics of the few Unionists now in power, he is best fitted to foil their sinister designs against the Arab world. He has a considerable following of Arab officers who left the Turkish Army, either as deserters or prisoners.

ANCIENT MONUMENTS IN CYPRUS.

(FROM OUR CYPRUS CORRESPONDENT.)

It is satisfactory to know that the Castle of Kolossi has been added to the Schedule of Ancient Monuments. This building, about eight miles from Limassol, was the Grand Commandery of the Knights Hospitallers in Cyprus (their name is, by the way, preserved in a neighbouring village of Spitáli). It was generally regarded as belonging to the early part of the fourteenth century, but is assigned by M. Eulart to the fifteenth. It is well that the building should be protected from injury or defacement under the Antiquities Law. Indeed, some years ago attempts were made to remove one of the marble scutcheons, of the Lusignan period, fixed in the north wall of the keep, which are one of the most interesting features of the building. The Curator of Ancient Monuments is Mr. G. E. Jeffery, well known for his architectural work in Palestine. He has done much useful work in Cyprus, though little of it is known to the general public; and it is to be hoped that he will in due time publish some record of it, which would be of great interest.

It was from this Commandery of the Knights Hospitallers that the well-known Commanderiá wine of the island took its name.

BRITISH ARMENIA COMMITTEE.

A meeting of the British Armenia Committee was held on Tuesday evening at the House of Commons, Viscount Bryce being present. The following resolution was proposed by the chairman, Mr. Aneurin Williams, M.P., seconded by Sir George G. Greenwood, M.P., and unanimously passed: "That the British Armenia Committee desire to place on record their warm gratitude to Mr. Asquith for the words of sympathy and hope which he uttered in his speech at the Mansion House to the Armenian people, and regard these declarations as full of promise (to use Mr. Asquith's own words) for 'an era of liberty and redemption for this ancient people.'"

It is announced from Cairo that the Shereef of Mecca has issued a decree providing for the establishment of an Arab Senate for the Hejaz under the presidency of Sheikh Mohammed Sheibi.

THE ARAB MOVEMENT.

ANOTHER MANIFESTO BY THE GRAND SHEREEF.

(FROM A CAIRO CORRESPONDENT.)

The Grand Shereef of Mecca has just published another manifesto in vindication of his action against the Unionist Government of Turkey. It is, in a way, a continuation of the line of reasoning traced in the first manifesto, from the purely Islamic standpoint, and embodies a political argument wherein his Highness exposes the folly of the Unionists in having departed from the traditional, and indeed, only wise policy, of friendship with the two leading European Powers that rule by far the largest number of Moslems in the world, and hold the supremacy of the seas—a fact of vital importance to a country like Turkey, with an extensive coast line. The following is a faithful translation:—

In order to dispel any lingering doubt or misgiving as to the real character of the rising that we men of the Hejaz have undertaken, and of which the principal motives are set forth in our first manifesto, we have deemed it advisable to publish these further explanatory lines, so that the worthy in the world, and especially the Muslimeen, may be further enlightened on our intentions and aims as regards our national existence. To that end we shall make use of the most recent data and advance the simplest proofs.

It is well known that all wise Moslems and intelligent persons in the Ottoman Empire, and, indeed, in the rest of the world, do not approve the entry of the Ottoman Government in the present war, and this for essential reasons, of which the chief is that the Ottoman Government had only just come out of the Italian and Balkan wars. This, of course, has led to weakness and waste in her army and finance, and, indeed, in every other department of public life, and has affected similarly the population; for hardly had the soldier returned to his village or work to provide for the sustenance of his family when he was called again to the colours. The nation, therefore, whose constituent members have thus been sorely tried can easily realise what the end would be of its government if it were to throw itself into the abyss of another war, so unlike all other wars, more especially as the Government's revenue consists of taxes and imposts which this already exhausted population has to provide. This is one of the main reasons that made all wise Moslems condemn the entry of the Ottoman Government into the present war. But there are also other reasons of an external order which have reference to the group of belligerents with which it sided. The Ottoman Empire is a Moslem Empire of vast limits and an extensive coastline, and the traditional policy which the Sultans of the great House of Othman pursued has therefore always been based on the maintenance and improvement of friendly relations with those Powers in whose colonial empires the largest portion of the Moslems of the world live, and who hold the supremacy of the seas. When, therefore, the Unionist Government entered this war against these Powers, siding with the other group, whose inordinate ambitions of expansion are determined by over-population in their own countries, all far-seeing Moslems could easily realise the evil consequences that were bound to follow. I was one of those, when I was asked by telegram about my opinion on this war, and I replied, giving the advice that I could only in all conscience give. This, indeed, is one of the proofs of my sincere and loyal friendship to the Ottoman Government, and of my solicitude for its welfare and for the protection of the stronghold of Islam. But what we feared has come to pass, and the limits of the Ottoman Empire have to-day receded almost to the very walls of Constantinople. . . . Whoever contemplates this state of things and watches the progress of this war cannot but see clearly the final result. We had either to give ourselves up to this threatening danger until we disappeared from the map of the world, or seek some means of escape. We leave it to the world at large to examine this question and reply thereto, and we have not the least doubt but that they will fully justify our rising, which came just in time, before ruin overtook by surprise the remnant of this empire. Aye, we have no misgiving whatever about the legitimacy of our movement, which, indeed, was incumbent on us as a duty. Did we at all believe that our continued attachment to this Government—which has become a toy in the hands of a few dictators—would be of any use to it and save its possessions we would have refrained from the steps we have taken and would have possessed our souls in patience and borne our share of the sacrifice. But how was this possible when it became evident that, if we were to allow ourselves to be led in the path they were treading, we should have both been hurled into the abyss of destruction, as was the case with the other vilayets?

Aye, we say this, and leave the judgment to the sense of justice of the world. But we cannot but openly declare that the sole reason of the eventual disappearance of this empire and loss of what remains to it of its subjects—viz., the population of Anadolia and neighbouring vilayets—is the action of the few usurpers of power of the leading Unionists—viz., Enver, Talaat, and Jemal; and their departure from the fundamental policy laid down by the great Ottoman statesmen, which is the policy of friendship with the great nations, Great Britain and France,

whose benefits can be denied only by those who deny the truths of history.

To illustrate the character of the Unionist leaders and judge the measure of their loyalty and good faith it suffices to mention that soon after the payment of the loan with which France helped them at the moment of their dire need they went over to the side of its enemies and declared war on it. But this is not the only test of their moral worth; the fact has been cited because of its being so notorious and of recent date. One has but to recall the acts of cruelty and injustice to which the people, Christians and Moslems alike, are subjected, and especially the inhuman treatment which those holding the power have meted out during this war to the Greeks and Armenians, contrary to the dictates of our holy Sheriat. They were, indeed, not long in following the same barbarous course against the Arabs of Syria and Irak, and even of Arabia, such as the people of Al Awali (one of the suburbs of Medina), whose women they have kidnapped and led to the barracks—an act that not only the Sheriat, but also Arab honour, reproves.

Aye, we have risen, and we do not cease proclaiming that our declaration of hostility and hatred is directed against Enver, Jemal, and Talaat, and their followers. All right-minded Moslems, even members of the House of Othman, are at one with us in this. As a proof of this noble house sharing with us this attitude there is the assassination, by these dictators of its pillar, the happy martyr, the Heir Apparent of the Sultanate, the late Prince Yussuf Izz-ed Din, of blessed memory. We not only dissociate ourselves from them, but openly declare our hostility to, and hatred of, them and their ways; and every pious and right-minded Moslem in the Ottoman Empire, as well as in all Moslem lands, cannot but associate himself with us in this, in view of the actual ruin that they have brought upon the land and the incalculable harm that they have caused to the great power of Islam, which has fallen a victim to their selfish aims and ambitions.

We disavow these folks before Allah, and know that this is the word of truth, on which we live and die. How can we act otherwise, when we have before us instances and examples, which we cite for our Moslem brethren to ponder over? Thus, Jemal Pasha, the autocrat of Syria, ordered the inhabitants of that Moslem country to form from amongst their womenfolk a women's society; then intimated that this society should get up a fête in his honour in their club. This was actually done, and he and some of the military and civil officials, together with others of his clique, whom he invited, attended the fête. The Moslem women, members of this society, actually received and honoured these guests; and at the end some of them made speeches, declaimed poems, and sang songs before this crowd of men, as was reported at the time by the different newspapers of Syria with expressions of pride and admiration, to win the favour of the autocrat.

Praise be to Allah, who saith in his Honoured Book: "And speak to the believing women that they refrain their looks and observe continence, and that they display not their ornaments, except those which are external; and that they draw their veils over their bosoms, and display not their ornaments, except to their husbands, or their fathers, or their husbands' fathers, or their sons, or their husbands' sons, or their brothers, or their brothers' sons, or their sisters' sons, or their women, or their slaves, or male domestics who have no natural force, or to children, who note not woman's nakedness. And let them not strike their feet together so as to discover their hidden ornaments."

It will thus be clearly seen what are the designs of these usurpers on the Moslem law and Moslem customs; and this should serve as a warning to our Moslem brethren in Turkey, as well as in other parts of the world, so that they may not lend in any way encouragement to these autocrats in their impious infringement of the laws of Allah and their insolent disregard of his commands, either for worldly fame or for material benefit, because it is idle for a creature to disobey his Creator. And he who is granted a power to put a stop to these sinful acts, either by his hand or tongue or his heart, it is his duty to use this power to that end. And whoever thinks he can defend the audacity of these usurpers, let him come forward with his argument; for, by the will of Allah, we are of those who are always willing to listen to what others have to say, and to follow the best in it; and we may then both be either in the right or in the wrong.

LETTERS FOR MESOPOTAMIA.

The Secretary of the Post Office points out that delay in the transmission of correspondence for members of the Mesopotamian Expeditionary Force will be avoided if particular care is taken in addressing officers, non-commissioned officers, and men who are detached from their units and employed in other appointments. The address should include particulars of the addressee's unit as well as of the unit to which he is temporarily attached, or appointment in which he is employed.

Correspondence for officers and men of the Force invalided to India should be addressed with the addition "care of Casualties, Bombay," and not to a particular hospital.

Mr. Forster, in a Parliamentary answer, states that there has been scurvy in the Mesopotamia Force, but adds that it has been confined to the Indian troops. The medical authorities in Mesopotamia have taken the necessary measures to deal with it.

TANGIER TO TEHERAN.

A copy of the *Busreh Times* recently received gives some particulars of a census taken last August in Busreh and its suburbs. The most important figures resulting from this census were published in last week's *NEAR EAST*, on page 45. I need not, therefore, repeat them here. But I have been interested in some of the comments of the *B. T.* upon the facts revealed by the census. For instance, it is observed that "it is clear that there is no overcrowding either in Busreh or in Ashar in the technical sense of an excessive number of persons per hundred square yards." This is satisfactory, and I hope that with the spread of civilisation—which, says the *B. T.*, "has come to stay"—overcrowding will not be suffered to creep in. It seems absurd to consider the possibility of such a thing, no doubt; but the danger is there, and unless the necessary building laws and by-laws are introduced, and strictly enforced, the evil is sure to make its appearance sooner or later. The value of land is bound to go up with a bound ere long; and that is nearly always the signal for overcrowding.

As the *B. T.* remarks, Busreh "is full of waste places, sparsely covered, with half-ruined houses and mat huts." The owners of these properties will want careful watching in the near future. Then, I read: "The streets are narrow, but the system of courtyards round which each house is constructed makes for light and air and reduces overcrowding. Even when houses are built with an upper storey it is comparatively seldom that both upper and lower storeys are used for sleeping in." All this is, of course, perfectly true. But, again, it will be necessary to see that, with the spread of the city and the rise in value of property, these conditions do not change for the worse. Overcrowding is bad enough anywhere; in a climate like that of Busreh it would be terribly risky to the health of the entire community.

This reminds me of a fact that often puzzled me when I was living in Baghdad. Most of the houses there are built round courtyards and two-storeyed. The courtyard system is, in my humble opinion, quite the best to employ in such a climate; but why only two storeys? A third would not be very difficult or very expensive to build, though the question of foundations is a difficult one on such soft soil, and it would add enormously to the comfort of a house. The third storey could be a very light affair—a kind of roof-garden for the greater part of the area, with rooms practically open on two, or even three, sides. These would be useful in the 'tween-weather periods. But their chief value would lie in securing greater coolness for the second storey, on which one passes the greater part of one's time in that region. The value in this respect of high houses seems to be well understood in Arabia proper. It is strange that Baghdad and Busreh still cling to the two-storeyed building so persistently.

It is perhaps not surprising that the Bulgarians should feel strong contempt for King Constantine—they were bound to feel either contempt or gratitude, and gratitude does not appear to be one of their strongly developed characteristics—yet if they had any tact at all they would surely have feigned some gratitude at the time they entered Kavalla, if only to avoid playing into the hands of his Majesty's opponents. But they seem to be as lacking in tact as in the other quality. A Cyprus correspondent sends me an extract from the *Phonetes Kyprou*, describing the Bulgar's conduct on their entry into Kavalla the coveted. From this account it appears that "they at once proceeded to hunt for portraits of King Constantine. Wherever they found one they threw it on the floor, trampled on and insulted it." In behaving in this childish way they were possibly imitating the example of their monarch, who, during the first Balkan War, had himself photographed in the act of stamping on a Turkish rifle! But there was some method in their madness. In place of the portraits of King 'Tino, "they hung lithographed portraits of 'Tsar' Ferdinand, who is represented as advancing on horseback. Underneath the portraits are the words: 'To Thessalonika' (Salonika)." Fort Rupel, Kavalla—and next Salonika! If the Bulgar has no overpowering "sense of favours to come," he has at least no small idea of his own power of getting what he wants.

Alexandria clearly has reason to be proud of its Fire Brigade. A correspondent writes from that city:—"It has been generally acknowledged by residents who have in past years been present at the exhibition drills of the Alexandria Fire Brigade that the men are particularly smart at their work. On one or two very recent occasions upon which they have been called out the comments of some of the officers who are temporarily with us, and who have frequently

watched the London Metropolitan Brigade operating at fires in the City, were most interesting. One of these witnesses remarked that in the rapidity in which they obeyed a call, the smartness, precision, and sangfroid with which they got to work on arrival at the spot, and, finally, the admirable training reflected by the horses, the brigade bears comparison with any he had ever seen. This testimony was confirmed by others present who were also strangers, and it seems only fair that their opinions should be recorded in print."

"Hymenæ rumours," wrote George Meredith, in "Diana of the Crossways," "... might be backed to run a race with the tale of evil fortune; and clearly for the reason that man's livelier half is ever alert to speed them." The saying was a true one, and it remains a true one still in these times of war and of tales "of evil fortune." A little while ago some ladies over dessert were discussing one of the latest of these rumours regarding H.R.H. the Prince of Wales. They were very loyal and—if I may so express it—very anxious that H.R.H. should make not only a "suitable" match, but also a thoroughly happy one; and for one reason or another they found difficulty in fixing on a future Queen of England. Then, in all humility, I ventured to suggest that Roumania has two most charming princesses—Princess Elisabeth, who was born in 1894, and is therefore the same age as the Prince of Wales, and Princess Marie, who is five years younger. Some time ago, it will be remembered, Rumour coupled the names of Princess Elisabeth and the Prince of Wales, and one then heard expressions of approval and of pleasure on all hands. Previously there had been another rumour—to the effect that the Princess might possibly be betrothed to the Crown Prince of Bulgaria. Happily, that would now seem to be quite out of the bounds of the probable; and the alliance between this country and Roumania would certainly make such a match as I suggested extremely popular. At any rate, the suggestion was on this occasion hailed with great enthusiasm by the company. It is early days to think of such things yet, perhaps, but—*qui vivra verra*.

A recent article in *The Times* showed that, although we have heard little or nothing of military operations in the Aden region, our troops there, as elsewhere, are at least being kept upon the *qui vive*. In the intervals of keeping stray Turkish forces and bodies of pro-Turkish Arabs on the run, they appear to be engaged in giving a warm reception to adventurous Teutons who have voyaged from the Far East for the express purpose of making themselves offensive to us in Arabia. How the said Teutons sneaked into the Red Sea is a puzzle to me. But that is by the way. What I am concerned about at the present time is the lot of our soldiers in Aden. Those of us who know the place from personal experience are unlikely to regard it as an entirely desirable residential area even in peacetime, and we shall not be tempted to envy the lot of the fighting men now quartered there. In fact, their existence must be distinctly monotonous, save when they are engaged in the pastimes mentioned above. But apparently they, like the Mesopotamia Force, have been somewhat unfortunate in the matter of being forgotten by the generous public. An appeal, issued in September, for funds to provide a good institute for British troops has met with a most disappointing response. A sum of £2,000 is required, and less than £350 has been subscribed by the public. Surely this fact has only to be made more widely known for more help to be forthcoming at once. Colonel Hughes, Secretary to the C.E.S.S.I. Association, Church House, Westminster, begs that donations may be sent to him "for the good of the men—soldiers and sailors—who are guarding the interests of the Empire in this lonely but most important outpost." I hope he will not beg in vain.

CORSAIR.

The work of the Wounded and Missing Inquiry Department, British Red Cross Society and the Order of St. John, is still carried on at 18, Carlton House Terrace, London, to which address inquiries for wounded and missing soldiers should be sent. The soldier's number, rank, regiment, battalion, and company should be given in every case, together with the date and nature of the casualty.

"An Old Nurse in Mesopotamia" writes to *The Times*:—"I have seen in your paper the letters of parents whose daughters are nursing in Mesopotamia, and who complain that their letters never arrive. I wish to point out how this trouble can be entirely prevented. If 'A Father' will write to his daughter when she first leaves England, 'care of Messrs. King, King, and Co., Bombay,' to await arrival, his daughter will find her letters with Messrs. King on arrival. Let her then direct Messrs. King to forward her letters to 'Messrs. Gray, Mackenzie and Co., Basra,' when she receives orders to proceed there. If she remains in Basra, her letters will always be with Messrs. Gray. If she is ordered elsewhere, she can arrange to have letters forwarded to any hospital in Mesopotamia by Messrs. Gray."

NEAR EAST BOOKSHELF.

A WOMAN DOCTOR IN SERBIA.*

"No woman should go out (to the war zone) as a free lance. . . . Let her be one of many and a worker with some unit." In making this assertion, the "Woman Doctor in Serbia" would have us except herself and others like her. The whole of this book is a commentary on the above text. Ably and interestingly written, the narrative of Dr. Matthews's doings in Serbia will convince most people that the spirit of adventure rather than the more tame desire of making the fullest use of her professional training prompted this lady in her career. It can be no matter of surprise that she on more than one occasion learned the disabilities of her sex in a warfare where all chivalry is forgotten by the enemy. Nor is it astonishing that the German military authorities, egged on apparently by a vengeful coward of a doctor, supposed her for a time to be a British spy. We might easily have thought the same of a German woman in a similar situation. As it was, the Red Cross alone, one would imagine, ensured her ultimate return to England.

It is decidedly a book to read, even if marred somewhat by inevitable egoism. Dr. Matthews came to Serbia via Malta and Salonika, clad in a becoming costume of khaki, with the idea that she would be allowed in the Balkans a status as Army surgeon such as she certainly could not have had on the Western front. At Nish she was told that no woman could be accepted for Red Cross work with a Serbian field army unit. She worked for a time at Skoplje in a large military hospital. We next find her as a guest of the Scottish Women's Unit at Valjevo. Again she tried at Mladinovat to get a kindly Serbian colonel to grant her permission; she was referred to Kragujevat, where she "knocked at a stone wall." When told to return she betook herself to Uzitsi, the head waters of the River Morava, not far from the Austrian frontier, where as a free lance she commenced her real adventures. Soon after her arrival a veritable stampede occurred, the Serbians in their haste to escape the approaching enemy leaving bridges undestroyed, depôts of ammunition intact, and engines and trucks of coal ready for immediate use. She alone remained in charge of the hospital. "Life was worth living in those days"! After some chapters well filled with the description of her adventures, insults and privations amidst vermin and filth, she narrates how she was conveyed to Belgrade, and finally joined the members of the Scottish Women's Unit in Austria, whence, after much improved treatment, she was conveyed to Switzerland, and thence came to England.

The narrative throws many sidelights on the war as waged in the Balkans. She describes the real sympathies of the Greeks towards the Entente, the varied sides of the Serbian character, and in strong colours the brutality engendered by the Prussian military machine.

I had never met before such peculiarly fiendish expressions of absolute hatred as were directed towards me by those Teutonic officers . . . never once have I seen such souls look out from human countenance! I was face to face, for the first time in my life, with the undisguised, unbalanced German *hatred* of my race. Far different in many instances was the chivalrous conduct of the un-Prussianised Austrians, all unwillingly our enemy at the first. She pictures the unmitigated horrors of war as it occurs in the Balkans, the awful ravages of typhus and the tragedy of the women. There are deeds of real heroism, as that of the Austrian Dr. Bubel, who laid down his life at Nish attending his *enemies* stricken with typhus. "Flowers lay upon his grave picked by some loving heart." "One of the most beautiful things of which I have ever heard" was the conduct of a prisoner, "a Russian soldier, in a torn, frayed uniform, looking dirty and ill-kept, wretchedly ill-fed and tired," who with much difficulty and at great risk conveyed to the starving lady "spy" his gift of precious chocolate.

Despite all, the author's confidence in Serbia is unbroken.

Now, for the moment, Serbia is crushed beneath the heel of Europe's enemy. Crushed, but not dead! She has a vitality all her own. She was not submerged in the past, not with all the pressure brought to bear upon her by alien masters—alien in religion, in thought, and in deed—and she will rise again in the future to a glorious destiny of wonderful life.

PRISONERS OF THE SENUSSI.†

In a shilling paper-covered book of 162 pages. Mrs. Gwatkin-Williams, the wife of Capt. Gwatkin-Williams, R.N., gives some extracts which she has compiled from the diary fortunately written by her husband when, with his shipmates of the torpedoed *Tara*, he was in the hands of the Senussi. The period of captivity was nineteen weeks, and its scene was the Lybian Desert.

* "Experiences of a Woman Doctor in Serbia." By Dr. Caroline Matthews. (Mills and Boon. 5s. net.)

† "In the Hands of the Senussi." Mrs. Gwatkin-Williams. (London: C. Arthur Pearson, Ltd. 1s. net.)

Capt. Gwatkin-Williams's record is a book of adventure and suffering and privation the like of which has rarely been excelled by the best-known writers who have captured the affections of British boyhood. There is not a dull line; there is much pathos, some very complete studies in patience in adversity, and, certainly, some humour which will not fail to raise a laugh, because it is of the pathetic rather than of the robust order.

BOOK NOTES.

Mr. E. Y. Priestman has written, and Messrs. Routledge have published (6s. net), "With a B.-P. Scout in Gallipoli." General Sir Robert Baden-Powell contributes an introduction.

Mr. Drane has published (at 3s. 6d.) "Serbian Folk Songs, Fairy Tales, and Proverbs," by Maximilian A. Muge.

Messrs. Howes have published this week, at the price of 6d., "Austro-Magyar Judicial Crimes: Persecutions of the Yugoslavs. Political Trials, 1908-1916." Mr. W. Joynson-Hicks, M.P., contributes a preface to the pamphlet.

Messrs. Longmans, Green, and Co. have in the press "A Guide to Diplomatic Practice," by the Rt. Hon. Sir Ernest Satow, G.C.M.G. The work will be issued in two volumes, but the price is not yet announced.

"Soldier Songs from Anzac" (Unwin, 1s. net) is a book of verse, "written in the firing line," by Signaller Tom Skehill. Major-General J. W. McCay provides an introduction.

"Shumer and Shem," by C. J. Ball, is reprinted from the proceedings of the British Academy, and is published by Mr. Milford. Its sub-title is "Some Philological Coincidences and Sequences."

"Maxims and Reflections (Translated from the Persian)" is published by Messrs. Dent at 3s. 6d. net. The translator and editor is Professor S. Khuda Bukhsh, of the University Law College, Calcutta.

Messrs. Constable are issuing "Seven Years in Vienna, 1907-1914." Amongst other characters sketched or described by the author are the "Tsar" of Bulgaria and the ex-Mpret of Albania.

Messrs. Hodder and Stoughton have published the Queen of Roumania's "Dreamer of Dreams." Mr. Edmund Dulac illustrates the dainty fancy with some charming sketches in colour. The book is published at 6s. net.

The same publishers have issued "The Story of Lord Kitchener," by Arthur Cooke, as a volume in the Little Stories of Great Lives series.

		Thursday	27	27

Monday is the birthday of H.M. the Queen Dowager of Italy.

On Saturday, according to a telegram from Athens, King Peter of Serbia arrived there unexpectedly from Chalcis in a motor-car. He lunched with the Serbian Minister and afterwards left again.

General Georgescu, of the Roumanian Military Headquarters Staff, specially attached to British Headquarters, returned to London from France last week.

Viscount Milner left London on Saturday and expects to be absent for 10 days. No letters will be forwarded.

Colonel the Earl of Stradbroke, C.B., C.V.O., who was on board the "Arabia" when she was sunk, has landed safely at Port Said.

Under date of November 11, Reuter's Cairo correspondent reports: The Sirdar's appointment as High Commissioner in Egypt will not involve any severance of his connection with the Sudan and its administration. Colonel Stack, the Civil Secretary at Khartoum, will be appointed Acting Governor-General and Acting Sirdar for the period of the war, carrying out his functions under Sir Reginald Wingate's direction. Close and constant intercommunication will be maintained between Sir Reginald Wingate in Cairo and the Acting Sirdar at Khartoum.

A correspondent writes:—Colonel L. O. Stack, the newly-appointed Governor-General of the Sudan, is one of the most typical Englishmen in the Egyptian Army. Extremely quiet and reserved, he owes his promotion to nothing but his own capabilities and his enormous capacity for hard work. The writer first met him when he was serving in the Sudan, prior to his appointment as Sudan Agent in Cairo. In those days all Englishmen were to a certain extent, as it were, on trial: the Sudanese were satisfied so far; it was in the hands of such men as Stack Bey and other officials of the same period to complete their satisfaction. He was then one of the most popular men in the Sudan, and father-confessor to many a young officer, British or Egyptian. He gained the confidence of the natives, not by his official position, but by his evident interest in them and their affairs, and the same thing applies to the whole term of his service both in the Sudan and in Egypt. He is possessed of more than ordinary powers of organisation, and—an essential point in dealing with peoples of the East—he never changes his mind when once his decision has been taken. In Cairo he was well known on the cricket

fields at Gezira, and cricket was his favourite sport. He is, however, also a good shot, although the circumstances of his service have prevented him from indulging his taste for big game shooting on a large scale.

The Rev. H. C. Robins, M.A., who has been in Khartoum for the past five years, has now severed his connection with the Sudan on appointment to the parish of Fleet, near Farnborough.

The King has been pleased to grant authority to Lady Graham, wife of Sir Ronald William Graham, K.C.M.G., C.B., Adviser to the Egyptian Ministry of the Interior, to wear the Grand Cordon of the Order of El Kemal, conferred upon her by his Highness the Sultan of Egypt in recognition of valuable services rendered by her.

The *London Gazette* announces:—The King has been graciously pleased to give directions for the following appointment to the Most Distinguished Order of Saint Michael and Saint George:—To be an Ordinary Member of the First Class, or Knights Grand Cross, of the said Most Distinguished Order: Lieut.-Colonel Sir Arthur Henry McMahon, G.C.V.O., K.C.I.E., C.S.I., on his approaching retirement from the post of his Majesty's High Commissioner for Egypt.

In a message dated November 7, the *Times*' Cairo correspondent says: Sir A. H. McMahon's departure is regretted in many circles. He faithfully served the policy, which the peculiar political situation demanded, of hampering as little as possible the military authorities. The success of this policy is proved by the facts that his two years of office have not been marked by any untoward incidents, the Sultan has gained popularity, and all elements of the population are happy and contented.

On Wednesday of last week M. Venizelos and his chief supporters were present at a special Te Deum, which was celebrated in the Church of St. Dimitrius at Salonika, in commemoration of the capture of that city by the Greeks in 1912. Prince Alexander of Serbia and representatives of the Allies also attended the service.

General Sir John Maxwell has left Ireland in order to take up his duties as General Officer Commanding-in-Chief the Northern Command. General Sir Bryan Mahon, his successor, has arrived in Ireland.

Dr. Nintchitch, of the Serbian diplomatic service, arrived last Friday from Petrograd.

M. Michel Boerescu, First Secretary to the Roumanian Legation, spent the week-end in the country.

H.E. the Greek Minister visited the Foreign Office on Monday.

We regret to learn that Trooper Isaac Colley and Trooper G. Parker, both of the Royal Horse Guards, have been reported "missing." They were among the eighteen Englishmen, residents of Constantinople, who were the first to leave that city as volunteers in September, 1914.

Second Lieutenant Crawford, formerly of the London Regiment, is at present engaged on censor's work with the Mediterranean Expeditionary Force.

By the direction of the Queen 6,100 garments and hospital dressings have been sent from Queen Mary's Needlework Guild to Mrs. Carrington Wilde for the Serbian Relief Fund Hospital on the Macedonian front.

Some interesting mementoes of Lord Kitchener are now on view at the headquarters of the League of Empire, 28, Buckingham Gate. The exhibition is open after eleven o'clock, and a charge of one shilling is made for admission, the proceeds going to the benefit of the League's funds. One of the principal exhibits consists of four groups of youths designed by Mr. John Haughton Bonnor for the corners of a fountain which was to be erected in the garden at Broome Park, and the general features of which were designed by Lord Kitchener himself. The

sketches for them, and even the sketch models, were to some extent contributed, or alterations indicated, by him, and he took the delight of a boy in the project for the provision of the fountain, often going down to Mr. Bonnor's studio at Chiswick or meeting him in town to talk over the matter. Finally, when the sketch model was made from Lord Kitchener's drawings, he expressed his delight with the whole idea, and asked the cost of carrying out the work. Mr. Bonnor told him that to carry out the project in its entirety would involve an expense of several thousand pounds, and thereupon he said the matter must wait for the present. "Perhaps, however," he added, "at the end of the war someone may present me with some money, or you may all wish to give me something, so it may be a good thing to have this model and show it to any one then."

It has been suggested that a fountain of the design which so pleased Lord Kitchener should be erected in one of London's parks as a memorial to him, and the League will be glad to receive communications from persons interested in the proposal, and will forward information as to expense, size, or other particulars. Small replicas of the boy groups in plaster, lead, or bronze may be obtained to-day at Buckingham Gate.

Another interesting exhibit is an old Chinese porcelain bowl. This was one of the objects in the S. E. Kennedy sale held at Christie's on June 22, and Lord Kitchener, wishing to add it to his art collection at Broome Park, asked Mr. Frank Partridge to purchase it on his behalf. His death took place before the sale, but Mr. Partridge carried out his wish, and presented it to the London Museum in Lord Kitchener's memory. It has been lent by the museum for this occasion. There is also on view a model ship's boat, made out of the wood from H.M.S. Hampshire sent by Lady Beatty to Mrs. Parker, Lord Kitchener's sister. A series of photographs of Lord Kitchener and some autograph letters complete the collection.

The Marchese Salvago Raggi, who has been transferred from Cairo to Paris as Italian Ambassador, has arrived in the French capital. He was received by the President on Tuesday.

On Sunday a memorial to Sub-Lieutenant Arthur St. Clair Tisdall, R.N.V.R., was unveiled at St. George's Church, Deal; Bishop Taylor Smith, Chaplain-General to the forces, performed the ceremony, and paid a fine tribute to Lieutenant Tisdall, who, it will be remembered, was awarded the V.C. after his death in action on May 6, 1915, for gallantry during the landing from the s.s. "River Clyde" at Gallipoli.

In a touching letter to a friend the Queen of Roumania, referring to the death of Prince Mircea, says: "My little one has been taken from me, perhaps so that I may better understand the sorrows of mothers who have lost their nearest and dearest. A Queen, like other mothers, must bow to the dictates of Providence."

Dr. Streit, former Greek Minister of Foreign Affairs, has been appointed to the Chair of Constitutional and International Law in the University of Athens.

APPOINTMENTS, PROMOTIONS, ETC.

The *London Gazette* contains the announcement that the King has been pleased to appoint the Hon. Mervyn Robert Howard Molyneux Herbert to be a Second Secretary, and Mr. Miles Wedderburn Lampson, M.V.O., to be an Acting First Secretary in H.M. Diplomatic Service.

Mr. Lampson was in 1911 Acting Second Secretary at Sofia, and acted as Chargé d'Affaires there for some time. He entered the Foreign Office in 1903, and has been connected with various missions to Japan. He holds the Japanese Orders of the Rising Sun and the Sacred Treasure.

The Hon. Mervyn Herbert entered the Diplomatic Service in 1907. He has served at Rome, Lisbon, and Madrid, and was ap-

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

FRENCH, English, Spanish, Italian, German, Scandinavian Languages, Greek, etc., rapidly taught by natives.
ΣΧΟΛΗ ΓΛΩΣΣΩΝ. Διδασκαλία συστηματική.

Lyceum Institute, 85, New Oxford Street, and 64, Haymarket.

pointed to Cairo in February, 1915. In November of the same year he was granted the allowance for knowledge of Arabic.

Amongst other appointments gazetted are the following:—Major Hugh Augustus Keppel Gough, as H.M. Consul at Shiraz; Mr. George A. G. Mun Gavin, as H.M. Vice-Consul for Lingah, the Shib Kuh ports, and the islands of Farur, Kais, Hindarabi, and Sheikh Shuaib, to reside at Lingah; and Lieut.-Colonel William G. Grey, as H.M. Consul-General for the province of Khorasan, to reside at Meshed.

King Nicholas of Montenegro has received, at Neuilly-sur-Seine, Count de Salis, Minister for Great Britain, who presented his letters of recall.

The *Official Gazette* of Bucharest publishes a decree appointing Senator Saveano Roumanian Government Commissary at the Russian Headquarters.

The Austro-Hungarian Minister at Sofia, Count von Tarnowski, has been appointed Ambassador at Washington.

OBITUARY.

General Sir Horace William Montagu died at Colchester on Tuesday, at the age of eighty-three. Born at Swaffham, Norfolk, he was the third son of the late Rev. George Montagu, rector of South Pickenham. He joined the Royal Engineers in 1842, and distinguished himself in the Crimea at the battles of Alma and Inkerman and at the siege of Sebastopol. In March, 1855, during a sortie, he was taken prisoner by the Russians, but was subsequently exchanged, and returned to the scene of operations shortly before Sebastopol fell. For his services in the Crimea he received the medal with three clasps, the Sardinian and Turkish medals, the Legion of Honour, and the fifth class of the Order of the Mejidieh. After his return to England he occupied various high appointments. He was created a Companion of the Bath (military) in 1869 and a Knight Commander of that Order in 1905.

Major Arthur Langston Pilleau, Hampshire Regiment, who took part in the Aden operations in 1903-4, is now reported "believed killed in action" on August 10, 1915, at Sari Bair, Gallipoli Peninsula. At the time he was reported "wounded and missing." He had been twice wounded, but was still gallantly leading his battalion when last seen. The only son of the late Mr. Arthur Pilleau, of Clifton, he was educated at Clifton College, Trinity Hall, and the R.M.C., Sandhurst. He reached the substantive rank of major, Indian Army, in 1903, and two years later retired but rejoined for the war, and in September, 1914, he was gazetted to a service battalion of the Hampshires, originally second in command. He had seen service in the Tirah campaign of 1897-8, and was at Malakand and in the action at the Tanga Pass. He received the Tirah medal with clasp. He married Constance Geraldine, youngest daughter of the late Mr. Keating Clay, of Meadowbank, County Dublin, and leaves one son, Lieutenant Gerald Pilleau, the Queen's (Royal West Surrey Regiment), now serving at the front.

The death was announced on Monday of Rear-Admiral the Hon. Thomas Seymour Brand, of Glynor Place, Lewes, who commanded H.M.S. *Bittern* at the bombardment of Alexandria (1882). For his services on that occasion he was promoted, and was awarded the Egyptian medal with clasp and the Khedive's Star. The second son of Mr. Speaker Brand, who afterwards became first Viscount Hampden and twenty-third Baron Dacre, he was born in September, 1847. He entered the Navy at an early age, and was flag lieutenant to the late Lord Alcester from 1874 to 1877. He retired from the Navy in 1892. Admiral Brand was on the Commission of the Peace for Sussex and an Alderman of the East Sussex County Council and he unsuccessfully contested Hastings in the Liberal interest in 1886, and was thrice candidate for the Eastbourne Division. He married in 1879 Annie Blanche, daughter of

the late H. L. Gaskell, of Kiddington Hall, Woodstock, and leaves a son, who is a lieutenant in the Navy, and a daughter.

A Reuter's message from Bucharest, dated November 7 reports:—"General Dragalina, the commander of the Roumanian troops in the Jiul valley, has succumbed to wounds sustained on the battlefield.

The Bucharest correspondent of *The Times*, in a despatch describing the incident in which General Dragalina was wounded, said this officer had been foremost in giving an example of gallantry to his troops. In face of a German surprise attack, after urging his advanced troops to hold on at all costs, he drove back to give warning, taking as the quickest way a route which passed close to the German lines. There he came under machine-gun fire and was hit twice in the arm, which had to be amputated.

Our Cyprus Correspondent writes:—"The death of Mr. Onoufriou Jassonides, at Limassol, has removed one of the best known figures of the Greek community. Mr. Jassonides was one of the best educated Cypriots. He spent some time in the seventies as an unattached student of Christ Church, Oxford, where he made several friends. He was a good English scholar, and was devoted to English literature. His tastes were those of a scholar, and he contributed articles and poems to various Greek papers. For a time he owned and edited a small literary periodical in Cyprus. He took but very little part in local "politics," keeping aloof from the parties which came into existence in the Greek community. He was a nephew of M. Acamas, who was Consular Agent for France in the early years of the British occupation, and a well-known and esteemed representative of the "old school" of Cypriots.

Second Lieutenant Ernest Macfarren, Royal Irish Rifles, who is reported killed, was attached to the British Legation at Sarajevo from 1909 to 1913. In the autumn of 1914, he joined the London Rifle Brigade. In September, 1915, he received a commission in the Royal Irish Rifles, and was sent out with the British Adriatic Mission in November, with the temporary rank of captain, returning last April to his regiment in Ireland at the time of the rebellion. He went to the front in June, and died of wounds on November 8. He was the son of Mr. Herbert Macfarren and grandson of the late John Macfarren.

Second Lieutenant Eustice Marchetti, R.F.A., who is reported killed on November 8, was the elder and only surviving son of Mr. and Mrs. George Marchetti, of 135, Gloucester Terrace, Hyde Park, his only brother, Second Lieutenant A. Marchetti, Rifle Brigade, having been killed on March 15 last. He was born in London of Greek parents, and was educated at Charterhouse. When war broke out he was in India. He joined a volunteer corps and came home on leave, soon after joining a Cadet corps. He received his commission last July.

Second Lieutenant Leonard Perkins, attached to the First Battalion Queen's (Royal West Surrey) Regiment, reported to have been killed in action on the third of this month, was in civil life a member of the London staff of the Imperial Ottoman Bank. Of that staff fifty-three have joined the Army since the commencement of the war, and of those fifty-three no less than ten have now been killed. Lieutenant Perkins was not quite thirty years of age. He leaves a widow and child.

The death has taken place in Paris, at the age of eighty-seven, of the Marquis de Vogué, a former French Ambassador in Constantinople. He was a well-known explorer and historian, and a member of the French Academy; and during the present war he has done splendid work as President of the Société de Secours aux Blessés.

The death has occurred at Hull, at the age of seventy-three, of Mrs. Ashton, sister of Mr. John Ross, and formerly of Alexandria.

The death is announced as having taken place in London, in a nursing home, of Mr. Charles D. Rudd, the father of Lady Eldon Gorst.

DOMESTIC ANNOUNCEMENTS

The Charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

MANSON.—On the 23rd October, at Cairo, the wife of J. B. Manson, War Office, Cairo, of a daughter.

DEATH.

CLAYTON.—On the 24th Oct., at Cairo, Thomas Falkingham, infant son of Brigadier General and Mrs. G. F. Clayton, aged four weeks.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHERD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

FRIDAY, NOVEMBER 17, 1916.

MR. ASQUITH ON THE OTTOMAN EMPIRE.

Thirty years ago, speaking at a Guildhall banquet on Lord Mayor's Day, Lord Salisbury said: "Again and again in this hall have you heard references made by successive Ministers to the difficulties which have baffled successive generations of politicians in the South-east of Europe." Those were the days when the Prime Minister's review of foreign and home affairs was awaited with somewhat more interest and curiosity than is the case to-day. The recurrence of the ceremony last week, however, found Mr. Asquith dealing with the same subject, and, although according to his wont he practised greater economy, if not of speech, at least of information, his reference to the settlement of the Turkish question deserves closer attention than it has received amid the stress of matters of more immediate concern. Characteristically vague as the remarks were, they offered, we are inclined to think, the most definite indication of future policy that Mr. Asquith allowed himself in his review of the general situation. Discussion on the future of the Turkish Empire has hitherto been discountenanced among the Allies. From the Prime Minister's words we may infer that the reasons which made for silence in the past no longer retain their original cogency. Even now the moment is probably not ripe for any detailed examination of plans, but there is much to be said for accustoming public opinion to face frankly the new circumstances which have altered the whole complexion of the Near Eastern question. Two years of war have served to establish the fact that a people cannot be dissociated for sentimental considerations from the acts of its rulers. It is improbable that the traditional liking of the British nation for the Turks will undergo much change; but recent events have shown them to be politically incapable of directing their own destinies, and at the same time a dangerous tool in the hands of any designing influence. It has taken an upheaval of the whole of Europe to satisfy Great Britain that the regeneration of the Ottoman Empire from within can never be realized. The fault may not be wholly Turkey's. In so far as she has always been subject to the distraction of European jealousies, she may be said to be the victim of circumstances over which she cannot hope to exercise control. However that may be, the outstanding feature to-day is that the Allied Powers would be faithless to the trust which the cause of liberty and justice imposes upon them, if they allowed the war to come to an end leaving Turkey still a powerful weapon lying close to hand for any who may once more be minded to trouble the peace of the world.

The prominence which Mr. Asquith gave to the Turkish question in his Guildhall speech by addressing himself at once to the subject was in contrast to the attitude of the British Government at any time during the past two years. We shall, therefore, not be far wrong in giving to the words he used the widest meaning of which they are susceptible. After referring to the satisfaction—premature and ill-founded, as the events proved—with which he had acclaimed the triumph of what was called the Young Turk Movement over the spy-ridden and blood-stained tyranny of Abdul Hamid, and to the hopes entertained in Great Britain in those days for the regeneration of the Ottoman Empire from within, Mr. Asquith continued: "Our hopes have been falsified and frustrated, and I believe we all now realize that the continuance of Turkish rule in Europe, where the Turk has always been a stranger and intruder, has already come to mean, and, if it

is allowed to persist, will increasingly mean, that the Turk is there only as a vassal and a subservient agent of German interest and ambitions." Proceeding to give what he termed a practical illustration and a very tragic one, Mr. Asquith instanced the sufferings and wholesale massacre of the Armenians. He pointed out that Great Britain, Russia, and the United States had raised large sums for the relief and repatriation in the future of these victims of Turkish misrule. "I need not say," Mr. Asquith added, "that his Majesty's Government look with profound sympathy on these efforts, and are resolved that after the war there shall be an era of liberty and redemption for this ancient people. But Germany, the master of Turkey, who by lifting a finger could have arrested and, if she wished, prevented this organised campaign of outrage and massacre against a Christian people—Germany has looked on unmoved, quiescent, for all we know, complacent. That is a significant example of what is meant by a Germanised Turkey." The Prime Minister left it to his hearers and to a far wider audience to complete his syllogism. If the Armenians are to enter upon an era of liberty, there must be an end to a Germanised Turkey; but there will always be this Germanised Turkey so long as Turkish rule in Europe is allowed to persist. The inference is as plain as if Mr. Asquith had stated it in unequivocal terms.

Unfortunately the settlement of the Near Eastern question entails a variety of separate settlements, and Mr. Asquith, although he reached an important landmark in his Guildhall speech, did not take us very far towards a solution of the whole problem. We may hope, however, that his reference to the subject reveals a disposition on the part of the Allied Governments not to postpone discussion of it any longer. The matter is too complicated to be adjusted between the cessation of hostilities and the signing of Peace. But a cut-and-dried settlement will have had to be reached before then; for the one thing that a meeting for the signing of Peace—by whatever name the gathering be styled—cannot be allowed to debate will be the terms of the Near Eastern settlement. This point is too frequently ignored by those who picture a congress of much wrangling and many compromises before Europe will have returned to a state of peace. It was insisted upon by Sir Edward Carson at the inaugural meeting of the Serbian Society. When the Allied Powers, he stated, after the victory they are determined to win, set themselves to the revising of the map of Europe the interference of Germany, Austria, Turkey, and Bulgaria will be eliminated. If the Allies wish, they can ensure that the settlement of the Near Eastern question will precede the settlement of the greater European question. But it will require a frank and possibly prolonged exchange of views between them. For this reason an early discussion is desirable. It may be necessary to introduce certain modifications in any arrangements tentatively made at the beginning of the war. On the other hand, agreements then reached, for which public opinion in one or other of the countries concerned was not ripe, may well be accepted now without cavil. In Great Britain there may have been some who viewed at one time with apprehension the prospect of trying to find any suitable successor to the Turkish Government in Constantinople, and on that account were prepared to see the Turks remaining in Europe. Mr. Asquith understated the case when he pointed out that the Turk can only be there as a vassal and a subservient agent of German interest and ambitions. When the war is over Europe will still have to fear the establishment of the Central European Block, stretching from the Baltic to Baghdad or beyond, which is the scheme by which Germany hopes in the shortest possible space of time to regain the power necessary to fight once more—and this time successfully—for the hegemony of the world. There can be no surer way of defeating this ambition than to have a strong and permanent wedge driven into the proposed Block. Constantinople affords the most suitable place for such a wedge, and the Allied peoples, when deciding on the form it is to take, must keep carefully in mind the objects they are setting out to achieve.

A HUNDRED YEARS AGO.

LONDON THROUGH PERSIAN SPECTACLES

(FROM A CORRESPONDENT.)

The following is a copy of a letter from the Persian Envoy to this country, Mirza Abdul Hassan, written about 1820, and now in the possession of my family. The writer's quaintly expressed views on English life and customs at that date will probably be of interest to your readers. His reference to what was evidently a meet of the Coaching Club is unique and entirely Eastern:—

To the London Gentleman who lately write him letter
and ask very much to give answer.

SIR, MY LORD,—

When you write to me some time ago to give my thought of what I see good and bad in this country, that time I not speak England very well, now I read I write much little better, now I give you my think.

In this country bad not too much, everything very good, but suppose I not tell something little bad, then you say I tell all flattery, therefore I tell most bad things. I not like such crowd in evening party, every night in cold weather not very good. Now hot weather, much too bad. I very much astonish every day now much hot than before, evening party much crowd than before, pretty beautiful ladies come sweat, that not very good. I always afraid some old lady in great crowd come dead, that not very good, and spoil my happiness. I think old lady after 85 years not come to evening party. Why for take so much trouble? Some other things little bad, very beautiful lady she get ugly fellow for husband, that not very good—very shocking. Ask Sir Gore, why for this? He says me, perhaps he got too much, perhaps he got title, perhaps he good man. I say I not like that, all very shocking. This all bad I know.

Now I say good English people, all very good, all very happy, do what they like—say what like—write in Newspaper what like. I love English very much, they very good very civil to me. I tell my King England love Persian very much. England King best man in world, he love his people very good much. Queen very best woman I ever see. Prince of Wales such a fine elegant beautiful man. I not understand English proper to praise him, he is too great for my language. I respect him same as my own King, his manner all the same as charm and talisman. All the Princes very fine men, very handsome, very sweet words, and very affable, I like all too much. I think Ladies and Gentlemen of this country most high rank, high honour, very rich, except two or three very good, very kind to inferior people.

This very good, I go to see Chelsea, all old men set on grass, in shade of high trees, fine rivers run by, beautiful place, plenty eat, drink, good coat, everything very good. Sir Gore tell me King Charles and King James make. I say, Sir Gore they not Mussulman but I think God love them very much. I think God love the King for keeping up that charity. Then I see one small regiment of little children go to dinner, one boy he say thanks to God for eat for drink for cloaths other little boys they all answer amen, then I cry a little my heart too much pleased. Two things soldiers fight much better, because see their good King take care of old wounded fathers and little children.

I then go to Greenwich that too good place, such fine sight, make me a little sick for joy. All old men so happy, eat dinner well, fine house, fine beds, all very good, this very good country. English ladies very handsome, very handsome beautiful. I travel great deal, I go to Arabia, I go to Calcutta, Hyderabad, Poonah, Bombay, Georgia, America, Constantinople, Malta, Gibraltar, I see best Georgian, Circassian, Turkish, Greek ladies but nothing so beautiful as English ladies, all very clever, speak French, speak Italian, play music very well, sing very good, very glad for me if Persian ladies speak such sweet words. I think tell little stories, that not very good. One thing I see, but I not understand that thing good or bad. Last Thursday I see some fine carriage, fine horses, thousand people go to look that carriage, I ask why for, they say me that Gentlemen on Boxes they drive their own carriage. I say why for take so much trouble, they say me, he drive very well, that very good thing, it rain very hard, some Lord some Gentleman he got wet, I say why not go inside? They tell me good coachman not mind get wet every day, will be ashamed to go inside—that I not understand.
—Sir, My Lord, good-night.

ABUL HASSAN.

Three Roumanian soldiers who were prisoners in Bulgaria have arrived in Bucharest, after having escaped from the camp in the environs of Sofia, and having swum the Danube between Tutrakan and Silistria. They report that they were subjected to bad treatment and received food which was hopelessly inadequate.

PROBLEMS OF THE SUDAN.

IV.—The Position of Woman.*

(BY OUR KHARTOUM CORRESPONDENT.)

There is no problem more difficult, and possibly more urgent, in the Sudan than that of the women. The men have acquired and have a taste for progress; the women have not changed. It is not merely that they do not desire the civilisation of a Western origin; it is remarkable that all the women of the Mahdi's family are taught to read and write and are skilled in embroidery. Yet this example, which might easily have become a matter of faith with them, has produced no sympathetic feeling. For the woman of the Sudan there is but one standard, money; one need, a man. Will education or learning obtain them? If not, it is not worth thinking of.

Notwithstanding the fancy pictures of fiction of the lovely houri surrounded by luxury, but enclosed within the prison of the harem, the woman's lot is not an easy one. Her business is primarily to get married, at as high a price as possible, and then to get as much as she can out of her husband before the grinding burden of childbirth and child-bearing relegate her to the second rank.

A Sultan of Darfur, with great forethought, once sent a number of Fur girls to be trained in Cairo in the art of cookery, and even now in Darfur a woman is reckoned by the dishes she can prepare. But this was a solitary gleam by a momentarily enlightened Sultan. The position of women in the Sudan varies to some extent. In the northern provinces, where the Turk and Egyptian influence has been long and strong, the system of the "harem" has popularity—with the men. But, normally, the women take a great interest and part in affairs, and every market-place contains at least as many, if not more, women than men; and anyone who has administered a district can tell that nearly all criminal cases are attributable finally to woman's influence. For they are taught from childhood to look for money; if their husband is poor, he must do anything—steal, rob, make slaves—but he must get money. If he is rich, he must spend his riches in jewellery, silver anklets, gold ornaments, amber beads—anything that may become her property.

Being entirely illiterate, the women are immensely superstitious; having but two ideas—men and money—they pursue them by superstition, and are a ready prey to the parasitic class of "Fugara" holy men, mostly of Fellala origin, who go from village to village hawking spells and love potions and involve in every intrigue. It would be too much to say that every woman has a lover; it would be true in certain districts, and the average of continency elsewhere is certainly low; but where all is primarily on a money basis sentiment is bound to creep in, and, even so, with the hope of profit. Morality—that is, the normal morality—has nothing to do with it, for, the end and object of life being profit, coupled with man, the women are pursuing and attaining their moral end.

That is exactly where the difficulty lies—the morality of the women of the Sudan is not that of the normal man; they pursue it with enthusiasm, and they will not tolerate any interference. Schools, even for boys, they look on with suspicion; innovations they assume to be profane and liable to draw the evil eye; and they rely ultimately on the fact that they can make a man's life a burden and a sorrow, so that he dare not go beyond a certain point. True, he may divorce them, but they know that he will never do so if he can avoid it. It means loss of money and another dip into the pool, likely to produce a very similar result.

Cruelty is always to be found in an unthinking people, but the worst is to be found between woman and woman when jealousy has made trouble between them. The oath of a woman is never accepted by an Arab, and he is probably right; and the proportion of women who have even the rudiments of Moslem religion is extraordinarily small, although they will be found to be the most fanatical of all.

There are certain schools for girls established in the Sudan, but they are few, and are used largely by officials, Syrian and Egyptian, for their families, and by such as are so dependent that they have little choice but to accept. The bulk of the feminine population remains untouched. It may be, as in one province, that the pure-bred Arab girl is not going to mix with the half-bred trash (from her point of view) that frequent the school. It may equally be the unwillingness of the parents to expose the girl to new ideas, producing no profit to her as a marriageable speculation. For it would be a bold man who married a woman who knew as much as himself, and perhaps more. So how are good honest parents to get back the trouble of rearing the girl?

In the negro tribes the position of the woman is entirely subservient. A hewer of wood and drawer of water, she

General Managers

thanks heaven for the good things that come her way, and does not resist too violently if a stronger man comes along. Amongst the truer types of Sudanese Arabs—that is, those who have not suffered from Turkish influence—the women have considerable individuality; some, indeed, attain to well-deserved fame, whether as poets or as mothers of large families, or even both.

In such tribes the old system of chivalry is still extant. Every lad has his fair lady, for whom he is prepared to overstep the limit, if opportunity offers; and if, by slaying a lion or (unluckily) by stealing a slave, he may make himself a subject of song when the virgins meet at sunset to celebrate the happenings of the day, any punishment is bearable. And although some of their customs would be deplored by Sunday-schools, there is at least a healthy spirit of loyalty, even possibly at times a higher passion, evoked; and there are refreshing instances of couples leaving their respective parents wrangling over the marriage dues and disappearing together to return with the *fait accompli*, and no more to be said or paid than the customary dues. Even so, the romance appears to be chiefly on one side, and the great problem of the Sudan is to bring the women up to the standard of the men, to teach them a less materialistic philosophy, and to secure the blind confidence that now they give to unworthy objects, to the ends of the true good.

THE PRESS ON THE NEAR EAST.

Great Britain and Greece.

In a leading article, "At Guildhall," upon the Prime Minister's speech at the Lord Mayor's banquet, the *Morning Post* remarks:—

We are glad to see that Mr. Asquith has expressed his sympathy with M. Venizelos, and that he has said a word or two in season to the Government at Athens. Let us hope that this sympathy will be extended also to the prisoners who are suffering in Greek dungeons for adherence to the cause of the Allies, and that it will take the practical form of insisting upon their liberation. Moreover, if Athens is still the "focus and centre" of German intrigue, it might be possible to settle accounts with the Athens Government without being "anti-Dynastic." After all, we are fighting the German Emperor without being anti-Imperial.

Roumania's Improving Army.

Under the title "The Barrier to Roumania," *The Times* on Tuesday published an interesting despatch from its correspondent in the Balkan Peninsula. Writing on the 10th inst., he says:—

In the opinion of military critics, the Austro-German efforts to effect the passage of the Carpathians are gradually slackening. The troops are fatigued, and unless considerable reinforcements arrive they will in all probability prove incapable of making further progress. Whether reinforcements are sent depends upon the pressure exercised elsewhere by Roumania's Allies.

The failure of the Germans to break through the Carpathian barrier must, in the first place, be attributed to the stubborn resistance of the Roumanian troops, whose capacity for mountain warfare, as was acknowledged by the King in his manifesto after the retreat from Transylvania, was not generally realized at the beginning. On the other hand, the initial successes of the Germans were mainly due to superiority in heavy artillery, and they were not maintained when the conflict was transferred to the mountain passes, where this advantage failed them. The enemy, moreover, have latterly suffered commissariat difficulties, which become greater as the distance from the base increases, and will hardly diminish amid the rigours of the coming winter. Meanwhile the Roumanian troops, hitherto unaccustomed to campaigning, are rapidly acquiring experience, and as incompetent elements are weeded out the Army is becoming a first-class fighting machine.

The writer then summarises a semi-official statement in the Roumanian papers describing the effect of our latest Ally's military activity upon the operations of the last two months. This statement frankly admits that the decision to take the offensive on the northern frontier while maintaining the defensive in the south was taken "owing to political conditions." It also points out how the successful resistance in the Carpathian passes forced the enemy to bring up further reinforcements, drawn from the French, Russian, and Italian fronts, thus contributing to the French victory at Verdun.

"The Greek Serial."

Although serious enough in all conscience, the situation in Greece undoubtedly has its comic side; and this evidently inspired the following note in the *Pall Mall Gazette* of last Saturday:—

The latest instalment of the Greek serial story keeps up the thrills very cleverly. Germany, we are told, has issued an ultimatum to Greece, and will declare war if the Allies get the breech-blocks, or what it is they are demanding. Accompanying the announcement, however, is an explanation that the threat of war was suggested to the German representative by the Greek Government as an excuse for their declining to comply with those demands. The situation grows contemptible. For our practical soldiers and sailors to have to play this silly game must be a sore trial to their patience.

King Constantine's Dilemma.

In a vigorous leading article, "Athens and Salonika," urging plain speaking by the Entente to King Constantine, the *Manchester Guardian* refers to the occupation by Greek troops of Western Macedonia as it is evacuated by the Bulgarians. "There is," says the *Guardian*, "one simple test of the propriety of these movements."

Constantine is King of Greece, except in so far as he has himself resigned his sovereignty. We are in occupation of Greek territory, either by right of conquest from the Bulgarians or as the result of conversations with M. Venizelos towards the end of last year. King Constantine may have disputed our right to be at Salonika, but he has never disputed the Bulgarian right to be in occupation of other portions of Greek territory, and to that extent he has resigned his sovereignty over it. He cannot have it both ways. He cannot both let the Bulgarians in and, when we turn them out, claim the right to reoccupy as though his sovereignty were still intact. Supposing that the Germans and Bulgarians had taken Salonika from us, they would only have admitted the Greek troops, if at all, on the terms that they went over bodily to the side of the Central Powers. As it happens, contrary to the expectations of the King, the fortunes of war have gone the other way, and, so far from losing Greek territory, we are winning it back from the invaders, whom the King has assisted in every way that he dared. It follows that, while we do not dispute the legal sovereignty of the King, we cannot admit him to occupation of any recovered territory for the period of the war. How do we know that he will not again give it back to the enemy, as he gave Fort Rupel and Kavala?

The lives of our Allies, the Serbs, and of our own troops, are, says the writer, more to us than the sensibilities of a monarch who, "whatever he may do in the future, has in the past shown himself no friend of ours." It may be painful to speak thus plainly, but needs must.

We are not reconquering occupied Greece for King Constantine, but for Greece. We hope that there may be no real difference, but we do not know for certain; it remains to be seen. We do not, of course, mean that his sovereignty depends on his taking our side in the war; Greece has a right to be neutral if she will, and to force her in against her will would be an act of tyranny. At the same time, we are guarantors of the constitutional government of Greece under the treaty of 1863, to which King Constantine owes his crown, and in our opinion the King, in dismissing M. Venizelos, in taking a different view from his responsible advisers of the obligations of the treaty with Serbia, and in acting upon this view, has been guilty of unconstitutional conduct.

After showing how France and England had, under the terms upon which they guaranteed Greece's independence, a right to land troops if that independence were menaced, the article proceeds:—

We are therefore in Greece to-day by the same right as King Constantine is on his throne. Being there, we were justified in taking such steps as seemed desirable in support of Greek independence or the Greek Constitution. We have used these rights with the utmost moderation and extreme consideration for the King's position. In the face of every difficulty, we gave him credit for thinking only of the interests of Greece, and instead of placing him out of harm's way (as Germany would have done under the same circumstances, and, in fact, did do with the monarch of one of the States whose independence she had guaranteed, Belgium) we agreed to recognise two sovereignties—a legal sovereignty of King Constantine and the *de facto* sovereignty of the people represented in certain districts of Greece by M. Venizelos. That is the present position. If it is not clear to King Constantine, the reason must be that our great tenderness for his feelings has been allowed to obscure the true facts of his position. It would be well that these should be made plainer to him than apparently they have been.

Arabia: Past and Future.

In a note headed "A New State," the *Globe* on Monday referred sympathetically to the Arabian revolt against Young Turkish misrule and oppression, and expressed hopes for the future of Arabia that will be shared by most Englishmen. The writer remarks that we may scarcely expect to see a revival of the glories of the days of the early Abbassid Khalifs, "for though the Arab race is large, the population of Arabia itself is small. But," he continues—

it will be at least a very interesting State, and, with its magnificent traditions, it should be free from the hideous stagnation which afflicts every land ruled by the Turk. The people who gave us algebra, and the numbers without which intricate calculations are almost impossible; who revived philosophy, invented chemistry, and devised one of the loveliest architectures of the world, will hardly be unprogressive now that they

are once more free. When books were rarities in Europe, Baghdad possessed a really large library, and that of the Khalif Hakim II. is said to have contained more than six hundred thousand volumes. The Arabs were great conquerors and great thinkers once; there is no reason to think that Arabian history is a closed and finished book to-day.

The Roumanian Theatre of War.

Discussing "Balkan Strategy," the military correspondent of the *Scotsman* (November 11) observes that criticism of our strategy in connection with bringing Roumania into the war should be cautious, since the average critic "is necessarily in the dark in respect of much that is requisite for the forming of a just judgment." He continues:—

In some quarters the statement has been made that all would have gone swimmingly with Roumania if her marching into Transylvania had coincided with an overwhelming Russian invasion from the Bukovina, and if the Allied Forces in Macedonia had simultaneously done their utmost against the Bulgars. But there is no reason to suppose that, in a strictly military sense, General Sarrail has not done all he could. It is no fault of his that there was a Greek Army in Thessaly that required watching. As for Russia, she had immensely important work to do between the Styra and the Stokhod and on the north side of the Dniester. If one were allowed to guess, one would say that the Entente heard of an accumulation of troops towards Temesvar, destined to help the Bulgars to make an end of our holding at Salonika. Three hundred thousand men, with plenty of guns, would suffice, Greece would be "liberated," and Roumania would, at worst, remain neutral, and would trade with Germany in corn and oil. Our view would be that Roumania, being ready to fight, would be in no real danger from 300,000 Austro-Germans, aided by 100,000 or so of Bulgars and Turks, and that her intervention would so increase the length of front as to upset all the German plans, and snatch from the enemy the initiative he was aiming at.

Turning to the activities of von Falkenhayn and von Mackensen, the correspondent discovers signs that the former is becoming stronger. There are also signs that the southern Bulgar army in Macedonia is being strengthened.

Von Falkenhayn is for the moment raging about from one pass to another, as if he were groping for a weak point. Presently, before the full winter sets in, he will choose a pass, or a group of contiguous passes, put in everything he can, and make a final effort at a decision. The central group, the Predeal and those to right and left, lead into the oil region, and are nearest to Bucharest. They should prove attractive, but our side are well aware of that, and have doubtless large reserves—local at Pitesti, Ploesti, and Buzau; general at Bucharest. The Roumanian railway system seems to be strategically favourable in this region.

The German "may try one of the wings, the Vulkan and Roterturm on his right or the Trotus Valley on his left," but we have good reason to hope that his attempt will not succeed. As for his companion, we read:—

Von Mackensen, retreating already in the Dobrudja to the extent even of abandoning Hirsova, may be so acting of set purpose. He said it was only strong reconnoitring bodies of his that followed his enemy's retreat north of Caramurat. This may be so, and he may be all the time entrenching from a point covering Cernavoda to the Tashavlu lagoon, on the Euxine. He is credited in some quarters with an intention of forcing the passage of the Danube, perhaps in the neighbourhood of Rastchuk, but more probably further up stream about Sistova. If he has this project in hand, we may expect von Falkenhayn to make a prodigious effort in the Vulkan and Roterturm Passes, with a view to joining hands with his colleague south-west of Bucharest. But von Mackensen had better beware of General Sakharov. This chief has arrived in the Dobrudja, and a man of his ability and repute has not left his army of Brody for nothing. His three successive and successful battles on the Volhynian Lipa at Brody, and among the upper waters of the Galician Sereth, have stamped him as a great tactician, and he has probably crossed the Danube with a large handful of his own veteran and victorious troops.

Mistakes of the Past.

"German Penetration in Roumania" is the title of a valuable article which Mr. D. Mitrany contributes to the current *Quarterly*, and which will be read with interest by all who wish to see the Allies profiting in the future by the mistakes they made in the past. The story told by M. Mitrany is not entirely a new one to readers of *THE NEAR EAST*, but he tells it more fully and more connectedly than it has ever been told before, and it will repay careful study. Unfortunately, it would be impossible in a brief summary to do justice to the author's lucid and detailed exposition of the subject. We may, however, present a few extracts from passages which lend themselves to quotation more readily than those that are of a more technical character. Roumania, says M. Mitrany, was the first of the south-eastern European countries to establish a German

dynasty upon her throne, the first to be drawn into the sphere of influence of the Central Powers. Yet—

Nothing seemed more artificial than this association between peoples so widely different in character as are the Germans and Roumanians, especially if we also take into consideration the constant friction due to the sufferings of the Roumanians in Hungary. Since the political emancipation of the European Near East sprang from, and was fostered by, French and English liberal ideals, the success of the German efforts is the more remarkable. The practical spirit, energy, and perseverance of the Germans, and the *éblouissement* which their highly developed State organization exercised when contrasted with five centuries of Turkish domination, cannot, therefore, fully explain the situation. It was the unfortunate tactics of Russia, coupled with the short-sighted passivity of the Western Powers, which most helped to build up the German policy.

Later, M. Mitrany gives a concrete case in which Roumania was, so to say, thrown into the arms of Germany—and by France, of all nations.

An attempt to reduce German political and economic influence was made in 1913. The diplomatic machinations of Austria had considerably weakened the bonds between Roumania and the Central Powers. The journey of Prince Ferdinand—now King of Roumania—to Petrograd, and the even more significant visit which the Tsar soon afterwards paid to the late King Carol at Constanza, unmistakably pointed towards a change in Roumanian foreign politics. In harmony with those events was the desire of the Roumanian Government to float a loan on the Paris Bourse, for which purpose M. Marghiloman, then Finance Minister, was despatched to Paris. This was soon after the conclusion of the Peace of Bucharest (August, 1913), which had added to Roumania's greatly consolidated economic position an enhanced political prestige. Roumanian public opinion viewed the Government's change of policy with much satisfaction, and in the light of the recent successes was nurturing sanguine expectations as to the result of M. Marghiloman's mission. Yet, notwithstanding the efforts of the latter, an agreement could not be arrived at, mainly, strange to say, on account of the unsympathetic attitude of French official circles. The transactions were followed closely by German financiers; and, at the critical moment, M. Marghiloman was approached by the representative of the Diskonto with an offer so favourable that he could not do otherwise than break off negotiations with the French bankers. He proceeded that very day to Berlin, where he had no difficulty in arriving at an early settlement.

This strange indifference is contrasted with the activity and pushfulness of the Germans, official as well as unofficial.

The German Government has never failed to back the efforts of German finance and industry; and, though the "Imperial Commercial Traveller" never honoured Bucharest with a visit, for personal reasons, the German diplomatists have not thought it beneath their dignity to sing, not always in the sweetest of tunes, the praises of this or the other German product. And these diplomatists were of the best that Austria and Germany had at their disposal.

And if the diplomatists "pressed the button" the German commercial man and workman was ready to do the rest.

German money never comes alone. Every new investment, every new undertaking, industrial or financial, brought along with it a crowd of German clerks and workmen. This peaceful invasion was rendered easier in our case by the fact that the Roumanian peasant, being deeply attached to the land and disinclined on account of social and climatic circumstances to regular work, settles down with difficulty to industrial labour. On the other hand, the ideal of the middle and upper classes is politics and officialism. If not exactly welcomed, the Germans were in these circumstances suffered.

"The present situation in the Near East," writes M. Mitrany, "proves only too clearly how unfortunate were the policies of France and England in the past." Very few people would be found to take the opposite view. The article concludes:—

There is now undoubtedly an opportunity of making good past errors. Roumania will the more gladly welcome such a change, as her place in the lap of the Central Powers, with Bulgaria sitting on her knees, must be at once uncomfortable and not a little alarming. But there is one point which the Allies must not overlook. The great difficulty in dealing with Roumania is her situation with regard to Russia. What the policy of Russia will be in the future no one can predict. But it is clear that Roumania's position is very delicate; politically, because she would never be able to withstand a pressure from the North: economically, because she depends for her trade upon the Black Sea and the Straits. In these circumstances, she must either be made secure against Russia, or she will of necessity, and with no other possible alternative, grow to depend more and more upon the Central Powers. This would mean—the considerations applying with equal force to the other south-eastern European States—a definite step towards the realisation of that Teutonic conception of "Mitteleuropa" which we may now hope will never become a fact.

A Sofia telegram announces that the Sobranje has adjourned until November 22, when it will meet again to discuss the Budget for 1917.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

King Constantine's Promises.

Nov. 9.

Lord R. CECIL, replying to Sir E. Cornwall, said that he was afraid he could not make any statement in reference to the nature of the interviews which the British Minister at Athens had recently had with King Constantine, or whether any undertakings had been given in writing.

A Salonika Despatch.

Nov. 14.

Mr. FORSTER informed Sir W. Essex that a despatch from the General Officer Commanding the British Forces at Salonika, dealing with operations up to October 8, had just reached the War Office, and it would be published in due course.

British Prisoners in Turkey.

Mr. J. F. HOPE, replying to questions put by Sir E. Carson and Sir E. Cornwall, said: From every hostile Government, except the Turkish, we have been able to obtain satisfactory lists of prisoners of war, but, notwithstanding all our efforts and those of the American Embassy at Constantinople, we have failed to obtain any but the most incomplete lists of our officers and men in Turkish hands. Apart from those who were taken prisoners in the Gallipoli operations, some 12,530, including, of course, Indian prisoners, we believe, surrendered at Kut-el-Amarah, but by means of information received up to the present from the Turkish Government, we have been able to identify only 1,923, and to this must be added another 764, of whom we have heard by means of private letters and other unofficial communications. In all other hostile countries prisoners of war camps have been visited by members of the American Embassy concerned, but a similar concession has always been strenuously opposed by the Turks. It is, therefore, impossible to give any assured information regarding our subjects in Turkey; but from all we can learn we have reason to fear that the conditions are very far from satisfactory, and that the mortality in certain cases has been heavy. There are also indications that our men have suffered severely on their way from Kut to places of internment. Moreover, we have grounds for fearing that our men are short of clothing, but every endeavour is being made by the American Embassy and Consular officials to meet this want by local purchases. A request to the Turkish Government to allow supplies of clothing to be sent in a neutral ship to some point in Asia Minor has been accepted only on the condition that the distribution shall be made by the Turkish authorities, which, again, is contrary to the practice in other countries, and is open to obvious and grave objection. Up to the present we have been compelled to rely on the provision of clothing from local sources, supplemented by the despatch of parcels from this country to those whose whereabouts is known; but the receipt of any parcels appears to be very uncertain. We have every reason to believe that the American authorities, through whom alone we can act, are doing their best under very difficult circumstances, but it would be idle to deny that the present situation is unsatisfactory in the extreme. We have recently again drawn the attention of the United States Government to the extreme urgency of the case.

Mr. FORSTER informed Sir E. Carson that care will be taken from time to time that any possible information is given to the country in reference to these prisoners.

Old and New Greece.

Mr. ASHLEY asked the Under Secretary for Foreign Affairs whether the Government still maintain official relations with King Constantine's Government; if so, in what districts of Greece does his Majesty's Government recognise that King Constantine has jurisdiction; and what amount of official recognition has been accorded by the Allies to the Provisional Government under M. Venizelos at Salonika.

Lord R. CECIL: The answer to the first part of the question is in the affirmative as regards the Allied Governments, including his Majesty's Government. As regards the second part, the situation changes from day to day, but it may roughly be said that M. Venizelos' authority exists in New Greece and the Islands, whereas the Government at Athens retains jurisdiction over Old Greece. As regards the last part of the question, I would refer the hon. member to previous statements which have been made on the subject. The Government of M. Venizelos is treated by the Allies as the *de facto* authority in the districts where it is established.

Mr. ASHLEY: What is the use of continuing the official recognition of the Government of King Constantine?

Lord R. CECIL: That is rather a large question to answer in reply to a supplementary question.

Mr. R. McNEILL: Has the extent of the recognition accorded by the Allies to M. Venizelos been indicated to him?

Lord R. CECIL: I understand so, certainly.

Mr. CATHCART WASON asked whether the noble Lord's attention had been directed to a despatch from M. Venizelos to Principal Ronald Burrows, King's College; and whether, in view of the facts there set forth, coupled with the occupation of fresh territory by Bulgarians, despatching of fresh troops to Berlin, and persecution of Greek patriots, he would consider with the Allied Powers what further steps it was necessary to take for the protection of M. Venizelos and his friends.

Lord R. CECIL: The answer to both parts of the question is in the affirmative.

Sudanese Troops.

Commander WENDWOOD asked the Under-Secretary for Foreign Affairs whether any additional battalions of Sudanese troops had been raised in the Sudan during the war, and, if not,

why such action had not yet been taken, in view of their suitability for fighting in Mesopotamia.

Lord R. CECIL said the answer was in the negative. For local reasons of a convincing nature it had not been considered desirable to raise additional battalions of these troops during the war.

Comforts for Mesopotamia.

Sir E. CORNWALL asked to what extent the army in Mesopotamia was now being supplied with winter comforts either by the Government or from private sources.

Mr. FORSTER said warm clothing, mackintosh capes, etc., had been despatched in large numbers to Mesopotamia. He also understood that the Director-General of Voluntary Organisations was in constant touch with Busreh, and had supplied and forwarded from time to time all the comforts which he had been asked to provide.

Mr. BILLING: Are we to understand that large numbers mean necessary numbers?

Mr. FORSTER said, as far as he knew, it did.

Sir J. JARDINE asked whether lime-juice and fresh vegetables were included especially for garrisons where scurvy was said to have broken out.

Mr. FORSTER said he did not think that the Director-General of Voluntary Organisations would be responsible for the despatch of vegetables, and they ought to be supplied by the Regular Army Service. As far as he knew, as abundant a supply as they could manage was being sent. Every possible precaution was being taken.

A Lady at Salonika.

Sir H. DALZIEL asked if the daughter of the British Consul at Salonika was sent home by the military authorities there, and if she had been allowed to return, in defiance of the opinion of the intelligence officers in Greece.

Mr. FORSTER said the lady was permitted to return by the General Officer Commanding the British troops at Salonika. He was not aware of the opinion of the intelligence officers in Greece.

Recognition of M. Venizelos.

Nov. 15.

Lord R. CECIL, replying to Mr. LYNCH, said:—The Allied Governments would, of course, recognise the belligerent rights of those Greek volunteers who attached themselves to the Allied Forces at Salonika. M. Venizelos was not in revolt against the King.

Mr. LYNCH: How can the noble lord justify the assertion that M. Venizelos is not in revolt against the King when he is raising armed troops which are defying the King's authority?

Lord R. CECIL: We have M. Venizelos's own account of it.

Lord R. CECIL, replying to a further question by Mr. LYNCH, stated that the Allied Governments had made a provisional advance of 10,000,000 drachmæ to the Government of M. Venizelos. He entirely agreed that the present position of States openly financing a provisional Government without formal recognition of its authority was anomalous, as were the circumstances that occasioned it.

Mr. LYNCH: Is there any precedent for giving a subvention to a subject in revolt against his Monarch and at the same time jeopardising the campaign by propping up the throne of that same Monarch?

Lord R. CECIL: As far as I know there is no precedent for the circumstances. So far as we are concerned the sooner the anomalous state of affairs comes to an end the better.

PLUMBING IN SERBIA.

The following extract from a letter written by the matron attached to the medical unit sent out to Vodena by the Wounded Allies Relief Committee, 8, Grosvenor Gardens, S.W., is of interest in showing what has to be done in arranging a building as a hospital:—"The house was just an ordinary private one, and consequently pipes have had to be arranged, sinks made, portions of the passage-ways screened off to make bathrooms, and two kitchens provided. The one already existing in the basement was rearranged as a sub-kitchen capable of cooking for 160, and a second kitchen was made upstairs. Out here it means 'making bricks without straw.' . . . I view with satisfaction a sink that I have just arranged for the kitchen. The trough is made from the wood of packing-cases, lined and neatly joined with the tin from petrol-tins, and the pipe below to the floor, where it joins the waste-pipe, is of the approved pattern, so that the proper water seal exists. This pipe had to be made by cutting small sections of tin and overlapping them. We have our own tinsmith, but he is a Serb, so that most of my instructions have to be given by drawings."

The Mesopotamia Commission sat at the House of Lords on Tuesday to hear further evidence.

The Greek Metropolitan at Durazzo has been arrested by the Austrians, who have sent him to Vienna.

Inhabitants of Roumania who have suffered from the enemy invasion are to be compensated by the Government.

An official report has been presented by Professor Jean Cantacuzene and the Director of the Bacteriological Institute at Bucharest upon their examination of the sweetmeats dropped by German aviators and spread over the city by German spies. Experiment showed these to contain disease-producing bacilli, including those of typhoid fever and infantile complaints. In the flasks discovered at the German Legation were found cultures of morve (glanders) and a very virulent form of anthrax.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

War means augmented and new transport services, and in this direction, I understand, the Khedivial Mail Steamship Company has done exceedingly well. Last December, as announced previously, the management was able to clear off the arrears on preference payments and to resume payments on the ordinary shares. For the year 1914-15 the board distributed five per cent., and since then an interim return of five per cent. has been made on account of the twelve months ended on June 30 last. Recently in London the market has had visions of a dividend of ten per cent. or more for the whole twelve months, a payment which would restore the company to something like the position it occupied a few years ago, and from which it was ousted through an accumulation of bad luck. The visions have been eclipsed, for, as will be seen from our City section, not only has a final dividend of 10 per cent. been declared, but a bonus of 10 per cent. has also been announced, making a total return to shareholders of 25 per cent. on the year.

The figures given in the report are worth study. After making allowance for the estimated liability in respect of excess profits duty, the working of the year resulted in a net profit of £51,957, compared with £19,731. After paying the increased dividend and bonus, the fine sum of £28,598 has been carried forward, against £12,637 brought over from last year. During the year under review, a number of the company's ships have been requisitioned for British Government service, others have been trading between Egypt and the United Kingdom, while the Cyprus mail service has been maintained and also a portion of the Red Sea pilgrim traffic between Egypt and Jeddah. Those vessels which have come home to British ports have been repaired.

Very important indeed are the indications of prosperity and well-being which are to be found in the result of the year's working of the Anglo-Egyptian Bank, with the dividend declaration of which for the year ended August 31 we have already dealt in THE NEAR EAST. In addition to the usual return to shareholders of 15 per cent., it will be recalled, a bonus of 2½ per cent. (income-tax free) is also to be paid. From the annual report, which is to be submitted to the meeting of shareholders next week, I take the following particulars:—Gross profits, £212,600 (increase, £23,700); net profits, £12,000 (increase, £10,500). Deposits have increased by more than £2,300,000. Holdings of Treasury Bills have increased from £1,400,000 to £3,550,000, and the cash holding from £1,279,600 to £1,786,000. The reserve fund exceeds the paid-up capital by £190,000. What could be better?

Mr. C. W. Twelves, late president of the British Chamber of Commerce in Belgium, has written from Cairo to the November Trade Supplement of *The Times* to support the contention that if Great Britain prohibits importation of all enemy products, while allowing Allied or neutral country products in free or under very light import duties, every German factory would soon have a subsidiary plant on

neutral soil. Mr. Twelves points out that "German factories have for many years past already existed in large numbers in many neutral countries, such as Switzerland, Holland, Belgium, etc., etc., and to a less extent perhaps in Great Britain, France, and Italy, etc. In some instances the fact that Germany controlled these industries was hidden either by the use of a non-German title or by allowing the name of an already established industry, bought up by Germany, to subsist."

In his letter, Mr. Twelves mentions a typical instance of the latter evil. "A French firm established in Egypt," he writes, "ordered a light railway plant from Decauville in France, and when the order was carried out the French firm here were much surprised to find that a large part of the goods came from Koppel in Germany, who, it was afterwards ascertained, held a controlling interest in Decauville, France." If I am not mistaken, British merchants all over the world could cite many instances of this method of Germany's "peaceful penetration," and it is to be hoped that after the war such barefaced exploitation will be impossible. I am aware that there is a boot for the other foot, that British manufactories have been established in foreign countries, and now in some cases may actually be working there. They may be stopped from doing so; but that would be a "reprisal" which we could afford to meet, and I trust its possibility will not be allowed to stand in the way of our initiating commonsense methods. The great point is that we must rid ourselves of the "German octopus grip" (to quote an apt description applied to the Hun stronghold by Mr. Twelves) and no private or individual interests must be permitted to stand in the way.

People who are inclined to minimise the importance to the Entente of Roumania should study carefully a thoughtful article in the *Portnightly*, by "Politicus," on the "Position of Roumania," in which he examines the statistics of her grain and petroleum industries. Roumania's downfall would be a disaster of the first magnitude to the Grand Alliance; he declares, with solemn truth: "It would almost completely nullify the British blockade. Germany and Austria-Hungary could hold out indefinitely as far as bread, meat, and petroleum are concerned, and their position with regard to wool and leather would be greatly improved. In addition, the Roumanian mines could supply them with considerable quantities of copper, nickel, etc."

But it is not only from that point of view that our enemies would gain. Readers of THE NEAR EAST will recall that in a recent article on Serbia we described the great railway projects upon which the Huns have set their hearts. This is what "Politicus" has to say upon the same subject, and I believe too much attention cannot be paid to his views:—"Instead of a single railway line towards Turkey and Bulgaria, Germany would command four. Her transporting and her striking power by railway would be quadrupled. In addition, she would dispose of the Danube from the source to the mouth, and she could transport on it vast bodies of troops and millions of tons of food and stores, leaving the railways free for other transport. There is a canal which connects the Elbe and the Danube. By subduing Roumania, Germany could easily send a large fleet

of submarines by way of the Elbe and Danube into the Black Sea, which might become a German-Austrian lake."

The Poland farce now being staged by the two Kaiser impresarios may be a crude political bluff; but it is, none the less, a military measure of some significance, for it will be held by the pirate kings to justify the enrolling in the armies of the enemy of thousands of Russian Poles. Beyond this, however, no importance attaches to the promulgation of the "paper" State. Certainly it has no bearing on the economic situation, nor is it likely to last long enough to affect it. This does not signify, however, that the creation of an autonomous Poland, after the war, will not be a powerful factor in the economic development of Central Europe; but such a province, or State, must be independent of Austro-German rule, and not a mere creation of those States, lamely set upon their legs to further their interests. A Poland of the latter sort would be an insignificant member of that Mittel Europa confederation of States which Naumann has been writing about, and its fortunes would be those of Prussia.

As was pointed out in THE NEAR EAST recently, however, the formation of this Central European combine cannot and will not be permitted if a lasting peace is to be signed, and if Prussia is not to continue to be a direct menace to Western civilisation and progress. We can, therefore, discard the probability of a Prussianised Poland, as is now designed by the grace of the Kaiser, becoming a unit of such a combine. But an autonomous Poland, created under the auspices of the Czar, is a different matter and one of considerable commercial interest to us. Needless to say, it must have a port of its own—a concession which, I think, the Russian Government will willingly grant—in order to enable it to draw its necessary supplies and manufactured articles from across the seas; without a port, it would remain a closed market to all the world excepting Germany and Austria—surely a state of affairs that would not tend to strengthen the country's economic relations and freedom of action. Poland, as it has been sketched by the Grand Duke Nicholas, with its own seaport, would rapidly become a leading State in the Near East, and would wield an important economic influence throughout Eastern Europe.

While on the subject of Poland, mention must be made of the lecture given at Burlington House by Professor Masaryk on Monday last on Czech aspirations. The Czechs, whose home is Bohemia, do not seem to be as pro-German as Pan-Germans fondly imagine; they are distinctly pro-Ally, and long for the success of our arms whereby they will be able to throw off the Austro-Teuton yoke and gain their independence. There is no valid reason why they should not be allowed to do so. Moreover, it would favour our own interests, political as well as commercial, in the Near East. Bohemia, it must be remembered, is the most industrial province of the Austro-Hungarian Empire, and the loss to the Teuton Empires of her factories and output would be a serious blow. A Mittel Europa without Bohemia would be an octopus without its body. So let us remember the aspirations of the Czechs and favour them.

COMMENTATOR.

The Prosperity of Egypt.

Healthy State of Government Finances.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 2.

The statement of accounts for the period ended on August 31, just published, reveals a continuation of the satisfactory condition of the State finances already referred to on previous occasions. Revenue at the end of August stood at £E6,927,214, as against £E5,930,455 on the same date in 1915, and expenditure at £E6,976,784, as against £E6,308,929. Revenue had therefore improved by £E966,759 and expenditure had increased by £E667,855 during the five months, with the result that the balance is £E328,904 better, or a deficit of only £E49,570, as against one of £E378,474 at the close of August, 1915.

Improvement in Revenue.

The principal heads of revenue showing improvement during the period have been:—Direct taxes by £E12,083, Customs £E402,583 (an increase of 70 per cent.), tobacco dues £E99,164, legal fees £E10,506, railways £E487,118 (an increase of about 40 per cent.), Post Office £E13,685, investment of funds £E20,849, and sale of land £E11,216. It is to be noted that the latter item already exceeds by £E5,635 the total estimate for "extraordinary receipts," in which proceeds of land sales are included. The only heads showing any important diminution were port dues, by £E13,954, and Domains receipts, by £E50,171. The decrease in the last-named is due to the inflation of the receipts during last summer by the proceeds of the sale of the 1914 cotton crop, which had been held over owing to the bad prices ruling during the autumn of 1914; the receipts this year are actually £E5,901 better than they were at the end of August, 1914. During August this year Customs increased by £E73,207, legal fees by £E11,071, and railways by £E82,120, and the total improvement in revenue for the month was £E144,664.

Expenditure during the five months was, as already mentioned, £E667,855 more than during the corresponding period of 1915. The chief items causing this increase were: Domains, by £E16,653; Post Office, by £E31,857; Public Health, by £E30,520; Irrigation, by £E40,889; Railways, by £E551,647; and provincial services, by £E21,943.

It is perhaps interesting to note that, by comparison with August, 1914—the month in which the first blow of the war was felt—the revenue during August this year was £E395,784 better—£E1,151,773, as against £E755,989. How improved the position now is can be gauged from the comparison of some of the heads of revenue during the months in question. Thus, direct taxes are £E72,067 (£E236,588), Customs £E102,860 (£E196,791), tobacco £E70,203 (£E164,575), legal fees £E30,913 (£E92,157), railways £E121,698 (£E329,743), Post Office £E7,149 (£E25,308) above what they stood at in August, 1914. (The figures in parenthesis are the amounts realised this August.)

Signs of the Times.

As a matter of fact, in addition to the State accounts there are other ample indications of the prosperity existing to-day in the country. Debts are being liquidated with alacrity, and very little further credit is being asked for, whilst the mortgage banks are finding their instalments and arrears coming in in a most satisfactory manner. Another striking indication of the local prosperity is the support that is being given to the share market. The few shares that are quoted are being very much sought after. Unified is in very great demand, and the recent issue of War Loans at 6 per cent. does not seem to have affected this security, which at present prices returns 5 per cent. At times it has been exceedingly difficult to find any lots offering, and con-

siderable consignments have been received from London and Paris. All have been absorbed with the greatest ease, and it is estimated that on an average £100,000 worth has been brought over monthly during the past few months. The interesting feature about these purchases of shares is that the buyers, one and all, are paying hard cash. There are practically none of the purchases on margin, which denote speculation, and those of the banks which do such business have had very few applications for advances against new shares purchased. One can, I think, say without exaggeration that all these shares have been acquired by bona-fide investors, which is, forsooth, one of the surest indications of local prosperity.

Bank of Egypt—Probable Reconstruction.

By-the-bye, I am credibly informed that a local financial group is negotiating for the purchase of the remaining assets of the Bank of Egypt, which is still in liquidation. The syndicate in question is, I understand, trying at the same time to raise sufficient capital locally to enable it to reconstruct, on a modest scale, of course, the old bank. The members of the syndicate appear to consider that more could have been made out of the liquidation and that they could do a great deal with the remaining assets. It remains to be seen whether their view is correct. Certainly the resurrection of the oldest bank in Egypt would be welcomed in many quarters, where its disappearance aroused genuine regret, although it is to be feared that too long has been allowed to elapse since the closing of its doors for the assets still unrealised to constitute much of a foundation for a reconstruction.

Trade between Egypt and the Sudan during September was somewhat brisker than a year ago, imports from the latter amounting to £E53,725, and traffic the other way to £E104,285, as compared with £E38,153 and £E95,185 respectively last year. The chief imports from the Sudan were:—Live stock, £E14,271; skins, £E2,444; maize, £E16,268; sesame, £E7,662 (the amounts for these two items for the nine months is a little more than double that of 1915); gum, £E1,204; and charcoal, £E1,250. No cotton came down this month, presumably because adequate accommodation could be found on steamers at Port Sudan and Suakim. Chief exports to the Sudan were refined sugar, £E27,291; cotton tissues, £E29,332; and cereals, £E7,779.

SIX MONTHS' SUDAN TRADE

According to statistics recently issued by the Sudan Central Economic Board, the values of the principal articles imported and exported during the first six months of the current year were as shown in the following table, the figures for the corresponding period of 1915 being added for purposes of comparison:—

Imports.

	(Jan. to June) 1915.	1916.
Cotton fabrics.....	232,373	258,192
Sugar.....	121,003	183,205
Coal.....	20,958	124,321
Coffee.....	22,060	47,673
Sacks, empty.....	36,134	38,667
Flour.....	26,800	31,136
Motor cars and accessories	4,439	25,884
Tea.....	11,029	45,261
Clothing and underclothing	14,803	19,311
Saddlery.....	1,664	15,198
Soap.....	12,876	9,991
Oils.....	3,404	8,554
Cordages and cables.....	2,208	7,669
Boots and shoes.....	6,401	7,418
Timber.....	20,661	6,539
Spices.....	3,882	5,926

Exports.

Gum.....	197,656	470,597
Cotton, ginned.....	127,010	252,042
Dura.....	108,153	173,326
Sesame.....	53,205	132,081
Cattle.....	52,804	44,406

PERSIAN TRADE.

Notes by the British Vice-Consul at Bushire.

The British Vice-Consul at Bushire (Mr. H. G. Chick) reports that hitherto Bushire has been the port of supply and shipment for the coastal region extending from the Province of Arabistan to the neighbourhood of Lingah, for the Province of Fars, and to a small extent for the towns of Isfahan and Yezd in Central Persia. Up to 1907 the Bushire-Shiraz-Isfahan route had been the principal caravan road for all merchandise entering the country by the Persian Gulf, piece-goods and sugar and other commodities for the important Isfahan market finding their way up-country from Bushire. Since that year increased traffic on the road from Ahwaz to Isfahan reduced to a large extent dealings between Bushire and Isfahan, both in imported goods and Persian produce. Larger sales in Fars and the coastal region, and greater business activity generally, however, have helped to maintain the value of trade entering and leaving the port at its previous level, viz., £1,000,000 to £1,500,000. Continual political disorders in one region or another of Southern Persia supply the reason for lack of further progress.

The outbreak of the European war, followed by the British campaign in Mesopotamia against Turkey from November, 1914, has effected radical changes in the volume of trade in the principal classes of imports and exports, viz., piece goods, sugar, tea, spices, gum, opium, carpets and almonds.

The total import of loaf sugar, previously brought from Belgium by German steamers, amounted to only 609 tons during the period August, 1914, to March, 1915, as against 4,525 tons in the corresponding period of 1913-14. On the other hand, imports of crystal sugar from India and Hong Kong amounted to 2,160 tons, as against 779 tons, during August, 1913, to March, 1914. The decrease in the imports of piece goods, from 1,112 tons during August, 1913, to March, 1914, to 659 tons during 1914-15 was largely due to the fact that the war has reduced direct sailings from the United Kingdom to a minimum and made shipments via India the only alternative. The closing of the Dardanelles—Batoum route for the large market for tea which exists in northern and central Persia brought the trade in tea back to the Persian Gulf and Bushire, the import for the year ended 21st March, 1915, being 600 tons, or three times the quantity imported in previous years. Similar reasons influenced the trade in spices, imports of which practically doubled.

As regards exports, the demand for Persian opium received a great fillip, doubtless connected with the interruption of the supply from Smyrna. A slump in the export of carpets has been caused by the severance of connections with the Constantinople, Smyrna and Vienna markets, the greatly reduced demand in Egypt and the United States, etc.

LIGNITE DEPOSITS IN SICILY.

The recent discovery of deposits of lignite in the Province of Messina is of considerable interest to manufacturers and users of steam power in Mediterranean Sea countries, for this product, more commonly known as brown coal, is compact, partially carbonised, and forms a fuel intermediate between peat and true coal. The mineral has been found on the property of Sig. Settimo Mingrino, in the Passo del Urni (Sicily N.E.). Active mining has commenced, and about 100 men are employed. The daily output is between 25 and 35 tons.

Although operations are carried on at less than 20 feet from the surface, examinations which have been made indicate that the deposit is of considerable depth, and has a surface area of practically 30,000 square yards. The quality is pronounced excellent.

The result of the analysis of this lignite is not yet available, but it is stated that certain valuable chemical properties have been found, making this discovery of greater importance than was at first realised. The owner is endeavouring to form a company for the development of the mine.

NEW CEREAL FOR CYPRUS.

(FROM OUR OWN CORRESPONDENT.)

NICOSIA, November 2.

Attempts have been made by the Agricultural Department to induce farmers to cultivate rye. Curiously enough, this cereal has never been grown in Cyprus, and until recently was not even known by name. The first Director of Agriculture under British rule, Mr. Gennadius, endeavoured to introduce it, and a few individuals tried it, but did not persevere.

The present director, Mr. W. Bevan, has had some grown on government land, and has some loaves made from rye flour for distribution amongst farmers. The introduction of this cereal should be profitable, since it grows well in poor soils, sandy or calcareous, which abound in Cyprus. It would furnish the earliest green forage, and the straw would be preferable to that of wheat, which is used in one of the local industries—that of making flat trays, by Cypriot women.

It would also be useful for rotation on soils where wheat and barley crops have been for years suffering from a pest (the *tinea temperella*), which has caused much trouble. The yield on most soils is greater than that of wheat. It is doubtful whether villagers would take to rye bread, but it is well that it should be given a trial.

GREECE AND THE ENTENTE.

What is coming to light in Athens regarding the complicity of Greek officials and merchants, politicians also, in the plot to hand the kingdom over to the Prussians, may well warrant the representatives of the Entente Powers in holding their hand until more is revealed, the *Investors' Review* wrote on November 15. Evidently the Greek capital, the Greek army and navy, the banking and mercantile classes, and many among the meaner strata of the people have been bought (or otherwise corrupted) by the Teutons. But until the evidence is complete enough to support conclusive action, it is better to let the infamy yeast itself to the surface.

Where *Truth* gets support for its assertion that the Powers are at variance over Greek affairs we do not know, but Lord Robert Cecil has again and again emphatically declared the contrary, and he is not a man given to lying; and the facts appear to us to support him, because they disclose nothing in the unhappy country's conditions for the Powers to quarrel over. Greece can never now hope to enter upon a great inheritance in outlying lands or to play a master part of any sort in the Near East. Her boundaries will be enlarged in accordance with just pretensions, but the little State can never be more than one of the several liberated and readjusted States into which the Balkans and adjacent territories will be divided under the protecting wing of the Great Powers.

Why, then, should these Powers "differ" about Greece? We cannot guess why, and do not believe that they are at variance, for not one of them is fighting to reach a position enabling it to annex and oppress, either in the Balkans or anywhere else. They are in arms to free the slaves of all races, to revive and liberate small peoples and large, and are ready to do justly by Greece, even as by Bulgaria, once the Turk has been swept off the stage as a "Power."

LANCASHIRE COTTON TRADE.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The market continues to gain strength, and a healthy demand has again been experienced in most quarters. Spinners of yarn have been independent for some time now, and producers of cloth are steadily improving their position. Further high records have been established in American cotton rates, a fresh bullish movement being started by operators in the United States. Egyptian cotton futures have been irregular, and there is some uncertainty as to what will be the effect of the decision of the Liverpool Cotton Association to impose restrictions upon dealings from next Monday in the way of a deposit of £10 a bale, and a permit being secured from a special committee. The demand in piece goods for Egypt continues healthy. Some substantial contracts have been arranged at high figures, and for delivery a long way ahead. Sized goods have been the chief attraction, but printed and miscellaneous fabrics have also moved off well.

A rather increasing demand has been experienced for India, a feature of interest being speculative purchasing by one or two leading houses in shirtings. Further buying has also been reported in dhooties and jaconets at advancing rates. China after being slow for a long time now seems to show signs of waking up, and more business has been done. Owing to there being less anxiety for fresh contracts, manufacturers of cloth, as a body, are holding out for more remunerative prices. In American yarns for home use the tone has been strong and prices have been put up in sympathy with the rise in the raw material. Some spinners are rather afraid to continue selling at such abnormal figures. The margin of profit in 32's twist is healthier than for many years back. Some miscellaneous sales have occurred in shipping counts, but no business of weight has been done. In Bolton yarns prices have not been much affected by the rather easier tendency in Egyptian cotton. Producers are heavily sold and can afford to be independent.

FERTILISERS FOR AGRICULTURE.

British merchants may consult at the offices of the Department of Commercial Intelligence a copy of a Memorandum (No. 5.) dated September, 1916, on the international movement of fertilisers and chemical products useful to agriculture, which has been issued by the International Institute of Agriculture at Rome.

The fertilisers dealt with in the memorandum are: Phosphatic fertilisers, namely, natural phosphates, basic slag, superphosphate of lime, natural and artificial guano, bones and bone manure; potassic fertilisers, namely, potassic salts, saltpetre, and other potassic fertilisers; nitrogenous fertilisers, namely, nitrate of soda, sulphate of ammonia, synthetic and organic nitrogenous fertilisers; general fertilisers, namely, unclassified chemical fertilisers, and unclassified fertilisers, and chemical products employed in agriculture, namely sulphur and sulphate of copper.

REUTER'S TELEGRAM COMPANY.

Messrs. Bircham and Co., solicitors, authorise the statement that the offer to purchase the undertaking of Reuter's Telegram Company, Ltd., has been made by the Hon. Mark Francis Napier, the chairman of the company, with whom are associated Lord Glenconner, chairman of the Union Bank of Scotland; Viscount Peel, a director of the London and Provincial Bank; and the Right Hon. Sir Leander Starr Jameson, Bart., president of the British South Africa Company. Certain investigations are now being undertaken on behalf of Mr. Mark Napier and his friends, and if the result is satisfactory to them the offer will promptly be submitted to the shareholders of the company for their approval. It may be stated that one of the principal objects of the acquisition of the undertaking is to ensure that Reuter's Agency shall continue to be independent of any alien or undesirable control, and that its conduct and administration shall be entirely British. It is intended to continue the existing administration of the Agency, and Mr. Roderick Jones, the present head, will remain in that position with enlarged powers.

TRADE NOTES.

Openings.

The Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), invites tenders for the supply of uniforms, cloth, white and khaki drill, saddlery, accoutrements, furniture, enamel ware, leather, boots, paints, oils, tarbushes, cotton shirts and drawers, blankets (woollen), and miscellaneous stores. (December 10.)

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs, dressings, sundries, etc., necessary for Central Stores for one year from April 1, 1917, to March 31, 1918. (November 25.)

The Director of Stores, Coast Guard Administration, Arsenal, invites tenders for the supply of petroleum and benzine required by the service at Alexandria, Port Said, and Suez during year 1917. (December 1, 1915.)

The Sanitary Commissioners of Gibraltar invite tenders for the supply and delivery of the following coal in such quantities as may be required during 1917:—Best Cardiff steam; South Wales small; Newport large; best quality Durham unscreened; anthracite large; and anthracite nuts. Specifications, conditions of contract, etc., may be obtained from the Sanitary Commissioners' Office, Gibraltar, at which address sealed tenders, on the proper forms, will be received up to the dates mentioned. (November 21.)

The Collector of Customs at Valetta reports that a local firm wishes to take up sole agencies for United Kingdom manufacturers of provisions, household requisites, stationery, jewellery, toys, textiles, clothing, haberdashery, perfumery, etc. Apply to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.

NEW COTTON-PICKING MACHINE.

According to *Al-Mokattam*, of Cairo, Gobran Bey Greis and Hussein Bey Wali have invented a machine to collect cotton bolls, which was tried recently in the presence of Mr. Dudgeon, Mr. Mackillop, and other officials of the Egyptian Ministry of Agriculture, when it is said to have answered the purpose. The machine is very simple and is drawn by a pair of oxen, and can gather the crops of four feddans of cotton in a day at a cost of four or seven piastres per feddan. The invention has been registered, and the inventors propose to seek the assistance of some capable mechanical engineer to perfect it.

ROUMANIA AND RUSSIA.

A Special Commission is being sent by the Russian authorities to investigate the possibility of exporting Roumanian oil for the use of the Southern and South-Western Russian railways. The quantities of oil which it is considered possible to export are estimated at one million tons.

Owing to the establishment of close economic relations between Russia and Roumania there is now an increasing demand for Roumanian currency. The standard exchange rate has been fixed at 44 roubles for 100 lei.

Lately great interest has also been shown in Roumanian currency on the neutral markets. Negotiations are taking place to obtain shares of Roumanian oil properties by Russian financiers, and this circumstance also increases the demand for currency.—*Financier and Bullionist*.

In the *Journal Officiel Tunisien* (September 30) is published the text of a Decree fixing maximum prices for the sale of certain cereals. The Decree provides, *inter alia*, that from October 1, 1916, for the period of the war and during the year following general demobilisation, the maximum prices for wheat, barley, and oats harvested in Tunis shall be as follows:—On railway trucks at the ports of Tunis, Bizerta, and Susa, 32 fr. per quintal for hard wheat weighing 79 kilograms, and soft wheat weighing 78 kilograms. to the hectolitre; 20 fr. per quintal for barley weighing 60 kilograms. to the hectolitre; and 23 fr. per quintal for oats weighing 48 kilograms. to the hectolitre. No permits for the exportation of cereals had been granted up to September 30.

PRODUCE REPORT.**Currants.**

LONDON, November 16.

After the activity and large business that passed during the last three or four weeks the market seems quiet, and prices have slightly declined in some instances.

Sultanas.

The quality of the first arrival of new Greek sultanas was quite satisfactory, and the small quantity that was available met with a ready sale. Afghanistan fruit, old crop, is still coming and sells at full prices. Cretan raisins are quiet, but prices are unchanged.

Figs.

New Spanish are in demand; in fact, it is the only kind available in the market at present, and probably for that reason they are dearer at 47s. to 55s.

Seeds.

Linseed is firm, but not active. London-Calcutta spot 98s., afloat 99s.; Nov.-Dec., 100s., and Dec.-Jan. 101s. Bombay, Nov.-Dec., 101s.; Dec.-Jan., 102s.; and small Nov.-Dec., 98s. Bombay to Hull, small, Nov.-Dec., was sold at 97s. 6d., and ordinary ditto at 99s. Rapeseed is strong and higher prices paid; Ferozepore 80s, while brown Cawnpore to Hull, prompt, was sold at 77s. 9d., and Toria to London, Nov.-Dec., at 83s. Cotton-

seed is firm. Egyptian is unaltered; Bombay dearer; London Sakelarides, prompt, £15 16s. 3d.; ditto to Hull, afloat, £16 15s. Bombay to Hull, Nov.-Dec., £15 15s. Rangoon white beans are very firm, spot £34 ex store; afloat £34, and new crop £31 c.i.f. The market for canary seed is strong, and an active business has been passing this week at rising prices.

Oils.

Linseed oil is firm, spot pipes quoted at £50 10s., barrels, Nov.-Dec., £51 10s.; and Jan.-April, £52 10s. Rape oil is also firm, refined English in barrels, spot, £54. Cotton oil is steady for crude pipes, spot, at £47 10s.; refined pale, pipes, £50 10s.; and sweet barrels, £54 to £56. Olive oil is firm on spot at £63 to £65 per tun, ex store, in barrels.

Oilcakes.

Cotton Cakes.—The market is practically cleared of any stocks of Egyptian, and good business is being done only in parcels afloat, and for November shipments at £12 per ton ex ship; while English makes are obtainable in limited quantities at £12 10s. to £12 15s. Linseed cakes are in small demand considering the time of year; values, however, are well maintained owing to the small quantity of English and foreign that is available on spot or for shipment. Best London made offered sparingly at £15 10s. to £15 15s. East India seed, pures, sell at £15 5s. to £15 10s. per ton.

EGYPT'S INSECT PESTS.

An interesting work has just been issued under the auspices of the Sultanic Agricultural Society on the insect and related pests of Egypt injurious to the cotton plant. The author is Mr. F. C. Willcocks, the entomologist to the Society, who has confined his attention to the pink bollworm, for the volume that has just made its appearance is only the first of three similar, all of which will deal with the varied insect pests of the country.

Originally it had been intended to publish an account of the insect and related pests of cotton in a single part to form the first volume of the complete report, but the great importance assumed by the pink bollworm here has made it imperative that a detailed and illustrated account of what is known up to the present time about this scourge should be put into print without any delay.

The second portion of the first volume will deal with the cotton worm, the ordinary bollworm, the cutworm, the aphis, and other creatures of this kind, while the second volume will include an account and suggested methods for the control of the insect and related pests of agricultural and horticultural crops other than cotton; fruit and fruit trees; shade trees; ornamental plants and shrubs; domestic animals; household pests; and insects directly injurious to man by biting or stinging him, or acting as carriers of disease germs.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

— CAWNPORE, INDIA. —

Everything in Pure Wool.

CONTRACTORS TO GOVERNMENT.

NEUTRAL CARGO ON ENEMY SHIPS.

Important Judgment in Prize Court at Alexandria.

Cargo ex the German steamer Lutzow is still the subject of litigation in the Alexandria Prize Court. The most recent case is one in which the American Trading Company claimed a release of goods, shipped by its Hamburg branch, on the ground that it was a neutral concern which, on the outbreak of hostilities, took steps to sever its connection with the enemy.

Giving judgment, Judge Cator said:—

"On the general question of principle I have already expressed my opinion that a neutral or British subject is entitled to a reasonable time within which to withdraw his property, and I now have to determine whether the claimants have so acted as to obtain any benefit from that rule.

"Shortly after the declaration of war the company decided that its Hamburg branch should engage in no fresh business, and that the affairs of the branch should be wound up, and it contends that under these circumstances its goods cannot be condemned as prize, in spite of the fact that up to date of the last affidavit filed in the cause the business had not been fully liquidated. It really comes to this, that, in effect, I am asked to declare that a neutral house in an enemy country need do no more than cease to take new business in order to benefit by the rule to which I have already referred, and to say that the Court should pay no attention to the length of time which may elapse before the liquidation of the business is concluded. That, however, is a proposition which I cannot accept. The cases are not very helpful on the point, but I think they indicate that promptitude in deciding to withdraw is not the whole duty of the merchant. Promptitude of action in removing his goods or winding up his affairs seems also to be required, and certainly it accords with common sense that a merchant should not be at liberty to claim any special indulgence unless he can show that he has taken extraordinary pains, even at the cost of some sacrifice to himself, to expedite the closing down of his house."

His Honour then discussed the liquidation proceedings, and, observing that the company determined on August 25, 1914, that it would wind up the affairs of its Hamburg branch and would do no fresh business there, proceeded:—

"What the exact nature of the company's business may be I do not know. We have no information as to details. But Mr. Morse has produced two balance-sheets relating to the Hamburg branch, which show its financial position on June 30, 1914, and December 31, 1915. From these it appears that considerable progress had been made in the liquidation by the end of 1915, but none the less the account was still some way from being closed. The total assets shown on the first balance-sheet amount to upwards of \$228,000, in which merchandise on hand figures as more than \$69,000, while at the latter date it is something over \$27,000, to which merchandise in hand contributes over \$6,000. But it has taken sixteen months to reach this point. How far the liquidation had got by the end of the year 1914 we are not told.

"The burden of proof in these cases must always rest with the owner of the goods, and when the liquidation takes so much time as this has done the Court is entitled to ask for special and particular explanations to account for the delay—explanations which in this case have not been attempted.

"So far as I can judge from the scanty information laid before me, the affairs of the house have been continued in just the same manner as before the war. It is doubtless true that no fresh business has been entertained, but certainly no special effort has been made to expedite the liquidation of the old. The great object seems to have been made to avoid loss. And although I should most gladly order a release of the company's goods if I felt that the law allowed me to do so, and should certainly give the company the benefit of any doubt that I might feel, I can only hold that this branch was carried on as a house of

business in an enemy country during war time, and as such ran the risk of having its property seized as prize.

"Any other conclusion would be an admission of the contention which I have just declared to be inadmissible, for if I were to release these goods I can imagine no case where a house having ceased to transact new business on the outbreak of war could not claim immunity from capture for all its merchandise.

"I regret to say that I must treat the claimants' property as if it pertained to an enemy house, and as the ship upon which it was seized has already been confiscated, I must deal with the goods in a similar manner. An order for sale has already been made, so that I have only to declare that the goods or the proceeds of sale are confiscated as prize for the benefit of the Crown."

AGRICULTURE IN EGYPT.

The Commission of Agricultural Commerce of Egypt continues its good work, and at a meeting held at Cairo on October 17 good progress was reported. The President (Mr. Gerald C. Dudgeon) described the progress which had been made with the sericulture experiment, and the manner in which the two families of Armenian experts had been installed at Ras-el-Khalig. The experimental work with "til" was being continued, and it was hoped shortly to publish the results of the flax-growing experiments of the Government farm.

Inquiries were being made with reference to the use of "bourdi," the Egyptian bull-rush for paper-making. Samples of coarse paper were recently exhibited in Alexandria, made from this plant, and the exhibitors seem confident that it will prove remunerative to manufacture pulp for export. The chief obstacles are connected with the difficulties of collection and transport. In the course of a subsequent discussion, it was pointed out that attempts which had previously been made to utilise the material in normal times failed owing to these difficulties. It was, however, agreed that it was the duty of the Commission to advise the Government of the points where the collection of the raw material might affect the scheme, in order that there should be no misunderstanding by those interesting themselves in it later. "Bourdi" was doubtless to be found in large quantities in the northern lake regions, where it was difficult to approach by boat owing to the shallow water, and was equally difficult to transport by men. The President pointed out that instances had recently been brought up, showing that where the plant had been frequently cut it had ceased to exist, and, in order to ensure a continuance of the crop, it would be necessary to leave it uncut about every third year. The question of the interference with fisheries was one which also required examination if cutting was to be carried on in the lake region.

Naus Bey's note on wheat and flour was then considered, and samples of types of Egyptian wheat and flour were shown. Egyptian wheat was far more impure than any other on the market, but improvement and selection of the best kind were being undertaken at the Ministry's farm at Gizeh. Before making definite recommendations, it was necessary that the experimental growth should be carried on under Government supervision, but, in the meantime, there seemed no reason why cultivators themselves should not improve their strains, and the President agreed to issue a short circular advising the procedure to be adopted by private individuals to obtain more perfect seed.

Mr. Dudgeon thought Egypt was the only country where the ordinary mixed commercial kinds were regularly used for sowing, nobody apparently making any attempt to obtain uniformity.

The Roumanian revenue for the financial year 1915-16 amounts to £25,796,880, showing an excess of £3,087,760 over the revenue of the previous year. The excess of receipts over expenditure amounts to £5,332,240.

At its last meeting, the council of the British Cotton Growing Association resolved that a letter be sent to Sir Reginald Wingate, the Governor-General of the Sudan, congratulating him on his appointment as High Commissioner for Egypt.

POPPY CULTIVATION.

Important Developments in Macedonia.

An important industry of Macedonia—and one that has brought excellent returns to the growers—is the cultivation of the poppy plant. Besides the opium extracted from the flowers, an oil is expressed from the seeds that is said to be superior to Russian sunflower oil and even to English and American cottonseed oil. The residuum, after being pressed into cakes, forms a nourishing food for cattle.

This year's crop of the poppy plant has been most abundant (its estimated value being £100,000, including the flowers, the opium extracted, and the seed produced), the various centres of cultivation contributing to the season's yield in the following amounts:

Districts.	lb.
Tikvesh.....	55,000
Veles.....	55,000
Ship.....	33,000
Kumanovo.....	33,000
Skopje.....	26,400
Radovich.....	6,600
Kratovo.....	6,600
Prilep.....	11,000
Kotchani.....	15,400
Total.....	242,000

The prices obtained for the season's crop ranged from 6d. to 8½d. per oka (the oka being the equivalent of 2½ pounds).

The primitive methods of extraction pursued in Macedonia produce but 42 per cent. of oil, but it is believed that with modern presses the output would be much greater. One-third of the seed suffices for the needs of the country, the remainder being exported. The opium produced likewise is exported, but it has been found impossible to obtain any reliable information as to the probable value of this special product.

BRITISH PETROLEUM COMPANY.

In the House of Commons, on November 9, Mr. Shirley Benn asked the President of the Board of Trade if he would say what percentage of the stock of the British Petroleum Company was owned by Germans; if it was now vested in the Public Trustee, and why he had not the power to sell if he could obtain a reasonable price?

Mr. Pretyman said that the capital which was held by or on behalf of a German company was now vested in the Public Trustee. Russian, French, and Belgian interests claimed to be entitled to 49½ per cent. of the capital of the German company. The question of how best to deal with the shares in the national interest was under consideration. Pending the result of that consideration, he was not prepared to authorise the sale.

Sir E. Carson: Is the intention of the Government in such cases to prevent them using the name British Petroleum Company?

Mr. Pretyman: I think it is very probable the name will be changed.

Major Hunt: Will the hon. gentleman see that the Belgians and French get their share? The Belgians complain that they are not well treated by the British Government, and I should think it is probably true.

On November 15 Major Hunt asked the President of the Board of Trade in the House of Commons if he would say when the Board of Trade proposed to authorise the Public Trustee to sell the shares in the British Petroleum Company, and so stop profits being taken from the British public to be held in trust for Germans until peace was declared.

Mr. Pretyman said the shares of the controlling company belonging to enemies would be sold by the Public Trustee. The question of how best to deal with the shares in the national interest was under consideration. He was not prepared to state what method would be adopted. Neither the shares nor any of the property were being held in trust for the Germans, but would be an asset in the hands of this country at the end of the war.

The recent organisation in Smyrna of a new Turkish firm to conduct a general import and export business, on commission and for its own account, is reported by the American Consul at that port.

ENGINEERING NOTES.

Coal Substitute for Petrol.

Mr. Sydney H. North, in the November issue of *Cassier's Engineering Monthly*, in the course of an interesting article on the economic and scientific treatment of coal, declares that coal should be deprived of all its invaluable products before it is used as a fuel for heating purposes, and it has been proved that by the use of low temperature distillation a solid fuel of good heat-providing properties may be supplied after the oils and ammonia and pitch have been extracted. Many endeavours have been made for years past, to discover some substitute for petrol, or some means of treating it, which would reduce the quantity consumed. The importation of this spirit amounts approximately to 200,000,000 gallons, for which we are entirely dependent on foreign sources of supply. What should we have done had these sources been cut off? We should have been compelled to resort to the same practice as Germany, who has made up her large deficit of petroleum spirit by distilling oil from coal and obtaining from it benzol which, in its refined state, is equal to petroleum spirit. Since the war began Germany has produced millions of gallons from her coal. There is, therefore, no economic or scientific reason why we should cast away the invaluable products obtainable from this mineral. There is no reason why we should be so completely dependent on foreign countries for the oil we require for power purposes of every description. There are, however, grave reasons why we should, from economic and scientific points of view, deal with our coal resources in a rational manner.

Gas-making Economies.

Discussing the question of coal substitutes as fuel for gas-making in a recent article in *The Times Engineering Supplement*, a writer observed:—"In Algeria it is common practice to distil eucalyptus wood mixed with about 20 per cent. of coal. This wood, which is of the white, and not the red, variety, is cut into blocks about four inches cube. After distillation for two hours it will yield per ton about 11,650 cubic feet of a somewhat inferior gas, and the charcoal residue obtained amounts to about one-quarter of the original weight of wood treated. Since the beginning of the war in works of importance Russia has adopted somewhat novel means of overcoming the coal shortage. In this case the raw substance carbonised consists of a mixture of coal, wood, and mazout, the last being a residue obtained from petroleum. When the mixture consists of 35 per cent. of coal, 64 per cent. of wood, and 1 per cent. of oil residue the yield of gas amounts to about 22 per cent. of the total products obtained, while coke accounts for 60 per cent and charcoal for 15 per cent. The greater portion of the charcoal may be readily separated from the coke by hand picking. In Bavaria and Switzerland wood gas was in regular use some years ago, and was popularly known as Pettenkofer gas. In these countries it was found that up to 14,000 cubic feet of gas could be obtained from a ton of pine, but the gas contained as much as 25 per cent. of carbon dioxide which had necessarily to be removed by means of lime. The ultimate product yielded contained nearly 8 per cent. of unsaturated hydrocarbons, and was conspicuous from the point of view of illuminating power. The by-products consisted of about 20 per cent. of charcoal and 5 to 7 per cent. of tar of good quality. The French Committee speak highly of the use of resins obtained from the tapping of certain pine trees. This gum-like material is collected and strained, and may then be carbonised with or without admixture with coal or any other substance. As would be expected distillation takes place very rapidly and results in a gas of exceptionally high candle power, while practically no solid residue remains behind.

The scarcity of the material, however, and its cost (about £6 per ton) precludes its adoption on a large scale. In the South of France experiments have been conducted with the residues from the production of olive oil. The pulp of the fruit, after squeezing, is used direct, and yields over 40 per cent. of its weight in gas. The solid residue consists of charcoal powder, which is mixed with tar and employed in the manufacture of briquettes. The chief drawback to carbonising wood and such materials in conjunction with coal is the change which is found in the density of the gas. Wood gas is invariably of greater specific gravity than neat coal; hence its adoption must be followed by the wholesale adjustment of burners and other appliances."

Oil and Gas Production

Confined though the work practically is to American conditions, the book of Professor Roswell H. Johnson and Mr. L. G. Huntley, of the University of Pittsburg, on the principles of oil and gas production, will appeal to a considerable section of the scientific world. The authors have treated more fully the newer, less developed topics of their subject, and less fully those that already possessed a literature of their own. It is of interest to note in passing that they contest the view held by some that the drilling of wells "is the very heart of oil and gas production" . . . "it is, in fact, merely an operation used also by the miner and prospector for water, and is not worthy of the disproportionate attention it has received, as compared with that given to the very vital need of developing better methods of locating and extracting." Students of the subject will be more than interested in the chapter (one) on varieties of oil and gas. Dealing with "heating value," in the same chapter, the authors observe that many of the heavy "fuel" oils contain a certain percentage of light hydro-carbons, frequently enough so that it pays to "tip" them. That is "to run them through the first step in the distillation process in order to extract the relatively high-priced gasoline content before the bulk is sold as fuel oil. Even in the higher grade petroleum, after the distillation is carried further the residue is sold as fuel oil. This is done in several American fields, as well as in Russia and Roumania." The book abounds in diagrams and other illustrations, and should appeal to all who are interested in the developing and widening of this great industry.

Seed-sowing Appliances

One of the latest American agricultural inventions, apart from the really interesting and economic advantages which it promises to agriculturists and farmers, will appeal particularly to a certain class of farm hands who agree with the inventor that "making drills and sowing seed by hand in the usual manner are not only tedious and back-breaking operations, but they are also wasteful, because far more seed than is necessary is planted, involving thinning out at a later date, when the seedlings have attained a certain growth." In the latest American idea the seed is sold already spaced and embedded in a tape. This tape is composed of a special fertilising material, which, decomposing and associating with the soil immediately contiguous to the seed, assists its germination and growth. The tape is sold in coils up to 40 or 50 ft. long, but it can, of course, be cut to the length required. All that is necessary is to plant the tape in accordance with the directions given. Sowing in this manner can be carried out rapidly and with a minimum of physical exertion. Provided that each seed is fertile, and that the ravages of birds and other pests are overcome, the seedlings will appear in due course a regular distance apart. Not only is thinning-out avoided, but economical use of seed is assured, no more being sown than is actually required. The colour of the tape is not mentioned. It may be "red."

NEW TRANSEUROPEAN RAILWAY.

Enterprising French Project for a Great Electric Line.

M. Herriot, the highly influential Mayor of Lyons, has placed himself at the head of the movement in France for the creation of a great Trans-European Railroad which would directly link up the Atlantic coast of France with Italy and South Russia (says the *Financial Times*). Before the war the only communication overland between the Atlantic seaboard and Russia was through German territory. In order to obtain a sort of "right of way" which would make Russia, France, and Italy independent of the German lines, it is proposed to promote the establishment of a Trans-Continental line which would closely follow the 45th parallel degree from Bordeaux, moving slightly northwards to Lyons, thence to Turin, Milan and Venice. From Venice it would follow the Adriatic coast to Trieste, Fiume, and Agram to the banks of the Danube, passing through Serbia and Roumania into South Russia, where its terminus would be at Odessa.

The line would be 2,500 kilometres in length, and would closely cling to the southern slope of the great mountain ranges of Europe. It would form the axis of the temperate zone, being at an equal distance from the Pole and the Equator. The numerous waterfalls and the character of the country would admit of the line being electrified throughout its entire length. There are no material or engineering difficulties that could not be overcome. Many existing lines could be utilised, but would require widening and the laying down of an additional set of metals. The cost would be amply repaid by the economic and material advantages such a line would produce. It would link up Switzerland directly with the French Atlantic seaboard and greatly facilitate trade between Italy and the West of France. For this reason the Italian Government is said to favour the scheme, and correspondence has taken place on the subject between the French and Italian Governments. Mr. Herriot is of opinion that the capital for such a line should be jointly guaranteed by France, Italy and Russia.

He points out that the Swiss are keenly alive to the advantage of the French section of such a line, inasmuch as it would enable them to link up Switzerland and Swiss products directly with Bordeaux, Nantes, La Pallice, and other Atlantic seaports, thus realising a much cherished Swiss scheme, the "Swiss-Atlantic" line. It has been demonstrated that, thanks to her low railway freight rates and to the St. Gothard Tunnel convention, Germany was able to transform the natural current of traffic towards Mediterranean ports in favour of Hamburg and her other North Sea and Baltic ports, and that she was enabled to bring the whole of Northern Italy under her economic and financial vassalage. If the Continental Allies are sufficiently clear-sighted and sufficiently energetic to take advantage of circumstances, they have in such a line a great economic future, a source of enormous wealth and prosperity. The question is, Have they? asks M. Herriot.

On and from November 1, all bales of cotton for transport over the Egyptian State Railways must be hooped. Bales secured with wire or rope will not be accepted.

One of the most important industries recently opened up in the Caucasus is a large plant for the production of French turpentine near the railroad station of Borjoh, in the Government of Tiflis.

SULZER BROTHERS, WINTERTHUR, SWITZERLAND
Steam Engines of all sizes, especially Uniflow Engines, Boilers and Superheaters. Sulzer Diesel Oil Engines from 20 to 6,000 B.H.P. NITRATE PRODUCTION.**Reduced Output and Increased Prices Explained.**

An American Consular report throws some light upon the nitrates position in Chili. It states that the production of nitrate of soda at all the Chilean oficinas during August, 1916, was 5,396,981 Spanish quintals of 101.4 lbs. each. The exportation from all ports during the same period was 4,338,013 quintals. There was a slight increase (84,205 quintals) in production over the preceding month, but a considerable decline (1,336,075 quintals) in exports.

This falling off in shipments may be attributed largely to a storm that prevailed along the coast and delayed loading operations. A violent wind at Mejillones destroyed or beached a large number of lighters at that usually quiet port, thus crippling the loading facilities there until lighters to replace those destroyed were brought from other ports. During the latter part of August and the first part of September there were an unusual number of vessels in the nitrate ports awaiting cargo.

Chili's August production and exportation of nitrate in the last five years have been:—

	Production.	Exportation.
	Quintals.	Quintals.
1912	4,870,821	4,115,302
1913	5,352,292	4,302,376
1914	4,839,657	1,362,189
1915	3,443,409	4,939,130
1916	5,396,981	4,338,013

The changes in price of nitrate on the coast have not been great, but the market has been rather firm. Nitrate is not pressed for sale, and the demand has not been insistent. Prices at Valparaiso have shown an advance of about 4d. per quintal for ordinary nitrate and about 2d. for the refined for early delivery. At the close of the month quotations for ordinary or 95 per cent. nitrate were about 7s. 10d. per quintal alongside for deliveries up to the end of 1916. Refined or 95 per cent.—1 per cent. nitrate was held at about 8s. 2d. for deliveries in this year, while 8s. is asked for next-year deliveries.

Factors that tend to increase prices are the possibilities of reduction in production, owing to the closing of some oficinas, and a reduction in fuel oil supply to those oficinas that use oil instead of coal, the oil companies having given notice that for the immediate future they can supply only about 80 per cent. of the amount formerly delivered. The wages of men employed in the oficinas, as well as many other expenses incurred in producing and shipping nitrate, are paid in Chilean paper currency, which fluctuates in value. The value of the paper peso has been rising for several months—being at present about 10d., or more than 30 per cent. above its value a little over a year ago—and this rise increases the cost of production.

GREEK FINANCE.

Answering a question by Mr. Lynch in the House of Commons on November 15, Lord Robert Cecil said that the Athens and Ionian Bank had advanced to the Provisional Government of M. Venizelos 10,000,000 drachmas on account of the Allied Powers. He certainly agreed that the present position was anomalous and without precedent.

THE IMPERIAL INSTITUTE.**Department for the Raw Materials of the Empire.**

An Inter-departmental Committee, presided over by Mr. Harcourt, has now arranged the respective spheres of work and co-operation, in dealing with commercial inquiries, of the new Commercial Intelligence Department of the Board of Trade and the Imperial Institute, which in recent years has become a central department for information and investigation respecting the sources and uses of the raw materials of the Empire. In future the Technical Information Bureau of the Imperial Institute will answer all commercial inquiries respecting the sources of supply, technical uses and value of raw materials within the Empire, and will be responsible for supplying all information required in order to bring the producer overseas in touch with the manufacturer at home.

Inquiries as to immediate supplies may be addressed either to the Board or to the Institute, as may be most convenient, but the Commercial Intelligence Department of the Board of Trade will, as a rule, be prepared to deal with inquiries for immediate supplies of well-known raw materials which can be obtained at once through ordinary trade channels. In answering those inquiries in which special statistical or trade information is required in addition to technical information, the Board and the Institute have arranged to co-operate.

Investigations of the possible industrial uses of raw materials will, as heretofore, be dealt with by the Imperial Institute. The arrangement proposed by the Committee has now been accepted by the Secretary of State for the Colonies, the President of the Board of Trade, and by the Executive Council of the Imperial Institute.

BRITISH OIL CONCESSION IN ALGERIA

In the Chamber of Deputies, on November 9, M. Sembat, Minister of Public Works, was interpellated by M. Outrey with regard to negotiations between that Ministry and the London firm of Pearson and Son with a view to the concession to the latter of an exclusive right of prospecting for petroleum within an area of 2,818 square miles and the exclusive right of exploitation within an area of 386 square miles in the province of Oran, Algeria. According to M. Outrey, the British company asked the French Government for this concession in January, 1915, and the Governor-General of Algeria favoured the application subject to Parliamentary approval. The deputy suggested that M. Sembat had attempted to avoid the control of Parliament and to favour a foreign company at the cost of French prospectors.

The Minister, in his reply, remarked that an opposite complaint had been made—namely, that because of his Socialist opinions he refused to give concessions necessary for the national defence. He showed that both complaints were unjustified, and he objected to France's Allies being treated as other foreigners. When the question of exploiting mines in the Loire Inférieure comes before Parliament, he said, the advantage of associating Frenchmen and Englishmen in such enterprises would be seen.

The debate was closed without a division.

COMPANY REPORTS.**Khedivial Mail.**

The report of the Khedivial Mail Steamship and Graving Dock Company for the year ended June 30 last shows that the trading profit, including Government subsidies, and after adding dividends, interest, and transfer fees received, and after providing for estimated liability in respect of excess profits duty and income-tax, has amounted to £85,657. Deducting London office expenses, debenture and loan interest, directors' fees, depreciation, etc., amounting to £33,700, and adding £7,139 brought forward, there is a balance of profit of £59,096. The directors recommend a final dividend on the ordinary shares at the rate of 10 per cent., together with a bonus of 10 per cent., making 25 per cent. for the year, leaving to be carried forward £28,598. The Board report that a number of the company's ships have been used, in various capacities, in the service of the country. Others have traded between Egypt and the United Kingdom. Advantage has been taken of the presence of such ships as have come to the United Kingdom to carry out many much-needed repairs. The Cyprus mail service has been maintained, and for a portion of the year the Government required a mail service to be run between Alexandria and Piræus. The s.s. 'Caloubieh' was sunk while in the employment of the Admiralty, and since the completion of the accounts the s.s. Prince Abbas has been sold. Meeting, 4th proximo, 12.30 p.m., Winchester House, E.C.

Anglo-Egyptian Bank.

The report of the Anglo-Egyptian Bank for the year ended August 31 states that the gross profits, after making full provision for all bad and doubtful debts, are £212,608, and deducting the expenses, amounting to £99,783, there remains £112,825 net profit for the year, which, added to £50,000 brought forward, makes £162,825. The directors propose a further dividend at 20 per cent. per annum, less tax, making 15 per cent. for the year, together with a bonus of 2s. 6d. per share, free of tax, to be paid on December 1, to transfer to reserve fund £10,000, to apply £5,500 as bonus to staff, to write off premises account £5,151, and to contribute to staff provident fund £2,674, leaving a balance to be carried forward of £52,000. Meeting, 21st instant, 3 p.m., 27, Clement's Lane, E.C.

Central Cheleken Oilfields.

The balance-sheet of the Central Cheleken Oilfields Company at December 31, 1914, shows the following items:—Debit: Capital issued (less £2,574 calls in arrear), £300,926; sundry creditors and suspense account, £10,377; loans from bankers and interest, £2,811; total, £314,114. Credit: Purchase of property, £252,993; capital expenditure in Russia (including £1,465 during year, but less £4,138 sundry realisations), £14,526; stocks of casings and materials at cost, £5,330; loan and interest, £5,298; sundry debtors, £936; preliminary expenses, £9,061; underwriting commission, £9,350; rent paid in advance (Russia), £237; cash at bank and in hand, £199; expenditure in Russia (including £2,163 for year), £8,325; loss on sale of sundry plant, etc., £1,223; consulting engineer's fees and travelling expenses, £1,211; trustee's and agent's fees, £1,202; expenditure in London (including £1,731 for year, but less £146 interest, etc.), £4,193; total, £314,114.

THROGMORTON STREET,

Wednesday Evening.

There has been quite a revival of activity in Egyptian shares this week. Egypt has been a bigish buyer in certain directions, and there has also been some local buying here of several shares which have been neglected for a long time past. The high prices of cotton and other produce have evidently caused an accumulation of large profits in Egypt, and some of these profits are now finding an outlet on the Stock Market. The natives in Egypt are also said to be beginning to make enquiries for the purchase of land. National Banks jumped up very smartly from 12½ to 13½, but are since rather quieter at 13½. Agricultural Banks are down to 5 and closed 3-32 higher at 4 29-32.

Land Banks have been wanted at 5½, but without business resulting, as there are no sellers. Egyptian Salt and Soda shares have been quite a feature on large buying orders from Egypt; they are 23s. bid to-night against 20s. 9d. last week, but sellers here have withdrawn from the market, owing to the very favourable rumours in circulation as regards the dividend, and there are no sellers under 27s. to-night. Another feature has been the rise in Khedivial Mail shares, which, on the final dividend of 20 per cent. (making 25 per cent. for the year), have jumped up 5s. to 37s. The report is an exceedingly satisfactory one, and shows, after allowance for excess profits, etc., that 40 per cent. has been earned on the ordinary shares.

Egyptian Markets are unchanged at about 25s. 6d. ex-dividend, and here also an increased dividend is expected. Alexandria Water are bid for at 1½ without result. Behera shares have again come to life, some fair business having been done at £6, at which price they are still wanted. Union Foncière have also jumped up from 31-32 to 21s., but without much business. Sidi Salem have had a smart rise from ¼ to 7-16, some few hundreds having been done at about 7s. 9d., with buyers left over willing to pay slightly higher prices. Egyptian and Foreign Trust have improved 1s. to about 6s., which is much under the intrinsic value as represented by their holdings.

Greek stocks are again higher all along the line. 81's and 84's are a point up at 54, 90's are 1½ up at 54, and Rentes also are better at 43. There has not been very much business done, as sellers have continued very scarce. There has been some business passing in Currant Bonds at 89½, at which price there are still buyers.

COMPANY NOTES.

Oil Outputs.

Anglo-Egyptian.—Gemsah, production for the week, 18 tons (last week, 26 tons); Hurgada, production for the week, 4,517 tons (last week, 3,534 tons).

Black Sea Amalgamated Oilfields.—Week ended November 4, 23,188 poods (374 tons).

European Oilfields.—Week ended November 5, 78,700 poods.

Maikop Combine.—Week ended November 4, 16,173 poods (261 tons).

North Caucasian Oilfields.—Week ended October 25-November 7, 543,066 poods (or 8,759 tons).

Dividends, etc.

The Egyptian Markets, Ltd.—An interim dividend of 5 per cent. (less income-tax at 4s. 6d in the £) in respect of the year ended December 31, 1916, on the ordinary shares of this company has been declared, payable on and after November 14, 1916, at the Anglo-Egyptian Bank, Clements Lane, London, E.C.

The Bank of England announces the numbers of 699 bonds of the Greek Guaranteed Two-and-a-Half per Cent. Gold Loan of 1898 which have been purchased for the sinking fund and cancelled.

OIL FROM FRUIT STONES.

To increase the supply of oil and fat, poppy and sunflower seeds have been even more widely sown this year than last in Germany. In 1915 about 662,250 pounds of oil were obtained from sunflower seeds, and this year promises a rich crop of poppy seed. Attention has also been drawn to the high percentage of oil contained in cherry and plum stones, which are usually thrown away. According to the statistics of 1900 there were 22,000,000 cherry and 70,000,000 plum trees in Germany. Large quantities of fruit stones were collected by school children last year, but great quantities were thrown away or destroyed, owing to the difficulty of extracting the oil from them.

The chief obstacle lay in the fact of there being no really practical method known by which the hard outer shell and the kernel containing the oil could be separated. The firm of M. Martin in Bitterfeld has succeeded in constructing a machine which solves this difficulty. The firm of Krupp Grusonwerk has also experimented successfully in grinding the stones between millstones, but after the outer shell has been cracked open it still remains carefully to separate the kernels from the crushed stones, and for this process no satisfactory machine has as yet been invented. The problem of separating stones and kernels has been solved by Dr. Alpers, who has discovered a chemical process, which is also to be recommended on account of the attendant small outlay.

NOTES OF THE WEEK.

The death of the Emperor Francis Joseph has come at a moment when the significance it might previously have had is swallowed up in the events of far greater importance that are now taking place. It was feared at one time that the removal of the veteran monarch's personal influence must inevitably precipitate a conflict among the discordant elements of his heterogeneous Empire. The Dual Monarchy, however, is already in the grip of the very convulsion which its own dissensions were expected to promote. For this reason the actual change of rulers may be effected more easily than any of the various Heirs to the Throne had reason to hope, but subsequent events will determine the fate in store for the Monarchy as a result of the war which it was instrumental in provoking. For the late Emperor Britons have always entertained a strong regard. No personal responsibility was attached to him for conditions in his Empire to which exception might well be taken. Whether he ought to have been able to control the responsible forces is another matter. It can hardly be doubted that as far as this war was concerned he was merely a helpless tool in the hands of others. He has passed away, therefore, at an opportune moment, for he has been spared the further humiliations that may be in store for Austria-Hungary at the hands of Germany or of whoever may be the instrument of her destiny.

Attention was drawn in these columns last week to the fact that the fighting in the Carpathians was dominated by the ability of the Austro-German forces to change their point of attack more readily than the Roumanians could transfer reinforcements to the district threatened at the moment. The course of events has proved that, while the enemy was hammering away at the Predeal Valley, he was concentrating for a further effort in the western passes. This effort has taken him practically unchecked to the main railway line connecting the frontier station of Verciorova with Bucharest. Craiova, the chief town in western Roumania, 120 miles west of the capital, is in his possession, and the situation has necessarily assumed a critical aspect. The Austro-German advance has been so rapid that for the moment some uncertainty prevails with regard to the fate of the Roumanian army operating near Orsova and closing the enemy's access to the Danube below the Iron Gates. Unless it has made good its retirement while the railway was intact, it may find it difficult to escape from the triangle formed by the Danube and the two railways from Verciorova and

Kalafat which meet at Craiova. Much depends on the strength of the invading troops. The rapidity of their advance suggests that they are mostly mounted.

It would be a mistake to regard the situation yet as desperate. Provided there has been time to remove or destroy the grain stores, the enemy has penetrated into the least vital part of Roumania. Moreover, as has been pointed out before, the rivers and streams run athwart his line of advance all the way to Bucharest. But other columns are still making a bid for the Roter Turm, Törzburg, and Predeal Passes, and if the Roumanians are to keep the situation in hand, it will be necessary to administer an early check to the force now occupying Craiova. While waiting for further news, the Allies must derive all the consolation they can from the fact that the Roumanians have the advantage of having at headquarters both the French and Russian Military Missions. What they stand most in need of is, perhaps, men and munitions. These would, no doubt, have reached them before now, if there had not been reason to suppose that Hindenburg is making ready for another blow against the Russians. In the meantime the position in the Dobruja is somewhat obscure. Both sides continue to report the absence of any change. Artillery activity at certain points along the Danube seemed to suggest that von Mackensen was feeling his way for an invasion across the river in order to assist von Falkenhayn in the north. The Roumanians could hardly have their hands fuller than they are. The Allies must see to it that neither in Macedonia nor in the Dobruja is the pressure relaxed sufficiently to leave von Mackensen time to carry out his designs.

It is inevitable that the situation in Roumania should detract from the satisfaction derived from the capture of Monastir, but there is no need why it should be allowed to obscure the importance of that achievement. Two months have passed since the hopes of the Salonika force were raised by the opening of the battle for Monastir. Subsequent events have proved that the strength of the enemy and of his carefully prepared positions had been seriously underestimated. But the Allies stuck to their task. The arrival of Italians enabled General Serrail to detach some of the French troops to strengthen his left wing, where the Serbians were showing that they were completely a match for the Bulgarians, if they could meet them on more or less equal terms. Thus, while the French and some Russian troops advanced from the south and south-west of Monastir, it was left to the Serbians to eject the enemy from the difficult country to the south-east and east. In the cap-

ture of Mount Kaymakcalan, 8,200 ft. high, they gave an earnest of their capabilities. But the ground between them and their objective still offered every advantage to the defenders, and the enemy made no attempt to conceal his conviction that Monastir would prove too big a nut for the Allies to crack. In the end it was the great sweeping movement executed by the Serbians, well supported by French artillery, that rendered the Bulgarian position at Monastir untenable. From the south the Allies gradually thrust back the enemy, who was becoming anxious for the safety of his communications, and during the night of November 18 the last Bulgarians and Germans left the town, after setting fire to some of the buildings.

Although French and Russian troops were the first to enter Monastir, the Serbians have carried off the honours in the operations that resulted in its capture. Apart from their belief in its impregnability, the Bulgarians regarded the town as their chief goal in this war, and its loss is likely to accelerate their disillusionment in regard to their future prospects. For the Allies Monastir is merely a landmark. General Serrail is a firm believer in the policy of exercising steady pressure on the enemy, and he has acted up to it in so far as his forces have enabled him. The Allied Army, therefore, is not likely to lay too much stress on the capture of the town or to seek to rest upon its laurels. It is understood that at the last moment German troops were hurried down to save Monastir, but, if this was the case, they arrived too late to be of use. They will, however, galvanize the Bulgarians into further resistance, and the country is still greatly in favour of the defence. One effect of the capture ought to be to facilitate an advance for other sections of the Allied line. It may still be necessary to wait for the Italians on the extreme left; but if the most is to be made of the moral advantage to be derived from the possession of Monastir, the Bulgarians must be given no respite at any point of their battle front.

Admiral du Fournet, armed with a very big broom, continues his sweeping operations in an attempt to clear the Greek house of an accumulation of German dust and microbes. The fact that the proprietors still remain in residence adds to the zest of the proceeding, without abating the ardour of the Allies' executive officer. Discretion and self-respect, it might have been thought, would have prompted the proprietors to withdraw until the Admiral's efforts have subsided; but they prefer to examine each stage in the cleaning process and generally to pronounce against it. The work, however, continues, while their protests keep pace with it.

During the past week the situation in Greece has passed through two fresh stages. Further demands on the part of the Allies have been embodied in a Note presented by General Roques, the French Minister of War, to the Greek Government. It is understood that the Entente Powers press for irrefutable proofs of Greece's friendliness, and suggest that these should take the form of the transfer to the Entente of the use of certain railways, the surrender of a quantity of munitions for the troops of the National Defence Movement, and the expulsion of a number of persons suspected to be agents of Germany or her Allies. As was to be expected, the Greek Government found itself unable to accede to these requests; but there would seem to be no doubt that in due course they will be carried out in their entirety.

The next stage in the relations between the Allies and Greece was the presentation of a Note by Admiral du Fournet to each of the Ministers of the Central Powers and of their Allies inviting them to leave Athens three days later. This invitation was duly complied with under protest on the part both of the Ministers concerned and the Greek Government. The measure was no doubt drastic; but it was a normal development of the situation, and the only cause for surprise is that it was not adopted long ago. The enemy

Ministers formed the centre of all the anti-Entente intrigues so actively carried out in Greece. So long as they remained undisturbed there could be no real improvement in the position. Moreover, the Allies were in possession of sufficient evidence to be able to prove that each Minister had so grossly offended against the comity of nations that he was no longer entitled to Greek hospitality. The Allies, it is stated, wished the Greek Government to hand the Ministers their passports. It had been given good cause for such a step in the statement made by the German Minister that all Greek ships carrying troops to the Provisional Government would be torpedoed. But the Greek Government declined. With the departure of these head spies, who are to be sent to Dedeagatch, there is hope that the malign influences which have been at work in Greece will be shorn of some of their potency.

One result of this fresh display of Admiral du Fournet's activities has been that the officers of both services who had been imprisoned for showing sympathy with the National Defence Movement have been liberated. At the same time the neutral zone between Old and New Greece, designed to prevent collisions between the Royalists and the Venizelists (to use catch terms), has been established. It has a depth of from three to seven kilometres, and, as it will be guarded by Allied troops, its efficacy is assured. As if to show that the pro-German element still retains some power, the acting chief editor of the *Patris*, a Venizelist organ, has been arrested on a charge of high treason for having published documents regarding the handing over of Fort Rupel to the Bulgarians. These documents, it will be remembered, purported to be the text of the official orders signed by the War Minister in the Skouloudis Ministry and by M. Skouloudis himself, instructing the commander of Fort Rupel to allow the fort to be occupied by the Germans and Bulgarians, but not by the Allies. M. Skouloudis assured the Greek Chamber that he knew nothing of any such order.

The sinking of the hospital ship *Britannic* off the coast of Attica, if it is proved to have been due to a torpedo and not a mine, can hardly fail to strengthen the determination of the Entente Powers to cope once and for all with the anomalous position in Greece. There can be little doubt that the enemy submarines rely upon services rendered to them in Greek territorial waters, and until the influential support which is behind these services has been withdrawn, the task of dealing with the submarines will be rendered more difficult. The sinking of hospital ships has become such a recognised feature of German policy that a fresh instance would evoke no surprise. It is clearly not in the interests of the Allies to announce their intentions too definitely; but it would reassure public opinion, if it could be stated in general terms that suitable reparation for all enemy offences against the laws of civilised warfare will in due course be enforced.

News of a Turkish attack on Sultanabad lifts for a moment the veil that has for a long time obscured the course of military operations in Persia. Neither our Ally nor the enemy is in any considerable strength in this region, but it comes as a surprise to find that the Turks have been bold enough to raid as far south as Sultanabad. Their activities had hitherto been devoted to the neighbourhood of Hamadan and north of that town. But the advance of the Russians down the western frontier may have tempted them to return to their haunts of a year or more ago in the expectation of finding this part of the country devoid of Russian troops. The most effective way of dealing with these marauding bands will be to occupy their base, which is Baghdad. For this reason news of a forward movement in Mesopotamia is awaited with eagerness. A fresh Turkish offensive in Armenia south-east of Oghnut proves that the Turks are still able to profit by any respite allowed them to draw upon their considerable reserves of man-power. The Russians' policy can only be to hold their own in this region and to contain as large a Turkish force as possible.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 9.

The High Commissionership of Egypt.

The news, published here on Tuesday morning, that Sir Reginald Wingate had been appointed High Commissioner in succession to Sir Henry McMahon came somewhat as a surprise to many people. Yet it should not have taken anyone unawares, for the appointment is but the natural consequence of the death of Lord Kitchener, which completely changed the situation, as far as the High Commissionership at Cairo was concerned. When Lord Kitchener became Secretary of State for War he still retained a lien, so to speak, on the Cairo appointment. It was no secret that he intended to return to Egypt as soon as the war had been concluded and he could be spared, and it was, therefore, decided to make no permanent appointment to the post. Had it not been for this, the High Commissionership would have gone immediately on the declaration of the Protectorate to Sir Reginald Wingate, who, apart from having the greatest claims, was Lord Kitchener's own candidate for the post, in the event of his not returning to it; but who could, naturally, not be promoted to what at the time was merely a temporary vacancy. It was in these circumstances that Sir Henry McMahon was selected to "hold the fort," but for obvious reasons it was not announced at the time that his appointment was only provisional. The death of Lord Kitchener in June last rendered it no longer necessary to maintain the previous state of affairs, and so it was decided definitely to appoint Sir Reginald Wingate, who will take up his duties in about six weeks' time.

Sir Reginald Wingate.

It is after all but in the fitness of things that Sir Reginald Wingate should succeed Lord Kitchener in Egypt, seeing that he followed him as Sirdar of the Egyptian Army and Governor-General of the Sudan eighteen years ago. Apart from that, his experience of the country, his knowledge of "native" affairs, his proved administrative ability, his tact and prestige mark him as the right man for the post, which he should fill with the same conspicuous success as has attended his administration of the Sudan. Before this letter reaches you, your readers will doubtless have been fully informed regarding Sir Reginald Wingate's work in the Sudan, so it is unnecessary for me to devote any space to what constitutes one of the most remarkable achievements of Empire building the world has seen in modern times. All that I will say about it is that the magnitude and importance of his work are fully recognised by all in Egypt who take any interest in such matters, and that I have reason to know that the administrators of British dependencies contiguous to the Sudan have greatly benefited by the influence which Sir Reginald Wingate wielded from Khartoum, and by his advice.

His appointment, judging from the impressions I have been able to gather, is an exceedingly popular one in all circles, and the local Press is unanimous in applauding it. At the same time it is pleasing to note that it is equally unanimous in its regret at the departure of Sir Henry McMahon, who, it is agreed, has had an exceedingly difficult task to fulfil, and who has carried it out with remarkable ability.

Sir Henry McMahon.

In this connection I may, perhaps, be permitted to say a few words in explanation of the part played by the retiring High Commissioner during his twenty-two months of office. It must have required no little courage, no little public spirit, for a man with a brilliant Indian reputation such as Sir Henry McMahon possessed, to accept a position like the High Commissionership of Egypt in the circumstances under which it was offered him two years ago. He came out to Egypt a stranger in a strange land. He was not known to the people, neither did he know anything about them. He followed a man whose name was a household word throughout the valley of the Nile. He had to face all the difficult and delicate problems which might con-

ceivably arise out of the complete change in status that the country had undergone but a month prior to his arrival. To crown it all, the country was under martial law, as a consequence of which the military authority took precedence; and, although it was laid down that the military régime was intended to supplement where necessary, not to supplant, the existing civil organisations, the situation nevertheless presented easy openings for any amount of friction. Could any prospect have been more discouraging to a new man taking up office than that presented by the High Commissionership of Egypt? There was not even attaching to it the saving grace of confirmation in his appointment should he make a success of it.

Sir Henry McMahon gave further proof of the courage, public spirit—call it what you will—which had prompted him to accept the position by the attitude which he publicly adopted in all political matters. He has throughout deliberately kept himself in the background, because he realised that it was absolutely essential that there should be no friction between the two authorities which existed side by side in the country, and that the local political situation demanded that the "kudos" for whatever benefits could be afforded to Egypt should go entirely to others than the British officials. In his opinion Egypt was too small for there to be "two kings in Brentford," and so he decided that he could best serve his country by not coming into the foreground of affairs. There is no disguising the fact that he has been much criticised for this attitude, but his critics either did not understand the motives underlying his decision, or were not in a position to know what was being done.

Keeping in the background does not, however, necessarily entail being out of touch with things or losing control of the situation. I have been at some pains to ascertain exactly what part the outgoing High Commissioner has taken in the conduct of affairs; and I find that in all quarters where any contact has existed with the Residency identically the same views are held, viz., that not only has he shown the liveliest interest in everything that was going on, and participated actively in the settlement of all questions that have arisen, but that the work he has done will in the long run prove of the utmost value to Egypt and to Great Britain, and that it should in many respects facilitate the settlement of many of the problems which the war has created in Egypt and elsewhere. Political considerations stand in the way of my referring more explicitly to these matters. It must be left until more peaceful times set in for the true record of his work to be made public and for his services to be seen in their proper light. Those, however, who have any knowledge of what has been done from a political point of view in this part of the world during the past year alone, and of what lies before the country in the near future, will be able to read between the lines and make a shrewd guess as to the direction in which his ability and his experience have been turned to Imperial account. Meanwhile, Sir Henry has the satisfaction of knowing that, at the end of two momentous and difficult years, he is handing over to his successor a peaceful, prosperous, and contented country, where cordial relations exist between the ruler and the Protecting Power and unity reigns between elements which were previously not in sympathy or accord one with the other, and where the foundation has been truly laid for a good deal of the work which lies before those responsible for the government of Egypt. Such a state of affairs alone should in the peculiar circumstances justify his tenure of office being qualified as successful.

Reference to Sir Henry McMahon's work in Egypt would be incomplete without any mention of his activities in non-political spheres. His régime will be remembered for the successful launching of the Cairo Cathedral scheme, for the impetus given to the Kitchener Memorial, and for the great assistance afforded to the Red Cross and St. John of Jerusalem Funds, the "Our Day" appeal for which resulted in Egypt taking second place amongst the British dependencies. In all these and similar objects of public and local interest Sir Henry took very great interest; and his attitude in these matters serves

but to prove still further that his "effacement" in matters political was deliberately self-imposed. In all his social work Sir Henry has been most ably seconded by Lady McMahon, who in the short time she has been in Egypt has acquired a unique place in everyone's affections on account of her charming personality. She has worked most indefatigably to further and make a success of all the schemes that have been started for the alleviation of the privations of our gallant soldiers and for their entertainment; she was one of the prime movers and most active supporters of the Imperial Club for Army Nurses which was opened in Cairo last winter; and she has displayed very sympathetic and practical interest in the question of the emancipation of the women of Egypt. Her departure will be deeply regretted by everyone, not least by those whose cause she has always championed so generously.

THE NILE FLOOD.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 8.

The Nile is slowly but surely dropping and the period of danger is gradually receding into the far distance. So far there have been no ill effects from the high flood, and the irrigation authorities deserve great praise for their able handling of a situation which was at one time fraught with serious possibilities. A great many of us have come to regard and speak of the present flood as a phenomenally or abnormally high one. It appears, however, that we err in so doing. True, it is the highest flood recorded since 1884, but the latter itself was not an abnormally high one, and we can understand that that qualification is incorrect as applied to the present flood, when we learn that it is quite possible for the Nile flood to reach a level one metre above what it has done this year. In short, the 1916 flood has been nothing more than what would have been looked upon in former years as a very good one, and it has only been regarded as abnormal because it has come after a period of low or ordinary ones.

Whilst the present flood has confirmed the great advisability of providing some substantial form of protection from the dangers of high Niles, such as the White Nile Dam, to which reference was recently made in *THE NEAR EAST*, it has at the same time shown more clearly than ever the urgency of the prompt execution of the great Delta drainage works, which were suspended on the outbreak of war. The experience of the last few months has revealed the extraordinary fact that lands which some few years ago were able to obtain all the water they required during flood have this year, when there was an abundance of water, failed to obtain all their requirements. The explanation of this lies in the great expansion in cultivation in the Delta of late years. This has brought about the result that the water required in a given region is very much more than it used to be, and that landowners at the far end of the canals are finding that more water is being taken on the way down by the intervening land, and that consequently less water than used to is reaching them.

The only remedy is the complete remodelling of the Lower Egypt canal system, which is part and parcel of the great drainage scheme embarked upon under the ægis of Lord Kitchener and suspended in the autumn of 1914. The provision of more water by works in the Sudan to increase the volume available at the low or summer stage of the river is becoming more pressing season by season, and is now so clamant that the demand ought at an early date to be met, otherwise reorganization of the canal and drainage system of Lower Egypt would lose more than half its value.

The Athens correspondent of the *Daily Express* learns from a good source that negotiations of an official character have taken place between authorised representatives of England and Turkey for the exchange of certain classes of civil prisoners.

An Admiralty notice in the *London Gazette* states that preparations are being made for the intended distribution of the award of the prize bounty granted to H.M. Submarine B 11 for the destruction of the Turkish battleship *Messudieh* on December 13, 1914.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, November 7.

Khartoum is now full; the cold weather has begun, and has brought with it most of the ladies resident in the city who had not previously returned. Among recent arrivals are Dr. Chalmers, of the Wellcome Research Laboratory, with Mrs. Chalmers, and Lieutenant-Colonel Smith, with Mrs. Smith and their baby. Colonel Smith is acting as Adjutant-General for the time being, owing to the sickness of Major Logan, who had been acting previously. Dr. Thomson arrived in Khartoum with Mrs. Thomson on his way to resume his duties at Roseires, and Mr. Hewins brought back Mrs. Hewins from Cairo after a short stay in Egypt. The Police Magistrate, Burges Pasha, has also arrived from England with Mrs. Burges. Others expected to arrive by to-day's train are Mr. Dun, the Advocate-General; Mr. Struve, Governor of the White Nile Province, with Mrs. Struve; Captain Field, R.A.M.C., with Mrs. Field; Major Forbes, of the General Staff; Mr. Grabham, the Government geologist; and Mr. Burgess, Inspector of the White Nile Province.

Mr. More, Governor of Khartoum, went North on the 3rd to meet Mrs. More on her way South.

The temperature has dropped 10 degrees in a few days, and feels astonishingly cold after the hot weather, especially the very unpleasant damp days that have been frequent recently. The thermometer now registers only some 85 degrees Fahrenheit maximum.

THE MECCA PILGRIMAGE.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 1.

The 1916 pilgrimage is over. The caravan has returned to Egypt, and with it the thousand odd Egyptians who have made the pilgrimage after waiting two years to accomplish the great duty imposed upon them by their Prophet. It was with some misgivings, it must be admitted, that many of us learned that the Egyptian Government had decided to allow the pilgrimage to take place this year. We were aware that the Shereef had given guarantees that the safety of the pilgrims and the caravan should be assured, and that he had undertaken not only not to exact the usual payments which he had been accustomed to demand from the pilgrims every year, but also to prevent the tribes and the parasitic population, which dwells in the Hejaz, from badgering and fleecing the pilgrims, as had been their wont. But we were of the opinion that Shereef Hussein was perhaps somewhat too sanguine, and that, as the Turks would very probably make a determined effort either to menace the pilgrimage itself or to prevent the promised protection being given to the pilgrims, the result might be disastrous, not only to the latter but also to the cause of the Shereef, with which we, as a people, have the greatest sympathy. But our fears have proved groundless. The Turks, either from fear that any interference on their part would do their cause more harm than good or from inability to do anything, took no step which could in any way affect the safety of the pilgrims, with regard to whom Shereef Hussein proved better than his word.

Most admirable arrangements had been made for the pilgrims' reception and accommodation. From the moment they landed at Jeddah to the hour of their re-embarkation after the conclusion of their journey to and from Mecca they were unmolested. None of the scenes that marred previous pilgrimages were recorded; prices were regulated; perfect order reigned all along the route from Jeddah to Mecca and at the Holy Shrine itself; and, more striking still, the sanitary arrangements were so good that no cases of infectious disease occurred.

All the pilgrims tell the same tale of pleasure at their trip and satisfaction with their treatment, and the vernacular Press is full of articles contributed by them on the subject. In order to obtain, so to speak, an outside opinion, I called on the Mission which went from the French colonies to congratulate the Shereef, and the members of which have been spending a few days in Cairo before embarking for France. The Mission consists of the following:—Sidi Kaddour Ben Ghabrit, Chief of the Protocol of H.M. the Sultan of Morocco and head of the Mission; Agha Zakrooni, Agha of Jebel Nader, who took 1,500 horsemen on the outbreak of war to France, where he fought for eighteen months, and who is Commander of the Legion of Honour; and Sidi Mustafa Cherchebli, both delegates

from Algeria; Sidi Chadly Okby, Kaid of Tunis, and Hajj Larbi Cheikh, delegates from the Bey of Tunis; Sidi Ahmed Skiredj, Alem of Fez, delegate of the Sultan of Morocco; and Abdou Kane, delegate of French Western Africa, where he was formerly Chief Kadi.

I was received by Sidi Ben Ghabrit, a fine-looking man of middle-age, with a short beard tinged with grey, who, I found, spoke French fluently. Even accustomed as I am to hear Egyptians speaking English and French, it somehow seemed strange to sit beside this typical Arab, dressed in the characteristic robes of his country, and to listen to him expressing his views in perfect French without any accent and with all the gesticulations of a born Frenchman. We talked of many matters connected with Arabia, which it would not do to publish at the present moment—of the war and of things in general. I found to my great pleasure that, albeit a most devout Moslem, he took a most broad-minded view of affairs.

But to return to the subject of the pilgrimage. Sidi Ben Ghabrit told me that he had never before made the pilgrimage, and he admitted that he had embarked upon it with misgivings. Not that he feared to be attacked on the way, for, as he smilingly remarked, he had been far too accustomed to have bullets whistling round his head during the twenty-two years he had resided in Morocco to mind such things—he is an Algerian by birth—but because he dreaded the diseases which he and his companions might catch owing to the bad sanitary conditions which always existed during the pilgrimage in the Hejaz. To his surprise, the hygienic conditions were everywhere excellent. They could not have been better in any civilized country, and while, no doubt, a great deal of the credit is due to the system prescribed by the specialists in Egypt, the merit of having introduced this welcome change in the local conditions, whatever the means adopted, must be attributed to the Shereef, who, in this matter, as in so many others, is displaying an enlightened and receptive mind rarely met with in men of his stamp and environment.

Sidi Ben Ghabrit and his companions were very much struck with the evident sincerity and the statesmanlike qualities of the Shereef, with the complete control he had over his people, as evidenced by the smoothness with which the pilgrimage was carried out, and with the martial bearing and intelligence of his sons. As an illustration of the latter, Sidi Ben Ghabrit told me that one of them discussed with him all the phases of the European war, pointing out with remarkable accuracy the faults that had been made by either side at various points. He said that the Shereef paid particular attention to the Indian pilgrims, the more important of whom were given a place at a table beside his own. About 30,000 pilgrims visited Mecca this year, about 5,000 Indians, 2,000 Egyptians (including the Mahmal escort), 2,000 Moroccans and Algerians, and 18,000 Hejazis. This was not, of course, anywhere near as many as usual, but it was a sufficiently large number to test the organisation and position of the Shereef. He had talked with pilgrims from all parts. One and all were very favourably impressed with the movement, the importance of which he doubted whether the Moslem world at large really realized. (In Morocco and Algeria they certainly did recognize what it meant, and the people were wholeheartedly on the side of the Shereef.) The authorisation of the pilgrimage this year was a bold enterprise, one that seemed at the outset almost too daring, but it had been a splendid success and the venture would bring its own reward; for the safe return of the pilgrims to their homes and the recital of their adventures and of what they had seen with their own eyes, would, he felt certain, have a favourable determining effect on the vacillating element in the Moslem world.

CYPRUS NOTES.

(FROM OUR CORRESPONDENT.)

CYPRUS, November 5.

Petitions to High Commissioners.

The High Commissioner, in his recent tour in the Papho District, visited Polistes Chrysokhou. The Mayor, after welcoming H.E., submitted various petitions relating chiefly to the improvement of road and postal communications, the appointment of a third Mudir for the district, for increased jurisdiction for the local village judge, the establishment of a Government nursery garden, and increased facilities for the purchase of timber from the State forests. These petitions show the general character of village needs.

Views of the New Members of Council.

Some of the newly elected members of the Legislative Council have had an interview with the High Commissioner, Sir John Clauson, during which they submitted various recommendations. Among them were the following:—That loans of seed corn should be granted to all agriculturists in need of it; that prices should be fixed for wheat, and that the Government should allow wheat to be issued from the tithe stores, even in small quantities, to householders; and that vetches—largely used for cattle food—should be similarly sold to farmers. Amongst other expressions of opinion was one that the police should cease to apply with rigour the "Cruelty to Animals Law." The High Commissioner replied that the Government would give careful consideration to all the recommendations. It is to be hoped that there will be no relaxation of the law referred to, for the protection of dumb animals. It was with great difficulty that the existing law, mild as it is, was passed, under Sir Henry Bulwer; and the prosecutions under it are only too few. The ordinary Cypriot peasant regards animals merely as other goods and chattels. Although Cypriots are not less humane than many other peoples, in no country have there been worse examples of cruelty. The maiming of animals has been until recently a very common form of showing animosity.

Demands for Control of Prices.

The rise in the price of many articles of consumption continues to be widely felt. The Commissioner of Nicosia, Mr. C. S. Cade, has received a number of officials, who explained the difficult position in which they were placed by the excessive cost of the necessities of life. It was urged that maximum prices should be fixed, at all events for articles produced in the island. The hardship is not only that of officials, but of the people in general.

Greek Cypriots and the War.

Greek Cypriots appear to realise quite clearly that the future of Greece depends on the success of the Allied armies, and that the action and policy of M. Venizelos, far from being revolutionary or anti-dynastic, are in the highest sense patriotic, and alone can save the nation and the territories now in "the barbarous hands of the Bulgarians." The papers refer in glowing terms to M. Venizelos and his new forces. The *Phoné tes Kyprou*, the leading paper of the capital, looks forward to the participation of Cyprus in the cause. "when," it says, "volunteer corps will be sought in Cyprus, in order that they may place themselves under the orders of the Government of M. Venizelos, as is likely to happen very shortly, since according to our Egyptian *confrères*, M. Lapathiotis, a highly distinguished officer of Cyprus, is coming here for that purpose. We have no doubt whatever that the youth of Cyprus will regard it as a duty to hasten to the call of the Mother Country."

EGYPT AND THE RED CROSS.

We announced last week that the first instalment of Egypt's contribution to the "Our Day" collection for the British Red Cross was £60,000. On Monday a telegram was received at the Red Cross Headquarters from Sir Henry McMahon, stating the total Egyptian contribution to date £85,210. A sum of £500 was subscribed personally by the Sultan, and the splendid contribution is a remarkable indication of public interest in and sympathy for the work of the Red Cross. It has been largely subscribed by Egyptians of all classes, to whom this year, unlike last year, no direct personal appeal was addressed by the High Commissioner.

ROUMANIAN LETTER.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, October 21.

The Air Attacks.

The German air raids, news of which has doubtless already reached your readers, have caused intense exasperation and indignation here. The Government is taking careful note of all damage done by the bombing, and is considering whether those citizens who have suffered loss should not be compensated by drawing upon the sequestered property of enemy subjects in this country.

The death and destruction wrought by the bombs dropped have made many converts among what was formerly the pro-German party. Even M. Maioresco, one of the most important members of that party, is reported to have been "visibly impressed" on visiting the scenes of havoc. But the greatest sufferer from "nerves" is said to be the German Consul, who, under the protection of the American Legation, and under the shelter of its hospitable roof, has remained here, to assist in looking after German interests. He is reported to have said that, whereas he formerly declined entirely to believe what he heard and read of his countrymen's acts of savagery and "frightfulness," he is now prepared to believe the worst. He is a man of heavy build, and Marienbad and Baden Baden had both failed to reduce his weight; but the few weeks of bombing, with intervals of painful anticipation, have worked wonders in this respect.

The Enemy's Poison Campaign.

The analysis made by Dr. Cantacuzene of the chocolates and other sweets dropped by the Bulgaro-German aviators in the course of their flights over the country has proved conclusively that these bonbons contained the microbes of typhus and other maladies. The Roumanian Government will send copies of the analyst's report and samples of the poisoned sweets to the Governments of the neutral countries.

Notices have been published in the Press and circulated among the rural authorities calling attention to the great danger of eating any sweets found; and the public are further warned against picking up pencils, cigarettes, or handkerchiefs which they may see lying in the streets, as it is believed that the Germans will resort to the use of such things to spread disease in their despicable war on women and children.

In connection with this poison campaign, it is important to note that a search in the German Legation brought to light—buried in the cellars—many phials containing the microbes of plague and typhus, and also some infernal machines. This rather suggests that, before the war, the manufacture of the poisoned sweets had been going on in Roumania itself; and it is even possible that those found were not all dropped from aeroplanes, as the fall would scatter and injure them, but were distributed by German agents. Needless to say, the police have the matter under investigation; and it is rumoured that some of the German agents have already been arrested, and handed over to the military to be dealt with.

The Scottish Women's Unit.

Quite a sensation was caused in Bucharest recently when among the many unfamiliar uniforms there appeared that of the Scottish Women's Mission, which is now proceeding to the Dobruja front, where they will serve with the Serbian forces. The smart uniform, with the slouch hat, short khaki skirt, leggings and gauntlets, was a revelation to the fair sex; and astonishment and admiration deepened when it became known that these ladies not only act as nurses, but also drive, clean, and repair their own cars, and that there is not a single man with the party.

THE BULGARIAN SITUATION.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, October 21.

A few refugees have managed to escape from Bulgaria to this city. They report that the Radoslavoff Government was for some time able to silence the malcontents in Sofia and throughout the country by assuring them that Roumania would never attack Bulgaria, all her attention and all her forces being needed for the Carpathians. The Tubrakan affair was turned to similar account. But at the present time some difficulty is being experienced in accounting for Roumania's success and Bulgaria's lack of success. The Opposition now attack the Government because foreign policy and the direction of military affairs are left so much in German hands, while Bulgarian military and political leaders are left out in the cold. The economic situation of the country leaves much to be desired, and even the population of Sofia is suffering considerable hardships.

The King has returned to Sofia, but he keeps much to himself and communicates with nobody; in fact, his return is denied by the authorities, but it is an open secret that he is actually in his palace, from which he never stirs. Only with M. Radoslavoff is he known to have held intercourse, and with him he has had long conferences. The dissensions between the Bulgarian and German officers are becoming more and more pronounced. General Mackensen is no longer at Sofia.

WOUNDED ROUMANIAN SOLDIERS' FUND.

The Earl of Bessborough, hon. treasurer of the Wounded Roumanian Soldiers' Fund, has received the following letter from the Lord Mayor:—

"I am glad to know that a fund has been established for the benefit of Roumanian wounded soldiers, of which your lordship is the treasurer, and that this fund is under the patronage of his Excellency M. N. Misu, the Roumanian Minister in London. It is also a source of much gratification to me to know that this fund has already placed the first instalment of its collections at the disposal of the Roumanian Red Cross Society in Bucharest. I feel sure that when this fund and its objects are brought before the generous British public its appeal will bring a worthy tribute, which will prove the extent of our sympathy."

Donations to the fund should be sent to the Earl of Bessborough, at the Bank of Roumania, Limited, 27, Throgmorton Street, London.

EGYPT EXPLORATION FUND.

The annual meeting of the Egypt Exploration Fund was held on the 17th inst. at the Royal Society's Room, Burlington House. The chair was taken by Major Lyons, in the absence of Earl Cromer, the president, who was detained by work in connection with the Dardanelles Commission. Because of the war the explorers who always work for the fund are not making any excavations at present, but the publications are still being brought out, especially those of papyrus manuscripts, of which many are stored at Oxford to last for from ten to fifteen years. These were found in the Fayoum. A most interesting account was given by Dr. Bernard Grenfell of the very important remains of ancient literature which he is editing for the twelfth volume of the "Oxyrhynchus Papyri," which will be delivered to subscribers in January next. Two of the texts are theological, being portions of Ecclesiasticus and the Shepherd of Hermas. One papyrus contains long extracts from a kind of Historical and Mythological Dictionary of the Greeks, made up not of original matter, but of citations from scores of authors. There are two papyri containing fragments of poems by Pindar, one from a work of his hitherto lost. Classical scholars will be most interested in one of the lost orations of Lysias, of which a long piece, although much mutilated, remains; also in a speech by Lycurgus against Lycophron, on the occasion upon which Hyperides also spoke for the defence. In addition to these papyri, a volume, profusely illustrated, is nearly ready, dealing with the "Rock Cut Tombs at Meir."

In his speech the chairman mentioned that so accurate were the old Greek papyri in determining the boundaries of fields and palm groves, routes of canals and watercourses, and so little change takes place in the land of Egypt that the descriptions in the old Græco-Roman taxing lists and deeds, sales, and leases were found very useful to the Government surveyor when he was serving recently in the country.

On the occasion of the reopening of the schools in Bucharest last week speeches were delivered full of patriotic references to Roumania's valiant struggle towards final victory side by side with the Allied Powers in the war for right and justice and for the delivery of the Roumanians in the Transylvania.

The Bar of Bucharest has established a hospital for wounded magistrates, lawyers, and law students serving in the Roumanian Army.

It has become known through prisoners taken by the Serbians that the Bulgarians are already using Greek war material surrendered to them by the Athens Government at Kavalla, Drama, and Rupel, including a number of heavy guns, which are being distributed along the Bulgarian front.

PROBLEMS OF THE SUDAN.*

V.—THE SUPPLY OF DOCTORS.

(BY OUR KHARTOUM CORRESPONDENT.)

The system of distribution of medical knowledge in the Sudan is somewhat complicated. It must first be appreciated that there is no local talent at all, and that all expert knowledge has to be imported; and for all practical purposes it may be said that the medical staff of the country is entirely in official employ. It may seem astonishing to find that the qualified British staff of the Sudan Medical Department numbers only six. True, four of these are Fellows of the Royal College of Surgeons or Physicians, as the case may be, and the standard is extraordinarily high; but the number seems to be very small in so vast a country as the Sudan. This state of affairs is due to a variety of reasons, amongst which the ever-recurring one of lack of funds may be counted first. Besides, the greater part of work in the out-stations is done by the officers of the R.A.M.C. employed in the Egyptian Army. That is to say, there are big and fully equipped hospitals at Khartoum, Omdurman, Atbara, and Port Sudan, which are supervised by the Sudan Medical Department. There are also smaller civil hospitals in every province, distributed, as far as possible, as population and circumstances require. In some cases these are supervised by the members of the Sudan Medical Department; in others the work is handed over to the military doctor, who combines the work with his own. This especially applies to the southern provinces. There are in the Egyptian Army some fifteen officers from the R.A.M.C., and some of these are of course employed in Egypt. It appears, therefore, that the total number of qualified men available in the Sudan does not exceed twenty, which still seems to be a very small number in so large a country, where communications are so difficult. There are, however, two other sources of expert medical knowledge. These are the Sleeping Sickness Commission, which is employed in the infected areas, and relieves the country of supplying other doctors in those parts, and the Wellcome Research Laboratory, the members of which not only do inestimable research work, but assist the doctors all over the country in every possible way by microscopic examinations and highly technical work of all sorts. They also take their part in the more ordinary forms of medical work where necessity bids. In effect, therefore, the medical staff of the Sudan makes up in quality what it may lack in numbers. It is probably true to say that no part of Africa is so well supplied with the latest knowledge of the science of medicine, and it is extremely odd to find the most modern treatments known and taken as a matter of course by savages of quite a primitive type.

The very highly trained staff described above is assisted by a number of qualified practitioners from Syria and Egypt, the majority of whom obtained their diplomas at Beyrout or at the Kasr-el-Nil school in Egypt, though there are some who hold American certificates. Unfortunately, the supply of these is not large. This is due to the fact that there is a very considerable demand in Egypt for practitioners who are conversant with the language and customs of that country. In fact, many of those employed in the Sudan finally retire to lucrative practices in Egypt, and when Syria is opened up to the Syrians (as must inevitably occur) there will be many more openings. The supply of the necessary qualified men for the subordinate posts in the Sudan is indeed a matter which will require consideration in the near future.

The people of the Sudan are extremely conservative in certain ways, and the introduction of many much-needed reforms can only be done by the tactful instruction of the medical authorities. It is not so much that the native is unwilling to do what he is told, as that unless he really believes in the efficacy of the treatment he will not do it properly, and there is still a strong feeling in favour of the old-fashioned spells. The native, therefore, needs to be encouraged to the required action by faith. He has learnt to have faith in quinine, he is fully cognisant of the virtues of 606, and he accepts vaccination—with some hesitation—because he himself discovered the merits of self-inoculation when in health, and uses the same method with his cattle. But hygiene is practically unknown to him, and, apart from the examples given above, he generally prefers to adopt some native treatment to visiting the doctor. Generally speaking, a strong purge and a faith cure is the native method, though there are most elaborate rituals of treatment for some diseases in some parts.

One of the chief difficulties in dealing with natives all over the world is their habit of secreting illness and thereby starting an epidemic. This is chiefly to be attributed to

the women, whose superstition will not allow them to make use of the foreign doctor or medicine, for fear that it may in some obscure way produce after-effects of the evil eye or the like. But the opposition is very deep-seated, and the only possible way of combating it would seem to be to train the natives themselves in medicine, so that they might be able to go to a man of their own race and believe in him, where the much more learned white man would have little chance of convincing.

The instruction of the native in so highly developed a subject as medicine seems, possibly, rather a fantastic idea; but it must not be forgotten that he would be supervised by an exceptionally highly-trained staff and would be employed in the subordinate posts only. There is little doubt that the training of natives can be done. It has been done elsewhere, and the capacity of the Sudanese for acquiring knowledge is adequate to the need, at least amongst the more educated classes, and these, thanks to the Gordon College and the Education Department, are an increasing number. It is to be hoped, therefore, that some move to the end suggested may be made in the near future.

OCCUPIED SERBIA.

(FROM OUR BUCHAREST CORRESPONDENT.)

The following sketch of conditions in Serbia to-day is based upon information from Russian sources, and may, I think, be regarded as trustworthy.

The definite division of the country between Austria and Bulgaria was accomplished in January, 1916, and the delimitation of the Austro-Bulgarian frontier was then proceeded with. The frontier starts at a point on the Danube and follows the course of the Great Morava, continues along the West Morava, then makes a turn to the south-east, leaving Kragujevatz to the Austrians and Konjoulou, to the south, to the Bulgarians. On the Plain of Kossovo the frontier passes between Mitrovitza and Prishtina, and includes Albania between Prizrend and Diakovo. This last portion of the frontier cannot be crossed without encountering Bulgarian guards, who prevent foodstuffs passing into Austria-Hungary. There are, however, no Austrian guards on this line.

The central administration of Serbia is at Belgrade, and its head is assisted by a military attaché, General Balitch, and a secretary of Hungarian nationality. Among the crowd of administrators and officials a certain Germann, formerly a member of the Bosnian Government, is conspicuous by his activity and his excess of zeal. Arrests and searchings of the houses of persons accused of complicity in the Serajevo assassination take place daily by his orders. Germann wears the uniform of a simple lieutenant, but he appears to possess powers greater than any general. He issues orders without consulting anybody, and they are obeyed instantly, and his apparently limitless authority enables him to perpetrate endless persecutions and acts of injustice.

The police and the gendarmerie in the portion of Serbia under Austrian occupation are recruited entirely from Hungarians. At Belgrade the tramways and the electric light are both worked entirely for the benefit of the army, and all the pharmacies have been taken possession of, and are run, by the military.

The only places at which the post offices work with some regularity are Belgrade, Gornj, Milanovitch, Valievo, and Palanka. Elsewhere it is useless to post letters, for they are never delivered.

The municipality at Belgrade exists in form only, and possesses absolutely no authority. All its decisions are liable to revision by the Austrian military, by whom they must be ratified—or rejected—and countersigned. The functions of the mayor are vested in a Dr. Velkovitch, assisted by two subalterns, MM. Denitchi and Popovitch.

In all Serbia there is but one man who enjoys the confidence of the Austrians—a Socialist deputy, named Powiskevitch.

A Salonika telegram says that the Council of the Greek Provisional Government has decided to send military officers to Egypt in order to form a corps of volunteers there and to drill them on the spot. This corps will be dispatched to Salonika when required.

The Anglo-Hellenic League, Reuter's Agency is informed, last week received the following telegram from M. Venizelos: "The authorities of Grevena are arbitrarily detaining a courier on his way to the villages in the district of Kozani. Some days ago the priest of the village of Tsouli was beaten and thrown into prison for having celebrated a Te Deum on behalf of the National Movement. The President of the Community of Dransita was thrown into prison by Athenian troops and beaten so that his left arm was broken. Colonel Mitsas has announced to the peasants that he will shortly occupy the town of Katerini and punish the population which joined the National Movement."

*Previous articles of this series appeared in THE NEAR EAST of August 11 and 25, September 22, and November 17.

TANGIER TO TEHERAN.

I am told that specimens of some new one-piastre and two-piastre notes, issued by the Turkish Government, have found their way to London. The lower value, I understand, bears a picture of the Dardanelles, while the latter depicts the Turkish victory at Kut. I wonder whether these embellishments will make this particular paper money any more popular in Turkey than the Smyrna issue to which I referred recently.

An officer writing from the Salonika front recently says. "I saw quite a comforting lot of German prisoners here to-day. . . . Brother Turk has come up against us in some force, and we catch him, too. You would hardly recognise him in his new uniform—rather Chinese in cut." There is a piquant little picture for you! It almost looks as if the Turk, realising that the Bag-and-Baggage Day is close at hand, is getting ready to trek eastwards again, to the home of his Mongol ancestors, and is preparing himself for a suitable change of costume.

The good start made by the Mesopotamia Comforts Fund is very cheering. It shows, I think, that the British public has only been waiting for a really "safe lead" to prove that it had not forgotten our splendid men who have been finding the traditional "Garden of Eden" region so very unlike Paradise. The public wanted to do something, but it did not know how to do it; and it had heard so many reports of "comforts"—to say nothing of letters—sent out by individuals going astray that it was afraid. Now that risk has been, as far as possible, eliminated; and with such an influential committee, such capable officials, the support of Sir Edward Ward, and the approval of the War Office, the fund is bound to inspire complete confidence. So, though rather late in the day, our Mesopotamian fighting man will come into his own, in this respect as in others, let us hope! Personally I feel as glad as I should if I were to receive all the subscriptions myself; for, knowing Mesopotamia well, and having been through a bad spell of sickness there, I was able to picture to some extent what our men have had—and *still have*—to go through; and I have felt not at all happy about it. But the first list of subscriptions has done me a lot of good.

Not the least pleasing thing about it is the support given to the fund by individuals and firms whose names are familiar to anyone who has been in touch with Mesopotamia and the Persian Gulf. Many of these donations are for handsome amounts, and the fact that they are given so promptly shows that the donors realise the value of the fund and the urgency of the appeal. But it would be a great mistake to think that because the start is so satisfactory the fund can do without constant and generous support. I note that "it is estimated that not less than £50,000 will be required within the next few months." That seems to me an extraordinarily moderate estimate. But £50,000 takes a lot of getting. So—Well, "cheques should be made payable to the Mesopotamia Comforts Fund, and sent to the hon. secretaries, 15, Aldford Street, Mayfair, crossed 'Coutts and Co.'"

The *Bosnische Post*, a journal published in Serajevo, announced recently, with a bit of a flourish, that a new German paper, *Die Deutsche Balkan Zeitung*, is to be launched in Sofia. Its object is "to give information on all Balkan

matters," and—as the Serajevo journal somewhat superfluously adds—to "propagate the principles of the alliance with Central Europe." It is not surprising to learn that this interesting venture is to be "financed with German capital," and that it is to be printed in German. Is not German to be the language of Mittel Europa, in which happy land Bulgaria (and Turkey) are, of course, to be incorporated? But what chiefly arouses my admiration for the scheme is the appointment of "a well-known German novelist" as editor. A practised writer of fiction is just the man for the post.

In spite of the strict blockade of our coasts which is maintained—according to the ever-veracious German Press—by the Kaiser's redoubtable under-water Navy, we are still able occasionally to get news of the outside world, now rapidly being brought under the blessings of Teutonic *kultur*, while the Kaiser's new Prussian Guard rehearses its triumphant entry into London. Thus it comes about that a telegram from Beyrout, giving momentous news, found its way hither last Saturday, having been transmitted by way of Amsterdam. It announced that "a war tribunal has sentenced to death *in contumaciam* Hussein Kemal Pasha—the Sultan of Egypt—on the ground that he placed under foreign rule constituent parts of the Ottoman Empire." And it adds, with fitting sternness: "The sentence has been confirmed by an Imperial Decree." This, as the small boy said a couple of seconds after the Head had invited him to bend over the form, is extremely painful; and I sincerely hope that the Sultan (of Egypt) will be more careful in the future. But what worries me most about the telegram is its failure to give information regarding two points: (1) The particular "constituent parts of the Ottoman Empire" which Sultan Hussein "placed under foreign rule"; (2) the date and place of the execution of the sentence. We can only hope that some kind friend will intervene with the Sultan of Turkey before the Imperial Decree is carried out.

Clearly, our friend the enemy is seriously annoyed. On top of the blood-curdling Imperial Decree just quoted, we have Kaiser Wilhelm, that faithful and devoted friend of Sultan Mohammed, announcing to one of his pet Prussian Divisions that the Roumanians must be "destroyed." And I notice that his chivalrous aviators—it was a German journal that reminded us a few days ago that chivalry still flourished in the air service—have already done their very best to carry out the Royal behest. We learned a few weeks ago that they had been dropping poisoned sweets in the streets of Bucharest. Now *The Times'* correspondent tells us that they have "carried out a series of ruthless attacks on peasants working in the fields, killing women and children." The Huns' hatred of the Roumanians seems to put quite in the shade even their hatred of this country. How long will it take them—and the neutrals—to become ashamed of this state of things?

It is pleasing to learn from Mr. Ward Price that German officers captured recently in the Balkans complain of the unreliability of their Bulgarian allies. They talked of the Bulgarian infantry stampeding and leaving them in the lurch, to be captured—horrible fate for the haughty Prussian!—by the Serbs. Really, the tactless way in which these Serbians insist on popping up again like a Jack-in-the-box, after being "exterminated" by the gallant Bulgaro-Germans, is extremely embarrassing. No wonder the German officers were unable to conceal their true sentiments towards their dear allies. But such straws show how the tide is running. And I hope the tide is going to turn to a regular flood very shortly.

For their part, the Bulgarians can hardly feel precisely happy just now. Their sins, and the sins of their "friends," are beginning to come home to roost. They purported sending a steamer, the Bulgaria, into the Black Sea as a hospital ship, and notified the Russian Government accordingly. But the Russian Government declined to recognise the vessel as a hospital ship, "in view of the recent sinking of the Russian hospital ships Portugal and Vperiod." Moreover, Russia has just made it very clear once more that she "will not be turned from her fixed purpose"; that she will not forget Bulgaria's "black treachery" towards her; and that she is "resolved to punish the personages of the Bulgarian Government who treacherously allied their country with the enemies of her invariable protector." Upon the whole, I am thankful that I am not in Ferdinand of Coburg's shoes, or in Radoslavoff's or Tontcheff's!

NEAR EAST BOOKSHELF.

WHEN THE WORLD WAS YOUNG.*

This book, one of the Peeps at Many Lands series, is intended primarily for young people, and it can hardly fail to appeal strongly to any boy or girl of ordinary intelligence. Certainly any boy worth his salt will find the story of Layard's adventures and discoveries excellent reading; and boys and girls will alike enjoy the lively pictures of life in the Assyrian capital, the stories of the heroes, and the legends of the gods and goddesses. But the little book is likely to be full of interest to many older readers also; for the author has been surprisingly successful in handling his subject. As treated by the professional Assyriologist, it is too often utterly dry and bewildering; but Mr. Baikie has clothed the dry bones, and, skilfully avoiding the chronological difficulties, has set before us a picture full of life and colour. It is, of course, a mere sketch, but it is cleverly done. If we want more than a sketch we can go to the learned works of the professors and 'ologists, and fill in the details for ourselves. Here, after all, we are promised nothing more than a "peep"; but the peep is a very pleasant one. If it sets us trying to get further views at the subject, so much the better.

The gradual building up of the Babylonian plain by the silt deposited by the great twin rivers, and of the birth of the small city states is well described. Babylonia itself is hardly in the picture, of course, but Assyria's rise and fall are outlined; then we are told how, after lying neglected for centuries, the ruin mounds were forced to yield up their secrets by the patience and perseverance of the excavator. Here, by the way, the author hardly does justice to his own countrymen. It is true that Botta was "first in the field" as far as actual excavation on any considerable scale was concerned, but it was Rich, an Englishman, who first explored the mounds in anything like a scientific spirit. The slip, however, may be regarded as of small importance in a book of this character.

After describing Layard's romantic discoveries and the sensation they caused in this country, the author carries us back "on some magic carpet" to Kalah, the Assyrian capital in the days of Ashur-natsir-pal. We visit the bazaar, examine a typical private house, are afforded a glimpse of the royal palace, and are shown the Great King himself on a lion-hunting trip. Then we follow his Majesty on his expedition against Syria—and, truth to tell, find the experience none too pleasant, for the King and his Staff have views upon the useful effects of a policy of "frightfulness" which bear a striking resemblance to those that flourish to-day in Prussia. It is interesting, however, to be present at what may be called the birth of the cavalry idea, and we find "the more modern and scientific members of the Assyrian staff. . . well aware that the day of the chariot in war is drawing to a close." Recent experiments with the "Tanks" seem to suggest that the despised chariot has come into its own again with a vengeance. So does the whirligig of Time go round!

After witnessing the gruesome sights attendant on the siege and fall of Aribua, it is rather a relief to be taken off to the great library of Ashurbanipal. It was all very well for Macaulay to make fun of cuneiform writing, as Mr. Baikie reminds us he did; but the wedge-inscribed tablets have enabled us to get more than a glimpse into the minds of the ancient Assyrians and the more ancient Babylonians. They have kept alive for us stories of heroes, gods, goddesses, demons, and all the rest of the characters that still strut bravely across the pages of many a popular writer. Some of those early tales are here retold for our delectation; and, frankly, we find them at least as entertaining in their old form as they are in the pages of the most fashionable lady novelists of the day—and, dare we add, less offensive? It is satisfactory to find that the indebtedness of the Hebrews to the Babylonians—or the Chaldeans—is fully acknowledged. To those who like to see their fellow-men becoming more hopeful and more happy, it is also satisfactory to note that the gloomy views of the "underworld" that prevailed amongst the Babylonians and Assyrians have been steadily losing some of their terrors as they were passed on from story-teller to story-teller and poet to poet. Mr. Baikie's readers—young or old—are unlikely to wish that they had lived in the "good old days" described, at any rate, in Assyria.

The photographic illustrations, from sculptures and tablets in the British Museum, are well chosen, and well reproduced. The coloured ones also, which will please the younger readers, are good—extraordinarily good for such a book. One of the latter shows a gateway in glazed brick-work, which is obviously restored on the basis of one of the structures unearthed by Koldewey at Babylon.

* "Ancient Assyria." By the Rev. James Baikie, F.R.A.S. (A. and C. Black. 1s. 6d. net.)

BOOK NOTES.

Mr. Andrew Melrose has published (6s. net) "With Serbia Into Exile," by Paul Fortier Jones. The author accompanied the Serbian Army in its heroic and famous retreat to the Adriatic, and here recounts his experiences.

Mr. Lane has published (15s. net) "The Antique Greek Dance After Sculptured and Painted Figures." Written by Maurice Emmanuel, the book has been translated by Harriet Jean Beaulieu.

Messrs. Blackie have published "On the Road to Baghdad," by Captain F. S. Brereton, one of the most popular writers for boys. With such a subject Captain Brereton should spin a good yarn, and one that ought to appeal very strongly to any boy of spirit and imagination.

Messrs. Harrap have just published "Myths and Legends of Babylonia and Assyria," by Lewis Spence.

Mr. John Hargrave is the author of another book on the Gallipoli campaign, "At Suvla Bay," of which Messrs. Macmillan are the publishers. The author served with the field ambulance of the M.E.F.

On behalf of the Lord Kitchener National Memorial Fund, the Mayor of Poplar (Mr. A. H. Warren), at the Town Hall, on the 15th inst., handed over to A. W. Day, late of the Royal Fusiliers, a donkey and coster's barrow. Day, who had already been in the Army, re-enlisted for the present war, and was with the first party to land in Gallipoli, where he was totally disabled by a gunshot wound in the right hand. In order to enable him to earn a livelihood the Lord Kitchener Memorial Fund decided to provide him with a donkey and barrow.

		Thursday	4	

Sunday is the birthday of Queen Maud of Norway.

Monday is the birthday of the Empress-Dowager of Russia, and next Friday is the birthday of Queen Alexandra, her sister.

Prince Cantacuzene left London last week for Bucharest to join the Roumanian Army.

Lady Howard de Walden gave birth to a daughter at Seaford House, Belgrave-square, on Wednesday of last week.

General Sir John Maxwell had an audience of the King at Buckingham Palace last Friday, when his Majesty invested him with the insignia of a Knight Grand Cross of the Order of the Bath, Military Division.

The *London Gazette* announces:—The King has been pleased to make the following appointment:—To be Assistant Private Secretary to his Majesty: Rowland Thomas Baring, the Viscount Errington, M.V.O. The appointment of Viscount Errington to be an Equerry-in-Ordinary to his Majesty is also gazetted.

In recognition of their services in the defence of Egypt, the Sultan has conferred the First Class of the Order of the Nile on General Maxwell and Admiral Wemyss, the Second Class of the Order on Major-Generals Wilson, Wallace, Eadie, Peyton, Watson, Lynden-Bell, Lord Denbigh, and Lord Lucan; and the Mohammed Ali Gold Medal on the Duke of Westminster.

A marriage has been arranged between Oliver William Verner, of the Ministry of Justice, Cairo, elder and only surviving son of the late Mr. W. H. Verner, I.C.S., and Mrs. Verner, of Cumber Lands, Kenley, Surrey, and Marie Louise, daughter of the Commandant d'état-major belge de Wasme and Mme. de Wasme.

The marriage arranged between Captain R. Chenevix Trench and Miss M. E. Jelf will take place at St. Margaret's Church, Oxford, on Saturday, December 2, at 2.15 p.m. No invitations will be issued, but friends will be welcome at the church.

On October 28, at All Saints, Cairo, and at the British Consulate, the marriage took place of Mr. Basil M. Rogers, of the Department of Mines, Egypt, and Miss Aline Ethel St. John. The bridegroom is the third son of the late Rev. W. H. Rogers, D.D., and the bride is

FLIGHT COMMANDER HANS ACWORTH BUSK, R.N., missing in the Dardanelles since January 6, 1916.—Any definite information that might be obtained through relatives or prisoners of war in Turkey concerning the fate of this officer would be gratefully received by his mother, Mrs. Busk, 6, Wadham Gardens, Regent's Park, N.W.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

the fourth daughter of the late Lieutenant-Colonel H. H. St. John, D.S.O., who saw much service in Egypt (in 1882, 1884, and 1885) and the Sudan (1885-6).

Captain Procter, who in civil life is the manager of the Manchester branch of the I.O.B., was severely wounded in the face on the 15th of this month. He is now in hospital in London.

We are glad to learn that Trooper G. Parker, formerly of Constantinople, who had been reported missing, was recently in London, and that the report was therefore unfounded.

Lieutenant-Colonel Leslie Orme Wilson, M.P., who commanded the Hawke Battalion of the R.N. Division in Gallipoli, has been wounded and sent home. Since the withdrawal from Gallipoli he has been serving on another front. Last September he was made a C.M.G.

Lady Roper Parkington, the hon. treasurer of the Montenegrin Red Cross and Relief Fund, having removed from Green Street, Park Lane, asks that donations to the Fund be sent to her at Claridge's Hotel, Brook Street, W.

The Red Cross ambulance and hospital unit the gift of the miners of Great Britain to Roumania, which left London on the 11th inst., in charge of Dr. A. P. E. O'Leary, left Petrograd for the Roumanian capital on Monday. The Hon. Arthur Stanley, Chairman of the Joint War Committee of the British Red Cross Society and the Order of St. John, has received through the Foreign Office the following message from Lady Barclay at the British Legation, Bucharest:—"I have to-day seen the Queen of Roumania. Her Majesty will herself choose the hospital for the miners of England, and she would like it to bear the name of the much-loved infant Prince whose death she now mourns, thus associating the miners of England in her sorrow as also in her joy, which she finds only in nursing her sick and wounded soldiers. The hospital is to be called 'Prince Mircea Hospital.'"

Captain Edward Unwin, V.C., R.N., was last week presented with a scroll of honour voted by the Portsmouth Town Council. Captain Unwin, who belongs to Portsmouth, won the Victoria Cross for distinguished bravery during the landing from the transport River Clyde on Gallipoli beach. The scroll was enclosed in a casket subscribed for by the public.

The first group of the French Medical Mission, under the direction of Major L. Avenant and Surgeon-Major L. Heureux, has arrived in Bucharest, accompanied by a full staff. A mission has also arrived from the Carrel Institute, directed by Surgeon-Major Dehelly.

M. Vladimir Rosing announces a fourth recital of Russian songs in aid of Russian and Serbian Prisoners of War for the 28th inst. at Æolian Hall at a quarter past eight. He will be assisted by Miss Ursula Tremayne and M. Julian Bonell. Tickets may be obtained from Mr. L. G. Sharpe, 61, Regent Street, or at the hall.

One of the most interesting gifts which has been made recently to the Red Cross has just been received by the Hon. Arthur Stanley, Chairman of the Joint War Committee of the British Red Cross Society and the Order of St. John, from Field-Marshal Sir Evelyn Wood. It is a packet of letters written by Lord Kitchener to Sir Evelyn Wood during the reconquest of the Sudan. Sir Evelyn Wood requests that they may be sold for the benefit of the Red Cross Funds.

On the march of the South Persian military police to Isfahan in August, Brigadier-General Sir Percy Sykes, K.C.I.E., wrote to the secretary of the C.M.S. Mission in Persia, drawing attention to benefits conferred on the column by Dr. White, of Yezd. His work is "well known in Persia, but for the first time it has helped a British force." Those of the men who were sick were left behind "under excellent conditions."

Our Roumanian Correspondent writes October 20:—"M. Eugene Goga, author of the well-known book 'Les deux Sibéries,' and brother of the Roumanian poet Octavian Goga, who is a volunteer in the Roumanian army, is just now in hospital at Fetteshti. A Transylvanian Roumanian and a jealous patriot, like his brother the poet—who is now in exile in this country, having been condemned to death in his absence from Hungary for his efforts in the cause of Roumanian freedom—he was first forced to serve in the Austrian army, was wounded twice, and then taken prisoner by the Russians and sent to Siberia, where he remained 13 months. He then obtained permission to come to Roumania, where he was one of the first to volunteer on the mobilisation of the Roumanian army, that of his real country. Happily his wounds received in the Dobruja are not severe.

Miss May Joyce, daughter of the sub-manager of the Imperial Ottoman Bank at Alexandria, has passed her final tests at the "Scuola Superiore di Pittura" at Rome with remarkable success.

APPOINTMENTS, PROMOTIONS, ETC.

Colonel Rascanu, of the Roumanian Staff, one of the ablest of the younger officers of the Army, says Reuter's Agency, has arrived in England on a special mission as representing the Roumanian Headquarters.

Under date of the 18th inst. Reuter's Washington Correspondent reports: The State Department has been informed that M. M. Ljoubonir Mihailovitch has been appointed the first Serbian Minister to the United States.

M. Slavko Grouitch, who was for a long time Serbian Chargé d'Affaires in London and later was Serbian Under Secretary for Foreign Affairs, has been appointed Serbian Minister at Berne. He will shortly take up his new position, where he will be assured of the good wishes of his numerous friends in this country.

M. Dragomir Yankovitch, who has been appointed Serbian Minister to Madrid, where he is the first occupant of that position, was formerly King Peter's Private Secretary.

M. G. Todorovitch, Secretary to the Serbian Legation, has been transferred from London to the Foreign Office at Corfu.

Bimbashi O. M. Conran, Officer Commanding Nuba Territorials, and Bimbashi H. C. Maydon, Cavalry and Mounted Infantry, have been struck off the strength of the Egyptian Army on reversion to their British units.

Mr. H. Garland, Department of Ordnance, Egyptian Army, has been granted the temporary rank of Saghkolaghassi whilst employed on special service.

Captain C. McKey Bey, Director of Customs, has returned to Port Sudan, after having passed the summer in Cyprus.

El Bimbashi (temporary) C. H. Wolff, 9th Sudanese, has been transferred to Equatorial Battalion.

A Turkish Legation is to be established at Copenhagen with Sefa Bey, formerly Minister in Bucharest, as Minister. Hitherto Turkey has been represented in Denmark by the Minister in Stockholm. It will be remembered that, in sending us news of Sefa Bey's departure from Bucharest, our Roumanian Correspondent compared him favourably with the departing German Minister.

M. Sachtoris, the Greek Consul-General at Alexandria, has declared himself as the representative of the true Greek Government, which he considers to be the Provisional Government, with headquarters at Salonika, and with M. Venizelos at its head. The Athens Government, however, sent a telegram to M. Xanthopoulos, the Greek Consul in Cairo, ordering him to proceed to Alexandria and take over the Consulate from M. Sachtoris.

OBITUARY.

The death is announced as having taken place on Thursday of last week, at Higher Knowle, Lustleigh, South Devon, of Mr. Edward Blencowe Gould, I.S.O., late H.M. Consul-General at Alexandria, Egypt. He had been ill only a short time. Mr. Gould was the eldest surviving son of the Rev. J. Nutcombe Gould, and was born in 1847. At the age of twenty-one he was appointed a student interpreter in Siam. Until 1889 his service was all in the Far East; he was Acting Vice-Consul at Bangkok on several occasions, and was promoted Vice-Consul (at Chiangmai) in 1883, and Consul in Siam in 1885. In 1886, 1887, and 1889 he acted as Chargé d'Affaires. In 1891 he was transferred to Port Said, and in 1897 was appointed Consul, with the personal rank of Consul-General, at Alexandria. In 1900 he was given a new commission as Consul at Alexandria, with jurisdiction over all the seaboard between the Gulf of Solloum to Damietta, and the Province of Behera and Gharbia. In 1903 he was made a Companion of the Imperial Service Order, and in November, 1909, he retired on a pension. He was a good shot and a keen angler.

The Athens correspondent of *The Times* reports that M. Denis Stefanou, a former Greek Minister for Foreign Affairs and Secretary to the late King George of the Hellenes, died on the 14th inst. *The Times* adds:—"M. Stefanou, who came of an old and esteemed Zante family, began his career at the Bar. On being returned as Deputy for his native island in the Chamber as a Tri-coupiot, he joined the Tricoupi Cabinet as Minister of Justice. On the death of Tricoupi he joined M. Theotokis, under whom he on various occasions held the portfolios of Justice and for Foreign Affairs. After the war of 1897 he went as Minister to Constantinople, where he exhibited considerable diplomatic ability. Later he was appointed Chief of King George's Civil Cabinet. This appointment he held until 1910, when he retired from public life. After the resignation of the Kalogeropoulos Ministry a short time ago King Constantine invited him to form a new non-political Administration, but M. Stefanou was compelled by failing health to decline this offer."

Our Cyprus Correspondent writes:—

Much sympathy is felt for Dr. R. A. Cleveland, the Chief Medical Officer, who has received news of the death, at the front, of his son, Mr. S. A. Cleveland, who was much esteemed in Cyprus.

News has also been received of the death in battle of Mr. A. Cunningham, who was Assistant to the Postmaster-General in Cyprus. Mr. Cunningham's father was for many years an able and much-valued official of the Public Works Department in Cyprus.

The death occurred at Botley, Hampshire, on Tuesday, of Sir John Samuel Moore, K.C.B., Paymaster-in-Chief, Royal Navy. Born in 1831, he entered the Navy in 1846, and served on the Cape Station during the Kaffir war in 1849-52. He took part in the naval operations of the Crimean campaign, and during the Egyptian war of 1882 he was Secretary to the Commander-in-Chief, Mediterranean Station. He was present at the bombardment of Alexandria, and was mentioned in despatches.

Brigadier-General Duncan J. Glasfurd, who died on November 12 of wounds received the same day, aged forty-two, was the second son of the late Major-General C. L. R. Glasfurd. He obtained his commission in the Argyll and Sutherland Highlanders in 1893, and served in the South African War as adjutant of his battalion. He was twice wounded and awarded the Queen's medal with three clasps. In 1901 he served in Jubaland against the Ogaden Somalis (medal and clasp), and in Somaliland in 1902-4, when he commanded the 4th Somali Camel Corps, and was afterwards employed as a special service officer under the Director of Supply and Transport, being mentioned in despatches and receiving the clasp. On the outbreak of war he accompanied the 1st Australian Division on the General Staff, and was present during the whole of the operations in Gallipoli, being promoted to a brevet lieutenant-colonelcy. He was promoted early

this year to the command of a brigade of Australian Infantry. He was slightly wounded last June, but remained at his post.

Captain Hubert John Daniell, whose death is announced this week, was the elder son of Major-General J. F. Daniell, C.M.G., G.O.C., Sierra Leone, and Mrs. Daniell. On the outbreak of war he went with his regiment to the Persian Gulf, and later was attached to General Delamain's staff. He served through the siege of Kut, and was mentioned in General Townshend's despatches. During the siege he contracted enteric, from which he died at Mosul. He was twenty-eight years old.

Lieutenant-Colonel Arthur S. Tetley, Royal Marine Light Infantry, who has died of wounds, was, before the war, captain in the Reserve of Officers, to which he was appointed on his retirement in September, 1910. He was re-employed and given the temporary rank of lieutenant-colonel. He served with the Mediterranean Expeditionary Force in Gallipoli, when he was with a battalion of the Royal Naval Division, and was mentioned in General Sir Ian Hamilton's despatch, published in the *London Gazette* of August 5, 1915.

Captain Frederick Septimus Kelly, R.N.V.R., of Bisham Grange, Marlow, was killed in action on November 13. An Australian by birth, he was educated at Eton and Balliol College, Oxford, and was a well-known oarsman. He volunteered for service with the R.N.V.R. directly war broke out, and served in the Gallipoli campaign. He was one of the three officers who remained at the observation post in the front trenches during the final evacuation, and was one of the last men to leave the Peninsula. For his services there he was awarded the Distinguished Service Cross.

M. Otto Baerlein, Serbian Consul in Manchester, died at Osborne House, Alderley Edge, Cheshire, on Saturday. He was in his sixtieth year, and had held his post since June, 1896.

THE WOUNDED ROUMANIAN SOLDIERS' FUND

(Regd. for the purpose of TRANSMITTING FUNDS to the ROUMANIAN RED CROSS SOCIETY.)

Under the Patronage of HIS EXCELLENCY N. YISU, the ROUMANIAN MINISTER in London.
Hon. Treasurer: THE RIGHT HON. the EARL of BESSBOROUGH, K.P., C.V.O., C.B., Bank of Roumania, Limited, 27, Throgmorton Street, London, by whom

DONATIONS will be GRATEFULLY RECEIVED.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

DE SMIDT.—On November 16, at Lahill, Exeter, the wife of Leonard F. P. De Smidt, Egyptian Civil Service, of a daughter.

MARRIAGE.

WINGATE—VINOGRADOFF. — On November 11, at Lahore, by the Bishop of Lahore, assisted by the Rev. S. C. Buckwell, Ronald Evelyn Leslie Wingate, eldest son of Sir Reginald Wingate, to Mary Harpoth, daughter of Mrs. Vinogradoff, step-daughter of Professor Vinogradoff of Oxford.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.55; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach.

Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURS' CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troodos.

For Tickets and further Particulars, apply to

NAJEM HOURS & SONS,

LIMASSOL, CYPRUS.

Proprietors of "The Army and Navy Stores." Branches—Polymedia, Troodos, Nikosia, Famagusta, Larnaca and Platres.

Head Office and Central Stores: LIMASSOL.

All arrangements for Transport, &c., are made by the above Firm.

RELIEF OF DISTRESS

IN PALESTINE AND SYRIA.

Bishop MacInnes will be glad to receive CONTRIBUTIONS made payable to the Rev. E. M. Bickersteth at the Church House, Westminster, S.W.

FRIDAY, NOVEMBER 24, 1916.

PEACE AND RECONSTRUCTION.

If it were possible to have achieved neutrality of opinion, as distinct from neutrality of attitude, in regard to the war, there would appear to the person or country so minded to be cogent reasons for supposing that the time is ripe, or nearly ripe, for peace. Such a person or country, taking note only of the immediate causes which led to the outbreak of war and of the outstanding features of the struggle, would attribute the provocation to Germany, and would point out that the Central Powers must know by now that they cannot win. The Allies, on the other hand, would be reminded that the price of complete victory may well prove almost as disastrous as defeat. Could anything, therefore, be more in keeping with the spirit of what ought to be a pacific age than to counsel the belligerents to abandon their strife, in order that they may live and let live? There are indications that such a line of reasoning is appealing to gradually wider circles in America, not necessarily as an outcome of German intrigue, but in response to feelings which entire detachment from the war and its real causes engenders in a naturally peace-favouring nation. In Great Britain, too, as we know, there have been a few people whose obsession by the theory of peace has prevented them from giving sufficient play to their intelligence to enable them to discover all that lies behind the great Armageddon. In so far as these peace suggestions merit notice they are easily answered by a reference to the terms which have been declared officially to be the Allies' antecedent conditions to a termination of the struggle. These may be restated in Mr. Asquith's words: "We shall never sheathe the sword, which we have not lightly drawn, until Belgium recovers in full measure all and more than all that she has sacrificed; until France is adequately secured against the menace of aggression, until the rights of the smaller nationalities of Europe are placed upon an unassailable foundation; and until the military domination of Prussia is wholly and finally destroyed." But, although such a statement may silence the peace-mongers for the time being, it fails to carry conviction, for it is attributed to one cause or another which is held in the same circles to have no permanent weight; and the next time when a favourable opportunity is thought to have presented itself, the same well-meaning but misguided overtures will be forthcoming.

Behind all such peace talk at this juncture lies the failure to appreciate the actual causes which have brought about the war. If neutral opinion—so-called—is to rid itself of the idea, which from now onwards may become more prevalent, that mere lust of power or revenge is spurring the Allies on against the Central Powers, it must acquire some of the knowledge which underlies the Allies' determination not to stay their efforts "until the military domination of Prussia is wholly and finally destroyed." In this connection we may commend to such neutral opinion a new weekly publication, entitled *The New Europe*, which, although it deals with a subject that has formed the theme of much recent literature, has the advantage of being able to follow up the details of a very wide question in the light of current developments. To understand the real causes that led up to the war is to realize why there can be no talk of a settlement at the present moment. Peace entails reconstruction—a new Europe, in fact, which is to make a repetition of the upheaval of the old one an impossibility. The two go hand in hand, and anyone who wishes to discuss peace must be prepared to offer the

details of a reconstruction which, in regard to the Continent, will satisfy Belgium, France, Great Britain, Italy, Montenegro, Roumania, Russia, and Serbia. It is not suggested that the public in the Entente countries have a clear appreciation of the precise form which reconstruction in Europe ought to assume after the war. They do not share a neutral's possible misgivings, and, apart from the actual causes of the war, they have all the object-lessons they want in Germany's conduct and methods of warfare to be resolved to see the struggle through, whatever it may cost, and to subscribe without reservation to the general principles of a settlement enunciated by the Allied Governments. But while the causes of the war and the question of reconstruction may have an interest for neutrals in helping them to understand the spirit now actuating the Allies, it becomes a duty imposed upon the thinking section in each of the Allied countries so to master the details of the whole problem that the peace which will finally be ratified shall detract nothing from the victory won at such a price. The public, therefore, will do well not to remain content with vague generalities, but to accustom itself to a consideration of definite schemes in order to strengthen the hands of the Government when it is called upon to collaborate with the Allies in the drafting of a programme of peace.

For readers of these pages the problem of the new Europe has a special interest, and it is inevitable that the greater part of the publication to which we have referred should be devoted to the Near East and its affairs. In a recent issue we are reminded that "the war broke out in the Balkans and for the Balkans. It is the sequel to the recent Balkan wars: it is a vital part and continuation of that historical process known to Western nations as the Eastern question." Germany's part in that perennial problem is realized more fully than it was before. The war, although of her own making, has forced her hand. She had been making her preparations to acquire in the Balkans and Turkey the additional resources which she considered necessary for her hegemony of the world. The war broke out before these plans had matured, and what there had not been time to accomplish by a gradual process had to be carried through in haste. Hence the rapid creation of the Central European Block—that solid phalanx of concentrated effort, stretching from the Baltic to Baghdad, which in the programme Germany had kept steadily before her was to be the agency of her world-dominion, and now in this war must serve as the rock on which the assaults of her enemies are to be shattered. There are indications that the scheme is arousing less enthusiasm among the other component parts of the Block than it does in Germany. This may be due to the fact that it had to be carried into force under pressure as a military necessity without being first preached as an academic proposition to open minds, or it may be due to defects in the German character. Be that as it may, the Allies cannot trust to the Block breaking up of its own accord. In so far as it is the pivot of Germany's ambitions, its perpetuation has to be prevented, and it will not be enough merely to detach the Turks by driving a wedge in between the Ottoman Empire and the Central Powers. The Turks, it is true, are the coping-stone, but the edifice rests on the substantial foundation which the existence of the Austro-Hungarian Empire offers to Germany. If the latter were to be left with the same nucleus for the gratification of similar ambitions in the future, the victory of the Allies could not be regarded as complete. The smaller nationalities, which, according to the Allied resolve, are "to be placed upon an unassailable foundation," are to a large extent to be found within the Dual Monarchy. Their liberation, therefore, has to be effected, and it becomes part of the problem which has to be solved in the terms of peace. The experience of the war has taught us that the interest taken by the public is likely to be the measure of the Government's knowledge of a subject. The Allies cannot afford to be robbed of the fruits of their victory, when it comes, by a makeshift or imperfect peace. We may welcome, therefore, every effort made to throw light on an intricate question, in the conviction that, if care and judgment are exercised in adjusting the affairs of the Near East, the rest of the new Europe will be capable of looking after itself.

THE ROUMANIAN FRONTIERS.

BY D. MITRANY.

Roumania's original offensive against Transylvania has been widely criticised and regarded as another addition to the list of strategic mistakes engendered by an over-emphasis of political considerations. Such considerations did, no doubt, weigh heavily in the decision; yet it is not too much to say that the move was worth attempting, even on purely military grounds. The remarkable stability shown by the Roumanian nation, notwithstanding an intensely troubled historical evolution, suggests a geographically well-conditioned homestead, and a glance at the map will prove this true. The region inhabited by the Roumanians centres in the natural fortress generally called the Transylvanian highland, the Roumanian plains extending round it, like a semi-circular glacis; while the rivers, the majority of which take their birth within that system and end at its limits, closely connect the physical features and emphasise the unity of the whole. The Transylvanian plateau has been of all times the refuge of the Roumanian people, whether they were avoiding the Tartar invaders coming from the north-east, or the Turks coming from the south. The wooded slopes of the Carpathians were not easily accessible to the enemy, while they offered to the Roumanians an always dominating position. Though at first sight possessed of formidable natural frontiers, the actual Roumanian kingdom has retained little of the invulnerability of the old Roumanian land. The shape of the country would allow a concentration in the northern half in the case of an invasion from the south, or in the southern half in the case of an invasion from the north; but it presents its greatest disadvantage in the case of a situation like the present one. Not only is the length of the frontier towards Austria out of proportion with the forces of the country, but the fact that it forms a re-entrant angle enables a successful offensive to disorganise the system of defence by cutting the country in two. The valleys of the Carpathians are all transversal, and have generally no connection with one another; the main lines of communication must, therefore, run at a considerable distance from the ridge of the mountains, and in so far as this gives greater free play to the initiative of the offensive, it renders more difficult the task of defence. Now, it is evident that a successful advance into Transylvania would have obviated all these drawbacks; moreover, by an offensive action Roumania had the opportunity of putting to use the one great advantage that she can derive from the nature of the Carpathian valleys—namely, that they converge all upon one and the same objective. That the enemy has been able to break the incipient offensive by a powerful concentration of artillery is a fact for which the Roumanians cannot be made alone responsible.

Roumania shows three comparatively well-defined regions, running parallel to the range of the Carpathians; that of the plain, which forms the arable area; that of the foot-hills, running up to a maximum height of 2,000 ft., and covered with meadows, vineyards, and orchards; and that of the mountains, reaching sometimes 7,500 ft., and bearing pastures and forests. The mountainous region forms a belt, covering on the average one-third of the total width of the country. It is accessible from Austria-Hungary through nine main passes, not all of which possess good roads, while only three are traversed by railways. From what has been said already it is clear that the three central passes—Toerzburg, Predeal, and Buzau—are the most important, because they are relatively near to one another and make possible a somewhat convergent action upon the heart of the country; also because their possession is necessary to secure the flank of the armies operating at the extremities of the country. The most important of all is, however, the Predeal pass. It leads into the rich valley of the Prahova, through which run the railway and the road forming the shortest direct connection with Bucharest, and in which, centring round the town of Ploesti, are situated the main oilfields of Roumania. Bearing in mind the fact that the question of transport is one of the main difficulties with which the Roumanian General Staff has to cope, it will be easily realised how vital is the possession of these oilfields to Roumania, if we consider that out of 888 engines running on the Roumanian railways in 1913-1914, 751 were using liquid fuel. The Roumanian railways are the largest consumers of petroleum residues,

accounting for 40 per cent. of the total consumption of liquid fuel in the country.

Next in importance are the northern group of passes, in Moldavia, the fall of which would threaten the contact between Russia and Roumania. The least vital sector is in Western Roumania, an invasion of which would only become serious should the enemy succeed in crossing the line of the Aluta River, and thus march on to Bucharest, while at the same time turning the Toerzburg, Predeal, and Buzau passes, where, despite strenuous efforts, he has yet failed to break through.

There have been up to now no important developments along the line of the Danube. The river forms a formidable obstacle, its value for the defence varying with the time of the year. During December, January, and February navigation on the Danube is generally interrupted on account of ice floating on a swift current, and during that period no military operation of any magnitude could be undertaken across it. Sometimes, though not often, the river is completely frozen, and then offers an easy and secure means of communication, not to be relied upon, however, for any length of time. The rise of the waters and the greatly-increased current render a crossing in the spring absolutely impossible. The most favourable period for such an operation is consequently that from July to October, when the waters are at their lowest. Even then the points where a crossing on a large scale is possible are not numerous, and are, generally speaking, those upon which roads and railways converge on either side of the river. An offensive from the south has the advantage that the right bank dominates the left along almost the whole line. On the other hand, as the river is constantly cutting into the Bulgarian shore, it has left on its northern side a terrace, dominating by 100-300 ft. the flood-plain which separates it from the water. This flood-plain reaches often a width of 12 kilometres, and as it is dotted with swamps, marshes, and canals, it reduces the number of possible crossing points and enhances the defensive value of the Danube. Moreover, Roumania controls the navigation on the lower Danube as long as she retains possession of both banks in the Dobruja.

The battles which have been fought out in that province have terminated, on the whole, unfavourably for the Roumanians. The Dobruja is, however, geographically distinct from the Roumanian kingdom. Its possession is valuable in so far as it obviates, in the case of an offensive against the Balkans, the necessity of forcing the obstacle of the Danube—though the destruction of the Cernavoda bridge, and hence of the only railway communication with Roumania proper, has somewhat reduced this advantage. In the hands of the enemy the Dobruja would not offer equal opportunities, as the enemy will still have the barrier of the Danube before him—a barrier the more effective as a crossing could only be attempted in the region of Silistria, at Hirsova, or in the region of Braila. It is not being unduly optimistic to say that even the loss of Constantza has not involved a serious inconvenience. It is of little use to the enemy, as Russia controls the Black Sea, while as long as the Dardanelles remain closed to the Allies Constantza's position must necessarily be a less than secondary one. The port was used for communication with Russia, but this was a connection which could not be regularly relied upon, and Sulina, at the mouth of the Danube, would prove a good substitute, if it had a railway connection with the interior. In the present state of affairs the connection will probably have to be kept up by Galatz and Braila, both points very convenient for reception and distribution. Navigation to these ports may be prevented, it is true, if the winter is severe; but in the case of such a winter the whole of the country, and especially the mountainous region, will lie deep in snow, and we may then expect to see activity on the Roumanian fronts reduced to a minimum.

It is reported that the Provisional Government of Greece at Salonika has a new set of stamps in preparation (says the *Daily Telegraph*). One of the denominations presents a portrait of the leader, M. Venizelos. Amongst the other vignettes to be used will be a group of portraits of the patriot leaders, M. Venizelos, Admiral Condouriotis, and General Danglis. During the recent Balkan wars several scores of new varieties of stamps were added to the lists of Greek issues, but the Hellenic stamp-makers have not been so busy during the present war. Only one notable issue has come out of Greece since the war began, and that was the British issue of "Levant" overprints made at the British Army printing office at Salonika.

WHITE HORSE
WHISKY.

GREAT AGE
AND
BOUQUET.

KING GEORGE

KING OF SPAIN

THE PRESS ON THE NEAR EAST.

Monastir.

In a leading article, "The Recapture of Monastir," *The Times* remarks that the recapture of the city "is a heavy blow to the Bulgarians and to the Bulgaro-German alliance."

At the present advanced season of the year, with a Balkan winter already begun in the highlands and the passes, the event may not prove to be of great military importance. A successful advance by Prilep and the Babuna Pass might possibly succeed in outflanking the Bulgarians facing the British about Doiran, but the country to be traversed is very difficult and the pass very strong. . . . But it is not because of any military consequences which are immediately probable that the success of the Allies will exercise a profound effect throughout the Balkans. The possession of the second city in Macedonia has long been the object of Bulgaria's dearest ambitions, and the passionate desire to win it has been fiercest amongst the Macedonian desperadoes who have controlled her policy for many years and who have been responsible for its most sinister aspect. It was largely the expectation of gratifying this desire which led the Bulgarians to betray the other Balkan peoples who had fought so gallantly and so triumphantly beside them in the great uprising against the Turks. Their humiliation and their disappointment will be deep and angry when they see the fruit of their felony snatched from them after less than twelve months of enjoyment.

There is reason to believe, the article continues, that the internal situation in Bulgaria is "anything but rosy," though "German fictions, German authority, and, above all, German military prestige," have hitherto kept it in hand. When the Bulgarian peasants learn that the city they cherish has been snatched from them and their German patrons, and that the hated Serbians had a great part in the defeat, the situation is unlikely to improve.

Roumania's Difficulties.

Writing in the *Fortnightly Review* (November), "Politicus" is disposed to take a pessimistic view of "The Position of Roumania." Apparently, he writes, Roumania is being attacked by overwhelming forces, both north and south; "her position is serious, and perhaps critical." After considering in some detail the material benefits that Germany would gain by crushing Roumania, "Politicus" turns to the Allies' side of the question.

The destruction of Roumania's army would not merely have a most unfavourable effect on the economic and strategical position, but on the political position as well. Not only the Greeks, but other neutral States seem to be wavering. Some countries appear to be hesitating whether they should join in the war on one side or the other. Roumania's downfall would be a fearful blow to the prestige of the Allies. Neutrals would point the finger of scorn at that nation which, while professing to be the protector of the smaller nations, had not been able to prevent the destruction of Belgium, Serbia, and Roumania. Great Britain cannot be held responsible for Belgium's defeat, because that country was invaded by surprise before Great Britain had begun to create an army. Serbia's downfall is less excusable, because it happened after more than a year of war and in spite of the most solemn and most urgent warnings. Still, it might be urged that British statesmen did not think Bulgaria capable of stabbing Serbia in the back, of perpetrating an unparalleled act of treachery upon those to whom she owed her deliverance from the Turkish yoke. If Roumania should share Serbia's fate, history will hold the Allies responsible for her downfall. The experience of Germany's methods and the destruction of Belgium and Serbia should have made a third disaster impossible. There is a limit to excusable improvidence on the part of nations and their statesmen. Great Britain, France, Russia, and Italy could scarcely complain if neutral nations, desirous of benefiting themselves, would conclude that it was dangerous to take the part of the Allies, that it was safer to join the Central European Alliance, and Germany would no doubt make the best use of that situation and force hesitating neutrals into the war at her side by her usual methods.

The Roumanians, "Politicus" fears, may be hopelessly outnumbered; and in modern guns they are at present certainly outranged.

Heavy guns, flying-machines, and machine-guns are of supreme importance. The Roumanians are as brave as the Serbians, but unfortunately they lack long-range guns, quick-firers, and aircraft. France and England are no doubt endeavouring to supply Roumania with all the modern arms which she requires, but as these have to be sent by lengthy, roundabout ways, they may come too late. We have been informed that Russia is pouring men into Roumania as rapidly as possible. However, heavy guns, machine-guns, and an abundance of ammunition are even more urgently needed than men. It is quite understandable that the Russian Supreme Command might hesitate to send to Roumania guns and ammunition from their reserves, which may not be over-large. The Russian generals may consider that these reserve guns and ammunition may be needed by the Russian armies in the West. Still, a withdrawal, or worse, of the

Russian Army would not be so disastrous to the Allies, and even to Russia herself, both morally and materially, as would be Roumania's downfall. The standstill of the Russian operations, and even the withdrawal of the Russian troops, would only be temporary, but it may be doubted whether Roumania's destruction would also be temporary. A large State can easily overcome lost battles and invasions. A small State is apt to disappear if invaded in force by a ruthless enemy.

An American View.

Equally pessimistic is the view expressed by the *Independent* (New York) of November 6, in an article headed "Roumania in Peril." We quote the opening and concluding paragraphs:—

Judging by the looks of things, Ferdinand of Roumania may soon have to decide whether he will stay in his capital and be captured or escape by the one railroad that is still open and join the other kings in exile, Albert of Belgium, Peter of Serbia, and Nicholas of Montenegro. The Roumanians seem helpless. The Russians have failed to come to their rescue and no other country can.

Apparently the Allies made a mistake in bringing Roumania into the war at this time. The hopes that were entertained a few weeks ago, that it would mean the conquest of Hungary, the crushing of Bulgaria, and the recovery of Serbia, have proved fallacious. Doubtless the entrance of Roumania did cause a weakening of the other fronts, and to this we may ascribe the gains of the British on the Somme, of the French at Verdun, and of the Italians at Gorizia. But these gains so far do not begin to compensate for what the Germans will gain if they carry out their present campaign to completion.

Two years ago, when the Allies were urging Roumania to join them, Premier Bratiano refused, saying that Roumania was too exposed to enter upon such an adventure without ample guarantees. He urged that his country was fortified only on the eastern side against Russia, that being allied with Austria-Hungary the Carpathians had never been put into a state of defence nor mountain troops developed, that the Roumanian army was dependent upon Austria and Germany for its war material, and that a successful offensive from Hungary would soon penetrate to the capital and would then cut the country in two.

These were certainly cogent arguments against entering the war, and one wonders what guarantees the Allies offered sufficiently strong to make him reverse his judgment, especially since the participation of Bulgaria has more than doubled the danger to Roumania.

Turkey and Her Allies.

On Monday the *Morning Post* published an article, headed "Germany's Asiatic Ally," by its Petrograd correspondent. The writer declares:—

There are not wanting signs that Germany is disposed to fling away like a sucked orange her Turkish ally. Hindenburg's plans clearly indicate the concentration of Germany's still very formidable strength upon the European fronts. Turkey has been drained of men for service under the German command. Therefore Turkey has lost value in German eyes, and will probably be left to her inevitable fate. The time seems ripe for an earnest diplomatic effort to detach from Germany her Asiatic Ally, whose present attitude indicates her recognition that the penultimate stage of the war has been reached.

"Who is It?"

In an article with the above heading, the *Evening Standard* asks who is responsible for the tenderness shown to King Constantine by the Entente. We quote the following passages:—

It is understood that certain influences in Russia, as well as in this country, were adverse to any dynastic changes in Greece. There must be, whatever the cost, no removal of King Constantine from the throne he has disgraced. That attitude might be understandable were not the interests at stake so enormous. But it is not the attitude of Germany. The Kaiser, we imagine, is as Royalist as most people. Yet he bombs the palace at Bucharest, and would, we may believe, have very little hesitation in dealing drastically with his Hohenzollern kinsmen on the Roumanian throne. There is a piquant contrast between our tenderness for the Kaiser's brother-in-law and the German treatment of King Albert of Belgium and King Ferdinand.

It is, we think, the duty of the House of Commons to insist on knowing who is responsible for the weak handling of the Greek situation and the extraordinary failure to act strongly against Bulgaria. If there are reasons so grave and dark that it is unsafe to let the people know, Parliament at least should be informed in secret session.

It would then be able to judge whether, in the circumstances, it is worth while to take what risks there may be in order to get rid of the Athens Court incubus. If, on the other hand, the only cause of our troubles is Viscount Grey's constitutional incapacity to come to a decision, the frank expression of Parliamentary opinion would probably suffice to get rid of that heavy handicap.

Gallant Roumanians.

In the *Daily Telegraph* (November 20), Mr. H. M. Donohoe describes "A Visit to the Roumanian Front." The Roumanian, he declares, "is a splendid soldier."

In the difficult passes of the Carpathians they have held back a powerful and well-organised enemy. They have defended their fatherland and at the same time fought the battle of our common

cause with a tenacity and heroism unequalled, perhaps, in the annals of history. Here is an edifying spectacle of a little nation, undaunted by the odds, exhibiting all the abnegations and resolution of the ancestral Romans, unhesitatingly shedding its blood that its sons might be saved from the humiliation of passing beneath the Prussian yoke.

And here is an extract which will show what manner of foe the Roumanian soldier has to face.

The humane treatment by the Roumanians of their wounded enemy is in marked contrast to the savage cruelty exhibited by the Hungarians when some Roumanians fell into their hands. In one hospital I saw two Roumanians, portions of whose tongues had been amputated by their Hungarian captors. These maltreated soldiers were captured by a patrol, and because they refused to give information of essential importance to the enemy the tips of their tongues were hacked off with sword-bayonets. They then set at liberty the victims, who are recovering from their terrible injuries, though they have lost the power of speech, and it is feared they may be dumb for life.

"Hoch" and "Hura."

The effect of the German "Hoch!" and the Roumanian "Hura" is amusingly contrasted by Mr. Donohoe. He writes:—

The prisoners more recently captured were Prussians—sturdy fellows, possessing a considerable but diminished quantity of national arrogance. They are for the most part frank as soldiers are who have fought and been vanquished. One Prussian of expansive girth and a face like a ripe apple said he had been told that the Roumanians were an untrained rabble, who were sure to run when the Germans appeared and shouted "Hoch!" but by that time personal contact with the previously despised enemy had inspired respect for the Roumanian soldier.

From chats with the prisoners I found it was the Roumanian bayonet which Bavarian and Prussian alike dreaded most. The Roumanian "Hura!" uttered by a charging line of infantry invariably produced a disquieting and oftentimes a demoralising effect among the Boche troops. In the base hospital I came across a Prussian who had been fighting since the war began. He had been on all the European fronts. Unbarring his arm, he showed a scar from a British bullet received at Ypres. Now he had come from the Russian front, and was laid low by Roumanian shrapnel in an attack through the Vulcan Pass. He was a philosophic chap, keen to seek any bright side lurking amidst all the dark horrors of war. He said laughingly that the amount of metal of one kind or another which he had carried in his body would be worth melting down.

Conditions in Bulgaria.

The *Evening Standard* published last Saturday an article by its Stockholm correspondent, setting forth the views expressed by a Bulgarian, a M. Dmitri Radistcheff, "a strong friend of the Entente, who was implicated in the original protest movement against King Ferdinand's betrayal. M. Radistcheff left Bulgaria a few hours before Roumania declared war on Austria, and he reports that at that time the Bulgarian Court and the whole Germanophile party were "discouraged and almost panic stricken."

Before his flight M. Radistcheff went all over Bulgaria. He found everywhere a lack of necessities. This results from the fact that when Bulgaria joined Germany the Radoslavoff Press proclaimed that peace would immediately follow Serbia's conquest. Two months would suffice. No economic preparations were made for a long war, and since last Christmas Germany and Austria have supplied nothing but munitions.

The following extracts from the article speak for themselves:—

During the past summer, reports M. Radistcheff, there has been a violent reaction against the war. In Sofia anti-war manifestations have taken place, and in August heads were broken close to the statue of the Czar Alexander II. . . . Chief centre of anti-war and pro-Entente feeling is Jamboli, an industrial town on the railway to Burghaz. "Jamboli," M. Radistcheff says, "has been against the war all along, and since the Entente's summer successes it has almost shaken off Sofia's rule. Thus one of the kingdom's largest towns is practically in a state of rebellion. The Jamboli anti-war party has a new leader, a young man named Theodoroff, whom the Government dares not touch, though he openly proclaimed that if Bulgaria is defeated the nation will hang King Ferdinand."

Thousands of Bulgarians, M. Radistcheff thinks, would rejoice to see Ferdinand's policy defeated, even if that involves defeat of the Bulgarian army. One hears that wish openly expressed everywhere; and the Germans know this and dread it. Sofia teems with Germans who profess to be helping in the sanitary service, but in fact are political agents with the mission of keeping Bulgaria in order. In the Military Governor's office are two German officers who direct what measures shall be taken against demonstrations and pro-Russians. In Philippopolis Germans in the same position made themselves so hated that their windows were smashed. In the hotels there is a great deal of demonstrative fraternising between the Germans and the anti-Russian minority of our officers, and there is much drinking or healths of the "Brother Doitchoes." The mass of the nation detests the "Doitchoes."

"In general," says M. Radistcheff, "we Bulgarians are sick of the war; and if the Entente Powers after a victory offer us

reasonable terms to detach us from 'Doitcho' tutelage, practically all Bulgaria will respond."

It is not surprising to be told that "King Ferdinand is in a fright both for his personal position and for the outcome of the war. He keeps very much to himself, and is trying to free himself from responsibility for the conduct of diplomacy and military operations. Sofia is not always allowed to know whether he is with the army, in his palace in the city, or at his farm on Mount Vitosch, close by."

Articles to Note.

"Roumania and the Danube," by H. Charles Woods; "Speculations on New Near-Eastern Frontiers After the War," by Lieut.-Colonel L. A. Waddell; "Armenian's Lullaby" (poem), by Archag Tchobanian; and "A Nestorian Bishop and His Commentaries," by Henri M. Leon, in the *Asiatic Review* (November 15).

"Turk and Armenian: A Chapter of Secret History," in the *Manchester Guardian* (November 16).

"Belgium-Poland-Roumania," by "Politicus," in the *Outlook* (November 18).

"A Personal View of Tsar Ferdinand," by M. C. Miyatovich, in the *Daily Mirror* (November 21).

THE SYRIANS IN AMERICA.

"A. S." writes:—*Al-Moustakbal* gives the Arabic text of the call of the Syrian Patriotic Association to its countrymen in America to come forward and volunteer for service with the Entente in defence of liberty and civilisation. The appeal takes three full columns, which would be equal, if translated into English or French, to six columns of *The Times*! For this no doubt those in Syria will have to pay to their present masters, Turks and Germans.

M. Lambrakis, acting chief editor of the *Patris*, was last week arrested on a charge of high treason in publishing the documents regarding the handing over of Fort Rupel to the Bulgarians, which have been reproduced in his paper.

A Reuter's message from Amsterdam, dated November 16, announces:—According to a telegram from Beyrout a war tribunal has sentenced to death in contumaciam Hussein Kemal Pasha—the Sultan of Egypt—on the ground that he placed under foreign rule constituent parts of the Ottoman Empire. The sentence has been confirmed by an Imperial Decree.

We have received from Messrs. Raphael Tuck some specimens of their Christmas cards and booklets, calendars and postcards. These are all produced in the excellent style for which the firm is noted, and it is safe to say that, so long as British firms can, and will, provide such goods at the prices at which Messrs. Tuck put these articles on the market, there can never be any excuse for the importation of the "Printed-in-Bavaria" card or almanac. The same remark applies to the postcards. In this branch Messrs. Tuck have always more than held their own, and, judging by the specimens they have forwarded us, they are likely to continue to do so with ease. The picture postcard can be "a thing of beauty," but it is only too often a thing of unspeakable vulgarity. Messrs. Tuck provide the former, but not the latter, class, and they have also several series which are really "funny without being vulgar." One of these, depicting poultry in various amusing tableaux, is as good as anything we have seen. What may be called the "patriotic" card is well to the fore, and it is noteworthy that in the selection of wording excellent taste has been displayed. Such cards can give nothing but pleasure to the recipients, and are unlikely to jar on the feelings even at times like these, when the Christmas spirit cannot possibly be rollicking. The books for children, especially for the very tiny children, which Messrs. Tuck publish, are again far superior to those "printed in Germany." "Father Tuck's Annual," now in its nineteenth year, is sure to be popular in the nursery, and anyone looking for a book for the smallest boy or girl can make no mistake in choosing this old favourite.

MONTENEGRO.

Any interested in the commercial and general development of this country, together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

"Major," c/o Messrs. Stilgoes, Solicitors,
24, Essex Street, Strand, W.C.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Persian Gulf Medals.

Nov. 15.

COLONEL YATE asked the Secretary of State for India whether the medal granted to the officers and men of the Royal Navy and Royal Indian Marine for services in the gun-running operations in the Persian Gulf and adjacent countries during the years 1909 to 1914 had been granted to the troops employed at various places in the same operations; and, if not, would he take measures for the grant of this medal to the troops concerned?

MR. CHAMBERLAIN: The medal granted is a naval one. The question of the grant of a medal to the troops employed for the suppression of gun-running was fully considered in 1913 and 1914, and I see no ground for re-opening it.

The Allies in Greece.

Nov. 16.

MR. LYNCH asked if any definition was available of the limits of interference of the representatives of the Allies in the affairs of Greece on the mainland; whether their authority was exercised in preventing Greek soldiers from going over to the Germans; and whether, in view of the confusion arising from what was practically a dual régime in Greece, the Foreign Office would now advise the recognition of the Venizelos Government?

LORD R. CECIL: The answer to the first part of the question is in the negative. All proper steps will be taken to safeguard the military position of the Allied Forces. I can add nothing to what has already been said on the last part of the question.

SIR E. CORNWALL asked whether the noble Lord could give the House any information with regard to the activities of the Greek Royalist troops; and whether satisfactory assurances were being received from the Athens Government on the subject.

LORD R. CECIL: According to the decrees issued by the King of Greece, the Greek Army is to be reduced to a peace footing, and the 3rd and 4th Army Corps are to be removed from Thessaly to the Morea. The dispositions necessary to effect this movement were to have been initiated on the 12th inst., and I have not heard that any delay has occurred. I would add that the Allied Governments are at present considering the best means whereby all possibility of armed conflict between the Greek forces and the forces which have joined M. Venizelos can be avoided.

Imprisoned Venizelists.

Nov. 21.

SIR E. CORNWALL asked whether officers given leave by the Committee of National Defence at Salonika had been imprisoned by the orders of King Constantine on account of their anti-Bulgarian sentiments, and whether any steps had been taken to obtain their release.

LORD R. CECIL: The answer to both parts of the question is in the affirmative.

MR. MALCOLM asked whether it was officially known that about ninety British officers taken at Kut had been for many weeks put in close confinement at Yuzgat, in Asia Minor; if so, what steps were being taken to provide them with food and warm clothing; and whether any reliable information as to their treatment was available.

MR. HOPK: The reply to the first part of the question is in the negative; the United States Ambassador has been requested to ask the United States Embassy at Constantinople by telegram for information on the points referred to. I would add that we have asked the United States Embassy at Constantinople to endeavour to secure the removal of our prisoners of war at this camp to some more suitable place of internment.

Relations with Provisional Government.

MR. R. M'NEILL asked the Under-Secretary of State for Foreign Affairs, in view of the fact that the Government had intimated to M. Venizelos that his Government is recognised by the Allies as the *de facto* authority in the districts where it was established, and of the importance to the Allied cause of his Majesty's Government being fully and accurately informed as to the policy, intentions, and wishes of M. Venizelos and the development of a situation that changed from day to day, whether he would invite M. Venizelos to accredit an official diplomatic representative of his Government to London and despatch an official diplomatic representative of his Majesty to Salonika.

LORD R. CECIL: His Majesty's Government are in constant communication with M. Venizelos through his Majesty's Consul-General at Salonika, and there does not appear on this ground to be any reason to depart from this method of communication, which has hitherto worked quite satisfactorily; nor could such a departure be made except in concert and agreement with the Allies.

SIR E. CARSON inquired whether any attempt had been made to interest the Allies in the question of bringing about here the appointment of a representative of M. Venizelos.

LORD R. CECIL: I hesitate to reply on the spur of the moment about any communications which may have passed between this country and our Allies, but I am sure they are fully conscious of the importance of the question.

MR. ASHLEY: Would it not be better to have a diplomatic representative of a friendly Greek Government rather than of a hostile Greek king?

Operations in "Asia Minor."

MR. BILLING asked leave to move the adjournment of the House to call attention to an "urgent matter of public importance," namely, the breakdown of the inland water transport operations, the despatch of the marine transport necessary for the operations in Asia Minor, and to the urgent and vital need of immediate

co-operation between the War Office, the Admiralty, and the Board of Trade for the transportation of these craft, so that present and future delay in their despatch should be avoided so as to prevent the failure of future military operations in Asia Minor.—The requisite number of members not supporting, leave to move was refused.

The Situation in Greece.

On the motion for the adjournment of the House, MR. LYNCH raised the question of the situation in Greece, which, he said, was impeding the proper carrying out of the campaign in the Balkans. The Greek Government—which was not a Government but a usurpation—was using all manner of force to the friends of the Allies.

The hon. member had been speaking five minutes when the House was "counted out."

LORD R. CECIL, replying to SIR E. CORNWALL, said: An arrangement has been come to between the Allied Powers and the Greek Government providing for the creation of a neutral zone between Thessaly and the districts of Southern Macedonia occupied by the forces of the Venizelist Government. The execution of this arrangement has been left to the French General Commanding-in-Chief the Allied Forces at Salonika. Lord R. Cecil added that the negotiations carried on in Athens by the Entente Powers were both direct with King Constantine and through the usual diplomatic channels. Replying to another question, whether King Constantine had asked the Allies for any promise or assurance that the Venizelist movement should not extend beyond its present limits, LORD R. CECIL said: I do not think it is possible consistently with the public interest to say anything at present about what King Constantine may have asked or what the Allies have replied about the matters alluded to in the question. It must also be borne in mind that all these questions about Greece relate to matters in which his Majesty's Government is acting in constant consultation and agreement with the Allies, and about which it is not always possible to make public statements except in consultation and agreement with them.

Gallipoli Graves.

MR. FORSTER, replying to MR. MALCOLM, said no report from the Apostolic delegate at Constantinople had been communicated to the British Government upon the state of English graves at Gallipoli. They were informed, however, that photographs of the graves had been taken, and that the Vatican would supply us with reproductions. He need hardly say that the Government very highly appreciated the Pope's solicitude in this matter.

M. Venizelos's Troops.

MR. FORSTER informed SIR E. CORNWALL that M. Venizelos's troops formed part of the Allied Army under the command of General Sarraill, and the question of the issue of separate *communiqués* with regard to their operations was not a matter for the British Government.

MR. LYNCH: Is it not a fact that the value of these forces is completely neutralised by reason of the efforts being made to prop up a pro-German Prince?

No answer was given.

COMFORTS FOR THE MEDITERRANEAN FORCE.

In a letter to the Press, Lady Murray writes:—The work of the Mediterranean Expeditionary Force Fund has been merged with that of Queen Alexandra's Field Force Fund with a view to more economical organisation and more effectively supplying the troops in the various theatres of war. I venture to ask those who have previously contributed money and gifts in kind for our soldiers in Egypt and Salonika to continue their generous support of the Fund. During the coming winter comforts will be much needed, especially in the Balkans, where the weather is so severe. The following is an extract from a letter, dated October 9, from my husband, General Sir Archibald Murray, Commander-in-Chief in Egypt:—

"Owing to the great extremes of temperature experienced by the troops on the desert frontiers of Egypt, there is always an urgent need for additions to what is provided officially, good though this provision is. The troops under my command greatly appreciate the gifts they have received from the Mediterranean Expeditionary Force Fund, and I hope the Fund will continue to find generous support."

Lieut.-General Milne, Commanding the Salonika Army, writes as follows under date October 11:—

"A considerable number of gifts have from time to time been received by me from the Mediterranean Expeditionary Force Fund for distribution to the troops of this Army, and I am now in a position to place on record how thoroughly the articles sent out have been appreciated by all the recipients. The gifts have been well and wisely selected for their utility, and on behalf of the Salonika Army I wish to express our grateful thanks to the President and members of your Committee, as well as to all the donors of the articles we have received."

The things most appreciated by our soldiers are socks, handkerchiefs, towels (small bath), tobacco, sweets, matches, pipes, candles, soap, stationery, bootlaces (leather), cigarettes, tooth-brushes, indoor games, packs of cards, and any articles of warm clothing. Contributions of money should be sent to the Hon. Treasurer, Queen Alexandra's Field Force Fund, cheques crossed Barclay and Co., and gifts in kind should be forwarded to Mrs. William Slater, Hon. Secretary, Q.A.F.F.F., 24A, Hill Street, Knightsbridge, London, S.W.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square, London, E.C.

The National Bank of Egypt, in its return of the note circulation, compiled up to September 30, shows that the total expanded during the month from £11,200,000 to £13,300,000. There was a slight increase in gold, which now stands at £6,300,400, while, on the authority of the Egyptian Government, £349,600 of British Treasury bills were deposited in lieu of metal, bringing the total of gold and Treasury bills combined up to £6,650,000—that is, 50 per cent. of the note issue. There are in hand, however, other securities of a like amount—namely, Egyptian Treasury bills £2,876,250; Egyptian Government securities and securities guaranteed by the Egyptian Government, £609,060; and British Treasury bills, £3,164,690. Meanwhile activity in the cotton industry continues, and it is expected that a further expansion in the note issue will be disclosed in the returns for October when they are issued.

In my Notes of November 10 I referred to the report of the Council of Administration of the Ottoman Public Debt. A more extended summary of the document is published elsewhere in the present number of THE NEAR EAST, and I fear Allied bondholders, who hold rather more than 80 per cent. of the total debt, will not gain much consolation from it. It would seem that only 15 per cent. of the sum due to bondholders on account of the interest for the second half of 1915 has been paid, the fortunate recipients, needless to say, being Germans and Austrians, who, with the Turkish representatives, now constitute the Council of Administration. All that it is possible to say at the moment is that the elaborate international organisation designed to finance Turkey's debt has broken down completely, and that a new arrangement will have to be made when the war comes to an end. Meantime comment is superfluous.

Mr. H. A. Richardson, the chairman of the Anglo-Egyptian Bank, issued a grave warning to "speculators" in Egyptian cotton at the annual general meeting of the bank on Tuesday. The speculation that had been rampant in the cotton markets, he said, unless stopped by the new regulations adopted last week in the Liverpool Cotton Exchange, would make business as difficult as it would be dangerous for the remainder of the Egyptian season. The bank must do its share in financing the business; but however careful it might be, and however much alive to the situation, they could not be sure of immunity from loss. Reference to our Manchester report will show that the situation remains acute.

The uncomfortable situation in Roumania adds importance to the report of the International Institute of Agriculture, which states that on July 31, 1917, the world's surplus of wheat will be only 12,586,000 quintals. The world's annual consumption is 144,000,000 quintals. "This year," says the report, "the world has been borrowing from last year's crop over 94,000,000 quintals of wheat. If next year's harvest should be as poor as this all stocks will be exhausted, unless by then the Russian stock of wheat, now unexportable for military reasons, should

be available. The amount of this is now estimated at over 82,000,000 quintals."

In my notes last week I invited attention to an article in the *Fortnightly Review* in which the writer, "Politicus," dealt very faithfully with the question of Roumania. What he has to say about the country as a producer of wheat and cereals is very much to the point. It is not generally known that until recently the country was the third largest exporter of wheat in the world, coming immediately after the United States and Russia. She exports per year more wheat than does Canada, so that ("Politicus" continues) "by conquering Roumania Germany would conquer another Canada." How many British people realize this, I wonder?

In 1911 "Roumania exported more than 4,000,000 tons of grain, flour, etc. Roumania produces, as a rule, about 10,000,000 tons of grain of every kind. If Germany should succeed in subduing Roumania she would undoubtedly follow her traditional policy of confiscating foodstuffs right and left and starving the population." It comes to this, that by defeating Roumania Germany can provide herself with all the foodstuffs which she and her ally need so badly. That would mean, it ought not to be necessary to point out, that the British blockade which now has reached a high pitch of efficiency, would be nullified to a very grave extent, which, again, would mean that the enemy would be placed in a position to battle on indefinitely. For, it must be remembered, Germany would be able to acquire, not only materials and food, but also huge supplies of minerals, oils, and many other commodities useful in warfare.

I am glad to learn that commercial concerns interested in Mesopotamia have given a great lead to the Comforts Fund for the British troops in that country. In the first list of subscribers are to be found such names as Messrs. Grace, Bros. and Co., Ltd., the Anglo-Persian Oil Co., Limited, the Ellerman Lines, Messrs. Strick, Scott and Co., the Strick Line, the Imperial Bank of Persia, the P. and O., Messrs. Gray, Mackenzie and Co., the Chartered Bank, Messrs. Lynch Bros., the Imperial Ottoman Bank, Messrs. Andrew Weir and Co., etc. The office of the Fund is at 15, Oldford Street, Mayfair, London, W.

For the benefit of those who have read statements to the contrary, I am able to state that the decision of the Government to organise another exhibition of Egyptian industries at Cairo has not been departed from in any way, nor has there ever been any proposal to defer the exhibition until after the war. It is proposed to hold the function about November, 1917, and the Department of Technical, Industrial and Commercial Education is now considering arrangements to that effect.

A supplement to the *Board of Trade Journal*, which was issued yesterday, contained complete lists of articles which, according to the latest information received by the Board of Trade, are prohibited to be exported from Denmark, France (including Algeria), Greece, Italy, Japan and the Netherlands. This supplement also

contains a complete list of articles which are prohibited to be exported from the United Kingdom. Recently there has been some confusion on these points, particularly in Britain, as to the restrictions imposed abroad, and it ought not to be necessary to point out that British merchants will do well to consult this "book of the ban."

Recently some American firms, induced thereto I have no doubt by the representations of the officers of the finely organised United States Consular service, have begun operations in some of the Turkish centres which, in times of peace, were controlled from the trade point of view by Allied subjects. The American campaign, I hear, is not popular with the Turks, who are said to have protested to Constantinople on the subject. News from Turkey is so precarious, both as to substance and reliability, however, that we shall probably have to wait a considerable time before we are able to learn the truth regarding the invasion.

The meat problem in Egypt, to which I referred a fortnight ago, continues to excite a great deal of attention. Prices, both in the Sudan and Egypt, seem to have advanced by anything between 25 per cent. and 40 per cent. An attempt has been made to saddle the Government with much of the responsibility for the present condition of affairs; it has also been stated that restrictions had been imposed upon the export of cattle from the Sudan—that "no export of cattle was allowed from the Sudan under £10,000"—but this statement has been characterized in well-informed quarters as "arrant nonsense." As a matter of fact, the Sudan trade is for the time being the principal source of supply from "abroad," with the exception of small imports from Cyprus. Regarding the other restrictions here is the case in their support as it was presented to a representative of the *Egyptian Gazette*:—"All cattle arriving are entrained at Shellal, and sent direct to Alexandria and Cairo quarantines to be slaughtered in adjacent abattoirs. Complete freedom cannot be allowed owing to the difficulty of diagnosing pleuro-pneumonia and detecting the very mild cases of cattle plague in the living animal. Apart from such measures which are necessary in the interest of public safety, the restrictions at present are remarkably light. There is, and can always be, plenty of meat obtainable at a price, and as far as Cairo is concerned, though higher prices do obtain, the 'crisis' is largely a figment of the butchers' imagination." The facts appear to be that there is a shortage, that prices are unusually high, but that the imports of Sudan cattle will increase considerably as there is an inexhaustible supply of live stock there without a market for local consumption.

I hear that American growers and exporters of fruit are making a big bid for the trade in South Germany, which formerly went to Bosnia, Serbia, and other Balkan countries. Before the war the nationals of these little States did thriving and prosperous business, notably in plums, and were able to do so because they could sell at rock-bottom prices fruit which possessed a finer aroma than even the famous "Santa Clara" plum.

COMMENTATOR.

Labour Problem in Busreh.

2,000 Indian Convict Volunteers from the Prisons of the Punjab.

It was not surprising that one of the earliest problems which confronted those to whom had been entrusted the civil administration of the occupied territory north of Busreh should have been connected with labour. The indigenous population, for various reasons, did not offer much scope for recruiting operations, and the authorities, many of whom received their appointments from India, naturally enough regarded that country as a promising source of supply.

Unfortunately, however, India has labour problems of her own. There is scarcely an industry that is not crying its troubles aloud, from Assam to the Punjab, and it was evident that the usual type of Indian labourer was not available for export. Then somebody had a brain wave: why not try convict labour? Indian prisoners as a whole are pretty docile, they are a healthy class—when they have been long enough in prison to reap the benefit of official medical attention—and are excellent labourers.

First Batch of 800 Men.

To the Government of India, then, the idea was suggested, and with unusual promptness—probably because of the urgency of the problem—consideration was given to it, with the result that on October 18, the first batch of 800 men left Lahore for Karachi, en route to the Persian Gulf. The initial "corps" has been taken from the great central prison at Lahore—the criminal population there at the time the selection was made numbered 3,000—and its members hail from all parts of the Punjab. The "non-commissioned officers" were chosen from the Indian paid warders, and the mates from the convict overseers, a class specially selected for good conduct. The men themselves were chosen from among volunteers by the military authorities and they are, for the most part, prisoners serving sentences not exceeding five years. The former will receive Rs. 30 (£2) per mensem, the latter Rs. 15 (£1), and the rank and file Rs. 10 (13s. 4d.). In every case the men will receive free kit and rations. On the day before they left Lahore all ranks received three months' pay in advance.

When the men were first informed of the scheme, and invited to volunteer, many were dubious; but we are told that the idea was reconsidered, taken up with enthusiasm, and volunteers were many. As a matter of fact when the selection was made the successful candidates were delighted. The chance was a great one, for a promise of release from the date of embarkation at Karachi was made to all who enlisted, conditional of course on their good behaviour and satisfactory work during the period of their employment. The majority of the men selected were imprisoned for offences not altogether serious; indeed, the corps was recruited largely from among these. A young officer of the Indian Army Reserve, and a warrant officer, have gone with the first corps and they are the only Europeans attached to it. The Civil authorities have provided four subordinate officers of the provincial civil service to act as general supervisors. The first corps, which also has its own doctor and clerical staff, will be known as the Sixth Porter Corps, and it is intended for service in unloading steamers at Busreh.

Three days after the despatch of the first party a second corps, known as the Tenth Labour Corps, was raised. This consisted of about 1,200 men, including about 100 skilled artisans of the carpenter, blacksmith and mason classes. This second unit was re-

cruited from the Lahore, Multan and Montgomery Central Jails, and were despatched under the personal supervision of the Inspector-General of Prisons of the Punjab. It may be mentioned that apart from these two corps some 800 volunteers of the "sweeper" (scavenger) class left for Mesopotamia some months ago.

Salvation Army Enterprise.

These do not exhaust all possibilities, however. The Salvation Army, led in India by Commissioner Booth Tucker, a former member of the Indian Civil Service in the Punjab, has interested itself in labour questions very largely during the last ten years. Beginning first as an entirely religious body, the Army discovered that if it was to be successful it would have to go down to the underworld: its work amongst the great and numerous criminal tribes followed in every province in the country. Whole communities, of which the police had washed their hands, except to round them up and to incarcerate them—the tribes were a serious menace to law and order and to the peace of the countryside which they infested—were handed over to the spiritual and social care of the Salvation Army. To-day thousands of these criminals have been converted into honest labourers and citizens, and from amongst these the Army would be able to recruit any quantity of good reliable labour. Already the organisation has sent detachments of porters to Busreh under European officers, and we need have no doubt that the movement will make for the industrial good of the occupied territory.

The assumption is, therefore, that the labour problem in and around Busreh will not present insurmountable difficulties in its solution.

Persian Labour.

So far as indigenous labour is concerned, the office of the Controller of Native Labour at Busreh has been opened at the mouth of the Ashar Creek. The following notification has been issued:—

"It is hereby notified that the military authorities have ordered that all Persian labourers and hammals must register themselves at the office of the Controller of Native Labour which has been opened at the mouth of the Ashar Creek. They will be provided free of cost with an armet which they must wear at all times. No charge will be made for this armet or for registration. Any Persian labourer or hammal found working for the Government or for private persons after November 1 who has not been registered and is not in the possession of a badge will be liable to imprisonment and fine."

KHEDIVIAL MAIL STEAMSHIP CO.

Apropos the report of the Khedivial Mail Steamship Co., Limited, Mr. Hugh Reeves writes to the *Financial Times*:—"One has only to look at the balance-sheet to apprehend that the assets, particularly the ships in their improved condition, stand at a very low figure. Those who know the company's freehold properties in Alexandria and Suez will also realise that the figure upheld is far below intrinsic or commercial value."

"The national position of this undertaking, too, should not be lost sight of. For many years it has been the principal British shipping company in Egypt, providing services from time to time required by the Egyptian Government, and among these the important annual pilgrim service for the natives. It is a fact that these services were not too well remunerated, and the expansion of general Mediterranean trading was hampered by the stiff competition of the Austrian Lloyd and other various services."

"It is to be hoped that after the war this purely British company will be made the centre of local shipping development in the interests both of the Protectorate and the British Empire."

TRADE IN LIBYA.

American Activity in Italy's North African Colony.

Attention has been drawn frequently in these columns to the thoroughgoing manner in which the American Consular Service watches and nurses foreign markets; British merchants tell us that they are doing so to some purpose, and that since the war began American manufacturers and shippers have been able to open up new markets and to extend their influence in others.

A case in point seems to be Libya, the Italian North African colony. From a consular report published recently we learn that although war conditions were felt severely in the colony in 1915, American imports increased in value from \$137,625 in 1914 to \$216,300, or rather more than 57 per cent. The Consul adds to his report: "The result clearly demonstrates how necessity is causing the flow of American products to remote fields, even to fields in which no American effort is put forth." Judging from the facts and figures of this report, we are not so sure as to the absence of "effort."

Of the future the Consul writes:—"The chance of any general improvement in commerce before the close of the war in Europe is remote, although engagements in some lines would be accelerated meanwhile if intercourse with the interior could be resumed. Necessity will turn inquiry to American products even more than in 1915, and if they are stocked in Italy further increases should be registered in 1916. . . . The special endeavour should be made in Italy. Conditions render the imposition of the middleman of that country between the American exporter and the Tripoli buyer a necessity in all but a few cases. This is particularly true of tools, hardware, electric fittings, cutlery, hosiery, and other small wares."

British manufacturers and merchant shippers may be glad to know what are the more important of the lines in which the Americans trade in the country. They are:

Cameras and photographic supplies, camp beds, canned goods, flour, dried fruit, electric fittings, agricultural implements, hardware and cutlery, safety razors, tools, typewriters, boots and shoes, saddlery, trunks, etc., benzine, cottonseed, fuel, lubricating, petroleum, fountain pens, pork products, pumps and windmills, roofing materials, rubber shoes, toilet articles, furniture and lumber.

Discussing export activities the Consul says that in 1914 the declared exports to the United States totalled \$57,042, in value, and included Sudan-tanned goat-skins worth \$56,871; ostrich feathers, \$163; and dates, \$8. In 1915 only Sudan-tanned goatskins were invoiced, their value being \$44,483, a decrease of nearly 22 per cent. This business was retarded by the general decree forbidding exports to foreign countries. Later, on representations made to the local authorities, the decree was modified to allow the sale in non-enemy countries of such skins as might not be required in Italy, a special permit being necessary for each intended shipment. Business continues on these terms, but few contracts are being entered into. Present-day freights on the long sea haul from Lagos to Tripoli, via Liverpool, have doubtless prevented the usual numbers reaching this city for sorting and repacking.

Direct communications between Tripoli and the United States are being discussed. "There is no question that direct steamer communication between Tripoli and the United States would quicken the interest in American goods," says the Consul. "It is not anticipated, however, that such a service will be feasible until some company with American freights for Moroccan, Algerian, Tunisian, Maltese, Egyptian, and other Levantine ports, consents to make calls at this port, which lies some 225 miles off the marine highway that leads from the Straits of Gibraltar, passing between Tunis and the Island of Sicily and on to Alexandria and Port Said. The initial calls would not be profitable, but any loss made could not materially affect the income from the voyage as a whole, while one of the greatest obstacles to first-hand intercourse between American exporter and Tripoli importer would be removed."

OTTOMAN DEBT.

Report by Enemy Members of the Council.

The Council of Foreign Bondholders has received a copy of the report of the Council of Administration of the Ottoman Public Debt (consisting at present of the German, Austrian and Turkish members) covering the period from March, 1914, to March, 1915, of which we were able to publish a summary in our issue of November 10.

The gross receipts in 1914-15 from all sources showed a decrease of 33.40 per cent., as compared with 1913-14, viz.:—

1913-14	£T. 5,378,782
1914-15	3,581,434

Decrease..... 1,797,438

It must be remembered, however, that in 1913-14 the receipts were the largest on record. In 1912-13 they amounted to £T4,536,605.

The falling off in the revenues is, of course, chiefly due to the disturbance caused by the war, into which Turkey entered in November, 1914. But, in addition to this, the Turkish Government in 1914-15 failed to pay to the Debt Council the sums agreed upon in substitution of (1) the Eastern Roumelian annuity, viz., £T114,000, and (2) the Cyprus tribute from the surplus of the tobacco tithes, viz., £T129,000. Default was also made in payment of the second half-yearly instalment of the Tumbeki revenue, amounting to £T25,000. These debts, aggregating £T268,000, were carried forward to the current year.

The expenditure of the Debt Administration was as follows:—

1913-14	£T. 681,656
1914-15	619,094

Decrease..... 62,562

After crediting the gross receipts with £T30,611 brought forward from the previous account, and debiting them with the above £T619,094 and miscellaneous charges amounting to £T104,863, there remained a net receipt of £T2,888,088, as against £T4,385,914 in 1913-14 and £T3,743,335 in 1912-13.

The annuity required for the service of the Unified Debt and Lottery bonds being £T2,157,375, there was a surplus of £T730,712, of which 75 per cent., or £T538,034, was paid to the Turkish Government, the remaining 25 per cent., or £T182,678, which is applicable to extraordinary sinking fund, being carried forward to the following financial year.

It appears from the report that, with the exception of the non-payment of the above-mentioned Annuities, the provisions of the Decree of Mouharrem have been respected by the Turkish Government.

Of the amount required to pay the half-yearly interest on the bonds of the Unified Debt outstanding on September 1-14, 1914, only a little over 15 per cent. was actually expended. If this percentage represents the amount of the Unified Debt held by the subjects of the Central Powers and by neutrals there would remain 85 per cent. in the hands of nationals of the Entente, who, under existing circumstances, are unable to encash their coupons. No amortisation of the bonds is mentioned in the report as having taken place during the second half of 1914-15.

According to a statement said to have been made at a meeting of the Debt Council in March last the revenues collected by the council for the service of loans outside of the Decree of Mouharrem and on account of railway guarantees fell from £T3,228,041 in 1913-14 to £T1,308,110 in 1914-15. It was also stated that the receipts of the Debt Administration for 1915-16 showed a considerable falling off

The Manchester Chamber of Commerce have been informed by the Cotton Export Committee that that body will not consider any application made on or after November 22 instant in which all-cotton goods are included with other goods. Separate applications in respect of all-cotton goods must be made. It would be advisable in the case of mixed orders for the all-cotton goods to be packed separately.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The market this week has been notable for wild fluctuations in raw cotton rates. Many ups and downs have occurred in American descriptions, but most violent changes have transpired in Egyptian futures. On Tuesday last, in a little over an hour, there was a drop of 2½d. a lb. in Liverpool. It seems quite evident that the new regulations of the Liverpool Cotton Association to check speculation have proved futile. If any further move is made in this direction it is suggested that business should only be done for cash, with a settlement each day. In yarn and piece goods business has been very adversely affected by the uncertain outlook. There is undoubtedly increased nervousness amongst traders as to what may happen in the near future. Under the circumstances, producers have not been at all anxious to sell, and buyers have limited their purchases as much as possible.

Encouraging letters and telegrams continue to be received as to clearances of cloth in Egypt, and although demand here has tapered off somewhat, it is believed that there is still a considerable business yet to be done. Merchants recently have paid very high prices, and it is hoped that there will not be any depreciation in values until such goods are distributed abroad. India has given much less support than last week, there being fewer offers from abroad and less disposition on the part of exporters to anticipate future requirements. Rather more favourable news has come through from China, but most of the bids, especially in grey shirtings, have been too far out for trade of any importance to be done.

The South American markets have been generally quieter. Numerous manufacturers of cloth continue independent, and are now in a position to choose their customers, and only deal with firms of the highest standing. Business in yarn has been disorganised by the raw cotton situation. Many spinners have tried to avoid selling, and have quoted prohibitive rates.

Amongst Egyptian spinners quotations have been withdrawn, and sellers now simply wait for offers to be made. Further developments have taken place in connection with the application of the card-room operatives for an advance in wages, and both masters and men have received the support of the rank and file in their action. We may reach a crisis before the end of the month, but if no settlement is reached, it is pretty certain the Government will intervene and give a decision on the point in question, and they have plenty of powers to force the two sides to come to terms.

GAMBLING IN COTTON FUTURES.

We take the following from the *Manchester Guardian* of November 18:—

The Liverpool gamblers in Egyptian cotton do not seem to be much impressed by the scheme which was to put the closure on them next Monday, for they sent prices bounding up yesterday—futures 60 to 73 and spot 100 to 125 points. However, the scheme is going on, and details of it were issued yesterday in the form of a circular to the members of the Liverpool Cotton Association. Members wishing to trade in Egyptian futures will have to apply to the Control Committee (the president, vice-president, Mr. W. R. Glazebrook, Mr. A. A. Patron, and Mr. R. Q. Wilson), at least one of whom will be available daily. The committee has discretionary power to fix on every transaction the amount of a margin not exceeding £10 per bale. This must be done before a transaction is carried through, and the margin must be paid into the clearing-house at the first clearing on the day following the execution of the order.

Applications for permits for the closing of contracts must be made as in the case of new business. If a written notification of the closing of a contract is sent to the clearing-house before 5 p.m. the same day the margin will be released and credited to the firm on the following day. Interest at 4 per cent. per annum, as allowed by the bank, will be credited to the firm's account at the end of each quarter. When a broker pays a margin

on behalf of a client the client must be charged interest at ½ per cent. over bank rate, with a minimum of 5 per cent., less the amount allowed by the bank. Members are permitted to job or deal in quantities not exceeding 500 bales, on condition the account is closed not later than a week from the date of the permit. Thus, the owner of the permit can sell or buy the 500 bales as often as he likes during the week, provided he is neither "long" nor "short" at any one time more than the amount stated on his permit. On permits of this kind a margin of £1 per bale will be required.

TRADE NOTES.

Openings.

The Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), invites tenders for the supply of uniforms, cloth, white and khaki drill, saddlery, accoutrements, furniture, enamel ware, leather, boots, paints, oils, tarbushes, cotton shirts and drawers, blankets (woollen), and miscellaneous stores. (December 10.)

The Director of Stores, Coast Guard Administration, Arsenal, invites tenders for the supply of petroleum and benzine required by the service at Alexandria, Port Said, and Suez during year 1917. (December 1, 1915.)

The Egyptian Ministry of Finance invites tenders for the supply to Ports and Lighthouses Administration, Arsenal, Alexandria, of iron, steel, etc., required for the financial year 1917. (December 22.)

THE BRITISH BLACK LIST.

By an Order in Council, dated November 10, the names of the following firms in foreign countries have been added to the list of firms with whom trading is prohibited:—

GREECE.

Achaia Wine Co. (Société Vinicole Allemande), Gutland, Patras; Akif, Hassan, and Co., Salonika; Asseo, Jacob, Yildiz Han II., Salonika.

Charamis, Panayiotis, Piræus; Cohen, Mor-doh, and Company, Kasmindji Han, Salonika; Cohen, Simando, Piræus.

Fabrique de Tabacs et Cigarettes Macedoniennes, Salonika; Fenyves, Philip, Teldji Han, 18, Salonika.

International Magnesit Werken, Gerekari, Euboea.

Maroulis, Alexander, and Company, Salonika; Mayer and Company, Salonika; Maz-zino, A. J., Syra; Miceli, E., and C. B. Xanthos, 20, Place de la Liberté, Athens.

Société Anonyme d'Entreprises Commerciales, Kolokotronis Street, Piræus; Stein's Oriental Stores, Limited, Salonika; Stuermer, Max, Candia, Crete.

Zachariou, John, Rethymo, Crete; Zachariou, Peter, and Son, Rethymo, Crete; Zirini Brothers (John, Basil, and George Zirini), Xanthi.

PERSIA.

Ghaffar Bonakdar, Ispahan; Ghaffar Itadalieh, Ispahan.

Intadalieh, Ispahan.

The following names to be removed from the list:—

MOROCCO.

Afergan David, Larache.

Benizri, Rafael, Larache.

PERSIA.

Sadie, Afshar, Yezd.

DELICIOUS COFFEE.

**RED
WHITE
& BLUE**

For Breakfast & after Dinner.

Wholesale, of Hanson's, London, England.

PRODUCE REPORT.

LONDON, November 23.

There is undoubtedly a more active demand in the dried fruit market generally for the various kinds of fruit, but owing, apparently, to the high range of prices and uncertainty as to the future, there is a tendency to make orders small and more frequent, which means that under the circumstances, a hand-to-mouth policy is preferred.

Currants.

The demand continues good, and prices are showing a slight turn in buyers' favour for medium and better grades.

Sultanas.

A fair amount of business has been done this past week, mostly in Afghan and new Australian. Newly-arrived Greek fruit is offered at prices which buyers evidently are not willing to pay, hence only very small business has been done.

Figs and Dates.

Business in these articles is being done at late rates, and there is nothing particular to report.

Seeds.

Linseed is firmer and dearer, with a better demand, London-Calcutta spot and afloat being quoted at 100s.; Nov.-Dec., 101s. 6d.;

Dec.-Jan., 102s.; Bombay ordinary, Nov.-Dec., 101s. 6d.; small grain, ditto, 100s. 6d. Rapeseed remains firm for Toria, Nov.-Dec., at 83s. 6d., and bold Ferozepore at 82s. Cotton-seed is very strong, London-Sakelariades, afloat, £19 per ton. Rangoon beans are steady at £36 to £37 per ton for spot lots. For forward shipment quotations are a little higher. Canary seed—Morocco descriptions especially—remains steady at the recent advance.

Oils.

Linseed oil is firm and dearer. Spot prices, landed, offered at £50 15s.; barrels, ditto, £51 15s. Rape oil is also firm; ordinary brown, naked, £50 to £51. English refined, barrels, £54 to £56. Cotton oil is in good demand and firmer. Crude spot, in pipes, £47 to £48; refined pale pipes, £50; barrels, sweet, £54 to £56, as to make. Olive oil is quiet, but prices quoted last week are well maintained.

Oilcakes.

Cotton Cakes.—Parcels of Egyptian of recent arrival find a ready sale at £12 5s. 6d. ex ship, or £12 10s. 6d. ex quay, while afloat and Nov.-Dec. shipments are offered at about the same price. English makes are quoted at £12 12s. 6d. to £12 15s. 6d. per ton. Linseed Cakes.—There is only a small demand, but owing, apparently, to the continued short supplies, prices are firmly main-

tained. Best London makes are quoted £15 15s. to £16, while American are offered at £15 5s. to £15 10s. per ton ex stores. Maize meal of foreign origin is not obtainable for prompt delivery, while English makes are quoted at £14 15s. to £15 per ton.

TURKISH INSURANCE BUSINESS.

According to the *Lloyd Ottoman*, the Minister of Finance has issued the following notification:—

Since the year 1331 a "temettu" tax on insurance business has been levied. This tax, in the case of life insurance, is at the rate of 2 per mille of the insured capital, payable in one sum for each policy, and in the case of other insurances 2 per mille on the premiums charged, which, with the various surcharges, amounts to 3 piastres 40 centimes per cent. Although a special law grants to insurance companies the right to raise the premiums in accordance with the amount of the tax for insurance business not previously liable to taxation, the inspection recently made has shown that insurance companies have raised the premiums by 6 per cent., charging 2 piastres 60 centimes more than what they pay the Government. As the companies are legally entitled to charge only the amount of the tax paid to the Government, all concerned are free to pay the difference or not, as they please.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

BRITISH TRADE IN EGYPT.**Important Action by the Chamber of Commerce.**

The British Chamber of Commerce of Egypt has issued a circular to members to the effect that since the publication in April, 1915, of the report on openings for British trade in Egypt, the Alexandria and Cairo Committees have had under study many questions of general reform and interest for the improvement and development of British trade conditions. Among these may be cited the following:—

Mixed Tribunal Reform; dishonoured, but properly accepted bills; trade mark abuses; Bankruptcy Laws; party costs; fire risks to archives in Mixed Tribunals; abuse of word "British" in Egypt; reform of English Company Law; foreigners trading under English name; Customs overcharges; formation of Permanent Trade Commission; commercial attachés at Consulate; railway and steamship preferential facilities to commercial travellers; appointment of British agents; unduly long credits; more extended use of parcel post and cash on delivery system; catalogue system.

The particular object of the circular is to invite the views of members on questions connected with their own business which from their experience they consider might usefully be studied with the view of remedying difficulties and tend to the development of British trade in Egypt.

THE "MEROE'S" CARGO.**7,392 Bales of Egyptian Cotton on Board.**

The following details of the cargo of the Moss liner Meroe, which was torpedoed and sunk during her voyage from Alexandria to Liverpool on October 18, are available:—

Bales of cotton:—B. Messina, 5; A. Adda, 350; M. Melachrinis, 60; S. R. Barda e figli, 86; V. Toriel et fils, 344; Sasson Israel and Co., 75; E. R. Carcas, 173; C. Gregusci and Co., 125; B. Barki and Co., 800; D. Pasquinielli, 50; Peel and Co., 1,250; And. Barsoum and Co., 718; J. Planta and Co., 300; Pinto and Co., 115; Alex. Cotton Co., 669; Sidi Cicurel and Co., 200; Tamvaco, Choremis and Co., 137; Carver Bros. and Co., 150; C. Zizinia, 62; Th. Mitarachi, 383; Choremis, Benachi and Co., 990; J. Rolo and Co., 300; A. Alby and Co., 50. Total, 7,392.

Cases of eggs:—S. Goldrei, 150; N. Zoechi, 50; Hadjes and Co., 281; G. D. Pappa and Co., 14; Continental Eggs Co., 275; R. Forti and Co., 50; J. Dimitriou, 50; S. Gordon, 50; L. Onofrio, 75; J. Sedbon, 30; Brook William, 100; Goschalk and Co., 127; A. M. Ades, 9; J. Pilpel and Son, 1; Ali Attia, 85. Total, 1,348.

Cases of dates:—L. Onofrio, 750; B. C. Thomaidis, 446. Total, 1,196.

Sundries:—Eight packages.

MALTA POTATO EXPORTS.

A recent *communiqué* by the acting Lieutenant-Governor of Malta states:—

"Attention is drawn to the present prohibition of the export of potatoes to all destinations; it is, however, notified for general information that in the event of the spring potato crop of 1917 being in excess of the requirements of the Army and Navy and of the civil population, the Government will be prepared to consider applications for the export of potatoes to approved destinations. The principal observed, however, is that local needs must have the first consideration, and farmers will therefore be acting in their own interests as well as doing a service to their country if they allot as large an area as possible for the sowing of potatoes. It is also notified that the Government does not propose to fix a maximum price for the sale of potatoes grown in these islands unless there is evidence that the potato trade is being directly or indirectly exploited to the prejudice of the general community."

It has also been notified that the exportation of cummin seed is for the present prohibited to all destinations.

EGYPTIAN COTTON CROP.**The Authorities and the Boll Worms Law.**

From the Bulletin concerning the condition of certain crops in Egypt during the month of October, 1916, issued by the Minister of Agriculture, we take the following interesting abstract which is summarised from reports received from Inspectors of the Ministry:—

"The relatively cold weather as well as the frequent occurrence of morning fogs has checked to a certain extent the ripening of immature bolls in many parts of the country. Picking has nevertheless made good progress. The first picking has been entirely completed and the second picking is considerably advanced. In most localities no third picking is expected to be taken; in any case where it will be taken its value will be of little importance.

"As was foreshadowed in last month's bulletin, the bolls that are gathered show a considerable increase of pink seed worm attack, as is borne out by the result of the examination made by the Entomological Section of the Ministry of some 20,000 bolls received from all parts of the country between September 25 and October 24. A corresponding increase has also taken place in the spread of the ordinary boll worm (*carias*), but the attack remains, nevertheless, comparatively insignificant.

"With the pains that the Ministry of Agriculture has taken to bring home to cultivators, big and small alike, the vital importance of conforming with the Boll Worms Law, an earnest attempt is being made in many parts of the country to remove and destroy the bolls remaining after the picking, although unfortunately ignorant cultivators very frequently try to smuggle bolls or uncleaned cotton sticks into the dwellings of the villages. Large numbers of contraventions are being committed, and it is feared that unless the generality of cultivators, the large landed-proprietors and Dairas taking the lead, attend more seriously to the task of collecting and destroying the remaining bolls before the dates fixed in the recently published Ministerial *Arrêtés*, a still larger number of contraventions will have to be dealt with, and large quantities of cotton sticks will be destroyed in a year when the sticks constitute a really valuable addition to the income of the farmer. A still worse result would take place, namely, the frustration of the efforts of the Government to control and gradually stamp out this pest from the country.

"The forecasts made in previous bulletins as to the disappointing result of the crop have now been confirmed, the factors in play being those already set forth in last month's bulletin.

"The figures given in this month's bulletin, however, constitute the final result of the observation of the crop in the field; but the ultimate crop estimate* cannot be published until some days after the appearance of this bulletin, owing to the fact that adjustments require to be made with respect to the decrease in ginning outturn (proportion of lint to seed by weight in the field *qantâr*)."

[*The estimate has since been published.]

FIRES IN TOBACCO CARGOES.

In addition to the numerous reports of wrecks, there was news from Alexandria that the Dutch liner Riouw, of 7,500 tons, had put in there while bound from Batavia for Amsterdam, with a fire in No. 2 hold. The significance of the incident (writes *The Times*) for the insurance market lies in the fact that she would have been carrying valuable consignments of tobacco and that this is the second casualty of the class to have occurred within the past few days. Last Wednesday a very serious fire was reported from Alexandria in the Dutch liner Djember, of 7,000 tons, also bound from the Dutch East Indies. No. 3 hold, containing 2,000 packages of tobacco, had to be flooded, and cargo in No. 3 hold was also badly damaged. It was understood some time ago that, in response to the representations of underwriters, measures were being adopted by the Dutch shippers to ensure that only tobacco which had been thoroughly fermented was shipped.

ROUMANIAN OIL INDUSTRY

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, October 20.

At the meeting of the newly-created Commission for the Control of the Petroleum Industry on September 28 several important decisions were reached regarding the production, transport, and fabrication of petrol. The Commission decided that for internal consumption alone 350 wagons are required weekly, 325 of non-paraffin, and 25 wagons of paraffin. It was decided also that the reserve stock for three months—fixed at 15,000 wagons of residue, 150 wagons of refined oil, and 170 of distilled oil, is practically exhausted and requires renewal.

As regards the exploitation, the Commission divided the works into three groups. Those of Moreia, Baicoi, Campina, and other localities in these neighbourhoods will furnish the petroleum necessary for the weekly consumption, being under State control. The second group, including the works in Moldavia, form a reserve, being more distant from the refining centres. The third group includes small isolated works, and will supply local requirements, always under State control.

As regards sales in the interior of the country, these will be under the control of the Société de Distribution, which equally, for the time being, comes under State control.

All transport of petroleum will be under State control.

GALICIAN OIL TRUST.**Sequel to Liquidation of the Company.**

On November 17 the case of Iredell v. the General Securities Corporation, Ltd., came before the Court of Appeal, consisting of Lords Justices Swinfen Eady and Banks and Mr. Justice A. T. Lawrence, upon the appeal of the plaintiff, Lieut.-General Iredell, retired, from the judgment of Mr. Justice Rowlatt in favour of the company.

The plaintiff brought the action to recover £107 8s. from the company as money paid on a consideration which had failed, or on a contract which had become impossible of performance. He asked alternatively for damages for breach of contract and for a declaration that no valid transfer of certain shares had been made to him. It appeared that the plaintiff bought 600 shares in the Galician Oil Trust from the defendant company to be delivered on May 29, 1914. The contract was carried over from that date to August 28, 1914, on plaintiff paying a certain sum in accordance with an arrangement between the parties. In July of that year the Galician Oil Trust went into liquidation. On September 3 the defendant company offered to the plaintiff bearer certificates representing the shares, but the plaintiff refused to accept them, on the ground that he was entitled to registered share certificates. The defendant company could not hand over registered certificates on account of the refusal of the liquidator to recognise transfers. At the trial evidence was given by a member of the Stock Exchange that share warrants to bearer would not be considered a good delivery on the Stock Exchange and that there was often a difference in value between bearer shares and registered shares. Mr. Justice Rowlatt held that, although the defendant company did offer to make a bad delivery, it did not definitely and permanently refuse to make a good delivery, and the plaintiff, instead of asking for a good delivery, merely wrote that he understood that, owing to the liquidation, the whole transaction was void. So both parties took up a wrong attitude. He accordingly held that the action failed and he dismissed it, with costs. The plaintiff appealed.

At the conclusion of the arguments their Lordships held that the tender by the company of share warrants to bearer was not a "good delivery" under the contract, according to the custom of the Stock Exchange. They therefore held that the plaintiff was entitled to the return of £107 8s. which he had paid the company. The appeal was accordingly allowed and judgment entered for that sum for the plaintiff, with costs in the Court below and of the appeal.

ENGINEERING NOTES.

Threshing Machines.

It is reported that a considerable quantity of this year's wheat crop in the Near East has been damaged or destroyed by rain and bad weather. The more serious damage has, apparently, been done to sheaves which, stacked in the field, were waiting for threshing. The delay was exceptionally prolonged this year, especially for proprietors who depended either upon the hiring of threshing machines, or on the employment of the local team of horses which are still being used for trampling the stalks on the archaic circular threshing-floor. But it appears that none of these means were easily obtained. The threshing machines were monopolised by well-to-do landowners, while horses and other draught animals were on "war service." Thus, the small farmers, who form the bulk of wheat growers, were the chief sufferers in this case. We have already had occasion to mention similar difficulties surrounding the work and efforts of the Oriental farmer; and to point out that it is not always want of means or lack of energy that keeps him from adopting modern machinery and methods. It is rather want of information how to find the manufacturers of the machinery, or implements that he may require.

Americans and Germans.

In this respect American and German manufacturers have helped him in recent years with results satisfactory to the firms. They have studied the small farmer's wants, and he knows how to find them. At the present time, light and cheap harvesting and threshing machines cannot be procured, as before the war, from Germany or Austria-Hungary; and as such machines are manufactured in Scotland and Ireland on lines that fully meet the requirements of small farmers in the East it would be worth the while of any makers to introduce them into those markets while the troubles of last season are still fresh in the farmers' minds; many of them are undoubtedly contemplating the purchase of such machines. A type of small threshing machine, for instance, which would be suitable for a great number of small farmers in the Near East is a machine which, we believe, can be obtained in two sizes, £22 the one, and £24 the other. The former has a steel-pegged beater drum, and will thresh from eighteen to twenty bushels per hour, while the latter will deal with from twenty-two to twenty-four bushels. In each case an adjustable concave or breast is fitted as well as crank shakers, a fan and riddles, the corn, cleaned of all light grain, chaff, sand, etc., being delivered from the side. This type of machine may be driven by horse, water, steam, or oil-engine power.

Substitute for Asphalt.

A mixture of 50 per cent. sand, powdered stone, etc.; 40 per cent. paraffin, beeswax, or ozokerit; 10 per cent. carnauba wax, and vegetable black to colour the composition is used, according to a recent patent, as a substitute for asphalt for floors, walls, etc. The sand or powdered stone is warmed, molten wax is poured over it, and the whole stirred until the particles are thoroughly coated. The composition is cut into slabs, and, when required for use, reheated and spread over the required surface.

Renovating Files.

Now that economy is the order of the day, it may be of interest to some who are using files, in some way or other, to know that that useful tool can be renovated in the following way. Clean the file thoroughly with a wire brush, or "file-card," and then immerse it for a short time in diluted sulphuric acid. This sharpens the worn teeth and gives the file a considerable further lease of life. The cost is quite negligible.

Flax Machinery.

Another class of agriculturists in the Near East, as elsewhere, that has, according to reports, sustained unusual losses through the scarcity of labour this year, is that of flax-growers. Large quantities of linseed, besides the fibre of flax, have been damaged or lost because harvesting and threshing could not be accomplished in time and properly owing to the difficulty of finding the necessary field-hands. As a rule, both these processes are carried out, in most parts of the East, by manual labour, and comparatively few are able to procure special machinery for the purpose. Of this special machinery mention was made some time ago in these columns, but farmers who are not in possession of such machines, and who still depend on manual labour, may be glad to know that an ordinary reaping machine requires very little adjustment to harvest a flax crop satisfactorily. The sheaves, in such case, should be made up small, so as to allow drying to proceed rapidly, and these then should be shocked together in the ordinary way. Except when the weather is very dry it is best to turn the shocks so as to make sure of the whole being thoroughly dry before being carted and stacked. A little more careful handling is necessary with the linseed crop when it is to be machined than with other grain, because the seed bolls become entangled, and are easily detached from the straw. With regard to threshing, the usual type of threshing machine will deal effectually with linseed; but growers should note that about two-thirds of the cavings riddle ought to be covered with sacking to prevent any large amount of the cavings falling through the riddle along with the seed and chaff. Unless the drum of the machine is set close, and a high speed is maintained, and the straw carefully fed into the machine, the straw may have to be put through a second time to remove all the seed; and only the finest riddles should be employed, owing to the smallness of the seed. To free the seed from chaff and clean it thoroughly, all that is necessary is to pass it through a winnowing machine fitted with the finest riddles. The above suggestions that the ordinary type of harvesting and threshing machines can also deal effectually with flax may perhaps encourage farmers in the East to procure such machines, since there will then be more work for them in the farm and consequently prove more profitable.

Safeguards against Shipwreck.

In view of the many shipwrecks that occurred during last week's gale it is to be wondered why all ships should not be equipped with the new devices which give a warning when near a dangerous coast. As is generally known, sound travels much more rapidly through water than through air. Therefore the sounds given off by a submerged bell would afford an effective warning of a dangerous coast. In practical test it has been found that bell signals from five to eight miles distant are clearly and distinctly heard through the microphone receiver on ship-board, and in view of this success a number of the lightships on the North Atlantic coast and some of the North Sea ports have been fitted with submerged bells, while several British and American lines have equipped their vessels with receivers.

ALEXANDRIA'S HARBOUR WORKS.

When Sir Murdoch MacDonald arrived at Alexandria from Cairo recently he received formally from the contractors the western part of the breakwater they have constructed in the Eastern harbour for the Municipality.

The Municipal Delegation has decided to give the contract to a European contractor for the necessary repairs to the breakwater, which has just been completed, for the sum of about £E8,900. The question of the eastern part of the breakwater has been shelved for the time being.—*Egyptian Gazette.*

AMERICAN TRADE METHODS.

Allegations of Bad Faith in Morocco.

American manufacturers and shippers will become unpopular in Morocco if they do not mend their ways. The attempts made at the beginning of the war to boom United States trade in the Shereefian Empire do not appear to have been successful. Difficulties connected with indirect communication, delayed deliveries, and high freights are partly responsible for this; but, so we learn from an official document, American manufacturers and shippers are partly responsible. Indeed, charges of bad faith have been made, as the following instances will show:—

"A motor-car company in a circular letter recently invited applications for the appointment of an agent for Morocco, although it had an agency contract already in force covering this territory. This information gave the actual agent a bad impression, and the incident illustrates one of the unfortunate results of indiscriminate circularization, a form of advertising that seldom produces tangible results.

"A large flour milling establishment, after making arrangements for a local selling agency and having agreed upon the special terms of sale current in this market, withdrew from its engagement when business, as a result of the agent's efforts, was on the point of materializing, thus placing the agent in a false and embarrassing position with his customers and discouraging further endeavours on his part.

"A typewriter company shortly before the outbreak of the war appointed an agent in Morocco. The company desired this agent to place a specified number of machines per month, but owing to the undeveloped conditions of the market agreed that the agent could not be expected to undertake any liability in respect to the minimum limit of sales. The outbreak of hostilities temporarily rendered impossible any business in this direction. When, however, during the first months of the war the agent had succeeded in placing an order for a certain number of machines, the company then stated that it would supply his orders only upon the condition that he undertook to sell double the number of machines per month previously agreed upon. The company in imposing such terms caused the agent entirely to abandon his connection with this company.

"Another typewriter company had granted a general agency, covering the territory of North Africa, to a firm in Spain, which in turn appointed an agent for Morocco. The Paris office of the company has also appointed a separate agent for Morocco, with the result that neither of the local rival agents can now be induced to push sales."

And here is an instance of sheer business ineptitude:—"A large hardware concern requested information as to what special articles might be sold in Morocco. This information was conveyed to it under the practical form of an order for about twenty tons of goods from the largest hardware dealer in the country. Not even an acknowledgment of the order was ever received."

The Carlow Castle, which is being built by the Northumberland Shipbuilding Company, Limited, on the Tyne, for the Union-Castle Mail Steamship Company, Limited, has been successfully launched. The Carlow Castle—about 4,500 tons gross—is practically a sister ship to the Carlisle Castle, at present engaged in the trade between this country and South Africa, and it is hoped that she will be delivered early in the new year.

COMPANY MEETING.

Anglo-Egyptian Bank.

At the bank's premises, 27, Clement's Lane, London, E.C., on Tuesday last was held the thirtieth ordinary general meeting of the Anglo-Egyptian Bank, Limited, the chairman, Mr. Henry Adair Richardson, presiding. After the secretary, Mr. G. H. Soul, had read the notice convening the meeting, the Chairman addressed the shareholders, reviewing the position of the bank, the conditions prevalent in Egypt, and the state and prospects of the cotton trade in the country.

Mr. Richardson said that, considering the times we were living in, it was highly satisfactory to the directors to be able to put before the shareholders the exceptionally strong balance-sheet which they asked them to pass that day, nor, he took it, would it require a long address from him to commend the profit and loss account to their approval. The result was due mainly to the satisfactory growth of over £2,000,000 in their deposits. The past season's cotton crop was 4,615,000 cantars, grown on an area of 1,100,000 feddans, or, say, two-thirds of the average area planted. It was all sold, and realised some £3,000,000 more than the previous crop, which was at least 2,000,000 cantars larger. The cereal crops had been good, and had realised very high prices. There had been an exceptional crop of maize, which had left an important surplus available for export. Up to July 31 some £800,000 worth in value had been exported, as against £250,000 in the previous year, and nothing before the war. Until recently everything pointed to a 7,000,000 to 7,500,000 cantar crop of cotton for the present season, but unfortunately the worm had appeared, and now it was expected that they would not get more than 6,000,000 cantars. The high price of cotton might amply compensate the fellaheen for the reduction in the amount of the crop this year, but a small Egyptian crop coinciding with the short American supply was a misfortune for the world. During the year the bank closed its branch in Paris, as the board saw little prospect of working the branch at a profit.

Dealing with the principal items in the balance-sheet, he pointed out that the deposits, etc., were nearly £2,250,000 up—good evidence of the high credit which the bank enjoyed, but part of these deposits must be regarded as war-time money, and they must be prepared to lose some of them when the war was over. On the credit side cash was up £500,000 at £1,786,000, a large amount to have lying idle, but, as bankers to the Army in Egypt and the Treasury in Malta and Gibraltar, it was essential to keep large cash balances on the spot to meet the heavy demands that are made upon them. Investments, standing at £776,000, included £600,000 of Four-and-a-Half per Cent. War Loan. The balance was largely in short-time Indian Railway debentures; depreciation had been provided for in full. Bills receivable showed an increase of £2,000,000. This item, added to the amount of cash they held, represented fully 100 per cent. of their total demand liabilities. Turning to the profit and loss account, he thought they might congratulate themselves on the result, for, although one effect of the war had been to raise interest rates to the benefit of the bank, another effect had been to depreciate securities, add to their bad and doubtful debt

accounts, and increase largely their working expenses, so shareholders would not be surprised that, although the gross profits were £23,000 more than last year, the net profits were only £10,000 more. He trusted the shareholders would approve the appropriation the board had made of the surplus profits. The bonus to staff, he was sure, would be unanimously approved—(hear, hear)—and, in the bonus to the shareholders, he wanted them to recognise that the directors had taken the first opportunity of doing something to compensate them for the deduction of income-tax in payment of dividends which the war forced upon them two years ago.

As regards the current year, he was not going to prophesy. So far they were doing well, but the sudden and rapid rise in cotton came at an unfortunate time, and must have caused loss to many merchants and dealers, while the speculation that had been rampant in the cotton markets, unless stopped by the new regulations adopted last week in the Liverpool Cotton Exchange to check speculation, would make business as difficult as it would be dangerous for the remainder of the Egyptian season. They must do their share of financing the business, but, however careful they might be and however much alive they were to the situation, they could not be sure of immunity from loss. The staff had done splendidly, as well for the country as for the bank. All of military age that could be spared had joined the forces, and it was with much regret that he had to report that three of them had been killed during the year. He spoke in appreciative terms of the willing and loyal services rendered by what remained of their old staff, and said that the ladies in the London office had done excellent work. In conclusion, he moved the adoption of the report and accounts.

Mr. Alan Richardson seconded the motion, and after Mr. Tomkinson had expressed satisfaction with the results of the year's working, the resolution was carried unanimously.

On the proposition of the Chairman, seconded by Mr. R. A. Foa, a dividend at the rate of 10s. per share, less income-tax, and a bonus of 2s. 6d. per share, free of income-tax, was declared, payable on December 1; and Mr. H. A. Richardson, the director retiring by rotation, was unanimously re-elected on the motion of Mr. E. Pusch, seconded by Sir M. F. Reid, C.I.E.

COMPANY REPORTS.

London and Maikop.

The report of the London and Maikop Oil Corporation for the year to July 13, 1916 (June 30, O.S.), states that operations on the Maikop oilfield have been retarded, or entirely arrested, by the general mobilisation throughout Russia, which has depleted the drilling staffs, increased greatly the cost of labour and materials, and delayed or prevented the transport of indispensable machinery and plant. In spite of these difficulties the general output from the field during the year amounted approximately to 52,000 tons, making a total of over half a million tons since 1909, of which about 475,000 tons have been delivered by the Maikop Pipeline Co. These figures show the existence of oil-bearing strata, and support the opinion of experts familiar with the developments of other fields that stronger and

more permanent sources still await discovery. Under present conditions, however, there have been no new developments. The efforts of the staff on the field have been devoted to the assistance of the Maikop Orient Oil Co., in which this company has a very large interest. Owing to the difficulties already referred to the directors of the Maikop Orient Co. decided to concentrate work upon one additional well on Plot 435 A, and this has reached a depth of 1,120 ft. It was hoped that this well would have been completed before this date, but operations have been delayed by the shortage of men and the long delays in obtaining and bringing the necessary supplies to the plot. The promising prospects at this point have encouraged development work in the vicinity.

Traian Roumanian.

The report of the Traian Roumanian Oil Co. for the year ended April 30 shows a loss of £2,677, and after deducting the credit balance of £669 brought forward a debit balance of £2,008 remains to be carried forward.

COMPANY NOTES.

New Company.

Overseas Agencies, Ltd.—Registered by Jordan and Sons, Ltd., 116-17, Chancery Lane, W.C. Capital £5,000 (£1). Business: Manufacturers, merchants, factors, and contractors of rolling stock and general railway equipment of all kinds, equipment for coal, gold, diamond, and other mines, forgings, stampings, castings, and constructional iron and steel work, iron and steel and non-ferrous metals of all kinds, to act as agents and representatives, particularly in Africa, the United Kingdom, Russia, and elsewhere, for manufacturers of the above-mentioned manufactures, and generally to endeavour to divert trade hitherto done by Germany and Austria into British channels. Private company.

Meetings.

Land Bank of Egypt.—December 5, 1916, at Alexandria.

London and Maikop.—November 29, 1916, noon, at 20, Cophall Avenue, London, E.C.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah production for week, 24 tons; last week, 18 tons. Hurgada production for week, 3,751 tons; last week, 4,517 tons. Hurgada well No. 8 plugged itself on November 15, and is now being cleaned.

Baku Russian.—Week ended November 11, 80,600 poods; November 16, 81,700 poods.

Bibi Eibat.—Week ended November 5, 53,400 poods (861 tons).

Black Sea Amalgamated.—Week ended November 11, 22,341 poods (360 tons); 18th, 21,604 poods.

European.—Week ended November 12, 76,000 poods; 19th, 77,700 poods.

Maikop Combine.—Week ended November 11, 16,916 poods (273 tons); 18th, 17,723 poods.

Maikop Pipeline and Transport Company.—Week ended November 18, 95,819 poods (1,545 tons).

North Caucasian Oil Fields.—Week ended November 1 (14), 539,519 poods (8,702 tons).

Russian Petroleum.—Week ended November 11, 60,100 poods; 18th, 61,800 poods.

ON 'CHANGE.

(By OUR CITY CORRESPONDENT.)

THROGMORTON STREET, E.C.,

Wednesday Evening.

The market in Egyptian shares has continued fairly active throughout the week, and much more business would have been done had it not been for the comparative scarcity of sellers. Egypt has continued to inquire for various shares on this side, and the result has been a fair amount of local buying.

National Banks gradually advanced from 13½ to 13¾, and to-day have had a big jump to 14½. Agriculturals have risen 5-32 to 5 1-16, and Anglo-Egyptians are ½ up at 12¾. Land Banks have jumped ½ to 5½, and Delta Light have changed hands round 5½, at about which price they are probably one of the best lock-up purchases for after the war.

Aboukirs have improved 9d. to 15s. 9d., and Egyptian and Foreign Trust, on the appreciation in their holdings, are about 1s. higher at 6s. 6d. New Egyptians are fractionally firmer at 9s. 3d., and Sidi Salems have further improved about 2s. to 10s. 3d.

There has been a steady demand for Union Foncières, which has carried them up 3s. 6d. to 24s. 9d. Markets and Salts have been firm, but Khedivial Mail ordinary have reacted 1s. 6d. to 35s. on profit taking; whilst the preference are ½ higher at 31 3-16.

Greek stocks continue very firm. Both Monopoly and Larissa are ½ up at 50½ and 54 respectively; whilst Greek Currant bonds have changed hands at 90.

Balkan Oil Shares.

Roumanian Consols were again badly affected by the war news and further fell 9d. to 11s. 3d. Spies were easier at 12s. 9d., and Ural Caspians and North Caucasians were dull, but unaltered. Maikop Pipe Lines receded to 3s. 9d.

GHARBIH LAND COMPANY.

NOTICE is hereby given that a Meeting of the Holders of the 5 per cent. First Mortgage Debentures of the above-named Company secured by trust deed dated December 23, 1910, in favour of George Pearce Foaden and Charles Robert Beasley as trustees will be held at the Cannon Street Hotel, Cannon Street, London, E.C., on Wednesday, November 29, 1916, at noon for the purpose of considering and, if thought fit, passing any extraordinary resolutions, pursuant to the provisions of the second schedule to the said trust deed, resolutions to the following effect, namely:—

(1) Suspending the rights of all the Debenture-holders so far as necessary to postpone until December 31, 1916, at the latest the payment of the Coupon on the said Debentures due on December 15, 1915, and to postpone until December 31, 1917, at the latest the payment of the Coupons on the said Debentures due and to become due on June 15, 1916, and December 15, 1916, provided that the Company agrees to pay interest on such Coupons at the rate of 5 per cent. per annum from the original due date of such Coupons respectively until the actual date of payment, and provided that the Egyptian Enterprise and Development Company agrees to pay to the Trustees for the Debenture-holders the amount of these Coupons and such interest as aforesaid on the dates above mentioned and secures such payment in manner set forth in a Deed of Hypothecation in the French language and made in Egypt in accordance with the local law on October 17, 1916, between the Gharbi Land Company of the first part, the Egyptian Enterprise and Development Company of the second part, and Charles Robert Beasley and George Pearce Foaden as Trustees for the Debenture-holders of the Gharbi Land Company of the third part.

(2) Approving of the above-mentioned Deed of Hypothecation and authorizing the Trustees to carry the same into effect.

This Notice is issued pursuant to the provisions of the Second Schedule to the above-mentioned Trust Deed to the intent that any resolutions passed at the Meeting shall be binding upon all Debenture-holders whether present or not at the Meeting.

A copy of the Deed of Hypothecation referred to in paragraph No. 2 above can be seen by any Debenture-holder during usual business hours at any time prior to the meeting at the following addresses:—viz., Messrs. Linklater and Co., 2, Bond Court, Walbrook, London, E.C.; the Trustees' Solicitors; the Offices of the Company, 7, Sharia Gameh Sherkass, Cairo, Egypt; and the Office of the Investment Registry, Limited, 2, Waterloo Place, London, S.W.

Dated 3rd November, 1916.
GEORGE P. FOADEN,
C. R. BEASLEY,
The Trustees for the Debenture-holders.

NOTES OF THE WEEK.

The situation in Roumania has undergone rapid changes within the short space of a week. In our last issue we recorded the fall of Craiova, and suggested that the Roumanians in their hurried withdrawal would have had difficulty in extricating the whole of the force stationed in the Orsova-Turnu-Severin district. The rearguard of that body had to be left to its fate, and has since been maintaining a plucky stand on the lowest of the spurs of the Carpathian foothills, which bend back for a short distance in a south-easterly direction from Turnu-Severin. On November 24 von Mackensen succeeded in sending forces across the Danube at several points between Calafat, opposite Vidin, and Simnitza, opposite Sistova. This move rendered the whole of Western Roumania untenable for our Allies, and there was nothing for it but to fall back on to the immediate defences of Bucharest.

The absence of any claims on the enemy's part to large captures, either of men or material, points to an ordered retirement of the Roumanians, and we are forcibly reminded of Russia's experience last year, when a shortage of munitions prevented her from offering any real resistance to the Austro-German forces. Roumania's plight is understood to be the same, and until it is known when an adequate supply of guns and munitions can reach her it is impossible to tell where the enemy's advance can be checked. So far, all the efforts of von Falkenhayn to advance along the Prahova Valley and down the Törzburg Pass beyond Dragoslavele have failed, and the Roumanian hold at this point has proved invaluable. But the enemy has already reached Curtea d'Argesh, which lies to the south-west of Campulung, and the position of the latter only a few miles south of Dragoslavele becomes gravely compromised. An equally grave menace is the occupation of Giurgevo, the Danube port opposite Rustchuk, barely forty miles from Bucharest. Until this town was seized there seemed some chance that the Roumanians would delay the enemy's advance along the River Vedeia, in spite of his claim to have captured Alexandria, which stands on this river at a distance of some twenty miles from the Danube. This line, however, has now been turned, and unless help is immediately forthcoming the next opportunity for a Roumanian stand is offered by the River Argesh, which flows within ten miles of the capital. At Curtea d'Argesh the Austro-German forces are already astride this small river, but Piteshti, an important railway junction, unless already lost, should stand our Allies in good stead at this stage. Without

munitions, however, neither generalship nor positions avail.

As long as Piteshti and the railway line from Campulung to Goleshti, five miles east of Piteshti, are held by the Roumanians the enemy are still outside the oilfields, which must be their main objective. Not until the next branch line running through Tirgovishte to Titu, on the main Bucharest railway, is reached will these fields be threatened. Hence the importance of our Allies being able to retain their hold on Predelus and Törzburg Passes immediately to the north of the oil district. If the railway from Verciorova has been adequately destroyed, some time must elapse before it can serve the Austro-Germans as a feeder for their advance. With the control of the Danube in his hands, von Mackensen has the best possible channel for supplies, and to a certain extent may be able to make up to von Falkenhayn some of the facilities which the latter has lacked since he advanced beyond the Hungarian railway system. Sooner or later the military position in Roumania will turn on the relative advantages of the contending forces in regard to supplies. Although in possession of a large stretch of Roumania's fertile plains, the enemy is unlikely to have captured any considerable stores of grain, as the greater part of these are to be found in the eastern districts. Apart, therefore, from the painful position in which the Roumanians find themselves placed, the Austro-German forces have still much to accomplish before they have fulfilled their mission in Roumania.

It is possible now to see—and to admire—the method of Germany's campaign against Roumania. By attacking the Dobruja first, von Mackensen has not only deflected Russian reinforcements to that quarter; but, owing to the configuration of the country, he has been able to confine the Russo-Roumanian troops in such a way that he has himself to occupy the shortest possible line—that between Cernavoda and Constantza. In this northern part of the Dobruja the Allies are powerless to affect the operations along the Danube from Silistria upwards. Had this latter town remained in the hands of the Roumanians, von Mackensen would have had much less chance of threatening Bucharest from the south. At the least expense to himself, he has temporarily immobilized a comparatively large Russo-Roumanian force, quite apart from the value of Constantza to our Allies as the main port of entry for supplies. A further attempt is now being made to encircle Bucharest by effecting a crossing at Oltenitza. But this move brings von Mackensen's force very close to the region where it is to be hoped the Roumanians will be able to make a stand in

defence of Bucharest, an earnest of which, perhaps, may be seen in the attack now launched by the Russians in the Carpathians where the Roumanian and Bukovina frontiers meet.

In Macedonia the Allies' next objective will be Prilep, north of Monastir, beyond which lie the famous Babuna Heights. On a broad front, stretching from Lake Prespa to the Vardar a steady pressure is now being exercised on the enemy. One of the latest communiqués reports a successful attack by British troops south-west of Doiran. In view of the nature of the country confronting that part of the Allied line which is operating north of Monastir, the work that the wings will now be called upon to perform becomes more important than it has been hitherto. The capture of Monastir straightens out the Allies' battle front, except where it faces east along the Struma. On the extreme west the Italians continue to make good progress, and are now north-west of Monastir. Provided General Sarraill's orders are "Full steam ahead," and he finds himself adequately supported by the Allied Governments, it may still be possible to achieve some measure of success in this region. The Bulgarians, with the further demands that the invasion of Wallachia will make upon them, must now be committed almost up to the limit of their resources. A determined attack from the south at a number of points could hardly fail to add to von Mackensen's embarrassments. The invasion of Roumania is good business from the German point of view, but will offer poor compensation to the Bulgarians for the loss of Monastir.

King Constantine and his Government have refused to accede to the Allies' demand to surrender artillery and munitions corresponding to the amount handed over to the Bulgarians at the time when the Fourth Army Corps allowed itself to be removed to Germany. The demand was presented in the form of an ultimatum which was to expire on December 1, by which date ten batteries of mountain guns were to be handed over. After having returned a negative answer, the King has sought to entrench himself behind an appeal to neutral States and the decisions of a Crown Council. The latter, as was to be expected, supported the refusal already given. In the meantime, Admiral du Fournet, the Allies' executive officer in Athens, has had an audience of King Constantine, and has informed him that there can be no modification of the original demand. It now remains to be seen how the Allies will set about to get possession of the artillery demanded.

The situation may shortly become critical. On the one hand there would seem to have been a good deal of oath-taking among a number of officers, who are pledged to resist the surrender of the arms at all costs. These are the people for whom active service against the traditional enemies of their country, the Bulgarians and Turks, has no attraction, but they are fully resolved to die in the last ditch, if they cannot get behind it, rather than give a proof that their country's undertaking of neutrality will be duly honoured. If the Greek military authorities have taken advantage of the few days' grace given them to distribute the artillery and munitions demanded by the Allies—or at least some of it—about the country, these recalcitrant officers may be capable of mischief. The standard of the opposition the Allies have to expect is indicated by the actions of the Reservists, who claim to be under King Constantine's special protection. These stalwarts hope to thwart the Allies by carrying out a campaign of intimidation against those of their fellow-countrymen who are supporters of M. Venizelos and have remained in Athens. On the night of November 25 all the shops belonging to Venizelists in one of the principal business streets of Athens were marked with a sign in red paint, and the public has been informed that the shops so marked and the houses of leading Venizelists are to be fired and pillaged. If the Greeks had not lost the saving grace of humour, we might have heard that the houses of all Reservists and officers of the Athens command, the Palace next excepted, had been daubed with similar signs. Instead of pursuing this

course, the intended victims persuaded Admiral du Fournet to inspect the ominous marks and to promise them protection.

It is to be feared that the general situation has been allowed to go from bad to worse, until it has become practically impossible to avoid a forcible settlement. The course of events in Roumania is calculated to encourage the King and his party in their opposition, and unless the Allies score some decisive success in the Near East they must look for recalcitrancy in Greece at every turn. By adopting a policy of protracted negotiations the Entente Powers have made it possible for King Constantine to collect a substantial following in the country—those who are jealous of M. Venizelos's political power, as well as the military bravados, who have more stomach for looting than fighting, and all who hope to batten on the Royal favour. It is, therefore, no longer a question of bringing one person to reason, but a whole country. How the problem is to be settled can be determined only by those on the spot.

Speaking on behalf of the Government, Lord Robert Cecil was not able to throw much light on the situation in Greece, nor can it be said that he made out a good case for British diplomacy. He reminded the House of Commons that the British Government did not want to take any action which might cause friction and trouble among the Allies. Our Allies, we feel confident, are actuated by the same motive. We are, therefore, left wondering why, when a palpably stupid course of action is suggested, the British Government should not insist upon a wise one being adopted, and leave the avoidance of "friction and trouble" to others for that occasion. Perhaps the most disconcerting passage in Lord Robert Cecil's speech on November 27 was his categorical denial that the Allies' policy was dictated by dynastic considerations. Such a statement, he declared, was "absolutely untrue. There is not a word, particle or syllable of truth in it." The suggestion, improbable as it was, at least offered an explanation of an anomaly. Now that it is ruled out of court, the British Government is left admitting that it deliberately acquiesced in a suicidal policy, either because it had no better one to suggest, or because in the Allies' councils, we are asked to suppose, the mention of an alternative policy implies "friction and trouble." Lord Robert Cecil will hardly expect the country to accept this second proposition. Rather will it be tempted to draw the inference that, as things are, Great Britain, who is doing so much in the field and at sea, is not pulling her weight in the councils of the Allies.

A telegram from Sofia reports that the tunnel through the Taurus Range was completed on November 15. If this information be correct, it constitutes an important landmark in the history of German expansion in Asia Minor. In passing, however, we may point out that the news comes from Sofia. Its importance, if it were correct, would justify special references both in Constantinople and Berlin. The tunnel was not expected to be completed at such an early date, and perhaps the doubt is justified whether the reference is to the final opening of the tunnel to traffic or merely to the piercing of the mountain. On the other hand, the urgency of the work in the furtherance of Germany's plans and the amount of labour available under Germany's organisation may have caused the Germans to concentrate their efforts on the early completion of the tunnel. Last year the tunnel through the Amanus Range was completed. That was three miles in length. The Taurus Tunnel, or, rather, series of tunnels, is distributed over a stretch of twenty miles, eleven of which will have called for boring operations.

If it be true that the tunnel is in working order, the existence of through railway communication from Haidar Pasha to Medina and to Nisibin, or wherever the railhead may be at present in the direction of Mosul, will materially assist Turco-German military operations on four fronts. But apart from facilitating the movement of troops and supplies it will visibly affect the

rate at which the further construction of the railway is being undertaken. The Germans will also hope that it will bring nearer and more rapidly to their doors some of the vast resources of Asia Minor. In regard to this point, however, the Allies have little need to be uneasy. The capacity of the railway is likely to be taxed to the utmost in trying to cope with military requirements.

Although the Red Cross has achieved a record in the collection of funds which eliminates all comparisons, we venture to think that, apart from it, the success of none of the many charitable schemes supported in Great Britain is more gratifying than that of the Mesopotamia Comforts Fund. It started late in the day; but the particular appeal which the fortunes or misfortunes of the Mesopotamian Expedition made on a charitable public has come with irresistible force, with the result shown in the subscription lists published in this issue. Splendid as the response for subscriptions has been, the need is specially great, and the Fund has still much ground to cover to meet the immediate demands upon it. The British troops serving in Mesopotamia deserve all that an appreciative public can send them, and much more. Little indeed can be done for them in comparison with the sufferings and hardships they have had to endure in the past. We may, therefore, hope that the response to the Committee's appeal will be immediate and overwhelming.

We publish on another page an interesting document sent by a correspondent in Cairo, throwing light on the origin of the Mecca rising. Reference has already been made in these columns to the view held by the Young Turk extremists that the Arabs stood in the way of Turkey's realization of her true destiny. For this reason the Arabs as well as the other races forming the Ottoman Empire were to be Turkified, if possible, or exterminated if they proved intractable. It was recognized that the Arab problem presented certain difficulties in view of the prominent part played by this people in the religious as well as in the political sphere. Accordingly, special methods for dealing with them were to be adopted, among others their hold on Islam and on Turkish literature was to be steadily undermined. In such circumstances the Grand Shereef of Mecca naturally became the personification of all that was objectionable in the Arab world to the Turkish mind. The letter which we are able to publish shows that as long ago as 1912 the Young Turks were preparing their plans for dealing with the Arabs. It was, therefore, no sudden craze or treacherous design on the part of the Grand Shereef that prompted him to throw down a challenge to Constantinople. He had either to face a struggle as soon as the Turks might feel themselves free to cope with him, or to make good his defences by establishing an independent State when Turkey's preoccupations would put him on more equal terms in a declaration of war.

The official veil which has obscured the doings of the German mission sent as long ago as the spring of 1915 to stir up dissatisfaction in Afghanistan has at last been lifted by the Secretary of State for India. Mr. Chamberlain's narrative is of sufficient interest to be reproduced here in full. He said: In the spring of 1915 the German Government decided to send a mission to Afghanistan, and for this purpose they selected from among a number of Indian anarchists in Berlin a young landowner from Oudh, who posed to them as a ruling chief, and as such was received in audience by the Emperor. This person was accompanied by a party of German officers, some Turks, and another Indian anarchist—a Moslem. The principal German officer, Lieutenant von Hentig, was the bearer of a letter from the German Chancellor to the Amir, in which the latter was invited to advise the pretended Raja how best India might be liberated from British tyranny. Von Hentig was also charged to make important revelations to the Amir regarding the relations which the German Government hoped would in future exist between Afghanistan, Germany, Austria-Hungary, and Turkey.

The mission, continued Mr. Chamberlain, broke up in Persia, and succeeded in making its way in small parties into Afghanistan in the late summer. They were arrested on arrival, and eventually conveyed to Kabul towards the end of the year. There is reason to believe that the Amir and his people quickly appraised these Germans and the Indian adventurers by whom they were accompanied at their true value. It is true that the intervention of Turkey under German influence created a complication, and placed his Majesty in an exceedingly difficult position. But at the outbreak of the war his Majesty gave the Viceroy the most solemn assurances of his intention to preserve the neutrality of his country, and it is with great satisfaction that I acknowledge on behalf of his Majesty's Government the loyalty of the Amir to his pledged word—as sacred to the true Moslem as to ourselves. His Majesty has firmly refused the inducements—as seductive as they are unrealizable—held out to him to induce him to forsake his Ally, and has used his influence to prevent disturbances on the frontier. The Amir dismissed the mission in May last. It would not be in the public interest to state what has become of the various members; but some of them have been captured by the Russians and the British after leaving Afghanistan. The estates of the Indian landowner have been sequestered by the Government of India. Letters were also addressed by the German Chancellor to a number of Ruling Chiefs.

ENGLISH LAW AND MUSSULMAN LAW.

The Right Hon. Syed Ameer Ali has just delivered two lectures at University College on the relations between English and Mussulman law. In the first (delivered on November 21) he pointed out that Mussulmans formed nearly a quarter of the inhabitants of the British Empire, and that it was impossible to govern that Empire by rulers who had no acquaintance whatever with their laws and institutions. The Mussulman Law of Status, he said, was of the utmost importance, because modern conditions had brought about a mingling of the Moslem people with other sections of the Empire's population. With regard to marriage (the foundation of human society), this was held in as much sanctity under Mussulman law as it was in Christendom, and it was a mistake to suppose that polygamy was the rule—one sect, the Mutazali, held exactly the same conception with regard to plurality of wives as the monogamous communities of the West.

In the second address, delivered last Tuesday, the lecturer said that, with the exception of certain principles, the operation of which was necessarily confined to the territorial limits of Islam, the Moslem law was generally a personal law. Its incidents remained attached to the individual Moslem, whatsoever his domicile, so long as he continued even outwardly faithful; and this was not the case with born Moslems alone, for as soon as a person belonging to a different persuasion accepted the religion of Mohammed all the civil obligations and duties which the Mussulman law imposed, and the rights and privileges which it gave, attached to the new proselyte. A mere change of domicile effected no alteration in the status or legal capacity of Mussulmans. Owing to the state of belligerency which existed originally between the Islamic Commonwealth and the hostile nations of the East and West, early Moslem jurists divided the civilised world into the "territories of war" and the "territories of peace." In this they were not more bigoted or exclusive than contemporary Christian jurists, such as Grotius and Puffendorff. In process of time more amicable relations sprang up, under which, by mutual agreement, Moslems and non-Moslems acquired reciprocal rights in friendly States; and the conditions of modern times, when millions of Mohammedans were subject to non-Moslem government, and were protected in the enjoyment of their civil rights and privileges, had also materially affected the ancient view of the Mussulman law.

The lecturer discussed at some length the legal situation which arose with regard to marriages in this country where one or both the parties were Mohammedans. He concluded that the time had now arrived when the complicated questions involved should be dealt with by legislation conceived in a broad and liberal spirit. The dicta of judges had established beyond question that marriages between two unmarried persons, one domiciled abroad and the other in England, were valid in this country, and the English Court should be empowered to determine all matrimonial questions arising in England from such a marriage. No remedy or relief should be refused on technical grounds, such as difference of domicile, faith or communion. He further suggested that when a man with a non-English domicile sought to marry a woman domiciled in England, and applied to the Registrar for a licence, that officer should in the first place transmit a notice of the intended marriage to the family of the applicant, and no marriage should be allowed to take place within a certain fixed period. This would enable people who had objections to prefer them before the ceremony was performed. Such a provision, he thought, would prevent the difficulties that arose when young foreigners married girls domiciled in England without complying with the formalities of their personal laws.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, November 10.

Sir R. Wingate's Transfer.

By far the most interesting incident of the week has been the announcement of the transfer of General Sir R. Wingate to Egypt. The first feeling of the natives on hearing the news was one of consternation at the loss of one to whom they have looked for so many years for unfailing sympathy and assistance. It would be difficult to exaggerate the strong feelings of personal attachment that are felt by the people of the Sudan for Sir R. Wingate. His kindness and accessibility are equally well known, and his knowledge of the native customs and language is profound. Above all, he is personally known to, and the friend of, all the notable natives in the country. Although, then, they acquiesce in his transfer to a wider field of activity, to which they admit his duty calls him, their regret is very deep, and they are only solaced by the fact that Egypt is, after all, only a little way off, and thus they hope to see him and not to lose touch with him altogether.

By those who have worked more directly with Sir R. Wingate in the development and administration of the Sudan, the loss is as keenly felt as by the natives, if not so vociferously expressed. The condition of the Sudan during the war is by itself sufficient evidence of the success of his administration. The Sudan Government, however, will continue to enjoy his supervision from afar, and will be proud to carry on the traditions that he has started for it of efficiency in all things.

The 'Remnants.'

Organised amusements are rare in Khartoum, and the first performance of the "Remnants" was very well attended. It fully justified the anxiety to see it. It would be invidious to particularise where every number was so fully appreciated, but possibly the greatest success of the evening was achieved by Sergt. Toovey. The inhabitants of Khartoum owe a debt of gratitude to Capt. Heriot-Hill for his untiring work both as stage manager and as a performer, and to Mr. E. More, the Governor of Khartoum, under whose auspices the performance was got up. The audience was gratified to hear that another "Remnant Sale" would be held in a month.

AMERICANS AND THE ROUMANIAN RED CROSS SOCIETY.

By way of showing their goodwill for the cause of the Allies the American circle of the Lyceum Club in Piccadilly gave an entertainment last Thursday. The Roumanian Minister, with his wife and daughters, Prince Bibesco, and the Countess of Bessborough were among those who were present. Afternoon tea and a musical programme were followed by an address by Mrs. Arthur Inkersley, the widow of a former American ambassador at Bucharest. Mrs. Inkersley appeared in the coronation robe worn by Queen Elizabeth of Roumania ("Carmen Sylva"), which, she explained, was a gift from the Queen herself, as were also the lantern slides with which the lecture was illustrated. Some of these pictured Roumanian scenery, others were connected with the home-life of the Roumanian Court. Mrs. Inkersley explained the circumstances under which the robe and the slides were given her. The gift was due to the Queen's sympathy with the blind. She wished Mrs. Inkersley to take up their cause, and gave her the robe and the slides so as to make the lectures more attractive. In this connection the lecturer said that Carmen Sylva was one of the most remarkable women of her time; she was a painter and musician as well as an authoress; but it was not by any of these things that she wished to be remembered; what she chiefly wished was to be remembered as a friend of the blind.

Sir George Anderson proposed a vote of thanks to the lecturer, which was heartily accorded, and a collection was made on behalf of the Roumanian Red Cross Society. The amount taken up at the time, with what was promised, will, it is hoped, realise fifty pounds, and, if this sum is reached, a friend has promised to add another fifty, making one hundred pounds altogether realised in one afternoon.

A word of praise is due to the committee of ladies who organised this successful demonstration of American goodwill for the cause of the Allies. They were: Mrs. E. Hatheway Turnbull, the President of the American circle, who, we may say, is doing a great deal of work for our blinded soldiers and sailors, Mrs. Degen, Mrs. Verco, and Mrs. Myers.

THE LOSS OF THE ARABIA.

(FROM OUR OWN CORRESPONDENT.)

PORT SAID, November 14.

Ninety passengers, together with nine European and forty native members of the P. and O. s.s. Arabia's crew arrived here late on the night of Wednesday, the 8th, in the s.s. City of Marseilles, by which they were picked up shortly after the ill-fated vessel had, without warning, been torpedoed in the Mediterranean about two days out from Port Said. They were met on arrival by the naval authorities and the P. and O. Company's agents, and were taken off in a special tender to the quay, where a procession of service motor-cars, under the able direction of the Base Commandant, rapidly conveyed the passengers and crew to the two principal hotels, where they were comfortably housed. For shipwrecked passengers one could not imagine a more cheery crowd.

When the ship was struck somewhere aft of midships, under the first-class smoking-room, all on board were partaking of the morning savoury cup of beef tea, and shortly afterwards they were lunching comfortably on the City of Marseilles, bound eastward, without money, kit, or passports, but still full of pluck. A rollicking concert was held that evening on the rescuing steamer, in which everyone joined.

The general conduct on board when the ship was struck appears from all accounts to have been excellent. The passengers mustered calmly to their appointed stations, and the boats were launched without any sign of panic. No time was lost in getting clear of the ship, and all were safely away and in view of the rescuing vessels before the Arabia took her final plunge.

The passengers are unanimous in their praise of the conduct of officers and men on board at the time when none could tell how long the vessel would remain afloat. The necessary orders were given and carried out with the calmness and method of a boat drill, and the fact that not a single passenger felt the damp of salt water is in itself a tribute to the discipline and courage of the able men to whose care so many precious lives were entrusted.

The P. and O. Company's agency here arranged for the passengers to continue their journey to London in the Messageries Maritimes steamer Paul Lecat, which sailed on Saturday, the 11th, and the passengers will be taken overland by special train from Marseilles. With the exception of a few who were suffering from shock, the whole of those landed here left on Saturday. All displayed a plucky determination to "see it through," and the courageous decision of the passengers—a large percentage of whom were women—will give the Hun an excellent idea of the moral value to him of these cowardly attacks on civilians.

A branch of the Paris Czech Press Bureau was opened on Monday at Thanet House, Strand.

On November 2, we learn from the *Egyptian Gazette*, a new daily newspaper made its first appearance in Cairo. It is named the *Egyptian Star*, and is a four-page journal.

A Reuter's message from Washington, dated November 29, reports:—The United States Ambassador in Constantinople has informed the State Department that Turkey cannot permit several hundred Americans, native and naturalised, to leave Turkey via Jaffa, owing to military necessity. In rescinding its previous consent to permit the departure of these Americans, Turkey says that the official who entered into the agreement had no authority to do so. The Government is greatly irritated by this information.

MONTENEGRO.

Any interested in the commercial and general development of this country, together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

"Major," c/o Messrs. Stilgoes, Solicitors,
24, Essex Street, Strand, W.C.

ATHENS LETTER.

(FROM OUR OWN CORRESPONDENT.)

ATHENS, November 12.

The Allies and the Government.

The past week has seen Greece, or the "State of Athens," obliged to submit to further demands on the part of Admiral du Fournet. The Government, as usual, replied in the negative to the Admiral's Note demanding the delivery of the light craft of the Greek Navy, and sent in the usual protest after the Admiral had taken possession of the arsenal and of the destroyers and torpedo boats. The tricolor now flies from these vessels; they are manned by French crews, and will be used for patrolling the Greek coasts. On the same day Sir Francis Elliot and M. Guillemin had a lengthy interview with the President of the Council, who subsequently conferred for some time with the King. The exact object of that meeting has not been made known by the newspapers, and there has been much speculation as to the nature of the further demands which, it is generally believed, the Allies have made, but the most probable of the many rumours which are in circulation appears to be that they related to the transfer to the Allies of the Greek artillery, etc. This matter, as well as the question of transferring the Greek troops from Thessaly, was doubtless discussed when the King received Admiral du Fournet on Thursday. In the meantime the Admiral is asking for more trucks from the Larissa railway; and it is rumoured that the French marines will be withdrawn from the Zappion Park, where their band entertains Athenian society, when the Greek army has been removed from Thessaly.

In the midst of all these pre-occupations the gallant Admiral still finds time for social functions. A short time ago official visits were exchanged between him and the Mayor of the Piræus, and yesterday the Mayor of Athens and a delegation from the Municipal Council visited the flagship *Provence*, with the usual ceremonies. This visit is to be returned in a few days.

A Significant Incident.

The following incident seems to have excited some attention, and is an illustration of the tactics of the anti-Venizelists. A motor-car conveying some French, Italian, and Serbian officials, and military men from Arta to Yanina was stopped on the way by some armed men, who said they would not allow the Italians to proceed; whereupon the whole party returned to Arta. The band was evidently organized as a demonstration against the presence of Italians in Epirus. The usual apologies, promises of punishment, etc., are, of course, forthcoming.

A Railway Strike.

Strikes seem to be the order of the day just now, and as soon as one is disposed of another is announced. The seamen's strike came to an end on Wednesday, the Government having arranged to indemnify the families of the victims of the Angelike and the Kiki-Issaia, which were torpedoed outside the Piræus. The coastal navigation has therefore been resumed, and Admiral Fournet has promised to convoy vessels proceeding to Salonika with Venizelist recruits. It is now the turn of the men of the Attica railway to vent their grievances, and, their efforts to obtain an increase of wages having failed, they have gone on strike; and the train services to Laurium and to the fashionable country place, Kephissia, have been suspended since Friday.

The "Benzine Deputy."

Some excitement has been caused by a raid on the residence of Mr. Callimassiotis, a member of the Greek Chamber, by the French police. There was some resistance from the house, and Mr. Callimassiotis got away. He is one of the gang who have been giving supplies to German submarines, and a number of letters are in the possession of the Anglo-French police proving his culpability. These letters are being published in some of the papers, and the Public Prosecutor has now opened an inquiry. In the meantime, the "Benzine Deputy" appears to be in hiding.

RECENT CONDITIONS IN PALESTINE.

(FROM A CORRESPONDENT.)

Another summer and autumn of increasing suffering, want, and privation have passed over the heads of the unfortunate population of Southern Palestine. Although there has been no repetition of the plague of locusts of 1915, and the harvest was a good one, the country has derived hardly any benefit from this, for all the grain has been monopolised by the Government authorities. They use it, first, to supply the army, the military institutions, and the households of the officials, and then the people are allowed to purchase what remains, but only in very limited quantities and at exorbitantly high prices.

Earlier than the harvest came the Government introduction of paper money. This brought with it great difficulties, as only £T5 and £T1 notes were available in Jerusalem, and no one would supply change at anything like the value of the note; whilst the Government forbade the notes being passed under less than their full value at heavy penalties! People were reduced to the direst straits, for no shopkeeper would change a £1 note. Change was only to be obtained secretly and at a heavy loss to the owner of the paper money; while at the same time both parties to the transaction, if discovered, were liable to heavy fines and imprisonment! When the harvest time came the Bedouin, the usual carriers of wheat from the Hauran to Jerusalem, absolutely refused to sell in exchange for paper money; they would have gold or silver, or else bring no supplies. Wheat, then, became so scarce that at last even the Government had to arrange for a supply of gold to be sent to the east of the Jordan to satisfy the Bedouin. But from that time all the grain supply was in the authorities' hands. The wheat grown in Palestine itself was seized on the threshing floors, and the Government monopoly was established. The peasants in the villages, though their condition is bad, suffer a little less than the townsfolk, as they are still able to dispose of some of their produce, and also to hide a little for their own use.

Happily the fig-trees yielded well this year, though the grape crop was very poor, and grapes were scarce and expensive. The figs helped to some extent to satisfy the natural craving for something sweet, as sugar has long been unobtainable by any except the very wealthiest.

But the greatest suffering of all is caused by the want of fuel and of lighting; and this is but too likely to be much increased as the winter draws on. The cold in Jerusalem during January and February is often severe, and now it is difficult to have a fire even to cook a meal with. Petroleum, formerly brought in abundance from the Russian oilfields at Batoum and Baku, as well as from American sources, is not to be had. Coal used to be brought from France and from Cardiff; but the coal which was in the country in November, 1914, was seized by the Government on the declaration of war. This has long been used up, and, of course, no more can be brought in because of the blockade. The only fuel remaining is wood, and of this very little indeed is to be had, and that at a very high price. Even before the war the wood supply was growing scantier every year, owing to the neglect of afforestation and the lack of forest laws. Even fruit trees have been cut down for wood, which is needed for the engines of the trains, now run for military purposes only.

The destitution and exhaustion of the whole land are terrible. Probably no other country, except those which have been the scene of actual fighting, has suffered so greatly from the effects of the war as have Palestine and Syria. And over all hangs the haunting dread that any incautious word or aspiration overheard and reported by a spy may be interpreted as showing "pro-Ally" feeling, thus leading to the speaker being dragged before the authorities, who will give him short shrift. Those who have relatives in Egypt are especially in danger, and this class embraces all the more intelligent part of the Christian population, as the better prospects in Egypt during the last ten years have led to an increasing stream of educated young men, and even young women, going to that land from Palestine, whilst their parents generally remained at home. Hundreds of families in Jerusalem and the other towns of Palestine have thus been, since the war, completely severed from each other. Not only are they unable to communicate the one with the other, but also those in Palestine are in personal danger if there is ever any suspicion that news from Egypt reaches them.

Abdul Damid Zehravi, a Turkish Senator, has, according to the German papers, been sentenced to death by a Court-martial, and has already been executed for alleged conspiracy against Turkey by attempting to make Syria an independent Arabian principality.

MONASTIR.

A Historical Note.

By Dr. T. GEORGEVITCH.

In the south-west of Macedonia, to the west of the spacious and fertile plain of Pelagonia, situated on a slope of the banks of the rapid and turbulent Dragor, lies the large Serbian town of Monastir, with a population of about 60,000 inhabitants. After Belgrade and Skoplje, it is the largest town in Serbia. The name "Monastir," which has become known throughout the whole of the world in consequence of the campaign taking place in the south-eastern European theatre of war, is of ancient Greek origin. The Serbian name for the town is Bitolj, which derives its origin from the Serbian word *obitelj*, meaning "monastery."

In Roman times it was in the middle of the celebrated Roman road, Via Egnatia, which connected the Adriatic with the White Sea from Durazzo to Salonika. At the end of the tenth and beginning of the eleventh centuries the Slav Emperors of Macedonia had their palaces in Monastir. It was also the seat of a bishop under the Ochrida Archbishopric. The old Roman road from Durazzo to Salonika remained through the whole of the Middle Ages the only road from the Adriatic to the White Sea; and Monastir was, therefore, a prominent town and market on that road.

During the Middle Ages Monastir is not mentioned very frequently in history. Other towns in the vicinity, with which were connected the most famous traditions of ancient Slav and Serbian history, were Monastir's powerful competitors, and they prevented her from becoming famous. Ochrida, seventy kilometres distant, was the centre of the well-known Ochrida bishopric, established in the tenth century by St. Clement, one of the first preachers of Christianity among the Slavs of the Balkan Peninsula. Later on, prior to the Turkish conquest, Ochrida was the royal residence of the great Serbian Voyvode, Branko Mladenovitch, founder of the Serbian dynasty of Brankovitch. Prespa, 35 kilometres from Monastir, was the royal residence of the independent Slav Empire of Macedonia in the tenth and eleventh centuries, and before the Turkish conquests it was the royal residence of the Serbian Voyvode, Novak. Prilep, also 35 kilometres from Monastir, was one of the royal residences of the Serbian Tsar Dushan (1331-1355), and the permanent royal residence of King Vukashin (1366-1371) and King Marko (1371-1394). Beside such important places Monastir was necessarily hampered in its progress.

The importance of Monastir really dates from Turkish times. When the Turks wrested Macedonia from the Serbs they destroyed all the old Serbian centres, and chose Monastir, in Western Macedonia, to take their place. Under the Turks the city became one of the centres of Turkish administration, and was the capital of the whole of the vilayet of Monastir and the principal town of Western Macedonia. Since that time all the records of Monastir speak of it as a large, beautiful, wealthy, and progressive town.

During the Turkish rule the importance of Monastir was a large factor in Serbian history. In the seventeenth century, in Komorn, north of Budapest, there was among Serbian emigrants the famous family of Monastirlija, which had migrated thither from Monastir. From this family, in 1698, the whole of the Serbs in Austria chose for their under-leader (*vice-dux nationis Serbicae*) Jovan Monastirlija. On April 11, 1691, the Austrian Emperor, Leopold I., was compelled, much against his will, to recognise him as such. Filled with hate against the Turks, who had driven out his ancestors from their homes, Jovan Monastirlija heroically led the Serbian nation into battle against the Turks. On his death he left to the Serbs the most glorious memories.

At the very beginning of the nineteenth century Monastir was also for a while the residence of the well-known Ali Pasha of Yanina.

After the liberation of Serbia from the Turks at the beginning of the same century the town was closely connected with Serbia. A large number of people from

Monastir found in Serbia, among their liberated brothers, a warm welcome.

Since Monastir was connected up with Salonika by the railway it has become one of the first markets of the Balkan Peninsula. All of South-Western Macedonia and a great part of Southern Albania bring their goods to the market of Monastir, and from there the goods are despatched to Salonika and elsewhere.

On November 19, 1912, the Serbs wrested Monastir from the Turks. On the same day in 1916 they captured it from the Bulgars.

"YOUNG TURK" v. ARAB.

(FROM A CORRESPONDENT.)

CAIRO, October 17.

Some little time ago some important documents came into the possession of a gentleman enjoying the confidence of the Emir Hussein, the Grand Shereef. At the time it would have been injudicious to make them public, although they redound to the credit of the Shereef and his supporters; but now that conditions have changed, no harm can be done by giving them publicity. Among them is an extract from a letter sent to the Grand Shereef by the well-known deputy for Busreh, Taleb Bey el Nakib, which reveals in a glaring light the treacherous designs that the Unionists were harbouring against Arabia and the Arabs as far back as 1912. The interest attaching to the letter is enhanced if we recall the circumstances under which it was written.

In previous notes a brief account was given of the incident between the Shereef and the Unionist Vali of the Hejaz who arrived in Mecca with his paramour, who, dressed as a Moslem lady, accompanied him constantly during his sojourn in his summer residence at Taieff as well as in the course of his tours to Medina and Jeddah, both indulging, the while, in insolent defiance of sacred traditions, in drinking, and much unseemly conduct in general. Now, this Vali was Wahib Bey; and when, after being driven out of the country by the Shereef, he arrived at Constantinople, great indignation prevailed among the Unionists, who forthwith set about devising means of revenge. Some of them met in the palace, at Beshiktash, of Taleb Bey el Nakib; and the proceedings at this meeting are dealt with in the extract from the letter mentioned above, of which the following is a faithful translation:—

Know, oh my Master (*Sayyed*) that the enemies of our language and race have, in their unanimous rancour, decided to divest you of the Emirship, and to confer it on their henchman Shereef Ali Haidar [a rank Unionist, and an ex-Senator and Director of Wakfs]. They are now plotting for your downfall, after Wahib Bey had related to them all that took place between you and him. I wish you could condescend to treat these folks with leniency and indulgence until the time comes for us to rid ourselves of their tyranny and odious arrogance, especially as you well know, oh my *Sayyed*, that the Empire has fallen into their claws, and the helm of Government is entirely in their hands; and so they hold the people by the neck, destroying those whom they wish, although this is calculated to lead to the destruction of the people. They declared before me—and that fanatic Khalil Bey was at their head—that we, the Arabs, have not submitted to their will; and that, therefore, there was nothing left for them but to hang us on the gibbet, so that they should be left free and unhampered. The echo of this threat has, oh my *Sayyed*, reached the ears of all the Arab deputies here, and caused consternation in their ranks, and provoked loud protests on their part; and the meetings in the house broke up that day in this fashion; and your honourable son, Shereef Abdullah, will describe to you the roughness and high-handedness of these low upstarts. I always remember what the *Tanin*—which is their mouthpiece—has never ceased to write about the Arabs, tearing away with vile claws their honour, not sparing even the tombs of the holy dead. Did it not say that they were the cradle of corruption and the birthplace of wrong conceptions, finally going to the length of attacking the Holy Places, which it qualified as the land of brigandage and barbarism? One could read between the lines the devout wish on its part that the Arabs might be wiped out leaf and root. Forget not, oh Shereef, my *Sayyed*, all this, and know that all the Arab deputies here uphold you with their tongues and their hearts, and gratefully acknowledge all that the Hejaz owes to you since you assumed the rule over it. Aye, they acknowledge your love of your faith, and your solicitude for the welfare of your nation, threatened as it now is by its enemies. If you rise up to uphold the Arabs and save them from tyranny and slavery, we shall all rise up with you. And I now address to your honourable person along with this a letter signed by every Arab deputy here who does not fear to

work for his Faith and his nation, after signs of aggression have appeared on the part of those folks in regard to your rights; and this as an expression of their feelings towards you and an acknowledgement, on their part, of your right to be the Khalif of the Prophet, and the person responsible to all the Arab lands. They do so, unmindful of what may result. And peace be on you.

Here follows the letter, signed by thirty-three Arab deputies, whose names the Grand Shereef did not wish to divulge. It is couched in the following moving terms:—

To the great *Sayyed* and noble Shereef, Hussein Pasha, Emir of Mecca: may Allah preserve him.

We, the Arab deputies, in the Mejliss El Mabouthan [Parliament], recognise thee as the Emir of Mecca, and acknowledge thee as the sole spiritual chief of all the Arab lands; for thou art the pure descendant of the House of the Prophet (may the peace and prayer of Allah be on him), and this our collective solemn declaration is recorded on behalf of the people of our country, and shall be openly proclaimed when necessity arises. May Allah preserve thee to thy nation, and help thee to repel evil from thy faith.

These are undeniable documentary proofs of the fact that the Shereef's action is not the mere outcome of a manoeuvre, as some would have the world believe, engineered by outside influences, but the result of a deep-seated national movement, which has long been fermenting, and to which the turn of events, after the war, gave open expression. Of course, sympathy and encouragement on the part of the Powers interested in the destinies of Islam, and pledged to the freedom of the smaller nations, were bound to be given to such a movement.

NEAR EAST BOOKSHELF.

WAR SKETCHES IN THE BALKANS.*

The title of this book is somewhat of a misnomer. It is neither a political history nor a military treatise, but a series of sketches in the rear of the Eastern front—never of actual battles, sometimes humorous, often tragic, and even horrible, but always alive. Originally written for an American magazine, they are here, very wisely, collected in a single volume. The Englishman to-day has so learned to identify himself with his allies that the detached and critical air of this American journalist may at times seem wanting in sympathy, but that is because the cause of each nation with us is now our cause and its misfortunes are our own. For seven months during 1915 the author, generally with the artist, wandered behind the Eastern front gathering impressions. He pictures—an awful account—Serbia before its last invasion, ravaged by typhus, and laid waste in parts by the earlier Austro-Hungarian invaders:—

Shabatatz contained twenty-five hundred houses. Some had been destroyed by guns, twice as many more were wantonly burned, and all of them had been broken into and looted. One walked along miles and miles of streets; every house was gutted. The invaders had taken linen, pictures, children's playthings, furniture, and what was too heavy or cumbersome to move they had wrecked with axes. They had stabled their horses in the bedrooms of fine houses. In private libraries all the books lay scattered in filth on the floor, carefully ripped from their covers. Not simply a few houses had been so treated—every house.

At Lechnitz more than a hundred women and children were chained together, their heads struck off, and were lying in a separate heap. At Kravitz old men, women, and children were tortured and fiendishly outraged, then butchered. At Yvremovatz fifty people were herded into a cellar and burned alive. And so on. The same old tale of Belgium, but here the work of Hungarians, who "reverted to their savage ancestors, the Huns"! Since this was written the poor Serbians have had an even worse dose of the twentieth century "cultured" Hun of Western Europe.

From Serbia the author passed to Russia, when, amidst many racily told adventures, he witnessed Russia's blackest hour—the great retreat. He tells of the appalling lack of guns and ammunition. Reserves in trenches behind the front line with no rifles at all, depending entirely upon picking up those of the fallen. His commentary on what he saw is, "Everywhere, utter disorganization," and prodigal waste of human life.

Of Russian life he says:—

It takes hold of the minds of men because it is the most comfortable, the most liberal way of life. Russian ideas are the most exhilarating, Russian thought the freest, Russian art the most exuberant, and Russian food and drink are to me the best, and Russians themselves are, perhaps, the most interesting human beings that exist.

For the account of many adventures, including arrest and imprisonment which led him from the rear of the armies to Petrograd, and thence through Moscow to Constantinople, the reader must read the book itself. It will well repay

* "The War in Eastern Europe." By John Reed. With Illustrations by B. Robinson. (Evelyn Nash Company, Limited. 10s. 6d. net.)

perusal, and at such a time as this it should have a large circulation. Of Constantinople itself and the Turks, the author writes pleasantly and picturesquely, but there is little new. English readers would like to hear more—what he says is much to the point—upon German rule in Turkey. Of the Roumanians, then weighing their decision in the balance, the writer has nothing good to say, but—like most of us in pre-war days—he greatly admires the Bulgarians. Their allying themselves against us is one of the great national tragedies of the war.

There was still a majority against the Germans when Bulgaria went to war. . . . Bulgarian statesmen . . . play the game of personal ambition and personal profit. . . . King Ferdinand is a regular romantic Balkan King. He perpetually sees himself riding into Constantinople on a white horse—the Tear of an immense, belligerent Empire. And as I write this he has again hurled his people against their will into a war from which they cannot emerge except as losers.

When ending his tour at Greece he summarizes his impressions of the Balkan peoples: "The Roumanians are gay and graceful; the Bulgars, honest and friendly; the Serbs, witty, brave, and charming; and after these the Greeks seem a stunted, unfriendly people, without any flavour!"

The forty-eight full pages of sketches greatly add to the value of the book; many are extraordinarily interesting, being happily reproduced almost untouched from the original sketch book. The impression of the "chanting legions" of Russians in Lemberg is one not easily forgotten.

A MODEL RUSSIAN PRIMER.*

Mr. Nevill Forbes, who has succeeded the late Mr. Morfill as Reader in Russian in the University of Oxford, is responsible for a most useful primer, in the guise of a collection of Russian fables. Each story has the Russian text, a phonetic transcription, and a word-for-word translation juxtaposed. His booklet will enable beginners to read and pronounce the most difficult of European languages with a fair degree of fluency; it is a marvel of labour-saving ingenuity. The stories thus treated are interesting as illustrations of the national genius; and the following is a fair sample, rendered in colloquial English:—

A peasant made great friends with a bear, and they agreed to sow turnips together. The peasant said: "I'll take the roots, and your share, Michael, shall be the tops." In course of time a fine crop came up, and was divided under the working agreement. Michael grumbled a bit on getting his share, but there was no help for it. When the following year's crop was discussed, the bear said: "This time you must take the tops and give me the roots." "Right you are," replied the peasant, and sowed wheat! So poor Michael was again cheated; and since that harvest the pair have not been on speaking terms.

Russians are blessed with a sense of humour which is utterly lacking in Teutondom, and a greater capacity for co-operation than is seen in the "individualist" communities of Western Europe. Hence their fortitude under adverse conditions, and their vast cohesive strength, which is proof against the severest external pressure.

F. H. S.

BOOK NOTES.

Miss Estelle Blyth, whose name is so well known to our regular readers, is the author of "Warrior Saints." Messrs. Harrap are the publishers of the little book, and its price is 1s. net.

We regret that by a printer's error the name of the publishers of "A Balkan Freebooter," which appeared last week in our list of books received, was given as "Smith, Lever, and Co." It should, of course, have been Smith, Elder, and Co.

Messrs. Hodder and Stoughton have published recently "The Black Hole of the Desert," the diary of a yeoman-signaller, one of the survivors of H.M.S. Tara (1s. net), and "Malta, the Nurse of the Mediterranean," by the Rev. A. G. Mackinnon (2s. 6d. net).

BOOK RECEIVED.

Armenian Legends and Poems. Illustrated and compiled by Zabelle C. Boyajian. (J. M. Dent and Sons. 21s. net.)

TANGIER TO TEHERAN.

I am indebted to a correspondent in Salonika for two curious newspaper clippings. The first, which is taken from the "Stop Press" column of the *Balkan News* a long time ago—May 5, to be precise—reads:—

A Zeppelin had survoled the port of Salonika this morning at 2 o'clock, but was destructed by the guns of the Fleet at 3 o'clock.

That was certainly an item worth stopping the press for. I am curious to know what form of frightfulness "survoling" a port indicates, but it is satisfactory, even now, to read that the monster was destructed within an hour of its arrival. The second clipping is from the *Independant*, and runs:—

UNE CURIEUSE ADHESION.

Parmi les officiers et soldats arrivés hier d'Athènes, se trouve également le commandant Mavroudis qui est le signataire du fameux protocole de la reddition de Ruppel. Il vient lui aussi, en compagnie d'autres officiers, adhérer au mouvement de la Défense Nationale.

The record of the new recruit, or what we are told of it, seems to render his adherence to the National Defence movement a cause for some surprise. My correspondent, who does not appear to be an admirer of the Fort Roupel incident, adds no fewer than four marks of exclamation to the title. The number does not strike me as excessive.

It seems to be established beyond question that there are a number of women in the world at least as ready to fight as many of the men. Last week one of our tribunals received a letter from one of these women, urging that she should be enrolled and sent to the front, and assuring them of her fitness in all respects for fighting. Then, we know that at least one of our countrywomen has attained to the rank of sergeant in the Serbian Army. And apart from these single cases there have been—so I understand—offers from large bodies of women, who have declared themselves ready to go anywhere and do anything. In the past, also, there have been fairly numerous examples of women serving as soldiers—and sailors—and serving remarkably well, too. As to the pluck of all these women, there can be little doubt. Their sisters in other fields of activity have shown us that courage is by no means a monopoly of the rougher sex. We are proud of our women, and with good reason.

All these cases, however, are those of voluntary service, or offers of service; and when we were told a short time ago that the Germans were contemplating the mobilisation of their women for war service—though not, of course, for employment in the firing line—the idea must have struck most of us as utterly repellent. Very few Englishmen would deny to-day that to compel any man to serve his country in whatever way he can best do so is perfectly legitimate. But with regard to women, we can hardly feel so sure; and certainly the notion of forcing any woman to take part in the actual fighting must be obnoxious in the extreme.

That, however, is exactly what a correspondent in Bucharest informs me that the Austrians have been doing. He writes:—"It appears that the Austrians, having in mind the exploits of the Amazons, are now enrolling women in the ranks of their army, so hard pressed are they for soldiers. These unfortunates are given a month and a half's training and are then sent to the trenches. But, careful for the lot of their 'Wäsch Mäd' and others of Vienna, they enrol only Roumanian women. One of these poor creatures, who had already obtained a sergeant's stripes, has managed to escape, and, her own wounds being now healed, is acting as a nurse at the Colza Hospital in Bucharest, where she goes by the nickname of 'Sergeant Rose.'" The story is circumstantial, and my correspondent is, I believe, trustworthy. Nevertheless, I cannot help hoping that there is a mistake somewhere.

A correspondent informs me that an Egyptian journalist has been taking THE NEAR EAST'S Cyprus Correspondent to task for writing of "the appointment of Fuad Bey and Khalid Bey as 'Turkish Judges' at Nicosia and Limassol respectively." "Can anyone explain this to me?" asks the scribe referred to, who appears to be labouring under the delusion that he has caught THE NEAR EAST—or its Cyprus Correspondent—napping. The explanation is, however, perfectly simple; and though my personal acquaintance with the island is not very extensive, I believe I can enlighten the bewildered pressman.

In each of the six Districts in Cyprus the Court is presided over by a British lawyer, and there is also a "Greek" judge and a "Turkish" judge. The latter two legal luminaries either sit with the President as a "full court" or

separately, as "magistrates"; and by British residents they are invariably spoken of as the "native judges." Equally naturally an Englishman would speak (or write) of them individually as "the Turkish judge" and "the Greek judge." These "Turkish judges" must, of course, not be confused with the officials of the *Mehkemeh Sherië*, which is presided over by a *Kadi*, and, under the terms of the Convention, deals with cases of a purely Moslem religious character. This, I hope, will satisfy the inquiring gentleman's thirst for information, and explain to him how it came about that, even though Cyprus *does* now belong to England—and may it always do so, in spite of the agitators in both islands!—THE NEAR EAST'S Correspondent, whose knowledge of Cyprus is extensive, wrote as he did.

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Hints for King Constantine.

Nov. 23.

Mr. R. McNEILL asked whether the Under-Secretary for Foreign Affairs was aware that the Treaty of 1863, which established the Dyrasty to which the present King of Greece belongs upon the Greek Throne, contained an article asserting that under the guarantee of Great Britain, France, and Russia Greece forms a constitutional State, and that this article was framed in consequence of the events of 1862, when King Otto, a German Prince, was deposed from the Greek Throne for having over-ridden the Constitution, and was removed on board a British ship, a provisional Government being set up in Greece, supported by an army of national defence; and whether he would instruct the British Minister at Athens to call the attention of King Constantine to this precedent?

Lord R. CECIL: Yes, sir; I am aware of the article to which my hon. friend refers. If King Constantine has forgotten it, no doubt my hon. friend's question will remind him of it.

Mr. LYNCH: Is it the case that the anomalies of the Greek situation really conceal something which the Foreign Office dares not convey to this House?

Lord R. CECIL: No, sir; I am not only not aware of it, but I know it to be utterly untrue.

Commander BELLAIRS asked whether his Majesty's Government would take measures to see that the followers of M. Venizelos inhabiting towns in Old Greece or towns to the south of the neutral zone now established would be allowed to cross the neutral zone, to the jurisdiction of M. Venizelos.

Lord R. CECIL: The decision of all such matters rests with the Allied Governments, and I cannot say more than that these matters are receiving and will continue to receive the attention of those Governments. To say more than this one way or the other would necessarily give the impression that we were trying to impose our will on the Allies by making a public statement designed to force their hands.

The Arrest of a Greek Editor.

Mr. SWIFT MACNEILL asked the Under-Secretary of Foreign Affairs whether the attention of the Secretary of State had been directed to the arrest, on a charge of high treason, in Athens, of M. Tambruhis, the acting chief editor of the *Patris*, a journal which was in favour of the policy of M. Venizelos; whether the alleged high treason consisted in publishing documents regarding the handing over of Fort Rupel to the Bulgarians in obedience to official documents, signed by M. Skouloudis himself and the War Minister, in his Cabinet, by which the commander of Fort Rupel was authorised to allow the fort to be occupied by Germans and Bulgarians, but not by the Allies; whether the publication by the *Patris* of these official documents, signed by M. Skouloudis, the Greek Prime Minister of the day, showed that when he, as Prime Minister, declared in the Greek Chamber that he knew nothing of, and had given no order for, the surrender of the fort he was guilty of a deliberate public falsehood, having regard to the fact that he had given the order for its surrender two months previously; and whether his Majesty's Government would take adequate measures to prevent the infliction of that penalty of high treason or any other penalty on M. Tambruhis for the exposure of an act of treachery or looseness on the part of M. Skouloudis to the Allies, towards whom his Government was assuming the guise of neutrality, while endeavouring to counteract their policy in German and Bulgarian interests.

Lord R. CECIL said his Majesty's Minister at Athens had been asked to furnish a report on the incident. As he (Lord Robert) had already pointed out, it was not for the Allies and not for H.M. Government alone to take measures in connection with this and other like occurrences.

The Situation in Greece.

Nov. 27.

Mr. ELLIS GRIFFITH asked whether it was true that his Majesty's Government for the last two years had been pressing on Greece and Roumania the duty of neutrality. Since M. Venizelos had formed a Provisional Government and declared war in the name of that Government upon Germany, what was the position of his Majesty's Government? The Government ought to make up their minds as to who was their friend—King Constantine or M. Venizelos. M. Venizelos was their friend not only in profession but in practice and sacrifice, and the least his Majesty's Government could do was to stand by him. The Allies had declared a neutral zone in Greece, and what our friends in Greece said was that in that neutral zone there was no passage for Greeks who wished to join the Venizelos party. Was that true or not?—because if it were true the sooner we relaxed these restrictions the better. It was also alleged that those who had joined the Venizelist party were being prosecuted and condemned for high treason. There was a vast amount of alarm and disquiet in this country about our attitude towards Greece. He asked for an assurance that the Government would not only recognise M. Venizelos as *de facto* ruler but in every possible way as a friend and ally, and as a man we were prepared to back up with all the resources of our Empire.

Mr. DILLON said it was a discredit to the House that when this burning question was raised a few nights ago an organised count-out should have taken place. The House had remained silent far too long concerning the attitude of the Government towards M. Venizelos. An idea fatal to this nation was spreading abroad that whatever nation or body of men on the Continent declared itself friendly to this country was bound to suffer. He hoped that before long an opportunity would be claimed for a debate concerning the Balkans and the disasters which were taking place. It might be argued plausibly but not successfully that in the cases of Serbia and Roumania we were unable to aid; but that plea could not be urged in regard to M. Venizelos and those who spoke for the majority of the people of Greece. Surely we had not too many friends that we should turn our backs on M. Venizelos.

Mr. J. M. HENDERSON considered that this was eminently a case where we must work with our Allies. Do not let us hide from ourselves what was manifest—namely, that there was a large section of Greece which did not want to fight.

Commander BELLAIRS said there could be no doubt that there was great alarm and disquiet throughout the country about the attitude of the Government. No member of the House expected separate action to be taken by his Majesty's Government in Greece, but it was desired that the case should be put as strongly as possible for M. Venizelos. There was an idea that his Majesty's Government had been rather a drag on the progress of matters in Greece. His Majesty's Government should lead the way and clear up a situation which ought not to have existed for more than a week.

Mr. R. M'NEILL said that his view—and it was one widely held in the House and outside it—was that the situation in Greece was only one of many illustrations which showed that almost all the troubles, disasters, and disappointments we had suffered in the war were due to the inveterate tendency of the Foreign Office to do things which discouraged our friends. Nothing could be more absurd than the policy of recognising two Governments in Greece, one the *de jure* Government in Athens, our enemy, and the other the *de facto* Government at Salonika under M. Venizelos, our friend. Even districts in New Greece which the evidence of elections showed were supporters of M. Venizelos were subjected to the terrorism and persecution of the Court at Athens, and the adherents of M. Venizelos looked in vain for help to his Majesty's Government or to any of the Allies. In 1862 King Otto was deposed by the protecting Powers of Greece because he had overridden the Constitution, and was taken away in a British battleship. That was a precedent which his Majesty's Government might bring to the attention of the King.

Sir H. DALZIEL said the opinion was widely held in France that this country was responsible for the state of things in the Balkans. That, he thought, was a reason why the Government ought to make a full and clear statement of their policy to the world.

Lord R. CECIL said it had been suggested more than once in debate that in this matter his Majesty's Government ought to give a lead to the Allies. What did that mean? Supposing that the British Government had a view different from that of one or more of its Allies, was the representative of that Government to come down to the House of Commons and say: "We think so and so, but our Allies do not agree." Would that be treating our Allies honestly or fairly? They would say that we were changing the position, and that the discussion between us was no longer being carried on upon equal terms. When hon. members really reflected, he could not think that they would wish the British Government to behave in such a way. An alliance in war was not easy to carry on under the circumstances, but this alliance had been carried on with an amazing want of friction, with a smoothness and general agreement which had no precedent in history. We wanted it to remain in that position, and we did not want to take any action which might cause friction and trouble. In these circumstances it was absolutely essential that we should show discretion and even reserve in dealing with every question relating to diplomatic affairs. He did not want it to be understood for a moment that in this case we advocated any particular policy which our Allies would not follow, or that they advocated a policy with which we did not agree. He had only been speaking quite generally, and, so far as he was aware, we had agreed on every point. His Majesty's Government had been criticised because they had recognised the *de facto* Government of M. Venizelos in the districts in which it was established, and at the same time had recognised the *de jure* Government of the King in Athens. He understood that M.

Venizelos governed in the name of the King, and that he was carrying on the Government of the King on lines of his own in that part of Greece where he exercised control.

Mr. PRINGLE: Is the declaration of war in the name of the King?

Lord R. CECIL: I do not know. That being so, it is plain that the *de jure* Government in Greece must be the Government of the King, and it is equally plain that we should not be recognising facts as they actually are if we did not recognise M. Venizelos' Government as the actual body which has the administration of the country in the districts which he controls. For the life of me, I do not see what other course was open to us. As to the neutral zone, what happened was this: The forces of M. Venizelos and the forces of the King came into collision at a place called Ekaterina, and it was felt that, from every point of view, there was nothing to be gained, and much to be lost, from an outbreak of civil war in Greece. The question was: How is that to be prevented? The device hit upon was that a neutral zone should be established between the two forces, and that neither should be allowed to enter it.

Mr. R. M'NEILL: Why could not you have said that you would throw your whole weight on the side of M. Venizelos?

Lord R. CECIL: That would have been another policy. The policy the Allies adopted was the one I am endeavouring to describe; for the moment I am not discussing whether the policy was good or bad. Having decided that this was the best way of avoiding a collision between the two forces, the Allies entrusted the French military authorities with the execution of that policy, and the French authorities have occupied that zone. It is said that we were there for dynastic reasons, and that our policy was dictated by dynastic considerations. That is absolutely untrue. The idea that we are bolstering up the King for some private or personal reason is absolutely untrue. The policy of the Allies is simply to do what they think is best in their belligerent interests and in the interests of Greece, and nothing else. It is equally untrue to say that we are prepared or are willing to throw over M. Venizelos. We recognise the services he has rendered not only to Greece but to ourselves. We shall never abandon M. Venizelos.

Roumania and the Allies.

Nov. 28.

Mr. KING asked the Secretary for War whether, before the end of August, 1916, the military and political position in Eastern Europe, and especially of Roumania, was reported on by the Intelligence Department of the War Office; if so, whether such report held out the prospect that an adequate supply of material of war was secured for the Roumanian Army, and that sufficient Allied support was forthcoming, with which the Roumanian Army could meet any possible enemy attack; and, if so, who was the officer responsible for this report; and what steps were being taken to restore the military position of our Roumanian Ally.

Mr. LLOYD GEORGE said it was not advisable to give information on that subject in answer to a question.

Sir E. CORNWALL asked the Prime Minister at what date the War Council decided to give the utmost assistance possible to Roumania, and whether there were any reports or minutes, the substance of which he could give to the House, which were made by the advisers of the Government as to the policy which should be followed in support of Roumania.

Mr. BONAR LAW, who replied, said: It would not be in the public interest to answer the questions put by the hon. member, but he may be assured that the Allies are rendering all assistance in their power.

Release of Venizelists.

Sir E. CORNWALL asked the Under-Secretary for Foreign Affairs what results had followed the steps taken by the Allies to obtain the release of Greek officers who were imprisoned by the order of King Constantine on the ground of their anti-Bulgarian sentiments.

Lord R. CECIL: Three officers have been released, and the Greek Prime Minister has undertaken to take immediate action in the case of the remainder, a list of whom has been furnished to him.

The Dardanelles Commission.

Nov. 29.

Mr. BONAR LAW informed Commander BELLAIRS that the Dardanelles Commission were considering the desirability of issuing an interim report, but they could not name a date for its publication should this be decided on. The Mesopotamia Commission did not think it would be possible for them to issue an interim report before Christmas.

Greece and the Powers.

Mr. R. M'NEILL asked whether the port of Piræus was regarded as being under the jurisdiction of the Provisional Government of Salonika, having regard to the fact that the inhabitants were Venizelist in sympathy.

Mr. J. F. HOPE: M. Venizelos was informed that the Allied Powers would recognise his *de facto* authority in those districts and islands which accepted his Government and officials. These conditions are not present in the case of the Piræus, so that the suggestion contained in the last part of the question does not arise.

Mr. HOPE, replying to Sir E. CORNWALL, who asked whether the Boulogne Conference decided to introduce any new principle into the procedure governing the action of the Allied Powers in Greece; and, if so, whether the privileged status of the protecting Powers, England, France, and Russia, was thereby affected, said:—It is not possible for me to make statements in this House regarding what passed between the Allied Powers at the Conference of Boulogne without consulting those Powers, except that there was complete agreement as to the steps then to be taken with regard to Greece; but I can assure the hon. gentleman that the status of the guaranteeing Powers was in no way affected by any decisions come to at that Conference.

To-day is the birthday of Queen Alexandra.

Sunday is the birthday of Prince Peter of Greece, son of Prince George and Princess Marie, who was born in Paris in 1908.

Crown Prince Alexander of Serbia has telegraphed, conveying his thanks to the Serbian Relief Fund for their congratulations on the fall of Monastir. At the same time he expresses his renewed thanks for all that the Serbian Relief Fund have done and are doing for the Serbian soldiers and the Serbian people.

Prince Cantacuzene arrived in Petrograd from London last week.

Lady Bland-Sutton, who has recently undergone an operation, is for the present unable to conduct her correspondence in connection with her Red Cross work.

H.E. the Roumanian Minister was one of the visitors to the Foreign Office on Tuesday.

Count de Salis, the new British Minister to the Holy See, arrived in Rome on Tuesday.

It is officially announced that the King has been pleased to approve the appointment of the Earl of Ronaldshay, M.P., to be Governor of Bengal, in succession to Lord Carmichael of Stirling, whose term of office will expire in April next.

Lord Ronaldshay, who was born in 1876, is the second, but elder surviving, son of the Marquess of Zetland. He has travelled in Persia as well as in India and Ceylon, and is the author of two well-known books of travel in the Middle East: "Sport and Politics Under an Eastern Sky," which appeared in 1902, and "On the Outskirts of Empire in Asia," published in 1904. He was for a short time A.D.C. on the Viceroy's Staff in India, and he is a Major in the Yorkshire Regiment. In 1907 he was elected as Member of Parliament for Hornsey, and the same year married Miss Cicely Archdale, daughter of Colonel Mervyn Archdale.

Sir William Henry Hoare Vincent, I.C.S., who was chairman of the Commission sent to Mesopotamia to investigate the defects in the medical arrangements, has been appointed an Ordinary Member of the Executive Council of the Viceroy of India, in succession to Sir Reginald Craddock, whose tenure of the appointment will expire next April.

Lieutenant-Colonel Adrian Carton de Wiart, Dragoon Guards, had the honour of being received at Buckingham Palace on

FLIGHT COMMANDER HANS ACWORTH BUSK, R.N., missing in the Dardanelles since January 6, 1916.—Any definite information that might be obtained through relatives or prisoners of war in Turkey concerning the fate of this officer would be gratefully received by his mother, Mrs. Busk, 6, Wadham Gardens, Regent's Park, N.W.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

Wednesday by the King, who conferred upon him the V.C. recently awarded to him.

In the special supplement to the *London Gazette* issued on November 23, containing the "List of Honours and Promotions awarded to officers of the Army for services in the field" we note with pleasure the name of Temporary Lieutenant Hugh Whittall, General List, formerly R.N., who has been awarded the D.S.O. Lieutenant Whittall is the son of Mr. and Mrs. J. W. H. Whittall, late of Constantinople.

We are glad to learn that Lieutenant Edward La Fontaine, son of Mr. Sidney La Fontaine, of Smyrna, has been awarded the French Military Cross in recognition of the services he has rendered as an *officier de liaison*. The Cross was presented recently, with the usual ceremony, and the brigade orders contained a fine tribute to Lieutenant La Fontaine's courage and devotion.

The Rome correspondent of the *Morning Post* reports:—The appointment of M. Mihailovitch as first Serbian Minister to the United States causes satisfaction to his many Roman friends. M. Mihailovitch was Consul-General at Monastir and Chargé d'Affaires here during both Balkan wars and until last year, subsequently becoming Minister to Montenegro, where he was when Locen fell. He is a very genial man, with a frank manner, and his forecasts about Albania have been signally verified.

An engagement is announced between William George Moultrie Gay, Lieutenant The Buffs, elder son of William Gay, Crowhurst Park, Battle, Sussex, and Katharine Josephine (Kitty), widow of the late Frederick Wood Collins Moss, Barrister-at-Law, of Alexandria, Egypt.

The marriage of Brigadier-General Montague Grant Wilkinson, late King's Own Scottish Borderers, and Miss Lina Florence Dick, eldest daughter of the late Captain Lennard Dick, R.N., was solemnised at St. Michael's Church, Leicester Square, on Thursday afternoon of last week. The ceremony was performed by the Rev. W. B. Dowding, Senior Chaplain to the Forces, and Major Spencer, of the bridegroom's regiment, acted as best man.

Our Roumanian Correspondent writes from Bucharest, October 20:—"The members of the Roumanian Missions from Turkey and Bulgaria have now arrived in Roumania. M. Langa Rashcano, Roumanian Chargé d'Affaires at Constantinople, and Colonel Frantomir, the Military Attaché, have, with the other members of the Legation, arrived at Bucharest. M. and Madame Derussi, with the staff from Sofia, are still at Jassy. The Missions from Berlin and Vienna should arrive in a day or two.

The *Egyptian Gazette* of November 11 reports the safe arrival in Egypt from England of Mr. McGillivray, General Manager of the Sudan Plantations Syndicate. Mr. McGillivray left Cairo for the Sudan on the 9th ult.

Dr. Abraham Galante, of Constantinople, who has studied in England, has been appointed Chief Rabbi of the Oriental and Levantine Jews, numbering about fifteen thousand, in New York.

On Tuesday afternoon, at the Jehangier Hall (London University), South Kensington, Canon Parfit delivered a lecture on "Baghdad and German Intrigue."

Apropos of the appointment of Viscount Errington, Lord Cromer's son and heir, to be an Equerry-in-Ordinary and an Assistant-Private Secretary to the King, the *World* remarks:—"The latter appointment is significant—coming events cast their shadows before. Viscount Errington has had a brilliant record. Only thirty-nine, he has been in the Diplomatic Service since 1900, and has served abroad at Cairo, Teheran, and Petrograd. In 1907 he came back to the Foreign Office, and gave secretarial assistance both to Lord Hardinge and Sir A. Nicholson. In 1911 he

left Downing Street and associated himself with a leading financial house in the City, but when the war broke out he was again in the service of the State, and went to India, where he saw much of his old chief, Lord Hardinge, then the Viceroy. He is very cultured, very tactful, and very accessible—the ideal Private Secretary to Royalty. He is said to inherit some of his father's literary ability."

The Office of Works announces that the Trustees under the will of the late Lord Kitchener have recently deposited on loan two valuable examples of the armourer's craft. One of these is a pair of saddle-steels, richly embossed, engraved, silvered and gilt in the third and last style of Lucio Piccinino, the celebrated Italian armourer of the end of the Sixteenth Century. They form part of the equipment of Philip III. of Spain. The other exhibit is a Japanese sword blade made by the master, Masamutsu, about the year 1390. The metal is after over five hundred years in precisely the same state of perfection as it came from the maker's hands.

Apropos of the death of the Marquis de Vogüé, reported in these columns recently, the *Building News* publishes an interesting note, from which we take the following particulars:—The Marquis de Vogüé, the well-known diplomatist, historian, explorer, and archaeologist, had for many years been the *doyen* of the Royal Gold Medallists of the R.I.B.A., of which body he had been an hon. corresponding member since 1865. He began his work as an archaeologist lecturer in 1849 and 1851, when he was attached to the French Embassy at Petrograd, and his essays on "The Ancient Art of Russia" were published in the latter year. In 1853-4 he visited Greece, Syria, and Egypt, the results of his investigations being summarised in his work on "The Churches of the Holy Land." In 1861 M. de Vogüé joined his friend M. Waddington in an exploration of Syria, and afterwards he published "La Syrie Centrale," a work filled with accurate architectural drawings by the author and E. Duthoit, an architect of distinction, and another on "The Temple of Jerusalem."

The *Scotsman* reports that Miss Olive Smith, of the Serbian Unit of the Scottish Women's Hospitals, and formerly head teacher of physical training under the Glasgow Provincial Committee, who died in Macedonia from a malignant type of malaria on October 5, was buried in the Serbian portion of the Allies' cemetery at Salonika. The service was conducted by a Church of England chaplain from one of the British hospitals, and a funeral oration was delivered by Captain Stepanovitch, secretary to the Director of the Medical Service of the Serbian Army. Beautiful flowers were sent from the Serbian authorities—a wreath from the Third Serbian Army, as well as from the Serbian Service de Santé, and from the Serbian Director of Medical Service.

APPOINTMENTS, PROMOTIONS, ETC.

A Reuter's message from Petrograd, dated November 23, reports: The Russian Minister in Bucharest has been recalled. General Mosoloff, Chief of the Chancellery of the Ministry of the Court, temporarily assumes charge of the Legation, with the title of Minister.

Colonel de Cumont has arrived at Bucharest as Military Attaché to the Belgian Legation.

M. Milan Gavrilovitch, the new Secretary of the Serbian Legation, and Madame Gavrilovitch arrived in London last week. M. Gavrilovitch has entered upon the duties of his post.

Captain A. Innes, R.A.M.C., Captain H. S. Smiley, Royal Fusiliers, Captain E. Chester-Master, Royal Fusiliers, and Lieutenant A. M. Ryan, 5th Light Horse Regiment, Australian Overseas Contingent, have been taken on the Egyptian Army as Special Reserve Officers, with the rank of Bimbashi, and attached, the first to the Medical Corps, the third to the 9th Sudanese, and the 2nd and 4th to the Transport.

OBITUARY.

Lieutenant-Colonel Frederick J. Saunders, D.S.O., R.M.L.I., who fell on November 12, aged 40, was the fifth and youngest son of Mr. William Saunders, of Sydenham. He joined the R.M.L.I. in 1895, and saw much service in South Africa, when he was mentioned in dispatches and awarded the D.S.O. He was Brigade Major of the 2nd Royal Naval Division in Gallipoli, and was mentioned in General Monro's dispatch for distinguished service during the evacuation.

Commander F. A. Brookes has died at Bath at the age of sixty-six years. He saw service during the Ashanti War of 1873-4 and during the Egyptian War of 1882. He received the Ashanti medal, the Egyptian medal, and the Khedive's Bronze Star.

Sir Ralph Frankland Payne-Gallwey, the well-known sportsman and writer on sport, died last Friday night at his residence, Thirkleby Park, Thirsk, after an illness of several months. He was an authority on ancient weapons, and the *Morning Post* remarks that his "researches on Turkish and other Oriental bows led to some curious results. The Turks, he said, were accustomed to wear a thin horn groove on the thumb of the left hand, which added considerably to the length of the arrow's flight. By way of testing the point he shot from a Turkish bow twelve arrows, each weighing about 3oz. in weight and 28½ in. in length. They flew an average of 275 yards. He then reduced the same arrows by three inches, to a weight of a half-ounce each, shot them from the same bow, wearing the horn groove, and they travelled on an average 360 yards."

The death took place, on the 24th ult., at Hagley, Worcestershire, of Colonel E. H. Fenn, C.I.E. Born in 1850, and educated at Sherborne, he joined the Army Medical Staff in 1875, and accompanied Lord Roberts's Relief Force to Kandahar, being mentioned in despatches. He took part in the Sudan Campaign in 1885, and eight years later was with Sir Mortimer Durand in his mission to Kabul, and received the thanks of the Government of India. He afterwards served on the Staffs of Lord Lansdowne and Lord Curzon in India.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

FAWKES.—On November 23, at Riverside, Lechlade, the wife of Rupert E. F. Fawkes, Sudan Civil Service, of a son.

MARRIAGE.

SHAKOOR—RIDINGS.—On November 25, at St. Faith's, Havant, by the Rev. A. G. Musgrave, rector, Trevor M. Shakoar, son of the late M. Shakoar Bey, to Maud, fourth daughter of the late W. G. Ridings, D.I.G., Royal Navy.

DEATHS.

BASILIADES.—On November 25, at his residence, 227, Archway Road, Highgate, N., after a long illness, Constantine G. Basiliades, aged 62.

GOULD.—On the 16th ult., at Higher Knowle, Lustleigh, South Devon, after a short illness, Edward Blencowe Gould, I.S.O., late H.M. Consul-General at Alexandria, Egypt. Eastern and Egyptian papers, please copy.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.55; Room, P.T.20; Lunch, P.T.18; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURS' CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troodos.

For Tickets and further Particulars, apply to

NAJEM HOURS & SONS,

LIMASSOL, CYPRUS.

Proprietors of "The Army and Navy Stores."

Branches—Polymedia, Troodos, Nikosia, Famagusta, Larnaca and Platres.

Head Office and Central Stores: LIMASSOL.

All arrangements for Transport, &c., are made by the above Firm.

DIPLOMACY AND STRATEGY.

It is difficult to explain away the position in Roumania. The Allies will be better advised to face it, whether it is on the eve of improvement or about to become even more critical, and to take to heart what lessons can be derived from it. When there was a tendency to blame Roumania for delaying her intervention it was pointed out in these columns that it would be worse than useless for her to enter the war at a time when she could be overwhelmed by the enemy and might disorganize the strategy of the Allies by compelling them to abandon other plans in order to come to her rescue. This is exactly what has happened. But the discomfiture of Roumania has been so rapid and sensational that it points to something more than a mere under-estimate of the enemy's strength on the part of the Allies. We are tempted to read into it a condition of things which, if not remedied at once, may continue to prove a serious handicap to the Allied cause. The manner of Roumania's intervention argues either complete failure, not confined to the Roumanians themselves, to profit by the experience of a two years' struggle, or a possible lack of co-ordination among the Allied Governments and their General Staffs. It is incredible that the Allies should have had any other plans in the Near East than a desire to detach Bulgaria and Turkey as soon as possible from the Central Powers. In such circumstances Roumania's duty was to remain on the defensive in the Carpathians, and to throw her main strength against Bulgaria. As everyone knows, she would naturally prefer to reverse this strategy, but few people were prepared to find the Allies acquiesce in such a scheme. The idea of the Roumanian Government pitting its views against the deliberate counsel of the Allied Powers may conform with the actual facts of the case, but we venture to think that it implies hesitating diplomacy and a sad lack of conviction. It was all-important to the Allies that Roumania's intervention should achieve its maximum effect, and that there should be no dissipation of her military efforts. If the Allied General Staffs can be supposed not to have been ignorant of the salient factors in the situation, we are left to wonder whether the fault lies with the military authorities for failing to apprise their Governments fully on the subject, or with the Governments for not conveying their knowledge to Roumania with such insistence that it would have been impossible for her to ignore their advice. In either case a state of affairs exists which calls for closer co-ordination among the Allies.

If the analysis of the situation could be carried still further, we should probably find that both the military authorities and the Governments had done their duty in a mild and ineffective manner, and that the former had failed to carry conviction with the latter, because they themselves were divided in opinion. It is no secret that one school of military thought is so obsessed with the idea that a decision must be reached in the West that it has been unable to contemplate a campaign not confined to a series of sanguinary frontal attacks. Attempts to out-flank the enemy in order to weaken the strength of his main position are denounced; scorn is heaped upon them as side-shows, and sermons are preached on the dissipation of military strength. In view of the fact that the Salonika expedition was the subject of anxious deliberation among the Allies, it is regrettable that, after Great Britain gave her consent to the French view, there should seem to be the least hesitation on her part to throw herself heart and soul into the undertaking. There

can be no suggestion of the British Government having failed to carry out, according to the letter, its part of the bargain; but the impression left on the public mind by the course of events in the Near East is that the demon of half-heartedness has brooded over the operations. A more active policy, even if a general advance could not be attempted, would have kept the enemy more on the alert, would have prevented him from reducing his containing army to a minimum, and from throwing strong forces, first into the Dobruja, and now across the Danube. It is not enough to urge that the Allies have done all that was possible with the resources at their disposal. For behind that claim lies the omission in at least one of the Allied countries to utilize the resources that lay to hand from failure to appreciate the military situation.

Far too late in the day the Allies have had brought home to them the fact that Germany does not share their views of the comparative unimportance of the Near East. Recent events have shown that our enemies are prepared to contemplate with more or less indifference several hundreds of thousands of casualties along the Western front, and the loss of many square miles of territory, provided they can retain their hold on the resources of Roumania and the Balkans. For it must be borne in mind that no losses on the Somme have deterred the Germans from their scheme for overrunning Roumania. We shall do well not to credit our enemy with too much folly. He may be seeking easy triumphs, and he may have sworn vengeance on the Roumanians; but the fact that he is facing a number of unpleasant experiences elsewhere in order to get possession of Roumania suggests that he sets greater store on replenishing his stocks of grain and oil than on conserving his resources of man-power. In other words, despite the arguments of military experts in the Allied countries, the Germans, with their full knowledge of their own position, have decided for themselves that they are at present more vulnerable in the Near East than they are in the West. To challenge such a position seems little short of madness; to accept it would mean for the Allies the prosecution of the war in the Near East on a scale that has so far not been attempted. Unfortunately, such efforts cannot be easily improvised. If von Falkenhayn's and von Mackensen's advance can be arrested before the greater part of Roumania is overrun, it may still be possible for the Allies to turn to their own advantage the sudden extension of the enemy's line of battle. The Roumanian Army has yielded ground without, so far as is known, any heavy losses. Its immediate need must be for munitions rather than for reinforcements, and the former are the more difficult to supply. But the capacity of Russia for heroic measures has been proved before in this war, and it may not be without significance that a number of prominent Roumanians should choose this moment to testify to feelings of gratitude to Russia. In the words of M. Take Jonescu: "Russia has not only been loyal; she has been generous. The help given to Roumania already exceeds what was contemplated when we entered the war." That help stemmed the tide in the Dobruja, although it did not avail to prevent von Mackensen from crossing the Danube. It has now to make its presence felt in a different direction, and to achieve its purpose it must be forthcoming without delay. Even when Roumania has been saved the need for closer co-ordination in counsel and effort on the part of the Allies will still exist. Their experience in the Near East, we may hope, will sweep away any false sentiment which in the past may have paralysed either their military actions or their joint diplomacy.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

BRITISH PIONEERS IN TURKEY.

EXTRACTS FROM THE LEVANT COMPANY'S RECORDS.

By the kindness of a correspondent, we are able to publish below some extracts from the records of the Levant Company, which will, we think, prove extremely interesting to our readers. For the greater part the extracts speak for themselves but, referring to the first, our correspondent writes: "To one who was in Constantinople during the last days of September, 1914, it seems to be just the sort of letter our Ambassador would have written to the community. It is as written by the Ambassador to the 'Factory,' the word applied at that time to members of the Levant Company." It will be remembered that on January 7, 1807, four months after this letter was written, Turkey declared war against Russia and England:—

To the members of the Levant Co. Factory.

9th September, 1806.

I received an answer from the Porte. I lose no time in informing you that the Note which I presented has been replied to. If I were to judge entirely from the language of the Porte I should freely give it as my decided opinion that we have been mistaken in attributing improper intentions to their Government. Nothing could exceed the friendly profession of the Porte both toward Great Britain and Russia, but as the measure which was complained of is still permitted to continue, we are bound in the first place, to listen with some degree of caution and suspend our judgement until we have learnt what effect this conduct has produced at Peterburgh. As it is now some time since the Russian Minister informed his Court of the measures taken by the Porte it cannot be very long before the Emperor's sentiments on that subject will be known. I also have apprised His Majesty's Government of what has been passing here, and instructions will necessarily be sent for the guidance of any future conduct. In the meanwhile as the Porte is now aware that no separation of interest has taken place between Great Britain and Russia it is hardly to be supposed that even the influence of France will induce it to offer any further insult to either. I think therefore, in so far at least as it is possible for me to conjecture, that we are for the present in a state of sufficient security, at any rate as you have now the same grounds of forming an opinion as I have myself and will be able to act with that caution as prudence may appear to dictate, and I have therefore only once more to recommend most strongly that no such symptoms of alarm may appear as might be injurious to the British interest.

It is to be hoped that the great man's recommendation was acted upon, and that the British behaved in 1806, as they did a century later, in a manner of which their countrymen might justly feel proud.

The remaining extracts, which are of earlier date, are arranged chronologically. The first seems to show that the Company had a keen eye to profitable business:—

21 Xbre, 1696.

Although we do not think it convenient to repeat our order against ye exportation of coffee, it being at present a great commodity, we shall connive at your shipping it off by such as please to do it at their own charge and hazard and paying our duties. You are therefore to leave the same out of the commanders' oaths till our further order.

To Consul Ray, Smirna.

June 21, 1699.

We allow the expence you were at in making publique rejoicing for the birth of the Gd. Sig. son and approve the congratulations made by your factory to his exc. on his success in concluding the Peace.

The Grand Seigneur, one hopes, was gratified by the "publique rejoicing," and graciously pleased to accept the Factory's congratulations on the conclusion of the Peace of Carlowitz (January 26, 1699).

To Consul Ray, Smirna.

31 Oct. 1699.

We have at the request of Mr. J. Freeman on your behalf sent you a flag.

To Lord Paget, Constantinople.

We understand your Lordship had lately procured a command for shipping off yearly at Smyrna 2000 killows of rice for ye use of ye King's kitchen, which was sent down to Mr. Purcell, which being a thing contrary to what has been formerly practised we take the liberty to inform you that it has never been usual to take out such commands for ye advantage of any particular person, but such grants were ever appropriated to ye benefit of ye Court and in general (as your commands for liberty to ship off fruit obtained by Sir J. Firch was). We therefore desire you that the aforesaid command may be put in ye Consul's hand at Smirna for all our factors to make use of it as occasion shall serve, as in ye same manner as ye commands for fruit.

To Consul, Constantinople.

May 29, 1700.

Finding our officers abroad in writing to us do usually style us Honble, which being a thing practised but of late years, and as we conceive not due to us, you are therefore to address your-

self to us for the future by no other title than—Ye Right Worshipful Ye Governor & Company of Merchants of England, trading into Levant Seas.

May it please your Excellency,

5 Feb. 1701.

Sir Pro Sulton, Consple.

Since our last we have received your two letters from Vienna and Peterwardin, with the inclosed proposals for carrying our goods through Germany to Turkey and your Lordship's counter-project for ye same which we have now under consideration.

This project was tried for a short time; but could not have been successful, judging by the cost of sending letters, for it appears that packages of letters cost as much as 300 dollars via Vienna and Antwerp.

The next extract, referring to the purchase of a burial ground at Alexandretta, will be of interest to those who have visited this spot in recent years.

To Consul Brandon, Scanderoun.

May 10, 1703.

The hundred dollars which you contributed for securing ye title of the burying-place wee doe also allow and doe desire you to be alwaies prudently thrifty for us.

To Consul, Alexandretta.

A convoy being intended and now ready to depart for Turkey, the following ships are designed to proceed herewith to Scanderoun.

Leghorn. Mesarun. The Jane Lextorton [?]. Hunton.

Aleppo. Hector. Resolution.

And we do now order you to pay to each of the commander of Her Majesty's ships that shall come as convoy to Scanderoun Two Hundred Dollars, being a gratuity which we have heretofore given in such cases.

May it please your Exc.

London 2 Nov. 1704.

We have to return your Exc. our thanks for procuring us Justice against the Cadi at Aleppo, who, the Consul informs us, your interest dismist from his office for striking and imprisoning our Chief dragerman, which example we hope will deter others from offering us like injuries and insults for the future and contribute to the ease and security of our factory there.

The effect of this letter—admirable in itself—is somewhat marred by another communication on the same subject, addressed to Consul Brandon:—

To Consul Brandon, Aleppo.

London, 2/12/1704.

We have received your letter of the 24th of April and the relation therein of your proceedings against Chelebee Adjemy, who was the chief cause of the Cadi's striking and imprisoning our dragerman at your place, for which the said Cadi is dismist from his office by ye Lord Ambassador's interest, which is a piece of Justice wee are very well pleased with and doe approve of your having applied to his Excellency for the same and for endeavouring to have procured punishment on the said Chelebee Adjemy in a regular method, which we would be very glad to have effected without their intrigues with your Pasha which you give us an account of. For we think it very unbecoming Christians to assist or encourage the Turkish Ministers in making false pretences or raising aravias [?] on any one, which is a practice that may some time or other be turned upon us and tho' wee are pleased that the insolence of that fellow is punished, yet wee doe order that no such method be used for the future.

The last extract which we are able to give is addressed to the Lord Ambassador, at Constantinople, and dated October, 1708. It runs:—

We are sorry to hear what you inform us concerning the said Mr. Bridges, our treas., being fully satisfied that it is much to our own and their disadvantage when any one of our officers and factors marry in Turkey.

Wee have therefore resolved to discharge ye said Mr. Bridges from his office of TreasR., to discourage so dangerous an example in one who is our immediate office.

Wee desire YR. LordP. likewise by all means to discountenance and endeavour to prevent the like error in others for the future.

It is regrettable that the selections, though closing on a note of marriage bells, have an "unhappy ending. But the records deal with facts, which are seldom so nicely adjusted as fiction in this respect. There is much in them that one is proud to read of. One wonders whether, if any records of German dealings with Turkey and the Turks ever come to be published, the Germans will be able to say as much.

A Reuter's message from Petrograd, dated November 23, reports that according to despatches to the newspapers from Baku, the Turks have massacred 5,000 of the 6,000 Armenians at Sivas in Anatolia.

THE PRESS ON THE NEAR EAST.

"Drift and Optimism."

The following passage is extracted from a leading article, "The Roumanian Defence," in *The Times* of Monday:—

The military responsibility for what is happening in the Balkans will have to be duly investigated, as the responsibility for other mistakes must be investigated; but the examination must be made by experts on strategy who have all the facts before them. What can be said fairly at present is, we think, that in the treatment of the Roumanian problem there has plainly been the same want of co-ordination between strategy and politics which has been the blight of all the Allied operations in the Near East. We have always recognised in the handling of this question by our own Ministers but one more example of the drift and optimism that have marked their whole conduct of the war. It is another proof how greatly they lack the provident care which is the mother of safety. It shows once again how they fail to think things out and to make sure that the preparations are complete before they take action. The thrust in Roumania is not going to win the Germans the war, even should it fulfil their fondest hopes of military success. The German soldiers know that very well, and they make the move with another object. They make it, as their colleagues the German emissaries and journalists are making the huge Press campaign in America of which we have fresh evidence to-day, in order to back the schemes of the Wilhelmstrasse for a premature peace, for they know that without such a peace the reign of "militarism" is doomed. They will fail in that object, and in the effort to attain it they will bring about results which they by no means desire.

The Commons and the Greek Situation.

The political correspondent of the *Morning Post* (November 24) writes that "the handling of the Greek situation during long months is a cause of dissatisfaction" to members. He adds:—

It is very difficult on this matter to get information. Lord Robert Cecil yesterday delivered a little lecture to Commander Bellairs—who put a question—and to the House generally on the impropriety of seeking to know anything of what the Government is doing, beyond that the matters referred to were receiving the attention of the Government. "To say more than this," he added, "would necessarily give the impression that we were trying to impose our wills on the Allies by making public statements designed to force their hands, and I hope hon. members will not make co-operation difficult by ignoring the existence of the Allies." Last week, in answer to the same member, the Under-Secretary said the Government does not know what the French Government says to the Foreign Affairs Committee of the Chamber. Now there is a wide impression that this Committee, which, of course, sits in secret, is very well informed of all that is being done, and that in this way the French Government is subjected to a healthy criticism from which our own Foreign Office is wholly exempt—and means to be exempt as much as it can.

A Neutral on the Roumanian Outlook.

On the principle that "lookers-on see most of the game," the views of a neutral regarding the outlook for Roumania are probably of greater value than those of any critic belonging to either side of the belligerents. When the neutral happens to be an acknowledged military authority, like Colonel Feyler, his opinion is not to be lightly valued. And it is satisfactory to find Colonel Feyler, in the *Sunday Times*, taking a view which is certainly not pessimistic. He declares:—

It is a mistake to imagine that the German successes against Roumania, formidable though they may appear, are quite conclusive proof that the Central Powers can continue to strike successfully where and when they choose. Their selection of Roumania as the scene of their next great offensive was forced rather than chosen. In the first place, they were faced with the possible defection of Hungary, dismayed by the Roumanian invasion; and in the second, they knew better than anyone else how badly off the Roumanians were in the munitions department. The Roumanian army were equipped almost entirely with Krupp guns, and had consequently to rely mainly on such shells as the other Allies could capture from the Germans and pass on to them. Again, Roumania has few railways, could only be assisted by Russia, the Power which is least able to spare guns and munitions in aid, and can only supply these mainly by road.

Secondly, in view of recent defeats on all the other fronts, it was absolutely necessary for Germany to exert herself in a brilliant offensive somewhere. One could adduce numerous other arguments which must have presented themselves to the Imperial German Staff, all compelling it to the Roumanian adventure—where triumph, and, above all, a rapid triumph, appeared to be alone probable.

"But the crux of the matter is," adds Colonel Feyler, "that it must be a speedy one." The Russians will move again with the frost; the Franco-British force on the Somme may, given hard ground, compel a draft on Falkenhayn's armies.

General Sarrail is moving slowly, but he is moving, and will, unless arrested (by forces which the Central Powers cannot at present spare), cut the communications between Berlin, Sofia,

and Constantinople. Roumania is in a precarious position, perhaps, but she is by no means yet crushed. France has despatched a military mission, with General Berthelot as Chief Adviser, whose services will be of incalculable benefit to the Roumanian General Staff.

Marshal Mackensen has crossed the Danube, and may join hands with General Falkenhayn. But, in view of his commitments in the Dobrudja and of the urgent Bulgarian need for reinforcements, he cannot have crossed the river in any overwhelming force. The Roumanian armies have been forced to retreat and may possibly suffer heavy losses, but Russian help is on the way, and with General Berthelot to advise them, there is no reason to suppose that they should not be able to fall back upon a system of trench defences in front of Bucharest, which will enable them to hold Falkenhayn up for an indefinite period. And in that event Germany will be deprived not only of a swift triumph over her latest adversary, but will also have lost her chance of winning or even of drawing the war.

"Hate" for Roumania.

The Budapest correspondent of the *Morning Post* refers again (in an article published on November 24 and dated November 15) to the "Press campaign which aims at creating [in Hungary] just such a feeling towards Roumania as prevailed in Germany against England at the beginning of the war." He writes:—

That campaign is still being energetically carried on, articles appearing almost daily in the Government organs descriptive of the atrocious crimes the Roumanians are alleged to have committed during their occupation of part of Transylvania.

Lurid accounts of the plundering of villages and towns are published, and these are supported by photographs of the supposed scenes of devastation. Unfortunately for the circulators of these wicked falsehoods, however, it happens that a photograph purporting to represent Pétrozsény after the Roumanian occupation has been positively identified by the *Népszava* as a view of the ruined houses in the vicinity of Louvain Cathedral. Thus do the authorities seek to incite the troops who are engaged in the attempt to subdue Roumania to show no mercy to the population of that country.

Apparently such trifling inaccuracies as that referred to do not seriously hinder the spread of the much-desired "hate," for the correspondent adds:—

The feeling of hatred towards Roumania is intense, not only on account of these articles, but because it is the outcome of a national feud, which reached its climax when Roumania invaded Transylvania. The newspapers still speak of the "treachery" of Roumania, and declare that the "higher powers" have at last "come to rescue the righteous and punish the wrong-doers." The higher powers, it seems, according to the *Pesti Hirlap*, are represented in the person of the German Emperor. In an article in that journal it is said that "the chastising of Roumania became the first duty of the German Emperor as soon as she joined his enemies, and it is added that his personal ambition and wish is that the Roumanian campaign should be carried out according to the programme, even if other most important interests have to be sacrificed for the present."

How far one may take this to be the truth I cannot say, but everything shows that it is not far from the truth, considering that the best German troops have been despatched in great numbers to the Roumanian front, that all the efforts put forth up to now show the abundance of war material, and that General Arz and General Falkenhayn are in command on one side and Mackensen, the second to Hindenburg in the eyes of the German Emperor, in command on the other. Moreover, there is a rumour current that the German Emperor regards the intervention of Roumania as a personal insult to himself and to his subservient ally, the Emperor of Austria.

The article concludes that, in order to secure a success in Roumania, the Central Powers "are quite ready to suffer reverses elsewhere, as on the Western front, where during the last few months the co-operation of the troops now operating against Roumania would have been simply priceless."

1813—and 1916?

Writing on "The Campaign in Roumania" in the *Sunday Times* (November 26), Colonel F. N. Maude begins his article:—

All eyes to-day are turned to Roumania. The situation is an almost exact parallel to that which arose in 1813, when Napoleon, for once too confident in his power of bringing the Russian, Prussian, and Austrian armies to a decisive battle, ordered Davout to execute a wide turning movement against their rear.

The Allies declined the proffered battle and retreated through the mountains. Davout, issuing out into the plains by a lateral road, found himself confronted by greatly superior numbers, and, after a tough fight, was completely overwhelmed and forced to surrender. The instance is classic, and is embodied in every strategical text-book, so it is quite inconceivable that the present opportunity should escape the notice of the Roumanian command and its advisers.

It is to be hoped that history will repeat itself once more. A little later Colonel Maude writes:—

The whole situation really turns on the basic fact that the enemy has not been able to detach more than thirty divisions against Roumania, and that the Roumanian forces can outnumber

their opponents by more than two to one, while the Russians in the north are only waiting for the psychological moment to strike the German invaders in their most vulnerable point.

A Policy for Persia.

United Empire, in its Editorial Notes and Comments, refers to the new situation in Persia, and expresses the hope that that country will be one of those "to which this war will have proved a blessing without any disguise."

The outbreak of the European struggle found Russia, Great Britain, and Persia thrown together by force of circumstances, but all pulling in different directions. In spite of the Agreement of 1907, there had been no real understanding between the two protecting Powers; their attitudes towards their protégé had little in common, and British diplomacy, lacking the courage of its convictions, often became responsible for policies of which it did not approve and which it made no attempt to justify. The German menace, which raised another head in Persia as soon as it had shown its fangs in Europe, forced upon Russia and Great Britain the necessity of concerted action. For the first time their interests were identical, and out of this situation we may look for a permanent community of interests which will function for the good of Persia. A temporary arrangement, to which the Persian Government is a party, has been concluded. It puts an end to the 1907 Agreement with its three spheres or zones, and should ultimately bring about a more genuine attempt to secure this time under sympathetic and harmonious guidance—Persia's rehabilitation by Persian agency. Only when the failure of such an attempt has proved unmistakably the inability of the Persians to help themselves, will it be necessary to take more drastic steps for the good government of the country. In the meantime, however, in the British sphere of interest in the South, a definite policy ought to be laid down for the guidance both of Great Britain's representatives and of the Persian Governors and officials.

We have heard very little of what has been going on in Persia of late, but all Englishmen who take an interest in the country will share the hope expressed in the above paragraph. Most of them will also agree that no time should be lost in regard to laying down a definite policy to be followed in the British sphere. Our failure to do so earlier has cost us much trouble, and the sooner the question is tackled and placed on a more satisfactory footing the better will it be both for Persia and for Great Britain.

THE COMMITTEE EARNESTLY HOPE THAT FURTHER LIBERAL DONATIONS WILL AT ONCE BE FORTHCOMING TO ENABLE THEM CONTINUOUSLY TO DESPATCH THE "COMFORTS," WHICH ARE SO URGENTLY NEEDED BY THE BRITISH TROOPS IN MESOPOTAMIA.

IT IS ESTIMATED THAT NOT LESS THAN £50,000 WILL BE REQUIRED WITHIN THE NEXT FEW MONTHS FOR THE PURPOSE.

The Committee is authorised to state that they are working in conjunction with Col. Sir Edward Ward, Bart., K.C.B., Director-General of Voluntary Organisations, and with the approval of the War Office.

CHEQUES SHOULD BE MADE PAYABLE TO THE

MESOPOTAMIA COMFORTS FUND,

and sent to the Hon. Secretaries,

15, Aldford Street, Mayfair,

crossed "COUTTS AND CO."

To-day the new official scheme for the co-ordination of relief to British prisoners of war comes into operation. Henceforth it will be possible to send food parcels to prisoners only through an authorised packing and distributing organisation or regimental care committee. The new scheme has been framed and will be administered by the Central Prisoners of War Committee of the British Red Cross Society and the Order of St. John.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Sir Joseph Ward, Finance Minister of New Zealand, is perhaps little known, except by name, in Egypt and the Near East, but he holds some decided opinions regarding the future relations between Britain and her present enemies, to which he gave expression in a lecture in London this week. Should German shipping be permitted to use the Suez Canal after the war? That is the interesting question he raised, and his answer was in the negative. He instanced the Kiel Canal, which, he said, Germany did not permit us to use, and he thought that the great sea link between East and West should be closed to the Huns when they resume their overseas operations. The suggestion opens up a new and great realm of thought, and I hope it will be considered. It may not be possible to adopt it in its entirety, but it is unthinkable that, after the appalling sacrifices which we and our Allies have made in this war, some tangible benefit should not accrue as a set-off.

Let us remember this, that in the past forty years the world has not been menaced by Prussianism in politics and human relations alone. "Kultur" has been applied also to trade and commerce. In the past we have winked at the gross commercial immorality of Germany—and we are now asking ourselves why we did so—with the result that when the war came the dislocation and distress were much more intense than they might have been. There must be a change. When the German preying upon human rights is stopped, her commercial piracy and dishonesty must also be made impossible. There must be a new order of things. Many of the restrictions we have imposed must be maintained—some permanently, others certainly for a term of years—and when the Teuton has been taught his lesson, and shows himself prepared to deal honestly, the question can be reconsidered.

The Sofia telegram received last week in Amsterdam to the effect that the big tunnel through the Taurus Range on the Baghdad Railway has been completed—reprinted elsewhere in this issue—may be taken *cum grano salis*. The report itself may, or may not, be accurate; that depends upon the exact meaning of the word "completed." Personally, I am inclined to think that, whatever its authors may wish us to believe, the tunnel is only completed in so far as the actual piercing process is concerned, and that considerable time must still elapse ere traffic can pass through from one end station to another. Even so, it must be admitted that the enemy have hastened work on the structure with quite extraordinary zeal, as, according to a recent report from the Swiss engineer engaged on the tunnel, the latter would not have been completed before 1918. In view of this it can reasonably be asked whether similar energy has been displayed in other sections of the line. Those known to be still incomplete were the eastern stretch from Nisibin to Jibbara (near Baghdad), the difficult section through the Amanus Mountains, east of Alexandretta, and the Taurus section, which, apart from the big tunnel, was to consist of many minor tunnels, bridges, and a long viaduct. No facts concerning

the state of work on these sections are generally known, but we can simply assume that work has been expedited, though it is hardly likely that through rail transport from Haidar Pasha to Baghdad will have been achieved this side of peace. Still, the question is one of great military interest to ourselves at the present time, and it is to be hoped (and believed) that the War Office is being kept well informed as to the *real* progress being made on the Baghdad line. Economic questions connected with it can be relegated to a later date.

In the circumstances, the new jute arrangement which has now been settled on is to be welcomed as a happy solution of a vexed question. The Ralli agreement, which was to have superseded the chaos of last year, was doomed to failure because, in the first place, it was a hurried measure carelessly thought out, and in the second, because it met with general opposition in the trade. It, therefore, made a graceful exit, thanks being largely due to the generous attitude of Messrs. Ralli Brothers, who freely renounced their somewhat unique position. The new arrangement includes, beside Messrs. Ralli Brothers, the names of nine old, well-established British firms, and these ten will now have a monopoly for the supply of raw jute on Government account to the Dundee mills. It is generally believed in the trade that the scheme will now work smoothly, in the interests of trade and Government alike, the latter having become, *ipso facto*, as it were, a partner in the combine. Certainly, and as regards the Government as a buyer, the danger of inflated prices has been minimised.

Mr. Hugh Reeves' remarks in the *Financial Times* recently on the position of the Khedivial Mail Line and its possible future development "in the interests both of the Protectorate and the British Empire" are doubly welcome owing to Mr. Reeves' knowledge of the subject. The matter is one which, as my readers will remember, was fully dealt with by THE NEAR EAST in an article published two years ago. Therein the unique position of the Khedivial in the Eastern Mediterranean was emphasised, and the hope was expressed that, when the time came, the directors would rise to the occasion and make their line what it ought really to be, namely, one of Britain's great shipping concerns and the nucleus of an Egyptian mercantile marine. Admittedly, and in spite of the favourable report of the company's working in the past financial year, the time is not ripe for the realisation of any scheme, but, at any rate, I hope that the directors will, at the forthcoming meeting of the shareholders, have something to say about future prospects, etc., if only to show that they are alive to possible happenings. There is no better occasion for doing so, because, I presume, shareholders will be in a pleasant frame of mind (for once) and will, therefore, be willing to listen to the prospect of a future extension of their service.

An interesting pamphlet by Mr. Norman H. Byers on "World Commerce in Its Relation to the British Empire" has come my way, and I am interested to learn that the author emphasises the view expressed by the writer of the article, "The Hundred Firms," which appeared

in THE NEAR EAST some months ago. The point emphasised in the article was that British manufacturers at home ought to combine with British producers of raw material overseas with a view to securing preference in the supply. Mr. Byers shows that within the territories of the Empire (and of our Allies) "there is enough and to spare of all necessary commodities," and all that is required for their proper utilisation is the full co-operation of capital and labour, which, when achieved, would quickly neutralise the waste of war and leave the way open for a general and stable prosperity hitherto unknown." What has become of the organisation of British firms to which the article in THE NEAR EAST referred, by the way?

Nothing more ridiculous than Bethmann-Hollweg's reference to the proposed Entente partition of Asia Minor and Asiatic Turkey in his recent bombastic speech in the Reichstag has been said for some time. His object, of course, was to make the Turks believe that their masters were really the protectors of their territorial integrity. The picture, however, convinces no one, not even the more intelligent Turks, who are beginning to realize, if the constant eruptions in Constantinople are to be taken as evidence, that the Teuton ambition is to create an Empire from Berlin to Baghdad, with Berlin very much to the front, and Vienna, Sofia, and Constantinople hidden somewhere in the background. What manner of life, let me ask, would be that of the Ottoman Empire if the Central European dream were to be realized? It would be a life of slavery and bondage. The *Hamburger Nachrichten*, one of the paid organs of the Pan-German clique, almost admits as much in a recent article. It urges, in effect, that Busreh must revert to Turkey, not for Turkey's sake, but because it is essential to the welfare of the "Central European Empire"—which is an aggrandised Germany, as was pointed out in these columns some time ago. How this callous admission on the part of the *Hamburger Nachrichten* conforms with Bethmann-Hollweg's picture of an altruistic Prussia it is not for me to say. I leave it for intelligent Turks to decide whether they want the German Central European Empire to end at the Persian Gulf.

Cotton is a problem in Switzerland, apparently, for the Federal Council, acting upon the recommendations of a Commission, are about to fix maximum prices in the trade, if, indeed, they have not already done so. In 1915 Switzerland imported about 35,016 tons, and it is estimated that the quantity this year will be 22,040 tons. The requirements for 1917 are 160,000 bales, including 40,000 bales Egyptian. In order that the trade may be regulated to the best interests of the country a central office will be created in Zurich, which, together with the Commission, will co-operate with the Political Department. The most important branches of the textile industry and trade will be represented by the Commission. Both the Commission and the central office will be subordinate to the Political Department. The regulations are framed along drastic lines, and, after they have become operative, more than maximum prices are fixed, the transaction will be considered closed at the fixed rates. Transactions contrary to the regulations will be cancelled.

COMMENTATOR.

How the American Government Assists Exporters.

Value of Frequent and Carefully Compiled Consular Reports.

We pleaded some little time ago in the columns of this journal for the reconstruction of the British Consular Service, in order that this organisation might be of some real and practical help to the British exporter when he enters upon the trade war which is bound to come after hostilities have ceased. In our previous notes we compared our own Consular system with that of Germany, and pointed out how far-seeing our present enemy was in that he continually widened the field of usefulness of Consular representatives all the world over, particularly in the Balkans and Near East, while we, in our obtuseness, clung to our old shibboleths.

So many articles have been written on "Trade After the War" that the public must, ere now, be heartily sick of the term; but though an immense amount has been written and said about what we ought to do—and there have been conferences and committees without number—very little has actually been done up to the present. It may not be amiss, however, to look into the manner in which our cousins across the Atlantic endeavour to foster and encourage the export trade of the United States. For a considerable period a Government Bureau, under the ægis of the Department of Commerce, has been in being, whose sole duty it is to develop the manufacturing industries and markets at home and abroad by obtaining useful material for instruction in a reliable manner, and publishing such information in a suitable form for the edification of manufacturers. This Bureau is more far-reaching in its powers and of far more assistance to commerce generally than any organisation that we in this country possess at the present time.

Principal Activities.

In the Washington official publication regarding this Bureau, its duties are clearly set forth. Its principal activities are as follows:—

- (1) Editing and publishing Consular reports on commercial subjects.
- (2) Tabulating and publishing statistics of home trade with foreign countries.
- (3) Collecting, translating, and publishing Customs tariffs of foreign countries.
- (4) Formulating instructions for the commercial work of the Consular service.

Attached to the Bureau are a number of agents whose sole duty it is to visit foreign countries and to make reports on special industries and special phases of commerce. These men are able to speak the languages of the countries in which they are operating.

In addition to these travelling agents there is a staff of commercial attachés stationed in all the principal countries of the world whose only task is to make a special study of the commercial conditions and commercial possibilities in their particular sphere. They are permanently stationed, and act to a certain extent as receivers of information from, and advisers to, the travelling agents. Practically, they spy out the land, and from their observations can direct the travelling agents to the most promising districts in their purview. To show how carefully the scheme is worked out it is necessary to state that the agents are carefully selected from amongst those who are actively engaged in some particular industry or commercial undertaking, and who are in every respect experts each in his own particular line. They periodically set out in their travels and observe and record the methods of manufacture, and the special requirements of the country, district, or locality allotted to them.

The Commercial Attaché.

The commercial attaché has but one duty—the promotion of trade between his country and the particular country in which he resides. He is not tied to his office, but is perfectly free to move about within his sphere. Besides these two arteries of information the Bureau

makes great use of the Consular Service. As in Germany, so in the United States, the Consul in a particular part or centre is a business man, and he is expected to supply the Bureau with voluminous information as to the trade of his district, lists of importers, particulars of contract work, and requests of local merchants who are desirous to entertain business with American exporters.

It may appear at first sight as if a certain amount of overlapping occurs between the Consuls, the commercial attachés, and the travelling agents, but so carefully is the plan of campaign organised that each forms an important part of the whole machinery. It is the Consul's duty to see that all the district trade journals are forwarded to the Bureau, and in the same way the Consul receives all trade journals from the States, which are most helpful to him in answering questions locally.

Utilising Information.

The mass of information culled from these three sources is divided into two portions. One portion is set aside for widespread publicity in a daily pamphlet, and monthly, quarterly, and annual bulletins; the other, dealing with confidential information, is only circulated to those American firms to whom the special information is of value. Space does not permit us to go into particulars regarding the details of these pamphlets and bulletins, but suffice it to say that they are compiled as clearly and concisely as possible, the final condensing being done by a staff of experts at *précis* work. The daily journal is supplied to manufacturers for the small cost of \$2.50 per annum, and, in addition, the annual Consular reports are sent to all subscribers free of cost. The Bureau—which, by the way, has ten main branches in the States and many sub-agencies—keeps up-to-date trade directories of all countries.

Further, at the main branches innumerable samples, specifications, etc., sent in by the Consuls, commercial attachés, and agents periodically, are open for inspection by those interested. There is a special department set aside for the filing and translating of all foreign tariffs. Such information as rates of duty, Customs regulations, licence fees of commercial travellers and commercial agreements, foreign trade mark and patent laws, can readily be obtained by inquirers.

Periodical Conferences.

From time to time each district office arranges for meetings between manufacturers and exporters and the travelling agents on their return from a tour, so that any particular matter of commercial importance can be discussed first-hand across the table. If there is a big contract in some foreign country which is to be put out to tender, the agent has all the information ready to give to the manufacturer, the name of the parties or corporation interested, private information as to the financial standing, etc., of such bodies—in fact, all the details necessary for the American manufacturer to have some basis on which to make his preliminary plans in advance.

The Department of Commerce spares no expense in obtaining the greatest efficiency out of its organisation, and from all accounts it would appear that there is no country in the world (if we except Germany before the war) so well supplied with the necessary machinery to promote and increase export trade as the United States. We have seen what Germany can do in the building up of overseas trade: the United States is following hot-foot. Are we going to allow other nations to forestall us and to snatch from us what we have fought for in the past and what we are fighting for now? There is little time to be lost. We can do what other countries have done and are doing if only the country will take to heart the words of King George, who, when Prince of Wales, made his historic speech at the Guildhall on his return from an Empire tour, and begged the Old Country to "Wake up."

SHIPPING NOTES.

Another Important Combine Reported.

An announcement has been issued to the shareholders of the Orders and Handford Steamship Company (Limited), of Newport, Monmouthshire, giving notice of a proposed amalgamation with John Cory and Sons (Limited), of Cardiff, the price to be paid for the £5 shares of the absorbed company being £20, says *The Times*. The Orders and Handford Steamship Company owns seven steamers of a total gross tonnage of 17,000, and John Cory and Sons (Limited) owns or acts as managing owners of thirteen steamers of between 2,100 and 4,300 tons gross each. In connection with the proposed fusion, Messrs. Orders and Handford, the managers of the steamship company bearing their name, give notice that they have taken into partnership Messrs. John Cory and James Herbert Cory, of John Cory and Sons (Limited).

Submarine Losses.

Enemy submarines continue their activity in the Mediterranean, and the toll of lost ships increases daily. Among recent losses are the following:—

Ellerman liner *City of Birmingham*.
Christoforos, 2,345 tons, of Piræus.
Greek steamer *Mihail*, off the island of Tinos.

Greek steamer *Margarita*, 1,112 tons. Passengers and crew landed at Alexandria.

Burned Tobacco Cargoes.

The damaged portions of the cargoes of the two Dutch liners *Djemmer* and *Riouw*, bound from the East Indies to Holland, in which serious fires were reported from Alexandria on November 15 and 20 respectively, have now been discharged, says a Lloyd's message. In each case consignments of tobacco have suffered by fire and water. A large quantity of tobacco in the *Riouw* is stated to be valueless.

Greek Prize Sold.

For the old iron prize steamer *Nicolaos*, of 2,047 tons deadweight, the high price of £29,250 was bid on November 23, at auction on the Baltic Exchange, representing more than £14 a ton. The steamer was built thirty-eight years ago, and the boiler is reported to have been new twenty-one years ago, and it is understood that some thousands of pounds will require to be expended on her on account of a Lloyd's survey, now due, and renewals. Before the war £2 a ton, or a total of about £4,000, might have been paid for her for breaking-up purposes.

The sale was by order of the Admiralty, for the vessel was seized at Alexandria, while under Greek managership, and was condemned on account of Turkish interest. The vessel was bought by the Overseas Syndicate (Limited) after competition with bidders of Allied nationality. The auctioneer, Mr. Kellock, made a point of the fact that the steamer was built of iron, "since an iron steamer of her age would be better than a steel steamer of the same age."

The Freight Market.

The amount of tonnage showing for December loading is very small, and shippers are finding it very difficult to fill their orders, says the City Editor of the *Morning Post*. The tone in the Eastern section is particularly strong, and some exceptionally high rates have been paid to both French and Italian destinations. This business generally goes to neutral owners, there being very little British tonnage free just now, and it certainly must be admitted that a freight of £12 per ton on the deadweight basis from Bombay to the Mediterranean, which compares with as many shillings before the war, is a very severe handicap for shippers, and the cause of a good deal of uneasiness among the consuming population.

PROHIBITED EXPORTS.

The Greek List.

Reference was made last week to the published list in a supplement to the *Board of Trade Journal* of articles the exportation of which is forbidden in certain countries. The following is the Greek list, which is compiled from information received up to November 20, 1916:—

Acorns and acorn-cups; alloys of metals of which the exportation is prohibited; animals (except swine); slaughtered animals (raw meat); arms, viz.:—

Rifles, carbines, bayonets, and cartridges of the following systems:—Mannlicher-Schonauer, Bulgarian Mannlicher, Turkish Mauser, Gras, Martini, Martini-Mausier; revolvers and cartridges of the 1873 and 1893 patterns, Bayard, Colt; sabres of artillery drivers and cavalry;

Beer; benzine (motor spirit); bladders, entrails, casings and sausage skins; bones of all shapes, whole or in pieces, and bone ash; boots (military);

Capsicums and peppers; carborundum of all kinds (see under emery); cartridges (see under arms; cartridge cases in general for small arms and artillery; casein; casings and sausage skins, bladders and entrails; cereals; cheese; chrome ore; coal (except bunker coal); cod, salt; coffee; colours and colouring materials; "conserves"; preserved foods; copper ore; copper sulphate; cork and cork dust; cotton and its derivatives;

Drugs; Emery; corundum, natural and artificial; alundum and carborundum of all kinds;

Ferrochrome; fibres, vegetable, and tissues made thereof; field glasses; flour (except flour derived from wheat delivered for that purpose before the publication of the Decree of July 20, 1914); foods, preserved; "conserves"; forage of all kinds;

Gold bullion in bars or sheets, etc;

Harness (articles of) for artillery and cavalry; hides, undressed, of cattle, buffaloes, and horses, and skins of calves, pigs, sheep, goats, and deer; also such hides and skins, dressed, suitable for making saddlery, harness, or military boots;

Instruments, surgical; intestines (entrails), bladders, casings, and sausage skins;

Jute sacks;

Leather (see under hides); lubricating oils (mineral);

Manganese, raw and calcined; meat, raw (slaughtered animals);

Oils (see under benzine, petroleum, lubricating oils, olive oil); olives.

[NOTE.—It is understood that the exportation of olive oil and its products (such as soap) from Crete is permitted.]

Ores—of chrome, of copper, of tin;

Petrol (benzine) (motor spirit); petroleum; potatoes; preserved foods; "conserves"; pulse in general;

Rattans; rice;

Sacks (jute); searchlights and parts thereof; skins (see under hides); soap; soda; sugar; sulphate of copper; sulphur of all kinds; surgical instruments;

Telephone apparatus; tin and tin ores, tin chloride; tissues made of vegetable fibre;

Vegetable fibres, and tissues made thereof;

Wool; woollen yarns.

A Law of February 27, 1915 (o.s.) authorised the Greek Minister of Finance to prohibit the export, re-export, transit, or transshipment of articles which may be considered as contraband of war, absolute or conditional. His Majesty's Minister at Athens has reported that this prohibition has been brought into force by Ministerial Order, and that it applies to everything which appears on the contraband list of any belligerent.

A Supplement to the *Board of Trade Journal* of November 30 contains complete lists of articles which, according to the latest information received by the Board of Trade, are prohibited to be exported from Roumania and Russia.

THE NEAR EAST.

Any Newspaper or Bookstall in the United Kingdom can supply copies of the NEAR EAST every Friday morning.

Should any difficulty be experienced in obtaining the paper, a post card addressed to the Manager 1-17, Devonshire Square, London, E.C., will oblige.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The general tone of the market has continued healthy, but, owing to the conditions being very abnormal, business during the week has been somewhat irregular. Although there is very little belief in lower values in the near future, the fluctuations in futures in Liverpool and New York have a rather unsettling influence upon trade generally. Buyers have found producers of yarn and cloth difficult to deal with, and numerous firms have quite as much work on hand as they care to entertain in view of the uncertain outlook and the fact that the output of the machinery in, say, six months' time is quite unknown.

The market for cloth continues to derive considerable support from the active demand from Egypt, and although business ebbs and flows, the general offtake from day to day has been encouraging. Shippers are finding they have to pay much stiffer rates for all kinds of sized goods than a week or two ago, as makers have now more work to go on with. Printed and fancy goods have attracted a fair amount of attention. Each mail contains good remittances, and the natives abroad seem to be in a very prosperous condition.

After a rather quiet demand for India, an increased inquiry has again shown itself, a feature of interest being more offers in shirtings for Calcutta, with fair sales where producers or merchants have been in a position to accept a little below full prices. Some useful orders have also been secured for Madras. No general flow of business can be recorded for China, and limits from the other side are rather slow in being raised, especially in grey standard goods.

Some advices from South America are not quite so promising. The strength of manufacturers of cloth is seen in the way sellers present a bold front to buyers when business is offering, and there is certainly no running after orders. American yarns for home use have been in steady demand, and late rates are well held. Prices do not come down when futures fall, but sometimes quotations are advanced when the raw material is dearer. There is a tendency, therefore, for margins to widen. Bolton spinners have been strongly held owing to the encouraging engagements of producers, but no weight of trade has been done.

Although strike notices are now being given out by the operatives in the cardroom department of the trade, which would mean a stoppage of the mills at the end of next week, there is every probability of an amicable settlement within the next few days. It is pretty certain that the Government Committee on Production will intervene if the masters and the trade union officials cannot come to terms. The market, so far, has been quite unaffected by the dispute.

OBITUARY.

Mr. Otto Baerlein.

The death is announced of Mr. Otto Baerlein, Serbian Consul, and senior partner in the firm of Baerlein Brothers, spinners, doublers, and merchants, of Blackfriars Street, Manchester, and of the Croft Street Mills, Gorton, which took place at Osborne House, his Alderley Edge residence, on November 18, in his sixtieth year. Mr. Baerlein was born at Furth, in Bavaria, but left home at the age of seventeen to spend a number of years first in Italy and then in Spain. Of the languages of both of those countries he is said to have acquired a perfect mastery.

Mr. Baerlein came to Manchester in the seventies in order to become associated with the firm founded there by his father in the 'fifties (says the *Textile Mercury*), and not many years afterwards was appointed Consul for Serbia, an office he fulfilled to the last. At one time he was president of the Consular Association. In public life he took no active part, but many charities will remember him as one of their most generous supporters.

TRADE NOTES.

Openings.

The Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), Egypt, invites tenders for the supply of uniforms, cloth, white and khaki drill, saddlery, accoutrements, furniture, enamel ware, leather, boots, paints, oils, tar-bushes, cotton shirts and drawers, blankets (woollen), and miscellaneous stores. (December 10).

The Egyptian Ministry of Finance invites tenders for the supply to Ports and Light-houses Administration, Arsenal, Alexandria, of iron, steel, etc., required for the financial year 1917. (December 22.)

The Collector of Customs at Valletta reports that a firm at Valletta, whose establishment is one of the most important on the island, desires to secure the representation of United Kingdom manufacturers of straw hats, cloth, knitting wool, canned goods, pottery, etc. United Kingdom manufacturers of the goods mentioned, and exporters of U.K. goods, desirous of being represented in Valletta, may obtain the name and address of the firm referred to on application to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.

Licenses to Trade.

Mr. V. R. Comas, 16, rue Tewfik, Alexandria, has been granted a licence to trade in Egypt, with the British Empire and with Allies of Great Britain, in accordance with the terms stated in Section B. of the notice published in the *Journal Officiel* of January 13, 1916. No. 4 bis.

UNITED STATES AND THE HIDE TRADE

The attention of shippers of hides is invited to the following:—

New and simplified regulations governing the disinfection and importation of hides, based on investigations in recent years, have been promulgated by joint action of the United States Treasury Department and the Department of Agriculture, to become effective January 1, 1917. Under these regulations the most stringent requirements are those for the exclusion of anthrax. The other diseases against which safeguards are established are foot-and-mouth disease and rinderpest.

Regulations are printed for the first time governing disinfection and admission of hair, wool, bones, horns, and hoofs. Hides from countries not shown by United States consular agents or official veterinary or sanitary inspectors of the countries to be free from anthrax, if such hides are to be admitted on certificate, must be certified to have been immersed in a 1-to-1,000 solution of bichloride of mercury for twenty-four hours instead of thirty minutes, as under present regulations. Hides in bales unaccompanied by certificate of freedom from anthrax, rinderpest, or foot-and-mouth disease, or by certificate of disinfection, will be admitted if such bales have been whitewashed under United States consular supervision, and the importer agrees to ship them in customs-sealed cars to a tannery provided with adequate facilities for disinfection, and to disinfect them in accordance with requirements of the Bureau of Animal Industry of the United States Department of Agriculture under supervision of an agent of that bureau. Sun-dried hides from countries certified to be free from anthrax will be admitted without disinfection.

PRODUCE REPORT.

LONDON, November 30.

Currants.

The demand during this past week has been good, although the bulk of business done has been for more or less small quantities, the hand-to-mouth policy to which allusion was made in last week's report being apparently still in favour. Prices all round are firm.

Sultanas.

The market has been fairly active with business done mostly in Afghanistan and new Australian fruit. The few available Greeks, new crop, are firm at the late high rates.

Dates.

There has been a better demand for all kinds, with an apparent preference for fine qualities of Persian and Egyptian.

Seeds.

Linseed is much firmer, and good business was done in London-Calcutta spot and afloat at 110s., whilst December-January is quoted 111s. For Bombay ordinary, November-December, 111s. was paid, with small ditto 110s. Rapeseed continues very firm, Toria being quoted at 89s. for December-January shipment, and Ferozepore, bold, November-

December, 88s. 6d. Cottonseed is firm, Sakelarides, loading, offered at £19 per ton. Mustard-seed, new, comes in the market slowly, finding only a moderate sale at current rates. Rangoon beans show a further advance on the week, and are now quoted at £39 per ton spot lots; whilst for forward shipment quotations are a little dearer.

Oils.

Linseed oil is very firm for spot pipes at £53 10s.; barrels ditto £54 10s., landed terms. Cotton oil is firmly held; crude spot pipes at £49; and barrels sweet at £58 to £59, as to make. Rape oil has also been very firm, ordinary brown, naked, spot, £51, whilst English refined, barrels is quoted £54 to £56. Olive oil is unchanged.

Oilcakes.

Cotton cakes—Egyptians are not available on spot, but good business was done during the week in parcels for shipment at prices between £13 2s. 6d. and £13 7s. 6d., ex-ship. English makes can be obtained only in very limited quantities at about £14 to £14 5s. per ton. Linseed cakes—stocks are much depleted, and prices very irregular. Best London made is selling between £16 15s., and £17 5s., whilst American is offered at £16 to £16 10s. per ton.

Maize germ meal is scarce, especially African. English makes, in limited quantities, are offered at £16 10s. to £16 15s.

EGYPTIAN INDUSTRIES.

At the last meeting of the Commission of Commerce and Industry, at Cairo, after a discussion on the question of the manufacture of paper and pulp from Egyptian products, the Commission (says the *Egyptian Gazette*) considered the report (which was adopted) of M. Bourgeois on the introduction into Egypt of the manufacture of ceramic pottery, and a letter was read from Bahari Bey on attempts to imitate ancient pottery, of which some very good specimens were on view in the industrial exhibition lately held in Alexandria. Mr. Twelves' report was next considered on the sisal industry for the manufacture of cordage. This is a promising industry, which will lead to the profitable cultivation of arid land.

Mr. Sidney Wells, the Vice-President of the Commission, then presented a very interesting report on industrial and commercial education in the country, as a result of which, in order to be better informed on the subject, the Commission decided to visit the Polytechnic School at Giza, the School of Arts and Crafts, the Model Workshops at Boulac, and the School of Commerce.

In a recent report on the trade of Chile in 1915 it was shown that exports to Egypt during the year amounted to £497,000, as compared with £208,000 in the previous twelve months.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

CONTRACTORS TO GOVERNMENT.

GREEK INSURANCE COMPANIES.

Marine, Life, and Fire Business in 1915.

An interesting note on the operations of life, marine, and fire insurance companies in Greece in 1915 has just been published, and from it we learn that during the year the premiums paid were as follows:—

	Drachmas.
Marine.....	1,370,879
Life	7,190,086
Fire	3,135,439
	11,696,404

A special tax is levied on insurance premiums. The basis of the tax on life operations is one-fifth per cent.; on marine insurance premiums the taxation is three per cent. Fire insurance companies pay a tax of three per cent. on all premiums collected, and an additional tax of two per cent. on premiums for the upkeep of the fire brigade, which is a Federal organisation, with a personnel composed of citizens called for military service and assigned to that duty. The companies are permitted to increase their premium charges to an amount sufficient to cover this tax.

No Greek company undertakes unemployment insurance, no provision is made against old age, there is no compulsory health insurance or workmen's compensation.

STANDARD TIME IN GREECE.

Although there has not yet been any agitation in Greece for daylight saving such as has been practised in several European countries during the last six months, the Hellenic Kingdom has carried out on its own account a reform that has had most salutary effects. On July 28, 1916, all clocks in the country were set forward twenty-five to thirty minutes, depending upon the difference between mean local time and astronomically correct time at Athens. This procedure, in addition to effecting a daylight saving of some half hour, has had the result, even more important, of bringing Greece within the zone of Eastern European time.

With the completion of the junction line that will make possible direct railway communication between Athens and the other capitals of Europe, the time question assumed great importance. It is now thought to be satisfactorily settled. The difference between the longitude of Athens and of Greenwich is 23° 31' 51"; according to the national Observatory at Athens the actual time difference is 1 hour 34 minutes 51 seconds.

A PICTURE OF MONASTIR.

Monastir, which stands some 2,000 feet above the sea, and is overshadowed by wooded mountains rising 8,000 feet and more, is in the middle of a fertile plateau, one of the richest countrysides in the Balkans, and like most good patches of land in the peninsula, devoted to the cultivation of luxuries rather than of foodstuffs. Tobacco, mulberry leaves for silkworms, and fruit are the chief products of the uplands of Monastir. The fertility of the country is at least one reason why the vilayet of Monastir has been coveted by so many different nationalities, Serbian and Greek, Bulgarian and Albanian, to name no more, says the *Daily Telegraph*. The population is of such diversity of race that any ownership must be unsatisfactory to some appreciable fraction.

The settlement which gave the town to Serbia has, so far as the inhabitants themselves are concerned, worked well. The commercial importance of Monastir has steadily increased of recent years, and it is estimated that in time of peace trade to the value of £500,000 a year passes through the town. In spite of these advantages of communication and commercial prosperity, there are disadvantages in choosing the place as a base or a seat of administration. Its situation in a depression among the mountains is not healthy. In the autumn and winter all the neighbouring country is liable to become sodden and waterlogged. The consequences are such as might be expected. Malaria is a besetting plague, and agues and similar diseases claim their victims.

RUSSO-BRITISH TRADE.

Inauguration of New Chamber of Commerce.

Lord Robert Cecil, in proposing the toast of the Russo-British Chamber of Commerce, at the inaugural luncheon, held in London, on Wednesday, said Russia had enormous natural resources, and we had a great industrial history, great engineering training, and great commercial position, and it was from a union between the two countries that the prosperity of each might be secured. If we were to develop our commercial relations to the highest point, the first thing we had to do was to understand one another. It was of great importance that British firms should have their representatives in Russia.

He believed the nation that relied exclusively on its Government was on the road to decay and degeneration. Therefore, he thought it was essential for British commerce that it should establish its own connection in Russia, and not merely rely on that official connection, which, however admirably organised, would never take the place of individual effort. He should like to see a visit here of Russian commercial men, and he would like to see representatives of our commerce visiting Russia. He trusted that the efforts which had been made by some of our great manufacturing firms would not be abandoned, but that they would train and educate young men, not only in the Russian language, but in Russian traditions, so that they could root in Russia the foundations of British commerce. It was for gentlemen whom he was addressing, the heads of British industry, to carry out this policy.

DATES FROM THE SUDAN.

For some time past the Imperial Institute has been inquiring into the possibility of finding a market in this country for dates from the Sudan, and with the import preference given last spring to dried fruits of the British Dominions, as against those from foreign countries, the question assumed a new importance. Samples of dates from the Halfa province of the Sudan have now been examined at the Imperial Institute. The results were most satisfactory, and as the opinion of a leading firm of importers of dried fruit to whom the dates were submitted was also favourable, a small trial consignment of dates was obtained from the Sudan and offered on the London market. This was quickly disposed of at a good price, and the Imperial Institute has accordingly suggested to the Sudan Government that a larger consignment of these dates should now be sent to London for sale.

There are many varieties of dates in the Sudan where the date palm flourishes freely as far south as Khartoum. Those now introduced to this country by the Imperial Institute resemble Persian Gulf dates, and were disposed of at about the same price. The present price of all dates is abnormally high, but there seems to be no reason why, after the war, Sudan dates should not still be able to compete with dates from Persia. Samples of Sudan dates can be seen in the Public Exhibition Galleries of the Imperial Institute, South Kensington, London, S.W.

SWITZERLAND AND ROUMANIAN OIL.

The entrance of Roumania into the war has hit the neutral Swiss, whose supplies from Roumania came across Austria-Hungary. The other neutral countries received only very limited supplies, if any, from Roumania, says the *Financier and Bullionist*. Switzerland is, however, reported to be well stocked with American oil imported through the ports of France and Italy. The proposal to admit Roumanian oil free of duty into Russia for industries more accessible to Roumanian fields than to Baku is said to have been well received in all Russian circles.

NEWS FROM ALL SOURCES.

The United States Consul at Patras telegraphed to Washington on November 4:— "The currant market has advanced an average of 33 per cent. over the mid-September quotations. Merchants report 50,000 tons of fruit available, of which 40 per cent is inferior."

The following official notification is published in Malta:—"The importation of cattle from the Sudan will not, for the present, be allowed, except in cases in which previous permission for such importation has been obtained from the Superintendent of the Public Health."

Lord Robert Cecil states in Parliamentary papers that the latest available statistics as to the production of oil in Galicia are those for 1912, when 1,130,425 tons were produced. As regards Roumania, the production in 1912 amounted to 1,806,942 tons, and the estimated production in 1913 to 1,885,384 tons.

Importing firms at Khartoum include Law and Co., Ltd., who have also a branch at El Obeid; the general stores of Pasgianos, Mamakos and Co.; the Victoria Book Store; and Davies, Bryan and Co.'s drapery and outfitting stores, as given in the *Mercantile Year Book*. Benoists, the well-known caterers, are represented in Khartoum by Mr. C. Triantafyllou.

With reference to the question of the labour supply at Busreh, which was discussed in THE NEAR EAST last week, the Commerce and Industry Department of the Government of India is endeavouring to work out a scheme with the Army Department, under which advisory committees consisting of commercial men may be set up in the port to assist the military authorities.

It is reported that two big petroleum tanks belonging to the Burma Oil Company, which stood near the railway wharf at Marmogoa (Portuguese India), have been sold to the British Government and conveyed to Busreh to be set up there as reservoirs for potable water. The oil company has taken fresh material to Marmogoa for the construction of new petroleum tanks which will be erected near their tin factory at Vasco da Gama.

By order of the General Officer Commanding-in-Chief His Britannic Majesty's Forces in Egypt, dated September 13, 1915, the public were notified that persons leaving Egypt were prohibited from taking with them in gold sums exceeding in value £15 for each adult. The Egyptian Government having now decided to prohibit the export of gold, except under special authority from the Ministry of Finance, the above-mentioned order is no longer necessary and has been withdrawn.

The Mercantile Marine Service Association (Liverpool) have issued an appeal on behalf of British merchant seamen detained as prisoners of war in Austria-Hungary and Turkey. For some time the members of the association have privately assisted a number of these with a weekly contribution, and this special effort is to endeavour further to ameliorate their pitiable plight by sending them periodical gifts of provisions, and, as the funds permit, warm clothing. There are 2,000 merchant seaman prisoners, and it has been ascertained that they exist largely upon food sent them from this country.

Among British oil men who recently left Roumania are Mr. Alfred Rutherford, managing director of the Roumanian Consolidated Oilfields, Ltd., and other members of the staff of that company, says *Oil News*. "The following members of the staff have not left Roumania:—Mr. Thomas Masterson (chief engineer); the company's commercial manager, Mr. H. Mejer; the two refinery managers, Mr. Halperin and Mr. Guthrie; and the principal field managers, Mr. T. G. Hayward, Mr. J. A. Sullivan, Mr. T. O'Brien, Mr. Eric Rutherford and Mr. Harry Swift. In view of the fact that Mr. Alfred Rutherford is in London (or has been), we hope the directors will give the shareholders the latest information as to the position of the company's properties."

ENGINEERING NOTES.

Agricultural Implements and Plant for Russia.

A great deal of attention has been devoted in these columns to agricultural machinery and implements as they apply to Near Eastern and Russian markets. Here are some notes by the British Vice-Consul at Kharkov. He says that "although there will evidently be an enormous shortage of agricultural machinery in Russia, Mr. Blakey does not believe that the prospects of large sales of British machinery are very promising. Except in large threshing machinery, agricultural oil engines and fodder-preparing machines, the British type of machinery is unsuitable for Russian conditions. There is no doubt that Russian manufacturers, with the assistance of the present subsidies and, probably, higher tariffs in the future, will be able rapidly to increase their output, and satisfy the needs of the country to a very large extent, thus making it fairly independent of imported goods. German types of ploughs are already manufactured in Russia in very large quantities, and at an exhibition of agricultural machinery which was held in Moscow last year, remarkable progress was shown in the manufacture of all types of harvesting machinery. Many large works in Russia, which are at present engaged in producing war materials, will be able to be adapted for the manufacture of such heavy machinery as steam threshers, tractors, and oil engines.

American Competition.

"In a recent address on exports of agricultural machinery from the United States, the Chief of the Bureau of Foreign and Domestic Commerce referred to the Russian factory of the International Harvester Company, which is authorised by Decree to do business in Russia. This company receives bounties from the Russian Government on its machines, especially the more complicated machines manufactured in Russia. Machines imported from the United States enter free of duty. These special advantages are conferred on the company because of the location of its manufacturing plant in Russia. American implement makers have representatives in almost every city or town of importance in Russia, and two Russian agricultural associations have representatives at Chicago and Minneapolis to purchase direct. Long credits are the rule. The last payment is usually not made until after the second harvesting season."

Theodosia Port Works.

The British Vice-Consul at Theodosia writes (October 24) that the authorities may decide to purchase winches with new patent booms instead of the four movable lifting cranes which were originally proposed to be installed. As regards the proposal to have a fifty-ton floating crane permanently in the port, it is stated that this will probably not be obtained from abroad, as floating cranes are now being built at Theodosia. In this connection the Board of Trade calls attention to the restriction on the manufacture, etc., of winches.

New Petrol Regulator.

With the existing petrol famine any means devised to economise the consumption of this liquid fuel is a matter of general interest; for, as is well known, the scarcity of petrol is responsible for many inconveniences and dislocations experienced by the public at the present time in every-day life. One of the latest devices is a simple regulator by which the petrol supply to the carburetter is efficiently controlled. It consists of a quadrant, which is attached to the steering column just below the wheel, and a Bowden wire connection to the dashboard disc which is ordinarily used to regulate the richness of the mixture to the engine. This regulator enables the driver to operate

the disc from the steering column, and also allows him to become better acquainted with the best and most economical position for that regulator. The quadrant on the steering column is marked with three positions—start, slow and fast. With the lever in the start position, the richest mixture is, of course, being supplied. After the engine has been started the lever may be moved to the slow position, which closes down the jet needle slightly, reducing the proportion of petrol to air. As soon as the engine gets warm, and the driver is on the road, he will find that he can gradually open the throttle and manipulate the finger lever of this regulator between the points slow and fast, the object being to give the cylinder a full charge of air and petrol, whilst, at the same time, taking care that as much of the former and as little of the latter as possible is used.

Opportunity for Inventors.

A prize of 50,000 francs has been offered to the Société Nationale de Chirurgie de Paris by a donor, who wishes to remain anonymous, to be handed over to the maker of the mechanical apparatus which best supplies the place of the hand. The competitors must belong to allied or neutral nations. They are to present to the society maimed men who have been using their apparatus for at least six months; and the society will experiment with each apparatus on the men. The successful apparatus will remain the property of its inventor. The competition will be closed two years after the end of the war. The committee elected by the society invites competitors to communicate with M. le Secrétaire Général de la Société Nationale de Chirurgie, 12, Rue de Seine, Paris.

To Thaw Frozen Pipes.

A new electrical outfit which has successfully been employed for thawing out frozen water services will be of interest to municipal authorities, especially at the approach of winter. The apparatus consists of a gasoline engine connected direct with a generator, a switchboard, and a reel of cable, the whole mounted on a structural steel frame so that it can be handled as a unit. The four-cycle, four-cylinder gasoline engine is directly connected by a leather-link flexible coupling to a 20 kw. 40-volt direct-current generator. A voltmeter, an ammeter, a rheostat, and a single-pole knife switch of 500 amperes capacity are mounted on the switch board. The reel holds 500 ft. of extra flexible copper cable of 300,000 circ. mils. cross-section, in 100 ft. lengths. Each length is fitted with terminal lugs. The various parts of the equipment are securely attached to the steel frames, making the equipment easily portable. For service the equipment is mounted on a trailer of a ton-and-a-half capacity, which is hauled by a motor truck. The mounting is not permanent, and after the winter season the thawer will be removed and the trailer used for other purposes. To thaw out a service one pole of the generator is connected in the premises to the pipe between the meter and the street main. The other pole is connected with the nearest fire hydrant. Thawing is effected in from five to fifteen minutes after the current is turned on.

The death of Mr. William Henry Bale, civil engineer, took place at St. Thomas's Hospital, London, on November 10, after an operation. The late Mr. Bale, who was in his seventy-third year, had practised as a consulting engineer at 181, Queen Victoria Street, E.C., for many years, and at the time of his death was head of the firm of Messrs. Bale and Hardy. He was the consulting engineer to many gas and water companies throughout the south of England and in parts of Ireland. In 1870 he visited Sicily, the Sahara Desert, and parts of Egypt for investigating and preparing mechanical and other reports.—*The Engineer*.

THE BAGHDAD RAILWAY.

Reported Completion of the Taurus Tunnel.

On November 24 *The Times* published a message from its Amsterdam correspondent, stating that, according to a telegram from Sofia, the tunnel through the Taurus range on the Baghdad railway had been completed. "The subject" (says the paper) "merits further notice, for the Baghdad railway, when it is completed, will afford direct transit from Haidar Pasha (Constantinople) to Baghdad, and so realize the long-cherished German dream of a road, unbroken except by the Bosphorus, between Berlin and Baghdad, giving German soldiers, traders, and diplomats direct access to and ultimate control over the whole of the Middle East. India, too, loomed in the background of this splendid Teutonic dream.

"The piercing of the Taurus range would overcome one of the greatest obstacles, and, if the news were true, bring the Germans nearer the prospect at least of immediate touch with Persia and Armenia through the present rail-head at Nisibin and with Egypt through the Medina railway, which branches off at Aleppo. From this point of view our Amsterdam message is of the greatest interest to us and to Russia. The opening of the railway for the full stretch between Haidar Pasha (Constantinople) and Nisibin would also affect indirectly our forces in Mesopotamia, in so far as it would facilitate enemy transport in its earlier stages, but 250 miles of the great gap between the rail-head at Nisibin and Baghdad has still to be filled.

"Before the war there were several gaps in the Baghdad railway, which joins the Anatolian railway at Konia, and is thus connected with Haidar Pasha, opposite Constantinople. The first gap was at the Taurus range, the tunnel through which is now reported to be completed. This was roughly twenty miles long, and extended from Karapınar some thirteen miles south of Bozanti (645 miles from Haidar Pasha) as far as Doirak. It was the most difficult section of all, requiring several tunnels, eleven miles in all, the longest of which is a mile and three-quarters, and a viaduct some 220 yards long.

"A road passes over the mountains, through the Cilician Gates, at the Pass of Kuleh Boghaz, and meets the railway again a little east of Tarsus. Between Tarsus and Namurie—120 miles—the line runs and continues to the Amanus range. Here was a second gap before the war, some six miles long. The Bagtche tunnel, which was designed to fill the gap, was reported by the enemy to have been completed last year. Assuming this to be so, the line would be continuous from Doirak, via Adana, Osmanie, and Namurie, to Mauslimie, just north of Aleppo, where the line divides, one portion going to Aleppo and Damascus, and the other proceeding to Jرابلس, where it meets the Euphrates. It then proceeds easterly to Rus-el-Ain and possibly to Nisibin, the present rail-head, about 600 miles from Konia.

"Between Nisibin and Jibbara, which is connected by rail with Baghdad, is the third gap of some 250 miles. The rails on this section have not yet been laid, and it is doubtful if they have been collected for the purpose."

The Russian Chamber of Exports has received a communication from the Committee for the Development of Russian Trade in Cairo saying that the latter has received many inquiries from both Egyptian and Sudanese merchants directed towards opening business relations with Russia without the intervention of agents. As far as the Egyptian merchants proper are concerned, what chiefly interests them is the prospect of exporting cotton to Russia.

ENEMY DEBTORS.

Colonel Ivor Philipps asked the Chancellor of the Exchequer in the House of Commons on November 29 if he would say what steps, if any, had been taken to establish a clearing-house in this country where British companies, firms, and individuals, being creditors of enemy firms and individuals, could receive payment of their debts from the moneys belonging to enemy firms now in the hands of the Public Trustee, irrespective of whether the particular enemy debtor firm had assets in this country.

Mr. McKenna said the suggestion had frequently been considered, but the establishment of such a clearing-house as this had been found to be impracticable while the war continued, unless it was proposed to confiscate the property of individual enemies in this country for the benefit of creditors of other enemies. Such a step undoubtedly would lead to reprisals and a further complication of the situation, and any scheme of the character proposed required the consent of the Departments concerned and the assistance of the enemy Governments.

In a further reply to Colonel Ivor Philipps, Mr. McKenna said that the debts returned by British creditors under the Proclamation of September 7, 1916, were being recorded by the custodians of the enemy banks. The returns at present numbered 17,500, and amounted to £79,000,000. Returns were daily being received. The approximate value of assets returned to the Public Trustee was £10,000,000.

GERMANS AND SUEZ CANAL.

Sir Joseph Ward, Finance Minister of New Zealand, made some interesting remarks concerning the use of the Suez Canal after the war, in the course of a lecture at Gresham College Hall, London, on Tuesday, on "The United Kingdom and her Overseas Dominions after the War."

A scheme must be evolved (said Sir Joseph) which would lead to an expansion of trade and put us in a position to negotiate with any country that had barriers up against us. It would be an act of madness to leave the United States out of any such arrangements.

The Germans had never in time of peace allowed us to use the Kiel Canal. Why should we, after the war, allow them to use the Suez Canal? He would deny them also the use of our coaling stations, and would demand from Germany ton for ton for sunken ships. Emigration after the war should be within the Empire. He hoped financiers would study the needs of the Empire after the war and lend money rather to the Dominions than to the enemies of the Empire. The historian would say that this war was a necessity and an inestimable blessing to humanity and to the British Empire.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the days mentioned and as compared with the same days last year:—

	1915.	1916.
	Francs.	Francs.
November 21	160,000	290,000
November 23 and 24	520,000	300,000
November 25 and 26	460,000	290,000

NEW SHIPPING COMPANY.

The company formed to give effect to the fusion of interests between the Anchor Line (Henderson Brothers), Ltd., and the Donaldson Line, Ltd., announced in our issue of October 21, has just been registered at Edinburgh under the title of Anchor-Donaldson, Ltd. The capital is £250,000, divided into 250,000 shares of £1 each. The objects for which the company is established are: To adopt agreements (1) with the Donaldson Line, Ltd., and Donaldson Bros., Ltd., and (2) with the Anchor Line (Henderson Brothers), Ltd., and Donaldson Brothers, Ltd., to acquire the steamships *Athenia*, *Cassandra*, *Letitia*, and *Saturnia*, and to carry on the business of shipowners, etc. The signatories, each subscribing for one share, are: Charles Donaldson, 58, Bothwell Street, Glasgow, shipowner; Norman P. Donaldson, 58, Bothwell Street, Glasgow, shipowner; and W. Betts, 58, Bothwell Street, Glasgow, shipowner. The company is private. The first directors (to number not less than six nor more than eight) are Sir Alfred Booth, Messrs. R. Clark, A. C. F. Henderson, C. Donaldson, W. B. Donaldson, N. P. Donaldson, and C. T. L. Donaldson. The registered office is at 58, Bothwell Street, Glasgow.

Recent reports state that only 110,000 ozs. of attar of roses were distilled in Bulgaria this year; peace time production is 200,000 ozs.

ON 'CHANGE.

(By Our City Correspondent.)

THROMORTON STREET,

Wednesday Evening.

We have had another fairly interesting week in Egyptian shares, and the market is closing with a strong tone to-night, on renewed buying orders from Egypt, in addition to a good many local inquiries here.

National Banks further rose during the week from 14½ to 14¾, closing at 14¾. Agriculturals have been very firm, and the price has improved to 5½. Delta Light have jumped about ¼, to 5½, the floating supply having been absorbed.

Aboukir are wanted in the neighbourhood of 17s. 6d., but sellers are scarce. Behéras are wanted at 6½, without finding sellers. Some small business has been done in Delta Lands in the neighbourhood of 9s. Gharbieh Land are inquired for at about 18s. New Egyptians have been a good market at about 9s. 3½d., the floating supply of shares having been considerably reduced. Sidi Salem and Union Foncière are still firm spots; but sellers are asking higher prices, and business is at a standstill. Salt and Sodas are again slightly firmer at 24s. 3d. bid.

Khedivial Mails, after being quieter, are in demand again to-night at about 35s.

Greek securities, in spite of the political tension at Athens, remain very firm; but there is very little business going on. Sellers are scarce. Rentes are exceptionally rather quieter at about 42.

Shell Transports were quiet, but steady, at 5½. North Caucasians and Ural Caspians were idle, but Spies were dealt in a few times around 12s. 6d. Russian Petroleum receded to 1s. 9d. Roumanian Consols displayed fair activity, but after changing hands over 11s. were finally unaltered at 10s. 9d. Traians were weak at 3s. 3d. Anglo-Egyptian "B" kept steady at 11s. 9d., while Suez were idle.

OIL OUTPUTS.

Anglo-Egyptian.—Gemsah, for the week, 18 tons (previous week 24 tons). Hurgada, for the week, 935 tons, against 3,751 tons.

Black Sea Amalgamated.—Week ended November 25, 21,704 poods (350 tons).

Maikop Combine.—Week ended November 25, 17,205 poods (277 tons).

Maikop Pipeline and Transport.—Received for pumping, week ended Nov. 18, 24,701 poods (398 tons).

British Maikop.—Week ended November 11, 2,575 poods (41 tons). Week ended November 18, 2,202 poods.

Spies.—Week ended November 26, including 3,445 poods from ambars, 162,585 poods (2,622 tons). Total, 7,595,995 poods (122,516 tons), against 12,215,510 poods (197,024 tons).

North Caucasian.—Week ended November 8/21, 618,885 poods (9,982 tons).

Bibi Eibat Oil.—Week ending November 12, 53,200 poods, or 858 tons.

Cheleken Oilfields.—Fortnight ended November 18, 566 tons.

European Oilfields.—Week ended November 19, 77,700 poods.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to October 30, 1916 (New Style: January 14 to October 13, 1916):—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross Receipts, Sep., 1916	Drachmæ. 3,505,545	Drachmæ. 2,971,000
Do. do. do 1915	3,084,821	1,894,000
Estimated Receipts for 9 months (Law of Control)	21,675,000	8,025,000
Actual do. do. 1916	26,621,906	21,156,000
Do. do. do 1915	27,258,968	17,991,887
Difference between estimated and actual receipts for 9 months	1916 + 4,946,606 1915 + 5,833,968	+13,131,000 + 9,966,887

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49.15 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

A Central News Athens message, dated November 28, states that the International Financial Board of Control has demanded a Government guarantee for the latest loan, stipulating that some other Customs shall be substituted for those of Kavalla. The Government is undecided on the subject at present.

NOTES OF THE WEEK.

The Roumanian tragedy pursues its course. An attempt to stem the Austro-German advance on the River Argesh failed, as it was bound to fail, unless measures had been taken to place it in an adequate condition of defence before the retreat from the Carpathians began. The Russians appear to have hurried forward some reinforcements, but these would be of little avail, unless there were positions awaiting them to be held. If our Allies are relying on checking the enemy merely by rearguard actions, they will be in danger of losing their whole country. Somewhere all this time every available pair of hands ought to have been employed in preparing a formidable line of defence against which von Mackensen, who now commands the operations against Roumania, would hurl his troops in vain. It was hoped that such a line would protect Bucharest; but the forts have been dismantled, and the city is now in the hands of the enemy. With it the Germans have captured Ploeshti, and, it is to be feared, the greater part of the oilfields. The hope of the Roumanians now centres on a stand at the Buzeu River.

If the German report that the Roumanians failed to destroy the bridges over the Argesh River be true, it is evident that our Allies have had to withdraw in considerable haste. In these circumstances some anxiety will be felt lest the destruction of the oilfields prove to have been delayed too long. So far the enemy has secured little beyond a large extent of territory. It is fertile land, and capable of producing much grain; but the crops are no longer there, and much may happen before the next harvest can be reaped by or for the Germans. On the other hand, an oilfield in working order is the one thing, apart from food supplies, that the Central Powers need, and if the Roumanian fields fall into their hands intact, their capacity for protracting the war will be greatly increased. With the knowledge that reinforcements are continually on their way, it may be hard for the Roumanians to set about destroying the second largest asset of the State, but if they fail to take the step betimes and to carry out the work thoroughly, they will be contributing to their own undoing. This is not a time for sentimental considerations. Already these have played too large a part in determining Roumania's action in the war, and she must now allow herself to be guided by others.

It is impossible to follow the fortunes of the Roumanians without realizing that the fate of the Salonika army is linked up with them. Landed originally for the

purpose of saving Serbia from being overwhelmed, the Allied forces remained to bar the enemy's road to the Ægean. They were then strengthened with a view to carrying out an offensive which would drive a wedge in between the Central Powers and their vassals, Bulgaria and Turkey. For reasons which have not been divulged this programme was indefinitely delayed, and the opportunity for an attack on Bulgaria on two fronts was lost at the time of Roumania's entry into the war. The Roumanians were allowed to follow their own bent without reference to the requirements of the Allies' strategy, and, as the event has proved, they have squandered their military strength without advantage to themselves or to the Allied Powers. If Roumania is overrun by the enemy, a wedge between the Central Powers and Bulgaria becomes out of the question, and the object to be served by the Salonika force becomes by no means apparent. There is nothing to show that it possesses either the necessary strength or the confidence to take upon itself single-handed the conquest of the Balkans. It has spent many valuable months merely containing an enemy force at an expenditure of men and material wholly disproportionate to the results obtained. In spite, therefore, of the eagerness with which the need for action in the Balkans has been preached in these pages, while there was still time for it, we realize that the situation as a whole has now to be reviewed as a result of the appalling series of blunders which have dogged the handling of the Near Eastern problem by the Allies.

Thanks to consistent mismanagement, the position in Greece at last constitutes a grave menace to the Allied cause. Criticism of the conduct of foreign affairs is notoriously undertaken at a disadvantage, inasmuch as so many links in the chain cannot be revealed to the public. We can hardly suppose, however, that the Allied Governments can profess extreme satisfaction with their handling of the problem. To the onlooker it seems as if the Greek question had never been fairly and squarely faced at any stage. Allied diplomacy, unless we are mistaken, has been content to live from hand to mouth, and to deal with each fresh development as it arose, regardless of the trend of its policy or its bearing on other questions. There is no need to recapitulate here the whole of the story; but we find it difficult to believe that at any point of the proceedings it was necessary to contemplate the prospect of Allied troops and marines being fired upon and killed in the streets or outlying quarters of Athens. And yet this is what has happened as the result of the failure to tackle the situation with knowledge and foresight.

Two alternatives confronted the Allies: either Greece was a negligible quantity, incapable of interfering with the Allies' plans, when once they had taken over Salonika and the surrounding territory, in which case there was no need to take her pinpricks seriously; or Greece was a potential danger, and as such had to be scotched, once and for all. The policy pursued by the Allies, as far as can be made out, has been to regard Greece as a serious menace, but to refrain from taking the obvious measures to render her harmless. Owing to this failure to act with decision and, we must add, straightforwardly, King Constantine has been able to strengthen his position in the country as a rival leader to M. Venizelos; he has had time to work upon the feelings of the army and has backed German intrigue among the civilian population. He and the rest of the anti-Entente party finally felt themselves strong enough to proceed to any lengths. They settled down to a policy of thwarting the Allies at every turn, and, encouraged by the milk-and-water treatment meted out to their offences—for it may be doubted whether even Admiral du Fournet's efforts to stiffen the proceedings impressed the Greeks very much—prepared to offer military resistance to the half-hearted police measures which the Allies' executive officer saw fit to adopt.

It is a matter for regret that Admiral du Fournet should have spoiled his record by a movement which was at best a makeshift between policing and military action. The facts before him and before the world were that the Royalist section of the Greek Army, being thoroughly out of hand, had sworn to resist all efforts on the part of the Allies to take over any more of Greece's war material; reservists had been armed and collected in Athens, while Venizelists were being visited or threatened with all manner of pains and penalties. In the face of these aggressive manifestations Admiral du Fournet landed a force only 3,000 strong and marched on Athens. Now, an elementary knowledge of the Greek character would have told the French Admiral that the Greek is of an impulsive nature, and that those who were causing him trouble in Athens, although terribly anxious to avoid real warfare, were just the people to wax very bold where they outnumbered their opponents by five or ten to one. As the Allied force approached Athens they were fired on by Greek troops, who had been placed in position for that purpose. This essentially Greek reception would not have mattered very much if Admiral du Fournet had been prepared for it. If behind him the Allied Fleet in Phaleron Bay had stood by with its guns trained on Athens, Greek resistance could have been disposed of in a very short time. A few shells were fired, and there was a hurried suggestion and an equally hurried acceptance of an armistice. Still more amazing, Greek troops were allowed to escort the Allied force back to the harbour.

By this action the Allied cause has been badly served. The Entente Powers, it is true, have no quarrel with the Greek nation, but they have a very just case against Greek troops who open fire on landing detachments. If the telegrams from Athens represent the situation accurately, the Greek army on this occasion was posted in positions easily located, which could have been promptly reduced by shell-fire. It may be that Admiral du Fournet was instructed to avoid warlike measures. In such circumstances he ought to have declined the undertaking, or, after having been fired upon, ought to have allowed things to take their own course. By agreeing to an armistice which left the Greek army "top dog," he has rendered the situation still more complicated. No steps that can now be taken by the Allies will be as efficacious as would have been the immediate acceptance of a state of hostilities after the first shots had been fired by the Greeks. Admiral du Fournet could have gone straight through with his uncomfortable task and settled it, leaving Allied diplomacy to shake its head or wring its hands.

The position created by the events in Athens has been termed by Lord Robert Cecil, speaking on behalf of the British Government, "one of extreme gravity." He went on to add: "In spite of the formal and repeated assurances of the Greek King and Government that no disturbances would be permitted, a most treacherous and unprovoked attack was made upon the Allied detachments landed by the French Admiral on Friday last, and many casualties have resulted. . . . His Majesty's Government consider that the responsibility of King Constantine and his Government are deeply involved in this matter, and they are considering, in conjunction with their Allies, immediate measures to secure a radical solution of the situation which has now arisen." The captious will be tempted to wonder whether the late British Government has had occasion to consider Greek affairs during the last two years, or whether its views on King Constantine are still determined solely by the fact that he was a frequent visitor to England and known personally to many of them. To talk of formal and repeated assurances of the Greek King who has betrayed a sworn Ally, who has violated the spirit and letter of his constitutional oath, who has broken any undertaken extracted from him during the last few months sounds to the unsophisticated lay mind as somewhat of an anachronism. The proposed "radical solution" will be awaited with interest. The actual problem to be solved can be stated in very few words; it is that at the first opportunity the Greek Commander-in-Chief and the troops acknowledging his leadership will be used to stab the Allies in the back. A radical solution, therefore, must either eliminate the possibility of that first opportunity, or it must eliminate the Commander-in-Chief and his army. At the same time, of course, the fact that Allied troops have been done to death in Athens cannot be lost sight of.

In the meantime, it is to be feared that the Greeks in Old Greece who are known to be friendly disposed towards the Allies and, with M. Venizelos, wish to see Greece play an honourable part in the European struggle, are being grossly maltreated by the King's followers. In view of the events of last week it has been impossible for Admiral du Fournet to give them the protection he had promised. We cannot be quite sure what is actually happening in Athens at this moment, but as the King and his reservists have the upper hand and, presumably, a free hand, there is unfortunately little reason to doubt the accuracy of reports of murder, pillage, and worse. It is fairly evident, therefore, that the "radical solution" promised by the late Under-Secretary of State for Foreign Affairs will not be provided by the first of the alternatives mentioned above. Every day is of importance, and it will be a matter for regret if the Ministerial crisis in Britain interposes a moment's delay in bringing King Constantine, his Government, and his army to book.

In this unhappy business Britons cannot lose sight of the fact that their quarrel is not and has not been with Greece or the Greeks as a nation, but with a clique which is as anti-Greek as it is anti-Entente. Whatever justification the King and his party can find for their hostility to the Allies, there can be none for their barbarous treatment of their own fellow-countrymen, the persecution of Venizelist officers, and the virtual reign of terror that followed Admiral du Fournet's withdrawal from Athens. In this connection we cannot but feel the deepest sympathy with the Greek Ministers accredited to Great Britain and France respectively and with the Greek Consuls in England who have felt compelled to resign their posts in protest against the actions of their Sovereign and Government. M. Gennadius has been associated with English life for so long, and occupies such a high place in English esteem as an able diplomatist, a talented man of letters, and a most agreeable man of the world, that he must have felt his position acutely. He has served his country well, and in the happier days in store will find in authority those who are better able to appreciate his services than the powers that now reign in Athens.

The new Russian Premier's first speech to the Duma was characterized by a straightforwardness of diction which is in welcome contrast to the customary circumlocutions of diplomacy. Speaking at the Guildhall Banquet on November 9, Mr. Asquith had ventured a cautious hint that Great Britain was gradually coming to the opinion that the retention of the Turks in Europe would be a mistake. M. Trepoff has used different words:—"An agreement which we concluded in 1915 with Great Britain and France, and to which Italy has adhered," he said, "established in a most definitive fashion the right of Russia to the Straits and Constantinople." The existence of the agreement was widely known, not only in the signatory countries, but also to our enemies. Whether it was wise to come to such an arrangement at such a time may be an open question; on the other hand, it may have been inevitable. But as the agreement was reached, it would, perhaps, have been the better course to pursue to have acknowledged it and to have justified it. The Allies gained nothing by allowing the Balkan States to hear of the pact through their own sources of information. Let us hope that M. Trepoff's advent to power implies that not only Russian, but Entente diplomacy as well, will henceforth recognize that honesty is the best policy.

The reason for secrecy at the time of the signing of the agreement was understood to be that the proposed Russian occupation of Constantinople might alienate sympathy in the Balkans. If the interests of any Near Eastern State, apart from Turkey, were to be affected, Great Britain ought not to have been a party to the agreement. But if, as was the case, Russia was prepared to give the necessary guarantees that Balkan interests should not be prejudiced, then a bold announcement would probably have removed all misgivings. In regard to Roumania, the Russian Government has had no difficulty in giving the required assurances. "There is no doubt," M. Trepoff went on to say, "that, after she has obtained sovereign possession of a free passage into the Mediterranean, Russia will grant freedom of navigation for the Roumanian flag." Neither Roumania nor any other country asks for more. The Allies are concerned to see removed for ever any possibility of the Dardanelles being closed again, and they consider that the best guarantee will be provided by the occupation of Constantinople and the Straits by a country to whose interest it is to keep the waterway open and who has the power to do it. There is a further reason for the change. Turkey has proved that she is unable to resist the temptation of being a tool of German ambitions. The peace of Europe demands that Germany should not be allowed to have easy access to a Power whose capacity for mischief is so great. But the occupation of Constantinople by Russia presupposes further efforts on the part of all the Allies.

In connection with this agreement among the Allies to see Russia established in Constantinople, we feel constrained to express the hope that it coincides with other arrangements dealing with parts of the world in which Great Britain is specially interested. It will, for instance, be no recommendation to the Russian occupation of the Straits, if it should be found that the Russian Government has not been equally accommodating and Great Britain equally insistent in regard to a satisfactory settlement of British interests, say, in Persia and Mesopotamia.

Two despatches have been published during the past week, one dealing with the operations in the Sinai Peninsula, the other with the work of the British Salonika Army between May and October. In the latter reference is made for the first time to the ravages of illness suffered by our troops, a condition of things which, no doubt, contributed to their enforced idleness. In the Katia-Rumani despatch we are glad to see officers and men of the Egyptian Army selected for special mention. Reference is also made to the Labour Corps, about whose work quite an interesting story could be written.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, November 11.

Agricultural Prospects.

Want of rain is causing considerable uneasiness, especially in the west of the island. There has only been a small fall in some parts to the east. Early sowing of cereals is retarded. The members of the Holy Synod had an interview with the High Commissioner on November 18, and urged that loans of seed corn should be granted with a far more generous hand by the Government to all agriculturists in need of help, in order to meet a distinctly trying time. They also recommended that loans in money should be made in all deserving cases, with regard to the *bona fides* of which precautions could be easily taken. The cultivation of wheat on a larger scale has been strongly urged during the last two years, and the recent advice of the Agricultural Department that rye should be sown in suitable lands should be adopted.

A successful agricultural and animal show has been held at Papho, the exhibits and attendance being very satisfactory. The Director of Agriculture, Mr. W. Bevan, was present, and a number of agriculturists took the opportunity of consulting him on various local interests, including the combating of pests. These include the large fruit-eating bats, which commit serious havoc in gardens and carob trees, rats, and hornets. Rats have long been a scourge to trees and crops, and hornets destroy bees on a large scale. Farmers in the west of the island complain that, although they have paid locust tax since 1881, and, in spite of the fact that this plague has not attacked their properties, help is not given from the Locust Fund against such animal pests as do infest their lands. Government measures are not undertaken against the latter on any serious scale. Papho, which has taken the lead in silk production, is anxious to extend and improve the breeding of silkworms, and asks for the establishment of nursery gardens. The district is endeavouring to make a wise movement forward. A further rise in the price of bread in Cyprus has aroused a strong desire that Government should allow wheat to be issued from its tithe stores to the public at moderate prices, and that steps should at once be taken to control prices of some other articles. The price of bread at the capital is at present 4½ piastres the oke for the best quality, which would work out at a fraction under 4½d. for a 2-lb. loaf, if such a weight were obtainable.

The Election of an Archbishop.

The Bishop of Papho, acting as Archbishop, has issued his invitations to the general electors to assemble on November 11 at Nicosia for the purpose of electing a new Archbishop. The Bishop celebrated his name-day at the capital on the festival of St. Jacobus, visits being paid to him by all the leading Greek citizens.

Emigration Facilities.

Notwithstanding the steps taken by the Government tending to check the outflow of emigrants, local steamship agencies continue to hold out inducements to those who wish to proceed to Egypt, Marseilles, America (via Naples), and Australia. Passages of four classes are issued, every facility, it is said, being given on landing for finding employment, etc.

Cyprus and the War.

There is a strong and growing feeling in the Greek community that Cypriots should take part in the national army of defence. They speak of the volunteers who went to Greece to join the colours during the two last Balkan wars, and of the assistance in money and gifts which Cyprus contributed to the cause. There should be no less enthusiasm for the movement to support the army of M. Venizelos, and to save the country and deal a blow against the hated Bulgarians. Hopes are expressed that Cyprus will take a worthy part. It is still expected that a Greek officer is coming to raise a Greek contingent in the island. Cypriots feel keenly the position of Greece and of Hellenism. Some of the Greek papers in Egypt have gone so far as to state that a force of 15,000 Cypriots has been enlisted for service under the order of the Provisional Government of M. Venizelos. There is no foundation for this report.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 16.

H.H. the Sultan.

It is expected that the Sultan will very soon definitely take up his residence in Abdin Palace. His Highness on his recent return to Cairo only stayed there a night, and proceeded next day to his private residence at Heliopolis, where, on the advice of his doctors, he has remained ever since. It is understood that he has benefited very much in health from the drier climate, and that the fever has practically left him.

The Air Raid.

As the cables will have informed you ere this, an air-raid took place here on Monday morning. It was carried out by one enemy machine, which suddenly appeared at 11.30 a.m., dropped nine bombs within the space of five minutes, and then made off before any of our own aeroplanes could get up after it. Not many people saw the raider; but those who did say that it was at a great height, and that after throwing its bombs it hovered over the city for a few minutes, presumably to see what damage it had done. Only one of the bombs fell on a building, and that was a disused mill. Very little damage to property was done.

The sole object of the raid was, unmistakably, the intimidation of the civilian population of Cairo; for not only did the raider avoid the few military points of importance in and near the city, including the Citadel, but he used bombs which could not possibly have damaged any buildings, and threw them on the residential quarter at an hour when it is notoriously most frequented. Far from the populace being intimidated or panic-stricken, it has preserved commendable calm; and now that the first shock is over, Egyptians as well as Europeans view the raid with quiet contempt tempered with feelings of intense disgust at the German methods of waging war. This latest outrage should certainly disillusion those of the local population who may have still harboured pro-German sympathies, and who have in the past cast doubts on the veracity of the tales circulated by us as to German barbarities in Belgium, N.E. France, and Serbia.

The New High Commissioner.

The local Press continues to publish articles and letters expressing pleasure at Sir Reginald Wingate's nomination as High Commissioner, and conversations which I have had with Egyptians of all classes convince me more and more of the popularity of the appointment. The selection of Colonel L. O. F. Stack as his successor at Khartoum for the duration of the war is also approved of. Stack Pasha is well known in Cairo, where, before he became Civil Secretary to the Sudan Government just prior to the outbreak of war, he had for some time ably filled the dual post of Sudan Agent and Director of Intelligence; and it is felt that with Sir Reginald Wingate at Cairo to assist with his advice the affairs of the Sudan will be just as well administered as if he had remained at Khartoum. One point which has not been referred to in this correspondence as yet, but which is worthy of note, is that the new High Commissioner holds higher military rank in the British Army than any other officer at present in Egypt.

All manner of absurd and fantastic stories as to the reason for the change in the Residency have been flying around, and one experiences the greatest difficulty in laying the rumours by the heels. People in Egypt seem quite incapable of accepting obvious and straightforward explanations for occurrences, and are much keener on crediting sensational versions of the causes leading up to them. The more improbable or far-fetched the reason the greater the credence attached to it. The following is a typical example of this attitude on the part of the general public. As you know, Rushdi Pasha, the Prime Minister, has recently recovered from an illness, in the course of which he had to undergo a slight operation to

his ear. When he fell ill he was brought hurriedly up to Cairo, where he was subsequently visited by a British specialist attached to the Army, who was sent by the High Commissioner. Just about the same time the Sultan became indisposed and went to his estate at Gabbaris. The Egyptians at once connected the two incidents. First of all, it was said that both illnesses were merely political ones; Rushdi Pasha had had a disagreement with the Sultan, who had proceeded to his estate in high dudgeon, and had refused to transact any State business until he was given a new Prime Minister. As, however, there was soon no doubt that Rushdi Pasha was really ill, the theory of a quarrel was dropped, but it was at once replaced by an equally extraordinary one, which I may say is still adhered to in many Egyptian circles to-day. It was averred that another attempt had been made on the Sultan's life, and that the Prime Minister had shielded him and had been wounded in the head. His Highness had had to go to Gabbaris to recover from the shock which this third attempt had caused him, and Rushdi Pasha had been brought forthwith to his residence in Cairo, because at the time his life was despaired of! That was bad enough, but the sensation mongers proceeded to add sauce to the "canard" by stating that the reason Sir Henry had sent a British specialist to Rushdi Pasha on his arrival in Cairo was that the Sultan's assailant had been a Britisher! Why it should not be possible at the end of a trying summer for both Sovereign and Prime Minister to become indisposed at about the same time, the one with fever, the other with a cold in the ear, eventually necessitating a slight incision; why there should be anything extraordinary in both of them under the circumstances deciding to seek a drier climate than Alexandria; why it should not be the most natural thing in the world for the High Commissioner, as an ordinary act of courtesy and as a sign of his regard for Rushdi Pasha, to send a British surgeon to examine him; why a Britisher, of all people, should attempt the life of the Sultan, the sensation mongers did not stop to consider, and if they did the explanation was, as usual, too simple to satisfy them. They proceeded to put into circulation their own highly coloured version of the matter, and the traditional credulity of the Egyptian public did the rest. This may be taken as a typical example of the way history is fabricated and facts and events are distorted and exaggerated in this country.

THE ESSENCE OF ISLAM.

Speaking at the meeting of the Sufi Brotherhood in Lad-broke Road, last Sunday, Mr. Q. Abdullah said that the very word Islam signified what the essence of Islam was. It literally meant "submission," "obedience," or "peace." So Islam denoted perfect submission to God, complete obedience to His commands, and being at peace with the Creator and his creatures. In other words, it denoted the strengthening of the relations between man and God. The formula of faith recited by every Moslem several times a day clearly set out our twofold duties towards our Creator and His creatures. Other revealed religions also claimed that their essence was the fatherhood of God and the brotherhood of man. If the purpose of all the divine religions was the same why was there so much rankling and bickering in religious controversies, and why the great animosity of people of one religion against those of another? The cause was that the spiritual power over the hearts of men had been quite loosened, and the real object of religion was lost sight of altogether. This was to know and recognise the true and living God who had created the whole world, to attain that stage of perfection in His love at which the love of all others beside Him was completely consumed, to have full sympathy with his creatures, and finally to lead a life of perfect truth and piety.

The Koran taught that there were three stages of perfection in our attitude towards our fellow creatures: the first was the doing good to those who had done good to us, the second was the doing good to those who had done no good to us, and the third was the doing good to others without laying any obligation on them, or expecting to receive any thanks in return, but giving ourselves for them as freely as the mother gave herself for her child. Islam recognised also three stages of spiritual development. The first, called "Fana" by the Sufis, took place when a person submitted his own self with all his energies to God and devoted them wholly to His service. The second stage was that of "Baga," when, after a complete annihilation of all carnal desires and passions, a person was moved to action by a divine power of attraction. Finally, he was given a new life, which was generalised by a heavenly magnetism, and all earthly connections were cut off. At that stage he saw God, actually spoke to him. This was the highest stage, and was called "Lila."

ATHENS LETTER.

(FROM OUR OWN CORRESPONDENT.)

ATHENS, November 20.

Increasing Tension.

General Roques' visit to Athens, and his audience of the King, caused quite a flutter, and has led up to another little crisis in Greece's politics.

There was considerable movement in official and diplomatic circles last week and it was conjectured that the French War Minister had made certain demands which were hardly palatable, but would nevertheless have to be accepted. The attitude of the Royalist troops in Thessaly and the recent conflict at Ekaterini made it imperative to take steps to separate the Venizelist troops from those still serving the King. It was accordingly intimated to the Greek Government that a certain strip of territory stretching across Greece should be considered a neutral zone, and that this would be occupied by French troops. This measure, it is hoped, will have the effect of preventing any trouble between the two opposing groups of the Greek Army. The demand for part of Greece's artillery and munitions, which is much more distasteful, has not yet been accepted, and is still the subject of negotiations between the Cabinet and the British and French Ministers.

A telegram from M. Briand to King Constantine and Admiral du Fournet's Note of yesterday, appear, however, to have created a greater sensation. The contents of this telegram have not been published, but the Admiral demands that the Ministers of Germany, Austria, Turkey and Bulgaria should leave Athens within forty-eight hours, and it is probable that others will have to accompany them. It has been felt for some time that this step would have to be taken, as the presence of these diplomatists in Greece in present circumstances could no longer be tolerated by the Allies. Their removal from Athens, together with the leaders of the German propaganda, should somewhat clear the atmosphere and rid the King of pernicious influences. Every opportunity seems to be taken by the Court and authorities to encourage the opponents of Venizelism and to punish anyone in favour of the National movement, as, for instance, the imprisonment of the Editor of the *Patris*, the leading Venizelist paper; and, on the other hand, the receiving in private audience by the King of the Editor of the *Embros*, a pro-German paper, which takes every opportunity of vilifying the Allies. Every opportunity is also taken to create friction and to hamper the Allies, and punishment is not inflicted on the Royalists with the same *empressement* as on the Venizelists. A party of about a dozen *evzones*, who had been forbidden to travel from one place to another in Thessaly by the French Controller of the Railway, insisted on doing so, and, on the matter being reported to Admiral du Fournet, he demanded their punishment; but it does not appear so far to have been carried out.

Student Demonstrations.

On Friday and Saturday the University students entertained Athens with their obstreperous conduct. An incident was provoked in the University by some students in favour of the King, but their condemnation of Venizelos aroused his admirers. The two parties paraded the streets on Friday evening, the Royalists marching to the Palace to cheer the King, whilst the Venizelists proceeded to the English and French Legations to acclaim the Allies. The Royalists, however, got panic-stricken outside the Zappeion Gardens at the sound of firing, and, doubtless thinking that French marines were after them, stampeded in all directions. In their haste to save their skins they fell over one another, and some broken heads was the result of that day's demonstration. The following day the Venizelist students, who are in a large majority, proceeded to the British and French Legations to show their sympathy with the Allies, and for several hours on Saturday afternoon the public were entertained with a scrimmage between students and military. The former ended up their day's exertions by visiting Admiral Fournet on the flagship. The Royalists, who are always the disturbers of the peace, invariably get the worst of it, and on these occasions it is easy to see which side has the preponderance.

Francophil Amateurs.

Admiral Fournet returned the visit of the Mayor of Athens last Thursday amidst great enthusiasm in favour of France. "Vive Venizelos!" invariably follows the cry of "Vive la France!"

Yesterday a deputation from the Piræus presented an address to the Admiral. The address, which is signed by some 12,000 residents in the Piræus, expresses its gratitude to France for its protection in the past and for again coming to protect the interests of Greece; and its disapproval of various incidents created by certain agitators.

Patriotic Volunteers.

Volunteers for the National Army continue to leave the Piræus for Salonika almost daily, and it is said that the number of officers who have so far joined the movement amounts to about 950. Officials from the different Ministries continue to leave, probably as they are required by the Nationalist Government. Whether it is their patriotism, their admiration for Venizelos, or their disgust at the state of affairs in Athens, these officers have risked all their future in leaving their posts. This matter has, however, been the subject of discussion between the Government and the British and French Legations, and an arrangement has been arrived at, by which the Government will not interfere with those wishing to join the Nationalist Army, and the Allies have promised to see that the officer's future career is not compromised.

The removal of the troops from Thessaly to the south of Greece is proceeding slowly. Procrastination in everything is the order of the day, and "since you are taking away our railway material, how can we move our troops?" is the excuse given for the delay.

Parliament was opened last Thursday, about sixty deputies attending, but the proceedings were merely formal, and the Chamber adjourned—"to be recalled when there are a sufficient number of members in Athens."

MESHED NOTES.

(FROM OUR OWN CORRESPONDENT.)

MESHEH, October 28.

During the past months, while other parts of Persia have been suffering political disturbances—some of them serious—the city of Meshed has been quiet, owing to the presence of the English and Russians, and there has been nothing of interest to write about.

Financial conditions are very bad. Imports from England and Europe have practically ceased, while from Russia and India they have greatly fallen off. Russia keeps a close watch on her trade with Khorasan, and during the war is permitting sugar and petroleum to come here in only limited quantities, and some commodities not at all. Ordinary medical supplies are very scarce and high-priced. Some commodities have risen to two, three, and even four times the normal price before the war. Khorasan is sending Russia some cotton, wool, and dried fruits, but as trade is mostly one way exchange is very bad. The normal price of the rouble before the war was about kran 5.85. Now it is kran 1.50. The normal price of pounds sterling was about kran 55. Now it is about kran 30 or less.

The parcel post service between here and England is stopped, and even the ordinary letter post is very much interrupted and out of order. For many weeks past practically no letters have been received here from England.

Colonel T. W. Haig, C.M.G., has been transferred to Ispahan, and Colonel G. W. Grey, I.A., is now British Consul-General. Prince Niseer-ed-Dowleh having been recalled to Teheran, was succeeded in the Governor-Generalship by Nasir-ed-Deen Mirza, a son of Muszafar-ed-Deen Shah. The latter also has just now been recalled, and is to be succeeded by Kamran Mirza, the well-known Niab-es-Sultaneh and brother of Zil-es-Sultan.

The American Presbyterian Mission has opened a dispensary and ten-bed hospital in the south-west part of the city, and is doing good work. In connection with it they have a Bible depot, where Scriptures are on sale in about twenty languages.

MORE "YOUNG TURKS" TREACHERY.

(FROM A CORRESPONDENT.)

CAIRO, October 20.

In a previous communication* I have referred to some important documents which prove how the "Young Turks" had been for some years endeavouring to crush the Arab element in the Turkish Empire; and how they had intrigued against the authority of the Grand Shereef. In this connection the following revelations, made by the Shereef in the course of a conversation with the editor of an Arabic paper who enjoys his Highness's confidence, have recently been published. They are of value as showing the patience displayed by the Grand Shereef in his dealings with his unscrupulous enemies. His remarks may be translated as follows:—

"I would never believe, oh! my son, before I succeeded to the Emirship of Mecca that the Unionists would go to the length of rekindling the embers of revolt, and raking up mutual jealousies and rancour among the Arab tribes at a time when they were most in need of peace for the preservation of the Empire and the maintenance of the honour of the Faith. But they have actually done all this, and I acquainted you yesterday with part of what has been established by proof against them. I will now make further revelations, which will strike wonder in the world of Islam when the day comes for you to make them public. What has been ordained is bound to come to pass.

"When the Unionists realized the failure of their intrigues to create dissension between me and the Imam Yehya and El Idrissi, they resorted to another stratagem, which would have imperilled the Holy Provinces and have led to the ruin of their inhabitants, both men and women, were it not for merciful Providence. To that end they actually sent delegates to Jeddah and Yambo, with careful instructions how to sow the seeds of revolt; and these had secret meetings with some of the tribal chiefs whom they sought to win over and incite to rebellion against me, in the name of the Faith, holding out to them fair promises in case of success in their evil mission, as they had actually done with the Imam Yehya and El Idrissi when they sought to cut off the communications between Jeddah and Mecca and between the latter town and Medina, and to plunder the caravans that follow those routes for purposes of trade and the Pilgrimage. It did not take long to kindle the flame of revolt in the breasts of the tribal sheikhs, who were thus misled under the false pretence of protecting the Faith. Meantime, arms and ammunition were being prepared, and trenches were dug clandestinely outside Jeddah, near the tomb of our Mother Eve (May Allah's favour rest on her!); and when they had completed their preparations they declared their well-known revolt, and closed the routes, killing thousands of people. Then they attacked Jeddah—not, however, before the inhabitants had closed its gates. The history of this revolt is common knowledge to all. When the sinister intelligence reached me, I sent word to the Emir of the tribes involved, asking him to stop this incursion, and quell the revolt among his men, promising him all that he might wish of silver and gold, if such were his object. But I asked him, if his revolt were determined by another motive, to postpone it until after the Pilgrimage—which was imminent—when he could carry out his intentions. My request was unheeded, and he replied that his sole motive was the Faith. Then it was that I sent out a force of my men under the leadership of my son, Shereef Faisal, who quelled the revolt, and killed, in the course of the battle, the Emir of these tribes. This, however, cost the blood of thousands of my men and his, and peace was ultimately concluded between us on certain conditions, one of which was that we should make common cause against the Unionists, if the reins of Government remained in their hands and they persisted in their hostile intentions against the Arabs, especially as it was later discovered that secret agents of theirs had been trying to seduce the sheikhs of those tribes by deceitful promises. After the conclusion of peace these secret agents were caught in Jeddah, and were about to be killed, when I intervened and let them off, to go back whence they had come, penitent.

"This, my son, is a page of the foul record of the Unionists' intrigues, which history will record to their eternal shame. Their only object in stirring up the Arab tribes was to fish in troubled waters after the fall of their Empire; then to carry out their evil intentions in the Holy Provinces, in the name of the so-called Moslem Government, forgetting that, by so doing, they are only combating Allah and His Prophet, in the person of the descendant of his Holy House.

"After all this, I might yet have borne with them had they finally acknowledged that they were not Moslems. But, behold! oh ye who have eyes to see, with what men I have had the calamity to deal!"

At a meeting of the Dardanelles Commission, held at the House of Lords last Friday, Mr. Churchill was again called as a witness. Sir George Arthur, who was Lord Kitchener's Secretary, was also in attendance. The Commission met again on Monday, when Major-General S. B. von Donop was called as a witness.

ARCHÆOLOGICAL NOTES.

Recent Discoveries in Egypt.

The difficulties in the way of printing any matter involving the use of varied types, such as required for a journal of a learned society, has caused the publication of the "Bulletin," of the Société Archéologique d'Alexandrie to be very much in arrear, but the editor, Prof. E. Breccia, who is also Curator of the City's Museum, has now brought out the first number for the season of 1914-15. By far the most important article is that upon the most valuable Greek inscription of more than fifty well-preserved lines, which was found at Theadelphia, now called Harit, in the Fayoum. The text records the petition of a certain Phillipos, son of Timocrates, to one of the Ptolemies and his wife, Cleopatra, praying that the rights of asylum which had appertained to the temple of the goddess Isis, under the special title of Eseremphis, should be respected, both by the people and by the officials. The inscription is really an embodiment of the petition and the formal granting of its proposition by the sovereigns. As it deeply concerned the rights of the shrine and its priestly hierarchy, they wisely had it engraved upon stone, and, doubtless, placed somewhere within the temple's precincts. The theophoric title given to Isis of Eseremphis was new when found, but has since been seen as accorded to her, among many others, in the wonderful papyrus containing a Panegyric of Isis, published by the Egypt Exploration Fund. Phillipos was an officer of the Corps d'Elite of the Machairophores, or Lancers of the Guard. The temples having the rights of Asyilia remind us of the cities of refuge of the Old Testament, and of many monasteries in the Middle Ages.

Although practically all Frenchmen of military age who were resident in Egypt have left to take their part in the war, the French Institute of Oriental Archæology in Cairo still continues the issue of the "Bulletin" under the auspices of the Director, M. George Foucart. The second fascicle for 1916 is almost entirely filled with essays upon the celebrated hieroglyphical record of the annals of the very earliest dynasties of the Pharaohs, which is preserved upon a monument, now in Sicily, known as the "Stele of Palermo." The reason for this recrudescence of literature concerning these records is that five more fragments of this inscription, some of them part of the very same stone, and others of one, or, perhaps, two duplicates of it, have been found in Egypt, and are now in the Cairo Museum. The object of engraving these memorials upon the stone was undoubtedly to prove to posterity the real historical existence of the early kings, by giving not only their names, but the chief festivals held in their reigns, and the heights of the annual Nile inundations. The record is, therefore, also of scientific interest, because it states the variations in the flood heights of the river for a long period—some 4,000 to 5,000 years ago.

A most interesting fact, too, is demonstrated by these annals, which is that at the time they were carved there were in existence lists of what are termed the prehistoric Pharaohs: that is to say, of princes earlier than Menes, the founder of the so-called First Dynasty. The writer gives in their case the name of each sovereign's mother, which is curious, as indicating either that we are dealing with what may be termed Matriarchal times, or that, each Pharaoh being supposed to have had a divine father, only the human female parent is specified. Although the "Bulletin" is a French Government publication, an English Egyptologist, Mr. F. W. Read, has been welcomed to take part in the discussion in his native language, and we hope the precedent will from time to time be repeated.

An important paper is by M. Munier upon some Coptic manuscripts of the Old Testament. Of these, two fragmentary pages contain parts of the 36th Chapter of Genesis, which is chiefly made up of a list of places and persons in Syria and Palestine. The spelling of these names varies very much in the Hebrew, Greek, and Syriac versions. The

MONTENEGRO.

Any interested in the commercial and general development of this country, together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

"Major," c/o Messrs. Stilgors, Solicitors,
24, Essex Street, Strand, W.C.

Coptic scribe who wrote this manuscript must have been a learned man; for whilst he was copying a Greek manuscript giving a text closely akin to the Codex Alexandrinus, he amended the lettering where he thought the transliteration into Greek could be improved upon to make it more closely render the Hebrew. We therefore have now a valuable guide of great antiquity for the spelling of these names. The scribe also probably knew the Egyptian counterparts for some of the names; for many of them occur upon Egyptian royal monuments, and therefore his emendations are to be treated with wise respect.

In the Apocryphal Christian book known as the "Gospel of the Infancy" it is stated that the Holy Family, when taking refuge in Egypt, resided at Matarieh, near to Heliopolis. This would suggest that there were Jewish families there, as we know there certainly were at Tell-el-Yahoudieh, not many miles away. Epigraphical proof of the presence of Jews near Matarieh is now forthcoming by the finding of several funerary inscriptions with Hebrew names by workmen excavating for the New Cairo drainage scheme at Demerdash upon the Heliopolis tramway. Some of the names upon the stela which have been edited by Mr. C. C. Edgar, such as Josephus, Eisakios, and Sabbataios, sufficiently illustrate the race to which their owners belonged.

The additions to ancient literature that have been obtained from Egypt during the last half-century are enormous, the reason, of course, being that, owing to the absence of rain and the sandy nature of much of the country, manuscripts are preserved for thousands of years. An instance of this is just given in a work entitled "The So-called Egyptian Church Order and Derived Documents," by Dom R. Hugh Connolly. The learned author shows that the oldest Egyptian codices containing the order of services for the Church are really a copy of a lost work of Hippolytus, his "Apostolike Paradosis," one of the earliest treatises upon Christian ritual ever written.

TANGIER TO TEHERAN.

A curious advertisement has appeared several times of late in the "Agony Column" of *The Times*. It offers a reward of £5 for two rings "lost in London or in Cairo in the year 1874." One of the rings is a "half-hoop, two rows of diamonds"; the other has "an anchor set in turquoises on a coil of rope in gold." Shall we ever know, I wonder, whether the rings are found? The prospect of such a happy ending to what has the air of being a romantic story does not seem to me a very good one. London and Cairo are both fairly large, and the "scent" must surely have become cold in forty-two years. But we hear so many strange tales of lost property being found and returned to its rightful owners that "Box X 845, *The Times*," may at least hope. The fact that one of the rings bears the emblem of Hope is, perhaps, a good omen!

I was interested in reading recently of a case which came before the Kensington War Tribunal. It was that of a well-known Egyptologist, who appeared before the Tribunal on the application of the military representative for the withdrawal of his certificate of conditional exemption on the ground that it was not in the national interest that he should remain in civil life. The Professor and the Tribunal were exceedingly polite to one another. The former explained that in his view we had to prove to the world that British Egyptologists were as competent to deal with Egyptian antiquities as were the numerous Germans who had formerly worked these; and the Tribunal "recognised his good work from an historical point of view," but adjourned the application for six months "to enable him to get an engagement in some war work."

Now, it seems to me that there was a good deal in the Professor's argument. We have to meet the Germans in the field of archaeology as well as on the field of battle; and I think I have pointed out before that the archaeological excavator and explorer is often a very valuable "advance agent" for his country in foreign regions. But the argument applies with far less force in the case of Egypt than it would in the case of Mesopotamia. In the Nile Valley we have long held our own in the matter of excavations and research work; and Egyptology has a very large following (comparatively) in England. But in Babylonia and Assyria the Germans have had things much their own way far too long. Would it be fanciful to suppose that Dr. Koldewey and the other German savants who have been so busy with pick and level among the Mesopotamian mounds have had a good deal to do with the spread of German influence in that region? I think not. Indeed, from personal observation, I am sure of it. So, if I had been on the Kensington Tribunal, I fancy I should have insisted on the Professor undertaking to divert his

studies from Egypt to Babylonia, and promising to do his best to get at least one British excavating party sent out to Mesopotamia as soon as circumstances should permit.

We have heard a great deal lately about those Greeks who appear to have forgotten the fine traditions of their country; and no doubt it is natural enough that such should be the case. But it is not quite so natural that we should have heard so little in praise of those other Greeks who have responded to the call of M. Venizelos. For, surely, they are showing a spirit that can hardly be praised too highly? They are not only risking their lives for a high ideal, but they had to make up their minds to do so under circumstances of extraordinary difficulty. Their King, who should have set them a fine example, has done the very reverse, nursing an old grudge against his greatest benefactor, and sacrificing the interests of the unfortunate country he rules over to his own personal ambitions and vanity. That was bad enough; for most of the Greeks had a quite unwarranted admiration for the Bulgar Slayer (!). But on top of this, many of them had, as we know, been prevented from hearing the Venizelist side of the case and had had the pro-German, Gounarist, side dinned into their ears on every possible and impossible occasion. Yet they have answered the call—and in numbers that are rather surprising when we take all things into consideration. They have declined to believe that the Bulgarian wolf has become an innocent little lamb all of a sudden, at the bidding of Constantine, Schenk and Co. And they are acting up to the conviction that is in them. I am no ardent phil-Hellene, but I admit that my heart warms to the volunteers of the National Defence movement.

The old Greek spirit still lives, but it seems to thrive best away from Athens. The Greek capital has sent comparatively few recruits to Salonika, but they have gone in their hundreds from other parts of Greece, from the islands, from Egypt, from Turkey and from many other countries, including Great Britain. Among the volunteers from this country I know of one youngster whose case interests me particularly, because I had met him once or twice. He came from one of the islands and was at a school near London; and I should not have thought he was more than sixteen, though he was a big, sturdy boy. But after attending the famous meeting a few weeks ago, he obtained permission—how I do not know—to go off to "do his bit," and went. I wish him the luck he deserves, for he had the right spirit. I have seen some of his school books, and they serve to show what a mere boy he was in many ways. A drawing-book of his lies before me as I write, and the drawings in it are just such as an English boy of twelve or thirteen would do—boats, forts and animals. They are rather stiff and "wooden": the forts have every stone carefully drawn in, with the aid of a ruler. But the Greek flag flies over each fort and each ship, and one of the latter—a three-masted vessel, such as you often see in the eastern Mediterranean—has her name carefully printed, "ΑΓΓΕΛΟΣ." Another effort that appeals to me is a drawing of a fort, which has a scaling ladder placed against its wall, while on the battlements two unmistakable Ancient Greeks mount guard. I imagine the young artist consoling himself in times of home-sickness by drawing these things; and I learn from one of his schoolfellows that he was an ardent Venizelist. Now he has gone to fight for the flag over the drawing of which he lavished such care. Looking at the crude sketches, it strikes me as rather pathetic. But it is a reminder that all Greeks are not yet pro-German.

CORSAIRE.

The German school at Sofia, says a Zurich telegram, has been destroyed by fire.

In a Special Service telegram from the Serbian Headquarters, Reuter's correspondent states:—Several Bulgar spies have been shot in Monastir. A placard was affixed to their bodies bearing the inscription, "This was a Bulgar spy."

The Lord Mayor's Armenian Relief Committee have heard from their agent in the Caucasus that some thousands of Armenians are now trickling through the Turkish lines to Erivan, which is in Russian occupation. Many of these people have suffered great hardships and privations. The problem of providing for their livelihood is a serious one, and the Committee have under consideration the starting of some new industry.

Among the mails which were lost when the P. and O. liner Arabia was torpedoed were the accounts for the twelve months ended October 20 of the British Red Cross Society and the Order of St. John, from the Indian Joint Committee and from the Commissioners in Mesopotamia, British East Africa, and Alexandria. When this was ascertained, duplicate accounts were prepared and forwarded from these centres, but, the Joint Finance Committee, at 83, Pall Mall, announce that a delay in the production of the accounts is an inevitable consequence. The published audited accounts of the Joint Societies, instead of being issued before Christmas, as they were last year, cannot now be available to the public until January.

LETTERS TO THE EDITOR.

TURKISH PRISONERS IN CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—My attention has been drawn to a letter in the *Westminster Gazette* of October 5, 1916, signed by Mehmet Aslan, advocate, at Larnaca, on the subject of the internment of the Turkish prisoners of war at Famagusta, with reference to which I shall be obliged if you will permit me to make the following remarks through the medium of your valuable columns:—

First. There is no such advocate at Larnaca or in Cyprus as Mehmet Aslan, and I know no person by the name.

Secondly. The Moslems of Cyprus, so far from being grieved and irritated (as erroneously supposed) by the establishment of a camp for the Turkish prisoners of war in Cyprus, are pleased that their co-religionists, who are so unfortunate to be prisoners, should be sent here, where—looking to the preparations made for their reception—we are well satisfied that they will be well cared for physically and morally, and have perfect freedom with regard to the exercise of their religious rites under the auspices of his most gracious Majesty's illustrious Government.—I am, etc.,

M. IRFAN,

Moslem Member of the Legislative Council, etc., etc.
Nicosia, Cyprus, October 27, 1916.

SIR,—After sending off my letter to you of the 27th instant *re* the letter in the *Westminster Gazette* on the subject of the internment of Turkish prisoners of war in Cyprus, I have read with great pleasure your very able comment on the same subject in your issue of the 13th instant, which I have just received. I hasten to write and tender my warmest thanks to you on behalf of the Moslems of Cyprus for the interest you have taken in this and other matters in their behalf, and congratulate you most heartily on the knowledge you display as regards the feelings of the Moslems in Cyprus.

The letter in the *Westminster Gazette*, written under a *nom-de-plume*, is intended to prejudice the British public against the Moslems of Cyprus, and, as you rightly say, cause the community to fall in the esteem of their fellow-subjects throughout the British Empire.

I most emphatically deny that the letter in question is written by a Moslem, and protest against it most strongly, and treat it with utmost contempt.

Hoping that you will also allow this letter to appear in your valuable paper, and thanking you in anticipation,—I am, etc.,

M. IRFAN.

Nicosia, Cyprus, October 31, 1916.

THE FOREIGN OFFICE AND GREECE.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Those who question the efficiency of the British Foreign Office in its handling of our relations with Greece should read the international correspondence of the past touching the Cretan question, and they will then see how the work of men of brains and character can be rendered futile by conflicting counsels.

There is nothing to show that the policy as applied in our dealings with King Constantine is the policy as it emerged from the Foreign Office. On the contrary, there is good reason to believe that it is not. In the first place, it is subject to revision by the Cabinet, and we know how the clear declaration of the Foreign Secretary in the matter of the Bosnian crisis was repudiated by the Government, and how a diplomatic retirement ensued on a question that probably more than any other constitutes the immediate cause of the present struggle. The policy of the Foreign Office must become the policy of the Government before it can be carried into effect. But not only has it to run the gauntlet of other Ministers; in the case of Greece it has also to be brought into harmony with the views of three foreign Governments, our Allies in this war, and constituting with us the four protecting Powers of the Hellenic kingdom. It is as if the designs of an architect for some public building were made subject not only to municipal, but, in addition, to State revision. What possible prospect could there be of the artist's work emerging undefiled? And how unjust to represent the twisted product as his design.

The want of definition of purpose, the confusion of method, and the inadequacy of force, all marking a lack of unity of conception in our foreign policy as it is applied to Greece, stand in such contrast with the Foreign Secretary's pre-war work that a tampering with it is plain on the surface. If anything is in doubt with regard to this, let him remember the zeal and vigilance that marked the Foreign Office during the ten years preceding the war in maintaining the Entente Cordiale and giving new and additional guarantees to its permanence. From our experience of the war and the knowledge now gained of Germany's methods of warfare, it

can be seen that the apprehensions raised by the first demonstrations of Welt-Politik in Venezuela and at Shanghai were well founded, and that the Foreign Office was right in upholding with all the means and tenacity in its power the structure of defence that had been reared in co-operation with France. It says something for the insight of Ministers that they were preparing to meet the danger so far ahead and with such large and adequate measures; and the public should realize how well they have served us, and how much we owe to Lord Lansdowne, who initiated the preparations, and to Lord Grey, who faithfully advanced and supplemented them.

Why, then, is there this loyal and virile handling of the Morocco issue and the weak, purposeless, and vacillating course we are pursuing in our dealings with Greece? Is not the explanation to be found in the fact that in the one case the Foreign Office had the support of its own Government, and its aims coincided with those of the French, whereas in dealing with Greece its policy has been subject to revision, first by the Cabinet, with results that brought about the resignation of Sir Edward Carson, and, secondly, by the Allies, one or more of whom, for all we know, may have urged modifications and arrested pressure, and the combined effect of which has very probably rendered the Foreign Secretary's Greek policy unrecognizable. If the facts were known, the quarrel with him on the part of the public would probably be seen not to touch the quality of his work, but rather his failure, as with Bosnia, to impose his views on those whose approval they require.

The anticipated creation of an independent War Council will tend to eliminate the authority of the Cabinet over foreign policy, and to that extent the destructive forces will themselves be destroyed. But our experience with regard to Crete showed the delays that arose in our international relations, and the point for determination, after we have set our own house in order, is how we can effect concentration in dealing with foreign affairs as between the Allies. The method at present in force is the periodical meetings in France of the leading members of the Allied Governments, at which, presumably, policies are defined on paramount issues as they present themselves at the time. But these meetings are few and far between, and the conditions change from day to day with bewildering rapidity, so that the policy of yesterday does not meet the necessities of to-day, and yet there is no authority with international status to revise it, and revision can only be effected through correspondence, and of necessity founded on compromise. There is only one way by which this can be avoided, and that is by supplementing our own War Council by an International Council, having the fewest possible members, the highest possible prestige, sitting from day to day, and, if not invested with plenary powers, then exercising jurisdiction in foreign relations limited only by the national War Councils of the Allies, from which it should spring. The ideal to be sought in the conduct of the war is the concentration of control in one master mind, and, in so far as this is unattainable, approximations should be sought; and these lie in the elimination of large bodies of opinion and in reposing authority in the smallest possible number of persons.—I am, etc.,

DOUGLAS M. GANE.

ENGLAND AND BULGARIA.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Will you be so kind as to insert the following in your valuable paper?

London is the greatest and most wonderful city in the whole world. Paris is beautiful, but London is more interesting, especially in regard to its population, who are the most philanthropic and good-natured people; but we must also admit that amongst them it is yet possible to find clever tricksters, card-sharpers, pickpockets, daring burglars, and—pro-Bulgarian lecturers. No doubt there are also pro-German lecturers, but these are obliged to be very circumspect for fear of being accused of treachery; but pro-Bulgarian lecturers may speak with impunity because we have not yet realised that whoever is pro-Bulgarian must necessarily be pro-German.

A pro-Bulgarian lecture was given last month. The lecturer was a lady who claims to be well acquainted with the Balkan people and Balkan affairs. Nevertheless, this lady was unable to distinguish between a Bulgarian and an Albanian; neither did she understand in the least who and what are the Jugoslavs (Southern Slavs), and because she knew nothing about them, naturally she did not think much of them, but employed the whole of her time during the lecture in praising the Bulgarians and trying her utmost to convince her audience that the Bulgarian people are the best and noblest on God's earth, regardless of the fact that at that moment the noble Bulgarians were killing the sons of Great Britain. If one member of the audience had not protested and pointed out to the lady some of her errors, the remainder of those present would have been misled.—I am, etc.,

D. JANITSCH.

London, W., December 5, 1916.

NEAR EAST BOOKSHELF.

A TERRIBLE INDICTMENT.*

The Serbian War Bureau has set an example which we may profitably follow in subjecting the enormities perpetrated by Austro-Hungarian armies to judicial investigation. Its agent for this purpose was Professor R. A. Reiss, D.Sc., of the Lausanne University; and no better selection could possibly have been made. As a neutral, he entered on his repulsive task with a mind free from bias, while his training in research work enabled him to sift facts from fiction and exaggeration. Travelling through Serbia in the footprints of the invading hordes, he recorded the depositions of many hundred eye-witnesses; took photographs of murdered victims; procured specimens of illicit weapons employed by the enemy. The evidence thus secured constitutes a crushing indictment of Austro-Hungarian savagery. It proves beyond the shadow of a doubt that thousands of Serbian prisoners of war and civilians of every condition were slaughtered in cold blood by the invading armies; that pillage, incendiarism, and the ruthless destruction of property occurred on a scale which was worthy of Attila's followers at their worst. Well may Dr. Reiss exclaim that "charming" Austrians and "chivalrous" Magyars surpassed their German wire-pullers in sheer bestiality.

One turns with positive relief from the long catalogue of atrocities recorded in this terrible book, and from its sickening illustrations to Dr. Reiss's analysis of Austro-Hungarian psychology. For several decades the Dual Monarchy had plotted the subjugation of Serbia, whose brave and brilliant people were the sole obstacle to the attainment of hegemony throughout the Balkans. Its reptile press persistently labelled the defenders of that little Naboth's Vineyard, representing them as savages, without one redeeming virtue. In this fashion public opinion was prepared for the more active anti-Serbian propaganda which began in August, 1914. The Prussian policy of "frightfulness," which bore such bitter fruit in Belgium, was adopted with zest by the authorities of Vienna and Budapest. Dr. Reiss gives us (p. 180) General Orders found in the possession of Austrian prisoners of war which deserve quotation:—

K.U.K., 9TH KORPS KOMMANDO.

Instructions regarding behaviour towards the population of Serbia.

This war is taking us into a country inhabited by a population which is inspired with fanatical hatred towards ourselves, into a country where assassination (as the Serajevo catastrophe has shown) is condoned and extolled as heroism by the upper classes. In dealing with people of this kind all humanity and kindness of heart are out of place; they are even harmful, for such considerations, which may sometimes be applied in ordinary warfare, would here place our own troops in peril. I, therefore, give orders that, during the entire course of the war, an attitude of extreme severity, harshness, and distrust is to be observed towards all Serbians. To begin with, I will not allow my troops to make prisoners of armed but un-uniformed men encountered in the enemy country: such are to be executed with despatch. In traversing a Serbian village, hostages must be summarily executed if a single shot be fired on our troops in that locality. The ringing of church bells is strictly prohibited, and, as a rule, every belfry will be occupied by a patrol. Divine service is to be permitted only at the request of inhabitants; and then it must be held in the open air, not in the church. No sermons must be preached and a platoon ready to fire will be posted near the church during Divine service. Every Serbian encountered, especially in wooded areas, must be regarded as a member of some band which has concealed its weapons in a place we have not time to look for. Such people are to be executed if they appear even slightly suspicious. Once more, discipline, dignity, but the greatest severity and harshness.

These direct incentives to massacre the civil population were punctually obeyed. The invading armies entered Serbia with a fixed conviction that its people were little better than cannibals, and their earlier excesses were probably inspired by fear. But the sight of blood aroused Sadic frenzy of the type one sees on a small scale in spectators of Spanish bull-fights. Egged on by their superiors, men who, in private life, may have been kindly fathers and law-abiding citizens were suddenly transformed into bloodthirsty fiends. As was the case in Belgium, the veneer of Teuton *Kultur* cracked, revealing the "blonde beast's" inbred brutality.

Dr. Reiss's concluding chapter summarises the sworn statements made to him by many Austro-Hungarian prisoners with regard to their treatment in captivity. One and all testified to the kindness displayed by their Serbian guards and the pains taken to feed them as abundantly as the country's meagre resources admitted. Despite great provocation and severe economic stress, Serbians did even more than their duty enjoined to mitigate the lot of captive foes. In all the essentials of civilization they stand on a far higher level than exponents of Teuton *Kultur*.

F. H. S.

*"Report upon the Atrocities Committed by the Austro-Hungarian Army during the First Invasion of Serbia." Submitted to the Serbian Government by R. A. Reiss, D.Sc., Professor at the University of Lausanne. English translation by F. H. Copeland. (Simpkin, Marshall, and Co., Ltd. 5s. net.)

BULGARIAN WANDERINGS*.

There is something about the nomad life of the gypsies which makes attractive reading even to those who affect to despise these wandering peoples and all their works. Notwithstanding the works of Borrow and other authorities, the veil of mystery still shrouds the gypsies, and mystery is always attractive. "Andreas," who has given us the latest book on this subject, writes with sufficient sympathy to ensure the interest of his readers, and although his work makes no claim to literary distinction, it is still valuable. The present moment is a very opportune one for the publication of any book which deals with any of the belligerent countries of the Near East, and in this work we are able to trace certain characteristics of the Bulgarians which explain, while they do not condone, Bulgaria's attitude in the present war.

"Andreas" begins his account with a description of the state of Bulgaria in the spring of 1913, at which time he was at Varna, virtually a prisoner, because all railways had been commandeered by the Government, and there was no other means of exit from the country. He conceived the idea of escaping from the country as a member of one of the gypsy caravans, and his book deals with incidents of his journey. He found it impossible to link up with the Mohammedan gypsies, as he had at first set his heart upon doing. Osman, the chief of the gypsies, vetoed his proposition, and there was no member of his tribe who had the temerity to work against his will. Eventually, however, "Andreas" joined a caravan of Christian nomads. The tale of his wanderings makes pleasant reading, and includes interesting sidelights upon the state of that portion of the country which had before the war been under Turkish government. The author's sympathies are very decidedly on the side of the Turk rather than the Bulgar, and his description of the arrangement made for the benefit of travellers by the despised Turk at various points will come as a surprise to many who have formerly considered him to belong merely to a race of ill-conditioned fanatics.

The chief fault which we have to find with this book is that it does not deal in sufficient detail with the life of the gypsies themselves. The writer's description of the visit to a prison where gypsies were incarcerated is excellent, and one of the best things he gives us. We would have welcomed more of the same quality.

A correspondent writes:—No news comes through from Constantinople to relieve the anxiety of those who have friends or relations in that city, except when occasionally, at long intervals, the citizen of some neutral State comes from Constantinople to England and brings information as to how things are faring there. Our latest advices are that Constantinople is quiet, ruled by a rod of iron. The system of espionage is as great as it was in the worst days of Abdul Hamid, when no man could be sure that even conversation in his own room would not lead to his sudden disappearance before morning. In all the circumstances, the prospect that some thought they saw of a revolution in Turkey becomes extremely remote.

Under date of November 22 the *Times* correspondent in the Balkan Peninsula writes from Bucharest: In the message from the Pope received by Queen Marie after the recent air raids, his Holiness congratulated the Queen on her escape from the attacks by the German airmen. This significant message on the part of the head of the Roman Catholic Church to the Sovereign of another communion constitutes an open and public rebuke to the authors' policy of "frightfulness" such as it has never yet received, exposing them to the reprobation of the whole civilised world and the condemnation of history.

14	1	Thursday	18	19

Next Wednesday is the birthday of Princess Eugenie of Greece, daughter of Prince George, who was born in Paris in 1910.

Thursday is the birthday of H.R.H. Prince Albert, who was born at Sandringham in 1895.

Thursday is also the birthday of Prince Paul of Greece, third son (and fourth child) of King Constantine, who was born in Athens in 1901.

Princess Jeanne Ghika has left for Roumania to take up Red Cross work.

The *Egyptian Gazette* of November 13 reports that among the British officers travelling on the transport which conveyed the Greek volunteers to Salonika, was a son of Princess Eugenia Paleologue, the sole representative of the elder Emperor Constantine or Paleologus. This lady, who is the widow of a British Colonel, last visited Greece about 18 years ago, and was received with the honour due to her blood; her eldest son fell at Hill 60 on the French front, and several other near relatives are at present serving in the British Army.

H.E. the Serbian Minister left London for the country on Friday of last week.

Sir Henry and Lady Bax-Ironside have arrived at 23, Grosvenor Place, from East Carleton Manor.

General Pavle Yourishitch, of the Serbian Army, and Colonel Ostovitch, A.D.C. to Prince Alexander, who have been in London on a special mission, have left for Corfu.

M. Slavko Grouitch, whose appointment as Serbian Minister at Berne was recently announced, left London for Paris last Friday.

The Roumanian Minister and the Greek Minister were among the callers at the Foreign Office on Monday.

We regret to learn from the *Sudan Times* that Miralai G. S. Symes Bey, Private Secretary to H.E. the Governor-General, Sudan, has been admitted to the Civil Hospital, Khartoum.

Colonel Subotitch, of the Serbian Medical Corps, has been visiting the military hospitals in this country, in order to study their organisation and management. He has now left for France, where he will also study the military hospitals.

FLIGHT COMMANDER HANS ACWORTH BUSK, R.N., missing in the Dardanelles since January 6, 1916.—Any definite information that might be obtained through relatives or prisoners of war in Turkey concerning the fate of this officer would be gratefully received by his mother, Mrs. Busk, 6, Wadham Gardens, Regent's Park, N.W.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

M. D. Buritiano, formerly Secretary to the Roumanian Legation in London, accompanied by Madame Buritiano, has left for Paris.

M. Georgevitch, who has been appointed First Secretary to the Serbian Legation in Washington, formerly held a similar position in London. He has left Corfu to take up the duties of his new post.

The marriage arranged between Charles Roland Skrimshire, 2nd-Lieutenant on the Unattached List of the Territorial Force, son of the late Dr. Skrimshire and Mrs. Skrimshire, of Sand Haven, Weston-super-Mare, and Aileen, youngest daughter of Mr. and Mrs. James Lumb, of 47, Putney Hill, will take place on January 2.

Captain Humphrey Ernest Bowman, Egyptian Civil Service, Royal Fusiliers (Headquarters Staff, Northern Command), was married on Saturday at St. Paul's Church, Knightsbridge, to Miss Frances Guenivere Armytage, youngest daughter of Colonel Armytage and Mrs. Armytage, of The White House, York. The bride, who was given away by her father, was attended by four bridesmaids—the Hon. Moira de Yverburgh-Bateson, daughter of Lord and Lady Deramore; Miss Violet Macdonald, daughter of Sir Alexander and Lady Macdonald of the Isles; and Miss Celia and Miss Sylvia Brinton. Canon Watson, Sub-Dean of York Minster, officiated, assisted by the Rev. Paget Bowman and Prebendary Leith Boyd. The bridegroom was attended by his cousin, Captain Cecil Charrington, South Staffordshire Regiment.

It was announced on Tuesday that M. Gennadius, the Hellenic Minister in London, had tendered his resignation to King Constantine's Government, feeling himself no longer able to represent that Government's policy and desiring to dissociate himself from it.

M. Stavridis, the Greek Consul-General in London, M. Casdaglis, Greek Consul at Manchester, M. Basil Malandrinos, Greek Consul at Liverpool, and his deputy, M. Andrew Malandrinos, have also resigned their positions in consequence of the unconstitutional and anti-Entente attitude taken up by King Constantine and his Government.

M. Gennadius has long been one of the most popular members of the Diplomatic body in London, and both among our own countrymen and members of the Greek colony here his action will be regarded with warm approval and sympathy. Referring to his action, the *Times* says:—"M. Gennadius, who has long represented Greece in this country, is one of the most distinguished diplomatists accredited to our Court. Born in 1847 of an Epirote family, and educated partly in the English College at Malta, he entered the Greek Diplomatic Service in 1872, and was attached to the Constantinople Legation. Two years later he came as Secretary to London, and was left in charge of the Legation from 1876 to 1881—a period which included the Russian-Turkish War and the Congress at Berlin. At the Congress he was one of the Greek delegates. Between 1881 and 1885 he held a diplomatic appointment in Vienna, but returned to London in 1885 as Minister Resident, a position which he held until 1892. He was also accredited to The Hague in the same capacity, and in 1888 was entrusted with a special mission to the United States. In 1892 all the Greek Ministers abroad were recalled, the Legations being left in charge of Secretaries, and it was not until 1910 that M. Gennadius was again appointed Minister to London. Since the outbreak of the war, M. Gennadius has not only constantly striven to maintain good relations between his Government and that of Great Britain, but has repeatedly warned his own Government, with a courage rare in diplomatists, of the inevitable consequences of the fatal policy upon which King Constantine has embarked. His present action will but enhance the high esteem in which he has always been held by his colleagues and by the British Foreign Office."

Madame Gennadius is a Scottish lady, the daughter of the late Samuel Laing, for many years Liberal member for Orkney and Shetland.

Mr. Thomas Pinkney, Greek Vice-Consul at Sunderland for over thirty years, has sent in his resignation as a protest against King Constantine's attitude towards the Allies.

Commander Bellairs, M.P., has received from M. Demetrius Zamanos, a Liberal Deputy of the Greek Parliament, and M. Adonis Kyron, editor of the *Hestia*, a telegram thanking him for his advocacy in Parliament of the Greek national movement. He has also received a similar telegram, signed by a number of representative business men in Athens, including the president of the Merchants' Guild of Athens.

The Rev. R. F. McNeile, who has been serving as an Army Chaplain in Egypt for eighteen months, has—learn from the *Sudan Times*—resigned his army chaplaincy for the time being in order to go to the Sudan at the Bishop's request. He was expected to arrive in Khartoum on November 17. His sister has been for some time in charge of the Khartoum girls' school. Mr. McNeile, who was formerly a tutor at Oxford and Examining Chaplain to the Bishop of Manchester, went to Cairo in 1908 to work under the C.M.S., and offered himself as an Army Chaplain when the war broke out.

Temporary Captain J. Proctor, of the King's Royal Rifle Corps, has been promoted to major, from August 1. As we stated a fortnight ago, when mentioning his being wounded and in hospital, he was the manager of the Manchester office of the Imperial Ottoman Bank.

M. Charles Maurras, the well-known French journalist, has, says the *Manchester Guardian*, returned to the King of Greece the diploma and insignia of the Order of the Saviour which he received some time ago, along with a caustic letter concerning the attitude of the monarch.

Captain Sir George Arthur has presented to the Royal United Service Institute Museum a set of medal ribbons worn by the late Lord Kitchener, which were taken from one of his undress coats at the time of his death. They consist of the G.C.B.; G.C.S.I.; G.C.M.G.; G.C.I.E.; Queen's Jubilee; Coronation, 1902; Durbar, 1902; Coronation, 1911; Egypt; Khartoum; South Africa, Queen's; South Africa, King's; Mejidieh; Osmanieh; Leopold of Belgium; Savoy; Legion of Honour; French Military Cross; French 1870 War; Khedive's Star; Khedive's Khartoum. Lord Kitchener's other Orders were as follows:—K.G., K.P., O.M., St. John of Jerusalem, and the Serbian Order.

In his despatch, General Murray writes, of the operations at Katia:—"Lieutenant-General the Hon. H. A. Lawrence directed the operations throughout, and the warmest praise is due to him, and the commanders, staffs, and troops concerned in the operations."

The following names are taken from the list of those of whom General Sir Archibald Murray, Commander-in-Chief of the Egyptian Expeditionary Force, makes special mention for their services between June 1 and September 30, 1916:—

STAFF.—Lawrence, Maj.-Gen. (temp. Lt.-Gen.). E. A., K.C.B.; Hordern, Rev. A. V., C.M.G.; Macauley, Bt.-Maj. (temp. Col.), Sir G. B., K.C.M.G., R.E. (Res. of Off.).

ARMY CHAPLAINS' DEPT.—Little, Rev. H., B.A.

EGYPTIAN ARMY.—Herbert, Lt.-Col. (temp. Col.), E. S., h.p.; Stafford, Maj. P. B., E. Surr. R.; Hudson-Kinahan, Maj. G. F., Durh. L.I.; Hutton, Capt. R. W., R. Mar. Arty.

CAMEL TRSPT. C.—Peel, Local Capt. W. E.; Bayne-Jardine, Temp. Sec. Lt. (temp. Capt.), T. E., Sp. List; Tadman, Local Capt. G. R.

EGYPT. LABOUR C.—Hicks-Paull, Local Lieut.-Col. J.; Losco, Local Lt. H.

News has reached the Red Cross headquarters, 83, Pall Mall, that the hospital unit provided by the miners of Great Britain, which recently left for Roumania in charge of Dr. A. P. E. O'Leary, has arrived at Jassy.

The *London Gazette* announces that the King has granted to the following officers authority to wear the decoration of the Order of the Nile (as stated before their respective names) conferred upon them by his Highness the Sultan of Egypt in recognition of services rendered:—

First Class: Vice-Admiral Sir Rosslyn Erskine Wemyss, K.C.B., C.M.G., M.V.O.

Third Class: Captain Charles Frederick Corbett, C.B., M.V.O., R.N.; Captain Philip Streatfeild, M.V.O., R.N.; Captain William Henry Dudley Boyle, R.N.; Captain Francis Herbert Mitchell, D.S.O., R.N.; and Captain Rudolph Miles Burmester, C.M.G., R.N.

Fourth Class: Commander Ernest Edward Alexander Betts, R.N.; Commander Arthur Lionel Snagge, R.N.; Commander Eric Gascoigne Robinson, V.C., R.N.; Lieutenant-Commander Henry Chapman Alcock, R.N.; Lieutenant-Commander John Henry Godfrey, R.N.; and Squadron-Commander Cecil John L'Estrange Malone, R.N.

Professor L. W. King has been appointed to deliver the Schweich Lectures on Biblical Archaeology. He will give three lectures on "Legends of Egypt and Babylon in Relation to Hebrew Tradition," at a quarter past five o'clock on the 14th, 18th, and 21st inst., in the Theatre, Burlington-gardens.

H.H. the Sultan of Egypt has conferred the Order of the Nile, 4th Class, upon Kaimakam E. H. Ross Bey, Sudan Government.

Sir Mortimer Durand, P.C., K.C.M.G., will preside over a meeting of the Central Asian Society, to be held next Wednesday afternoon, at 4.30, at 22, Albemarle Street. Miss Edith M. Durham will read a paper, entitled "Albania, Past and Present."

The Right Hon. the Lord Reay, K.T., P.C., will preside over a meeting of the Royal Asiatic Society, to be held next Tuesday afternoon, at 4 o'clock, at 22, Albemarle Street. Dr. A. Cowley will read a paper on Professor Hrozy's Views on the Hittite Question.

The £1,000 aimed at, with which to purchase a fifth motor transport boat for Mesopotamia, in connection with the Wimbledon "Silver Thimble" Day held in Wimbledon and district a fortnight ago, was exceeded by £562.

The British Women's Hospital will hold a meeting at the Palace Theatre on Tuesday, the 12th inst., at three o'clock, on behalf of the Scottish Women's Hospital Units, one of which is now in Roumania. Sir Johnston Forbes-Robertson will take the chair.

APPOINTMENTS, PROMOTIONS, ETC.

Captain R. P. Mahaffy has been selected for the post of Military Judge in the Sudan till the conclusion of the war. He expects to leave Dublin in January. Captain Mahaffy is the son of Dr. Mahaffy, Provost of Trinity College, Dublin.

Bimbashi D. A. Fairbairn, 9th Sudanese, has been struck off the strength of the Egyptian Army.

The *Sudan Times* announces:—

El Miralai W. B. Drury Bey, director, Sudan Government Steamers, has been granted the temporary rank of Lewa.

J. Falconer Bey, War Office representative, Suez, has been granted the temporary rank of Miralai, and Mr. C. E. D. Trelawny, War Office representative, Port Said, has been granted the temporary rank of Kaimakam.

Miralai C. H. Little Bey, General Staff Officer (2nd grade), has been appointed Officer Commanding Arab Battalion, and Bimbashi H. B. H. White, D.S.O., 1st Battalion, has been transferred to Arab Battalion.

Kaimakam R. P. Lewis Bey, Sudan Government, has been struck off the strength of the Egyptian Army.

Captain G. D. Hall, Royal West Kent Regiment, and Captain W. R. Barker, Duke of Cornwall's Light Infantry, have been attached to the Egyptian Army as Special Service officers. They have been granted the temporary rank of Bimbashi and attached for duty, the former to Kordofan district and the latter to Khartoum district.

OBITUARY.

Lieut.-Colonel Osborn Brace Pritchard, Welsh Regiment, died on November 27 at 63, Lewisham Hill, Lewisham, aged 48 years. He entered the Army in August, 1888, obtaining his commission in the Welsh Regiment in November, 1914. He saw active service in the Sudan in 1888, being present at the action of Gamaizah, and in 1897-8 was with the Tirah Expeditionary Force (medal with two clasps). As a Special Service officer, he took part in the operations in Somaliland in 1903, and was awarded the medal with clasp. In the present war he was wounded in November, 1914.

Major-General Sir Alexander Nelson Rochfort, K.C.B., C.M.G., late Lieutenant-Governor of Jersey, was found dead at his chambers in Half Moon Street, Piccadilly, on Tuesday. He was mentioned in despatches and received his brevet of major for his services in the Sudan in 1885, and during the South African war was twice mentioned in despatches and received the C.B. He was again mentioned in despatches and decorated with the C.M.G. for his work during the Somaliland operations in 1902-4. He afterwards held the post of Inspector of Horse and Field Artillery, and was appointed to the Governorship of Jersey in 1910.

THE WOUNDED ROUMANIAN SOLDIERS' FUND

(Regd. for the purpose of TRANSMITTING FUNDS to the ROUMANIAN RED CROSS SOCIETY.) Under the patronage of HIS EXCELLENCY N. MISU, the ROUMANIAN MINISTER in London. Hon. FRIDAY, DECEMBER 8, 1916.

THE END OF A CHAPTER.

The solution of the Greek problem, we can but hope, is being worked out in the reconstruction which the British Government is now undergoing. A few days before the outbreak of the war Viscount (then Sir Edward) Grey declared that the interests of Great Britain in Serbia were nil. There has been no indication since that date that the late Foreign Secretary or the Governments of which he remained a member ever modified the attitude of mind which the statement regarding Serbia revealed. It is true that among the causes for which the Allies are fighting is the complete rehabilitation of that country; but the whole course of the struggle has shown that the detachment from Near Eastern affairs which Sir Edward Grey claimed as an integral part of British foreign policy in July, 1914, has been persisted in throughout all the tragic developments connected with the Balkan Peninsula during the last two years. It was from a detached point of view, rather than with a clear understanding of the vital issues at stake, that negotiations were carried on with the Turkish Government during the period when it held back from a declaration of its sympathies. Only ignorance of the situation and unyielding adherence to a policy of detachment could have prompted the British Government to leave in Russia's hands the critical negotiations which preceded Bulgaria's entry into the war. Not that Russian diplomacy is less able, but, as any tyro in Balkan affairs was aware, Russia of necessity stood suspect in those days in the Near East; and it was only necessary for a Balkan Government to be known to be in negotiation with Russia—whatever the subject under discussion might be—to arouse the suspicions and hostility of one or more political groups and to drive them into the hands of Russia's enemies. After the defection of Turkey and Bulgaria we may picture those who have failed to appreciate the importance of the Near East to British interests as deriving from the process of elimination that has been taking place something of the pleasure which other minds experience in recording the disappearance one by one of certain hypothetical nigger boys towards whose fortunes or misfortunes they assume an attitude as detached as Sir Edward Grey's towards the Balkans. Serbia, Montenegro, and Albania will have been duly "ticked off." Five of the ten States which come within our purview remained when Roumania's troubles began, and it may be that the march of events in Athens has already caused a mental skip to the "Then-there-were-four" stage in the hope of being in time to record the elimination of Greece. Whether their diagnosis will be justified depends in part on the thoroughness of the reconstruction.

Readers of these pages do not need to be reminded that the existence of THE NEAR EAST has constituted a standing protest against the ignorance of and indifference towards the affairs of South-Eastern Europe and beyond—two qualities which seem to have characterised British foreign policy in spite of the expert knowledge which the Foreign Office has had at its disposal. At a time when it was officially held that British interests in Serbia could never justify this country in going to war we stood for the doctrine that the ten countries of the East, Roumania, Albania, Montenegro, Serbia, Bulgaria, Greece, Turkey, Egypt, Mesopotamia (i.e., the

Persian Gulf and its hinterland) and Persia, had to be considered in their relationship to Great Britain as a single whole, of vital importance to the Empire, and that the welfare of the Empire required that we should never lose sight of the close connection between the interests of those countries, individually and collectively, and ours. The region covered by these ten States stands athwart the King's possessions. They form the corridor by which Germany hoped to reach India and to drive a wedge into the British Empire at its most vulnerable spot. Failure to envisage this region as a whole has led in part to the neglect of the Balkans, but conversely it has allowed the last three countries to receive greater attention. Egypt, it is obvious, stands in a category by itself; for no Government since 1890 would have been allowed to neglect it. But the record of the Balkans will fill many people with misgivings lest the long series of failures in dealing with countries whose conditions, economic, social, and political, ought to have been as well known as those of our own country, should be extended to the last two on the list, Mesopotamia and Persia. In South-Eastern Europe the milk has already been spilt; in the Middle East there is still time to avoid the repetition of similar mistakes. For this reason we hope that the chapter in which the humiliating story of the Balkans has been unfolded has now, with the killing of Allied bluejackets in Athens, been brought definitely to an end. The reconstruction of the Government is directed primarily towards a more forceful prosecution of the war; but it must also make for efficiency, for "doing the right thing at the right time," where before all was ignorance, indifference, and vacillation. British interests are bound up with a vigorous policy in Macedonia and in Mesopotamia, in both of which places, according to our enemy's point of view, the Allies have for so long maintained monster "internment camps" for the benefit of the Central Powers and their vassals. Linked up with such a policy are questions of a final settlement. In Mesopotamia and Persia these ought still to be free from many of the complications which diplomatic mistakes in the past have created in the Balkans; but unless more heed is paid to expert advice and closer attention given to the part which these countries play in the general scheme of British Imperial politics, then they, too, will become sources of embarrassment rather than of strength to the Empire.

Just as in Near Eastern Europe a too diffident attitude, ending in self-effacement, proved prejudicial not only to British prestige but to the interests of the Allies as a whole, so in the Middle East there is need for the adoption of a definite policy which will command respect both from our Allies and from the local inhabitants. The troubles of the latter are largely due to uncertainty whether Great Britain can be relied upon and is capable of carrying out what she undertakes. Promises are of no worth, unless they can be supported immediately and in an adequate manner by action. Vacillation in the Balkans has spelt failure to protect Serbia, mismanagement in Roumania, loss of life among the Allied forces in Athens, and persecution for the Venizelists. British prestige in Mesopotamia and Persia can hardly be expected to stand higher than it does in South-Eastern Europe. After the preliminary blunders associated with the Mesopotamian Expedition, it has taken time to reorganise an efficient force. Whether the protracted delay that has actually taken place was inevitable we have no means of knowing; but until Kut and Ctesiphon are avenged we need not wonder that the native tribesmen hesitate to espouse the British cause. They will change their views as soon as the advance takes place in earnest, and their permanent allegiance can be secured by an early and clear pronouncement of a wise policy for the future. Again, in Persia there would be little need, it would be thought, for the silence that has fallen upon the country if Russian action in the north had been adequately supported in the south. To the chapter which, it is hoped, has now been definitely closed belongs a state of affairs which argued an inability on the part of Great Britain to keep abreast of her responsibilities either in the diplomatic or in the military sphere. A new order characterized by single-minded devotion to national efficiency will experience no such difficulties.

SERBIA AND THE ALLIES.

We have received the following interesting communication from a correspondent in Khartoum. It is dated November 14:—

In the issue of your paper for October 13 you publish a communication from Mme. Christitch upon the subject of the "Claims of Serbia upon the Allies" ("Serbia's losses").

Mme. Christitch is the wife of a former Serbian Minister, but this is not her only claim to distinction. She is an Irish lady, who has patriotically identified herself body and soul, both by word and deed, with the country of her adoption, and anything which she has to say on the subject of Serbia compels respectful attention.

In December of last year, being myself a member of one of the British Missions in Serbia captured by the Austro-German Army, I made the acquaintance of Mme. Christitch and Mlle. Christitch, who then were nursing at a large hospital, full of Serbian soldiers, wounded at Belgrade and during the retreat. They were assisted by a Norwegian friend. This was at a country town named Trstynek, on the Western Morava River, ten miles from Vratse, where most of the British hospitals had concentrated. Mme. Christitch's and her daughter's work was most admirable. What became of them after all their patients were transferred to Hungary I do not know, but one may be sure that they are actively engaged in Red Cross work for Serbia somewhere or another.

It must not be concluded that the present Serbian Army includes the total male population of Serbia—much less the total number of male Serbs. There are more than 100,000 Serb prisoners of war in Austria-Hungary—soldiers captured at Belgrade, and afterwards during the retreat; there were besides several thousand wounded taken in the hospitals, being unable to escape, and transferred to Austria-Hungary as soon as it was possible to remove them, in a great many instances a great deal sooner than the condition of their wounds admitted.

Much hardship was suffered by these unfortunate wounded and sick Serbs. They were scarcely treated like human beings. In their utter wretchedness and abandonment, bundled into their remnants of clothes, placed on springless bullock wagons in the bitterest Balkan winter weather, and packed off to the nearest station and sent to a place corresponding to a collecting dépôt, with precious little food supplied and no blankets, many had reason to be thankful for the presence of the British Mission Hospitals, who distributed stores, clothing, blankets to these heroic soldiers, and so mitigated some of their misery and suffering. The Austrians and Hungarians locally in charge treated the captured British hospitals very well; and they treated the wounded Serbs in hospital as well as they could do. Some invisible hand seems to have determined everything of importance, however, and the local authorities seemed to be left completely in the dark about the future, until a telegram of instructions arrived from Headquarters. This often countermanded the last order, and much inconvenience arose through the local authorities being in ignorance of what was going on, and having so little authority or discretionary power. The Austrians and Hungarians, especially the rank and file, were none too well off themselves for food and blankets during the advance in 1915, so that the fact that they succeeded in keeping so close to the spirit of the Red Cross Convention is the more remarkable. I am aware, of course, that they did not desire to stir up any unnecessary ill-feeling between the conquered Serbs and themselves, on account of possible administrative difficulties. However, they deserve credit for their treat-

ment of the captured English Medical Missions; and especially so does Baron Slatin, whose influence contributed, I think, not a little to the correct treatment of the doctors, nurses, and orderlies of the hospitals.

Besides these prisoners of war now in Hungary, thousands of boys between the ages of thirteen and the military age were collected and interned in Hungary. Men of fifty and over were either transferred to large towns like Belgrade, or sent for internment in Austria or Hungary.

I think that only the hopelessly crippled males were allowed to stay at home. No males were left in Serbia, excepting a few able-bodied men working under Austrian direction and some old men and very young children. When I left in February, 1916, Austrians, Hungarians, and Germans, and Russian and Italian prisoners were the only males to be seen in the land, with the above exceptions.

But the Serbs as a people would not be wiped out even if the present army in the field were killed "to the last man." The countries round—Bosnia, Herzegovina, Croatia, Slavonia, and the south part of Hungary—are for the most part Slav, and, in spite of their great losses, there is no fear of the Serbian people being exterminated. There is a danger of Serbia as a nation disappearing.

It is well to remember, too, that Serbia has not an equal claim on the Allies with Belgium. France and Russia went to war on Serbia's account. The Belgians were drawn unconsciously into the war by the force of a sudden whirlwind of events. The Belgians had no voice or choice in the preliminaries preceding the war.

I do not think for an instant that the Serbian Army would consent to sit by with folded arms, and act the part of spectator whilst the Allies fought its battle. The sword was drawn on Serbia's account, and Serbia is required to help in Serbia, where her soldiers have unique opportunities to assist in this great world war, whose issues now are certainly far wider than any Serbian interests, but whose consequences will affect every Serbian, born and unborn, more than perhaps any other nationality.*

The issues are worth fighting for. If the Allies lose, Serbia will be as a nation for ever exterminated. If the Allies fail to win outright, conditions of peace will be made at the expense of Serbia; for the Germans are fighting to get possession of Serbia more than any other place, and it will be the area of conquered land that they will like least to part with.

The Serbian Army would, I am sure, resent most strongly any attempt of the Allies to place them in the background in the final stage of the struggle for their national existence.

J. B. C.

*The Serbians have not only magnificent fighting qualities, but their knowledge of the difficult languages in the Balkans and of local conditions make them indispensable in the Balkan campaign.

FIND OF OLD SERBIAN COINS.

Die Drau, of October 21, reports that one of the Dalmatian papers has received the following news from Kotor:—During the progress of the work upon the enlargement of the aqueduct of the town, the workmen came upon a buried jar full of Serbian silver coins, bearing the effigy of Tsar Urosh II. (son and successor of Tsar Dushan). The mediæval Serbian Kings and Emperors were in frequent economic and political relations with the small Republic of Dubrovnik (Ragusa), in Dalmatia, and the southern part of this province, which countries were at one time tributaries to them, wherefore such discoveries are not in the least strange. Tradition says that the spot where the coins were found is the former site of the Benedictine monastery, which the Venetians razed to the ground in the course of a retreat during their wars with Frederick Barbarossa, so that this money is probably the ready money of the monastery. The newly discovered silver coins, which number about one thousand, are in good preservation.

HOUSE OF LORDS.

The Situation in Athens.

December 5.

The MARQUESS of SALISBURY asked for information regarding the very serious position of affairs in Greece.

The MARQUESS of CREWE: There is not very much to be said about Greece; but since the statement made by the Under-Secretary for Foreign Affairs yesterday a telegram has been received from his Majesty's Minister in Athens, from which it appears that a certain degree of order has been re-established in the capital. The bands of Reservists who, so far as can be ascertained, were more directly connected with the attack on the Allied troops and with the atrocities committed on the Venizelists in Athens have, it appears, been dismissed, and the town is now being guarded by Regular troops of the Greek Army. In the meantime his Majesty's Minister has advised British subjects to proceed to the Piræus, where they will be in a position of safety. Although no immediate danger is to be apprehended in regard to the safety of British life and property in Athens, we do not at all desire to imply that his Majesty's Government regard the situation as one of less gravity, or that they are in any degree less determined to fix responsibility for the events of December 1, or to secure that such outrages are not repeated.

HOUSE OF COMMONS.

The Standing of Venizelists.

November 30.

Mr. DILLON asked the Under-Secretary for Foreign Affairs what provisions had been made by the Allied Governments to safeguard the status as combatants of the Greeks who joined the Venizelist army, and to make sure that if taken prisoners by the enemy they would be treated as soldiers and prisoners of war.

Lord R. CECIL: The forces of M. Venizelos will be regarded by the Allies for belligerent purposes as volunteers serving with the Allied Armies at Salonika.

Lord R. CECIL informed Mr. King that the Allied Governments had furnished to M. Venizelos an advance of 10 million drachmæ, and they were at the same time rendering to him considerable assistance in kind in connection with the equipment, maintenance, and transport of volunteers adhering to the Venizelist movement.

The Position in Roumania—

December 4.

Sir H. DALZIEL asked the Secretary for War whether he could make any statement in regard to the military position in Roumania.

Mr. FORSTER: It is not desirable to make any statement on this subject at present.

—And in Greece.

Lord R. CECIL, replying to Sir H. DALZIEL, said: I regret to state that the situation in Greece is one of extreme gravity. In spite of the formal and repeated assurances of the Greek King and Government that no disturbances would be permitted, a most treacherous and unprovoked attack was made upon the Allied detachments landed by the French Admiral on Friday last, and many casualties have resulted, though full accounts have not yet been received. His Majesty's Government consider that the responsibility of King Constantine and his Government are deeply involved in this matter, and they are considering, in conjunction with their Allies, immediate measures to secure a radical solution of the situation which has now arisen.

On the motion for adjournment Mr. LYNCH called attention to the situation in Greece, where, he said, things were going

from bad to worse. Venizelist editors were being imprisoned without trial, and the most unfair treatment was being exercised towards inhabitants who were friendly to the Allied cause. The Government had encouraged their enemies by their hesitating counsels and weak action until the problem was now a hundred times more difficult than it was a few weeks ago.

Mr. DILLON said that a few days ago the Foreign Office gave a distinct pledge that the supporters of M. Venizelos would be effectively protected. M. Venizelos had telegraphed that nothing was being done to protect his friends. They were now exposed to systematic terrorism and prevented from joining the National Army. The history of the Greek matter had been a history of blunders perfectly unparalleled in civilised annals. A year ago this country had a clear treaty right to intervene in Greece, and the justification of our landing in Salonika was the lawful invitation of the lawful Government of Greece. When the King of the Hellenes broke the Constitution of his country we had a clear right to go in as the protectors of the Greek people. Instead of that we stood idly by while the Greek King who invited us to quit spent millions of German money in organising a system of terrorism and intimidation against our friends in Greece and in endeavouring to overcome the voice of the Greek people. When we had deliberately put ourselves in the wrong we served the King with a notice that he was to deliver up his artillery. What right, in the circumstances, had we to do that? When he refused we advanced upon Athens with a domineering expedition, and in such force that we met with a most humiliating and disastrous reverse.

Mr. ELLIS GRIFFITH said that this country had not been very fortunate in its championship of small nationalities. We went to war mainly because Belgium was attacked. The state of Belgium was known to all. Incidentally we went to war to protect Serbia and Montenegro, and they were to a large extent overcome. The last small nation was Roumania, and her position was one of which we had no reason to be proud. We had gone to Greece and had taken a certain portion of her territory, but the position was that the King of the Hellenes was against us. Why in the world did not the Government recognise that fact? Was not the failure of the Gallipoli Expedition due in no small part to the influence of certain of our enemies in Greece? We had encouraged Venizelos, who was regarded by some as a traitor to his King, but we had delayed doing everything he required, and what had happened within the last few days was most humiliating. Why did not the Government make up their mind once for all as between King Constantine and M. Venizelos? The Government had nothing to lose by a free and frank discussion. As it was, they had created a feeling of disquietude throughout the country. If they wished to secure the confidence of the country they should adopt a definite policy, support M. Venizelos, and make his position secure.

Egyptian Cotton.

Mr. PREYMAN, answering Major Hunt, said that, according to returns published by the United States Bureau of Foreign and Domestic Commerce, the quantity of Egyptian cotton imported into the United States during the year ended July 31, 1916, amounted to 195,500 bales of 750 lbs. weight. The quantity imported in the previous twelve months was 174,400 bales: the average of the preceding four years was 116,800 bales. These figures included a certain amount of Egyptian cotton which was subsequently re-exported to Canada.

Soudan Wheat.

Lord R. CECIL, in answer to Mr. Fell, said that it was probably the case that every effort was being made to stimulate the production of wheat throughout the Turkish Empire. His Majesty's Government were in communication with the Egyptian and Sudanese Governments in regard to the possibility of increasing the supplies of wheat available for export to this country. The matter would be examined with the utmost care and expedition.

The Austro-Hungarian Government has asked the American Red Cross Society to discontinue relief work in Belgrade and other parts of Northern Serbia after the supplies now in hand have been distributed. No reason has been given for this step.

HELP ROUMANIA

By coming to a Meeting at the Palace Theatre

(kindly lent by the Directors),

TUESDAY, DECEMBER 12th, at 3 p.m.,

held by the British Women's Hospital Committee in aid of

THE SCOTTISH WOMEN'S HOSPITALS (London Units).

In the Chair: SIR JOHNSTON FORBES-ROBERTSON.

The LADY FRANCES BALFOUR, BISHOP BROWNE, Miss COMPTON,

Miss DORIS KEANE, FATHER N'OLAI, Mr. PETT RIDGE,

Mr. BEN TILLET, Miss LINDA F. HAGEBY.

NATIONAL ANTHEM, Sung by Mme. CLARA BUTT.

The Palace Theatre, Tuesday, December 12th, at 3 o'clock

Tickets: 3s., 2s., 1s., to be obtained at Box Office, Palace Theatre, and at 21, Old Bond Street, W. If you cannot come to the meeting, please send a subscription to LADY COWDRAY, 16, Carlton House Terrace, W.

Our Object is to Win the War, to Prevent a Compromise Peace, to Uphold British Honour.

A MASS MEETING IN HONOUR OF THE SMALL NATIONS

(Belgium, Serbia, Montenegro, Roumania and Greece) will be held in the

QUEEN'S HALL, on Wednesday, Dec. 20, at 3 p.m.

Speakers—

Miss ANNIE KENNEY, Mrs. DACRE FOX & Representatives of the Allied Nations.

Chair—Mrs. PANKHURST.

The National Anthems of the Allies will be sung by Eminent Artists (see further notice).

Tickets, 2/6, 1s. and 6d., can be obtained from the Queen's Hall Box Office, and the W.S.P.U. Offices, 114, Gt. Portland Street, W.

Women's Social and Political Union, 114, Great Portland Street, W.

THE PRESS ON THE NEAR EAST

"'Per Mare per Terram.' New Version."

On Tuesday the *Morning Post* published a leading article, with the above heading, which expresses a feeling experienced by many Britons on reading of the event to which it refers. We quote the first portion of this article:—

"British and French marines to the number of 600 to-day marched out of the Zappeion under a strong guard of Greeks."

The quotation is taken from the published telegram despatched from Athens on Saturday. We beg our readers to read the citation again. It records the greatest humiliation ever inflicted upon the Royal Marines, who suffered it together with their French comrades, and it was inflicted by the British Foreign Office, whose policy is directly responsible for the ignominy, confusion, vacillation, and anarchy now prevailing in Greece. If the reader will endeavour to picture a battalion of the Guards marching out of Wellington Barracks "under a strong guard" composed of the least desirable alien inhabitants of Whitechapel, he will gather a faint notion of the degradation which Viscount Grey and his colleagues have brought upon the honour of British arms. The soldiery of King Constantine are a mob; the King himself a traitor to his country, and, as regards the Allies, a common defaulter; and the British Government allows his ragged regiment to "guard" the Royal Marines. The Allied troops had been landed because neither the King of the Hellenes nor his Ministers could keep order in the capital, so that the friends of the Allies, the men of M. Venizelos, whom the British Government has formally recognised as an Ally, were being shot and imprisoned by King Constantine's people. The Allied forces were attacked without provocation, and what was the sequel? The landing of reinforcements and the instant suppression of the mutineers—insurgents—bandits, or whatever they are? Not in the least. British and French Marines were marched out "under a strong guard" of these same ruffians.

The article proceeds to ask "By whose orders?" and to attribute the responsibility to the Foreign Office. It hazards the opinion that—

It is possible, since the Royal Marines and the British seamen are accustomed to enforce and to maintain justice, law, and order, that had not the Foreign Office policy been carried into execution there would be some Greek assassins the less in Athens at this moment, and the Germanised King and his Germanised Ministers would be under arrest on board a ship-of-war of the Allies.

Italia Irrendenta.

There is much discussion about the national claims, Italian or Southern Slav, to the lands of "Italia irrendenta." We do not purpose entering into the merits of these claims just now; but it is certainly advisable to hear, from time to time, the opinion of competent authorities on the matter. One of these authorities, M. F. Beaudoin de Courtenay, a well-known Russian philologist and a member of the Russian Academy of Science, recently wrote in the Russian paper *Den* as follows:—

Generally, it would be interesting to ascertain the facts of the racial and national position of the countries which the Italians call irrendentist countries. This position is known to many, but not to all. I am, personally, well aware of this position, through my own observations. As a student of the national customs, I have travelled along and through certain parts of the Austro-Italian theatre of war, and have stayed in nearly every village there.

In not one of these provinces which are being claimed by Italian irrendentism is the Italian—or, generally speaking, the Roman—element in the majority. The strong Italian or Roman element only exists in two Austrian provinces—namely, in the southern part of the Tyrol and in the south-western part of Gorizia.

We must not forget that the population of Italy herself is not composed only of Italians born and bred. In the north-eastern parts, in the territory which is adjacent to the Austrian provinces Carniola and Gorizia, there are over 30,000 men speaking the Slav language.

Throughout the Irrendentist provinces of Italy the non-Italian element prevails. More than three-fifths of the population of the Tyrol is composed of Germans; more than three-fifths of the population of Gorizia are Slovenes. It is true that in Istria there are a few small towns the population of which is entirely Italian; but, taken as a whole, Istria's population is only 30 per cent. Italian, the remainder consisting of Croats and Slovenes. Carniola is, as a whole, one of the purest—from an ethnographical standpoint—Slovene provinces. The whole of the Carso is inhabited by Slovenes. The population of Croatia, Dalmatia, and all the islands in the Adriatic consists of Serbo-Croats. In Dalmatia the number of people of Italian nationality is insignificant.

Russia and the Straits.

In a leading article, "Our Russian Ally," *The Times* (Tuesday) expressed satisfaction with the explicit statement made by M. Trepoff to the Duma regarding the

Allies' recognition of "the right of Russia to the Straits and to Constantinople," adding:—

Absolute agreement on this point exists among the Allies. Freedom of navigation will be enjoyed by Roumania, "now fighting—not for the first time—in battle side by side with the flag of Russia." While this explicit statement reveals nothing new to those who have followed the process of the diplomatic consolidation of the aims and interests of the Allies during the war, it is satisfactory that the existence of this agreement should have been solemnly proclaimed to the representatives of the Russian people in the Duma.

After recalling Mr. Asquith's statement, made to the members of the Council of the Empire and of the Duma who visited this country last May, that the British Government and people considered the complete agreement established between the two countries in regard to Eastern affairs "one of the most gratifying results of our Alliance," the article proceeds:—

They knew already, from the statement made by Mr. Asquith to the members of the Council of the Empire and of the Duma who visited England last May, that complete agreement had been "established between Great Britain and Russia in regard to Eastern affairs," and that the British Government and people consider this agreement "one of the most gratifying results of our Alliance." But it is well, at a moment when German intrigue is particularly busy in Russia, that the fact should be unequivocally declared to the representatives of the Russian people. We are convinced—indeed, we know—that Russia will extend to the rights and interests of Great Britain the same large-minded treatment which Great Britain has gladly promised to the traditional aims and interests of the Tsar and his subjects. Germany tried long and too successfully to foment distrust and suspicion between England and Russia and to keep us apart. Now we have come together, and we mean to stay together.

The people of England and the Western Allies have no desire to interfere with the development of Russia in accordance with her own genius. They desire to see her happy and prosperous, with a free outlet to an open sea, and able to live her own life in her own way; for they know that her own way will be the way of peace and of large-minded humanity.

A Land of Promise—Unfulfilled.

The December *Blackwood* contains an article entitled "Mesopotamia," which gives a capital description of the region between Kut and the head of the Persian Gulf, and of the appalling conditions amidst which our gallant troops have had to live, march, and fight. The writer, an officer, who naturally remains anonymous, was, like many other travellers, agreeably surprised by his first glimpse of the palm-lined Shatt-el-Arab. Basing himself on Mr. David Fraser's somewhat sketchy description, he had expected apparently to find a sandy desert. Instead he discovered that—

Both shores of the river, right down to the water's edge, were densely clothed with the tall, graceful date-palm, vines trailed from tree to tree, the scarlet pomegranate peeped in the undergrowth, and pink and white clusters of oleander dipped over the water's edge. . . . Grassy banks as green as any on the Thames itself, and myriads of palms swaying gently in the breeze, casting deep reflections in the water, left the impression that here was the Land of Promise.

Unfortunately he found, as others have done, that the promise is not fulfilled. A survey from the steamer's bridge showed that the belt of vegetation is of the narrowest; the desert lies behind; and, for that matter, the palms themselves are few and far between as soon as one leaves the Shatt-el-Arab and enters the Tigris. The descriptions of Busreh under British occupation, of the natural features of the country up-river, and of the Arabs and their manners and customs will be read with interest and profit by anyone who still wishes to learn what Lower Mesopotamia is like. But even more interesting are the passages describing the march to Orah in the advance that was to relieve Kut, of the fighting at the Hannah and Es Sinn positions, and of the "Julna's" gallant, but, alas! fruitless, attempt to run the blockade. All these things must be read in the original. But here is a passage describing part of the march from Kurnah. "Marching," we read, "was no pleasure now, but real hard work."

Men and animals would constantly slip and fall, and fatigue parties had to be told off to unload packs and help the mules on

to their feet again; great masses of clay would adhere to men's boots, increasing in size with each step, and only breaking away with their own added weight. There were marshes and creeks to be forded where the water would at times rise to one's waist. Biting winds and frost had taken the place of the phenomenal heat of July and August, and the discomfort of marching in wet boots and trousers needs to be experienced to be realized. Added to this was the discomfort of having to bed down for the night on ground sodden with the rain, and to scramble into one's wet things in the morning when the pools by the wayside were frozen, and so to march for hours through more puddle and marshes.

The Caucasian Front.

Writing in the *Birmingham Post* (December 4), Mr. Edgar Wallace observes that "the Turk seems to be testing the Russian line on the Caucasian front." He continues:—

Possibly he anticipates a renewal of the Russian offensive, and he has certainly had intelligence that the Russian is preparing to make some move or has been considerably reinforced, otherwise these reconnaissances conducted by important forces would not have been made. The army in the Caucasus usually does its best work in mid-winter. The Turk has every reason to believe that he will be subjected to pressure at this point. Indeed, he himself has directly challenged Russia to an offensive in Armenia by sending his divisions against the Roumanian. Turkey is the new recruiting ground for the German Army, and Turkey has enjoyed a long spell of quietude. In the course of the past eight or nine months new divisions have been formed and new strength has been acquired, but the Turk had some leeway to make up, for he lost heavily in the Gallipoli campaign, in the earlier battles of Mesopotamia, and very heavily in Armenia. To-day he is rather an unknown quantity, for we have very little information indeed as to the strength of his field armies or the size of his reserves. Possibly in the near future we shall have an opportunity of seeing his strength tested. He at any rate would seem to anticipate some such development.

King Constantine: A Greek Valuation.

The *Pall Mall Gazette* published last Friday an interview with Mr. Eumorfopoulos, chairman of the London Greek Committee, who, without mincing matters, said openly what most Greeks in this country have long been saying among themselves. Among other things, he stated:—

King Constantine has allowed his passions to guide him and his jealousy—for he is childishly jealous of Venizelos—to completely extinguish his judgment. By his directions all the just demands of the Entente are met in a carping spirit and with an ill-grace that the words "benevolent neutrality" try vainly to hide.

What are the "vital interests" of Greece of which we hear from the Tatooi Court? Certainly not Greek lives, which are being sacrificed by German submarines without protest; nor Greek territory, as Kavalla has gone and the King's Army remains in Athens; nor yet Greek honour, in view of the violation of the Constitution and of the Serbo-Greek Treaty. I am forced to conclude that the "vital interests" of the nation are centred at Tatooi, that the noble heritage of ancient Greece is being squandered to maintain a Prussian Court in the land of freedom.

Until Dousmanis, Streit, and Metaxas are removed from the councils of King Constantine no reliance can be reposed in the Royal undertakings.

The Roumanian Situation.

The *Statist* (December 2) is inclined to believe that the German attack on Roumania "is really induced by distress in Germany and the necessity felt to relieve that distress in some way or other."

Roumania had kept out of the present war so long that economically she was in a good position. Therefore, if Germany can treat her as Serbia was treated, Germany will be able to take possession of a very large booty; and, consequently, may hope that, for several months at all events, relief will be given. Looked at from that point of view, the operations in Roumania are of the highest interest. It is little to the credit of Entente Governments that they have not foreseen this and taken measures that would make Roumania reasonably safe. It is to be feared that although we have been assured again and again that the Entente Governments are in close and constant communication regarding a uniform policy in the war, there is not, as a matter of fact, the unity of command and strategy which is so absolutely necessary. If Russia were better prepared she, of course, alone would have been able to dispose of the German attempt.

Our Policy in the Near East.

In an article entitled "The Grecian Burlesque," the *Outlook* of December 2 regrets profoundly "the weak defence of the Government's policy in Greece put up by Lord Robert Cecil last Tuesday." After analysing the speech, the article concludes:—"It may, however, be said of him in extenuation that he would not commit himself to an opinion as to whether the policy adopted by the Allies was good or bad. Indeed, he wound up his defence upon a note of real humility."

The mischief of it is that there is not merely public opinion in this country to be considered. We have vast and vital interests in the Near East, and intelligent neutrals or belligerents reading

a summary of Lord Robert's speech would be likely to make two deductions: first, that when British policy does not happen to be in agreement with one or more of the Allies, it is meekly surrendered in the cause of peace; and, second, that whereas to support us carries no guarantee of protection, treachery and obstruction can be indulged in without fear of reprisals. Either of these deductions would be highly prejudicial to British prestige among primitive and warlike peoples, who do not understand diplomatic conundrums, but can appreciate the virtues of force and good faith.

The Turks' Misfortune.

The old British liking for the old Turk seems to take a lot of killing—probably because it is so very British. He is to-day our enemy, and we recognise the fact; but we do so reluctantly, because we see that he has been misled; and we still admire his good qualities, amongst which his courage takes high rank. It is a significant fact that those who have fought against him are the most ready to speak well of him. A writer who contributes lively notes, under the heading of "The Periscope," to the *Scots' Pictorial*, says:—

I shall be called a pro-Turk if I confess to having a very warm side for the Turkish soldier. It is a fact, nevertheless, that if the Turkish Army were trained by British drill sergeants they would be the finest troops bar none. The Germans have not been long in learning that. Ask any Anzac what he thinks of the regular Turk as a fighter and he will wax eloquent over his fearlessness, courage, devotion, hardness, and, last but by no means least, his anxiety to play the game. The Turk is a clean fighter, who will succour his fallen opponent and respect the rules of warfare. The irregular, the Bashi-Bazouk, and other riff-raff troops who are found fighting for the Sultan are a totally different type. The less said about them the better. German methods may temporarily succeed in persuading the Turk to fight, but brute-force discipline is certain to produce a bad effect in the long run. I am sorry for the Turk, because he is governed by the most corrupt set of rascals on earth.

That is the tragedy of the Turks! They have always, or nearly always, had rulers unworthy of them, thus proving that a people does not always get the Government it deserves.

RUSSO-PERSIAN FRIENDSHIP.

Under date of December 1, Reuter's Teheran correspondent reports:—

The Grand Duke Boris Vladimirovitch has arrived in Teheran after visiting Kasvin. At the outskirts of the town his Imperial Highness was welcomed in the name of the Shah by Prince Shoua-es-Saltaneh, the Shah's uncle, accompanied by a number of high Persian officials and by members of the Russian Legation. The Grand Duke will visit the Shah to-morrow.

Under date of December 4, Reuter's Petrograd correspondent reports that the following despatch has been received there from Teheran:—

The Grand Duke Boris on Saturday paid a visit to the Shah, to whom he presented, on behalf of the Tsar, a handsome silver vase. Yesterday the Shah gave a luncheon in honour of the Grand Duke, and expressed great joy at his visit to the Persian capital, in which, he said, he saw a pledge of the consolidation of relations of friendship and neighbourliness between Russia and Persia.

The Grand Duke expressed his satisfaction at having been selected as the first representative of the Imperial family to visit Teheran, and to confirm in the name of the Tsar the hope of the further consolidation of the traditional friendship of Persia and Russia.

A Sofia telegram announced that the German, Austro-Hungarian and Bulgarian Ministers to Greece had arrived in the Bulgarian capital last week. The Turkish Minister returned directly to Constantinople by way of Lule Burgas.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

In an interesting letter received by the last mail, our Correspondent at Nicosia informs me that the copper mines at Skouriotissa continue to be worked for an American company. There are two resident American engineers.

When I heard that M. J. Gennadius, the Greek Minister in London, had resigned his post because he was no longer able to identify himself with the policy pursued by his Government, I called and asked him to make a statement. Beyond confirming the report, however, his Excellency would say nothing, and, of course, his refusal to speak was strictly right and proper. With the Minister, the Consul General in London, and the Consuls at Liverpool and Manchester, also "went out," which shows how Greeks who know Britain and what she stands for regard King Tino's sinister activities. It is a pity, because Greek commercial interests in this country were being carefully watched and safeguarded and excellent relations had been maintained.

It is interesting to recall that the Greek consular service in Liverpool has been established since 1852. The first consul was Mr. D. N. Gianacopoula, and he was succeeded by Mr. D. Th. Ralli and Mr. M. A. Ralli (members of a well-known local firm, one of whom has been High Sheriff of Denbigh), and Mr. E. D. Barfi. Mr. Malandrinos was appointed to the office in 1893, and held it until he resigned recently—a period of twenty-three years.

The continued receipt of serious news from Roumania, winding up with the enforced abandonment of Bucharest, serves to emphasise the position of Germany if it had been possible to force her to rely for her supplies entirely upon food which she could import on payment. If that had been possible, if the effectiveness of the British blockade had operated, the next few weeks would have been serious indeed for the Huns. Unfortunately, however, this does not seem to be probable at the moment. Roumania cannot be said to be defeated—as defeats are counted—but with the steady advance of the enemy we must face the possibility of the latter being able to secure from the occupied territory large supplies of the commodities of which they stand much in need. We have yet to learn what the Roumanians have done in their retreat: whether they have been able to leave empty granaries and oil depots, and so reduce to a minimum the spoils which the Germans hoped to secure. I hope this will prove to be the case, for, apart from the hardships which would fall to the lot of our Roumanian friends, it would be disastrous to the Allied cause if the Huns were able to obtain sufficient supplies to enable them to carry on to next harvest time.

It is not surprising to hear that Roumanian Consols continue to weaken on the London Stock Exchange. This was inevitable when the Germans captured Toigoristea and made progress on the way to Ploesti, in the oil-field region, where are many refineries and the principal pumping and storage station of the Gov-

ernment pipe line. It is unfortunate for shareholders in the Consolidated—which holds more than 5,000 acres of oil-bearing land—particularly because last year (ended June, 1915) the concern earned nearly £80,000 net profit.

Interest will be taken in the publication of the resolutions adopted by the Executive Committee of the Business Conference of representative British Chambers of Commerce. The principal of these urged that enemy ships "shall not be free after the war to extend their share of the world's carrying trade until the enemy has replaced all ships lost by the Allies owing to the enemy's piratical methods, and that no peace terms which do not provide for such replacement should be considered." I should like to think that our own and the Allied Governments will adopt these proposals. The toll which has been levied on shipping by the Germans is grave, and quite apart from the fact that these maritime outrages have been indiscriminate and committed without a thought as to the fate of crews, the destruction has been thoroughly wanton.

And not only ourselves and our Allies are concerned. Neutrals will have heavy bills to present to Berlin. There is scarcely a maritime nation in the world that has not suffered; the wicked campaigns against Norwegian and Danish ships and, to some extent, against Swedish and Greek, are too recent to be forgotten; and I hope that when the time comes no mawkish sentiment or desire to make the way of peace easier will stand in the way of these claims being enforced.

Congratulations to the P. and O. and the able men who steer the concern to triumph. During the past year the success achieved has been on an unparalleled level; earnings were phenomenal, and the dividend declared on the deferred stock is the greatest in the history of the company. A full summary of the report for the year is to be found in our City pages, and it will be seen that the net profits amounted to £717,500, an increase of £286,300 as compared with 1914-15. It is noteworthy that this result has been won despite the fact that half of the company's fleet of steamers is held by the Government at rates which prevailed before the war, and that no fewer than five vessels have been lost during the year. The accounts are again presented in "simplified" form, which precludes an out-and-out analysis—if, indeed, any be called for.

A special correspondent of the *Paris Journal* paints a harrowing picture of the condition of the people of Old Serbia, particularly the agriculturists. In a recent article he spoke of the nameless atrocities committed by the enemy in the early days of the occupation, of the massacres, and of the famine to which the country was succumbing. Stocks of food which were estimated to be enough to last the whole population for two years had immediately been commandeered with the most pitiless thoroughness. In particular, thousands of pigs had been driven off by the Germans. The whole of this season's harvest had also been requisitioned, so that by the end of the year the people would be starving. These things must be kept in view for the day

of reckoning. Meanwhile, there is a Serbian Relief Fund which I commend to charitable attention.

As a journalist who has worked in three continents I have followed the recent developments in connection with Reuter's Agency with much interest. At the extraordinary general meeting of the company, held last week, the shareholders confirmed the arrangement to sell the concern, a summary of which appeared in the last issue of *THE NEAR EAST*. The offer came from the chairman of the company, the Hon. Mark Napier, and his friends, and it was to purchase, for the sum of £550,000, which was equal to £11 for every £10 share, the undertaking and assets of the company, which would include the whole of the shares of the British Commercial Bank, Ltd. It was stated that the directors were strongly of opinion that the shareholders would act wisely if they confirmed the sale, which not only would provide sufficient to pay them £11 for each £10 share as consideration for the transfer, but ensure that for the future the agency would be in a position to carry on its business entirely free from influences hostile to British interests either during the war or afterwards.

The shareholders have done well to accept the offer, for despite all the labours of the company and of the manager of the bank to secure increased earning power, the £10 shares had for some time fluctuated between £4 10s. and £6 17s. 6d. For the last three years the shareholders have received no return on their invested capital, and there is little doubt that they will do exceedingly well out of the transaction. Reuter's Agency is at any rate saved to British commercial interests, and I think Mr. Napier, and those who have acted with him in this delicate negotiation, deserve thanks and congratulation.

The methods employed in Egypt of obtaining commercial information continue to arouse criticism in the country. One point complained of is that there are too many import firms and commission agents who act as inquiry agents for firms abroad. This complaint was made recently to the Chamber of Commerce, which comments as follows in its *Journal* for November:—"Our correspondent asks how it is possible for a man who is a commission agent himself to give information, with impartiality and discretion, when he is asked to report on a competitor, or the clients of a competitor? The inquiry service of the local banks, also, leaves much to be desired, the same information being often given on half-a-dozen different firms, and there is much too much use of stereotyped forms of reply such as 'New firm, means unknown, must be seen working,' which is, of course, very prejudicial to the interested parties, about all of whom it is easy enough to obtain reliable information, were the necessary trouble taken. What is really needed is a thoroughly reliable and impartial commercial inquiry office whose whole time and energies are devoted to obtaining and classifying information for the use of firms abroad desiring connections in this country."

COMMENTATOR.

Trade Problems in Egypt.

British Exporters' Neglect of Present Opportunities.

The British Chamber of Commerce of Egypt continues to wage war against the apathy of British houses towards the trading possibilities in Egypt, and in the November issue of the *Journal of the Chamber*, Mr. J. Murray has a striking article on the subject. Writing under the title of "British Exporters and the Egyptian Market," he says that the market has generally been underestimated both by our export merchants and manufacturers. Very rarely is found an English manufacturing firm actively interested in Egypt, "and among the export merchants, outside of the textile trades, it seems a mere handful who derive any considerable part of their business from Egypt."

"Under the circumstances, the United Kingdom's share in Egypt's import trade must be deemed as large as could reasonably be expected. Egypt is, of course, comparatively regarded, a market of limited possibilities for a great many trades, and that is generally the whole explanation why British firms spend so little attention upon it. They have mostly preferred to follow the main 'runs' for over-sea trade, and in the line of these Egypt does not lie, whatever geography may have to say in the matter. With the increasing stress of international competition, however, the minor and isolated markets cannot be so indifferently regarded, and our traders are, in fact, revising their outlook upon the world's markets, as may be observed in various directions."

Bad Debts—A Moral.

"There are, however, it must be said, a number of British manufacturers in whose books Egypt stands for nothing more than bad debts. In their casual way, these unfortunate manufacturers had accepted orders without closely ascertaining whom their correspondents were, and they are still waiting for their money. In many cases, manufacturers complain that Egypt requires a much cheaper kind of article than they produce. This kind of objection, however, which one used to hear so frequently, with reference to almost any market, is happily far less common nowadays, thanks to the influence very largely of the younger men in our industries. And the war has administered a wonderful filip to our manufacturers in this direction, by awakening them to the serious encroachment of enemy competition in their overseas markets."

"With the invaluable assistance and encouragement of the Board of Trade, who collected and exhibited to our manufacturers a great variety of samples of the more successful lines of enemy goods, numerous firms have taken up, during the war, the production of new and cheaper articles, more adapted to the tastes and conditions of various markets, and many other firms now engaged upon the production of munitions have the intention of doing likewise as soon as they are free to pursue their ordinary business. Meantime many of the new lines of British goods have been successfully introduced to export buyers, and are reported to be winning ground for British trade in Empire markets."

Enemy Businesses.

"It has been asked why British exporters are not more alive to the opportunities of acquiring the business of enemy houses in Egypt, as they are being wound up. The question is important in view of the limited number of British houses in Egypt, and attention might usefully be drawn to it through the Commercial Intelligence Branch of our Board of Trade, who have the best means of knowing the circles likely to be interested."

After referring to the sale of the Nigerian properties, Mr. Murray writes:—

"The mention of Nigeria brings to mind a striking illustration of the way in which our merchant houses have developed British trade in outlying markets, which otherwise would in all probability have remained all but unnoticed by our manufacturers. The West African trade has been 'created' by our merchant houses, and, thanks to their efforts, is catered for by considerable numbers of our manufacturers."

The Merchant System.

"The merchant system has its drawbacks, but British manufacturers are still generally grateful for the convenience it represents in export trade, and, in the interests of developing our trade with Egypt, the most hopeful course would be to attract more attention to it among our merchant houses. The merchants dealing in the general requirements of the market could do much to educate our manufacturers as to the goods required and, in being able to sell to the merchant houses, on practically home trade terms, the manufacturers would have a far readier interest in the market than if it were a question of dealing direct with Egyptian buyers."

"Egypt would in any case be a market of more interest to our merchants and our manufacturers if they knew more about it. In view of the enquiries received for the most elementary information about the country, one is astonished in realising how little Egypt is known, even to our bigger and more enterprising manufacturers. The Chamber's Report on Opportunities of Trade resulting from the elimination of enemy competition contained much needed information, which has served in more than one case within my knowledge to beget a more active interest in the possibilities of business with Egypt. The growth of advertising in the Chamber's monthly *Journal* also witnesses that an active propaganda to interest our manufacturers in Egypt is not hopeless."

A Case in Point.

"A certain Egyptian firm of commission agents recently circulated a proposal among London export merchants for the financing and execution of their orders on this side. Perhaps they were finding that few of our manufacturers were in a position to sell on long credit, and through the intermediary of a merchant house here hoped to overcome the difficulty. This function of financing overseas orders is the main service of the merchant houses to British export trade and explains their great position in our trade system. Proposals like that of the firm referred to are certainly of interest to our merchants, and on such lines the merchants' co-operation would be of great advantage to British trade with Egypt. One important house whose attention I drew to the Egyptian firm's offer were found to have already given it their consideration, although hitherto, I believe, they have given no attention to Egyptian business."

"The Federation of British Manufacturers, which has just been formed is the first really national organisation in this country concerned with trade, and it has abundant opportunities of useful service. Groups of manufacturers not competing in their production are beginning to be formed to establish direct representation in particular markets, and are being remarkably well supported. China, especially, in this connection is receiving attention. Egypt's turn may come presently."

SHIPPING NOTES.

Empire Chambers of Commerce Proposals.

The following summarises the resolutions dealing with British shipping after the war which have been adopted by the Executive Committee appointed by Business Conference of representatives of Chambers of Commerce throughout the Empire held in June:—

Enemy ships not to be free after the war to extend their share of the world's carrying trade until the enemy has replaced all ships lost by the Allies owing to the enemy's piratical methods. No peace terms to be considered which do not provide for such replacement.

A lower scale of tonnage dues and port charges to apply in British ports to British-owned vessels.

Privileges in British ports to be accorded to Allied and neutral shipping equivalent only to corresponding privileges accorded by Allied and neutral countries.

Enemy shipping to pay in British ports double dues paid by other shipping.

British Government subsidies in no case to be granted to enemy shipping.

Foreign tonnage in Empire ports to conform to Empire conditions regarding shipping.

Shipping laws and regulations to favour the shipment of goods from one port to another within the Empire in vessels under the British flag registered in the Empire, or in vessels belonging to Allied Powers.

No agreements to be entered into by British shipping companies with foreign shipping companies without the cognisance of the Board of Trade or other Ministerial authority.

Measures to be taken to prevent foreign goods from being carried in British ships from British ports at less rates than similar British goods.

Unfair treatment or preference to foreign goods to be reported through the British Imperial Council of Commerce to the Board of Trade.

Any British shipping company giving preference in freight to foreign goods, the steamers of such company to pay port and other charges without rebates.

Fearful Loss of Strick Liner.

Lloyd's agent at Plymouth telegraphs that some books from the British steamer *Serbistan* (belonging to the Strick Line Ltd.), a tin canister containing various papers relating partly to the *Serbistan*, and a Bible marked inside "Capt. John Griffith, 29, Snowdon Street, Port Madoc, North Wales," were picked up on November 24, six miles south-west of Eddystone. The *Serbistan* left Brest on the afternoon of November 16.

Russian Reprisals.

Russia has refused to recognise the hospital ship *Bulgaria*, of the Bulgarian Black Sea Shipping Company, two Russian hospital ships having been torpedoed in the Black Sea by the Turkish Fleet.

Torpedoed Vessel.

Vessels torpedoed by the enemy during the week include the following: Greek steamer *Michael* (2,410 tons; built in 1890). Cargo valued at £200,000.

As the tenders received for the purchase of wheat in stock at the Delta Adult Reformatory, Cairo, were not satisfactory, new tenders were advertised for, to be sent in by November 25, 1916.

SULZER BROTHERS, WINTERTHUR, SWITZERLAND.
Steam Engines of all sizes, especially Uniflow Engines, Boilers and Superheaters. Sulzer Diesel Oil Engines from 30 to 6,000 B.H.P. Pumps of various systems, particularly Sulzer's high and low lift Centrifugal Pumps. Fans of all kinds. Steam and hot water heating. Ice and Refrigerating Machinery (if inde system).

PERSIAN MONEY VALUES.

A correspondent who has been travelling on relief work in the Russian Caucasus sends to *Common Sense* some remarkable figures about the Persian exchange. "Most of us believe that the credit of Russia and England is quite as good as that of Persia, yet in the exchange market Persia stands higher than either. The immense imports into Russia, both from England and from Persia—where a Russian army is operating—have produced a sale of rouble paper without any corresponding demand. . . . Between Russia and England there have been credit operations—loans—which have served to prevent the full drop in the value of the rouble in terms of the pound sterling. But Persia has not acted similarly, and we find that the sovereign has been dragged down to the level of the rouble, although there is little or no trade now between Northern Persia and England. In changing a pound sterling into Persian currency we lose about 29 per cent. of its original parity value; in purchasing roubles with our sovereign, we gain about 53 per cent.

"In the relief districts the price of food-stuffs has risen enormously. Taking the pre-war standard as 100, the present price at Tabriz is 254, at Urumia 283, and at the Armenian town of Van 338. Thus we are well within the mark if we take 88 per cent. as the average rise in prices for the relief undertaken from Tiflis as a base, and 154 per cent. as the rise in Persian prices. For goods bought in Tiflis the gain on exchange is more than compensated by the loss on increased prices, the purchasing powers of the sovereign being reduced to 81 per cent. of the normal. In Persia, where both exchange and high prices tell against English purchasers, the efficiency of the sovereign is reduced to the low figure of 28 per cent."

ENEMY PROPERTY IN EGYPT.

The following Proclamation by the General Officer Commanding-in-Chief in Egypt appears in the *Journal Official*:—

"Whereas by the Proclamation of July 31, 1916, provision was made for obtaining particulars of enemy property in Egypt; and whereas it is important, on the other hand, to obtain particulars of all property in enemy territory belonging to persons resident or carrying on business in Egypt, and of all claims of such persons against enemy persons and Governments;

"Now I, Archibald James Murray, in virtue of the powers with which I am invested as General Officer Commanding-in-Chief his Britannic Majesty's Forces in Egypt, hereby order as follows:—

"1. Every person resident or carrying on business in Egypt who is entitled to property of any description whatsoever in enemy territory, or who has any claim against an enemy Government or against any person who is an enemy person within the meaning of Article 1 of the Proclamation of July 31, 1916, shall make a detailed declaration of such property or claim within thirty days from the publication of the present Proclamation.

"2. Declaration shall be made to the Public Custodian of enemy property in Egypt at the Ministry of Finance, Cairo, and shall be in such form as the Public Custodian may direct.

"3. For the purposes of the present Proclamation:—

(a) The word 'person' shall include companies, partnerships, and associations of persons corporate or unincorporate.

(b) The term 'enemy' territory shall include all territory of any State at war with his Britannic Majesty, and all territory in the effective military occupation of any such State."

Recent events in Abyssinia have drawn attention to the banks of the Red Sea and of the Indian Ocean, where France possesses important economic interests, too little known, says a Paris contemporary. These interests are not only concentrated in the great port of Jibuti; they range themselves along the Yemen Coast, where France occupies a position of first-rate importance from a commercial point of view as far as the distant shores of the Persian Gulf, where French merchandise is very much in demand, but where the French flag—except on the small islets of Muscat—has not made its appearance for less than a quarter of a century.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The market during the past week has been more unsettled than for some time back, and there has been a disposition on the part of traders to restrict their purchases. More bearish influences have prevailed in raw cotton circles and values in American cotton are nearly a penny a lb. lower than the top. The political crisis and the unfavourable military position have had a disturbing effect upon trade generally. Sellers of yarn and cloth have not given way in price equal to the drop in the raw material, but producers have found it much more difficult to sell.

Considerable activity has recently occurred in piece-goods suitable for Egypt, but shippers this week have been less disposed to purchase freely. Large contracts, however, are on the books, and it is to be hoped that there will not be any serious depreciation in values before such supplies are cleared abroad.

Some speculative purchasing has occurred for certain Near Eastern outlets, but buying has been very irregular. For India fewer wires have come through, making offers for cloth and bleaching descriptions continue to attract more attention than grey staples.

No general support has been given by China, although it is said certain standard makes are wanted in Shanghai. Home trade buyers have been less inclined to anticipate future wants. The position of most manufacturers remains healthy, and there has been no running after fresh orders.

American yarns for home use are easier on the liver in sympathy with the lower rates in Liverpool and New York. Individual spinners, however, have been stiff, and concessions in price have not been easily obtained. So far as sales are concerned, it has been a smaller week than for a long time back.

Prices in Egyptian yarns have also given way somewhat, but producers are indifferent sellers, and mills in Bolton and district continue busy. In connection with the wages dispute the Government has stepped in, and although an actual settlement has still to be arranged, it is quite impossible for any strike to take place.

COTTON SPINNING IN 1916.

Mr. Frederick W. Tattersall, of Manchester, has prepared an analysis of the stocktaking results of Lancashire cotton spinning companies for the twelve months ending November 30, 1916. The list contains particulars of 62 concerns. The total paid up share capital of these companies amounts to £2,230,639, with loan capital of £1,192,616. Of the sixty-two companies sixty have made a profit for the year and two a loss. The total profit for the twelve months after paying interest on loans and allowing for depreciation amounts to £250,188. The profit on share capital works out at 11.22 per cent. per annum against less than 1 per cent. per annum in 1915.

The total value of the plant of these mills, including machinery, is £2,702,989. The year opened with spinners of yarn in a fairly healthy position, but business has gradually become still more profitable, and at the moment the production of the mills is deeply sold at remunerative rates, the margin of profit being healthier than at any time since the beginning of the war. Employers have been harassed by the shortage of labour, and the output of machinery is much less than in pre-war days. The sixty-two mills contain 1,821,574 mule spindles, 3,351,453 weft spindles, and 374,972 ring spindles.

A ridiculous and mischievous rumour is interfering with the urgent work of recruiting men for railway construction in Mesopotamia. The *Madras Mail* learns of many cases in which men at the last moment hang back because they have been told by ignorant and irresponsible people that, though recruited for non-combatant work, they may be made to take part in fighting. Every man recruited enters into an agreement with the Secretary of State, wherein it is specified in what capacity he is to be employed, so that employment in a combatant capacity would be a gross breach of faith.

TRADE NOTES.

Openings.

The Egyptian Ministry of Finance invites tenders for the supply to Ports and Light-houses Administration, Arsenal, Alexandria, of iron, steel, etc., required for the financial year 1917. (December 22.)

Agents Wanted.

A well-known firm in Birmingham is desirous of appointing agents in the principal towns of Egypt for the sale of yellow greases, belt greases, soluble oils, colours, varnishes, etc. Further information on application to the British Chamber of Commerce, 6, rue l'Ancienne Bourse, Alexandria.

Accepted Tenders.

The Egyptian Ministry of War has accepted the following tenders—

For the supply of cotton seed oil into the War Department Stores, Tûra, by Messrs. J. Riches and Co., Cairo; £E7,275.

For the supply of caustic soda into the War Department Stores, Tûra, by the Egyptian Salt and Soda Company, Ltd., £E917.

For the supply of talc into the War Department Stores, Tûra, by Mr. Maurice Ab. Israel, Cairo, for the total sum of £E61,200 millimes.

COTTON GROWING IN MOROCCO.

Experiments in cotton-growing in Morocco have gone on uninterruptedly, in spite of the war, under the direction of General Lyautey. Before the declaration of war satisfactory results had been obtained by a few colonists at Colomb Bechar, Ravat, Ain-Zibet, and Souk-el-Raba (says *The Times* Trade Supplement for December). A sample of the crop was submitted to a Liverpool house in November, 1913, and estimated to be worth from 11d. to 1s. ginned, and to be more resisting and finer than most of the Egyptian and Georgian cottons.

In 1914, 35 hectares (87 acres) were sown; in 1915, 12 hectares (30 acres); and in 1916, 45 hectares (112 acres). The crops were abundant, in spite of unfavourable circumstances, due to migration and to late picking. The yield per hectare (2½ acres) was 1,000 kilos (2,200 lbs.) for the variety known as Abassi; 1,400 kilos (3,080 lbs.) for Accabari; and 1,000 kilos for Porto Rico.

The verdict of the experts on the new plant, Porto Rico, was as follows:—"A very fine cotton—white, brilliant, with very long, fine, and nervous silk." On the market, whereas the rates of the various varieties ran from 60 fr. to 100 fr. (£2 8s. to £4) for the 50 kilos (110 lbs.), Porto Rico fetched 200 fr. (£8). The receipts per hectare in 1915 were, for Abassi, 2,240 fr. (£89 12s.); 2,408 fr. (£96 6s. 8d.) for Murabi; and 4,000 fr. (£160) for Porto Rico.

Morocco is regarded as the future cotton-producing centre for France. It has a splendid system of rivers, running plentifully all through the year. The Oued Sebou, Oued El Rivia, Oued Sous, Oued Moulouya, with their muddy waters, can easily irrigate the high valleys and the plain.

In a lecture delivered in London last week Mr. D. F. Pennefather, M.P., discussed "The Empire and the Cotton Plant." From Egypt and the Sudan, said Mr. Pennefather, came about 1,500,000 bales of cotton, much of it being, on account of its qualities, used as silk. Russia produced about a million bales, upon the whole fairly good. From Brazil, Mexico, Peru, and Turkey came about 2,000,000, some of it used in woollen fabrics.

DELICIOUS COFFEE.

WHITE
& BLUE**

For Breakfast & after Dinner.

Wholesale, of Hanson's, London, England.

PRODUCE REPORT.

LONDON, December 7.

Currents.

There has been only a moderate activity in the market during this week, but prices are well maintained. The situation in Greece is causing considerable uneasiness, and unless favourable developments soon ensue the effect in the currant markets here, as well as in Greece, will be grave.

Sultanas.

The demand is good, and a fair amount of business has been done in Afghan and Australian fruit at full prices.

Raisins.

About 138 tons of Valencias were offered at public sales this week and met a slow demand, only a small part having been disposed of at late rates; quarter boxes common to good sold at 52s. to 55s., and seedless at 62s. to 65s.

Seeds.

Linseed continues to be very firm and slightly dearer this week. London-Calcutta, spot and afloat, is quoted at 110s.; whilst December-January is offered at 112s. with few buyers at that figure. Ordinary Bombay, December-January, quoted to-day 113s. Rapeseed is firmly held; bold Ferozepore, December-January, finds buyers at 90s., whilst Toria, ditto, is quoted at 93s. Cotton seed is quieter, but quotations advanced

since last week; Sakelarides, loading, is quoted £19 12s. 5d., London. Mustard seed is in moderate demand and practically unchanged. Rangoon beans show a slight advance on the week, both for spot parcels and for arrivals. Canary seed is in better demand for export. Spanish and Morocco are obtainable at late rates.

Oils.

Linseed oil has been quieter this past week; spot pipes sells at £53 5s.; barrels, ditto, at £54 5s., landed terms. Rape oil is firm, but with little doing. Ordinary brown, naked, spot, £52; English refined, barrels, £54 to £56. Cotton oil is very firm for crude spot pipes at £50, refined pale nominal, and barrels sweet at £59 to £60 as to make. Olive oil is also very firm, Spanish spot selling at £68 per tun, ex store, in barrels. Soya oil is steady at £46 5s. for December-January shipments.

Oilcakes.

Cotton cakes.—All recent arrivals of Egyptian have been cleared and a fair amount of business has been done in December shipments at £14 10s. ex ship. English made cotton cakes are sparingly offered at £15 12s. 6d. to £16 2s. 6d. Linseed Cakes.—The market is practically bare of stocks, whilst offerings for shipment are very limited, the average quotations being £18 to £19 10s. per ton, ex mill, for English made

cakes, and American at £17 2s. 6d. per ton. Maize germ meal, white African, can be obtained only in small quantities at about £16 15s. per ton; and English made at £16 15s. to £17 2s. 6d. per ton ex mill.

TOBACCO IN ALGERIA.

The British Consul-General at Algiers reports that an American syndicate has for some time been negotiating with local tobacco merchants with a view to the acquisition of their businesses, and that it has secured from the large majority of them an option to purchase within the next six months.

In this connection the Consul-General has forwarded an extract from the local Press, dated November 1, containing the report of a Commission appointed by the Governor-General to consider, *inter alia*, the whole question of a tobacco monopoly. The Commission recommends (1) the institution of a partial monopoly of tobacco, comprising the taking over by the State of the production and importation of the raw leaf tobacco and the general sale of manufactured tobaccos; (2) the institution by the State of a model manufactory; and (3) State encouragement of independent manufacturers. It is thought that by these means the producer would be protected from any violent fluctuations in prices, and the interests both of the consumer and of those traders who elect to remain independent would be safeguarded.

Prominent Industries of India

ENGINEERING NOTES.

Projected Volga-Don Canal—Link with the Black Sea.

The British Acting Vice-Consul at Rostof-on-Don reports that, according to the local press of September 13, the project for the construction and equipment of a Volga-Don canal, as designed by the Russian Minister of Ways of Communications, has been approved by the Government. A party of engineers has been appointed to carry out detailed technical surveys and to consider other questions connected with the execution of this large enterprise. The projected canal will play an important part in the economic development of south-eastern Russia and of the Volga and Don Basins. Grain from Tsaritsain and timber and ore from the Urals will thereby obtain a direct outlet to the ports of the Sea of Azof and thence to the Black Sea. Moreover, the canal will make it possible to supply coal to all the chief cities and industrial centres of the Volga and surrounding country from the rich coal district of the Donetz Basin. It is thought that there will be a prosperous future for Rostof, which will be the outlet for the products using the new route.

The Sudan Railways.

The Sudan railway authorities intend to relay the remaining portion of light rail track between Atbara and Abu Hamed with heavy section rails, and thus complete the work begun in 1912. For this purpose the new sleepers are being creosoted at Atbara, so that they will be safe from the attacks of white ants. It is well known that the Sudan railway service has an installation at Atbara by means of which creosote oil is introduced into the capillary pores of the sleepers as follows:—The sleepers are placed in trolleys,

which are pushed inside a large air-tight steel cylinder. The air is then sucked out of the cylinder by means of electric pumps, and when a vacuum is created in the cylinder and in the pores of the sleepers the oil is admitted into the cylinder from a large storage tank, and it works its way into the core of the wood. When the cylinder is full, more oil is forced into it by means of pumps, and this ensures the sleepers being saturated. When this is done the oil is worked back into the storage tank by means of pumps, and the sleepers are taken out. Creosote oil is a poison to the white ant, and wood treated with it will not be attacked by this ant.

Russian Railway Projects.

The railway programme of the Russian Government continues to receive great attention in the Continental Press. It includes one project intended to develop the Volga districts and to connect the Ural region and Central Asia with transit lines to Moscow and Petrograd. The following railways have been under consideration:—Galitch-Kazan-Bogatoe line (on the Tashkent Railway), 834 versts, estimated to cost 88,000,000 roubles; or, alternatively, a Manturoff-Kazan-Bogatoe line (710 versts), to cost about 75,000,000 roubles; or a line from Galitch to Kazan and Orenburg (1,213 versts), to cost 123,000,000 roubles; or a Manturoff-Kazan Orenburg line (1,080 versts), to cost about 110,000,000 roubles.

Electric Tramways.

Russian municipalities have shown great readiness in adopting comprehensive electric tramway schemes, says the *Financier and Bullionist*. The list of towns now possessing such systems, as well as electric stations, is a long one; and previous to the war the list of other municipalities seriously discussing the establishment of electrical tramways and

lighting systems was remarkably long. The German tentacles that had spread over the Russian municipal system and so largely controlled the tramway systems, being now cut, there is another field open for specialists in foreign tramway systems—there are some such in Britain.

Public Works Wanted.

Sufficient has been said above to show that Russia is not only in urgent want of public works, but that her readiness to adopt the same is evidenced in her Budgets, where large sums of money are entered for the express purpose of their creation. But it requires a few moments' reflection, perhaps, to realise that Russia's immense population of 170,000,000 contains few very large towns, and that the population, therefore, is very widely distributed, and is made up of many villages and towns of various importance, each requiring the aid of the skilled engineer and the money combination. The call, therefore, is not for the execution of a few gigantic engineering projects (of course, there are such), but rather for the endowment of a large number of important communities with a series of public utility works, constituting valuable investments both for the respective communities and contractors concerned.

Geared Steam Turbines.

Geared steam turbines are making great headway in the domain of marine engineering. Last year, of nine turbine-engined vessels built, with a view to classification in Lloyd's Register, six had geared turbines. At the present time, with the same object in view, there are fifty-two vessels under construction in which geared turbines will be fitted. Of these twenty-five will have Parsons single-geared turbines, and twenty-seven will be equipped with Curtis double-reduction geared turbines.

COMPANY MEETINGS.

Khedivial Mail Steamship and Graving Dock.

The 19th ordinary general meeting of the Khedivial Mail Steamship and Graving Dock Company, Ltd., was held on December 4 at Winchester House, Old Broad Street, E.C., Lord Ernest Hamilton (the Chairman) presiding.

The Secretary (Mr. G. R. Branch) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The record of your ships' services for the past 12 months is briefly as follows: a certain number of your boats have from time to time been requisitioned by the Government for various purposes. Some of these ships have subsequently been released, and again requisitioned at a later period. All such ships as were left in our hands have been used for ordinary trading purposes as tramp steamers, with the exception of the s.s. *Kosseir* and one other which had to be kept as a reserve for the *Kosseir*, the *Kosseir* having been used to maintain the Cyprus mail service. This service has not been a source of profit, but we were bound to it under the terms of our contract with the Government, and the fact that it is no longer profitable is an incident of the war and one which we have got to face. Our old contract with the Egyptian Government, whereby we were subsidised to the extent of £6,000 a year with the obligation to maintain certain mail services, has naturally had to be very much modified, the Constantinople mail service having been for obvious reasons impossible. As the agreement now stands, we are in receipt of a reduced subsidy, with the obligation to maintain certain services in the Red Sea, and with a further obligation, if called upon by the Government, to run a mail service between Alexandria and Piræus.

The result of the year's working is satisfactory by comparison with the profits of former years. (Hear, hear.) I do not, however want shareholders to run away with the idea that the satisfactory results obtained are entirely due to the war or to causes arising out of the war. They are, no doubt, to a very great extent due to the abnormally high freights which have ruled during the past 12 months, but they are also in some measure traceable to the generally improved condition of the company. During the past few years several much-needed reforms and economies have been instituted. The fleet has been reduced in size and very greatly improved as regards efficiency, and last, but not least, the debt on the steamship *Osmanieh*, which has for the past ten years been hanging round the neck of the company, has at last been paid off. It must be remembered, too, that in normal times a certain number of our ships were very profitably employed for about six months of the year in the Egyptian pilgrim traffic, but for the remainder of the year—not all, but a certain proportion—they had to be laid up at considerable expense to the company, as there was no opportunity of suitably employing them. During the past twelve months there has been no laying up of ships. All have been constantly employed except when under repair, and I think it must be a source of real gratification to all connected with the company that so many of our ships have proved of service to the country in the national crisis. (Hear, hear.) Though such Government service is naturally less profitable than ordinary trading, I am sure that none of us for one moment regret that these ships have been called upon to help the country in its need. (Hear, hear.)

I wish to go rather closely into the question of the dividend which it is recommended should be paid on the Ordinary shares. The amount of this dividend has been the subject of very considerable discussion and debate, and I wish to take the opportunity of putting before the shareholders the main reasons which have actuated us in arriving at a decision. I do this for the following reason—namely, because, although I feel personally convinced that we have done the right thing this year in recommending the dividend which you will presently be called upon to approve, I am very anxious that shareholders should not

necessarily look upon this as a precedent which would govern future years. What I mean is, I am very anxious that, in the event of our profits for the coming twelve months being in the neighbourhood of the previous twelve months, Ordinary shareholders should not feel aggrieved if the directors do not think it expedient to recommend another dividend of the same proportions as the present one. The present dividend amounts, together with the bonus, to 25 per cent. The amount distributed is split up into dividend and bonus for the following reasons: It was felt that on one or two occasions in former years the company had earned profits which might legitimately have been distributed among the Ordinary shareholders. This was not done at the time for prudential reasons, anticipating certain possible adverse conditions which in the event did not materialise. It was felt that some reparation was due to the Ordinary shareholders for their disappointment on these occasions, and I think I may say, broadly speaking, that the 10 per cent. bonus was aimed at being compensation in some measure for the failure of the company to declare an Ordinary dividend on the occasions I have indicated. I again say that I think we have done right in declaring this dividend and bonus—(hear, hear)—but I particularly want the directors to have a free hand and free discretion with regard to the future. We are this year carrying forward £23,500, which is a reasonable amount, but by no means excessive, under the circumstances.

The obvious reason for not distributing profits up to the hilt is the very great desirability of accumulating a reserve fund by means of which we may in the future be able to add to the strength of our fleet, and in this way so increase our earning capacity that a good dividend on the Ordinary shares may be paid regularly, and not sporadically as at present. (Hear, hear.) Our ships this year have undergone many very greatly needed repairs both as regards structure and machinery. By the time we have done with them I think they will all be good serviceable ships of which we shall have no reason to be ashamed, but they are very far from modern. I merely mention this so that shareholders may realise the paramount importance of the company being in such a financial position that it may be able to take advantage of any opportunity that offers for acquiring more modern tonnage in the future and so competing successfully with other shipping companies. (Hear, hear.) The acquisition of such modern tonnage should be the means of prolonging, if not of maintaining permanently, a good dividend on the Ordinary shares. I think even Ordinary shareholders will agree that it must be mistaken policy to divide profits up to the hilt when the necessity of replacing some of our older ships in the near future seems so very imminent. It will probably be of interest to shareholders to learn something with regard to the investment of such capital sums as have fallen in owing to the sale or sinking of certain units of the fleet. The steamships *Minieh*, *Caloubieh*, and *Prince Abbas* were hypothecated to the trustees for the Debenture holders, and the proceeds of these three ships and the floating dock at Alexandria, which has been sold, have been handed over to the trustees for the purpose of investment and for the partial liquidation, if need be, when the times comes, in 1918, of the Debenture debt. The steamships *Saidieh* and the *Assouan* were free ships—that is to say, they were not hypothecated under the trust deed—and the proceeds of these have been invested by the directors in War Loan and Exchequer bonds. (Hear, hear.)

I should not like to close without making some reference to the splendid work of the Alexandria staff. Our new manager, Mr. Curwen, has for two consecutive years forgone the three months' holiday to which he is entitled under his agreement with the company. Anyone who has had experience of the climate of Alexandria in the three hot summer months will realise that this means no insignificant sacrifice. I think all of us connected with the company feel proud of its achievements during the past 18 months and of its greatly improved condition. It is always a pleasure and a pride to be associated with a concern which is on the upward grade, and I think we can all say, without any fear of contradiction, that the Khedivial Mail Steamship Company is very decidedly

on the upward grade. (Hear, hear.) I beg to move: "That the report of the directors, together with attached statement of the company's accounts as on the 30th June, 1916, duly audited by Messrs. Edwin Guthrie and Co., be and they are hereby adopted."

Mr. Francis Allen: Gentlemen,—It is unnecessary for me to add anything to what the Chairman has just said, and I have very great pleasure in seconding the adoption of the report and balance-sheet.

After some questions had been asked Mr. Hugh Reeves said: My Lord and Gentlemen,—I do not wish to ask any questions, but I should like to congratulate you on the excellent results of the past year's trading. I was very pleased to hear you state that we had rendered a national service in placing our fleet at the disposal of the Government. I think nowadays that those people who are in the fortunate position of having rather better incomes from something which is connected with war work need not be afraid of hiding their light under a bushel and putting away their profits so that nobody can see them. This is the most satisfactory account we have ever had, and I only wish that you had a larger body of shareholders here to congratulate you. We are certainly a fairly small family. We have only £300,000 of capital, and all I can imagine is that those shareholders who have not come here are so satisfied with the excellent report which you have published, or we fortunate shareholders have bought all their shares already. I was a little bit disappointed that you referred to the probable distribution on the Ordinary shares in the future, because shareholders have only to study the balance-sheet, notwithstanding the very clear remarks you have made, to see what our position is. Obviously our fleet is very much undervalued in the balance-sheet. Those who happen to know Egypt, even to the extent I do, will know that your land and buildings are very much under-valued. Roughly, after setting aside sufficient to pay your debtors and your open trade creditors you have a surplus of £100,000. If you add that to your fleet and your land, we shareholders have a property worth nearer one million of money than anything else, clear of all debts. (Hear, hear.) Now, if you can manage to pay us a dividend on that big asset proportionate to its huge capital value, we, of course, are particularly satisfied. On the other hand, if you, the Board, make careful reserves to replace some of our ships you will be entirely supported by us in doing so. There is one other point with regard to which I noticed a distinct omission in your speech—that is, you forgot to tell us what you, the members of the Board, have had to do during the past year because of the nature of this business, which was previously carried on almost entirely locally and is now almost worldwide. That is something which we shareholders should not forget, and I do not think those who have thought of it have forgotten it. I have given notice of a resolution which I should like to move presently—not that it will in any way compensate the Board, if it is passed by the shareholders, for their additional work, but it will record the fact that we shareholders are not unmindful of the good work which they have done. I should like to support the motion for the adoption of the report. (Applause.)

The resolution was then put to the meeting and carried unanimously.

The Chairman next moved: "That a final dividend of 10 per cent., together with a bonus of 10 per cent., on the Ordinary shares of the company, for the year ended 30th June, 1916, be and is hereby declared payable on the 30th December, 1916."

This was seconded by Mr. Francis Allen, and, on being put to the meeting, was carried unanimously.

Mr. Reeves said that as the company had been very prosperous during the past year he had given notice of the following resolution: "That the company defray the income-tax on all directors' fees payable for the period covered by the accounts before this meeting." He had already stated why the shareholders should recognise the excellent services rendered by the directors. They had more than doubled the "take" of the company this year, and they were working for the same fees. If they could in any way approach such a result next year he thought they would have from the shareholders' side of the table a suggestion

that they should be better remunerated, because they had been deprived of the services, by absence, of several of their colleagues, owing to the difficulty of getting from one side of the world to the other. Mr. Bowen Rees had been unable to attend any Board meetings, Mr. Head had been in the Army service, and Mr. Wellhoff and Mr. Swinglehurst had been in Egypt and had not been able to get here. It would therefore be realised that the gentlemen sitting in London had had great difficulties to contend with. They had been engaged in fresh business, and yet they had handled matters in an extremely satisfactory way for the shareholders, and he hoped that they would support him in passing the resolution.

Mr. Parsons seconded the motion, which was carried unanimously.

Societe Generale de Pressage.

The report of the Board of Directors of the Société Générale de Pressage et de Depots, which was read before the annual general meeting on October 30, states that during 1915-1916 479,527 bales, weighing 3,604,352.62 cantars, were pressed, against 536,850 bales, weighing 4,066,073.97 cantars, during the preceding year. Cleaning by machinettes amounted to 879,758.40 cantars against 1,222,528.14 last year. A profit of £E33,348 was declared after writing off expenses, interest on the 1898 loan, and depreciation. This allowed the distribution of a dividend of 10 per cent. per share and a return of P.T. 100 per thousand cantars to the pressers. In addition a bonus was declared, being half of the 4 per cent. retained on the profits of 1913-14. Thus shareholders received £1 16s. per share, 3 per cent., or 12s. per share having been paid last March—making altogether a dividend of 12 per cent. or £2 8s. per share. Mr. F. Allemann was elected to the board of directors in the place of Mr. C. L. Allemann retired, and Messrs. W. R. Carruthers and T. A. F. Critchley were re-elected.

Nile Cold Storage.

The annual general meeting of the Nile Cold Storage Company was held in Cairo on November 11 in the presence of shareholders representing 5,674 shares out of a total issued capital of 9,638 shares. Dr. Herbert Milton, the chairman of the company, presided. In moving the adoption of the balance-sheet and directors' report for the financial year ending June 30, 1916, the chairman drew attention to the fact that as in the previous year, the satisfactory profit which had been made resulted from the heavy turnover of the company's business, which for the year under review was close upon three-quarters of a million sterling. He also pointed out that the shareholders were to be congratulated on the successful reconstruction of the original capital of the old company, a large proportion of which had in earlier days been lost. The capital of the new company, as of the old, was now £50,000, and he calculated that the original shareholders of the old company who had had sufficient courage to retain the shares through thick and thin had received in the form of cash dividends a return representing about 10 per cent. per annum on the original outlay. Mr. Astley P. Friend was re-elected a director of the company; and Messrs. Russell, Harris, and Co. were re-appointed auditors for the ensuing year.

COMPANY REPORTS.

P. and O.

The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30 last states that, after making provision for depreciation on ships and investments and for various appropriations, there is a credit balance on the year's accounts, including £78,182 brought forward from last year, of £669,645. The directors propose a 12 per cent. dividend and 6 per cent. bonus on the original deferred stock, free of income-tax, and a 6 per cent. dividend and 6 per cent. bonus on the deferred stock recently created, free of income-tax, leaving £85,329 to be carried forward to next account. Some property not now required by the company has been sold at a profit. Several outstanding unadjusted accounts, for which provision had been made in previous years, have been closed, leaving credit balances. These factors, combined with the result of the year's operations, admit of an increase of 2 per cent. in the dividend and 1 per cent. in the bonus, and an addition to the reserve fund of £126,000. In the statement of accounts the book value of the fleet, plant, payments on account of ships under construction, property, stores, investments, and cash have this year been brought together as a matter of convenience. Debenture stock to the extent of £100,000 has been redeemed, but the company has power to re-issue this at any time. The expense of loading and discharging the steamers, owing to the rise in wages, has greatly increased, and the cost of victualling, running, and working the ships, to which reference was made in the last report, has been much higher than it was during the previous year, in addition to which London dock dues have been augmented to cover the higher rates paid for labour, and the Suez Canal Company's tariff has been raised. The company's fleet has been reduced by nine steamers during the year. The company has suffered severely by the loss of the services of these ships. The two mail steamers which have been under construction for some time have made a certain amount of progress, as well as two large vessels with refrigeration which were ordered in the early part of 1916; but construction has been greatly delayed owing to Admiralty requirements. As soon as the building yards are in a position to construct mercantile tonnage with a prospect of assured delivery, several new ships will be ordered. The company has acquired practically the whole of the ordinary shares of the New Zealand Shipping Company, Ltd., paying for them by an issue of £905,820 P. and O. deferred stock, which was authorised by an extraordinary general meeting of the stockholders held on September 7. This stock ranks *pari passu* with the stock previously issued, and carries dividend and bonus for the six months ended September 30, 1916. The P. and O. Company's shares in the New Zealand Shipping Company ranked for the final dividend for the year ended June 30, 1916. This has been received and brought to account. Half of the P. and O. Company's fleet has been in the service of the Government during the past year at pre-war rates. Meeting, 122, Leadenhall Street, E.C., December 13, at 11 a.m.

Egyptian Salt and Soda.

The report of the Egyptian Salt and Soda Company for the twelve months ended August 31 states that the gross profits are

£E99,505.181, from which has to be deducted general administration expenses, £E2,065.578, and interest on debentures, £E3,604.269, leaving a net profit before writing off depreciation of £E93,835.344. The directors have set aside for depreciation of the various factories, £E11,323.258; writing down the value of the patent rights in connection with the new oil processes, £E2,000; provision made for completion of new works at Moharrem Bey for the exploitation of the new oil processes, £E20,000; and amount transferred to reserve for bad and doubtful debts, £E3,000, leaving a balance of £E57,512.086, which, added to the balance carried forward from last year, makes a total of £E118,642.878. The directors propose a dividend of 12½ per cent. on the share capital, and that the balance of £E57,974.478 be carried forward. Meeting, 22nd inst., 3.30 p.m., Alexandria.

COMPANY NOTES.

Meetings.

The eleventh ordinary general meeting of the Associated Cotton Ginners of Egypt, Ltd., will be held at Alexandria on Friday, December 22, at 4 p.m.

The seventeenth ordinary general meeting of the Egyptian Salt and Soda Company will be held at Alexandria on December 22, 1916, at 3.30 p.m.

An extraordinary general meeting will be held immediately after the seventeenth ordinary general meeting, when the following resolutions will be proposed: That the articles of Association be altered in manner following:—Article 92 shall be cancelled and the following Article substituted therefor, namely: "The remuneration of the Directors shall be the sum of £2,000 (two thousand pounds) per annum, which sum shall be divided among them in such proportion and in such manner as they shall agree, or in default of agreement equally."

Alexandria and Ramleh Railway.—The ordinary general meeting will be held at Alexandria on December 19. Agenda:—1. To receive and consider the annual statement of accounts and balance-sheet and the reports of the directors and auditors thereon, and to fix the amount of dividend. 2. To elect auditors for the ensuing year and fix their remuneration. 3. To elect directors in the place of those retiring by rotation. 4. To increase the directors' remuneration for the past year from £600 to £1,000.

Oil Outputs.

Bibi Eibat.—Production week ended November 26, 854 tons.

British Maikop.—Production week ended November 25, 31 tons.

European.—Production week ended November 26, 75,900 poods.

Dividends, Payments, Etc.

Notice is given that Coupon Serial No. 24 on share warrants to bearer of this company for interim dividend declared of 5 per cent. (less income-tax) in respect of the year ended December 31, 1916, will be payable on and after November 14, 1916, at the Anglo-Egyptian Bank, Ltd., London, Cairo, and Alexandria.

Egyptian Government Irrigation Trust Certificates.—The Bank of England announce the numbers of 407 Four per Cent. Egyptian Government Irrigation Trust Certificates which have been drawn for redemption on January 1, when interest thereon will cease.

ON 'CHANGE.

(By Our City Correspondent.)

THROGMORTON STREET,

Wednesday Evening.

There has been much less doing this week, no doubt owing to the political situation and the depressing Balkan news; but prices have remained, generally speaking, very firm, and to-day there has been a renewal of demand from Egypt for Agricultural Bank shares, with a fair business passing at about 5½.

National Banks have been quiet, and are rather easier at 14½. Behéras have been in demand, and have further jumped about ½ to 7½, but so far without business.

Delta Lights have been a firm spot, with buyers in the neighbourhood of 5½; a few hundred Delta Lands have changed hands at 9s. 1½d. Salts are rather quieter, in the neighbourhood of 24s., but not much business is being done; Khedivial Mails, after being up to 35s. 9d., closed quieter also, round 34s. 6d.

In New Egyptians, some further good buying carried the price up to 9s. 6d., but they are quieter again at about 9s. 3d. A few Sidi Salems changed hands at about 10s., and some United Lands at 11d.

In Greek securities, in the early part of the week some fair business was done in Monopoly round 49½ and 49, in 1884 at 53, in Rente at 42, in 1914 at 74, and in Rails at about 63. Some Currant Bonds changed hands to-day at 90. Since Monday, however, the market has been practically at a standstill owing to the very disquieting news from Athens.

News from Roumania has naturally depressed the markets. There has been a further relapse in Consolidated, which were pressed for sale and received very little support. Prices fell back 1s. 6d. to 7s. 6d.

Russian Oils were generally inactive, but North Caucasians were easier at 24s. 3d. Egyptians were quiet. Anglo-Persian Preferences were dull at 19s. 9d.

BRITISH BANKING AND EXPORTS.

Mr. G. P. Brown (manager pro tem. of the Manchester Branch of the Imperial Ottoman Bank) opened a debate recently at the Athenæum in that city, the subject being "Is our present Banking System adaptable to the requirements of the Export Trade?" He said that Germany built up in a comparatively short period, say twenty to thirty years, a superb export trade, totalling at the end of 1913 £510,000,000, mainly by reason of a more elastic banking system prevailing in that country than in our own. He suggested that it is worth while considering whether the British financial world has hitherto been guided sufficiently by national considerations, and whether it is not possible in future to give wider facilities for the promotion of export trade and the national industries which feed it, without sacrificing anything that is sound in British banking practice. The difficulty was owing to the smallness of the Joint Stock Banks' own capitals and reserves in proportion to their huge deposits repayable practically without notice.

This made it necessary, Mr. Brown said, that the banks' principal consideration, first, last, and all the time, must be to keep their funds liquid. The Government should stand behind the existing banks to the extent of offering them advances, in case of emergency, up to a limit of 5 per cent. of the amount of their deposits and current account balances. Assuming goodwill and a ready response on the part of the banks, this would make available sixty millions sterling for the very same purpose as those for which the British Trade Bank is suggested, as it would to this extent entirely remove the bugbear of fear of sudden withdrawals.

The resolution was carried by a substantial majority.

NOTES OF THE WEEK.

Germany's offer of an armistice in order to negotiate peace terms lost nothing in its setting. A sudden summons to the Reichstag, following upon mysterious allusions in Sofia to epoch-making announcements that were to bring joy to the peoples of the Central Alliance before Christmas, had prepared, if not the world, at least the German people for much. We can but hope that they will be duly grateful to their rulers for what they have received. Certainly the offer concerns the Central Powers more than it does the Allies. The reply of the latter has already been given many times in advance. Nor are they likely to be favourably impressed with the manner in which the intentions of the German Government have been made known. "Our troops," said the Chancellor, "had so shaped conditions that they had given a security which was not only complete, but still greater than ever before," and, after a reference to the "unparalleled genius," Hindenburg, who, we are told, does not rest, "military operations progress. Simultaneously by strokes of the sword new firm foundations for our economic needs have been laid. . . . To these great events on land heroic deeds of equal importance were added by our submarines. . . . The Empire is not a besieged fortress, as our adversaries have imagined, but one gigantic, firmly disciplined camp with inexhaustible resources." In other words, Herr von Bethmann-Hollweg celebrates the apotheosis of German militarism, which the Allies are determined to destroy.

Whether the German Government believes in the picture on which the Chancellor lavished so much paint we have no means of knowing; but it was in this spirit that the Note to the Allied Powers containing the offer of an armistice was drafted. There are references to the "unconquerable strength" of Germany and her Allies; they "have gained gigantic advantages over adversaries superior in number and war material. Our lines stand unshaken . . . the whole situation with regard to our troops justifies our expectations of further successes." If this be the case, it is very evident that there is no common ground on which the Central Powers and the Grand Alliance can meet to discuss peace terms. A Germany so confident of itself, or rather German militarism so firmly established, remains as great a menace to the world as it was before August, 1914. The Allies do not expect the Germans to understand their point of view, and there is, therefore, no need to waste words in the reply to these overtures. Briefly put, that point of view is that a world under

German domination, with German militarism free to rattle the sword at will, has become intolerable and unthinkable. The Allies may not put forward the German claim to a monopoly of Divine assistance, but they refuse to accept as final a dispensation which allows the negation of all laws, human and Divine, to triumph. They believe in the ultimate victory of Right and Justice over organised aggressiveness and brutality, and for that reason know that sooner or later they will be able to dictate peace on their own terms.

The German Note to the Allied Powers was a proposal to enter forthwith into peace negotiations. No mention was made of the terms which the Central Powers were prepared to accept, but statements, apparently inspired, issued in America, point to a proposal for a return to the *status quo ante bellum*, with certain important modifications. Among the latter are enumerated the creation of new kingdoms of Poland and Lithuania and changes in the Balkan boundaries, "but, at least, part of Serbia and Roumania to be restored." The restoration of Belgium and the occupied districts of France would be counterbalanced by the return to Germany of her African colonies. Unfortunately for Germany, the day has passed, and with it the authors of the policy, when British interests in the Balkans were regarded as *nil*, and when the cession of Cyprus without conditions was considered a suitable *douceur* for Greece's observance of her treaty obligations. There will have to be changes in Balkan boundaries, but not in the way anticipated by the Central Alliance. It may be that three years of war will be found to have simplified the problem by putting entirely out of court both Bulgaria and Greece as at present constituted. In any case the Allied Powers will be guided by the interests of future peace in Europe, and neutrals, to whom, together with the Pope, Germany especially appeals, will be able to judge the extent to which the German terms of peace hold out to small nations the prospect of guarantees for their "existence, honour and liberty of evolution."

At no time could the German offer of peace have been considered as a feasible proposition by the Allied Powers, but, least of all, at the present moment. Russia, Great Britain and France have in these last few days consecrated themselves afresh to a vigorous prosecution of the war. That deadly will-o'-the-wisp—an early collapse of the Central Powers—which has lured the Allies into the pitfalls and quagmires of half-heartedness and procrastination, has at last been scotched, when the list of possible mistakes has been well-nigh exhausted.

Even at Germany's estimate of her own strength, a struggle to the bitter end is accepted. But the Allies cannot afford to overlook the sting in the scorpion's tail. "If, in spite of this offer of peace and reconciliation, the struggle should go on, the four Central Powers are resolved to continue it until a victorious end, but they solemnly decline every responsibility for this before humanity and history." By such words Germany may hope to ease her conscience for further exhibitions of frightfulness and super-frightfulness, and it is in this sense that the German Press dots the i's and crosses the t's of the Note. It may be well for the Allied Powers to meet these eventualities with an indication of their future policy. Germany's rulers will have realized by now that sooner or later a day of reckoning must come. Let it be clearly made known to them that, while for the German nation as a whole only honourable terms of peace are intended to be imposed as a result of its unsuccessful appeal to the arbitrament of war, for those responsible as the authors or instigators of the crimes and outrages which have sullied Germany's conduct of the war, terms of peace by no means honourable to them will be reserved.

The reconstruction of the British Government has led to the creation of a War Cabinet of five members, which will be practically in daily session, and will be responsible for the general supervision of war policy. Apart from the implicit confidence felt throughout Great Britain in the energy and determination which this Cabinet brings to the conduct of the war, those who are specially interested in the Near East have reason to be particularly gratified with the inclusion among the five of Lord Curzon and Lord Milner. The experience of the former in India and in Persia, the intimate knowledge that the latter has of Egyptian affairs, and the wide interests of both are a guarantee that the policy of ignoring the British Empire's close concern in Near Eastern and Middle Eastern affairs is a thing of the past. In Mr. Balfour, who succeeds Lord Grey of Fallodon, the Foreign Office has a Secretary of State whose breadth of vision and knowledge of the world justify the hope that a régime of *laissez faire* will make way for a more vigorous part to be played by Great Britain in the councils of Europe. Lord Curzon's appointment is most opportune at a time when a revision of the relations between Russia, Great Britain, and Persia has been rendered necessary by the events of the war. A general understanding between the two Great Powers has been reached; but the details, it is understood, have still to be filled in. We may hope that in the final arrangement equal provision will be made for the interests of the three States.

After the capture of Bucharest and Ploeshti the German advance in Roumania has slowed down, but it would be premature to speak yet of a definite check. In the north the Austro-German forces have been temporarily stayed and even counter-attacked. The left of the Russo-Roumanian line, however, has been bent back at one point across the Jalomitza, and it is probable that the whole battle front must still be withdrawn. Meanwhile, the German troops hurriedly concentrated for the Roumanian campaign may be found more useful elsewhere now that there has been a considerable shortening of the enemy's line. German headquarters will have to choose between the relative value to their propaganda purposes of a further advance in Roumania and an attempt to overwhelm the Allied Army in Macedonia. The attraction of the former will be that it may yet yield some of the stores of grain which have been so conspicuously absent in the territories already conquered. On the other hand, there is evidence that the Bulgarians resent the loss of Monastir, and feel that their particular ambitions are receiving less attention than they deserve.

The Allied forces that captured Monastir have been able to make little headway immediately beyond the town. East of them, however, the Serbians are still not to be denied, and few days pass without some ground being wrested from the Bulgarians. The

strength of the enemy's counter-attacks north of Monastir points to his having been reinforced already. It remains to be seen, therefore, whether the Serbian gains will cause a Bulgarian withdrawal on the west before the whole line has had time to be strengthened. From other parts of the Macedonian theatre there has been little news during the past week. The grip of winter is fastening upon the country, and must retard operations, if it does not stop them altogether. In this connection, however, it may be recalled that the outstanding feature of General Milne's despatch, to which a brief reference was made in these pages last week, was the obviously subordinate part that the British troops were called upon to play in the plan of campaign. Such operations as were undertaken during the period under review had no definite objective in view, but were launched merely to support the main movement on the left of the line by preventing the Bulgarians from moving supports freely from one point to another. The policy of passive warfare for which the Salonika force has stood for so many months raises grave doubts regarding the Allies' interpretation in the past of the art of war. To contemplate this army still waiting without further support for von Mackensen to turn south and to reinforce the Bulgarians, with or without Greek co-operation, must cause misgivings. The resolve taken in Great Britain, France, and Russia to introduce more vigorous prosecution of the war has been reached not a day too soon. In no quarter, it would seem, is the speeding up of the Allies' efforts more urgent than in Macedonia.

A fortnight has passed since Greek forces opened fire on detachments landed from the Allied Fleet, but the Entente Powers have not yet exacted reparation for the outrage from King Constantine and his Government. The position is admittedly an awkward one. The long delay, however, points to the absence of close co-operation between the Allied Powers, who seem to be back again in the position in which they found themselves at the outbreak of the war, when every decision was subject to an almost interminable exchange of telegrams between the different Governments. If, as is hinted, the presentation of the Note to Greece has been delayed because one or other of the Ministers in Athens had not received his instructions, it is high time that the Allies arrived at a stage of sufficient mutual confidence which would enable two or more to act in cases of emergency in the name of all. For reasons that are amplified elsewhere in this issue, it is essential that King Constantine and his Army should be brought to book at once, and valuable time is thus being lost.

As a preliminary measure of exacting reparation a blockade of Greece has been established. The objections to land operations in the event of Greece not acceding to the Allies' demands are so obvious that it would be thought that naval power would be relied upon as the chief factor in the solution of the problem. No long time, therefore, is needed to collect the force required to support the terms of the Allies' Note. In these circumstances each day's unnecessary delay is a matter for regret. Immediately after the events of December 1 Athens was given over to outrages, official and unofficial, upon those who were known to be in favour of the National Movement at Salonika or supporters of M. Venizelos. The particular horrors by means of which King Constantine and the Greek Government sought to rival the Abdul Hamid régime in Constantinople at its worst may now have ceased owing to the perpetrators' courage having predeceased their lust. Realization of the possibility of being held to strict accountability caused them to stay their hand, but the crimes remain; the victims are for the most part still in prison, their property pillaged or destroyed. In view of the promises so lightly given by Admiral du Fournet to protect the Venizelists, the Allies have a double obligation to act expeditiously. As the worst consequences of the ill-fated landing might have been avoided by a vigorous use of the Fleet's guns, it is a matter of surprise that the French Government has not felt called upon to cut short the delay in retrieving its Admiral's omission on that occasion.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 23.

The High Commissioner.

The High Commissioner, accompanied by Lady McMahon, proceeds to-night for a short trip to Upper Egypt. He will travel by special train to Luxor, and thence by steamer to Assuan, and is expected to return to Cairo in about a week's time. According to present arrangements, Sir Reginald Wingate will arrive from Khartoum with his Staff on December 20 in order to take up his duties as High Commissioner.

The Air Raid.

The local Press is still discussing the recent air raid and its unfortunate effects. The list of casualties, which was first given as 39—14 killed and 25 wounded—has now increased, and stands to-day at 50—22 killed and 28 wounded. The difference in the total is due to the fact that some of the wounded proceeded straight to their homes, and nothing was officially known about them for several days. H.H. the Sultan, ever in the van where public charity is called for, has ordered an inquiry to be made into the circumstances of the wounded and of the families of those killed, and has expressed his intention of personally affording financial assistance to those requiring it. This characteristically generous act has greatly affected the masses, who realise that their sovereign takes a personal interest in their welfare. The air raid has also shown the Sultan in another and praiseworthy light. When the news of the bombing of Cairo was received at Heliopolis, the Palace officials at once lowered the Sultanic standard and removed the tents which had been erected for the escort during his Highness's stay there. As soon as he heard of this, the Sultan gave orders that the standard should be at once rehoisted and the tents put up again.

This air raid took everyone by surprise. Many had thought that the Germano-Turks might quite conceivably attack Cairo from the air; but as they made no such attempt when they were so much closer to the Canal, and the time rolled by without anything of the nature taking place, everyone concluded that the Huns considered the venture scarcely worth embarking upon.

Although he was lucky in the number of his victims, the raider missed an excellent opportunity, which will certainly not occur again. All preparations have been made for further raids, which are now fully expected to follow.

The publication of the German communiqué announcing that during this raid Cairo railway station was destroyed, and the permanent way seriously damaged, has enabled the Egyptians, who, to their cost, know the real facts, to take the true measure of all announcements from Central Empire sources. It is to be hoped that it will lead them to realise what little faith can be put in German versions of war events.

The "Our Day" Appeal.

Once again Egypt has exceeded all our expectations; for her contribution to the "Our Day" appeal has this year reached the magnificent sum of £85,000. Last year no less than £115,000 was subscribed; but at that time the "Red Cross" was the only object before the Egyptians to appeal to their generosity, and a certain amount of pressure was brought to bear in the form of letters from the High Commissioner and other high British officials. This year, however, the people have been left to themselves. Beyond the initial publication of the appeal when it came out from London, no call has gone forth from the Residency or Government offices. Despite this and the even more important fact, as pointed out in THE NEAR EAST of the 10th inst. just to hand, that there was still looming in the near distance the Kitchen Memorial, with its own peculiar appeal to them, the Egyptians have come forward with a contribution which is a token to the world of their inherent generosity and of their loyalty to the protecting Power. To say that this response has come as a pleasant surprise is only giving mild expression to the feelings of the local British authorities when the result was made known to them.

The Upper Nile Projects.

Sir Murdoch Macdonald, Under-Secretary of State for Public Works, proceeded on Monday evening on a short visit to the Sudan. Although officially nothing is to be ascertained on the subject, I have reason to believe that his journey is directly connected with the Upper Nile irrigation projects. Certain valuable and interesting data have been lately obtained, as a result of the research work carried out during the past two years; and it is highly probable that, when Sir Murdoch returns to Cairo next month, a definite decision will be taken as to the direction in which serious construction is to be undertaken next year.

Sultanic Decorations.

Last Monday's *Official Journal* contained a long list of the decorations conferred by H.H. the Sultan on members of the naval and military forces which have been engaged in the defence of Egypt during the past two years. The list includes General Sir J. G. Maxwell and Rear-Admiral Sir R. E. Wemyss, on whom the first class of the Order of the Nile has been conferred, and the Duke of Westminster, who receives the Mohammed Ali Gold Medal.

A long list of honours is expected to be published on the 17th prox. on the occasion of the anniversary of the accession of Sultan Hussein. The various administrations have for some time been busy drawing up and revising the lists of eligible officials and notables. Very stringent rules have been laid down, and these will be strictly adhered to in the selection of those persons whom the Sultan will be asked to honour with a grade or a decoration.

Lecturing at the Camera Club last week, Professor W. C. Anderson said that during his visits to the Balkans he had never left a Bulgarian town without knowing that he had been swindled, but in a Turkish village he never lost a penny. The Turk gave him bread and salt freely; the Bulgarian sold him whatever he could, and then stole it back again.

A Reuter's message from Addis Abeba, after describing the recent fighting in Abyssinia and the defeat of Ras Mikha'il, says that Lidj Jeassu, the deposed Emperor, was never in the fighting, and nothing certain has been heard about him since his escape from Dire Daouwa. It is thought that he is hiding in the Dukali country. The Government has sent a large force to search for him.

Our Cairo "season" contemporary, the *Sphinx*, is to resume publication on the 16th inst., and will, as usual, continue to appear until the end of March. Miss N. Griffiths will again occupy the editorial chair, and, in spite of the difficulties attendant on the production of a paper in Egypt just now, the *Sphinx*, judging by the programme it has set itself, promises to be more interesting than ever. It will, as hitherto, remain a purely social, non-political, and non-controversial illustrated journal, and among its features will be original sketches by Mr. J. A. Sheppard, author of "Zig-zags at the Zoo," illustrations from the French Army Official Photographic Service, a second series of articles by "Greenshirt," author of the series entitled "An Idler in Cairo," etc.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, November 25.

Greek Feeling and the War.

The Greek Press continues to express entire sympathy with the cause of the Allies for reasons of patriotism. Cyprus, it is hoped, will not fall behind Egypt, which contains so large a community of Cypriots, and which is heart and soul with the Allies. Greeks in Egypt have taken the lead in showing their patriotism by deeds as well as words.

Government Officials' Pay.

A large number of Government officials have held meetings at Nicosia, in order to combine in pressing their claims for higher rates of pay, on account of the increasing difficulty in making both ends meet.

The New Archbishop.

The election of the new Greek Archbishop took place on November 24, at the headquarters of the Orthodox Church in Nicosia. The Bishop of Papho, as *locum tenens*, presided. The Bishop of Kyrenia, Kyrillos, received 49 votes, and the Abbot of Kykkou 23, out of a total of 77; three electors abstaining from voting. Unanimity was not expected. The Primate, who is of advanced age, has been Bishop of Kyrenia since 1895. In 1900 both he and his namesake, the Bishop of Kition, were elected Archbishop by contending parties, and a deadlock ensued which lasted for nearly ten years. In 1910 a reconciliation took place, and the Bishop of Kyrenia retired in favour of his rival, and returned to his see, with the title of President of Kyrenia, in lieu of Metropolitan, which he has borne till now. He is a man of high character, an eloquent preacher, and widely esteemed. He is not of robust health. After thanking the Holy Synod and the chosen body of electors, he stated that he could not look forward to many years, but that he would devote the remainder of his life to the welfare of his flock and to the great and acknowledged needs of the island church. These no doubt call for drastic reforms, which it is generally hoped will now be no longer delayed. Among the principal are the raising of the clergy to a higher level, the wiser administration of church and monastic revenues, and the building and equipment of various schools.

WHO WERE THE HITTITES?

At a meeting of the Royal Asiatic Society, held last Tuesday, Dr. A. E. Cowley read a paper explaining and criticising the views on the Hittite question of Dr. Hrozný, Professor of Semitic Languages at Vienna. Dr. Cowley stated that there were two classes of Hittite inscriptions to be deciphered, cuneiform and hieroglyphic. In the first of these we had a known system of writing expressing an unknown language; in the other we had the much greater puzzle of an unknown system of writing concealing an unknown language. It was with the former only that Professor Hrozný had concerned himself. Dr. Cowley detailed the inscriptions which had as yet been discovered. The most important, he said, were those found in the years 1906 to 1912 by Winckler at Boghaz-keui, the Hittite capital in the north of Asia Minor. Some of these were in Semitic cuneiform, and could be read with comparative ease, others, though written in cuneiform, were in a language which was certainly not Semitic. On the material at his command Dr. Hrozný had formulated a theory that this people, living in the north of Cappadocia, beyond the Halys, shut in on the west by the non-Greek states of Asia Minor and on the east by the Kingdom of Van, in close contact with, and strongly influenced by Babylonia, spoke an Indo-European language, and one, moreover, belonging to the western branch rather than the eastern. Dr. Cowley examined at some length the evidence as yet advanced in support of this theory, concluding that it was not proven, but that we ought not to reject it off-hand, because we have not all the material on which Professor Hrozný bases it. We must wait for the publication of the new texts.

A short discussion followed.

Lord Reay, who presided, in the course of some remarks, moving a vote of thanks to Dr. Cowley, said that among the Caucasian languages there was a large mass of material which had not been very fully explored, in which, perhaps, clues might yet be found to the problems involved.

The Russian Ministry of Public Instruction has opened at Kazan a high school for young Tartar girls. The local newspaper, *Uzdiz*, sees in this a sign of the intellectual development of Russian Mussulmans.

RELIEF FOR SYRIA.

REGRETTABLE DELAYS.

(FROM A CORRESPONDENT.)

CAIRO, November 21.

The fact that well-known neutrals, who left Syria this summer, have confirmed the previous reports that over 80,000 souls have perished in that unhappy country, either directly, through inanition, or indirectly, through disease brought about by poor or insufficient food, has roused the relief committees in England and America to energetic action. Syrians here have been watching with the deepest interest and satisfaction the magnificent movement in England, in which so many prominent Englishmen are taking part.

In America, the land of practical action, the desired solution seems to have been reached. The American Red Cross agent here recently received a telegram from New York informing him that a ship had been given to the Syrian Relief Committee, and asking that the President of the Cairo Relief Committee should remit the funds that he had now available. On the next day another telegram was received by the Cairo Committee from the New York Syrian Committee to the effect that the American Government has placed a steamer at the disposal of the committee, that further sums were required for the purchase of the necessary foodstuffs, and that a remittance of these sums by cable was required. To these two messages the Syrian Committee, to the effect that the American Government has a requested authority from the Allies to send a steamer from Egypt, and that their reply and the remittance of funds must depend upon the reply. Meantime a telegraphic assurance was requested as to whether it was clearly ascertained that the admission of the steamer to the port of Beyrout was definitely agreed upon.

The American Committee for the relief of Syrians and Armenians in Turkey then replied in the affirmative, and asked again for the remittance of the available funds. The Cairo Committee replied that negotiations had already been begun with the representatives of the Allies regarding the sending a steamer from Egypt, and that no further advice could be given before the receipt of the official reply. And again the question was asked whether the United States had an unequivocal assurance from their Ambassadors in London and Constantinople that the ship would be allowed into the port of Beyrout. The reply affirmed that Turkey and the Allies have granted permission for the relief ship to enter Beyrout, and again required a telegraphic remittance of the available funds. The Cairo Committee's reply was that the remittance of funds was impossible without a special licence from the Allies. And there the matter has since stood.

In this connection it is painful to record that, in spite of the fact that the Grand Rabbi and the Grand Sheikh of Al Azhar, as well as other spiritual heads, have been given their due place on the General Committee, and that it was clearly laid down in the rules of the committee that the funds to be collected were destined for distribution to all sufferers in Syria, irrespective of creed or denomination, few, if any, subscriptions have been made by Moslems or Jews in this country. This deplorable apathy has apparently reacted on other important centres in Egypt, such as Alexandria, Tantah, Mansourah, etc., where the Syrian community is fairly important, and some of its members are wealthy; for very little has been done, and several wealthy Syrians, who have, unfortunately, a poor reputation for munificence, have taken this as an excuse for not subscribing to the fund.

Sooner or later Syrians abroad will have to return to their country. For, once it is freed from despotic rule, they are sure to find there more prosperity and real happiness than in any other country; and if only they realized that by allowing the destruction of their compatriots at home they are indirectly destroying their own future happiness and prosperity, even the most miserly among them with any practical sense would no longer stint his help.

Fears are entertained about the fate of the relief funds or foodstuffs if the Ottoman Red Crescent were to have a hand in the distribution, and to a certain extent such fears are not unjustified. On the other hand, the Americans' moral and material interests in Syria are such as to make the depopulation of the country a very serious problem for them. Therefore, even apart from humanitarian considerations, the American Red Cross in Syria may well be expected to make the fullest possible use of the relief funds and foodstuffs.

YOUNG TURK v. ARAB. THE INTOLERANT "UNIONISTS."

(FROM A CORRESPONDENT.)

CAIRO, November 10.

I am able to send you another document which the Grand Shereef has allowed to be published now that the right time has come. It constitutes yet another proof—if such be needed at this late hour—of the treacherous policy of the "Young Turks" in regard to the Arabs, of their overweening pride, and of their carefully prepared plans for the utter destruction of the Arab national spirit.

At the time when El Sayyed Kassim Zeinal, the deputy for Jeddah, proposed in Parliament: (1) the establishment of primary schools in which Moslems should be instructed in the Koran and learn to commit it to memory; and (2) the recognition of Arabic as the official language in Government departments, he was supported by all the Arab deputies and even by some of the moderate Turks. The Majliss was, however, stirred to its depths; there was tumult among the Unionists; and their spokesman, Hussein Jahid, made a most arrogant retort:—"Speak not of the Arabs, nor mention here their language or their books. Let them not think that they are anything but a negligible quantity. Let every Arab deputy know that what the Committee of Union and Progress does not decide upon the Majliss shall not decide upon." This declaration provoked loud and indignant protests on the part of three prominent Arab deputies—they have since been hanged in Syria—and the incident would undoubtedly have ended in a scuffle, had not the President hastily closed the debate and adjourned the sitting.

That same evening a deputation from the Unionist Club, headed by Hussein Jahid, proceeded to the residence of Shereef Abdullah; and there a discussion took place, which was of such a momentous character as to make the meeting an event of real historical importance. This may be seen by the following translation of a letter sent by the Shereef Abdullah to his father, the Grand Shereef:—

"Had I known, oh my father, that the Arabs were 'a negligible quantity,' as I have heard to-day in Majliss el Mabouthan [Parliament], I should have far preferred staying in Rabegn or Yambo, and the primitive tent-life of the desert, to living in your sumptuous palace dominating the hill of Buyukdere, and spending one minute in the hall of the Majliss to hear what every Arab soul must abhor. Who ever thought that I should hear from Hussein Jahid and his compeers words of threat and intimidation, on account of certain legitimate demands laid before the Majliss by the Deputy for Jeddah? The fact of these demands being purely Arab made the Unionists fly into a rage and foam; and you will realize the gravity of the situation when I tell you that the session was adjourned on account of the heated discussion and dispute that ensued.

"You can imagine my state when Hussein Jahid, accompanied by his clique, actually said in my own house: 'You Arabs shall not be able to revive your tongue in the Ottoman Empire, so long as the Unionist Government is at its head. And the Book which you so extol, and of which you are so proud, on account of its Arab origin, shall unfailingly be translated into Turkish, so that Turkish eyes shall no more pass over Arabic sayings.' What would you do, oh my father, when I tell you what Hussein Jahid said about you on Anwar's [Enver's] behalf: 'The voice of the Arabs was low before your father succeeded to the Emirship of Mecca; but as soon as he took up the post this voice began to grow louder and louder, until it almost stopped the progress of our programme. But we have taken our precautions and the necessary measures for stifling it; because if the Arab traitors were to be allowed power in the Empire, then all our hopes and our people would be consigned to perdition'?

"All this I heard, by thy truth, oh my lord and father, from Hussein Jahid, and I do not wish to repeat further sayings—which would only stir thy anger and provoke thy displeasure—uttered by those traitors

who, but yesterday, were holding up their arms to implore our help, and who now, through the power of the Committee Club, have risen to the might of a Sultan. It is my wish now to retire from this Majliss. In reply to all those foolish and deluded utterances I only said that the Arab nation does not need to resort to the exercise of power to regain its rights, and has too much sense to afford you an occasion that you have been seeking all along. We, the Arabs, are persuaded that if our pacific endeavours shall not prove sufficient to make us regain our usurped rights, Allah will be the guarantor thereof at the very end. For to Him the unknown is an open book.—Your obedient son,

"ABDULLAH."

After this moving missive was gone through his Highness passed to the reader a copy of the paper *Al Islah* (Reform), which used to be published in Jeddah, and which was suppressed simply because, following this incident, it made some outspoken comments on the Unionists and the declaration of their spokesman that what the Committee does not decide the Majliss shall not decide.

A SERBIAN HERO.

DEATH OF CAPTAIN ANTULA.

During the four years that the Serbian Army has been fighting it has suffered enormous losses. Many of Serbia's best officers have been killed, as well as a large number of distinguished writers, students and others. Quite recently the London and provincial papers reported that "the valiant cavalry captain, Nikola Antula, the brilliant literary critic and historian, fell gloriously on the field of honour."

Born at Belgrade, in 1885, and a member of a prominent Serbian family, Nikola Antula was educated in the capital, completing his University course, with distinction, in 1909. He then became a teacher in one of the best secondary schools in Belgrade. In the autumn of 1913 he went to Rome in order to study, in its rich libraries and records, the literary connection between Serbia and Italy. He devoted his chief attention to the period of the renaissance in the literature of Ragusa, which, as is known, flourished exceedingly under the influence of Italian letters of that time. He was a brilliant literary critic and historian, and great hopes were entertained about him in Serbian literary and scientific circles. The Chair of Ragusan Literature at Belgrade University was reserved for him. He wrote several essays on the old Ragusan poets, as well as on modern Serbian novelists.

His studies, however, were interrupted by the two Balkan wars and the present war, in which he bore an heroic part, entering as a reserve cavalry second lieutenant, later being promoted to captain. He distinguished himself by his heroism in all the principal battles of the Serbian campaign—Kumanovo, Bregalnitz, Rudnik, Monastir. Though never wounded, he was twice attacked by typhus in its worst form, after the retreat through Albania. In the bloody fighting at Crna Reka, last November, he found a glorious death whilst in command of a cavalry advanced guard detachment.

His death is a very great loss to young intellectual Serbia, and is deeply deplored in that unfortunate country. May his death be not in vain; may it mark a step forward on the road to final victory!

A telegram from Constantinople, received by way of Amsterdam, and dated the 7th inst., reports that the Turkish Senate has adopted a Bill for a supplementary credit for the War Ministry of £15,000,000. The telegram adds that wireless communication between Constantinople and Athens has been re-established.

MONTENEGRO.

Any interested in the commercial and general development of this country, together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

LETTERS TO THE EDITOR.

THE MOSLEMS OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I shall be deeply grateful, on behalf of the Moslems of Cyprus, who have always been known for their loyalty to the British Government, if you can find room for the enclosed letter in your valuable paper.—I am, etc.,

M. IRFAN.

Nicosia, Cyprus,
November 19, 1916.

Nicosia, Cyprus,
November 19, 1916.

To Arnold J. Toynbee, Esq.,

C/o the Clarendon Press, Oxford.

Dear Sir,—My attention has been called to the following extract from pp. 235-36 of your chapter on Greece in a book entitled "The Balkans: A History of Bulgaria, Serbia, Greece, Roumania, Turkey" (Oxford: Clarendon Press, 1916):—

"The whole population of the island (i.e., Cyprus) is Greek in language; while under an excellent British administration its political consciousness has been awakened, and has expressed itself in a growing desire for national unity among the Christian majority. It is true that in Cyprus, as in Kreta, there is a considerable Greek-speaking minority of Moslems who prefer the *status quo*; but, since the barrier of language is absent, their antipathy to union may not prove permanent. However important the retention of Cyprus may be to Great Britain from the strategical point of view, we shall find that even in the balance of material interests it is not worth the price of alienating the sympathy of an awakened and otherwise consolidated nation."

I beg leave to point out that the statements that "the whole population of the island is Greek in language," and that the Moslem minority is Greek-speaking, are diametrically contrary to the facts. According to the latest census (1911), the population of the island amounts to 274,108 souls, of whom 56,428 are Mohammedans and 217,680 non-Mohammedans. Of the above the census shows that Turkish is the mother-tongue of 55,213 persons, and Greek of 216,310, the balance of 2,585 being made up of persons whose mother-tongues are English, Armenian, Arabic, and other languages.

In support of my facts, which are so well known to those acquainted with Cyprus as to be beyond all dispute, I venture to draw your attention to the official publications of the Island Government—e.g., the Report on the Census of 1911 (London: Waterlow and Sons, 1912), the High Commissioner's Annual Reports, the Cyprus *Official Gazette* (published simultaneously in English, Turkish, and Greek), etc. I would also state for your information that the debates in the Legislative Council of the colony are carried on in the three official languages—English, Turkish, and Greek.

Permit me to add that your inference that Cyprus should be handed over to Greece, because, as you say, the inhabitants, both Moslem and Christian, are Greek-speaking, is the more insidious by reason of the analogy erroneously drawn by you with Crete, whose Moslems, unlike those of Cyprus, are of the same race as their Christian fellow-islanders. It has never occurred to anyone acquainted with Cyprus to suggest that the Cypriote Moslems are other than the descendants of the Turkish conquerors of 1571 and of Turks who subsequently settled in the island.

In view of the importance to the Moslems of Cyprus, who are most anxious on no account to be severed from the British Empire—to which they are proud and happy to belong—that mis-statements such as those to which I draw attention should not pass unchallenged, I am communicating a copy of this letter to the Press.—Yours faithfully,

M. IRFAN

(Moslem member of the Legislative Council of Cyprus).

CHRISTMAS FUND FOR SERBIAN SOLDIERS.

The Serbian Army is facing a second Christmas in exile, unable to receive letters or parcels from their homes. They know nothing of their relations except that they may be in dire distress. The British Workers in Serbia want to send a Christmas present to each of the soldiers they grew to know and admire, and, in order to raise funds for the purpose there has been formed the British Workers in Serbia Christmas Present Fund for Serbian Soldiers (Registered.) The Executive Committee consists of the Hon. Lady Whitehead (President), Miss A. J. Dickinson (Chairman), Miss E. Benjamin (Hon. Treasurer), Miss Bradshaw (Hon. Secretary), Miss E. Cargin, Miss Christobelle Ellis, Mrs. Jan Gordon, Mr. H. C. M. Hardinge, Dr. R. M. Morison, R.A.M.C., Miss Pearce, Dr. E. M. Tindal Robertson, Dr. Soltan, Dr. R. W. Seton-Watson, and the Rev. H. E. Simpson.

It is proposed to send tobacco, and, if possible, sweets, ordered from Salonika—thus avoiding delay and expense of transport. £2,000 is required immediately. The Serbian Christmas Day falls on January 7th. Those who desire to show their sympathy to the Serbian Army are invited, either to send a cheque—no matter how small—or to apply (at 3a, Clareville Grove, S.W.), for 6d. collecting cards, which must be filled up and returned with the money by December 26.

THE NILE VALLEY.

GEOLOGICAL FORMATION.

At the Lyceum Club, Piccadilly, on the 6th inst., Professor Flinders Petrie delivered a lecture on the formation of the Nile Valley, viewed from the geographical and geological standpoints. Lantern slides illustrated his various points. The first of these showed the desert, not covered with sand, as in the story-books, but with flints or stones, as the traveller usually finds it. One slide showed a road made by clearing away flints, so old that it went back before even what are usually considered prehistoric times. It was in the upper desert, and very many thousands of years must have passed since men used it. Other slides showed the Nile Valley as a trench worn by the river through the rocks. The rocks were sandstone in the upper valley, limestone in the lower, with an eruption of granite at the first cataract. Geological investigation showed that the region had not always been desert, nor always at the present sea level. Two distinct wet glacial periods could be traced, with the sea level much higher than now, and two warm, dry, inter-glacial periods, when the sea was much lower than at present. The evidence was to the effect that these changes were not confined to Egypt, but concerned the whole of Europe; and Professor Petrie showed by maps the configuration of Europe and Northern Africa when the sea covered what is to-day the Russian Plain and the Mediterranean was united with the Red Sea; and what it was like at the other extreme, when the coast line of Continental Europe extended as far as Iceland and the Mediterranean and Black Seas became a chain of lakes, like the great lakes of North America. The first warm inter-glacial period was that of the Heidelberg man; but there was no trace of man in Egypt at that very early time. The second inter-glacial period showed a great accumulation of flint implements of Chellean type. The third warm and dry period was that of the cave man, who carried flint implements to the highest perfection they ever attained.

Slides showed the similarity of flint implements of Egypt with those of Western Europe at this period, and Professor Petrie explained that this similarity was easily to be understood. Five thousand years would give plenty of time for a type of tool or weapon gradually to make its way across the entire distance, and five thousand years was but a small part of the time that implements of this sort were in use. Most of these chipped flints, he added, were probably grubbing tools, used for getting up the roots of plants. We to-day have greatly improved our vegetables, but in very early times the root of a plant was commonly the most valuable part for use as food.

Other slides showed views of modern Egypt, and the lecturer explained the country's wonderful fertility. The Egyptian sun, he said, was not so hot as that of the Tropics, but it was much more constant. Then, the cultivated land consisted simply of the bed of the river, covered with water during part of the year, but left uncovered sufficiently long for tillage. Under the most favourable conditions three crops a year could be grown on the ground, while date palms could grow over the top, but would still let as much light through as elsewhere on an ordinary cloudy day.

BULGARIAN RULE IN MACEDONIA.

Under date of December 9, Reuter's correspondent in Corfu forwards a statement issued by the Serbian Press Bureau regarding Bulgarian rule in Macedonia. From this we take the following passage:—

"The Moslem population, although the Bulgarians are allies of the Turks, were maltreated and terrorised. Omar Bey, one of the notabilities of the town and president of the Municipal Council under the Turkish *régime*, fled to Constantinople. Rapine was so common and regarded as so natural that even the public authority took part in it. The furniture was taken from the houses of our officials at Monastir and in other towns and sent to Sofia, where it was distributed among the Bulgarian officials. The leading citizens protested, but only with the result of incurring Bulgarian odium. To sum up, the Bulgarian *régime* in Macedonia has been one of murder, rapine, and terror. It was the same procedure as was carried out by the Bulgarians under the Turkish *régime* when they endeavoured by terrorism to crush the Serbian sympathies of the Macedonian population."

The Berne correspondent of the *Morning Post*, writing on December 10, refers to an interesting article on "The Ambush of Athens, December 2," in the *Journal de Genève*. This article, he reports, suggests what would have happened if a German squadron had been lying where the Allied warships are stationed. "Athens would have been bombarded and reduced to ashes." It writes: "The Parthenon and the Acropolis would have shared the fate of the Cathedral of Rheims and the Library of Louvain. Thank Heaven French and English mariners have resisted such temptation."

BALKAN COMMUNICATIONS.

Before the Liverpool Geographical Society on Monday night Mr. Charles Woods lectured on the subject of "Balkan Communications." The situation in the Near East, he said, was now so complicated and so all-important that he proposed to discuss the different rôles of the various railways in the present war, and to explain some of the events which were now taking place. In certain instances he omitted details, and spoke with reserve, not from any want of forethought, but because he was particularly anxious not to say anything which ought not to be said, and because he was desirous of not contravening any regulations which were now in force.

In the earlier part of his lecture, Mr. Woods explained the enormous importance of the Danube, not only as a thoroughfare for traffic, but also as an obstacle to through communication between the North and the South. By the subjugation of Serbia and the co-operation of Bulgaria, the Central Powers secured full control over a large section of the southern bank of that river. But so long as Roumania held a long length of the northern bank, and so long as Roumania or Russia held both banks near the mouth, Germany was not able to use the Danube as a through means of communication between Central Europe and the Black Sea, or as an alternative route to the Great Trunk Line from Belgrade to Constantinople.

After explaining the importance of the Cernavoda Bridge, Mr. Woods went on to point out that, unfortunately, the very considerable rectification of the frontier insisted upon by Roumania during the Balkan Wars had not enabled that country to protect the bridge and the port of Constantza. But the disasters which were now taking place in Roumania were due not to local conditions, but to the fact that that country was not and could not be in a position to meet an attack from the North and the South. That combined attack would never have taken place had the victors in the second Balkan War behaved with greater moderation at the time of and after the Treaty of Bucharest, and had the Allies early in this war insisted upon a recreation of the Balkan League. That this was not arranged, and that Roumania was allowed to enter the war under the circumstances she did was responsible for her misfortunes—misfortunes which would never have taken place had the Allied operations in the East been preceded by successful and far-seeing diplomatic preparations.

After showing that the entirely inadequate system of railways which existed in the Near East largely resulted from the opposition of the Turkish Government, and pointing out that the most important line in the Balkan Peninsula was that which connects Belgrade with Constantinople, Mr. Woods went on to discuss the three railways which affect the Salonika operations, and to explain various aspects of those operations themselves. The first of these railways was that which connects Salonika with Nish, and follows the valleys of the Vardar and the Morava. Throughout the war the significance of this line had been enormous. Prior to the conquest of Serbia it was by way of it alone that the Serbians were able to maintain railway connection with the outer world. To-day it formed the centre of our position, so to speak, and constituted the route by which, if the Salonika campaign was to be successful at all, the Allies must sooner or later push forward an attack into the interior of the Balkan Peninsula.

To the right or to the east of this railway there ran a line connecting Salonika with Dedeagatch. It traversed the plain which lies between the Rhodope Balkans and the Ægean, and would sooner or later form the principal means of communication between Salonika and the right of the Allied position, and between that town and the various points from which it would be possible to push forward an Allied advance into the Rhodope Balkans. On the west of the Vardar Valley there was a railway from Salonika to Monastir. This line was of great importance because, running as it does more or less parallel to the Serbo-Greek frontier, it serves that considerable section of the Allied front which extends along or near that frontier. Moreover, giving access to various roads which run from it in south-westerly, westerly, and northerly directions, it may be destined to play an enormous rôle in our operations.

Dismissing the subject of communications in Greece with a brief statement that the railway system of that country has only just been connected with the remainder of Europe, Mr. Woods passed at once to the political situation. In regard to this question, he said that the worst expectations of those who had contemplated the difficulties connected with the inauguration of an Allied campaign in a neutral country had been realised. Since our arrival at Salonika the policy of the King of Greece had enormously hampered, if it had not actually frustrated, the objects of the campaign. That policy might or might not have been in accordance with the spirit or the letter of Greek neutrality; but, however this might be, Mr. Woods thought that if the Greeks had not kept their original promises and engagements—and he contended that these had not been kept—the Allies should have taken the matter into their own hands, and insisted upon the government of Athens adopting a policy which would not only be in the interests of the Allies, but would also safeguard the future of Hellenism. Personally, he would have liked to have seen the inauguration of an Allied policy destined not to separate but to bring the King and M. Venizelos together. Instead of this, we appeared first to have supported one party and then the other, and here, as elsewhere in the Balkans, we had waited until our suggestions, which might have been agreeable sooner, had only been treated with contempt. Cyprus, which much earlier in the campaign might have been accepted by Greece in

exchange for part of the Kavalla district, was a futile offer when made at a moment when the Hellenic Government knew that the cession of that district could not prevent Bulgaria from taking the field on the side of the enemy.

Again, the protecting Powers who were in a position to enforce constitutional government in Greece refrained from taking the necessary measures until the King had so strengthened his prestige that even to remove him from the throne would only have rendered the position worse confounded. As things stood at present the Allied Governments must either decide not to withdraw the blockade until the Royalist Greek army had been completely disarmed, or prepared at once to safeguard their interests against further Greek treachery.

In concluding his lecture, Mr. Woods said that military operations conducted in the Near East must be entirely unlike, and in most ways far more arduous than, those taking place elsewhere in Europe. The existing communications were quite inadequate for the movement and supply of large armies. In the Roumanian and Salonika theatres of war the railways available to the enemy were much more effective than those possessed by the Allies. Practically the whole area was mountainous, and the mountains for the most part consisted, not of regular ranges, but of disjointed rocky masses. The winding valleys, which often narrowed down to mere gorges, were shut in by sloping hills so forbidding that an advance across them seemed to be well-nigh impossible. The roads, except those in Bulgaria and a few main routes in other parts of the peninsula, consisted of the merest paths or tracks, strewn with rocky stones so enormous that one had to ride, stumble, or clamber along them as best one might. The existing bridges were either so narrow or so shaky that one crossed them only at the greatest risk. These conditions, together with the effect of the winter rains and snows, meant that motor vehicles, transport wagons, and big guns, upon which a modern army depended, were often useless; and special transport and mountain guns had to be provided for service on the numerous tracks which were not passable for wheeled traffic. Thus, if the Allies intended to further their cause in the Balkans—and the Balkans could not be abandoned—they must either inaugurate a new and more systematic diplomatic campaign, or prepare to send an army much larger than that possessed by the enemy who, so far, had accomplished practically everything he had attempted in the Near East.

SCOTTISH WOMEN'S HOSPITAL WORK IN THE NEAR EAST.

Presiding last Friday at a meeting of women interested in the work of establishing hospitals for our Allies in the Balkans, Lady Frances Balfour said that those hospitals had been entirely staffed and run by women from the first year of the war. It had been a great adventure, and a good deal of persuasion had been necessary to get governments at home and abroad to believe that such an enterprise could succeed. But the hospitals were now an established fact, and the women had proved themselves efficient surgeons, great organisers, and economical administrators. They had been the pioneers of movable hospitals along the front of our Allies.

Mr. E. P. Stebbing, who was transport officer of one of the units, delivered an address describing the experiences of that unit in Serbia last summer, and giving some account of the work it had done. Some of the incidents had a humorous side, such as those connected with the getting a heavy motor lorry along a road consisting of stretches of deep sand and patches of rock. A steep hill on the road from Salonika to Ostrovo was almost too much for them. However, the hospital arrived near the front, and took in its first patients on September 16. The first operation was performed next day, and after that work went on in the operating theatre from nine in the morning until late at night. In the first ten days it was the means of saving not less than forty Serbian lives. Had it had beds for 500, instead of for only 200, all could have been filled. The Serbians themselves were able to make but very inefficient provision for their wounded. There were bell tents, with straw on the bottom, for the bad cases, but the slightly wounded men sat or lay outside. Their doctors, however, did wonderful work. The lecture was illustrated by lantern slides. One of these showed the pillar that was erected by the 5th Serbian Infantry to commemorate the recovery of a portion of their country from the enemy.

We learn by inquiry that the latest unit sent out by the Scottish women went to Roumania by Russia, and arrived at the end of September. It was immediately sent up to the front, and, of course, retreated with the Roumanians. The latest news is that it is now at Odessa, and that all the equipment has been saved, except a motor-kitchen and a lorry. At the head of this unit is Dr. Elsie Inglis, who has had previous experience in Serbia. Under her is a staff of nearly eighty—cooks, orderlies, chauffeurs, etc.—all of them women.

On the occasion of the Yugoslav Congress at Pittsburg, the Serbian Prime Minister, M. Pashitch, has telegraphed to the President of the Congress that Serbia will never disown her brothers, and that she is determined to accomplish her divine mission to liberate and unite all the Yugoslav countries.

A Zurich message states that Herr Naumann, a member of the German Reichstag and author of the book "Mittel-Europa," the authoritative exposition of German aims in regard to the Central European League, has been sent on a lecturing mission to Bulgaria to revivify national enthusiasm for the cause of the Central Empires, which has shown a decline since the fall of Monastir.

TANGIER TO TEHERAN.

Time's whirligig is indeed an erratic bit of mechanism. Sometimes it revolves so slowly that no mortal eye can detect its motion; at others its speed is positively dizzy. In regard to Near Eastern affairs the pace certainly seems to have been accelerating of late. Take, for instance, the case of Crete. On December 14, 1913, the ceremony of formally annexing the island to Greece was carried out by King Constantine amidst scenes of exuberant rejoicing. This, as was remarked in *THE NEAR EAST* at the time, marked "an event to which Greeks and Cretans alike have looked forward for generations." But now, less than three years after this popular demonstration, we learn from a Reuter's message that at a large meeting held at Canea on Sunday, December 11, "a resolution was unanimously passed declaring King Constantine dethroned and cursing him as a traitor to the nation and the Motherland." The message adds that "soldiers who were present tore the Royal crowns off their uniforms, singing patriotic songs." This second demonstration does not, of course, indicate that Crete wishes to sever its connection with "the Motherland," but it does look as if the Cretans had revised their estimate of King Tino.

That is a pretty turn of the whirligig. But King Constantine has nobody but himself to blame for his unpopularity outside immediate Court circles in Athens and the gangs of roughs and rowdies who have been bought by the Pro-Germans. Greeks who have not fallen under the pernicious influences that have been at work in the Greek capital have reluctantly come to the conclusion that "Constantine must go"; and, judging by the attitude of the communities in Paris, London, Liverpool, Manchester, Cardiff, and other centres where they are numerous, it would seem that they have reached the conclusion that he is even past praying for. It must, by the way, have been distinctly embarrassing for Prince George of Greece to learn this fact at the Greek church in Paris last Sunday. But since he is, I believe, a straightforward, plain-spoken person himself, he can hardly have failed to recognise that the decision to omit his brother's name from the prayers was justified up to the hilt.

Travellers in general, and especially those used to the swiftness and punctuality of the West, are rather apt to find fault with certain features of the Roumanian State Railways. But let us give praise where praise is due. I learn from a Roumanian correspondent that a little time ago at a level crossing on the Rimnic-Serat line a locomotive ran into a wagon drawn by two bullocks. As in the hypothetical case put to Stephenson, the result was decidedly "bad for the coo," for both oxen and cart were reduced to fragments. The driver, however, escaped—how he does not know. His six-year-old child, who was with him on the wagon, disappeared completely, to be found, howling but quite unharmed, on the front of the engine when it pulled up at the next station. Now, no Western engine could have done that. I do not doubt my correspondent's veracity. Indeed, I cannot, for he is a Scotsman!

The passages quoted in last week's *NEAR EAST* from the article "Mesopotamia" in the current "Blackwood" led me to read the original—and extremely interesting I found it. True, the description of the discomforts that our soldiers had—and still have—to endure in that "Land of Promise—Unfulfilled" is not exactly cheerful reading, especially if your knowledge of the country helps to make the picture all the more real to you; and the fact that the trials of the horses and mules "exceeded anything one can imagine" is unpleasant to contemplate, if you happen to be a lover of animals. But the cheerful way in which the writer deals with the mud, the muddles, and the rest of the Mesopotamian trials is a tonic for dyspeptics and pessimists; while his descriptions of encounters, peaceful and otherwise, with the Arabs are full of vivid touches. If you have not read the article already, I advise you to do so at once.

That, however, was not my object in referring to it. I notice that, in describing life at Orah camp, the writer mentions that: "Aeroplanes would start out each morning to scout over the enemy's positions to collect material for the making of maps, for of this theatre of the Great War no previous maps existed." The italics are mine, and I think they are warranted! On the military aspect of the question I do not wish to comment, of course. But is it not strange that this part of the world, in which we have had important interests for so long, has remained unmapped? British surveyors, amateur and professional, have been busy in other parts of the country. Rich, our Consul in Baghdad and a pioneer in Assyriology, made the first map of the

Tigris south of Mosul very many years ago; Chesney's work, on both rivers, is known to all the world; Jones surveyed all the district between the Tigris and the Upper Zab; and Collingwood, Bewsher, and Selby performed a similar service for a considerable portion of Mesopotamia and the region between Musseyib and Shenafiyeh. All this work, it is worth while noting, is incorporated in Kiepert's map—another case of German reaping where British sowed. But the southern part of the country has been strangely neglected. It is so flat, has so few features worth recording, and is so unattractive to most people, that probably nobody thought it worth worrying about till now!

The thought of Bucharest in the hands of the Huns must be painful to a great many people who are not Roumanian. It is—or was—such a bright, joyous, careless little city; and now—? Of course, it is only for a time. The Germans, the Bulgars, and the Turks will all go back whence they came, and Bucharest will recover from the feeling of uncleanness that they are bound to leave behind them. But it will take time: you cannot get the smell of an unclean thing out of your nostrils till long after the thing itself is removed; and so it must be in the case of the intruders in Bucharest. At the present time the city must certainly lack most of its charm. The "conquerors" cannot, one supposes, take away the fine buildings, though it is to be feared they will remove not a few of the art treasures, public and private. But to most visitors the greatest attraction of the city was its crowds—good-looking, cheerful, gay, lively folk whom it was a pleasure to watch. And now the streets are doubtless full of pot-bellied Prussians, beetle-browed Bulgars, and Teutonized "Young" Turks. Truly a sorry exchange! I only hope the restaurants and cafés had time to clear out, or destroy, their stocks of good things before the entry of the enemy, and that the *chefs* made good their escape. Bucharest knew most things there are to know in the way of "good living," and no doubt the Germans anticipated a "real good time" there. May they have been disappointed.

CORSAIR.

FOR WOUNDED ROUMANIANS.

The sympathy felt with the Roumanians in their present time of trial, and the admiration for the gallant resistance they have opposed to the invaders of their country, are so genuine and so widespread that it is remarkable that the Wounded Roumanian Soldiers' Fund has not met with wider and more generous support. The second list of subscriptions, which was published in *THE NEAR EAST* last week, only brought the total to £3,346 odd; and though the British public has almost innumerable calls upon its purse at the present time, this amount cannot be regarded as satisfactory. The explanation probably lies in the fact that the existence of the fund is not more widely known, and any of our readers who can bring its claims to the notice of their friends and acquaintances will certainly be helping a deserving cause. Further donations will be gratefully received by the Hon. Treasurer (the Earl of Bessborough), at the Bank of Roumania, 27, Throgmorton Street, London.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post *THE NEAR EAST* for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad *THE NEAR EAST* is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galimani, 274, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepherd's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacalli and Compagny, 2, Rue Sesostris; Librairie Calabotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugénides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francaise, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafia's.

BUCHAREST. No. 1, Strada Academiei, and Sococ and Company, Calcea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

NEAR EAST BOOKSHELF.

THE SOUL OF THE POLISH RACE.*

The interest aroused by "Tales from Polish Authors" has inspired Mme. Else Benecke to provide us with another instalment, in collaboration with Mme. Marie Busch. Their book is a notable exception to the rule that a sequel fails to justify the good impression derived from its predecessors. It is a revelation of the genius of that brilliant race whose evolution has been arrested by faulty political institutions and the greed of their mighty neighbours. Despite inevitable differences in quality, the six translations which make up this fascinating work prove that Polish men of letters excel in the difficult art of compressing material for a novel into the compass of twenty pages.

In two cases the scene is laid in Eastern Siberia—a thrilling region of thick-ribbed ice to which many thousand Poles were exiled after the abortive rebellion of 1862. Appalling must have been their tribulations in that Arctic climate, and without a glimmer of hope that they would see their dearly-loved fatherland again. Yet most of the characters display a degree of resilience which is full of happy auguries for the future of Poland. It is probable that the author of "The Stronger Sex" owes something to the inspiration of Henrik Ibsen, but the atmosphere which he conjures up is infinitely more attractive than that of the Norwegians' sordid dramas. In this, and several of the stories, one detects a distinctly Latin quality, a blend between Maupassant and Zola at their best, with a subtle flavour which is essentially Slav. It traces the gradual deterioration undergone by an ardent and loving soul if it be left for years to vegetate in semi-barbarous surroundings. "The Trial" recounts a terrible instance of the Lynch Law which prevails in vital communities when they discover that official methods of preserving order are quite inefficient. It recalls the rough-and-ready justice meted out by the Vigilance Committees of California sixty odd years ago, although the savagery with which Polish peasants avenge their wrongs has never been seen in Anglo-Saxondom.

It would be invidious to select passages for quotation from a book which has not one uninteresting page. One rises from a perusal of its fascinating stories with the conviction that Poland will reach a higher destiny than has hitherto fallen to her lot.

F. H. S.

RUINS IN CEYLON.†

This book will be an admirable guide to those who wish to spend a few days examining the ruins of the famous Sinhalese cities. Miss Mitton has seen the mighty monuments of Egypt, which left her cold, and the many attractions of Burmah, which only amused and interested her superficially, but in Ceylon, among the stupendous ruins of the cities of Anuradhapura, Mihintale, Bolunasume, and other sacred places she felt from the first moment at home. The book collates and puts in compact and readable form all that most people will require to know of the achievements of the Sinhalese. The author's enthusiasm for Buddhist objects of worship, or adoration, sometimes leads her to exaggerate their historical worth unduly. The Mahamansa, on which the writer depends for her history, though a valuable record, is not always a safe guide. Justice is done to the invaluable work of the Ceylon Government in the work of restoration, but the writer well points out how the Sinhalese have remained indifferent to the fate of their noble cities. The book has many illustrations and maps, and a full index. It will be of great value to those who are interested in a wonderful civilisation which attracted the unbounded admiration of the East 2,500 years ago.

ANOTHER "AYESHA."‡

This book inevitably reminds us of some of Mr. Rider Haggard's early romances; and those who enjoyed "She," "Allan Quatermain," and "Cleopatra" will equally enjoy this weird story. In the "secret city" of Nefert, out in the "Great Desert," we are introduced to an assembly of characters as strangely assorted as any to be found between the covers of a single volume. There are Arabs—Moslems in name, but in little else, one fancies; a Christian monk fleeing from temptation, one Francis, who reminds us somewhat of Philammon in "Hypatia"; a trio of priests who have kept alive the worship of the gods of Ancient Egypt, and who plot and plan to restore that worship to its former greatness in Nefert; a band of ardent Christians, dimly reminiscent now of "The Last Days of Pompeii," now of "The Sign of the Cross"; and—besides many other old friends with new faces—Reinhild, a lady of surpassing

beauty, limitless self-assurance, a rather lurid past, and uncanny powers of mesmerism—or is it hypnotism?—which Ayesha herself might have envied.

The individual reader must judge for himself whether the assemblage of such a company of actors on such a stage is likely to provide good entertainment. But it is certain that the author handles his subject with a good deal of skill, and that once at least he is likely to catch the most hardened reader of romances napping. There are, too, many incidents that will appeal strongly to such readers. In a word, the book is quite a good one of its class, and anyone who wishes to escape for an hour or two from the realities of the present might do much worse than turn to its pages. Mr. Doke will often amuse them, and may occasionally make them think. But if they are sticklers for probabilities they should avoid the fickle Reinhild and her adventures; for they will find Nefert, its mixed inhabitants, and its strange visitors merely irritating.

BOOK NOTES.

A book of considerable interest to students of policy and diplomacy in the Near East is "My Russian and Turkish Journals," by the Dowager Marchioness of Dufferin and Ava. It is Lady Dufferin's account of events during the time when Lord Dufferin was British Ambassador at Petrograd, from 1879 to 1881, and afterwards at Constantinople, up to 1884. Mr. Murray is the publisher, and the price of the book is 10s. 6d. net.

We understand that Messrs. Stanley Gibbons have issued a pamphlet on "The War Stamps of Salonika and Long Island." The subject is one in which many of our readers are interested.

H.E. the Serbian Minister contributes a Foreword to a little book on Mestrovitch (the Serbian sculptor) and Serbian Sculpture, of which Mr. Yusuf Ali is the author and Mr. Elkin Matthews the publisher.

Anyone looking out for a book as a Christmas present to a boy should bear in mind the late G. A. Henty's "With Kitchener in the Sudan." Messrs. Blackie have just issued (at 3s. 6d.) a new edition of this popular book.

Messrs. Hodder and Stoughton published on Monday "The Stealers of Light," by Marie Queen of Roumania. The price is 6s.

Messrs. Philip and Son have issued recently a "Strategical Map of Mesopotamia and Asia Minor," and a War map of the Balkans, at 2s. 6d. net each.

A report on "The Treatment of the Armenians in Turkey" has been issued as a Blue Book by the British Government, and is being published for general circulation by Messrs. Hodder and Stoughton. The report presents an approximately complete collection of first-hand evidence on the atrocities that have been committed. The documents come principally from neutral residents in Turkey, who have made their way out of the country, but there are also some of German authorship.

BOOKS RECEIVED.

The Pan-German Plot Unmasked. By André Chéradame (Translated by Lady Fraser). John Murray. 2s. 6d. net.)

My Russian and Turkish Journals. By the Dowager Marchioness of Dufferin and Ava. (John Murray. 10s. 6d. net.)

The Lord Kitchener Memorial Fund has received the following translation of a letter which was sent to the Governor of Fiji from a native province in that part of the world. The communication is headed "Somosomo, August 8: The news of the sad end of Lord Kitchener caused a wave of profound sorrow to pass over the whole of this province. We felt what little we could do to show our deep feeling and our veneration of him who served the late Queen Victoria, the late King Edward VII., and King George with all his strength and with all his might. In the irreparable loss thus sustained by his Majesty the knowledge of high duties loyally accomplished can be no small consolation. In conjunction with the heads of the Churches a Memorial Service was arranged, in which a collection for war purposes was taken. The sum realised was £162 13s. 8d. I desire to record my appreciation of the cordial support extended to me in this matter by the Roman Catholic priests and by the Methodist ministers."

THE WORLD-FAMOUS
YAGHOURT

may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.

Also **LEVANT PRODUCE:**
Tomato Paste, Black Olives, Locomas, Walms,
Bamias, &c.
Recommended by Mrs. Frank Barker.

Sunday is the birthday of H.R.H. Prince Alexander of Serbia, who was born at Cetinje in 1888.

Wednesday is the birthday of H.R.H. Prince George, fourth son of the King and Queen, who was born at Sandringham in 1902.

The King has consented to open the School of Oriental Studies, London Institution, Finsbury Circus, formally in February next. A further announcement will be made shortly in regard to the date of the ceremony.

The Sultan of Egypt has conferred the Order of Mohammed Ali on Sir Henry McMahon, and the Order of El Kamel, First Class, on Lady McMahon, personally bestowing the insignia on the former.

H.E. the Serbian Minister and Madame Yovanovitch visited the Duke and Duchess of Connaught at Clarence House on Monday afternoon.

The Duke of Westminster is making good progress towards recovery from his recent illness.

H.H. the Aga Khan and H.E. the Serbian Minister are among the writers who send messages to the *World* (December 12) on the subject "1917." Both messages are full of quiet confidence and determination to win.

The Lord Provost of Edinburgh has received from the Serbian Minister in London a letter thanking him for the courtesy shown to him and his friends during their recent visit to the Scottish capital.

M. Burilliano, formerly of the Roumanian Diplomatic Service, and Madame Burilliano left London for Paris on Sunday.

M. Metaxas, a former Greek Minister in this country, was recently appointed Minister at Washington. News reached London last week that the vessel by which he was travelling from Marseilles was torpedoed, and that M. Metaxas had been landed at Alexandria.

M. Slavko Grouitch, who is now at Corfu, will take up his duties as Serbian Minister at Berne at the beginning of the New Year.

Captain George Lloyd, M.P., arrived in Khartoum on November 20, on a short visit to the Sudan. He stayed at the palace as the guest of Sir Reginald and Lady Wingate.

FLIGHT COMMANDER HANS ACWORTH BUSK, R.N., missing in the Dardanelles since January 6, 1916.—Any definite information that might be obtained through relatives or prisoners of war in Turkey concerning the fate of this officer would be gratefully received by his mother, Mrs. Busk, 6, Wadham Gardens, Regent's Park, N.W.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

Mr. and Mrs. C. H. Page have returned to Khartoum North after a stay of two months in Egypt.

M. George Bonoesco, of the Roumanian Legation, has returned to London from Eastbourne.

The engagement is announced of Earl Curzon of Kedleston and Grace Elvina, eldest daughter of the late Mr. J. Monroe Hinds, formerly American Minister at the Court of Brazil, and Mrs. Monroe Hinds, and widow of Mr. Alfred Duggan, of Buenos Ayres.

The marriage arranged between Captain James L. Willcocks, M.C., Black Watch, only son of General Sir James Willcocks, G.C.M.G., K.C.B., K.C.S.I., D.S.O., and Muriel Kathleen, younger daughter of the late Colonel Gordon-Price and of Mrs. Gordon-Price, of Ootacamund, India, will take place to-day at St. Peter's Church, Cranley Gardens, at 1.45 o'clock.

A marriage has been arranged, and will take place in Glasgow, between Lieutenant-Colonel J. S. Liddell, D.S.O., Inspector-General of Telegraphs, Cairo, son of the late Captain J. Liddell, R.N., of Rodlease, Lymington, and Theresa, elder daughter of Paul Rottenburg, Esq., LL.D., Glasgow.

The engagement is announced of Captain Roderick (Eric) McLeod Mitchell, Yeomanry, son of Roderick Mitchell, J.P., Imperial Consul for Persia in London, and Mrs. Mitchell, of 1, Terrace Houses, Richmond, and Iris, daughter of Percy Rexford Parsons and Mrs. Parsons, 42, Draycott Place, S.W.

It was reported last week (not in *THE NEAR EAST*) that Commander Locker-Lampson, who was in command of a British armoured car unit in the Dobruja, had been wounded. This was incorrect. Reuter's Agency reported last Friday that it was Lieutenant-Commander F. W. Belt who had been wounded, and that Commander Locker-Lampson had arrived in England.

The following casualties to the British armoured car unit referred to were also reported by Reuter: Lieutenant W. C. Ingle, and Petty Officer Crawford, wounded; Petty Officer Armstrong, accidentally injured. Lieutenant F. H. Mitchell, Chief Petty Officer Curzon, and Petty Officers A. Maillard, P. D. Higgins, D. Howell, and H. S. Mortlock are missing and believed to be prisoners. The unit in question, after operating in the Caucasus and in Persia, made a further remarkable journey to Odessa, and thence to the Dobruja, where it joined the Russo-Rumanian armies.

Dr. G. A. Reisner, of Harvard University, has left Cairo for the Sudan, where he will conduct excavations at Kerma on behalf of Harvard. He is accompanied by Mrs. and Miss Reisner, Mr. Robert Williams, F.R.I.B.A., and Mrs. Travers Symons.

Colonel C. P. Lynden-Bell has returned to Silchester from the Russian-Turkish Frontier, and is shortly to give lectures in different parts of England for the Russian Red Cross and to promote Anglo-Russian friendship.

Corporal R. E. Millingen, of the machine-gun section of the London Scottish, is at present in England on leave from the front. He goes into an O.T.C. at the end of the year. Corporal Millingen was recently awarded the Military Medal, since when he has been wounded.

The Serbian Relief Fund has received a letter from Mr. E. P. Warren, the administrator of their hospital unit No. 6, stating that he reached Monastir on the day following evacuation by the enemy, and was at once allotted a building in every way suitable for a military and civil hospital.

Prince Abdul Karim Khan will preside at a meeting of the Central Islamic Society, to be held to-morrow afternoon (December 16) at Caxton Hall, Westminster, at four o'clock. Viscount de Potier will read a paper on "Moslems in non-Moslem States, the Balkans, Russia, etc."

On Wednesday afternoon Miss Edith M. Durham read a paper, entitled "Albania, Past and Present," at a meeting of the Central Asian Society. Owing to pressure on our space, we are reluctantly obliged to hold over a report of this lecture until next week.

A special committee has been recently organised for the purpose of sending Christmas gifts of food to Serbian prisoners of war in Germany and Austria-Hungary. The committee is under the patronage of Queen Alexandra, and is working under the auspices of the Serbian Relief Fund (5, Cromwell Road), which has undertaken the despatch of the gifts through its Prisoners' Committee in Berne. An operatic concert will be given at the Queen's Hall on the 19th inst., by M. Vladimir Rosing and M. Vassili Safonoff, in aid of the fund.

Under the patronage of H. E. the Serbian Minister the British Empire Union will this afternoon hold a matinee in aid of the Serbian Refugee Fund. It will take place at two o'clock at the Lyric Theatre, Shaftesbury Avenue, and an excellent programme has been arranged. Besides this matinee there will be an Allied tea party and concert at five o'clock at the International Hall, Café Monico.

Rear-Admiral the Hon. Horace Lambert Alexander Hood, of East Sheen Lodge, East Sheen, Surrey, formerly Naval Attaché at Washington and afterwards in command of the Royal Naval College, Osborne, who was killed in the Battle of Jutland on May 31, second son of the fourth Viscount Hood and heir-presumptive to the title, left unsettled estate of the value of £7,681.

Commander William Maitland-Douglall, R.N., aged 63, of Scotsraig, Tayport, Fife, A.D.C. to General Sir Arnold Kemball during the Turco-Serbian Campaign of 1876, and A.D.C. and Secretary to General Kemball in the Russo-Turkish War, 1877-8, left property, exclusive of real estate, of the gross value of £51,000.

APPOINTMENTS, PROMOTIONS, ETC.

The appointment of Lewa Kelly Pasha, Officer Commanding Egyptian Cavalry and, since the operations against Darfur, Officer Commanding the Western Frontier Force in the Sudan, as Governor of Darfur Province, has been officially announced in the *Sudan Gazette*. His appointment is retrospective from May 23 last.

Kaimakam H. A. MacMichael Bey, hitherto Senior Inspector Khartoum Province, who accompanied the Darfur Expedition as Political Officer, has been appointed Sub-Governor to that Province.

Bimbashi Bally, Inspector, Upper Nile Province, has been transferred to the Intelligence Department at Khartoum to succeed Major H. Lewis, who reverted to his British unit on November 1.

Captain Arthur C. B. Critchley-Salmonson, D.S.O., Royal Munster Fusiliers, has been taken on the strength of the Egyptian Army with the rank of Bimbashi. He has been posted to the 11th Sudanese.

The *Morning Post's* Stockholm correspondent reports that, according to *Svenska Dagbladet*, the Serbian Government has decided to establish a Legation at Stockholm and to appoint a Minister there who will represent Serbian interests throughout Scandinavia.

Our Cyprus Correspondent writes (November 12) Mr. Sophronios Papadopoulos has been appointed Chief Clerk to the Chief Commandant of Police, in the place of Mr. Th. Perdikes, who is retired on pension; and Mr. Cigathocles Christophides has been appointed Chief Clerk to the Commissioner of Kyrenia.

THE NEAR EAST.

Any Newsagent or Bookstall in the United Kingdom can supply copies of the *NEAR EAST* every Friday morning.

Should any difficulty be experienced in obtaining the paper, a post card addressed to the Manager, 16-17, Devonshire Square, London, E.C., will oblige.

Bimbashi (temporary) E. Keith Roach, Khartoum District, has been transferred to Sudan Government.

The *Sudan Times* announces:—

Lieutenant Algernon J. R. Lamb, D.S.O., 2nd Dragoon Guards, has been taken on the strength of the Egyptian Army with the rank of Bimbashi, and posted to the Cavalry and Mounted Infantry.

Lieutenant Cyril G. Martin, V.C., D.S.O., Royal Engineers, has been taken on the strength of the Egyptian Army with the rank of Bimbashi, and has been posted to the Military Works Department.

Lieutenant Guy A. Heineky, 4th Hussars, has been taken on the strength of the Egyptian Army with the rank of Bimbashi, and has been posted to the Cavalry and Mounted Infantry.

Bimbashi G. F. Hudson-Kinahan, 2nd Battalion, has been transferred to 3rd Battalion, and has been granted the temporary rank of Kaimakam.

Kaimakam C. Cassidy Bey, M. B. Medical Corps, has been transferred to the Recruiting Department.

The *Egyptian Gazette* announces that Lewa Selim Musally Pasha has been transferred from disponibilité to the Medical Corps, in the Sudan. Musally Pasha is an able physician, and has been attached to the Egyptian Army Medical Corps for a long time. During the Balkan War, the Egyptian Red Crescent Society sent him in charge of its missions, and he distinguished himself there, and was granted the honorary rank of Lewa by the Sirdar in recognition of his good work.

OBITUARY.

It is announced that Brigadier-General Duncan John Glasfurd has died of wounds. He was second son of the late Major-General C. L. R. Glasfurd, Bombay Staff Corps, and entered the Army in 1893, obtaining his commission in the Argyll and Sutherland Highlanders. He served in the Boer War, and was in the advance on Kimberley and the operations at Paardeberg. He was twice wounded during the campaign, and had the Queen's Medal with three clasps. In 1901 he served in Jubaland against the Ogaden Somalis (medal with clasp), and in 1902-4 he was again in Somaliland, commanding the 4th Somali Camel Corps. He was mentioned in despatches, and had a clasp to the East African Medal. On the outbreak of the present war he accompanied the 1st Australian Division on the General Staff, and was present through the whole of the operations in Gallipoli. He was promoted brevet lieutenant-colonel, and this year received his brigade command in the Australian Imperial Force. About midsummer he was slightly wounded; recently he was again wounded in the front trenches, and died the same night.

Major-General William Dalrymple Thompson, C.B., of Iver House, Bucks, who served in the Crimea, died last week at Princess Christian's House, Windsor. Born in 1833, and educated at Cheltenham College, he entered the Army in 1852, and reached the rank of major-general (retired) in 1884. In the Crimean campaign he was present at the siege of Sevastopol and the assaults on the Redan, and was dangerously wounded, being mentioned in despatches, awarded the medal with clasp, the Turkish medal, and appointed Knight of the Legion of Honour. General Thompson commanded the 1st Battalion 17th Foot in the Afghan War, and took part in the capture of Ali Musjid, the action of Chenar, the expeditions into the Bazar Valley, and the actions at Kabul River and Maidenack. He was again mentioned in despatches, and received the medal with clasp and the C.B.

RELIEF OF DISTRESS

PALESTINE AND SYRIA.

Bishop MacInnes will be glad to receive CONTRIBUTIONS made payable to the Rev. E. M. Bickersteth at the Church House, Westminster, S.W.

Major-General A. T. G. Pearse, late R.A., has died in London at the age of eighty-two. He took part in the Crimean War in 1855, when he received the medal with clasp, the fifth class of the Mejidieh, and the Turkish Medal. He also served in the Indian Mutiny, obtaining the medal with clasp.

Commander Edward Hamilton Currey, R.N., who died suddenly at Rock Ferry, Birkenhead, had retired from the Navy but had been re-employed for the war. He was fifty-nine years of age. Commander Currey as lieutenant of the Monarch served with the Naval Brigade landed for service in the Sudan with the Nile Expedition for the relief of General Gordon at Khartoum (1884-5). He was the author of "Sea Wolves of the Mediterranean."

The *Egyptian Gazette* of November 24 reports that news has been received in Egypt of the death at the front of Mr. W. A. T. Allen, who for many years was secretary of the Bohera Company at Alexandria. Mr. Allen, who left Egypt in 1908, was at the outbreak of the War in the service of the Government railways at Buenos Ayres, and was at home on leave. He at once joined the O.T.C., and obtained a commission in the 18th Liverpool Regiment. He went to the front in France, and met his death on October 18 while organising an attack. His brother officers, in a letter to his widow, say: "His devotion to duty and his inspiring bravery at that critical hour will never be forgotten. We mourn the loss of a comrade, whom we had learned to admire as a gallant soldier and a true English gentleman." Mr. Allen has a brother at Alexandria, Mr. A. H. Allen, of the Egyptian State Railways.

Our Cyprus correspondent writes:—Amongst those who have laid down their lives for their country is Mr. A. Mackay, son of Mr. J. W. Mackay, collector of Customs at Limassol, who is one of the oldest, if not the oldest, British official in Cyprus in point of service. Much sympathy is felt with the family in their bereavement.

We regret to learn of the death a short time ago in New York of Colonel John Frangoudis, brother of M. Demetrius Frangoudis, of the Union Foncière d'Egypte, of Alexandria. Colonel Frangoudis was formerly A.D.C. to King George of Greece, with whom he was a great favourite; and when the King was assassinated he vainly endeavoured to protect him against the assassin. He was in America at the head of a military mission, and met his death as the result of inadvertently touching an electric wire during the testing of a new artillery invention.

Amongst the casualties at the British front in France reported on November 22 occurs the name of Second-Lieutenant W. D. Semple, King's Royal Rifle Corps, eldest son of Colonel Sir David Semple, Director-General, Public Health Department, says the *Egyptian Gazette*. At the outbreak of the war Mr. Semple was an undergraduate at Cambridge, but he threw up his studies and joined the Army in September, 1914, receiving a commission in the King's Royal Rifle Corps. Early in the summer of 1915 he was sent to the front in France, and had been continuously in the fighting line over a year. He was grenade officer of his regiment, and in that capacity had seen much hard fighting at close quarters. It was during one of these attacks, when leading a party of his men who entered the enemy trenches, that he was killed on June 29. For some time he was reported as missing, and it was hoped that he might have been a prisoner in Germany, but evidence which has lately come to hand proves that he was killed. He was twenty-one years of age at the time of his death.

The death of Dr. Thomas B. Hamilton, medico-legal expert to the Egyptian Government, occurred at his residence, Cairo, on November 23, at the age of 38. Amongst those present at the funeral, which took place the following day, were Sir William Brunyate, Dr. Dobbin, Dr. Keatinge, Dr. Beddoe, Dr. Madden, Major Philips, Major Pringle, and a deputation of students from the Kasr-el-Aini Medical School.

DOMESTIC ANNOUNCEMENTS

BIRTH.

EGERTON.—On December 3, at Tenantrees, West Stafford, Dorchester, the wife of Philip R. le Belward Egerton, Sudan Civil Service, of a daughter.

MARRIAGE.

BARRY—TODD.—On the 5th inst., at the Parish Church, Bromley, Kent, William Verner Barry, of Khartoum, to Edith Perceval, daughter of the late Francis Lambert Perceval Todd, of the Admiralty, and Colyton, Devon.

DEATHS.

MCPHERSON.—Killed in action, on November 16, Major Donald William McPherson, Brigade Major, Indian Infantry, eldest son of the late D. W. McPherson, Deputy-Accountant-General, Simla, and of Mrs. H. M. McPherson, and beloved husband of Sybil McPherson, aged 37.

MAYO.—On December 8, at 5, Amherst Road, Bexhill, Penelope, second and last surviving daughter of the late William Mayo (formerly of Constantinople), of St. Leonards-on-Sea and Dulwich, aged eighty-three.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.53; Room, P.T.23; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach.

FRIDAY, DECEMBER 15, 1916.

"THE RIGHT THING AT THE RIGHT TIME."

One of the first problems to engage the attention of the new War Cabinet in Great Britain will have been the solution of the *impasse* that has arisen in Greece. It brooks no delay, as the safety of the Allied force in Macedonia to a great extent depends on a settlement which, whether the methods of arriving at it be satisfactory or unsatisfactory, must be final. Here, then, is a test case for a Government formed for vigorous action. In other directions measures for the future conduct of the war must be elaborated slowly, though decisively; but in Greece there is an urgent need for immediate steps. The sequence of events may be briefly recalled. On November 16 Admiral du Fournet, on behalf of the Allied Governments, demanded, as a result of Greece's equivocal attitude, particularly with reference to the cession of the 4th Army Corps and of war material to the Bulgarians, the surrender against financial compensation of a certain number of batteries of field and mountain artillery, together with a proportionate quantity of shells, 40,000 rifles with ammunition, 140 machine-guns with ammunition, and 50 motor-vans. As Greece insisted that her attitude towards the war was one of strict neutrality, from which she would not depart at the bidding of either group of belligerents, it was evident that she could have no need for munitions of war over and above the recognised requirements of the country on a normal basis. On the other hand, as the events in Eastern Macedonia proved, the Allies had to face a very distinct risk of Greek munitions finding their way into German or Bulgarian hands. They proposed accordingly to restrict Greece's superfluous supply of guns and munitions. To the Allies' request the Greek Government returned a categorical refusal. Admiral du Fournet made a further appeal to King Constantine and his Ministers to accede to the demand, which could not be withdrawn, and he fixed December 1 as the date by which the surrender of the first instalment of the war material would have to take place. On that day, in the absence of any conciliatory overtures from the Greek Government, the French Admiral proceeded to land an Allied force, some 3,000 strong, at the Piræus, in order to enforce his demands. Greek troops, posted at places of vantage in and about Athens, opened fire on these detachments, which, in the face of superior numbers, were withdrawn and re-embarked, after having suffered a number of casualties. Infatuated by this military success, the Greek Government and its troops abandoned themselves to taking vengeance or venting their spite on the followers of M. Venizelos among their own countrymen. Athens and other towns were given up for a few days to orgies of organised violence and pillage.

This lapse of Greece from the behaviour of a civilized State to the condition of a negro republic in revolution constitutes the problem which awaits solution at the hands of the Entente Powers. The Allied Ministers remain in the capital; developments have been too rapid and unexpected to arrange for their removal, and so far the Royalist hordes have lacked the courage of the Boxers in China to lay hands on foreigners or the Allied Legations. As the ordinary channels of diplomatic communication have thus been left open, the Entente Governments are continuing negotiations with Greece. A fresh Note is understood to have been presented. Whether the new demands are made in one or two instalments, there can be little doubt about their tenour. Official Greece, having shown in unmistakable manner its hostility to the Entente, must be rendered harmless before it can threaten, in

co-operation with Germans and Bulgarians, the safety of the Salonika force, and, at the same time, must make some reparation for the treachery of December 1 and the outrages of the following days. The least that can be demanded is complete demobilization and the restoration to the Allies of control over posts, telegraphs, and railways throughout Greece. For the actual crimes that can be brought home to the Government and its followers separate expiation will have to be made. It is apparent, however, that the Allies in this way revert to the position that existed before Admiral du Fournet attempted to land wholly inadequate forces to deal with Greek recalcitrancy. If, therefore, the Greek Government remains obdurate, there will be no other course open to the Entente Powers than to adopt warlike measures against the country. Retribution, if it is to fall upon Greece at all, must come swiftly and overwhelmingly. The Allies will then have reached the point which Sir Edward Carson declared more than a year ago ought to have been their goal at that time—to make Greece afraid of them. It is the fear of Germany that has been King Constantine's guiding policy since the outbreak of the European war. He may have realized that for Greece the British Navy might prove an equally uncomfortable medium of chastisement; but, doubtless, he felt confident that there would never be behind it the same determination, still less the same ruthlessness. As the negotiations with the Entente Powers progressed, he has been confirmed in this belief, until he has ventured to make unofficial war upon them.

In the interval of preparing a joint Note for presentation to the Greek Government the Allies have declared a blockade of Greece. As a preliminary measure it is useful, and it happens to be for the moment the only line of action available. It would be a grave mistake, however, to suppose that the inconvenience which this step may cause will of itself moderate the King's hostility to the Allies. A few weeks will elapse before the pressure of a food shortage is seriously felt in Greece, and King Constantine, if left to his own devices, is capable of arranging that before then his German, Bulgarian, and Turkish Allies, with the support of his own forces, shall have tried conclusions with the Allied Army based on Salonika. Rapidity of action, therefore, becomes an essential element in the Allies' dealings with Greece. Any period of grace must be measured by hours, not days, and failure to satisfy at once all the Allies' demands must be followed by certain naval operations rendered possible by Greece's geographical position. The most obvious among these would be the complete destruction of the new line which links Larissa with the Salonika-Monastir Railway, and of a number of bridges within reach of the Allies' naval guns, including the important bridges over the Corinth Canal. Both the Larissa and the Peloponnesus railways could be cut at other points as well, and in a variety of ways the military ardour of the Royalists could be damped. There would be little need for insistence upon such measures, if it were not for the fact that even now the Allied Governments show little appreciation of the value of time in solving the Greek problem. A telegram from Athens to an Italian newspaper speaks of the British and Russian Ministers dining with King Constantine. All news from Greece is suspect, and we refuse to believe this particular piece of information until it has been officially confirmed. If it were true, a necessary preliminary to future action would be the immediate recall of the Ministers in question. The fact that such a message was sent from Athens is proof of the desire of King Constantine and his advisers to throw dust in the eyes of the Entente Powers and to gain time. Already the Greek Chargé d'Affaires in Paris has expressed to the French Government King Constantine's regret for recent events in Athens. By representing the events of December 1 as a regrettable accident the Greek Government may also succeed in prolonging the negotiations. In view of the danger of delay it would be well if the Allied Powers could agree that unless King Constantine accepts their demands in full the necessary warlike measures will be allowed to take their own course without further reference to the respective Governments.

THE FUTURE OF PALESTINE.

BY ESTELLE BLYTH.

I.

The future of Palestine and Syria is a problem that comes up for consideration from time to time, and, indeed, can never rest until these much-tried and deeply wronged countries are freed from Turkish rule. This now seems possible in the threatened collapse of the once-great Turkish Empire; and in view of it the future of Palestine assumes a more definite shape in our minds. Palestine is no lonely little island, lost in the midst of a great sea, whose possession is of little moment to any one; her position on the map makes her as real and vital a factor in the world's history now as she has ever been. The Russian pilgrims ardently believe that in the Church of the Holy Sepulchre at Jerusalem is the actual centre of the world, and it is certain that in Palestine, which contains the dearest shrines of the Christian and the Jew, are centred some of the chief and most urgent problems of the world.

We shall start from a clearer standpoint if we consider Palestine and Syria as being quite distinct from one another. They are so, but because they are next-door neighbours and under the same rule, they are always spoken of together, and counted as one. The Turkish Empire has been for so long in a tottering condition that any interference with one part of it might well have caused the whole crazy structure to collapse—an undesirable complication from the European point of view; but now the cold hand of doom seems to be closing upon Turkey, and of necessity the question arises, "What will happen then? Who will have this part—and who that?" There is nothing more alluring and less fruitful than speculation on political problems; even now Turkey may be allowed to retain some of her old possessions; indeed, she must, though, let us hope, under the most vigilant supervision; the thought arouses in lovers of Palestine the fear that, as usual, *she* will be sacrificed.

There are many voices being raised now in favour of Syria passing into French keeping. It seems the best, almost a natural, solution of her question. France has long cared for Syria, and Syria for her; France has spent a good deal upon Syria, one way or another; there is something curiously akin between the two peoples, and it is pretty certain that Syria as a whole would welcome French rule. Syria would present a fruitful field for the exercise of that engineering skill in which France is so eminent; there are great mountains to be bridled by railways and roads, rivers to be spanned by bridges and harnessed for irrigation, valleys and plains to be cultivated for the use of men. For the purposes of our argument we will separate Palestine and Syria as completely as if such division did indeed exist.

The history and influence of a land are so largely determined by its geographical position and peculiarities, that there can be no real discussion of the future of Palestine without due consideration of her physical features, characteristics, and relationships. Briefly, then, it is a small, narrow strip of land running along the eastern shore of the Mediterranean, dividing the sea from the desert, and presenting within its narrow confines geographical features as varied and distinct as its history—a land unlike any other, remaining mysterious, aloof, remote. Geographically it is an insignificant item on the globe, a highway along which successive generations of races, wars, conquests, changes, and governments have passed, raising clouds of dust and leaving many footprints, but not altering the character of the road at all. These all pass, but the road remains. Palestine stretches from the mouth of the Litany River (32° 20' N.) south to where the Wadi Ghazzi joins the sea (32° 28' N.) south of Gaza, and running south-east includes Beersheba. The western boundary is indefinite; Syria proper is the northern, and Jordan marks the east, but the point at which Palestine ends and the Arabian Desert begins is vague. The configuration of the land is thus exactly what Isaiah describes it: "A highway out of Egypt to Assyria." In these accepted limits Palestine is less than one-seventh of the size of Great Britain. "It is a land of hills and valleys, and drinketh water of the rain of heaven," said Moses. The chain of Lebanon runs north and south, Lebanon being divided from Anti-Lebanon by a narrow valley. Lebanon belongs to Syria rather than to Palestine, but from this range the four big rivers take their rise, flowing across the length and breadth of Palestine. The Litany runs west, the Barada (the Abana of the Bible) east, rejoicing Damascus on its way, the Jordan rises in Hermon and flows south to the Dead Sea, and the Orontes, rising in the upper valley between the two Lebanons, flows north to Antioch, then turns west to seek its outlet in the Mediterranean. Only the Orontes and the Litany find an outlet; the Jordan dies in the Dead Sea, and the Barada in the desert.

Palestine has three lakes, all famous. Lake Huleh, "the Waters of Merom," lies to the south of Lebanon, surrounded by swamps and thick jungles of papyrus reed. The

Dead Sea is nearly 1,300 feet below the level of the Mediterranean; its bitter waters wash a barren shore whereon no vegetable life is seen; it is the very type of desolation, of a land under a curse. The Sea of Galilee, on the contrary, is one of the chief beauties of Palestine; it is a deep, beautiful blue in colour, its waters are sweet and clear, though it is still subject to swift and terrible storms such as Christ rebuked long ago. "Jehovah hath created seven seas," said the rabbis, "but the Sea of Gennesaret is His delight." In Palestine, as in Eden of old, there goes up a mist from the face of the earth, her incense in the sacrament of dawn, for it is then that it rolls away before one's eyes, leaving the ground all moistened and refreshed before the real heat of the day begins.

Sir George Adam Smith in his wonderful book, "The Historical Geography of the Holy Land," defines very clearly the contour of Palestine, giving three great mountain ranges—the western, the central, and the eastern—whose bold sections and bi-sections divide the land into "a series of four parallel lines or bands running north and south," and form a barrier to the desert, thus:—

SEA	MARITIME PLAIN	THE CENTRAL RANGE	THE JORDAN VALLEY	THE EASTERN RANGE	DESERT
-----	----------------	-------------------	-------------------	-------------------	--------

The central range is the "Mount of the Amorites" of the Book Deuteronomy. South of Hermon is a high plateau intersected by a deep ravine running north and south, which forms the bed of the Jordan and the Dead Sea. The Mountains of Moab, of Judea, and of Galilee, though interesting from a Biblical and historical point of view, need not be dealt with at length, being practically offshoots of the big ranges, as Carmel, with its bold head thrust outward to the sea, is a continuation of the chain of Lebanon. Still, there will rise to mind names dear to us from childhood, such as Tabor, the traditional Mount of the Transfiguration, with its steep sides covered by brushwood still sheltering wild animals, and its curiously flat top; Olivet, one of the hills that "stand about Jerusalem"; Ebal and Gerizim, from whose summits the blessings and curses could plainly be heard by Israel trembling in the beautiful valley below.

Palestine lies in the sub-tropical zone. The extraordinary differences in altitude and surface characteristics (it varies from 1,300 ft. below the sea level to 9,000 ft. above it) must greatly affect the climatic conditions and the temperament of the people. The average summer temperature is from 80°-90°, occasionally rising to 100°; we complain long before it reaches that point, however. The heat is never unbearable (except in the low-lying lands of the Jordan Valley, where the thermometer will register as much as 118°, and the ground opens in deep cracks, till the very natives themselves move their tents to higher places). In an ordinary way the stone houses are well adapted to keep out the heat. The rainfall is from 28 ins. to 32 ins.; snow falls frequently, but not every year; 12° of frost strikes us as being very severe. The rainy season is from the end of November to the end of February. "The former rains" begin at the end of October, "the latter rains" fall in March and April. January is cold and stormy, May and October are "sirocco" months, to be avoided by newcomers and travellers; in August the rising of the Nile brings heavy dews at night, refreshing the land when it is weary. Barley and wheat are sown in December and reaped from April to June; and millet, sesame, figs, grapes, melons, etc., from August to October. The chief grain fields are the Plains of Esdraelon and Sharon, some districts around Jerusalem, Bethlehem, and Hebron, and, of course, the rich lands east of Jordan. The winds of Palestine are often referred to in the Bible. The south and west winds are refreshing ones, the north wind is a storm-bringer; the east wind, or sirocco (the people use the Italian word derived in the first place from their own "sharkiyeh," eastern), is a malicious wind—piercingly cold in winter, and dry and heavy in summer. The heat of Palestine is largely sun-heat; even on the hottest days (not sirocco) there is a touch of chill in the shade, and at sunset a treacherous coolness sets in, which may bring on fever if one is careless.

There are many springs in Palestine, and these, with the gracious dews, partly atone for the lack of rain. Water is stored in rock-hewn cisterns; when these run dry at the end of a long summer following upon a poor rainy season, fever and sickness crop up everywhere. In spite of this, nothing would induce the Turkish Government to tackle the question of the water supply, by no means an impossible

General Managers.

one to solve, nor would it let anyone else do so. Water and fuel are the two chief problems of life in the Holy Land. We discuss every fraction of the rainfall with all the earnestness it deserves, for on it, indeed, depend both health and food for the coming year; and the disastrous taxation on trees under Turkish rule, and their wholesale destruction, either for firewood or to escape the tax, have sensibly lessened the rainfall. The scarcity of wood, the difficulty of bringing it from long distances in a country where roads are few and generally bad, and the rise in prices consequent on these hard conditions, made this one of the gravest anxieties for the future just before the war; though Cardiff coal was obtainable, latterly it cost at least 80 fr. a ton, or £3 5s. All these things, taken in conjunction with a population rapidly increasing through immigration, for which no provision was made by the Government, made the question of one's daily bread an anxious one.

Despite the dead hand of Turkey on her, the fertility of Palestine is as amazing as it is wonderful. Everything grows out in the open, and, as it seems to us, under conditions that ought to prevent any self-respecting vegetable life from attaining maturity. The land, after yielding one crop will be scratched up, (for the primitive native plough does little more than disturb the surface), and planted again almost immediately; on the hillsides every little patch of soil amongst the rocks will be sown or planted, and with marked effect. Palestinian vegetables would demoralize an English market; we have cauliflowers that measure at least a foot across, and water-melons hardly to be spanned by a grown person's arms; to this day the grapes of Eschcol grow in clusters from three to four feet in length. We have in their seasons grapes, apricots, nectarines, plums, damsons, quince, mulberries, figs, lemons, oranges, prickly pear, pomegranates, and many kinds of nuts; in the season a rotl of grapes (6 lbs.) costs about 10d. (old residents consider the price excessive), and for a trifling present you may go into a vineyard and eat as many grapes and figs as you can manage.

And what of the flowers? From the semi-tropical vegetation of the Jordan Valley to the English flowers cherished in gardens, practically everything seems to flourish. The wild flowers in spring are wonderful, especially perhaps in Galilee. We have anemones, scarlet, white, mauve and pink (many people believe that they are "the lilies of the field" before whose glory that of Solomon paled), hyacinths, ranunculus, narcissus, honeysuckle, daisies, buttercups, cistus, cyclamen, irises, black arums, broom, mandrake, oleander, rose and white, thrift, hyssop, orchids, asphodel, acanthus, vetches of many kinds, unscented violets, roses, speedwell—all these, and many more whose names elude me now, grow wild. Besides these, which we may term native to the land, most English flowers flourish in gardens with a little care: cowslips, daffodils, primroses, sweet peas, pansies (we had some that shot up nine inches in height), violets, parma, white and blue, tube roses, chrysanthemums, asters, jasmine, heliotrope (this grew like a tree, at least ten feet high), begonias, geraniums, carnations, hollyhocks, pelargoniums; the list becomes unduly long, but it is not complete. When you have lived in Palestine and marked its lavish beauty and fertility under the most harrowing ill-treatment, as well as neglect, you realize that such expressions as "the glory of Lebanon," "the excellency of Carmel and Sharon," and "the desert shall rejoice and blossom as the rose," are no lovely fancy of the poet, no delusion of the over-fervid patriot, but the sober, literal truth. Palestine is still a land of corn and wine. We see the surface richness of her, but what of the treasures hidden within her—"the chief things of the ancient mountains and the precious things of the lasting hills"? Moses assured the Israelites that it was "a good land." "Thou shalt not lack anything in it; a land whose stones are iron, and out of whose hills thou mayest dig brass." But who has looked for it? About four years ago a Syrian found that his small plot of ground contained oil; he used it surreptitiously, and found it of excellent quality, but he kept the secret, for he knew what would happen if the Government got wind of his discovery.

(To be continued.)

A Rome report states that the inquiry into the causes of the fire which destroyed the Military School at Sofia has led to the discovery of a plot, and that the fire was initiated by a Bulgarian political party which was tired of German domination.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

DOMESTIC LIFE IN EGYPT: THE HOUSE OF THE BEY.

Mr. Eyed Ehsan El. Bakry, speaking last Monday before the Société Internationale de Philologie, Sciences et Beaux-Arts, said that the Bey in the time of the Mamelukes was like a Mediæval baron in Europe, a man with an armed following, and who lived by plunder. Those times, of course, had completely passed, but there were still Beys of an old stock—men sixty or seventy years old—unspoiled by contact with the West, and holding to many of the ancient ideas of the land. Such a man would not, however, continue to live in the great ancestral home. For one thing, this was, no doubt, situated in a crowded and unhealthy part of the city, and, for another, he had probably been a spendthrift, and, having squandered his resources, had retired to a smaller mansion, not greatly different from that of a nobleman in Italy or elsewhere in the South of Europe. Wherever the house was situated it was divided into two parts, the *Selamlık* and the *Haremlik*; the first of these contained the guest house and the apartments for the men. The other part was apt to be pictured by romantic artists as a place where lightly clad ladies sported with gazelles round a fountain. In actual fact it was simply a part of the house which was kept for the women and which a visitor did not enter unless invited. An old Bey of the type that he (the speaker) was describing would probably be a retired courtier or Government official. He would be an early riser, and, having little to do, like people of a similar class in other parts of the world, would occupy a good part of his time nursing an illness and cursing the servants. In his case the illness would not be gout. About ten or eleven o'clock he would probably go to a café, or he might sit outside his door watching the people going and coming and chatting with his neighbours. Perhaps a hawk would come along—hawkers were very numerous in Egypt—selling fruit, and the old Bey would want to buy some. After having been a spendthrift all his life, he would very likely try on this occasion to be an economist, and would spend an hour chaffering over a halfpenny. Having finally succeeded, and being in a good humour in consequence, he would perhaps fail to talking with the hawk. This would occupy until lunch time, when he would call a servant to give the man a meal. The hawk, after eating this, would probably sleep out the afternoon and go away well content. Old Beys of this kind were very kind hearted. By custom they were required to assist any poor relations, married or unmarried. In some parts, especially up country, a whole village would be inhabited by people of one family. Most of these, of course, would be poor labourers, and the one rich man among them would find the assisting of so many a great drain.

The *Haremlik* was presided over by the oldest lady of the house, not necessarily the wife of the Bey; it might be his mother, or even his grandmother. She was a very early riser, very fully occupied with the cares of such a large household, and spent a great deal of time in prayer. Her greatest pride was to be a very good housewife, but now a new generation of Egyptian ladies was springing up exactly like the child-wife of David Copperfield. There were many servants in a great Egyptian house—a porter to sit at the door and take the names of callers, a man to whom the porter called to conduct the visitor to the guest house, servants to make the beds, servants to wait at table, and so on. There would be a European servant, much disliked by the others, to attend on European visitors, and the old nurse of the Bey would probably be there, quarrelling with everybody except the Bey himself, whom she regarded as her son.

THE TEACHINGS OF ISLAM.

Maulavi Sadar-ud-Din, speaking last Sunday before the Sufi Brotherhood, at 86, Ladbroke Road, W., said that the teachings of Islam were to be sought in the Koran—the book that was followed by 400 million Moslems. Its first phrase ran:—"All praise and worship is due to the Almighty, the Creator of everything that exists, who is the Lord and Cherisher of all the nations and of all the worlds." This was the theme that ran through the book. They would find there that the first principle of Islam was to cherish the devoutest possible respect for Divine commandments, to believe in and worship the only one God. The second principle was the love of all God's creatures. In another chapter the Koran said that the Moslem was he who believed in the unseen God, and, as a proof of the love that he had in his heart for his God, maintained prayers always. Moslems said prayers five times a day—the most devout said them even more often than that. Mohammed was always most regular and strict on this matter, and when his earliest followers were compelled in self-defence to fight the idolatrous inhabitants of Arabia, he would pray even on the battlefield. The Moslem did not reject the prophets who came before Mohammed; he believed in them all from Abraham to Jesus, and read both the Old and New Testaments. The same God had sent Abraham to rectify the mistakes of the people of that age, had sent Moses to redeem his nation from the bondage of Pharaoh, had sent Jesus Christ to set a very noble example of self-sacrifice, and had sent Mohammed when wickedness was rife in Arabia and most other parts of the world. The religion of all the prophets was the same, because all received a message from the same God.

The lecturer said there was no priesthood in Islam. He was regarded as a spiritual leader, and could lead prayers, but anyone else could do the same thing. There was perfect equality in the mosque. In the one at Woking you might find an English lord, an Egyptian princess, or an Indian prince in no conspicuous place, but in a back row or mixed up with the crowd of worshippers.

THE PRESS ON THE NEAR EAST.

"A Great Advertisement."

In a leading article upon the fall of Bucharest *The Times* remarked that the German Press comments indicate that "our principal adversaries are disposed to recognize the very definite limitations of their triumph in Roumania." After pointing out future difficulties that the enemy is likely to encounter if he follows up the Roumanians, the article pays a tribute to "the sorely tried Roumanian forces" and "the Russians who have fought by their side." It concludes:—

The Germans boast that they have greatly shortened their line across Roumania, but they must be conscious that the latest of their campaigns has imposed a severe strain upon their diminishing resources in men and material. They have gained a great advertisement, they have found means to fight some time longer, but they are no nearer the victory they seek. Around the countries of Central Europe the Allied nations are ranged, armed, and aggressive, determined to fight on unceasingly, and as confident as ever in the ultimate outcome of their efforts. When the spectacular side of the invasion of Roumania ceases to impress, it will be found that Germany has obtained a success which contains many flaws, and possibly introduces fresh elements of weakness. The regret of the Allies at the course of the Roumanian campaign must remain unabated, but it presents no reason for despondency, and in that spirit we should now regard it.

Roumania and the Powers.

In his article ("The Light that Failed in the Near East") in the *Contemporary Review* Dr. E. J. Dillon writes:—

In July last Russia's instances again became pressing, and M. Bratianu found himself all at once confronted with two alternatives, of which one was wholly impossible and the other seemingly dangerous. The Tsar's troops were back again in the Bukovina. Their advance had been so rapid, and their successes so brilliant, that they reminded one of the days when Russia was known as the "steam-roller." And it was thought if Roumania could be got to throw her weight into the scale at this auspicious juncture, a knock-out blow might be dealt to the enemy in the Near East. If he had been free to hearken to the promptings of his own judgment, the Roumanian Premier would still have held back, because he had a presentiment that Hindenburg would again get the whip-hand of Russia, and if the Allied Governments had been directed by a keen-sighted statesman, they themselves would have held him back until spring, when the transport of munitions is relatively easier than during winter. But, as they lacked a statesman to guide them, they continued to press their suit, the gods heard their prayer, and M. Bratianu was compelled to resign himself to the only feasible alternative.

Islam and Modernism.

Under the above heading the *Spectator* (December 9) publishes a review of Professor Hurgonje's "Mohammedanism" from the pen of Lord Cromer, which, it is hardly necessary to add, will repay careful reading. Lord Cromer concludes his review by expressing doubt whether Professor Hurgonje's forecast, that "between Islam and the modern world an understanding is to be attained." He writes:—

All sympathisers with Mohammedans—and their name is legion in this country—will earnestly hope that Professor Hurgonje's forecast will turn out to be correct; but although it is with the utmost diffidence that I express even a shade of disagreement with so high an authority, I am bound to add that I do not feel as sanguine as he does. So far as my own experience goes, the Moslem world may, broadly speaking, be divided into three categories. In the first place, there are the canonists and the mass of the uneducated, who, as Professor Hurgonje very truly says, "still live in the illusion of the days of Islam's greatness." Those who hold to these views are indeed by no means defunct. It may well be that their influence will eventually decay, but the process will be very gradual. It cannot as yet be said to be even moribund.

In the second place, although the influence exerted by Christian propaganda on the Moslem world, considered as a whole, has been almost inappreciable, there can be no doubt that contact with Europe and the acquisition of European learning are producing an ever-increasing class of Moslems who are merely nominal believers in the faith of Islam, and who may be practically classed as agnostics. . . . It is conceivable, although I have never heard any evidence which leads me to think it is probable, that for purely political reasons greater unity amongst Moslems will be encouraged, and may possibly be attained. But Moslem agnostics have, as yet, shown no great disposition to hold out the hand of real fellowship to non-Moslems. . . .

In the third place, there is a small body of men, of whom Syud Ahmed, in India, and Mohammed Abdu, in Egypt, were typical representatives, who are labouring earnestly and intelligently to harmonise the creed of Islam with the requirements of modern thought. We may all wish them well. They have certainly exercised a limited amount of influence amongst the best type of Moslems. I cannot say, judging from my own experience, that I think that influence has as yet extended very deep. The difficulties that they have to encounter are,

indeed, formidable. Professor Hurgonje says that neither slavery nor polygamy is "indispensable to the integrity of Islam." This is so far true as regards slavery that some seventy millions of Mohammedans are now living contentedly in India, where the status of slavery has been abolished by the Legislature. But it has to be remembered that so drastic a measure as this is only possible by reason of the incorporation of India into the British Empire. Further, it may be said that there is a tendency amongst the higher classes to discourage polygamy; but it is the great facility afforded by the Moslem law to divorce rather than polygamy itself which tends to undermine that family life which is the acorn from which the oak of true civilisation is produced. Professor Hurgonje attaches a far greater degree of importance to the fact that it is still the duty of Moslems to regard all those parts of the world which are not yet subject to their authority as "the Abode of War." Personally, I should not have been inclined to attach such great importance to this theory. My own view would be that the great obstacle to reconciliation between Islam and Modernism is to be found in the immutability of the Sheriat, the sacred law of Islam. I have as yet never noticed the least disposition to permit the admission of the principle that the Sheriat can be changed. Without such a change a full understanding between Modernism and Islam is very difficult, and if the change is ever made, Islam would come out of the crucible with perhaps some of its essential dogma intact, but in a form differing almost wholly from the Islamism with which we are all now acquainted.

"An Open Enemy."

An article with the above title in the *Spectator* (December 9) begins:—"The Royalist Government at Athens has become an open enemy, and must henceforth be treated as such," a statement which nobody in this country would be inclined to deny. After reviewing recent events in the Greek capital, and referring to the "series of messages purporting to come from British correspondents, but containing opinions which those correspondents would certainly never have expressed," which are one of the results of the Royalist control of the cables and the censorship, the writer continues:—

The Greek King and Government had better understand at once that they have forfeited the right to indulgence—an indulgence which was practised even on the fatal December 1, and caused the Allied naval officers to fire a few shells more by way of warning one would think, than with a real intention to destroy. The King must know now that he is recognized as our enemy. It is not a question of our suffering a "trifling loss of prestige," but of his standing to have no more of those opportunities of salvation which the Allies have patiently offered to him. Of course, M. Venizelos, with his characteristic moderation, has never wished to destroy the monarchy. But if King Constantine forces our hand it may become necessary to remove him as a military precaution. Military measures, exacted by the situation of the Allies, cannot after all make punctilious concessions to Greek internal convenience. This is an argument which certainly would appeal to M. Venizelos as strongly as to any one, for his hopes for his country are indissolubly bound up with the fortunes of the Allies.

The article concludes with a plea for prompt action, and a reminder that "if the Germans menaced Salonika in force it would be too late to deal with Greece."

A National Shrine.

In an article entitled "Art Treasures of Roumania" a correspondent of *The Times* (December 8) points out that there are in that country, awaiting more careful study on the part of Western students, many treasures which would well repay closer investigation. He goes on to say:—

All who know the country have been filled with anxiety lest the Germans, in their onward march, should injure or destroy the great church of Curtea de Arges, one of the most imposing churches in Europe, successfully restored to something of its early magnificence by the late King. This extraordinary building was founded in 1517 by Prince Neagoe and his wife Despina, of Serbia, and was dedicated to the Blessed Virgin.

. . . The Prince and Princess. . . determined that their cathedral should excel in beauty all that had preceded it, and in the days of its early glory it must have been magnificent indeed. Neagoe's successor, Theodosius, continued the work of his father, but it was Radul d'Afumatii who completed the building.

. . . In 1866, when King Carol visited the place, he found it largely in ruin. He took the advice of Viollet le Duc, who recommended an artist named Lecomte de Nouy, and under his skilful attention the great church was restored and reopened on October 12, 1886. Lecomte visited other great national memorials, the churches at Jassy, Horez, Cozia, Valcea, Padure, and Campulung, and from these famous buildings—all well worth study by the modern student of architecture—he acquired a good knowledge of sixteenth and seventeenth century Roumanian work. The building now re-erected is superb, with wonderful frescoes and mosaics, glorious bronzes, and rich marble, the whole place a glowing feast of colour; the architecture a strange mingling of that of the Arab and the Roman, eminently characteristic of the people whose national shrine it has become. In the interior the tombs of the founders and their successors belong

to the original building, but of the smaller objects with which Neagoe and Despina enriched their foundation there is but little remaining.

The Mismanagement of Greece.

In a note dealing with the attack on Allied troops at Athens and the maltreatment of Venizelists by the Royalists the *Nation* says:—

Greek narratives should always be treated with caution, but with some knowledge of the wholesale brutalities and massacres which the Greek army, under King Constantine, perpetrated against the Bulgarian peasantry in Macedonia in 1913, we have no difficulty in believing that there is much truth in these stories, even when allowance is made for panic. Even in the Balkans there is no mob quite so brutal and so cowardly as a Greek mob.

In the following note the writer declares:—

It is sufficiently clear that the whole Greek situation has been grossly mismanaged. The critics of Lord Grey insist, of course, that he ought from the first to have followed a policy of thorough-going coercion against Greece. On the contrary, the mistake, as we see it, was that a continual guerilla coercion was kept up, at the instance of the French military authorities. Steps to secure full control of the actual war zone were plainly necessary as military measures. It is the ineffectual interference in the purely domestic concerns of Greece proper, and especially the measures of police taken at Athens, which have done the mischief. It was a policy of half-measures, which irritated but did not intimidate. These mistakes will have their sequel, and further coercion is now inevitable.

Germany and Roumanian Supplies.

The Military Correspondent of *The Times*, in reviewing the results of "The Roumanian Retreat" (December 9), writes:—

If the disasters of Rumania, deeply though we feel them, do not materially affect the ultimate issues of the war, and even in a sense are stimulating, because they substitute hard facts for baseless visions, the assistance which our enemies will receive from the seizure of the corn crops of Rumania also promises to be much less than is generally supposed. The average yearly consumption of cereals by Germany and Austria is about 60,000,000 tons, and the total amount of grain believed to have been in Rumania last month was under 6,000,000 tons, more than a third of which at least is required for the consumption of the Rumanian population. Of the residue, much will have been destroyed, a good part has been shipped to Russia, and another important part is stored upon the Lower Danube and at present out of harm's way. The amount of grain in Rumania last month was approximately equal to the import of Germany and Austria from abroad in a year of average crops, but we have also to remember that the enemy's crops are not average now, that his people are hard pressed for food, and that of the Rumanian corn crops not a very large amount will remain for the enemy's consumption. Even if this amount is 3,000,000 tons, which may be taken as an outside figure, it represents only one-twentieth of the total annual consumption of Germany and Austria, so that we can well understand why the German Press is made to publish a warning that the people must not expect a double ration of bread. Indeed they must not. . . . On the supply side the success achieved, though of some importance with regard to wheat, fodder-foods, cattle, and oil, will not do more than assuage for a few weeks the hunger of our enemies.

The Unforgivable Thing.

On the same date, and in the same article, *The Times* correspondent writes:—

The contraction of the enemy's front, now that he has reached the line from the Danube about Silistria to Brasso, will naturally cause a portion of his armies to pass into reserve, and to be available for other operations as soon as both sides decide where they mean to cry a halt. In this case the natural course will be for the Bulgarian and Turkish divisions to return home, and some seven divisions will become available for reinforcing the Bulgarians and Turks now facing General Sarrail, and to these the Turks fighting in Galicia may be added. The season is unpropitious for Balkan operations, but in view of the positions occupied by the enemy on the Salonika front, and the expectation which the enemy may entertain that the Greeks may fall upon our rear, a concentric attack upon General Sarrail's Army within the next few weeks is a contingency which must be faced by the Allies. The particular course which commends itself to us in these circumstances is written very plainly on the map, and the only thing that will never be forgiven is indecision in a situation which needs handling both prompt and firm. The safety of our troops forbids us to pander any longer to political objectives which have no basis in sound strategy.

A "Little Tin God."

Monday's *Daily Express* contained an article on King Constantine by Mr. Herbert Bailey, who declares that "to those who have long studied the peculiar constitution of King Constantine's mind, examined the motives which impel him on his various policies, and watched his personal predilections, his infamy is but the natural sequence of his career." He is a despot at heart, and now he shows himself more or less in his true colours. "To him M. Venizelos, the statesman who derived his strength from the masses, and fashioned his policy with

the object of saving Greece irrespective of all Royalist inclinations, was, and is, personal anathema. A determination to crush the Cretan leader forms, indeed, a foremost item in King Constantine's policy." But jealousy and hatred of M. Venizelos are not the only things driving this obstinate monarch along the road to ruin.

The adoration of the Kaiser, the sublime faith in everything Prussian, is undoubtedly the principal motive force behind King Constantine. Domestic relations alone, the fact that he is a brother-in-law of the Kaiser, and that his wife is a woman of distinct personality and power, would indeed urge him to turn his eyes to Berlin. But he is almost frantically devoted to the Kaiser. In him he sees the personification of all that is virtuous in a Sovereign; in him he sees a man worthy of imitation. That turn of vanity which belongs to the Kaiser also belongs to King Constantine. He believes, and he has induced the Royalist faction and its numerous followers to believe, that he is the greatest living strategist, an Alexander and Napoleon in one.

Mr. Bailey asserts that "a solemn promise to the Kaiser (although that is not in itself very valuable in one who, like the German Emperor, places military necessity above all bonds, oaths, or promises, and considers duplicity as merely good politics) exists, by which he is to preserve strict neutrality until military necessity intervenes. That military necessity, it is needless to say, is to be applied by Germany." And he adds:—

His inordinate vanity, his position as a field-marshal in the Prussian Army, his love of German organisation, German ruthlessness, and German "blood-and-iron" philosophy—all serve to make him a fitting tool for the Kaiser in Athens. A man of no striking intelligence, as stubborn as a wayward child, but as despotic and deceitful as a Prussian officer, he stands today amid the confusion in his country the Wilhelm of the Balkans.

Roumania's Turkish Memories.

In an interesting article, entitled "Teaching Patriotism in Roumania," in the *Graphic* (November 18), Miss Edith Sellers writes:—

Patriots may, as folk say, be born, not made; none the less. I very much doubt whether Roumanian schoolboys would be quite such ardent patriots as they are were it not that their fathers, mothers, grandfathers and grandmothers all combine with their teachers in fostering their patriotism. In their land there is hardly a town or village but some old man or woman is there who remembers the days when it was a mere Turkish province, its people at the mercy of foreign rulers (I have often stood side by side with one of them at these Sunday drills). Now these old people have terrible tales to tell of what they saw in those days, of what they had to suffer—how they must stand aside helpless while Turkish marauders drove away the cattle they had reared, gathered in the crops they had sown—nay, snatched the very bread from their children's mouths, slaughtering ruthlessly whoever dared to raise a protest. And they tell these tales to their children's children and grandchildren, just as they used to tell them to their own children; say how they saw the old homestead pillaged and burnt, those nearest to them led away captive or murdered. There is hardly a peasant family but has its tradition of horrors, a fact that explains why it was that among the peasants indignation blazed forth most fiercely, when the rumour spread that there were men in Bucharest bent on fighting side by side with the Turks.

Articles to Note.

A telegram from Athens reports that the town was decorated with flags in honour of the fall of Bucharest.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I am glad to learn that the Manchester Chamber of Commerce does not propose to flirt with enemy interests after the war. The Chamber had resolved to amend its articles of association so as to exclude from membership of the Chamber any German, Austrian, Bulgarian, or Turk who had not before August 1, 1904, become a naturalised British subject, as well as any firm with a partner or director of enemy origin who, before that date, had not become a naturalized British subject. A further amendment excluded from membership any company in which one-fifth, or more, of the issued stock or share capital, or of the debenture or loan capital is held by, or for the benefit of, any person of enemy origin who was not a naturalised British subject before August, 1904. In the cases of those who were naturalised before August 1, 1904, limitations on their admission were imposed.

Recently the resolutions were submitted for confirmation at an extraordinary general meeting of the Chamber, and not only were they confirmed, but some members expressed a desire to call a meeting of the Chamber to consider a stronger line of action. Further developments will be awaited with interest. It would also be interesting to know what other British Chambers propose to follow the lead of Manchester.

One or two significant messages from the Continent have appeared in the English papers this week which go to show that the food problem in Germany is less acute than it was. For example, we are told that "from January 1, 1917, bread in Germany will be manufactured without the addition of potato. Besides large quantities of macaroni, vermicelli, semolina, groats, and oats will be for sale." Another telegram—this time from Copenhagen to the *Morning Post*—states:—"According to the *Ertrabladet*, the Co-operative Bacon Factory at Holbaek, Denmark, has been advised from Germany to send only salt pork, as fresh pork will be rejected. Danish exporters believe that Germany is getting ample supplies of fat and pork from Roumania." Even more disquieting is Reuter's despatch from Zurich on December 3, which mentioned reports from Vienna to the effect that "large stores of grain have already fallen into the hands of the German and Austrian troops in their advance through Roumania. Very great stocks were warehoused in Turnu Severin, Giurgevo, Craiova, and Alexandria. Still larger supplies are in the hands of the landowners and farmers. Before the war the Roumanian Government had ordered the farmers to reserve 40 per cent. of their crops for home consumption at comparatively low prices. But, as the export prices were more than double these, most of the agriculturists preferred to keep back their grain."

My readers will recollect the very grave warnings contained in the article by "Politicus" in the *Fortnightly Review*, which I quoted at some length on November 17 and 24, and pointed out that the

defeat of Roumania by Germany would mean that the latter could "acquire not only materials and food, but also huge supplies of minerals, oils, and many other commodities useful in warfare." Roumania is not nearly "defeated" yet, despite her perilous situation; but are the messages quoted in the preceding paragraph to be regarded as indications that already the Huns have been able to replenish their depleted food stocks? If that is the case, the position is graver than most people realise, and calls for the initiation of a clear, definite policy by the Allies. The pity of it all is that we can find so few who are able (or willing) to speak the truth.

There appears to be great financial activity in Turkey. According to the *Berliner Tageblatt*, several Austrian concerns have "recently been linked on to the Austrian Creditanstalt and the Vienna-Hungarian Bankverein," and have formed a new "Austro-Hungarian Orient group." We are told that this is a syndicate which is, in the first place, concerning itself exclusively with concessions of all kinds in Turkey, while the members of the group retain freedom with regard to current banking business and the establishment of branches of their banks in Turkey. The syndicate has entered into agreement with the House of Rothschild, and has been already very active in Turkey.

It is well known that the Austrian-Creditanstalt has for some time been a member of the German Orient Bank, and it is probable, as the *Berliner Tageblatt* indicates, the arrangement will enable the German financiers to find what is called "an extraordinary broad foundation for financial operations in the East and the possibility of bringing to a satisfactory solution the very difficult tasks and questions which will face the Central Powers after the war." All of which, to say the least, is pure speculation. Meanwhile, the Senate at Constantinople has adopted a Bill for a supplementary war credit of £T15,000,000. Turkey, one may easily believe, will be a great field for lenders, at least.

Shareholders in the British India Steam Navigation Company, Ltd., will have no reason to complain of the result of the last year's working. The total distribution is increased from 10 to 12 per cent., which is possible through an increase of £23,200 in the available profit balance, after providing for depreciation. The management has not been without its problems—torpedoed shipping being one of them—which makes the result the more handsome and deserving of congratulation.

During the past week I have talked with a number of London Greeks about the situation in their unhappy country, and, without exception, there was condemnation of the King and his satellites. Great satisfaction was expressed at the action of the Greek Minister in London and various members of the Consular service. In other parts of the Empire the feeling will be the same, particularly in India, where Greek merchants have thrived and prospered for a very long time. Not only so, but many of them have engaged in public life, and it

has been forgotten that they are not actually Englishmen. No doubt they are all anxious just now regarding the trend of events; but I believe that in the event of any more sinister developments, the British Government would endeavour to regularise their position.

Meanwhile, the Venizelist Government has already set to work to organise Greek affairs overseas. At a meeting of the Greek community in London early this week a letter was read from Mr. J. Stavridis, who recently resigned the post of Consul-General in London for Greece, in which he stated that he had been requested by the Venizelist Government to act as their Consular representative in London, and although unable to take up the duties officially until recognition is granted, he added: "I am willing to open a register, in which all sympathisers with the National Government can inscribe their names, and which I have no hesitation in stating will be recognised and respected by the British authorities."

I am glad to see that *The Times* has been telling the truth to "investors" in "second-hand" ships. Discussing the shipping problem on Wednesday, the City editor of the paper declared, very properly, that "the people who really have most cause for uneasiness are those who have been buying second-hand ships at fabulous prices. The complete success of these transactions really depends on the ability of the vessels to secure the full market rates for at least many months. If all these vessels were to be required to accept moderate freights in future, it is certain that many of the purchasers would very much regret having sunk their money in them. Undoubtedly sympathy would be expressed for them, but it must be remembered that they were backing their own judgment, and that even under the old order of things they always had to take the risk of the particular vessels being requisitioned for Government service."

That is straight from the shoulder and the blow is deserved; but the writer goes further and emphasises the character of some of the transactions in second-hand ships. "It is significant" (he writes) "that many of the sellers have been the old-established firms and that many of the buyers have been the younger firms, thus suggesting that the transaction was prompted by caution on the one hand and the acceptance of risks on the other." It is as well that we should have the truth, even if it is belated.

Much interest will be aroused by the facts contained in the speech delivered by Lord Inchcape at the P. and O. meeting on Wednesday. If any management in the world deserves congratulation it is that over which Lord Inchcape presides: a somewhat formidable list of lost vessels, many vessels taken over by the Government for war purposes, and a depleted sea-going staff. Yet, despite these grave handicaps, the mail, passenger, and cargo services of the company have been maintained and the shareholders receive an increased return on their capital. The P. and O.-cum-British India and many other concerns is an empire institution of distinction.

Egyptian Finance and Trade.

Revenue Surplus in First Half of 1916—Exports Nearly Doubled in October.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 21.

Last night's *Official Journal* contained the State accounts for the month of September, and thus the figures for the first half of the current financial year. During the six months the revenue has amounted to £E8,316,708, as against £E7,144,023 during the same period of 1915, whilst the expenditure has attained £E8,116,994, compared with £E7,404,415 a year ago.

The main increases in revenue have been: direct taxes, £E14,599; Customs, £E446,276; tobacco dues, £E126,023; legal fees, £E17,333; railway receipts, £E557,307; Post Office, £E17,156; investment of funds, £E20,997; and sale of land, £E13,883. The sole decreases of any importance were port dues, £E19,320, and Domains receipts, £E35,754. The former is due to the decrease in shipping entering Egyptian waters, and the latter to the fact that last year at this time the Domains Administration still was disposing of the previous season's crop, which had been held over owing to the low prices ruling when it first came on the market.

Chief Items.

The chief items of expenditure during the half-year have been:—Sultan's civil list, £E158,166; Ministry of Finance, £E140,374—an increase of £E16,185; Survey, £E69,292; Mecca caravan, £E35,343, as compared with £E7,271 the previous year; Domains, £E121,505, and Post Office, £E165,624—increase of £E14,319 and £E31,953 respectively; Customs, £E71,438; Port and Lights, £E66,471; Coastguards, £E69,905; Public Instruction £E177,861; Public Health, £E209,951; Ministry of the Interior, £E168,124; Prisons, £E88,850; Ministry of Justice, £E399,775; Irrigation, £E418,466—an increase of £E40,166; Public Works, £E246,373, as against £E273,436 last year; Ministry of Agriculture, £E48,099; Railways, £E1,704,515—an increase of £E555,738; Telegraphs, £E59,580; War Office, £E406,602; British Army subvention, £E73,125; pensions and indemnities, £E332,737; Police, £E236,280; administrative services in the provinces, £E239,621; and Public Debt, £E2,333,239.

Substantial Surplus.

The half-year closes with a surplus of £E199,714, as compared with a deficit of £E260,392 at the end of September, 1915. This is exceedingly satisfactory. How the position has improved even as compared with pre-war first half-years can be gauged from the following table:—

*Year.	Revenue. £E.	Expenditure. £E.	Balance. £E.
1913	7,310,098	8,892,616	-1,582,518
1914	7,040,531	8,752,082	-1,711,551
1915	7,144,023	7,404,415	-260,392
1916	8,316,708	8,116,994	+ 199,714

*From April 1 to Sept. 30.

Two Millions Better.

From this table we see not only that even before the war a surplus was not obtained as the result of the first six months' working, but that the revenue during the current first half-year is far in excess of what was obtained in such a normal year as 1913. The improvement in receipts in favour of 1916 is over one million pounds (Egyptian), whilst the expenditure is three-quarters of a million less. The position is, therefore, just under two millions better than it was in the last normal year prior to the war, whilst compared with last year it is £E460,106 to the good. This result is all the more remarkable when one remembers that the first half is always the worst of the year, and invariably shows a deficit. The coming six months will give an excess of revenue over expenditure as a matter of course, owing to the heavier instalments of the land tax, which fall due in October-December—three millions of the tax have to come in during the last half, as against but two in the first—and to the moving of the cotton crop, which naturally swells the Railway and Customs receipts. Basing ourselves on these facts and on the present position, therefore, we may, I think, confidently look

forward to the current financial year closing with as favourable a surplus as the last, which gave one of over two million pounds (Egyptian).

FOREIGN TRADE.

Increases in Imports and Exports.

October was another good month for Egypt's foreign trade. Imports came to £E2,364,304, and exports to £E4,063,903, as compared with £E1,672,767 and £E2,414,482 respectively in October, 1915. This brings the totals for the ten months to £E24,745,212 for the imports, and £E24,016,437 for the exports—an increase of £E9,840,111 and £E4,730,446 respectively, in comparison with the same period of last year.

The chief imports during the month were:—Salted and preserved meat, £E100,125—practically all from Australia, and an increase of £E89,215 over the previous October; flour, £E49,199—about the same as last year, but the total for the ten months is considerably less than in any of the pre-war years; petroleum, £E146,299, and mineral oil, £E28,590—from the United States; stationery, £E81,969; coal, £E431,943—80 per cent. from England and the balance from the States; natural indigo, £E22,225—from India; textiles, £E787,646—of which £E467,013 was cotton tissues, £E48,919 cotton threads, £E55,155 sacks, and £E52,097 ready-made linen and millinery; worked iron and steel, £E71,418; and machinery £E36,310. It is to be noted that during the month imports of rice, cereals (not including flour), coffee, tea, cheese, and charcoal fell off, as indeed they have been doing during the whole year.

Principal Exports.

The principal exports during October were:—Eggs, £E62,698—a very considerable increase over October, 1915, when practically no traffic was done in this industry, i.e., twenty-one million against one and a quarter; raw and tanned hides, £E36,435; rice, £E27,563; cotton seed, £E330,454; cotton-seed cake, £E69,807; sugar, £E16,459; cotton-seed oil, £E18,089; alcohol, £E23,750; and cotton, £E3,363,374. The most important decreases were in wheat, beans, sugar, and wool. Practically all the other items mentioned show substantial increases. Cigarettes to the value of £E16,806 were exported during the month—slightly less than a year ago.

In imports England increased her share, approximately maintaining her proportion. She supplied 69 per cent. of the flour, 70 per cent. of the beer and liqueurs and of the agricultural and other machinery, 23 per cent. of the stationery, 80 per cent. of the coal, 76 per cent. of the cotton tissues, 84 per cent. of the wool tissues, 22 per cent. of the ready-made linen and millinery, and 85 per cent. of the worked iron and steel. India increased her share by 75 per cent. to £E126,315—30 per cent. of the flour, all the indigo and sacks, 35 per cent. of the cotton threads. Australia jumped from £E2,294 to £E101,806, mostly meat. The United States increased their share from £E79,993 to £E276,299—petroleum and all mineral oils, 20 per cent. of the coal, and 30 per cent. of the construction wood. Spain and Sweden both somewhat increased their sales, the former owing to larger fatted oil and textile shipments, the latter due to larger stationery deliveries. France and Italy maintained practically the same figure as last year; the last-named supplied 20 per cent. of the stationery and cotton tissues.

British Share.

The British Empire took by far the lion's share of the exports—£E2,967,728—all the eggs, natural phosphates, wool, cotton seed, and cake, 33 per cent. of the raw skins and tanned goods, 75 per cent. of the sugar (16 per cent. to India), and 72 per cent. of the cotton. The balance of the latter went 10 per cent. to the United States, 4 per cent. to France, 6 per cent. to Italy, 3 per cent. to Russia, and the balance to Japan, Switzerland, and Spain. France substantially in-

creased her purchases, taking 70 per cent. of the rice and practically all the cotton-seed oil and alcohol, whilst Greece took all the maize and 45 per cent. of the raw skins and tanned goods.

Trade between Egypt and the Sudan during October was also flourishing, imports from the latter increasing from £E40,472 to £E70,705, and exports to that province from £E70,096 to £E96,392. The chief imports into Egypt were:—Livestock, £E21,806 (14,652); skins and tanned goods, £E4,710; maize, £E28,659; sesame, £E1,374; and senna, £E1,668. No cotton came through. Under exports Egypt sent sugar to the value of £E22,622; cotton tissues, £E31,340; mules and donkeys, £E3,295; and cereals, £E4,661. The total trade turnover between the two countries during the ten months has increased by just under 50 per cent.

FLOURISHING SUDAN TRADE.

The second quarterly statement of the trade of the Sudan with foreign countries and Egypt has just been issued by the Sudan Customs Department. It gives detailed statistics about exports and imports during the period April 1 to June 30, 1916, and also general statistics about the first half of the present year in comparison with the corresponding period of 1915. A cursory glance over the summary of these statistics shows that the trade of the Sudan in the present year is in a much better condition than it was during the last year.

The total value of imports from January 1 to June 30, 1916, amounted to £E1,185,887, as compared with £E745,250 during the same period in 1915. There is, therefore, an increase of £E440,637, or nearly 60 per cent. The exports, which were valued at a total of £E777,973 in the first half of 1915, amounted to £E1,444,342 in the first half of the present year, thus showing an increase of £E666,369, or over 85 per cent. up. This is certainly a very pleasing result, and shows that the trade of the Sudan, in spite of the war, is in a healthy and prosperous condition.

GENOA COTTON IMPORTS.

According to unofficial statistics the imports of cotton at Genoa during the period September 1, 1915-August 31, 1916, show a considerable falling off from the figures of the previous year. The decline is notable not only in American, but also in Indian and Egyptian cottons. There are slight gains from other sources.

Kind of cotton.	1914-15. Bales.	1915-16. Bales.
American	1,105,346	833,001
Indian	221,826	187,689
Egyptian	151,127	66,995
Other	30,333	49,064
Total	1,511,632	1,136,749

In explanation of the above quantities it should be stated that there is considerable difference in the weight of bales imported from various places. Estimating the American square bales at 520 pounds and round bales at 250 pounds, the Egyptian at 725, Indian at 400, and other importations at 475 pounds, the following computation will give a more accurate idea of the actual amount of cotton imported during 1915 from various countries:

Kind of cotton.	Actual number of bales.	Equivalent to 500lb. bales.
American—Square....	743,409	408,970,680
Round....	89,592	151,131,360
Indian	187,689	75,075,600
Egyptian	66,995	48,571,375
Other	49,064	23,305,400
Total	1,136,749	555,923,055

Trade Rivalry and How to Meet It.

Systematic Campaigns in U.S.A., France and Japan.

Questions concerning the British Consular Service and the training and equipping of British youth for commercial work abroad have been discussed in THE NEAR EAST so frequently that, in further discussion of the subject, there is involved some risk of tiring our readers. We propose again to discuss the matter, however, and, if any apology is needed, to plead the extreme urgency of the questions.

In our last article on the subject we dealt with the organisation and energy of the American Consular Service. To-day we have to begin with another American text, and point to the great propaganda work recently undertaken in the principal cities of the United States by the Civil Service Commission. The result has been that examinations have been held all over the country with a view to the selection of persons to act as Trade Commissioners and special agents for the American Bureau of Foreign and Domestic Commerce.

Scope of Investigations.

As a beginning, ten appointments are to be made to undertake the following investigations:—Hardware in the Near East, Africa, and India; motor vehicles in Russia and the Far East; investment opportunities in Russia; fancy groceries in South America; furniture in South America; metal-working machinery and prime movers in Russia; metal-working machinery and prime movers in Brazil; jewellery and silverware in South America; ports and transportation facilities in Russia and the Far East; and mineral resources in the Far East.

For the moment, perhaps, the actual interest of our readers in this list is very restricted; but it shows how earnest are the intentions of American commercial and industrial men to push their trade; and it may reasonably be assumed that their work in the Near East will not be confined to the single item, hardware.

To Plan Trade Campaigns.

It is laid down that the duties of the men who secure the appointments will be to obtain information concerning the demand in foreign markets for the particular commercial lines they are to study, and to present the data obtained in straightforward, readable reports, which will enable American manufacturers and exporters to plan campaigns for the sale of goods in the markets investigated.

An official statement issued declares that "Applicants for the South American investigations will be expected to know Spanish, and extra credit will be given for Portuguese. For work in Brazil Portuguese is considered especially desirable. In the investigations including Russia, French is required, and an extra credit is given for Russian. No foreign language is required for the hardware investigation in Africa, the Near East, and India, or for the investigation of mineral resources in the Far East."

"No person will be admitted to any of these examinations who has not had previous training which would qualify him as an expert in the particular line to be investigated. This means substantial and responsible experience."

Another trade educational movement which is making great headway in America is that conducted by the Bureau of Education; and as a result of the second Pan-American Scientific Congress the sub-committee in charge of commercial education decided to invite the preparation of papers, which, when printed, would be a permanent contribution to this phase of educational work.

These papers are declared to have "offered a new body of material from which to proceed for further study and incorporation in the proceedings of subsequent congresses. The work was deemed of paramount importance at this time, not only for economic reasons of

higher efficiency in the organisation of business and the marketing of products at home and abroad, but also as a means of acquiring by study the international way of looking at things, and of assisting in establishing international amity.

Other Competitors.

America is not alone in this bold bid for the world's commerce, however. We have referred on previous occasions to the tireless energy of Japanese traders in the cheap markets of the world. India has a tale to tell in this connection: we believe we are right in saying that Egypt has already been exploited to some extent. Trade representatives have established themselves in centres over a widespread area, and now Japanese banks have begun to open branches in America and the neutral countries of Europe. Exchange business is being undertaken, and the indications are that Japan intends to challenge a place in the general commercial system of the world.

France, too, despite her political and war anxieties, is awakening. Recently the French Chamber of Commerce of Milan established an endowment which will permit the payment of 1,500 frs. (£60) a year to a French student of commerce to enable him to study the Italian language and Italian business methods in Italy. In commenting upon this item of news several French publications held up the action of the Milan Chamber as an example to other commercial bodies in France and abroad, and pointed out that steps of this kind are an especially desirable means of contributing to a country's economic expansion.

What Are We Doing?

What is Great Britain doing to meet these new developments? It is true enough, unfortunately, that the war demands most of our thought and energy, but there are many official, quasi-official, and private bodies in this country which can afford to leave the prosecution of the war to the appropriate departments, and to devote their attention to the demands of trade and commerce.

Educational work among young men, on the lines of that being taken in the United States, is pre-eminently necessary, and we commend this need to the London Chamber of Commerce, in particular, and to all British chambers in general.

It is satisfactory to learn that in some quarters there has been an awakening. We learn that in preparation for the extension of British trade in Russia, classes have been formed in public schools and other educational institutions in Scotland for the study of the Russian language, and at present 168 students are enrolled in such classes in the Edinburgh district. The University of Edinburgh has two lecturers in Russian, one a Russian and the other a Scotsman; but in October the class had only five members. In the Heriot-Watt College, where a night class meets twice a week, there are about forty students. The Royal High School, Edinburgh, has a course in Russian. There is a night class twice a week with fifty pupils in attendance. In the woollen manufacturing district of South Scotland the school boards of Galashiels and Hawick have started classes in Russian, with an enrolment of twenty-three in the former town and forty in the latter.

A similar movement is reported from Hull. At a meeting of the Chamber of Commerce a day or two ago it was announced that one of the members, Captain H. Samman, a ship-owner, had intimated his desire to encourage the study of Russian, in view of the commercial intercourse between Russia and Hull, which was likely to be still greater in the future, and was willing to start an endowment fund for the purpose with a sum of £10,000. It was left to the Parliamentary Committee of the chamber to formulate a scheme, and it is possible that travelling scholarships will be arranged.

All this is, of course, so much to the good; but there is as little reason why the movement should be confined to Scotland and Hull

as there is that Russian only should be taught. There are many oversea markets in which our once paramount influence has waned, others which we have touched scarcely at all, and still others from which Hung and Austrians have been driven; and which would rather have the British substitute than any other—Egypt, for example. The question is, what are we doing to make good?

NEWS FROM ALL SOURCES.

The Greek Consul at Perth (Western Australia) has resigned owing to the recent events in Europe.

Wireless communication between Constantinople and Athens has been, it is reported, re-established.

A Bill for a supplementary credit of £T15,000,000 for the Turkish War Ministry has been adopted by the Senate.

In the week ended December 5, 4,206 tons of coal were exported from Hull to Alexandria. These figures do not include bunker coal shipped for the Admiralty or for the Allies.

The adjudication which was to have been held on November 15, 1916, for the supply of a Worthington pump, valves, and pipes, to the Delta Barrage gardens, Egypt, has been postponed to December 23, 1916.

An address on "The World's Cotton Supply and India's Share in It" was given at the opening meeting of the Indian Section of the Royal Society of Arts yesterday by Professor J. A. Todd, University College, Nottingham. A report of the meeting will be published in THE NEAR EAST next week.

The U.S. Government has decided not to protest against the refusal of the British Government to supply bunker coal to neutral ships at British ports, considering the matter one of purely domestic control, even though it affects neutral shipping.

The greater part of Tokar lands has been planted this year with Affi cotton. The newly flooded lands at Sakalat have been planted with Sakelaris or American, while a part of Sherbet lands has been planted with American cotton. Prospects are generally good, and it is estimated that this year's crop will be three times that of last year's.

The Manchester and District Unit of the Hospital for Serbian Refugees in Corsica has now been at work nearly a year. It is regarded as most important that the work should continue another year, and for this purpose £1,500 is needed. Donations may be sent to Mr. D. Drummond Fraser, Manchester and Liverpool District Bank, Spring Gardens.

It was stated in the House of Commons recently that, according to returns published by the United States Bureau of Foreign and Domestic Commerce, the quantity of Egyptian cotton imported into the United States during the year ended July 31, 1916, amounted to 195,500 bales of 750 lb. weight. The quantity imported in the previous twelve months was 174,400 bales; the average of the preceding four years was 116,800 bales. These figures included a certain amount of Egyptian cotton which was subsequently re-exported to Canada.

Recent reports from Marseilles state that the requisition of wools still continue, and that business is almost at a standstill. Algerian waste, owing to the high prices asked by holders, is neglected, and this state of affairs is likely to continue unless actual quotations are considerably reduced. The latest arrivals comprise 68 bales Algerian waste; 370 bales Bastian wool; 10 bales Bona wool; 33 bales Mogador; 1 bale wool from the Island of Roussa; 17 bales goats' hair from Alexandria; 21 bales skins and waste from Philippeville; 67 bales pressed wool from Naples; 41 bales wool from Bombay; 100 bales waste and 65 bales woollen rags from Tunisia, and 53 bales wool waste from Greece.

PRODUCE REPORT.

LONDON, December 14.

Currents.

As was anticipated in last week's report, the gravity of the political situation in Greece had a remarkable effect in the tone of the currant markets in this country. The blockade of all Greek ports, which, apart from other consequences, means that no further shipments will be allowed, with the confirmation, that came at the same time, of the loss of the steamship Michael with 3,000 tons of currants for Liverpool, created considerable activity in the market, and large business has been done in all grades at an advance of prices of from 3s. to 4s. per cwt. Under the circumstances, sellers are holding their fruit, expecting higher prices before long. The stocks of currants in London on November 30 were 10,058 tons.

Sultanas.

There is only a moderate activity with business done mostly in old crop. New fruit is kept for higher prices.

The stocks of sultanas in London on November 30 were 1,690 tons, against 1,057 tons the same period last year.

Seeds.

Linseed has been inactive these last two or three days. London.—Calcutta, spot and afloat, is quoted to-day at 110s. 6d., and December-January 112s. Bombay, ordinary,

December-January, 113s. Rapeseed is very firm. Toria, December-January, to Hull, 93s.; and bold Ferozepore, ditto, 91s. Cottonseed is steady. London, Sakelarides, December, offered at £19 15s. per ton. Quotations for Rangoon beans show an advance on the week, both for spot lots and forward shipments. Morocco Canary seed of all descriptions is in less demand, but prices are maintained.

Oils.

Linseed oil is quiet. Spot pipes are offered at £53 5s., and barrels, ditto, at £54 5s., landed terms. Rape oil is very firm; ordinary brown, naked, spot, £54; English refined, barrels, £56 to £58. Cotton oil continues very firm; crude spot pipes are quoted £51; refined pale pipes, nominal, and barrels, sweet, £59 to £60, as to make. Olive oil unchanged.

Oilcakes.

Cotton Cakes: The demand for Egyptian is good, but offers for either spot or shipment are somewhat limited, although quotations are not dearer at £15 5s. to £15 12s. 6d. English makes are rather quiet at £16 per ton, ex mill. Linseed cakes: Owing to the scarcity for prompt delivery prices have been forced up. Best London made are quoted at £19 5s. to £20 5s. per ton; and American at £18 per ton, ex store. Maize germ meals, white African, offered only on shipment at £16 10s., c.i.f., while home manufacturers ask £16 10s. to £16 15s. per ton, ex mill.

BRITISH COTTON-GROWING.

The one hundred and fifty-fourth meeting of the council of the British Cotton Growing Association was held at Manchester on December 5. In the absence of the President (the Right Hon. the Earl of Derby, K.G.) Mr. J. Arthur Hutton presided.

A letter from the consulting agriculturist for Egypt was read, acknowledging receipt of a letter from the association, dealing with the complaints made by spinners of waste-matter found in bales of Egyptian cotton. The consulting agriculturist has taken up the matter with the Alexandria General Produce Association, and has pointed out that the attention of the Ministry of Agriculture has been called to the repeated occurrence of pieces of string in bales of Egyptian cotton arrived in England, the effect of which seems to be serious, at the present juncture, as, owing to the complaints of bad spinning, due to the presence of these fibres in the cotton, operatives seem to readily leave the employment of the mills to take up other work which is now easily obtainable. The pieces of string were supposed to enter the cotton when the seed cotton bags are being opened for ginning, and the consulting agriculturist suggests that ginners should be circularised pointing out that steps should be taken to prevent the string being cut into small pieces, in which case better conditions would be obtained in the final bale.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds,
Broadcloths, Coatings, Hosiery, Rugs,
Puttees, Uniforms, &c., &c. . . .

CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,

CAWNPORE, INDIA.

Army Boot and Equipment Manufacturers.

CONTRACTORS TO THE INDIAN, EGYPTIAN AND
OTHER GOVERNMENTS.

THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,

CAWNPORE, INDIA.

Tanners and Curriers, Leather Goods Manufacturers.

Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.

CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.

CAWNPORE, INDIA.

Spinners, Weavers, Bleachers, Dyers, and
makers of every description of Cotton
Goods such as TENTS, DURRIES (Cotton
Carpets), and other Floor Coverings,
Dusters, Towels, Bed & Table Linen, &c., &c.

**Contractors to various Government Departments for
Uniforms, Tents, Camp Equipment, &c.**

New Egerton Woollen Mills Co., Ltd.

DHARIWAL, PUNJAB, INDIA.

Sole Manufacturers of the Famous . .

Dhariwal
Long Life Wool Wear

Costume and Suiting Materials, Blankets, Rugs,
Lohis, Hosiery, Puttees, Uniforms, Liveries, &c. &c.

CONTRACTORS TO GOVERNMENT.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The market has presented an unsettled appearance this week, and the conditions have not been at all favourable to a large turnover. The slump in raw cotton rates, followed by a reaction, have rendered progress most difficult, and numerous buyers have decided to hold aloof until the outlook is clearer. It remains to be seen what will happen to the German peace proposals, and varied views are held as to the effect upon our staple industry should hostilities be brought to an end. In raw cotton circles a feature of interest has been the American Government official estimate of 11,511,000 bales, which seems to indicate a commercial crop of about 12,500,000 bales. Stocks of Egyptian cotton tend to increase, but there is no particular change in the prospects for supplies. The general demand in piece-goods for Egypt has continued rather quieter. Some merchants who have recently purchased speculatively for that outlet have been somewhat concerned at the easier tendency in raw cotton rates and depreciation in the value of goods might turn out to be a serious matter for many firms. Less activity has shown itself for India, the demand in shirtings for Calcutta having decidedly fallen off. Light fabrics, such as dhooties, are also quieter. Miscellaneous sales have been put through for China, but there are no indications of any general revival of demand. No business of weight has been heard of for South America. The independent attitude of manufacturers is still very pronounced, and it has been difficult to obtain concessions in prices. Increased irregularity has shown itself in American and Egyptian yarns. Orders have been placed very unevenly. Numerous spinners have not been at all anxious to sell, and now and again prohibitive prices are quoted, especially in ring beams, in order to check further buying.

CROP ESTIMATES.

According to information furnished by the International Institute of Agriculture at Rome the production of the undermentioned cereals in Italy is estimated as follows:—

	Estimated Production.	Increase or Decrease on the average yield in 1909-15
	Cwt.	Per cent.
Wheat	94,571,000	- 3.7
Rye	2,671,000	+ 0.3
Barley	4,335,000	0.0
Maize	39,369,000	- 21.5
Oats	7,451,000	- 29.4

The total yield of wheat in Canada, United States, India, European Russia (forty-eight Governments), United Kingdom, Spain, Norway, Netherlands, Roumania, Switzerland, Japan, Egypt, and Tunis, is given at 1,190,847,000 cwt., and of rye in the United States, Canada, Russia, Ireland, Italy, Norway, Netherlands, Spain, and Switzerland at 468,473,000 cwt. The total production of barley in the same countries as mentioned for wheat, with the exception of India, is estimated at 410,817,000 cwt., and of oats in the same countries as for barley with the omission of Egypt and Japan at 787,045,000 cwt. The total yield of maize in the United States, European Russia (forty-eight Governments), Italy, Switzerland, Japan, and Canada is estimated at 1,402,386,000 cwt.

Compared with the average production in the period 1909-13, these estimates represent increases of 14.8, 2.6, and 5.7 per cent. for rye, barley and oats; and decreases of 7.4 and 3.3 per cent. for wheat and maize respectively.

TRADE NOTES.

Liquidations, etc.

The General Officer Commanding-in-Chief H.B.M. Forces in Egypt has appointed Mr. H. Bridson, 6, Rue de l'Ancienne Bourse, Alexandria, Receiver of the affairs in Egypt of Mr. Hugo Lindemann, with instructions to liquidate the same.

The Public Custodian of Enemy Property in Egypt has been appointed Receiver of all the property and assets of Alexander Safarowsky, printer, of Cairo, a German subject, with instructions to effect the liquidation of his business, and to hold any surplus of money or other property resulting from the liquidation in accordance with the provisions of the Proclamation of July 31, 1916.

EGYPT'S COTTON PEST.

Peasantry and the Pink Boll Worm.

We take the following from the *Bulletin* of the Egyptian Minister of Agriculture concerning the condition of certain crops in Egypt during the month of October, 1916:—

State and prospects of the crops, summarised from reports received from Inspectors of the Ministry of Agriculture:—The relatively cold weather, as well as the frequent occurrence of morning fogs, has checked to a certain extent the ripening of immature bolls in many parts of the country. Picking has nevertheless made good progress. The first picking has been entirely completed and the second picking is considerably advanced. In most localities no third picking is expected to be taken; in any case where it will be taken, its value will be of little importance.

As was foreshadowed in last month's bulletin, the bolls that are gathered show a considerable increase of pink seed worm attack, as is borne out by the result of the examination made by the Entomological Section of the Ministry of some 20,000 bolls received from all parts of the country between September 25 and October 24. A corresponding increase has also taken place in the spread of the ordinary boll worm (*Earias*), but the attack remains, nevertheless, comparatively insignificant.

With the pains that the Ministry of Agriculture has taken to bring home to cultivators, big and small alike, the vital importance of conforming with the Boll Worms Law, an earnest attempt is being made in many parts of the country to remove and destroy the bolls remaining after the picking, although, unfortunately, ignorant cultivators very frequently try to smuggle bolls or uncleaned cotton sticks into the dwellings of the villages. Large numbers of contraventions are being committed, and it is feared that unless the generality of cultivators, the large landed-proprietors, and *Dairas* taking the lead, attend more seriously to the task of collecting and destroying the remaining bolls before the dates fixed in the recently published Ministerial *Arrêtés*, a still larger number of contraventions will have to be dealt with, and large quantities of cotton sticks will be destroyed in a year when the sticks constitute a really valuable addition to the income of the farmer. A still worse result would take place, namely, the frustration of the efforts of the Government to control and gradually stamp out this pest from the country.

The forecasts made in previous bulletins as to the disappointing result of the crop have now been confirmed, the factors in play being those already set forth in last month's bulletin.

The *Egyptian Gazette* says of the pink boll worm:—

There is no doubt that this pest is to a great extent brought back into the cotton fields through the channel of the sowing seed, in which it lies dormant even though buried in the plants. Fumigation of cotton seed will undoubtedly mitigate this danger, but until it can be adopted so that all the seed is treated, other means of protection must be employed. The complete installation of fumigation or other apparatus for seed worm destruction cannot be made until September next, but the pest could be materially minimised during the coming cotton season if growers could be induced before sowing their seed to eliminate and destroy all double and hollow seeds which are the resting place of the worms.

In all cotton seed there is a quantity of seed containing pink boll worm. In order to prevent these from escaping from the ground after sowing to attack the new crop of cotton, cultivators are urgently requested in their own interests to take out and destroy by burning all the hollow and double (joined) seeds in which the live pink boll worms are hiding. By doing this the following crop will be much protected from damage and the seed improved.

AGRICULTURAL RESEARCH.

Some important research work is being done by the Commission of Agricultural Commerce, and at the last meeting, held at Cairo on November 7, the question of the use of seed drills in Egypt was discussed. One member of the Commission said the heaviness of the Egyptian soil was against their employment, although it was admitted that they might be successfully used in the light lands, and their great economy in seed was accepted.

With regard to the production of wheat capable of being marketed in Europe in normal times, the President mentioned that the excess of dirt in Egyptian wheat, owing to the threshing being done by the "Norag," was an objection which could only be overcome by washing the grain, and this had been actually proposed by millers in England, who pointed out that the washing must be done before shipment, otherwise the dirt was ground so deeply into the grain that it could not be removed by washing just previous to milling in Europe. It was suggested that fermentation might be set up, but the President did not think that there would be as much chance of this occurring in Egypt as in India, where the washing of wheat before shipment was, he believed, always done.

Bourdi for Paper Making.

H.E. Shakkour Pasha mentioned that, in accordance with a previous resolution, he had procured a ton of *bourdi*, which he was endeavouring to get steam pressed. He had purposely taken his sample of average quality in order that the report obtained on it might be applicable to the product as a whole. The question of a concession was discussed, when the President said that he understood that the Government did not contemplate any sort of monopoly being granted on cutting the *bourdi* on Government lands, but he thought it possible that permission might be obtained for the concessionaires to cut as much as they were able for a term of years, where their operations did not interfere with the fishing or other rights which might exist in the locality. A further discussion followed with reference to the possibility of future improved methods being handicapped, if anything, more than the process of manufacture were protected.

Sisal Hemp.

Mr. Kingsford replied to a number of questions regarding the possibilities of growing sisal hemp, and added that the suggestion which had been made that Government should encourage the cultivation of the plant on poor lands by supplying plants and teaching the people to grow and prepare the fibre, as well as to assist them to dispose of their crop, was one which had obstacles. He doubted if people would take it up generally, even with this encouragement, as, owing to the fact that no return could be expected before the third year—and then only half a crop—considerable capital would be necessary, on which there would be no return for some years. The cost of cultivation of the ground for the first two years must be placed at from £E12-15 per feddan, and no area less than 500 feddans would be of any use as a plantation. It was agreed to make inquiries regarding the actual work in this connection already done in Egypt, and to obtain some of the East African reports for future discussion.

DEVELOPMENT OF COTTON GROWING.

The one hundred and fifty-fourth meeting of the Council of the British Cotton Growing Association has been held at Manchester, Mr. J. Arthur Hutton in the chair. The Association was established to prove whether the Empire could produce cotton suitable for Lancashire, and its members claim that they have proved that as far as both quantity and quality are concerned the Empire can produce all the cotton that Lancashire requires. The Association has completed the experimental work, has laid a solid foundation on which it is possible to build up and develop an enormous industry of immense value both to this country and to our colonies, but has not the means to undertake any further large responsibilities, and it is felt that the time has arrived when the country and the Government must decide whether any further developments are to take place.

ENGINEERING NOTES.

An Ancient Egyptian Industry.

An interesting lecture was given before the Hampstead Archaeological and Selborne Society by Dr. A. F. R. Platt on "The Old Egyptian Stone Workers." Dr. Platt emphasised the difference between Ancient Egyptian modes of working and our own, the consideration of which is necessary in order to judge of the rate at which the Egyptians worked. The granite industry as we know it is comparatively modern, and it was not till after the erection of the Eddystone Lighthouse by Smeaton, in 1759, that Devon and Cornish granite was systematically quarried. Not until eighty years ago did we learn to polish granite, whereas the Ancient Egyptians could quarry, dress, and polish not only granite but other hard stones thousands of years before the Christian era. The earliest known examples of Egyptian work in hard stone are the syenite and porphyry disc-shaped mace-heads of the early prehistoric civilisation and the vases of granite, basalt, breccia, etc., which were chipped and polished outside without rotary motion, and hollowed out by grinding with stone blocks fed with sand or emery. Professor Petrie has proved that the Egyptians used emery. In the early Dynastic Period they used rotary motion and began to drill out the axis of the vase with a tubular drill, before hollowing it out. Many of their hard stones the Egyptians obtained from mountains in the Eastern Desert; but they quarried nearly all their granite in the immediate vicinity of the First Cataract, where it occurs in the form of dykes and bosses, and of course the Nile simplified transport.

Quarrying Methods.

Sound rock was not far under the surface, and there was consequently no deep quarrying, though there was withdrawal from the river as years went on in the search for suitable material. Modern quarrying consists in drilling holes in the rock, which vary in depth and diameter, and blasting with powder. These holes are made either by hand with long steel chisel and hammer, or by a pneumatic rock drill. Not being able to blast, the old Egyptian was entirely dependent on the wedge, and sank vertical holes quite different in shape and size from those made by the quarryman of to-day. Then pieces of wood were hammered into the holes and saturated with water, so that the after-expansion of the wood split the rock. Examples of this kind of work are to be seen in the granite quarries at Assuan. In a word, the Ancient Egyptians were successful in keeping up an equal strain along the line of a rock, and so obtained even fractures. If the block were very long, as in the case of obelisks, all the greater must have been the judgment and skill of the workers.

Transport Extraordinary.

What time, asked Dr. Platt, was required to extract these gigantic blocks? The largest obelisk in Egypt is that of Queen Hatshepsut, and it is 97 ft. high, 5 ft. 8 ins. thick at the apex, 7 ft. 10 ins. at the base, and weighs about 300 tons. On the base is an inscription, which the doctor interpreted, going to show that the making was "seven months since the ordering in the quarry." It is not quite clear what is meant by the inscription, but it is usually understood to mean that the obelisk was quarried, transported to Thebes erected, dressed, polished, and engraved in seven months. Possibly that was meant, and yet, perhaps, the queen recorded as remarkable not all the operations from quarrying to completion, but the successful quarrying and

dressing in seven months of two flawless blocks of unusual size, out of which two obelisks were made.

Ancient Tools and Plant.

Connected with quarrying, continued Dr. Platt, another question arises. How did the Egyptians hollow out their sarcophagi and monolithic shrines? In late times they used chisels, but Prof. Petrie has shown that in the time of the fourth dynasty sarcophagi were hollowed out by drill—bits of bronze, armed with corundum, next in hardness to diamond. There were also saws of bronze or hardened copper, also armed with pieces of corundum let into the blades in the same way as into the drill. Saws were both circular and straight, and the latter must have been 9 ft. long. Dr. Platt next discussed the period required to saw the sarcophagus of Khufu, and then passed to the question of dressing granite, as done by the Ancient Egyptians, and the tools which they used. Copper was used from prehistoric times, copper harder than modern refined copper owing to the presence of arsenic and other impurities. Bronze with 9 per cent. of tin was in use as far back as Snefru, and iron was known from the time of the Great Pyramid. A rough, unfinished statue of Osiris in a quarry at Assuan shows pick and chisel marks, but of what were the tools made? Evidence rather points to copper, perhaps iron and steely iron, while no doubt with heavy flint pebbles the Egyptians could dress a large area with considerable rapidity.

The Modern Engine.

Speaking at the Society of Arts last week, the Hon. Sir Charles Parsons said that the internal combustion engine ranked among the most important, and was most economical in the conversion of energy in oil and gas into mechanical power. Upon it depended all aircraft and nearly all submarines, as well as motor transport of all descriptions. Indeed, for small and moderate power its use was almost universal. It had become an ever-present part of our modern life, and was exercising upon the community at large an educational influence in mechanics and engineering far greater than we were disposed to think. Dr. Dugald Clerk said many seemed unaware of the leading part taken by England in that great field of invention covered by internal combustion engines, imagining that in this matter we were wholly indebted to Germany. He emphasised that, in the development of internal combustion engines we had done our full share of pioneer work.

Boiler Incrustation.

A patent has been granted for an invention for preventing incrustation in boilers. The curious part is that all the information given in the "Abstract" is that "Brimstone is placed in the boiler water. About 1 cwt. of brimstone is added to 2,000 gallons of water." That is all.

MERCURY DEPOSIT IN ALEXANDRIA.

It was recently reported that in drainage excavations, conducted by the Alexandria municipality in Rue Sesostri, a deposit of mercury had been found. The work of extraction was at once begun, says the *Egyptian Mail*, and up to date about 20 kilograms have been obtained. This work is being conducted by the Technical Service, and seems well worth the small amount of labour involved in excavation and extraction, as the price of mercury well warrants the expenditure. As a matter of fact this price appears to be very elastic, some authorities putting it at £2 10s. to £3 the kilo, others, in view of the great rise in the value of metals, so high as £12 to £14 the kilo. Competent judges are of opinion the deposit is not large, but in any case a good profit should result from the work.

SHIPPING NOTES.

Casualties and Wrecks.

The vessels torpedoed, or otherwise sunk, during the week included the following:—Caledonian (Anchor), 9,223 tons; Spyroo (Greek), Grigorios Anghelatos (Greek), the latter in the Piræus.

A Port Said message states that the Greek steamer Nicolaos Michelos struck the canal bank and damaged her rudder. Cargo is being discharged.

High Freights in Egypt.

A freight of 18s. 6d. a ton measurement was paid on December 8 for a steamer to load at Alexandria for Liverpool. Before the war freights were accepted of 6s. 3d. a ton for the similar voyage to Hull and 6s. 9d. for the voyage to Hamburg. This extraordinary high freight is due to the fact that many merchants were anxious to secure a steamer to load at Alexandria, and when one at last became available, each was ready to pay almost any rate to obtain it.

On December 12, for a neutral vessel handy in size and position, Alexandria established a record at £9 17s. 6d. a ton.

Greek Vessels in British Ports.

Negotiations are stated to be in progress between leading British shipowners and the authorities in regard to Greek vessels now in British ports. No information, of course, can be given as to the details of certain proposals which have been put forward, but it was reported in shipping circles in London on Wednesday that a scheme may later be arranged whereby Greek vessels will be utilised by the owners or their agents under conditions to be decided upon by the authorities.

TRADING WITH THE ENEMY.

The British Military Court, sitting in Alexandria, gave its judgment on November 28 in the case against Messrs. Alaily, native timber merchants, who are accused of having carried out some transactions with an enemy country. Mohamed Tewfik Bey Alaily and his brothers were fined ££350, Toussoun Bey Alaily ££5.

Messrs. Alaily are Turks by origin, and are possessed of large woods in certain places in Anatolia, from which they import their timber and wood for sale in Egypt. Their property in Turkey is entrusted to an agent, and up to the time Turkey came into the war they were in constant communication with their agent; since then, however, the Alailies had to give up their Turkish transactions.

Some time ago the mails from Switzerland brought to Messrs. Alaily a letter from their agent in Turkey informing them that the Turkish military authorities had laid their hands on their timber and offered a certain price for it. The letter was seized by the military authorities, and after formal inquiry the accused were referred to the Military Court for trial.

At the Sudan Government offices, Ministry of War, Judge J.I. Kershaw presided over a Military Court, which had before it the case of Messrs. Pierre and Gabriel Baida, of Mousky. They were charged with: (1) Having, between August 17, 1915, and September 9, 1916, transacted business in Cairo without licence in contravention to the proclamation issued by the G.O.C. on August 16, 1915, and (2) Having been during that period agents of the enemy firm Butros and Bubran Baida, gramophone merchants, of Beyrout, without licence. The accused pleaded "not guilty," but they were convicted on the first charge and fined £10, and acquitted on the second count.

SULZER BROTHERS, WINTERTHUR, SWITZERLAND.
Steam Engines of all sizes, especially Uniflow Engines, Boilers and Superheaters. Sulzer Diesel Oil Engines from 20 to 6,000 B.H.P. Pumps of various systems, particularly Sulzer's high and low lift Centrifugal Pumps. Fans of all kinds. Steam and hot water heating. Ice and Refrigerating Machinery (Linde system).

COMPANY MEETING.

P. and O. Steam.

The seventy-sixth ordinary general meeting of the company was held on Wednesday at the offices, Leadenhall Street, the Right Hon. Lord Inchcape, the chairman, presiding.

The Chairman said, in the course of a review of the company's work for the past year:—About one-half of the P. and O. fleet has been continuously in Government service during the past year, and has been paid for at less than pre-war rates, while we have been handicapped in the mail services by the conveyance of enormous quantities of mail matter, to the exclusion of cargo.

The company has unfortunately lost five ships during the year—the Socotra, Persia, Geelong, Maloja, and Simla. The two mail steamers which have been under construction for some time are still far from completion; and two large steamers for the Australian frozen meat and general trade, which were ordered in the early part of this year, are progressing very slowly. Within the last few days we have placed an order for a large high-powered mail ship, which is to be laid down immediately.

Despite the fact that so many of our ships have been taken over by the Government, the company's mail sailings from terminal ports have been maintained, not one having had to be abandoned.

Since closing our accounts the Arabia has been sunk by the enemy. As a matter of interest, I may mention that the company has spent £10,000 in assisting and looking after the Arabia's passengers at Port Said, Malta, Marseilles, and elsewhere, and in transporting them to England.

The Poona, outward bound to India and Australia, was badly damaged by an enemy mine or torpedo on December 6 off Beachy Head.

On September 8 last the shareholders of the P. and O. Company decided to purchase the ordinary shares of the New Zealand Shipping Company and to pay for them by the issue of about £906,720 of P. and O. deferred stock, thereby increasing the deferred stock to £2,704,853. Out of 90,672 ordinary shares in the New Zealand Shipping Company, the P. and O. are now the proprietors of 90,582 shares, only 90 shares being held by others, and the P. and O. Company has, therefore, complete control of the New Zealand Shipping Company, which owns the Federal Line.

The P. and O. capital, including debenture stock, preferred and deferred stock, now amounts to about seven and a-half millions sterling.

Although I have the honour to be addressing the shareholders of the P. and O. Company, I do not forget that I am also speaking through them to the shareholders of the British India Company. The amalgamation which was sanctioned more than two years ago has worked out not only without a hitch, but with material benefit to both concerns. In the year under review, I am sorry to say, three British India steamers were destroyed by the enemy, and since closing our accounts another has been sent to the bottom. Of these four three were sunk by enemy submarines in the Mediterranean and one by an enemy mine or submarine in the North Sea. The last-mentioned had brought home from India a batch of repatriated Germans and Austrians, the people whom Lord Grey, you will remember, was specially warned by the enemy to safeguard, as they were "of the better class." (Laughter.) The vessel was sunk after these distinguished passengers had disembarked.

After providing for the payment to Government of 25 per cent. of our net earnings in the shape of income-tax and for 60 per cent. of any profits earned in excess of those made on the average of two pre-war years, there remains sufficient to pay the proposed dividend and bonus, to make an addition to the reserve fund of £126,000, and to increase the carry forward by £7,000.

We are not distributing a war dividend. We are able to recommend the present modest increase of 3 per cent. in our dis-

tribution in a great measure owing to the fact that the company's resources in the past have been conserved under the prudent guidance of our late chairman, Sir Thomas Sutherland. The dividend which we propose on the deferred stock represents an extremely moderate return on the amount of capital actually employed in the undertaking. If you look at the credit side of our balance-sheet you will observe that our assets are close on £12,500,000.

The report was adopted.

COMPANY NOTES.

British India Steam.

The report of the British India Steam Navigation Company for the year ended September 30 last states that the balance available for distribution, after providing for depreciation and deducting interim dividends paid in May last, is £113,846. The directors recommend a dividend of 8 per cent. (free of tax) on shares and a special bonus of 4 per cent. (free of tax) on shares, the balance of £19,770 to be carried forward. The number of steamers employed by Government during the year was increased, thus further limiting the tonnage available for ordinary trade. The directors regret to report the loss of four steamers. Several new vessels have been added to the fleet during the year, and others are now under construction.

New Company.

B.S.T., Ltd., has just been registered at Somerset House, with a nominal capital of £100,000, in £1 shares. The objects are to consider and investigate proposals and schemes for the foundation, promotion, and operation of corporations and companies of all kinds and for the raising or issue of capital, including debentures, debenture stock, and other obligations of any such corporation or company, and the objects and prospects of such proposals and schemes, and to advise thereon and issue reports in relation thereto, whether for public or private circulation, and for all or any such purpose to employ and retain the services of professional men, experts, and others as may be thought desirable; to invest the funds of the company:—

(1) In the bonds, obligations, securities, and stock of, or guaranteed by, the Governments of the United Kingdom or India, or the Dominions, Commonwealths, Dependencies, and Colonies of the British Empire, or by foreign States, Dominions, Commonwealths, Sovereigns, States, Provinces, municipalities, public authorities, or bodies in any part of the world.

(2) The shares, stock, debentures, debenture stocks, bonds, obligations, mortgages, scrip, or other securities of railway and other public companies, works and undertakings, incorporated or established by Act of Parliament, Royal Charter, or under the Companies Acts, in the United Kingdom or India, or the Dominions, Commonwealths, Dependencies, or Colonies of the British Empire, or by State authority, or under the laws of any foreign country or State, and of any joint stock companies or undertakings incorporated in or carrying on business in any part of the world.

(3) The stocks, shares, or securities of any company registered as a private company under the Companies Acts in the United Kingdom or India, or the Dominions, Commonwealths, Dependencies, or Colonies of the British Empire, or under the laws of any foreign country or State.

(4) And other marketable securities not comprised in the foregoing enumeration.

(5) Real and personal property of any tenure, nature, and description in any part of the world, whether encumbered or not.

Canadian Pacific Traffic.

An increase of \$93,000 is exhibited in the Canadian Pacific's gross receipts for the first week of the current month, following upon a gain of as much as \$1,280,000 in the corresponding period of last year. The aggregate improvement for the financial year commencing on July 1 now amounts to \$10,612,000, as against a rise of \$6,315,000 twelve months ago.

Dividends, Payments, Etc.

Land Bank of Egypt.—The Comptoir National d'Escompte de Paris have received instructions to pay, on December 15,

dividend on the Land Bank of Egypt's shares as follows:—6s. 6d. on ordinary shares against coupon No. 14, and £1 2s. on founders' shares against coupon No. 10.

Anglo-Persian Oil.—Transfer register will be closed from to-morrow to Friday next, both days inclusive, to permit of the preparation of warrants for the interest payable on December 31, 1916.

Ottoman Railway (Smyrna to Aidin).—Transfer books of 4 per cent. first and 5 per cent. second debenture stocks will be closed from December 12 to 31.

Eastern Telegraph.—The directors declare a dividend of 3½ per cent. per annum (less income tax) on the preference stock for the quarter to December 31, and the third quarterly interim dividend of 1½ per cent. on the ordinary stock (free of income tax), in respect of profits for the year to December 31, payable on January 15.

Alexandria Water.—Interim dividend of 4s. per £5 share on Coupon No. 56 is declared payable on and after December 15. (See notice on p. 168.)

Oil Outputs.

Anglo-Egyptian.—Gemsah, 29 tons; previous week, 24 tons. Hurgada, 1,389 tons, against 1,297 tons.

Bibi Eibat Oil.—Week ended December 3, 52,467 poods.

British Maikop.—Week ended December 2, 2,213 poods (36 tons).

European (corrected return).—Week ended December 2, 81,400 poods; week ended December 10, 84,800 poods.

Maikop Combine.—Week ended December 2, 273 tons.

EXCHANGE IN PERSIA.

A message from Resht, North Persia, says that the rate for the kran is higher, and that the tuman is being changed for six roubles ten copecks. New harvest cotton is coming along; it is of fine quality, better than last year's. A Tabriz (North Persia) message says that the rouble is improving in value, and that the tuman is being changed in the Persian bazaars for five roubles 80 copecks. The cotton harvest in North Persia is reported to be unprecedentedly abundant this year.

At Tiflis a meeting was held of all the representatives of credit establishments in the district to consider the popularisation of the present War Loan issue. The tobacco manufacturer A. A. Enphiadzhiantz said that the best way to popularise the loan would be for the financiers of the district to make an authoritative statement supported by acts. He announced his intention of subscribing 500,000 roubles. Then a ten minutes' interval was declared, during which, says the *Caspia*, the subscription was carried over 8,000,000 roubles.

SITUATION IN RUMANIA.

A despatch from the *Times* Correspondent with the Rumanian armies, dated December 3 (before the fall of Bucharest), stated that "in view of the probable fall of the city measures have been taken to prevent the Rumanian oil from falling into the hands of the enemy. During the past week all the wells, refineries, oil-tanks, and other installations situated in the Prahova Valley have been destroyed in a way which renders the production of oil from this rich petroliferous region impossible. Great depôts of benzine were burnt. At Moreni (the most important oilfield in Rumania from the point of view of production) the destruction was of a very complete character in view of the necessity of preventing the working of the heavy oil deposits, which are so necessary to the Germans, seeing that the Galician wells yield only light oils.

"I was in Bucharest on Friday last. The capital was quiet; the shops were open, and the population, which in the first days of the alarm had been in a panic, had become resigned to the situation. The members of the Cabinet, who had remained till then, left on Friday for Jassy. The thunder of the invaders' guns could then be distinctly heard in the city, where a great part of the population remained, confident in the feeling that, even if the capital were taken by the enemy, his occupation would be of short duration."

ON 'CHANGE.

(By Our City Correspondent.)

THROMMORTON STREET, Thursday.

Business has been on a very small scale this week, in sympathy with the general inactivity on the Stock Exchange caused by the news from the Balkans. The violent fluctuations in cotton, no doubt, have also acted as a deterrent against much activity on the Egyptian Bourses. News, however, from Egypt continues to be of a very satisfactory nature, and as soon as there is some lifting of the clouds over here a renewal of activity and higher prices are to be looked for.

In Government bonds, Egyptian Unified have receded from $\frac{3}{4}$ to $\frac{7}{8}$. National Banks are slightly quieter at $1\frac{1}{4}$, with very little business passing. Agricultural Banks have been dealt in to a small extent round $\frac{5}{8}$, and remain a firm market. Alexandria Waters have been wanted in the neighbourhood of $12\frac{1}{2}$, a rise of $\frac{1}{4}$, but no business has resulted owing to the absence of sellers.

Some small transactions have taken place in Salt and Sodas round the slightly lower price of 24s., and Delta Lands have also changed hands in a small way at about 9s. In Sidi Salem about a couple of hundred shares were done at about 10s. Khedivial Mails have been weaker in sympathy with other shipping shares on fears as to fresh adverse legislation; but the market was better to-day, and, after touching 30s., the price has recovered to about 31s. 3d. The company's business, it is understood, continues to be very satisfactory. In other shares there is hardly any change.

In Greek securities the market has continued quite a nominal one, and although quotations have been reduced from 1 to 3 points, there has not been any real selling pressure, and in the event of better news being received from Athens, it would probably become very difficult to buy at all.

BRITISH REVENUE RETURNS.

For the week ended December 9 the ordinary expenditure was on a much smaller scale than of late, amounting to £16,455,550, of which supply services accounted for £13,059,609 and interest on war debt for £3,041,675. Treasury Bills for supply were repaid to the amount of £29,629,000, and Ways and Means Treasury Bills for £5,115,000 were also repaid. These amounts, together with some minor items, including an issue of £130,000 to reduce the debt created under the Cunard agreement, made the total outgo for the week £51,425,250.

The ordinary revenue amounted to £9,827,001, and no less than £5,055,000 was contributed by excess profits duty, which promises largely to exceed the estimate. Among the other sources, Customs produced £1,820,000, Excise £625,000, Post Office £600,000, and Income-tax £882,000. In addition there was received £35,675,000 from Treasury Bills for supply, £9,480,000 from Six per Cent. Exchequer Bonds, £900,000 from War Savings Certificates, £196,300 from War Expenditure Certificates, £50,000 from bullion repayments, and £500,000 from temporary advances. The total receipts thus came to £56,628,301, or £5,203,051 more than the total expenditure, and the Exchequer balances were increased by that amount to £25,199,102. Maturing Treasury Bills having been nearly as large as the fresh ones issued, the total outstanding has only risen by £583,000 to £1,148,471,000.

ROYAL EXCHANGE ASSURANCE.

The Secretary of the Royal Exchange Assurance, Mr. W. N. Whymper, has resigned his appointment in consequence of ill health, after forty-four years' service. To fill the vacancy the directors have appointed Mr. Percy F. Hodge (at present the accountant) to the position of secretary, and Mr. H. D. Street successor to the latter as accountant. The directors have also appointed Mr. E. de M. Rudolf as "joint assistant secretary" with Mr. R. E. Duke. All these appointments will take effect as from January 1, 1917.

Mr. Whymper's retirement will cause great regret in London insurance circles where he was held in the highest respect and esteem.

NOTES OF THE WEEK.

Germany's disappointment over the failure of her offer to negotiate is the keener because she feels that she has had the bad luck just to miss her peace market by a few days. Her overtures found Russia with a new Prime Minister, the British Government in the course of reconstruction, and France and Italy resolved to follow Great Britain's example with a view to speeding up their war machinery. Accordingly, the hopes that the Central Powers had previously formed of securing a favourable hearing for their offer ought to have been dissipated before the peace kite was actually flown. It would be too much, however, to expect Germany to realise that from no conceivable Government in any of the Allied countries could she have counted upon an acceptance of her offer. But she may well feel entitled to condole with herself for having to receive an answer drafted under the stimulus of a revived determination on the part of all the Allied Powers to prosecute the war to the bitter end with greater vigour and with greatly enhanced efficiency.

The event of the past week is undoubtedly the enunciation of the programme to be put into execution by the British Government, which reflects the new spirit animating the whole of the Grand Alliance. It is on the will to conquer and on the scientific organisation of the country's resources that the British nation has to rely in appraising the actual situation. Rightly or wrongly, it has judged itself handicapped in the past by the absence of leadership, a defect by no means confined to Great Britain among the Allies. In the new Government it finds a determination to translate into action the principles on which it would have the war conducted, and it regards as of the best augury the circumstance that the Allied States also share this view and are no less anxious to follow confident leadership.

In the review of the whole position in regard to the war which Mr. Lloyd George had to give in his first speech in Parliament as Prime Minister, much space had to be devoted to details of the new administration. Of the military situation he had little to say; but he made a welcome departure from the former custom of dressing up pious aspirations in the garb of facts. The military situation, Mr. Lloyd George declared, was not a gloomy one, but to represent the position accurately he would have to paint a stern picture. The darkest cloud on the horizon, he frankly admitted, was in Roumania. "The Roumanian blunder was an unfor-

tunate one"; it had been "a real set-back." But at worst, he went on to add, it prolongs the war; it does not alter the fundamental facts of the war. "I cannot help hoping," he continued, "that it may even have a salutary effect in calling the attention of the Allies to obvious defects in their organisation, not merely the organisation of each, but the organisation of the whole, and if it does that and braces them up to fresh effort, it may prove, bad as it is, a blessing." The country will notice the absence of Mr. Asquith's splendid periods in which he would have eloquently voiced the sympathy felt for the Roumanians and evoked loud applause by a statement of what the Allies intended to do in the distant future. Not so the new Premier. He believes that "a good many of our misunderstandings have arisen from exaggerated views which have been taken about successes and from a disposition to treat as trifling real set-backs." For that reason no undue expectations in regard to Roumania were raised. "We are doing our best," said Mr. Lloyd George, "to make it impossible that that disaster should lead to worse." The nation will appreciate the new method of looking facts in the face, and the quietus given to Parliamentary window-dressing.

The worst that could happen to Roumania would be that she should lose any large portion of her army in addition to the wide extent of territory she has been called upon to surrender. So far, no overwhelming disaster has befallen the Roumanian troops. They have been pressed back at great speed and in rearguard actions have lost a considerable number in killed, wounded and prisoners. But the army remains intact, and by the time it has reached its prepared positions on the Sereth River, we may still hope that it will be able to impose a final check on the enemy's advance. But the Sereth line, while protecting Galatz, entails the abandonment of Braila. Mackensen's forces have approached to within thirty miles of the latter port, which boasts of no serviceable defences. Here they have been checked for a day or two; but at the moment of writing it is not possible to tell whether this success represents anything more than a special effort on the part of our Allies to enable General Sakharoff to withdraw his troops from the Dobruja, and the Roumanian authorities to complete the removal or destruction of the grain stores at Braila. Unless Braila could be saved, there would be no point in a Russo-Roumanian army attempting to hold out in the Dobruja.

Not the least interesting part of Mr. Lloyd George's speech was his announcement that the British Govern-

ment meant "to take no risks" in Greece. "We have decided," he said, "to take definite and decisive action, and I think it has succeeded. We have decided also to recognize the agents of that great Greek statesman, M. Venizelos." If the definite and decisive action refers only to the ultimatum, we fear that the new Premier may be found to be unduly optimistic in supposing that the presentation of the last Allied Note, together with the enforcement of the blockade, has already succeeded, in the sense that it has brought King Constantine and the Greek Government to a new frame of mind. On the morrow of their acceptance of the Allies' demands, it was reported that a warrant had been issued for the arrest of M. Venizelos on a charge of high treason and of "libel" against the Greek General Staff in articles published in his organ, the *Kirya*. A subsequent telegram from Athens states that in a Note to the Entente Powers the Greek Government presumes to review the situation resulting from the delay in the formulation of the Allies' demands for reparation, and implies that it may be compelled to interrupt the transference of the troops from Thessaly to the Peloponnese, which is being carried out in accordance with the undertaking given to the Allies.

A more impudent attempt to flout the Allies than the issue of a warrant for the arrest of M. Venizelos it would be difficult to imagine. We trust that it is in no sense as a "reply" to this piece of effrontery that the Allies have agreed to recognize M. Venizelos's agents. That step ought to have been taken as a natural corollary to the "recognition" of the Salonika Government, and it was long overdue. The action of the Government in presuming to impugn the patriotism of the maker of Modern Greece calls for far more drastic treatment. When, on the top of it, an intimation is conveyed to the Allies that King Constantine and his advisers may once more go back upon their pledged word, the accumulation of evidence that there can be no solution of the Greek problem so long as the present King is on the throne ought to determine the Allies' next step. It is of first importance that all Greek troops should be removed from Thessaly, where they constitute a menace to the safety of the Allied force in Macedonia. But the Entente Powers cannot leave the situation as it was left by the so-called recognition of the two mutually incompatible Governments at Salonika and Athens. The challenge now thrown out to M. Venizelos in the issue of a warrant for his arrest must be allowed to decide the matter. It has been carefully explained to King Constantine that nothing in M. Venizelos's actions was directed against his position on the throne or his dynasty. He has preferred to make the issue a personal question, and the Allies must now make their choice between King Constantine and M. Venizelos. It is very clear that the former considers that Greece is not large enough to hold both. So let it be. The Allies should have no difficulty in arriving at their decision. They have deliberately taken such action as implies the definite recognition of M. Venizelos's new authority. But any recognition accorded to King Constantine dates back to pre-war days, and may quite well be recalled in the light of recent events. We hope that "the definite and decisive action" to which the British Prime Minister referred will include the cutting of this Gordian knot.

After nearly a fortnight's deliberation the Allies on December 14 presented an ultimatum to the Greek Government, calling upon it to remove the entire Greek force from Thessaly, according to the detailed arrangements set forth in a subjoined Technical Note, and to stop all movement of troops and war material to the north. Twenty-four hours were allowed for a notification that the Allies' demands had been accepted in full, and it was stated that failure to comply with them would be deemed to constitute a hostile act. Meanwhile, the blockade of the Greek coasts was to be maintained until the Greek Government made full reparation for the recent unprovoked attacks against the Allied troops in Athens and until sufficient guarantees for the future had been given. These terms were immediately accepted and the removal of the Greek forces

from Thessaly was begun. The Allies, however, have allowed a further week to elapse without indicating the reparation they require for the events of December 1 and 2; no doubt, for a good reason, but the delay does not seem to have pleased the Greek Government. It is probable that it has not dared to repudiate the action to which it lent itself in the first flush of success in the encounter with the Allied landing detachments. The issue of a warrant against M. Venizelos is a sure sign that the persecution of Venizelists continue, although the earlier outrages may have been checked. But if the doctrine of personal responsibility is to be enforced by the Allies, the Greek authorities will be by no means anxious to add to their collective and individual account a fresh list of crimes from day to day, committed because they have neither the courage nor the power to gainsay the mob rule of the Reservists. Hence the latest communication asking the Allies to let them know the worst in regard to the reparation to be exacted for the events of December 1.

An official statement announces that the Mesopotamian expedition assumed the offensive on December 13. Thus after a period of seven and a-half months operations on a large scale have once more been begun. Holding the enemy on the left bank of the Tigris, General Maude has advanced on Kut from the south, and is now close to the town, with the Tigris between him and his immediate objective. Turkish headquarters are a short distance up stream, and have been subjected to air raids. After a long spell devoted to reorganization, Expeditionary Force "D" takes the field, we may feel confident, in sufficient strength to gain its objective, and that at no excessive cost. It has been urged in some quarters that the Mesopotamia campaign is practically of no value, as the question of British prestige depends on the result of the war in Europe and not on the fighting on the Tigris. In so far as British prestige in the world at large is concerned this is undoubtedly true; but the line of reasoning does not apply to Great Britain's position in the Middle East.

The establishment of satisfactory relations with the dwellers in Mesopotamia will be rendered far more difficult if the end of the war were to find the former reverses still unavenged and the army with a record of consistent failure. The most sweeping victories in Europe, about which they will only hear vague reports, can never impress the people of these regions as will the capture of Baghdad after a successful advance up the Tigris. The Mesopotamia Expedition, therefore, has a very definite objective. It has to occupy territory which it is essential for the peace of the world and the safety of India should pass under the jurisdiction in some form or another of Great Britain. We cannot too strongly deprecate the point of view that the British people have little interest in the Mesopotamian campaign. The fighting on the Tigris will not affect the war in Europe, but it will have an important bearing on future conditions in that part of the world, and we feel confident that British statesmanship as represented by the new Government has sufficient vision and foresight to be able to provide that the Army's work in the Middle East shall now be well done without impairing in any way the success of the campaign in Europe.

Neither Turkey nor Germany, it is to be hoped, has heard the last of the massacres that accompanied the deportation of Armenians at an earlier stage of the war. In a Blue Book recently issued Mr. H. A. L. Fisher, now President of the Board of Education, contributes a notable expression of opinion on the responsibility of the Central Powers in connection with the outrages. Unless we are mistaken, they have since admitted cognizance of what was taking place, and have excused their inaction on the ground that they had no right to interfere with Turkey's private affairs. A recent development in the story is that the representations made by the United States Government to Turkey have proved so embarrassing to the latter that the normal course of diplomatic relations between the two countries threatens to be interrupted.

NEWS FROM TURKEY.

(FROM OUR SPECIAL CORRESPONDENT.)

ATHENS, November 18.

The Control of Exports.

The following information respecting the state of affairs in Turkey, as far as it can be judged from a residence in Smyrna, is given by some one who lately left that town.

Life in Smyrna can almost be described as normal. There is not, of course, the usual activity of a busy commercial town, and Europeans have practically no business to transact; but there is a fairly active trade in the products of the district by native dealers who are sending such articles as raisins, figs, valonea, cotton and wool to Constantinople. There the exports from Turkey to the Central Powers are controlled by a commission under the presidency of Talaat Bey, and only the surplus over the requirements of the country is allowed to be exported. The idea that Germany has benefited largely in the way of Turkey's products is apparently quite erroneous, as nothing is allowed to leave the country which is necessary for Turkey's own requirements.

The grain crops this season in Asia Minor were about 40 per cent. of the average, and will not, it is expected, be sufficient for Turkey's wants. The Government are accordingly buying up all the grain at fixed prices, with the view of making a distribution over the country according to requirements. This is, however, a formidable task; and in view of the lack of sufficient transport, it is possible that some districts will run short of supplies, whilst others will have an abundance, or, rather, a sufficiency. At the present time bread is being sold at fourpence the kilo loaf in Constantinople, and in Smyrna at eightpence. The Government loses by selling at the former price, but it is bent upon appeasing the lower classes as far as possible. Until Roumania joined the Allies, large quantities of flour were received from that country.

Turkey's Chief Weakness.

The grain sowings this winter will probably be even lower than last year, owing to want of labour and cattle; and therein lies Turkey's weakness. Up to the present time, even with the assistance of Bulgaria (and until recently also Roumania), only a limited allowance of bread has been available, barely sufficient for the poor to live upon; but with smaller grain crops and no other supplies of wheat or flour coming in, the position next summer may be serious. Both in Smyrna and in Constantinople the sale of bread is limited to about a third of a kilo per person per day; an allowance quite insufficient for the poor and lower classes, with whom bread is the staple article of food.

There is no scarcity of most of the other necessities of life either in Smyrna or in the capital. Meat is apparently plentiful, being sold in Smyrna at about 5d. the lb. Fruit, vegetables, poultry, game, milk, cheese, and olives are all more or less plentiful, and a few of the residents are even privileged to indulge in game shooting. Imported articles, such as tea, coffee, and sugar, are, of course, scarce and expensive, tea, for instance, costing about 20s. the lb., and coffee about half that price. Sugar is being sold at about 2s. the lb., a certain quantity having been received from Austria. Clothing, footwear, and any other articles which have to come from abroad are extremely expensive. Petroleum was selling at about 10 piastres the oke when supplies were being obtained from Roumania; but now that stocks are running low the price has risen to about 18 piastres. Imports from the Central Powers have been on a very small scale.

Supply of Fuel.

One of the surprises in Turkey has been the discovery of large quantities of lignite in places easily accessible. This lignite has enabled the country to exist to a large extent. It is being used by trains, steamers, mills, gas-works, and, in fact, is in general use, together with wood, of which there are also large supplies. Smyrna is not, therefore, under any inconvenience from want of

gas. The price of lignite in Smyrna is about £2 the ton. Regular communication with Constantinople is kept up by the Soma railway to Panderna, thence by steamer. Coal from the Black Sea mines has evidently been reaching Constantinople, but recently the Russians appear to have sunk four steamers, and there are now very few left in Constantinople for transport purposes. Coal is therefore likely to become scarce, but supplies can, of course, be obtained from the Central Powers.

The Paper Currency.

The gold and silver coinage has practically ceased to exist both in Smyrna and in the capital, the coins having evidently been hoarded by the public. Paper is the currency, and there are notes of the value of five, twenty, fifty, one hundred, five hundred, and five thousand piastres. These are Government notes, guaranteed by the Administration of the Public Debt, in virtue of loans made to Turkey by Germany. What all these notes will be worth after the war will presumably depend upon Germany's financial position and her ability or disposition to meet her liabilities. In any case this paper currency is now depreciated to the extent of about 65 per cent.—that is to say, a gold lira is worth one hundred and sixty-five paper piastres—and the depreciation is likely to continue. In the circumstances it is not surprising that no one is anxious to hold more of this paper money than can be helped. There is in consequence a tendency to invest one's surplus funds in landed property, and high prices are, therefore, being asked for land and buildings. In order to replace small change the municipalities issue notes of one and two piastres, which are accepted as legal tender.

Political and Military Situation.

As regards the political and military situation, the Turks are quite confident of winning, and certainly the military position of Turkey as it is seen to-day by the people in Turkey is hardly one to cause them any anxiety or doubt as to the tales that the Huns tell them of their future. During the critical days of the Gallipoli campaign the people were in a state of excitement and fear, but in the course of the past twelve months things have changed, and although the war is unpopular, there is now a feeling of greater confidence in the eventual results than there was at that time. It may be said that the Turks have no animosity against the English and French, who enjoy greater esteem than the Huns; but there still exists the traditional fear of the Russians. In Smyrna, and even in Constantinople, it is seldom that any newspapers of the Allied countries are seen, and the people form their judgment on the news they obtain from Turkish papers. They have thus no opportunity of judging the situation from both sides.

The whole of Turkey might be described as an armed camp. There are soldiers everywhere, and it is confidently asserted that Turkey has to-day over two million men under arms. This statement may come as a surprise to many, and will possibly be disbelieved, but, nevertheless, it is more or less accurate. It is known that almost every available man from eighteen to fifty has been called up; there are numbers of Greeks, Armenians, and Jews serving; and large levies of Kurds and Arabs have been raised. Turkey under the Germans is making a very great effort. She has been able to send about a hundred thousand men to Galicia and the Balkans; she has considerable forces all over Asia Minor; and, apart from the garrisons around Constantinople and Smyrna, she has armies in the Caucasus, Persia, Mesopotamia, Syria, Egypt, and Arabia, and troops practically all along her coasts.

This general call to arms has caused infinite suffering to the lower classes, and there is undoubtedly great misery in Turkey, but on the whole one can probably live more cheaply to-day in Smyrna or Constantinople than in Athens.

Certainly the better classes are undergoing no privations. In Smyrna the life is monotonous, and the absence of letters and newspapers from the allied countries is most discomforting, but English and French residents are well treated. All the English in Smyrna are well.

ROUMANIA INFELIX.

(FROM A CORRESPONDENT.)

The tragedy of Roumania during the past few weeks could hardly have been painted in more sombre colours. The tidal wave from the west and south has swept on relentlessly across Wallachia to the boulevards of Bucharest, and then northwards along the great highways to Ploeshti, Campina, and Sinaia. In front of it, borne down by the enemy's gigantic superiority in war material and engines of destruction, the brave Roumanians endeavoured with all the means at their disposal to stem the hostile flood, and to save their homes and families from devastation. Deeds of heroism, not less noble because little known, will have been enacted in thousands by the soldiers of King Ferdinand along the banks of the many tributaries of the Danube. At first sight these deeds may be deemed purposeless, because their immediate objective, the staying of the enemy, has not been attained; but time will prove the contrary. Brilliant scenes in a grim tragedy, they will live to inspire the victors of to-morrow and strengthen them in their resolve to impose full punishment on the Boche invader.

The picture of Roumania is a terribly sad one; rich fields have been lost to her, and vast wealth in stores and oil; the capital and Court have been removed from Bucharest to Jassy; the enemy overruns vast districts and occupies industrial and maritime centres. The tragedy is as keenly felt in this country as are our own sorrows. We have followed each incident in the great campaign with deep anxiety and hope, partly because Roumania is fighting with us in the same cause, partly because we have always cherished esteem and friendship for King Ferdinand's subjects. The latter can, therefore, be assured of our most heartfelt sympathy in this, the darkest moment of their national history. Whether or not the catastrophe might have been, wholly or in part, avoided, it is not for us to debate to-day, for recriminations lead to no goal, and deeds are wanted, not regrets. Our immediate duty is to remedy the evil rather than to deplore what has happened; to take stock of what remains to us rather than to count up Germany's booty and spoils.

The situation is by no means hopeless. In spite of her heavy losses in men and land, Roumania's army is still intact, and placed astride the country's narrow throat, which extends roughly east and west from the Carpathians to the Black Sea. It is thus able to hold a short front, deeply manned, whilst, in the rear, across Moldavia, stretch the giant steppes of Russia, with all their untold wealth of men and help. Now that the campaign of the past few months is over, and it is realised how small—according to military notions—Roumania's army was in comparison with the extent of her territory, it seems incredible that she should ever have attempted all that she did. The shortened front now is an advantage, and, if stoutly held, as we have no doubt it will be held, will be an important sector of the Baltic-Black Sea line from where the great eastern offensive against the Central Powers will emerge in good time. The enemy, on the other hand, has not only increased the length of his front considerably, but he has increased the distance separating his eastern from his western front, and has occupied territory the inhabitants of which have no love for him, and who will harass him mercilessly when the time comes, as come it must. Moreover, of little avail to Bulgars, Teutons, Magyars, and Turks will be their various crossings of the Danube when, like an avalanche tearing down the mountains, the Roumanian and Russian avengers sweep down from the north and north-east and drive them to the swampy banks of the wonderful river which has become more important in this war than any other European stream.

The position, therefore, is by no means a hopeless one. On the contrary, from a purely military point of view it offers us certain advantages which must not be lost sight of. The enemy objective—namely, the encircling or destruction of the Roumanian army—has not been achieved, nor have our Allies been driven up against a wall, there to stand fast and die. The seizure of corn

and oil supplies by the Germans will doubtless tend to alleviate for a moment the harsh conditions of life obtaining in the Fatherland; but, compared with the military disadvantages of the new situation, it can exercise but little influence on the war as a whole. Through Russia the brave Roumanians in Moldavia will be strengthened and receive all necessary war supplies, and then, in due time, the advance westwards, even beyond the Carpathians, will commence in earnest. The sooner this happens the better, but the exact time depends on the activity with which the war as a whole is conducted. The recent Cabinet changes in Great Britain are an earnest that we are at length awake to the grave realities of the case, and to the necessity for the adoption of an energetic policy in conducting military operations. Roumanians can, therefore, rest assured that we will leave no stone unturned to hasten the return of King Ferdinand to Bucharest and to precipitate the flight of his brother, Prince Wilhelm of Hohenzollern-Sigmaringen, the German puppet and usurper.

That the military situation, in whatever light it may appear to the ordinary man, is none too favourable for the enemy, is demonstrated by the Kaiser's most recent peace manœuvre. The Higher Staff is well aware that Germany has attained the zenith of her military prestige, and that from now on her star will wane until it disappears altogether. Hence her desire, by a well-advertised manœuvre, to secure peace on her own terms, which are, of course, unacceptable either to our Allies or to ourselves. But the fact that Germany herself recognises her coming impotence is the silver lining to Roumania's tragic cloud, and will do more to strengthen her firm resolve to see the war through than would the capture by her of rich Transylvanian cities. It will, moreover, advise her to give the immediate lie, in deeds if not in words, to those Potsdam-spread rumours accusing her of wishing to sign a separate peace with the enemy. It is unthinkable that she would ever think of coming to any but honourable terms with the Boches; and they can only be honourable when the enemy has been driven pell-mell westwards across the Carpathians and northwards beyond the Danube.

After all, Roumania entered the war on our side for two distinct reasons and with two distinct objects in view; they concerned the liberation of her kinsmen in Transylvania from the Austro-Hungarian yoke, and the freeing of Roumania from the economic thralldom to which she had been subjected by the Prussians. The persecutions of the Roumanians of Transylvania is an historical injustice with which most of us are acquainted, but we are less informed as to the extent of Germany's pre-war hold on Roumania and the measure of her pacific penetration of that country. That it was tremendous has now been amply proved, an eloquent instance being the German-engineered ovation to Mackensen on his arrival in Bucharest. To get rid of this nefarious Teuton influence, which was undermining the authority of the State and mortgaging its interests to the banking institutions of Berlin, Darmstadt, Frankfurt, and Vienna, Roumania declared war; and she will not sheathe her sword until her complete freedom has been won. Besides, the happenings of the past few months will have deadened any sympathy with the Boches which may have been latent in the country; and thus, by invading and temporarily seizing Wallachia, the Germans have not only helped their victims of past days to achieve the object dearest to their hearts, but have also worked untold harm to their own interests, and destroyed all chances of being able to realise their great Central European scheme, with which Roumania, according to Naumann, was to have been affiliated. So much good has the invasion of King Ferdinand's realm done them; and, on the other hand, it has done more to further Roumania's emancipation from Germany than years of national pacific propaganda. Something, therefore, has already been achieved; the remainder must still be fought for, not only on the Roumanian but on every other front of the gigantic war camp. Speaking for ourselves and our Allies, King Ferdinand and his people can be assured that no peace will be signed with the enemy unless it acknowledges Roumania's claim in full.

IS ARMAGEDDON FOUGHT IN VAIN?

(By DOUGLAS M. GANE.)

In speaking at Melbourne on the 14th, with reference to the German proposals for peace, Mr. Hughes is reported to have said that no peace would be satisfactory that did not provide for the evacuation of the Allied territory occupied by the enemy, the repatriation of the inhabitants, and the repair of the cities and industries. It will be apparent that what he refers to here as calling for reparation is all in the nature of consequential damage, and does not touch the source of the mischief. Belgium and Northern France were occupied, not because occupation was one of the primary objects of the war, but as strategical measures dictated according to Germany's views of the necessities of her conflict with the Western Powers, and the treatment of enemy subjects and the destruction of their property were expedients which, according to her ideas, would be calculated to contribute to military success by striking terror into the hearts of her adversaries. These injuries might give scope for reprisals, they might afford room for compensation, but they did not give rise to the war; and so the adjustment of them would not remove the conditions out of which the war arose. Therefore, says Mr. Hughes, peace must also provide effective guarantees that will render the recurrence of such a war impossible.

The provision of guarantees, to be effective, of necessity takes us to the root of the matter, and the forebodings with regard to the developments of the Eastern Question, which of recent years have been unrelenting under the growth of German pressure towards the East, leave no doubt where this lies. The concentration of Russia's efforts in Asiatic adventure came to an end with the results of her war with Japan as it affected the Far East and with the Anglo-Russian agreement as it affected the Middle East, and thereupon her interests were redirected towards the Near East, where the Teuton thrust towards Constantinople revived the prospects of Armageddon. With the accommodation of Anglo-Russian rivalries disappeared the old Turkish régime which had thriven on them, and with the rise of the Young Turk came the portent of a reassertion of Ottoman dominion in Europe and the panic conversion by Austria-Hungary of the trust estate she held in Bosnia and the Herzegovina into a beneficial interest. This was accompanied by the declaration of Bulgarian independence and the seizure of the Oriental Railway, denoting a working agreement so far back as 1908 between the Monarchy and the Principality that had particular reference to German communications with the East. There followed the payment by Austria of the Bosnian indemnity, and the unexpressed purchase thereof of Turkey's goodwill, and the Pan-German movement in Greece, the fruits of which we now see. The provocation of Serbia ensued, having as its explanation the fact that the railway connection between Austria-Hungary and Bulgaria lay through Serbian territory. This provocation was continued until the assassination of the Austrian heir-apparent afforded a *casus belli*, and, following the conquest of Serbia, German land communications with the Bosphorus have been laid, and the first object of the war attained.

The question then arises, from the point of view of the safeguards Mr. Hughes would impose, what prospect is there that Armageddon will settle the Eastern Question? For, if that be settled, the need for guarantees will very largely disappear. The Eastern Question has arisen through the demise of the Turkish Empire and the gradual breaking away of the small floating units of the Christian States that had become subject to its rule. Sundry devices have been conceived for bringing about a resettlement of the Balkan area, but, in consequence of the rivalries by which these small communities are beset, reabsorption into other States came to be regarded as the natural means of securing unity, and Pan-Germanism

provoked Pan-Slavism as a rival. With the rise of the Young Turk a confederacy of the Balkans became the subject of genuine endeavour on the part of the better political elements of the Peninsula. But the tendencies in this direction were arrested by the policy of Ottomanization that marked the new Turkish régime; and this in the end brought about a Concert of the remaining Balkan States and produced the Balkan wars, from which the Turkish Empire emerged further dismembered, and by which the divisions between its adversaries were ultimately further inflamed. Under the stress of war unity among the Christian elements was for the moment attained, but now it seems impossible of revival. Nor could peace prevail on the foundations of the balance of power in the Peninsula, for the equilibrium has now been hopelessly destroyed.

What, then, are the prospects of the Eastern Question being solved by the war, or have we to face the fact that Armageddon has been fought in vain? What is the British standpoint? German dominion in South-eastern Europe is fraught with political consequences more especially prejudicial to British interests because, with Constantinople in German hands, this dominion would tend to be exercised and its power felt from the Bosphorus to the Indian Ocean, and from the Red Sea to the Persian Gulf. It would give Germany command of the Euphrates Valley, and so the overland route to the East. It would make her our potential neighbour at Aden; and it would encourage her in efforts to restore the Ottoman Empire in Africa to its old dimensions, and so make her mistress of the Nile Valley. Expansion such as this is inherent in the movement set up by Germany, and whether it should be suffered to advance has been the question on our side to be determined by the war. What is now the position? Germany has been spending her strength, and it is matter for conjecture whether her surplus energies any longer suffice for the huge work of development she had in hand. Louis XIV. sought to create an Empire in Western Europe by bringing about the union of the crowns of France and Spain, and the wars of the Spanish Succession prevented it. In the negotiations for peace safeguards were sought, but they were sought in vain, and the Treaty of Utrecht for its security was made dependent only on the express renunciation of the Monarch's intention. The real safeguard was found to lie in the reduction of his strength which the war had brought about. Only in the dissipation of Germany's strength also is to be found the safeguard Mr. Hughes requires, and if the war be fought till this be assured, then Armageddon, so far at least as the German menace is concerned, will not have been fought in vain. But whether it will be found to have solved the Eastern Question or only abated present inflammations is another matter.

MOSLEMS IN NON-MOSLEM STATES.

At a meeting of the Central Islamic Society held last Saturday in Caxton Hall, Viscount de Potier recounted his experiences, travelling in the Balkan countries, Russia and Turkestan. Speaking of the treatment of Moslems in those States, he said that none had cause to congratulate themselves on being severed from the Ottoman Empire; but Austria, for whatever reason, treated its Moslem subjects remarkably well. About half the population of Bosnia were Moslem, and lived on very good terms with its Christian neighbours. There were over a thousand ordinary Moslem schools in that country, forty or fifty high schools where Arabic was taught, and a great central school where Moslem law was taught. The Austrian Government not only supplied money for keeping up Moslem institutions in Bosnia, but also provided money to assist those who had not funds of their own sufficient to take them on the pilgrimage to Mecca. In Greece, especially in the countries recently conquered, the condition of the Moslems at the time that he was there was absolutely disastrous; neither life nor property was safe. Towards the end of the Balkan war, Moslems in Greek Macedonia were made so uncomfortable that many left the country. They sold their non-movable property at absurd prices, and in some cases the money so obtained was absolutely stolen from them by the Greek authorities, so that they landed in Turkey penniless. There was nothing to complain of in the treatment of Moslems in Serbia and Roumania. In Bulgaria proper Moslems and Christians lived in closer contact, and on more friendly terms than in any other country—much more so than in Turkey—but in Bulgarian territories acquired after the Balkan war the treatment was not so good. Russia, alike in Europe and Asia, treated Moslems well.

TANGIER TO TEHERAN.

At the beginning of this year, as some of my readers may remember, Lady Neave organized a bazaar in aid of British refugees from Turkey; and in connection with this a writer, in one of the halfpenny papers, referring to Sir Louis Mallet's patronage of the sale, mentioned that it was "got up . . . in aid of the Albanians." I remember the blunder well because, as I observed at the time, the Albanians' conduct just then was "hardly likely to endear them to Englishmen." Also, I recollect, there was in the same issue of the paper referred to another glaring error about a lady and a gentleman closely connected with the Near East, and again dealing with the subject of refugees from South-Eastern Europe.

These "howlers" seemed like to carry off the palm in their own particular line for the present year of grace. But a correspondent sends me a cutting from another halfpenny journal—of the evening variety this time—which runs them very close. I have read it with rather mixed feelings. It begins:—

Seeing the Right Hon. Sir Gerard Lowther, our late Ambassador to Turkey, at supper at Ciro's the other evening—in khaki—I was struck by his amazing resemblance to his brother, the Earl of Lonsdale.

Well! well! A good many strange things have been said and written about "Ciro's" of late, but nothing, I venture to think, more strange than this. What kind of supper, I wonder, had the writer been indulging in before he wrote this "snappy" paragraph—I think that is how such things are described. Surely the name of one who served his country with such distinction as did the late Sir Gerard Lowther might be left out of such stuff!

A French *communiqué* reports that on Sunday afternoon "there was a persistent fog on the Macedonian front." Now I cordially detest fog, for to the average man it is a humiliating experience to go about feeling lamp-posts, walls, pillar-boxes and so forth in order to pick up his bearings; tripping over kerbs; and coughing nervously to announce his whereabouts to other pedestrians. Last Saturday we had a very fine specimen of this kind of thing, and I admit that it got badly on my nerves. Therefore, when on Tuesday I came across a headline in the *Morning Post* which read "Fog in the Balkans," I wondered why on earth the *Post* thought such an unpleasant topic worth chronicling. Then I read the second headline: "Successful British Air Raids," and now I feel amiable again. For as far as I can make out after comparing the reports, our airmen seem to have been making themselves offensive to the enemy in spite of the "persistent fog"; and that looks as if experience gained in this tight little island had come in very handy. So, if even fogs can help our cause along we may try to console ourselves the next time we are groping and stumbling through the Cimmerian darkness by imagining that some budding aeronaut may be benefiting by the opportunity.

The renewed activity on the Tigris will have afforded satisfaction to many Englishmen. It will also, I hope, serve to jog the memory of anyone who may have forgotten to send his, or her, subscription to the Mesopotamia Comforts Fund, which is, unfortunately, one of those that can hardly be over-subscribed. The Fund wants every penny, and every pound, it can get; and from what I have seen and heard of its methods of work it is safe to say that every penny will be spent to the best possible advantage. Mesopotamia in winter is a more bearable place than in summer; but it is not a Paradise even now, and our soldiers out there cannot, under the most favourable conditions, be having a very enjoyable kind of Christmas. Moreover, the Fund has to look ahead, and to get ready comforts for the coming of the terrible hot weather. It is doing it, and doing it well. But just how much it will be able to do for the fine fighting men, who are—we all feel sure—going to "get there" this time, must depend on the support it receives from the public. So, in case you may have mislaid the address of the Fund, I may remind you that it is: 15, Alford Street, Mayfair, and that the telephone number is Mayfair 935.

Now that the season of Pantomime is so close at hand I suspect that a good many Principal Boys, Comic Pages, Penurious Barons, Bibulous Baronesses and other leading lights of the Panto' world are busy studying songs of the super-patriotic variety and laboriously preparing new, or (more likely!) working up old, jokes at the expense of our friend the Enemy. Hajji Wilhelm, Little Willie, and "Tsar" Ferdinand of Bulgaria are sure to figure largely in the rough-and-tumble scenes, and our old friend the Turk will doubtless be to the fore. But what of 'Tino? Shall we have got over our indignation with him in time to enjoy

a laugh at his expense, or will he be still too much in our bad books to be even mentioned? At the time of writing I dare not attempt to prophesy. But I am tempted to hazard a guess that some daring soul may venture to rake up some of the old songs about Russia and Constantinople, and, altering them to suit the times, score a tremendous hit. Such things have been done before in the Panto' world—or so I am credibly informed; and the temptation to repeat the experiment seems rather strong.

In case any "artist" is inclined to act on the hint, may I suggest for his (or her) consideration a gem which was popular a good many years ago? One verse ran:—

Brave Turkey has no cause to fear,
For Britain's help will soon be there,
Then down must come the Rooshian Bear,
With three loud cheers for Turkey.

I am a little bit doubtful about the punctuation; for I quote the lines as handed on to me by an old sea-captain, who remembers hearing them bawled out by a street vendor of "all the latest popular songs" of his younger days. The same friend remembers attending a lecture on the war, in course of which the lecturer referred to a certain incident in the Black Sea. "The Russians," said the lecturer in question, "at Sinope sank the Turkish fleet, and gained *what they call* a victory." The italics are, of course, mine. It strikes me that a lecturer who wished to be really popular with his audience would be likely to omit these three words at the present time. The poetic effort remembered by my friend would require rather more editing, no doubt, but it can be done. As for example:—

Bulgar and Turk will disappear
Ere Christmas once again is here;
Constantinople will be Russ,
Though Kaiser Bill may rage and fuss.

It might be improved upon in some respects, perhaps. But its patriotism, I venture to think, is of the very best Pantomime order.

From a Cairo correspondent I learn that one of the leading Egyptian newspapers has been publishing a series of articles on the subject of what is referred to as the "marriage crisis" in that country. This reminds me of the correspondence that raged round the topic, "Is Marriage a Failure?" in the columns of the *Daily Telegraph* some thirty years or more ago. It is a little startling to find Egypt barely a third of a century behind this country in such a matter; but, of course, there is a considerable difference between a series of articles, for which one writer alone is responsible, and a correspondence such as that in the *D. T.*, which exercised the minds of scores, if not hundreds, of more or less respectable Britons. To my mind, however, it is a sad thing for Egypt that the subject should be considered "popular" enough to justify even a series of articles upon it; and I hope it will not give rise to controversy in the correspondence columns of the journals concerned. For that would prove—to me, at least—that Egypt was more decadent than I imagine it to be.

The writer of the articles referred to is, I gather from my correspondent, a Moslem, and he attributes the "crisis"—in other words, the disinclination on the part of the Egyptian young man of education to marry—to the fact that religion is losing its grip on his countrymen. As a secondary cause he places the increased cost of living, or rather of living in the "modern" style, and of educating children. Thus, according to him, many young men with an income of thirty pounds (Egyptian) a month object to getting married because they cannot provide what they consider a suitable home for a wife. It is apparently the old story: the young people want to begin where the old ones left off. It is no affair of mine, no doubt, but when I think of the Fellah and his way of life, and contrast him with the young Effendi, with his airs and graces and his vast opinion of his own cleverness and value, I am tempted to ask myself whether Egypt has not had too much "education," or had it too suddenly, or had the right kind of education? There are, I hasten to add, very many excellent Egyptian gentlemen who are unspoiled by contact with Western ideas, just as there are *fellaheen* who are by no means to be envied or admired. But, as a rule, it seems to me the Fellah is at least a much happier man than the Effendi. And, after all, if there really is any "marriage crisis" in Egypt, it will be the Effendi, not the Fellah, who will be affected by it. The Fellah will continue on his own placid way, as his forebears did before him, and his race will not die out. If a man with thirty pounds a month is not prepared to take his risks in the marriage lottery, it is perhaps as well for his country that he should—do the other thing.

NEAR EAST BOOKSHELF.

SOME RUSSIAN SUPERMEN.*

The vitality of a race may be measured by the depth at which the roots of its civilisation lie embedded in the past. Russia satisfies this test in a supreme degree; the most unlettered *muzhik* cherishes a mass of fact and legend bearing on the history of his country. But simple minds are unable to grasp an abstract idea without the aid of some human figure which seems to embody it. So every phase of Russia's evolution is typified by a superman, who personifies the spirit of his age. This phenomenon is of universal application. The past is brought home to us not by its wars, its inventions, its discoveries, but by the great men and women who soared far above the horizon of their contemporaries. In "A Thousand Years of Russian History" Mrs. Sonia Howe had drawn the broad outlines of her country's development. "Some Russian Heroes, Saints, and Sinners" completes the picture with biographies of human agents who left indelible traces on their generation.

Her initial chapter relates all that is known of the Slav invaders who swept over Eastern Europe long before the dawn of history. That they were a branch of the great Aryan family which conquered Upper India about the same epoch is proved by the survival of many Sanskrit roots in modern Russian and by similarities in the religious beliefs of prehistoric Slavs and of Indians of the Vedic age which cannot be fortuitous. The newcomers subdued or absorbed the Scythian, Sarmatian, and Finnish tribes which had made those boundless plains their habitat; but an insuperable barrier of race antagonism rose between the Slavs and their Teuton neighbours of Central Europe.

We obtain blurred pictures of the doughty immigrants from the annalists of Byzantium, with which empire-city they bartered raw materials for objects of luxury. All agree that Muscovites of old time were cheerful, hospitable folk, addicted to rude poetry and music. In warfare they were fierce and sometimes cruel, but never treacherous. Their tribal organization lacked cohesiveness because an inbred love of freedom forbade the individual to subordinate his inclinations to the common weal. A chronic state of internecine warfare prevailed, to which a truce was called by threats from a common foe. According to one Byzantine writer, Russians "could be conquered only through their internal dissensions," and another records the significant fact that they disliked binding themselves down to particular action by treaty. These judgments confirm a deduction drawn by many sociologists from the world-war now raging—that racial character is what mathematicians style a "constant," and persists despite the added factors of civilization.

After settling down to cultivate the rich black soil of Southern Russia, the Slavs built rude forts for protection against hostile raids. As years rolled by these citadels became nuclei of towns, which waxed wealthy from caravan or riverine commerce with Byzantium. Such was the origin of Kiev, Pskov, and Novogorod, where the genius of the Russian race shines more conspicuously than in the comparatively modern creations of Petrograd or Moscow. Their government was democratic, tempered, as in modern Japan, by the dictates of a Council of Elders, and each town sent representatives to a general assembly termed *Vietsha*, whose policy was moulded by the influence of the more important cities. In this fashion the Russia of a millennium ago became a congeries of urban republics, varying greatly in extent. Lacking a strong central government, they were perpetually at feud, and had to defend themselves against the incursions of barbarous tribes in the hinterland. So dire necessity compelled the Elders of Kiev and other city-states to hire Scandinavian soldiers of fortune—kinsmen of the Normans who conquered England in the eleventh century of our era. These Viking or "Varangian" chiefs had attracted bands of henchmen, termed *Drujina*, whose duty it was to defend the republic from attack and safeguard its commerce with the sunny south. All castes are apt to use physical force for their own advantage; the Varangian mercenaries, drawing strength from their military organization, began to fight for their own hand. Flouting the elders' behests, they raided distant lands, and returned laden with spoil, which was never shared with their employers. From protectors they became oppressors, and chiefs who had originally been elected were able to transmit authority to their male children. Just as the Hohenzollern eagle dug its claws into the "free" city of Nuremberg, so did Varangian chiefs become hereditary rulers of many Russian city-states. The evolution of an empire came in natural sequence by a process of agglutination, known in ancient Greece as *synæcism*.

The successive landmarks in Russian history are traced by Mrs. Howe with clarity and knowledge. We see the light of a noble religion dawning from Byzantium, and understand

the overwhelming influence which it exercised on the emotional Slav. In no country have the Christian lessons of self-denial, self-sacrifice, and brotherly love been so completely absorbed as in Holy Russia. We see a nascent civilisation of transcendent quality eclipsed by the Mongol invasion of the twelfth century; and realize the fact that history may well repeat itself should Europe be reduced to impotence by internecine strife. We are able to follow the development of the autocracy, with roots thrust deeply into the racial fibre. And every phase in Russia's evolution is illustrated by short biographies of the intensely human heroes, saints or sinners, who guided her in the path of progress, or hampered her normal growth.

The value of Mrs. Howe's work is enhanced by a wealth of illustrations, which reproduce the art of past ages, and modern paintings of exceptional power. Western readers will not fail to re-echo the hope expressed in her peroration:

That Russians of the present day, in their loveliness, or even in their apparent unreasonableness, may become better understood by their British friends if it is borne in mind that they are of the same flesh and blood with the Heroes, Saints, and Sinners portrayed in this volume.

F. H. S.

BOOK NOTES.

The Government Press, Cairo, has issued, at the price of P.T.30, "The Geography and Geology of West-Central Sinai," by Dr. John Ball.

Messrs. Hodder and Stoughton have just published the Queen of Roumania's book, "My Country," which will be sold (at the price of 5s.) for the benefit of the Red Cross in Roumania. It is very pleasantly written, and is illustrated with many beautiful photographs taken by the Queen, and would make a most acceptable Christmas or New Year's gift.

We have received from Messrs. George Philip and Son, the London Geographical Institute, 32, Fleet Street, a copy of their "Large Scale Strategic War Map of Mesopotamia and Asia Minor." The renewal of activities on the Tigris makes the appearance of this map particularly opportune, and the publishers are to be congratulated on having provided a really good map of a region of which, even now, very little is known in this country. We must reserve detailed criticism for a future issue; but a first glance at the map shows that it can be recommended to our readers. It can be obtained in envelope case for 2s. 6d. net; on cloth, to fold, at 6s. net; or mounted on roller at 7s. 6d. net.

BOOKS RECEIVED.

The Treatment of Armenians in the Ottoman Empire. Documents presented by Viscount Grey of Fallodon, with a preface by Viscount Bryce. (Hodder and Stoughton. 3s. net.)

Scalers of Light. By the Queen of Roumania. Illustrated by Edmund Dulac. (Hodder and Stoughton. 6s. net.)

A PLEDGE TO SERBIA.

The following telegram has been addressed by Mr. Lloyd George to the Serbian Prime Minister:—

The King having entrusted me with the formation of a new Government, I hasten to express to your Excellency my feelings of friendship and admiration for your gallant nation and my determination to co-operate with our Allies until the final victory is secured and the independence of Serbia is restored.

M. Pashitch replied as follows:—

It is with the liveliest and most sincere satisfaction that I have received the telegram in which you inform me that his Majesty the King and Emperor has been pleased to entrust you with the formation of the new Cabinet. We are all of us animated with the liveliest hope and most steadfast confidence that, under your wise guidance and in intimate co-operation and perfect agreement with the Allies, glorious and humane England and her gallant army will secure victory at the last in order to safeguard the reign of liberty and justice among the nations, and to permit the whole world to develop in peace. Our hearts are filled with the deepest gratitude as we hear the words with which the Prime Minister of England has given us the assurance that the sacrifices of the loyal Serbian people and of its valiant army will be rewarded by the independence of Serbia and, if the Almighty will, by the liberation of the whole Serbian nation.

ARCHÆOLOGICAL NOTES.

EGYPT, BABYLON, AND HEBREW TRADITION.

Upon the 14th inst., at Burlington House, Professor Leonard W. King delivered the first of three lectures upon "The Legends of Egypt and Babylon in Relation to Hebrew Tradition." There was a large audience, and the lecturer expressed his views with eloquence, and illustrated some of his remarks by lantern slides. From his introduction it is clear that the foundation for his subject is the publication of some thirty cuneiform tablets, embodying literary remains in the very ancient Sumerian language, which were discovered by United States explorers at Nippur. Some of these contain lists of very early kings; others Sumerian versions, perhaps of the Deluge and Creation stories, but among scholars some consider a few of the tablets to be really concerned with irrigation engineering works.

In the first lecture Professor King devoted himself to explaining these new relics, and also alluded to the recently edited fragments of the Egyptian Palermo Stele, containing annals of what are termed prehistoric Pharaohs. He then proceeded to discuss the probability of the Hebrew records of Genesis being indebted to Babylonian and Egyptian myths and legends, as illustrated by the supposed adoption by the Hebrews of the artistic designs and iconography of the two Empires. For this purpose he showed a number of Phœnician and Syrian monuments with Phœnician and Aramaic inscriptions, but it is worthy of note that he did not produce any Hebrew or Jewish relic showing similarity with either Egyptian or Babylonian art. Moreover, the specimens selected were mostly of late date. For instance, one of these was the well-known stone sarcophagus of the Sidonian prince Eshmunazar, which bears a long Phœnician text. This was adduced as an instance of Egyptian influence in Syria. But the famous coffin of another of these princes, Tabnith, would have been, perhaps, a wiser selection, because not only is it of Egyptian work, but it still bears the inscription of the Egyptian officer for whom it was made, some thousand years before it was utilised at Sidon. The fact that in the Persian period there was a brisk trade in secondhand Syene granite sarcophagi between Egypt and Syria can scarcely be used as a proof of the adoption by the writer of Genesis of Egyptian and Babylonian myths many centuries earlier.

The monuments, consisting of ornamental reliefs with Phœnician or Aramaic texts indicating Egyptian influence, in each case depicting representations of female deities—an idea absolutely opposed to all Hebrew religious sentiments—and the admission of such concepts into the theology of the neighbours of the Jews does not really lead to any inference of literary influence upon the Old Testament authors. As an instance of the far-reaching effect of Babylonian culture Professor King mentioned the figures upon our clocks and watches and our twelve-hour day, admitting that we derived these through the Greeks, and not by way of Palestine. This time measure, it should be remembered, is based upon the sexagesimal Babylonian system, their sacred number being the *sess*, or sixty. Whilst we know little of the mental concepts which gave rise to this arrangement, the twelve-hour day appears to have been the result of the division of diurnal time into a series of periods of sixty minutes of sixty seconds each—two *sess* numbers. The Hebrews, however, ignored the *sess* system completely, and seem to have had some knowledge of a decimal reckoning, because the term "thousand" is often used and the sacred law was of ten commandments. Whilst the Roman numerals we use are indicative of a twelve-hour period, the figures themselves are based upon a decimal calculation, they being founded upon signalling numbers by means of the fingers and thumbs—ten in all—of the human hand.

That the Phœnicians and allied races in Syria should in their artistic designs be much indebted to Babylonia and Egypt is natural, because ancient authors allege that they were emigrants from the littoral of the Persian Gulf; and

they were great maritime traders with Egypt, their galleys continually sailing up the eastern mouths of the Nile Delta, while the Pharaohs used to charter their ships for Mediterranean voyages.

Mr. King suggested that as Solomon employed Tyrian workmen for building the Temple, its ornamentation was of Babylonian and Egyptian design. But we have a somewhat full description of the artistic motives of the decoration, and they do not support this theory. Nowhere do we read of colossal lion-headed bulls, sphinxes, and gryphons, or animal and human forms combined, or figures of deities; neither of reliefs of wars and triumphs, such as abounded in the temples of the two great nations, because no Hebrew king was deified, and no image of the one God, Jehovah, was permitted. The only approaches to the shrine furniture of other cults seem to have been the bronze so-called kettle-wagons, which are similar to some known to have been used in Cyprus and Greece.

ALBANIA, PAST AND PRESENT.

The story of Albania was the theme of a lecture delivered by Miss M. Edith Durham before the Central Asian Society on December 14. She said that reports of the present condition of the country represented it as worse than that of Belgium. The men were being forced into the Austrian army, and the civil population were dying of starvation in many districts. An American missionary had recently stated that at least 150,000 people, largely women and children, had died of hunger and misery since the present war began.

The Albanians, said Miss Durham, are the direct descendants of the ancient inhabitants of Illyria and Epirus. They still cherish the tradition of Pyrrhus, "who beat the Romans and everybody else." They call him Burrus, and *A je burra*, "How art thou, my brave?" is a common salutation among them to-day. Plutarch tells us that the soldiers of Pyrrhus hailed him as the eagle. The modern Albanian calls himself Shkipetar and his country Shkiperia, words derived from shkip, an eagle. Christianity was introduced very early; the Albanians indeed claim to have been converted by St. Paul, who says, "Round about Illyria have I preached the Gospel of Christ." The Romans succeeded at last in subduing the country, but never in completely Romanising its inhabitants. Afterwards came the Slavs. Stephen Dushan conquered Albania, and endeavoured to force its inhabitants to leave the Roman communion for that of the Greek Church. He punished by death those who obstinately refused to be converted. Thus was developed a hatred between the two peoples, which has lasted down to our own day; and, during the first Balkan war, hundreds of Albanians who refused to join the Orthodox Church were murdered or deprived of all they possessed and driven out of the country. The Turks, said Miss Durham, had never treated the Balkan Christians as badly as they treated one another. After Kossovo, Albania maintained for centuries a fight against the Turks. Their great hero, Skanderbeg, made the country entirely independent while he lived, and, when the Turks at last conquered, they were content to exact only a military tribute.

The Albanians did not begin to embrace Islam until the seventeenth century, and their doing so was mainly the result of neglect by their own Church. They were put under bishops who were mostly foreigners, and who chiefly occupied themselves with squabbles about the frontiers of their dioceses. One unfortunate result of the change of faith was to lead other people to regard the Mohammedan half of the Albanian population, as Turks, though they were really as intensely national in spirit as their Christian compatriots, and joined in the efforts for Albanian freedom. Under Ali Pasha, Albania was for a time independent. At the time of the Berlin Treaty Great Britain was in favour of forming a large autonomous Albanian province, but the Powers were not unanimous, and all that was done was to recommend reforms. The Sublime Porte responded to this by arresting the heads of the Albanian League, and executing them or exiling them to Asia Minor. Afterwards it permitted Albanian schools to be opened, and allowed printing in the Albanian language. Then these privileges were withdrawn, and, when Miss Durham first visited Koritza, in 1904, its unfortunate schoolmaster was still serving a term of fifteen years' imprisonment. The Greeks helped the Turks in this work of repression. A Greek bishop excommunicated the Albanian language, and a Greek priest told the people it was useless to pray in that tongue because Christ did not understand it. The Young Turkish revolution was hailed with joy in Albania, newspapers sprouted up, and schools were opened. Then again came reaction, leading up to the revolt of 1910, since which time the country has been incessantly harried by foreign troops. Turkish, Montenegrin, Serbian, Greek, Bulgar, and Austrian armies have successively swept in, plundering and slaughtering the inhabitants.

An enthusiastic mass meeting of Greeks in Melbourne has sent a cablegram to M. Venizelos expressing admiration for his courage in showing the whole world that the Greek people, except for a small and unrepresentative minority, are whole-heartedly in sympathy with the Allies.

The Post Office announces that parcels can now be accepted for transmission to Salonika (including the immediate locality) and the Islands of Crete, Thasos, Lemnos, Mitylene, Chios, Samos, Fourni, and Syra. Parcels cannot be accepted for transmission to any other part of Greece.

MONTENEGRO.

Any interested in the commercial and general development of this country, together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

LETTERS TO THE EDITOR.

THE MOSLEMS OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have read with interest in your issue of the 15th the letter addressed by Mr. M. Irfan to Mr. Arnold J. Toynbee, concerning a passage in the latter's book, "The Balkans: A History of Bulgaria, Serbia, Greece, Roumania, Turkey" (Oxford: Clarendon Press, 1916). The passage in question, according to Mr. Irfan's letter, is:—

The whole population of the island (i.e., Cyprus) is Greek in language; while under an excellent British administration its political consciousness has been awakened, and has expressed itself in a growing desire for national unity among the Christian majority. It is true that in Cyprus, as in Krete, there is a considerable Greek-speaking minority of Moslems who prefer the *status quo*; but since the barrier of language is absent, their antipathy to union may not prove permanent. However important the retention of Cyprus may be to Great Britain from the strategical point of view, we shall find that even in the balance of material interests it is not worth the price of alienating the sympathy of an awakened and otherwise consolidated nation.

Mr. Irfan is quite correct in his contradiction of the statement that "the whole population . . . is Greek in language" . . . and that "there is a considerable Greek-speaking minority of Moslems."

Besides the references given by Mr. Irfan to the Report on the Census of 1911, Mr. Toynbee might, with profit, have read a few lines in "A Handbook of Cyprus," by Sir J. T. Hutchinson, Chief Justice of Ceylon, and Claude Delaval Cobham, 1907, (p. 58):—

The language spoken by the largest number of inhabitants is modern Greek . . . in which is found a large admixture of French, Italian, and Turkish words. Italian and French are spoken in a few families of Latin origin, Arabic by the Maronites. The Osmanli Turkish spoken by the Moslem inhabitants is considered pure. . . . Officially English, Turkish, and Modern Greek are recognized in the administration and courts.

The above is reproduced in the seventh issue (1913) of the handbook, revised and edited by Henry Charles Lukach, M.A., Private Secretary to the High Commissioner, and Douglas James Jardine, B.A., Junior Assistant Secretary to the Government of Cyprus (pp. 32,33).

I have preferred to quote from an earlier edition of the handbook because the late (alas!) Claude Delaval Cobham was probably the best authority on the languages of Cyprus, where he was a Commissioner 1879-1908. A correspondent of *The Times* (June 3, 1915) wrote:—"If the visitor preferred to talk in Greek or Turkish, French or German, Italian or Persian, he found Cobham able to converse with him in any of these tongues."

In *The Times* of March 25, 1915, appeared a description, by Mr. H. C. Lukach, of the opening of the Legislative Council at Nicosia. In the last paragraph is the following:—

The High Commissioner concludes the reading of his speech, removes his hat as he bows to the Council, and leaves the Chamber to inspect the guard of honour furnished by the Cyprus Military Police, a force composed of Turks and Greek Christians. Meanwhile, copies of the speech, printed in the three official languages of the island, are distributed among the members.

As to what Mr. Toynbee says about what he describes as the "considerable Greek-speaking minority of Moslems" (in fact, a Turkish-speaking minority of Moslems) and their possible willingness to accept union with Greece, "since the barrier of language is absent" (undoubtedly an error of information), I may usefully quote a few lines from a letter, written to me some years ago by the then High Commissioner:—

There is one important element in the matter of the Tribute which should not be overlooked—viz., the strong Moslem feeling in regard to the sanctity of the Sultan's sovereignty. There are 50,000 Moslems in Cyprus, and they regard the Tribute, crushing though it be, as the visible sign of the Sultan's supremacy; and, extraordinary though it may appear, they are strongly opposed to any reduction of the amount to be paid by the island. The fact of the Sultan not getting the money directly does not influence them at all in their view of the matter.

This extract comes from a letter written some years before the war. It serves to show what were the feelings of the Turks of Cyprus, and I doubt their having changed at all.

I may add, concerning the Turkish language in Cyprus, that I well remember meeting there, many years ago, a young Englishman, an Oxford graduate,

if my memory is correct, who was staying in the island in order that he might learn Turkish, taking his lessons from a Cypriot Turk, this because "the Osmanli Turkish spoken by the Moslem inhabitants is considered pure."

Surely a writer on serious subjects should get his facts right before he produces arguments and draws conclusions.—I am, etc.,

ROBERT PIERPOINT.

8, Cleveland Square, Lancaster Gate,
London, W.

AN IMPUDENT FORGERY.

The following statement was issued by the Foreign Office on Thursday last week, too late for publication in our issue of the 15th inst.:—

M. Venizelos has addressed the following message to his Majesty's Government:—

"Those governing at Athens have just committed another infamy towards me by publishing in their newspapers, the only papers which now appear at Athens since the sack of the offices of the Liberal papers, in facsimile a letter which I am supposed to have addressed on November 7 last to General Korakas, explaining to him my political projects and my preparations, in concert with representatives of the Entente, with a view to my installation at Athens with official recognition of the Powers.

"I have never written such a letter, and I denounce the forgery to which those governing at Athens have had recourse in the hope of completely misleading public opinion."

SERBIANS AND MILITARY SERVICE.

The following notice has been issued by the Serbian Legation:—

"In pursuance of Article 3 of the new Law respecting persons evading military service published in the Serbian *Official Gazette* and according to the Order of the Minister of War No. 38519, all Serbian subjects must be examined by the Medical Commission in Paris, as well as all others under Serbian protection, aged between eighteen and fifty-four, who are abroad, irrespective of any previous examination and exemption. All those residing in the British Isles and their Dominions will be examined in Paris by the Medical Commission, who have already commenced this examination. Therefore, in order that they may be sent to Paris, all those concerned must call on the Serbian Military Attaché at his offices, 115, Gloucester Road, S.W., between 11 a.m. and 1 p.m. and 3 and 6 p.m. any weekday, who will give them railway tickets free of charge to Paris, as well as other necessary papers. Those who are exempted by the Commission will be sent back free of charge supplied with the document or exemption. Any who fail to comply with this notice will have the most stringent legal steps taken against them, and those who are under Serbian protection and do not respond will have that protection withdrawn."

Under date of December 18, Reuter's correspondent in Washington reports:—"It is learned from the State Department that Turkey's conduct towards Armenians and Syrians has brought to an abrupt termination the extra-territoriality agreements with the United States, and has created a situation that is postponing confirmation of the appointment of Fuad Bey as Ambassador in Washington."

Alexander Gorbachevitch, a priest of the 115th Russian Division, who has escaped from captivity in Austria, says:—"The Serbian prisoners of war unquestionably look more unhappy than ours. They have all become very weak and emaciated from hunger, and they look for roots to eat. I don't think I ever saw a set of men looking more wretched."

King Peter of Serbia has been visiting the Macedonian front.

The Duke and Duchess of Connaught, Princess Patricia, the Grand Duke Michael and Countess Torby were present at a concert at Queen's Hall in aid of the Serbian Prisoners' Christmas Gift Fund on Wednesday.

Lord Cromer will spend Christmas in Scotland.

Lady Maxwell and Miss Maxwell have left London for York.

Lord and Lady Oranmore and Browne left their residence in Cavendish Place on Wednesday night for Castle Macgarrett, Claremorris, County Mayo.

The Hon. Lady Byng, having taken 22, Princes Gardens for the remainder of the winter, arrived there on Monday.

The Right Hon. A. J. Balfour, M.P., Secretary of State for Foreign Affairs, has appointed the following to be his Private Secretaries:—The Hon. James Eric Drummond, C.B., Private Secretary; the Hon. Theo Russell, C.V.O., Diplomatic Private Secretary; Mr. Cecil Dormer, Assistant Private Secretary; Mr. Ian Zachary Malcolm, M.P., Parliamentary Private Secretary.

Field-Marshal Lord Grenfell is laid up with influenza, and has been obliged to cancel his engagements.

Lord Robert Cecil received the Roumanian Minister and the Serbian Minister at the Foreign Office last Friday afternoon.

On Monday afternoon a memorial to Earl Kitchener was unveiled at The Heritage Craft School, Chailey, Sussex, by Lord Kitchener's sister, Mrs. Parker. It is the gift of Mr. F. J. Benson.

Commander Oliver Locker-Lampson, who returned to this country last week from Roumania, was in the House of Commons on Friday, and received warm greetings from all sides.

Readers of THE NEAR EAST will have been much interested in the announcement, made at the end of last week, that Sir Mark Sykes had been offered the post of Under Secretary to the Foreign Office, but had declined it because he felt that he could be of more use by continuing the work he has been doing for the Imperial General Staff. The announcement of the offer will have come as no surprise to those who have followed Sir Mark's career. His maiden speech in the House of Commons marked him out as one of the rising men, and since that day he has gone steadily forward along the path of parliamentary success. That he has a lively wit and an original way of looking at things is shown both by his speeches and his writings; and wit and originality are qualities that still count in Parliament. Moreover, he

has travelled extensively, and has studied men, manners, and methods of government in many countries. His knowledge of Turkey and the Near East is particularly full, and his sympathy with Islam and the Moslems is very apparent in his writings. That knowledge and sympathy have been of much service to this country in the present war; and though many of his friends and admirers will feel regret that he has not seen his way to accept the offer recently made to him, it is probable that his decision is a very sound one. During the war he has done excellent work in connection with the Mesopotamia expedition; and when the time comes to discuss the many questions that must crop up in regard to Asiatic Turkey it is to be hoped that his ideas and opinions will be taken into consideration by the authorities.

A marriage has been arranged between Lieutenant Donald Swinton Campbell, West Kent Yeomanry, eldest son of Mr. Colin and Lady Angela Campbell, of Everlands, Sevenoaks, and Madge, eldest daughter of Mr. and Mrs. Percy Carver, of Alexandria, Egypt.

A marriage has been arranged, and will shortly take place, between Evan Roland Campbell, Lieutenant Royal Sussex Regiment, youngest son of William Middleton Campbell, of Colgrain, Dumbartonshire, and Fen Place, Sussex, and Antoinette Priscilla Vulliamy, younger daughter of Mr. and Mrs. Robert L. Devonshire, of Maadi, Cairo.

At St. Peter's Church, Cranley Gardens, the marriage took place last Friday of Captain James L. Willcocks, M.C., Black Watch, only son of General Sir James Willcocks, G.C.M.G., K.C.B., K.C.S.I., D.S.O., and Muriel Kathleen, younger daughter of the late Colonel Gordon-Price and of Mrs. Gordon-Price, of Ootacamund, India. The service was taken by Prebendary W. S. Swayne, the vicar of St. Peter's. The bridegroom was accompanied by Captain Carkett James, D.C.L.I. Among those present were General Sir James and Lady Willcocks, Viscountess Charlemont, Lady Greagh, General and Mrs. Malleston, General and Mrs. Hudson, Mr. and Mrs. Carkett James, Mrs. Sheppard, Mrs. Ramsay, Miss Jellicoe, Colonel Tomkins, Colonel and Mrs. Lowry, Mrs. and Mrs. E. C. P. Hull, Mrs. Colvin, Mrs. Campbell Krook, Colonel and Mrs. Merewether, Captain Smith, and Mrs. Dottridge.

Her Majesty Queen Alexandra has been graciously pleased to accept a copy of the recently published volume of "Armenian Legends and Poems." Her Majesty writes that the subject is one in which she has always taken the deepest interest, adding that the book is a charming and fascinating one. The volume has been compiled and illustrated by an Armenian artist, Zabelle C. Boyajian, who is giving all the profits to the Lord Mayor's Fund for Armenian Refugees. Lord Bryce has written a preface for the book, which also contains a contribution on Armenian epics, folk-lore, and mediæval literature. It is published by Messrs. J. M. Dent and Sons, Ltd., and will make an excellent gift-book for Christmas, serving at the same time the purpose of helping to mitigate the sufferings of the Armenians.

A cablegram received on Monday at the Red Cross Headquarters from Salonika states that in the presence of the Crown Prince of Serbia, General Tertsitch, Minister of War, and General Boyovitch, Commander-in-Chief, the thirty ambulances and two motor kitchens sent by the Joint War Committee of the British Red Cross Society and the Order of St. John to the medical services of the Serbian Army were formally handed over ready for immediate work. The Crown Prince expressed his high appreciation of the gift.

On Thursday afternoon last week a meeting was held in the "Star and Garter" rooms, 21, Old Bond Street, in aid of the fund which British workers with the Serbian Army are raising to send Christmas presents to Serbian soldiers. Lady Whitehead presided. The Serbian Minister expressed the appreciation of all Serbians for what had been done for their countrymen by British doctors, nurses, and other workers. Professor Popovitch and Dr. Curcin also spoke.

Professor Popovitch told a story of an English officer who, he said, had made the Serbians more than ever admirers of the English. A Serbian soldier called his colonel's attention to an English officer covered with mud, saying, "Look, Colonel, at that officer. He has been knocked down fourteen times by German shells and yet has never left his division." That English officer, said Professor Popovitch, was Captain E. Hilton Young, M.P., who was formerly City Editor of the *Morning Post*.

Mr. W. H. Crawford Price has, I understand, agreed to deliver some lectures in this country during the present month on Serbia's part in the war, says "Whitefriars" in the *Newspaper World*. Mr. Price is well qualified to speak on the subject, having served *The Times* from the time of the outbreak of the first war in the Balkans down to the present, and has spent nearly the whole of that period in the peninsula. In 1909 he was attached to the Turkish army, in the second Balkan war he was with the Greeks, in 1914 he had special facilities with the Serbians, and now he is the "Eye-Witness" with the new Serbian army. Few men possess a better right than Mr. Price to lecture on the subject announced. At present he is making arrangements for the inauguration of a Y.M.C.A. service in Serbia, and moreover hopes to supervise this useful installation.

A successful matinée in aid of the Serbian Relief Fund was given at the Lyric Theatre last Friday afternoon by the British Empire Union. Sir Mervyn Manningham Buller presided; and, in addition to many excellent "turns" of the now usual kind, Mr. W. Joynton-Hicks, M.P., and Dr. Clement Philippe delivered short speeches.

The Anglo-Hellenic League (Reuter's Agency states) received information last week that Professor Sotiriadis, Professor in the Foreign Schools of Archaeology of Athens, was arrested on the 13th inst., and that it is expected that M. Petrocochino, head of the Athens branch of the Anglo-Hellenic League, would also be shortly arrested.

Viscountess Bryce opened on Saturday afternoon a fancy sale at Maitland Lodge, Addison Road, Kensington (lent for the occasion by Mr. N. P. Hacobian), in aid of the Armenian orphans in the Caucasus. The sale was arranged by the Armenian Ladies' Guild, and Colonel Gregory, President of the Armenian Association of London, said the particular aim was to provide funds for succouring the large number of orphan children held to ransom by Kurds and Turks. So far over £2,000 had been subscribed by the Armenians of London and Manchester. Lady Bryce made a strong appeal for the practical sympathy of the public, and Miss Pauline Aganoor, the organising secretary, stated that £600 had already been subscribed in connection with the sale.

The London Committee of the French Red Cross is sending a motor convoy to the Balkans. It will consist of 15 motor ambulances, 1 repair van, and 1 touring car, driven by 25 voluntary British drivers, under the command of Major Lyon-Clarke. The cars and their equipment are the gift of Sir Lucas E. Ralli, and will bear his name.

News by letter from the Scottish Women who have been nursing the wounded in the Dobruja was received last week. The base hospital was set up at Medjidie, for the Serbs, but the patients were a medley of Serbs, Russians, and Roumanians. This hospital was only able to work for three weeks and then the evacuation began. After five days the unit was at work once more, some of its members having found a hospital of 11,000 wounded Roumanians needing help, with only one surgeon and six doctors to attend to the patients. Some of the unit carried on a hospital of 100 beds for the 1st Serbian Division, and two of the Scottish Women were lent to a British Red Cross Unit. The Russian military authorities have recommended the whole unit for medals.

Colonel Dragutin Dimitrievitch, of the Headquarters Staff of the Serbian Army, has been attached to the Headquarters Staff of the Belgian Army.

ORIENTAL STUDIES.
THE SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C., will be OPENED on 18th JANUARY, 1917. Courses will be held in the Principal Languages of the Near, Middle, and Far East, and of Africa. Courses will also be given on Oriental Religions and Customs. Intending Students are invited to apply at once to the undersigned. E. DENISON ROSS, Director.

Mr. Richard W. Abdy writes to the *Egyptian Gazette*, regarding the memorial to the late Judge Sandars:—"We, the small committee named, have erected in St. Mark's Church a tablet in memory of our late friend. After defraying the cost of this tablet, we have in hand funds, which, after consulting the Head of Victoria College, we intend devoting to form a 'Judge Sandars Library,' to be added to the existing library at Victoria College. This will, we feel, perpetuate the name of Judge Sandars in a manner which would have had his approval." The memorial was to be unveiled on November 28.

Under date of December 11, the Budapest correspondent of the *Morning Post* writes that the Hungarian war correspondents at Bucharest "relate that the King and Queen of Roumania, with their suite of about twenty people, left Bucharest early in the morning of December 2 in six large motor-cars, which were followed by five motor-lorries carrying the personal luggage of the Royal Family. Where the party drove to is not known in Bucharest, but it is believed they have taken up their quarters at the present seat of Government at Jassy. The officials who were left behind in the Royal Palace declare that at the last moment the Queen seemed quite happy, and that in saying 'au revoir' to them she declared that she would soon be back. The King, too, seemed as unconcerned as if he was simply going off on a shooting expedition."

The following is an extract from a letter sent home from Salonika by a Glasgow medical graduate, and published in the *Glasgow Herald*:—

"To-day (November 27) has been a very famous day here. We have in the hospital, as I think I told you, a woman fighting with the Serb infantry, Podnaridnik (Sergeant) Mitunca Savitch. She has been six times wounded. Also we have another Joan of Arc, a Miss Sands, who has been fighting with the Serbian infantry, and is a sergeant too. She has fought since the retreat last year, refusing to go back with the hospitals, where she was a nurse. She is a parson's daughter of a Kerry family (Protestant), who left Ireland when she was a young girl. She has been magnificently brave, and has been in the trenches all the time roughing it. She has distinguished herself time and again, leading her section in the charge, and rallying the men in tight corners. She has won all the highest honours for individual bravery, including the Milosh Obilitch Order, which is like our V.C., and is given in silver and gold, the gold being the greater honour. Well, she won that. There is only one higher grade in the Serbian Army—the Cross of Kara (black) George, with Swords.

"To-day the Serbian liaison officer, whom I had met in Salonika, came out to visit her," the writer continues. "By the way, he is on the Crown Prince's personal staff. His mother was a Scots lady and his father a Serb of family. The Crown Prince sent him to-day to present the Cross of Kara George, with Swords, for exceptional bravery in the field to Miss Sands. The Serbs were strongly attacked, and not too well reinforced at a particular spot—they were fighting in mountains deep with snow—and Podnaridnik Sands hopped over the parapet and rallied her men, shouting 'Aide' (come on!). Not on one, but on many occasions, was she successful in breaking a section of the attack. She is to be promoted to sergeant-major."

Reuter's Agency states that M. Gennadius was received by the King at Buckingham Palace yesterday, on relinquishing his post of Greek Minister in London.

FLIGHT COMMANDER HANS ACOWORTH BUSK, R.N., missing in the Dardanelles since January 6, 1916.—Any definite information that might be obtained through relatives or prisoners of war in Turkey concerning the fate of this officer would be gratefully received by his mother, Mrs. Busk, 6, Wadham Gardens, Regent's Park, N.W.

SEC.-LIEUT. GEOFFREY N. P. D'ERF WHEELER, Dorset Regiment, missing, September 26-30. Any information will be most thankfully received by his mother, Mrs. d'Erf Wheeler, 97, Comeragh Road, West Kensington.

OBITUARY.

MR. A. DE VERE VERE.

It is with deep regret that we learn of the death of Mr. Arthur de Vere Vere, late of Constantinople, which took place at his residence 66, Fitzjohn's Avenue, Hampstead, N.W. Although ailing for some time past, his health had of late so considerably improved that he had virtually resumed his normal life. There was nothing to lead anyone to expect the fatal end which came, quite suddenly, on Sunday morning last, Mr. Vere being himself in the best of spirits and looking forward to going out to lunch with his daughter.

Mr. Arthur Vere was well known in Constantinople, and especially in diplomatic society there. He represented various important British interests in Turkey for close upon forty years, and it might be said that he was one of the oldest British residents in Pera. He was greatly respected and a general favourite with all those who came into close contact with him, his agreeable and pleasant manners and generosity making for him many real friends. We feel sure that there are many of our readers who will learn with real sorrow of his death.

The funeral took place at St. Peter's, Eaton Square, on Wednesday, at noon, and was very largely attended. Among others present were Lady Lowther, Sir Vincent Caillard and Mr. Esmond Caillard, Sir Henry Wood, Count Ostrorog, and many former residents of Constantinople.

News has been received in London of the death of Dr. Andrew Watson, an American, who had been engaged on missionary work in Egypt for over half a century.

Major-General Sir William George Knox, K.C.B., Colonel-Commandant Royal Artillery, died at his residence, 24, Portman Square, on the 14th inst., aged 69. He was the son of the late General T. E. Knox, C.B., and obtained his commission in 1867, reaching the rank of Major-General in 1902. General Knox saw a great deal of service. He was in the Abyssinian Expedition of 1867-8, the Ashanti War of 1873-4, the Zulu campaign of 1879, and the South African War (1899-1902). In South Africa he was on the Staff taking part in the Defence of Ladysmith, and being specially mentioned by Sir George White in despatches. He was awarded the Queen's and the King's medals with six bars and was made a Knight Commander of the Bath. Between 1902 and 1908 he held various commands in the Armies in England and Ireland. He married in 1889 Alice, second daughter of Sir Robert Dundas, of Arncliffe.

The death has occurred at Bath of Major-General Alexander Caesar Hawkins, aged ninety-three years, son of Sir John Caesar Hawkins, third baronet. He obtained his commission in the Royal Artillery on January 1, 1842, and retired in 1880. During the Crimean War he was present at the siege and fall of Sebastopol. He was mentioned in despatches and received the medal with clasp, the Turkish and Sardinian medals, and the Fifth Class of the Order of the Mejidieh. In 1871 he was created a Companion of the Bath.

We regret to learn that Second-Lieutenant Baron Brooke Booth, Northumberland Fusiliers, who was officially reported wounded and missing on September 15 last, is now unofficially reported killed on that date. The fourth son of Captain and Mrs. J. Brooke Booth, of Alfriston, Cole Park Road, Twickenham, he was educated at Gresham School, Holt, Norfolk, and when war broke out held an appointment under the Colonial Government in Cyprus. He was granted special leave to come to England to take a commission in a battalion of his father's old regiment. He was twenty-eight years old.

Lieutenant-Colonel G. F. Pridham, Welsh Regiment, died on December 16 abroad. He joined the Welsh Regiment direct from Sandhurst, served throughout the South African War, and was awarded both medals with seven clasps. Four years later he joined the Egyptian Army, in which he rose to command a battalion, and served in the Kordofan campaign. His engagement with the Egyptian Army ended last year, when he was given command of a battalion of his own regiment. He was recently mentioned in despatches.

DOMESTIC ANNOUNCEMENTS

MARRIAGE.

BRISTOW—CALLEJA.—On December 3, at Malta, Captain Laird C. Bristow, R.G.A., only son of the late Lieutenant J. L. Bristow, the Welsh Regiment, and of Mrs. Bristow, Southsea, to Gertrude Pauline, only daughter of Mr. and Mrs. Phillip Calleja, of Newsham, Sliema, Malta.

DEATHS.

HARRIS.—On December 15, 1916, at Hilliers, Park Hill, Carshalton, Edward Harris, formerly of Constanza, Roumania, Commandeur de l'Etoile de Roumanie, aged 81.

VERE.—Suddenly, at 66, Fitzjohn's Avenue, Arthur de Vere Vere, of Constantinople.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.53; Room, P.T.23; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach.

Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

FRIDAY, DECEMBER 22, 1916.

GERMANY'S PEACE OFFER AND THE NEAR EAST.

That Germany should have chosen the moment when Bucharest and a large part of Roumania had fallen into her hands to propose peace negotiations is proof that she has a shrewd appreciation of her own interests. But, as usual, she has shown herself a bad judge of the psychology of other nations, and the manner and terms in which she has made the offer have gone far to rob it of the subtlety it might otherwise have had. The claims to invincibility, the threat of yet greater ruthlessness, ill suit a nation that would pose as the aggrieved party; for a people that has been gratuitously and unjustly attacked and feels itself confident of victory can be content only with a peace which leaves its enemies no longer in a position to renew hostilities. It is for this reason that the Allied Powers can have nothing to say to any offer of negotiations at this stage. Germany, however, with other and wider aims in view, realises how much she has already gained in the direction of the attainment of her ambitions, and is prepared to sacrifice what she can dispense with for the time being, in order to make sure of the essentials in her far-reaching plans. Those plans, as the Entente Powers are only now beginning to understand, are concerned more with South-eastern Europe (and beyond) than with any other part of the Continent. Much has been made of the indispensability of Belgium to Germany's future freedom from "aggression"; in the same way she is to be protected on the east by the independence, under German sovereignty, of Poland. Both of these so-called safeguards, it is more than probable, are mere pawns in the game, to be surrendered in the last resort in order to secure the safety of more valuable pieces. There is in Germany a section of public opinion which recognises that the retention of Belgium is only compatible with the sweeping victory that is no longer likely to be attained; but so far no one has dared to contemplate the possibility of such a disaster to German arms as would deprive her of her gains in the Balkans or challenge her liberty to direct the destinies of Near-Eastern Europe in the way that seemed good to her. Germany, the Allies may rest assured, knows her own business best. The maintenance of her dominating position in South-eastern Europe is the one factor which she will hope to save intact from the welter of her shattered aims, and it is, therefore, unlikely that she will reach the frame of mind required for the acceptance of the only terms of peace to which the Allied Powers can agree until she has been driven from her stronghold in the Balkans.

The fact that the Naumann idea of a "Central European Block" extending from the Baltic to Baghdad has met with strong opposition both in Germany and Austria in no way implies any abandonment of the resolve to strengthen the political and economic bonds between the Central Powers, the Balkans, and Turkey in accordance with German interests. Naumann propounded the theory of a compact state independent of all foreign nations for its supplies. Shipping and industrial interests in Germany had little difficulty in proving the weakness of such a scheme; and it is now accepted in the words of Count Reventlow, that "the aim of the freedom of the seas cannot be replaced by the aim of 'Berlin to Baghdad.'" But, the same writer is careful to add, the scope and the meaning of these aims do not overlap except to an insignificant extent, while, on the other hand, they are mutually complementary. "'Berlin to Baghdad,'" he continues, "is an old objective of German policy, even in time of peace. The relations which have been

developing since the war between ourselves and the Turks—especially in view of the principles of the Turco-German Alliance—led naturally, on military and political grounds, to the necessity of opening the route from Berlin to Constantinople via Sofia." The fact that Naumann has recently been sent to lecture to the Bulgarians on the advantages of close economic co-operation between Germany and Bulgaria is a sign that the former is not going to allow her future plans to be thwarted by lack of enthusiasm on the part of individual members of the Central Alliance. The over-running of Roumania has provided an opportunity for strengthening the weak links in the chain which is to connect Germany with the Middle East. Parts of Wallachia are to be used to widen "the corridor," and have already been theoretically partitioned between the claimants. In regard to Serbia, it has been laid down as an axiom of German policy that her restoration is out of the question. She must be so reduced and fashioned within and without as the interests, on the one hand, of an assured connection between Central Europe and Constantinople, and, on the other hand, the interests of Germany's Bulgarian and Austro-Hungarian Allies demand. Whether the economic consolidation of this block of Powers is to be achieved by the State or by private agency, or by a judicious combination of both, can be left to circumstances to decide. The point to be borne in mind is that Germany is not likely of her own accord to loosen the hold which the war has given her over Bulgaria and Turkey.

The answer of the Entente Powers alike to Germany's schemes and to her offers to negotiate peace terms must be the drafting of a clearly defined programme which will embody the objects for which they are fighting. It may be that before peace can be declared a settlement will have to be reached on one point or another (witness the question of Constantinople), and it is essential that every detail should be adjusted in such a way as to form part of a consistent policy. The war began over the Balkans, and we must look to a settlement of the Balkan question as an indispensable preliminary to permanent peace; for, unless there is peace in the Near East, the peace of Europe as a whole can never be assured. Germany and her Allies count on the elimination of Serbia and the absorption of all or the greater part of Roumania. The principle of nationality to which the Allies stand pledged requires that Roumania, Serbia, Bulgaria, and Greece should each be allowed to live a separate existence, but at peace with one another, in conformity with the requirements of Europe and in their own interests. If this goal had been clearly kept in view from the outset, and had been carefully explained to all concerned—to the Greeks, for instance—the course of events in the Near East might well have been different. The settlement of the Balkan question cannot be left to any peace conference. Germany's recent overtures have been made because it would suit her plans admirably to have peace now on her own terms; sooner or later she will be ready to accept it on the Allies' terms. At the present stage of the war it is not difficult to recognise how suicidal to the Allies' cause would be anything in the nature of a truce; it ought to be recognised that a truce will be equally prejudicial whenever Germany asks for one. For the time being she pictures to herself a conference at which, thanks to her own unity of control and the lack of it among her enemies, she will be able to play havoc among the Allies. The latter can never have the same unity of control, but they can acquire a corresponding strength of purpose by agreeing beforehand on a definite programme of peace. As it will have been drawn up with a single eye to the permanent peace of Europe, it will, when once accepted by all the Allies, admit of no further discussion, and can be presented to the enemy for his acceptance or rejection. All attempts to represent such a stage in this war as unattainable are echoes of Germany's desire to proclaim "a draw." The first peace conference can be restricted to the members of the Central Alliance, who will have to decide among themselves when they will accept the Allies' demands. Thereafter a European congress can ratify the charter of a new Europe, in which those Governments or individuals who have shown that they observe neither treaties nor laws will have no part.

THE FUTURE OF PALESTINE.

BY ESTELLE BLYTH.

II.

We said at the beginning that the history of a country was largely determined by its geographical conditions. A glance at the history of Palestine bears out this statement in a very definite way. It is a tangled narrative of changes and conquests, the early records being vague and unsatisfactory in the main, though certain periods and facts stand out with some distinctness against the shifting background of uncertainties. Excavations in Palestine reveal traces of prehistoric dwellers in caves, whose implements were fashioned from bone; the skulls and bones of these people are akin in some instances to the modern inhabitants. As a land of many tribes and petty kings, with their perpetual wars and ineffective treaties, each one striving to get the upper hand, it is difficult to form any distinct historical idea of it from the confusion of battle ever waging amongst these tribes; and when out of the vagueness of these shifting periods appear the Hyksos, the invaders of Egypt (1700 B.C.), they present a welcome sharpness of outline. The hand of Egypt lay heavy upon Palestine for many years, some of the kings of the land even being appointed by Pharaoh, to whom they appealed for help, vindication, or redress in their constant internecine wars. Seti I. (1320 B.C.) led an expedition into Palestine; but the power of the Hittites (from Northern Syria and Mesopotamia) was gradually building itself up in the land, and Rameses II. (1300 B.C.), in a treaty with them, renounced all the Egyptian holding in Palestine. Egyptian supremacy revived under Rameses III. (1200—1169 B.C.), but fifty years later the Assyrians under Tiglath-Pileser swept away in their rapid encroachment the landmarks of both Egyptian and Hittite suzerainty.

We find a supreme interest, of course, in those periods immediately concerned with the Bible. Palestine, divided into a series of small kingdoms ever at variance, was in a state which rendered it peculiarly open to foreign aggression; and amongst those petty tribal kingdoms the Hebrew invaders out of Egypt made a firm place for themselves, aided, no doubt, by that learning of the Egyptians which they brought with them in the formation of an ordered communal life. They took deep root and spread themselves out, and in the interval between their entry under Joshua and the day of the Messiah Whom they rejected, theirs was the history of the land. It is strange that, despite a mass of oral tradition, and the work of scribes, the political records of the Jewish monarchy are yet so slight. In reading the books of the Old Testament which are concerned with the events of those years, and taking them merely as historical records of the kingdoms, we are struck by the prominence given to the personal character and life of the king, and the correspondingly scanty attention paid to the country and its foreign policy and relations. We are told, for instance, of Solomon's fleet and his riches gathered by it from all lands, but we are given no details of his policy, home or foreign, which seems to have been governed largely by a commercial spirit. The records of the kingdoms of Israel and Judah are chiefly the records of the life and deeds, good or bad, of each king, and of the never-ending struggle between the hierarchy and the monarch. The kingdoms, which lasted, roughly speaking, from 1075 B.C. to 597 B.C., drew to their mournful and dishonoured close, the kings went into exile, and the people were dispersed, never again to be gathered into one fold. "Other lords have had rule over us," was the prophet's lament; the people who had rejected every chance over and over again were left to struggle as they might against the overwhelming pressure of outside forces.

For as the strength of Israel, religious and political, waned, other influences increased in Palestine—Babylonian, Chaldean, Assyrian. Warfare decimated the population, and the conquerors brought in their own countrymen to fill the empty places. The social, religious, and national life of the Jews was broken up, an exhausted people lay at the foot of an iron conqueror. A number of the Jews returned to Palestine some fifty years after the Great Dispersion under the favour of Cyrus, but they "came back not to a

kingdom, but to a *medinah*, or district (and city) of the Persian Empire."* Palestine remained practically a Persian province until the downfall of that empire after its defeat by Alexander the Great. After his death the Ptolemies in Egypt and the Selucidæ in Northern Syria contended for the possession of Palestine, and a time of great misery followed for the Jews, culminating in the plunder of the temple by Antiochus IV. His cruel persecution goaded the Jews into rising, and the priestly family of the Asmonean Mattathias led the revolt, which enjoyed a brief success. Judas Maccabæus, the son of Mattathias, founded the Asmonean Dynasty, which lasted until B.C. 34, when Herod the Great, an Idumean (Edomite) by nationality and Roman Prefect of Syria, murdered Antigonous, and made himself King of the Jews. Palestine enjoyed a fitful prosperity under Herod, the ruins of whose magnificent buildings yet adorn the land; but at the death of his son Archelaus (A.D. 6) the land passed into Roman holding.

The New Testament story embraces much of that of the Roman occupation of Palestine; Roman influence was very strong; the Gospels are stamped with the image and superscription of Cæsar's supremacy; Roman laws, money, institutions, customs, officials, appear all through the sacred narrative. Greek influences, once also very strong, paled and dwindled before the stern onward march of the Romans, and we may trace the struggle between these two great Powers in the books of the Maccabees and of Josephus. Fire, sword, and persecution reduced the people to misery and despair, which their occasional maddened revolts only served to render more poignant, until the beneficent rule of Constantine the Great (A.D. 323—336) and the establishment of Christianity, in some degree relieved them. Palestine remained a Roman province from the day when Pompey added her to the Imperial crown (A.D. 65) until the Arab Conquest in 634; from that day she has been a Mohammedan possession. Some four centuries later began the Crusades—those vain, romantic, fascinating episodes in history whose glamour affects us even now; the Christian kingdom lasted just eighty-eight years ere it fell by its own hand, slain by the treachery and selfishness of the rulers whose faithfulness should have been as its shield and buckler. And yet it is amazing what an abiding impression that short-lived Christian occupation has left upon the land, in words scattered through the language, in buildings whose glorious ruins attest the skill and energy of the makers, in the occasional signs of Western blood and characteristics traceable to-day in the natives. Probably the strange force of their short tenure of Palestine lies in the fact that they came to her "not like most other invaders, because she was the road to somewhere else, but because she was herself, in their eyes the goal of all roads, the central and most blessed province of the world."† The incense of their devotion, so freely offered, lingers yet in Palestine, enriching her history beyond price, drawing East and West together through a common love, and absolving the memory of men—fierce, ruthless, and unstable as they were—who bore the cross-handled sword through the land. Eight Crusades at later periods strove to recover the land, but in vain; and in 1517 it fell into the hands of the Ottoman Turks under Selim I.

What is to be the future fate of Palestine? If her past is any guide to us in our attempt to solve the riddle of the future, we may well come to the conclusion that she can never belong to any one race or people after the absolute fashion of other lands. She is a road, a highway; she can be policed, controlled, kept safe and open, made beautiful, but she cannot become the absolute property of any one nation. She has been held longest by Turkey, whose people are the most mixed and least national of all races; but Turkey has been such a weak Power latterly that it has held Palestine more or less under the will and by the grace of Europe. And Turkey, by its cruel taxation, its insincerity, its injustice and cynical oppression, its utter faithlessness to trust, has all but ruined the country; it has driven abroad the best of her youth, and has broken the spirit of those who could not get away. We can only pray that no selfishness in European policy will allow the traitor to retain the land it has tormented and betrayed; or if, for reasons of high diplomacy that we cannot grasp, it must be

permitted the semblance of power there, then that this may be only under an eagle-eyed supervision.

A good many people consider that Palestine should pass to the Jews. But the Jews are now only a kindred, not a nation, for they are English, Spanish, Russian, German, Roumanian, Austrian, American, Polish, according to the place of birth or the exigencies of life. Which Power would be the predominating influence in a Jewish State? When we recall the enthusiastic loyalty of English Jews during the war—proving once again that they count themselves as truly English as any one of us—how can we suppose that they, any more than we, would enjoy being deprived of the honour and safety of British citizenship and summarily attached to a new State, nominally Jewish but virtually under, say, German control? Surely that would be a very scurvy trick for a Government to play its people—or for a people to play its Government. The Jews are not like the Armenians, who, through centuries of dispersion, oppression, persecution, and alien rule, have yet preserved intact a national church, a distinct royal tradition acknowledged by them all, a language, and a passionately conservative nationality. The great movement of Zionism, which aims at the acquisition of Palestine, is half political, half religious, and as a governing force would be the very representation of a house divided. A prominent Zionist (I wish I might give his name, for that alone would carry weight), when asked what was to come after the Zionists had acquired possession of Palestine, answered, sadly enough: "That is the weakness of it; we do not know." He was a burning Nationalist and a man of deep, though perhaps not extremely orthodox, religious principles, and he saw no further than that.

Many pious souls refer to Palestine as the Promised Land, overlooking the fact that the promise was coupled with very stringent conditions. Should we not rather think of it as the Land of Promise—an infinite promise not tied to any one race, but of eternal hopefulness and wide enough to include all races in a blessing that is peculiar to the land? It shows a lack of historical proportion to say that the Jews, or any other individual race, may claim the land by right. The Jews conquered her and held her for a term of years; they fought bravely enough to recover her when they lost her; but Christian blood has been poured out for her sake just as freely and through longer ages. We once held a larger portion of France than the French kings had, but that hardly gives us a lien upon French territory to-day. That is all past history, however. What are the Jews doing for Palestine to-day? They have planted many fruitful colonies about the country, but in the towns they are, alas! the chief moneylenders, extorting 100 per cent. very often, when the Turkish Government generously allows .15 per cent. And to the outside world they exhibit no greater aptitude at self-government now than they did of yore, for there is sharp jealousy and antagonism between the different sects, as any resident in Jerusalem can testify. There is, moreover, a generation growing up of absolute free-thinkers of both sexes, whose marked boldness of demeanour is very repellant in the East; it was probably some of these who, when the Turkish troops detailed for active service entered Jerusalem in November, 1914, erected triumphal arches in their honour, and greeted them with cries of "Blessed be ye that come in the Name of the Lord!" Any comment on this amazing incident would be superfluous. Political considerations also make it impossible that Palestine should become an insular Jewish State. What would be the fate of the Church of the Holy Sepulchre and of the Church of the Nativity at Bethlehem, those priceless treasures of Christendom? What would Islam everywhere say if the mosques at Hebron and Jerusalem and the tomb of David were taken out of their jealous guardianship and given over to the Jews? It is probable that neither England nor Russia could afford to disregard universal Mohammedan opinion on this point.

Every signpost seems to point to the one end, every argument to lead to the one conclusion, namely—that Palestine should be annexed to Egypt, and thus experience those benefits of English rule which she has so long desired. England alone would hold her on trust for the rest of the world—Christian, Jewish, Mohammedan: under her care Christian, Jew, and Moslem would worship in peace and safety; by her every religious and national prejudice would be respected. If France has Syria and Russia Constantinople, Palestine should fall naturally to Great Britain. Our present occupation of Egypt makes it, indeed, a necessity that we should guard Palestine also; for the desert between is no protection to either country, and if a Turkish army (which is generally destitute of every military necessity, except courage) can pass the desert with such comparative ease and celerity, what would not be possible to fully equipped and organised forces? English rule has long been the ardent desire of the Christians of Palestine, and latterly even the Moslems have openly cried out for it under the ever-increasing weight of Turkish oppression. About three years ago deputations of Bedouin from beyond Jordan—wild creatures who usually avoid the stir

of towns—kept on coming in to ask the Turkish Governor of Jerusalem when the English were coming to take the Holy City. The Pasha, considerably perturbed by this unexpected development, put them off with specious excuses; they were coming soon—letters took so long on the way—there was no answer yet from the English. Three times these untamed men of the desert came; then ceased, in bitter disappointment. Perhaps they thought England had failed them. What had started the idea no one ever knew. About the same time a rumour arose in the city that five English generals were coming by the evening train to take Jerusalem. Half the city flocked joyfully to the station, many of the Jews even went down to Jaffa to view the landing, and when no one arrived the disappointment was really intense. We may smile at the simplicity of these people, but never at the real desire for liberty, the real belief in England, that lay behind it. England is greatly trusted in Palestine, for the people now understand that all her institutions out there are wholly for their benefit, and mask no ugly political aim or greed; the common saying, "On the word of an Englishman it is true!" must make us proud each time we hear it. English prestige has suffered a temporary eclipse of late years, owing perhaps to a restrained line of policy that was misunderstood by those to whom power must be shown in concrete form, but it has never been destroyed. "On the word of an Englishman it is true!"

There is no doubt that Russia would cherish Jerusalem very dearly, and of course the Greek Church is the Church of the land; but it is very unlikely that Greece would acquiesce in such an arrangement, or that Rome would tolerate a very great acquisition of power by the Orthodox Communion in the Holy Land.

For many years past the education of the land has been in foreign hands, with the result that there is now ready a generation of well-educated young Syrians, men and women, knowing English and French well, who (the men chiefly) have been driven by Turkish misrule to seek their living in other countries. These would swarm back to Palestine at the first dawning of a fairer day, and there would be at once a generation ready and fit for use; they are now exiles in Egypt, America, and the colonies, but they love Palestine and long to return.

We cannot doubt that, freed from the long bitterness of an unspeakable bondage, and brought under the splendid breadth of English rule—which is, of all Western Governments, that best adapted to Eastern needs—Palestine would become once more what she should be, the High Way of God. Is she not to us all the Land of an infinite Promise?

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Situation in Roumania.

December 19.

Earl CURZON, in speaking of the military and political situation abroad, said he was not one of those who believed in painting too rosy a picture of affairs. That did not mean that we ought to take a gloomy view, but it did mean that we ought to take a stern view of the realities of the case. There was no use in concealing the fact that the enemy by his military successes had obtained a position of advantage in some of the main and in many of the minor theatres of war, though in the case of Roumania the whole of the oilworks and stocks in the area now occupied by the enemy were destroyed before the invasion and the larger part of the Roumanian Army was still intact. The failure of Roumania was explained by the geographical position of the country. Russia, the only Power which could do so, had done what she could to help Roumania with armies. We had sent munitions and lent money, and had taken the offensive from Salonika. The picture might seem depressing, but the successive victories of the Central Powers over petty States were only a corner of the canvas. The fate of pawns did not determine the ultimate issue of a game of chess. It was necessary to take a large view and reflect what changes in the external aspect of the war the last year had produced.

The MARQUESS OF CREWE, referring to the question of peace terms, said he was sure that our first thought must be for the peoples of Europe who are under the harrow, so to speak, the people of Serbia, Belgium, and Armenia. Not since the Thirty Years' War, perhaps not since the Middle Ages, had such a series of horrors been known to the world, and the fate of these outraged people and any changes that may take place in the map of the world after the war depends, and must depend, on the measure of military success which the Allies obtain.

HOUSE OF COMMONS.

The Allies and Greece.

Dec. 14.

Mr. ALDEN asked whether the complete blockade of Greek ports implied that a state of war existed between the Allies and Greece.

Lord R. CECIL: The answer is in the negative.

Major NEWMAN asked whether in any temporary settlement of questions at issue between the Allies and the Government at

Athens, the safety and liberty of M. Venizelos's supporters would be fully provided for?

Lord R. CECIL: In such an eventuality the Allies will do their utmost to secure sufficient and satisfactory guarantees.

Great Britain and Greece.

Dec. 16.

Mr. DILLON asked Mr. Bonar Law to impress on the Prime Minister when he spoke on the following Tuesday to make, as far as was consistent with the public safety, a frank statement of the position of the British Government on the Greek question. The country was very much disturbed at the news which was daily coming from Greece and at the fact that despite repeated pledges that effective measures would be adopted to protect the friends of the Allies in Greece no such steps had been taken. The enormous share which Great Britain and the Empire had contributed to the prosecution of the war entitled her to a very large, he would almost say a commanding, voice in connection with affairs on the Near Eastern front. It was a horrible thing to read in the *Times* the other day that the British Minister and the Russian Minister had dined with the King of Greece, on whose word that there would be no attack a small detachment of French and British sailors were sent to Athens and many of them treacherously murdered. A number of machine-guns were used against the unfortunate detachment without any warning, and the result was that a number of men lost their lives and many were wounded. The prestige of the Allies in the East had suffered greatly. Horrible to relate, our men left Athens escorted by the troops of the King of Greece. If it were true that soon after these occurrences our Ambassador dined with the King, this country suffered a humiliation unparalleled in its history. By our action in Greece we had allowed the impression to get abroad that we had neither the courage nor the power to stand by those who stood by us in the Balkans.

Mr. BONAR LAW: With regard to what has fallen from the hon. member for Mayo, he has himself indicated that he does not expect me to make any statement as to our policy in Greece, or, indeed, as to our policy generally in connection with the war. He has seen a rumour, which I had not noticed, that our Ambassador has been dining with the King of Greece. I have seen, I think, all the Foreign Office telegrams, even during the strenuous days which have passed recently, but I have seen no indication of any such occurrence as that, and I can assure the hon. gentleman and the House, after what has happened in Greece, the views expressed by our Ambassador on behalf of this Government are of such a nature that I cannot believe it is within the bounds of possibility that such a social engagement could have been attended by him.

The Allies, Greece, and Roumania.

Dec. 19.

Mr. LLOYD GEORGE, in moving the second reading of the Consolidated Fund (Appropriation) Bill, made but brief allusion to the Near East, but what he said was calculated to show that a more active policy is likely to be pursued henceforth in that part of the world. Early in his speech he referred to the invasion of Serbia and Belgium, remarking caustically that these measures of "self-defence" indicated the Germans' idea of respect for the rights of other nations. Later, he referred to Roumania and Greece. "The Roumanian blunder," he said, "was an unfortunate one. But at worst it prolongs the war; it does not alter the fundamental facts of the war. I cannot help hoping that it may even have a salutary effect in calling the attention of the Allies to obvious defects in their organisation, not merely the organisation of each, but the organisation of the whole, and if it does that and braces them up to fresh effort it may prove, bad as it is, a blessing. That is the worst. That has been a real set-back. It is the darkest cloud, and it is a cloud that appeared on a clearing horizon. We are doing our best to make it impossible that that disaster should lead to worse. That is why we have taken in the last few days this very strong action in Greece. We mean to take no risks there. We have decided to take definite and decisive action, and I think it has succeeded. We have decided also to recognise the great Greek statesman, M. Venizelos." This statement was received with loud cheers. Speaking of our relations with our Allies, Mr. LLOYD GEORGE said: "I ventured to say earlier in the year that there were two things we ought to seek as Allies. The first was unity of aim and the other unity of action. Never have Allies worked in better harmony or more perfect accord than the Allies in this great struggle. But when I come to the question of unity of action, I still think that there is a good deal left to be desired. I have only to refer to the incident of Roumania, and each man can spell out for himself what I mean. The enemy have got two supreme advantages: they act on an internal line, and there is one great dominant power that practically directs the forces of all. We have neither of these advantages. We must, therefore, achieve the same end by other means. The advantages we possess are advantages which time improves. No one can say that we make the best of that time. There has been a tardiness of decision and action. I forget who said about Necker that he was like a clock that was always too slow. There is a little of that in the great Alliance clock—Belgium, Serbia, Montenegro, Roumania. Before we can take full advantage of the enormous resources at the command of the Allies there must be some means for arriving at quicker and readier decisions, and of carrying them out. I believe that that can be done, and it will quicken our action as well as our decisions, it will equalise the conditions more than we have succeeded in doing in the past. There must be more real consultations between the men who matter in the direction of affairs. There must be less of the feeling that each country has got its own front to look after. The policy of a common front must be reality. There is an essential feeling that there is but one

front, and I believe we have got to get that more and more. That is essential for the Allies, not merely to realise it, but to carry it out in policy and action, and I take this opportunity at the beginning of this new Administration of emphasising that point, because I believe it is the one essential for great victory, and for the curtailment of the period before victory arrives.

Mr. ASQUITH agreed with what the Prime Minister had said about Roumania. "It has," he said, "been a bad business. Although it is not possible at this moment, even if it were desirable, to go into the matter, precisely to apportion the different degrees of responsibility—and I have no desire to enter into that question—yet I am heartily in agreement with him. We have often discussed the matter together, and I do say that it is a very good illustration of the desirability, nay, urgent necessity, of more intimate co-operation between the General Staffs and the politicians of the Allied countries. You cannot get over, unfortunately, in this world, the limitations of time and space, and the difficulty of bringing together in constant and intimate communication not only the soldiers but still more the representatives of the four Powers, so widely separated geographically and otherwise as those who constitute this alliance.

Prisoners at Yuzgat.

Dec. 19.

Mr. HOPE informed Mr. G. Lambert that his Majesty's Government had asked the United States Ambassador at Constantinople to press the Porte to remove our prisoners at Yuzgat to a more accessible and more suitable camp.

THE PRESS ON THE NEAR EAST.

An Impertinent Warrant.

In a leading article *The Times* expresses satisfaction with the Government's decision to recognise the agents of M. Venizelos. It adds:—

Short of the direct recognition of M. Venizelos and his Provisional Government by the Allies as the true representatives of Greek national feeling and the rightful rulers of Greece, it is the best step that could have been taken, and the one most closely in accordance with public feeling in this country. But, though Mr. Lloyd George thinks, as he has doubtless reason to think, that our "very strong action" has succeeded, the Athens Government has impertinently issued a warrant for the arrest of M. Venizelos on a charge of "high treason" and of "libel" against the Greek General Staff. The temper thus displayed scarcely encourages belief in the penitence of King Constantine's partisans. It suggests the advisability of caution in regarding our action as successful until positive proof is forthcoming that the Greek Royalists and their Chief have effectively complied with all the demands which the Allies have made or may make upon them.

The Mesopotamia Advance.

The following are a few opinions on the advance in Mesopotamia, which speak for themselves:—

The Mesopotamian Expedition is in a much happier position than it occupied at the beginning of the year. Two light railways are being built, and have reached an advanced stage. The river flotilla has been strengthened. Spacious wharfrage accommodation has been provided at the base at Basra. Ample supplies have been accumulated, and the medical and hospital organizations are now believed to be sufficient for the largest possible demands. Thus the early blunders committed in Mesopotamia have to a great extent been rectified, and the Expedition has had the satisfaction of discovering that it is no longer forlorn and neglected. Its ultimate object, however, still remains obscure. We will only say that, however deep may be the feeling about the Mesopotamian campaign, our prestige in the Middle East will not be materially affected by the occupation of this or that Mesopotamian town or city. It is time we recognized that the future of our prestige will depend upon our successful conduct of the war as a whole, and that the defeat of the main German Armies will dominate the position on every front.—(*The Times*, December 18.)

The Mesopotamian theatre is, of course, a secondary one, and no operations in it will decide the war. It is nevertheless much to be desired, for military as well as political reasons, that we should retrieve our record there, and in so doing relieve the pressure on the Russians in Armenia and, if possible, bring the Turkish escapades in Persia to an end.—(*Daily Chronicle*, December 16.)

Most people had forgotten the Tigris Field Force, which, when lost sight of in the spring, was cursing its luck before the flooded trenches of Sanna-Yat, and almost as short of food as the Kut garrison it had failed to relieve. There the curtain dropped, and the Parliamentary inquiry into the causes or that failure has not lifted it. To-night, however, we hear again of this splendid force of hard-bitten soldiers—the best of the Indian Army, and some of our old regulars. They have struck again for Kut along a new line, which suggests co-operation from the detached force which has been based so long at Nasiriyeh, on the Euphrates, at the other end of the Hai Creek. We must not jump to conclusions. This may not be a big advance. Yet, even as it stands, it is most satisfactory. It refutes the retired colonels here who declare that after their disappointments and a summer's inaction, the force would lose its morale.—(*Sheffield Daily Telegraph*, December 16.)

Vain Hopes.

The following is the concluding paragraph of a letter sent to the *Morning Post* by its Budapest corre-

spondent on December 10, and published on Monday:—

In expectation of the peace campaign of the Karolyi party, most of the newspapers are discussing the possibility of peace after the fall of Bucharest, for the fall of the Roumanian capital—like so many other events during the war—filled the people here with hopes and expectations. The idea prevails, as I have said, that Roumania was the trump card of the Allies, and that now it has been ineffective they will be ready to throw up their hands. It may be explained by the fact that for Hungary Roumania was an immense source of danger and anxiety, and it is believed here that the same importance is attached to her failure in other belligerent countries as well. They seem to forget that the British Army—as great and as organised as any of the others—is still intact, that the British Navy is still dominating the seas, that the Russians have not yet used up a fifth of their effectives, and that the French and Italian Armies are as strong and vigorous as ever.

Forgetfulness of the kind indicated is likely to lead to a distinctly unpleasant awakening.

Roumania or Greece ?

Writing on "The Great War," in the *Spectator* (December 16), Brigadier-General Stone says:—"The weather and the condition of the ground on the Western Front seem likely to fortify the resolution of the Germans to press the advantage which they have already gained in Roumania, and the question is, In which direction will this advantage be pressed?" There are, he continues, "two almost equally tempting alternatives."

One is to complete the conquest of Roumania and, if possible, the utter defeat of the Roumanian Army, invade Bessarabia, and make the line of the Dniester the next objective; the other is to reinforce the Bulgarian armies which are operating against the Allies on the Greek frontier and allow Constantine to declare himself to be Germany's ally.

The former of these two courses involves an arduous offensive, which could scarcely fail to call for ever-increasing efforts and sacrifices the more nearly the objective was approached; but, at the same time, it offers correspondingly important results in the event of success, for it is believed that Germany regards the chances of bringing Russia to her knees as somewhat more feasible than causing the collapse of the Western Powers, and there is little doubt that she would be prepared to offer Russia the most tempting terms to make a separate peace. The Germans are bad psychologists, and apt to judge others by their own standards. It is absolutely inconceivable to us that Russia will ever, under any circumstances, throw up the sponge.

Of the other alternative, the writer says that it "certainly presents most attractive features, and although not promising such far-reaching results (as it presents itself to Germany) as the Russian adventure, at the same time does not call for such a supreme effort, and therefore does not run such serious risk of bringing about a dangerously successful offensive on the part of the Allies on the Western Front." After reviewing the situation in Greece, he concludes:—

The Allied forces in Greece are insufficient to conduct a successful offensive in the face of Bulgaria reinforced by Germany, and at the same time they are in excess of the requirements for merely holding Salonika. The situation is disquieting, and it will become more so the longer the diplomats are instructed or allowed to prevent the soldiers and sailors from settling it. It is impossible to deal with the situation on other fronts in the present article or with the question of command of the sea, which is being disputed with such success as to call for special measures to meet it not only on our own behalf, but on behalf of, and it may be hoped in co-operation with, neutrals as well as belligerent Allies.

Responsibility for the Armenian Atrocities.

In a leading article, inspired by the appearance of the Government Blue Book on the Armenian massacres, the *Daily Telegraph* of Saturday brings out clearly the responsibility of the Central Powers, as well as of Turkey, for the crimes committed. The evidence presented, says the *Telegraph*:—

proves, in the first place, that a regular and systematic attempt has been made for the last two years to destroy the Armenian people, and that the cruelty and tortures inflicted are due not so much to local authorities—though they are guilty enough—as they are to the Turkish Government as a whole, whose obvious intention it has been to carry out a general massacre. In the next place, it becomes equally certain that this terrible chapter in the history of the Near East has not been written without the direct connivance, and even sanction, of the Central Powers. Austria, indeed, intervened on one occasion in order to get partial protection for Armenian Catholics, in whom she was interested. Inasmuch as she gained her object in this instance, it is obvious that if she had seriously exerted her influence she could have done much to hinder and control Turkish ferocity. As to Germany, there are unfortunately clear signs that, so far from discouraging these butchers in Armenia,

she has allowed her good name to cover some of their worst infamies. There is no more remarkable illustration of the bitter irony of history than the close alliance between Wilhelm II. and such men as Enver and Talaat.

It is the Young Turks, the writer declares, "who, above all, are responsible for the massacres of the Armenians." But

Let us also remember that the Young Turks' effort to exterminate the Armenians is sympathetically regarded, and, at all events, not openly disavowed, by Berlin. The Turks are valuable allies of Germany, and taking, as they do, their orders from the Supreme War Lord, could, if he wished, be very easily debarred from exercising their sinister talents in outrage. Bearing these things in mind, we can estimate at its proper worth the recent appeal which has come from the German Chancellor to the world at large, and especially to the United States and to the Pope. The Holy Father is assured that Germany is appalled by the unspeakable misery of humanity; America is told that the object of the German Higher Command is to "defend justice and the liberty of national evolution." . . . The horrible hypocrisy of such pleas can be estimated aright by those who peruse the latest account of the wholesale destruction of men, women, and children carried out in Armenia by Germany's ally, the Ottoman Empire.

The Remedy for Greece.

The *Times* last Saturday, in the course of a leading article ("Plain Words to King Constantine"), remarked that "we could ask for nothing more drastic than the contents of the Note" presented to Greece by the Allies; and added that its only regret was that an ultimatum was not presented long ago. King Constantine, the article proceeded, "has temporised too often. . . . The Allies have at last taken the measure of his aims."

We are confident that the new War Cabinets of Great Britain and France will not repeat the unfortunate mistake of Admiral du Fournet. The public in both countries will look to them not to place themselves in the humiliating position of formulating demands which they cannot enforce should action become necessary. Admiral du Fournet made the error of risking a small force which was quite unable to ensure fulfilment of the wishes of the Allies. There must be no repetition of that deplorable occurrence. We are steadily moving towards a very critical situation in Greece and in Macedonia. It can still be saved, but only by immediate and adequate preparation, which we hope is in progress, against possible developments. The four great Allied Powers cannot conceivably have called upon King Constantine to do their bidding without being ready to apply compulsion should the necessity arise. We fear it may arise, for the increasing hostility of the Greek Monarch is hardly veiled. We shall never feel safe about Greece, we shall never be in a position to pursue our projects in Macedonia, until the Greek Royalist Army and its pro-German leaders have been removed to areas where they cannot affect the military situation. The true remedy for Greece, in her present unhappy and divided condition, is to keep her sword sheathed and to place the country under the control of M. Venizelos.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I think the freight paid recently in Alexandria for Liverpool—namely, 197s. 6d. a ton measurement—to which I referred last week, constitutes a record, the pre-war rate for the same measurement and distance having been in the vicinity of 6s. 3d. The phenomenal increase shows the demand in Egypt for bottoms—in other words, the cargo stored up in our Protectorate is awaiting vessels to ship it to this country. No sooner does a fair wind blow an empty ship to Alexandria than its free space is at once seized by shippers eager to send off their loads. The result is that they outbid each other, the highest bidder—in this case the £10 man—ousting his competitors.

This is all very well and satisfactory from the ship's point of view, and I am the last man to grudge its exceptional windfall. But there is another aspect of the question: the cargo shipped has been mulcted to the tune of about £9 10s. per ton measurement—an imposition that will have to be borne by the consumer, be the latter the State or a private individual. If the State, then its accountants who permit such dealings should be relieved of their office; if the consumer, however, is a private individual (or a company selling later to the consumer), then all I can say is, "Pity the consumer, for his only sin is that he is helpless." Prices now of most commodities are high, but in many cases they are factitiously high, and such exorbitant rates as those recently paid in Alexandria only tend to aggravate the situation. Failing State control of shipping, such rates should be forbidden. There is a "limit" in poker; surely there should be one in shipping rates, above which no shipper may go. For the sake of the helpless consumer, the dependent of Tommy Atkins, I urge the Government to prevent the recurrence of such mad rates as those recently paid in Alexandria.

We published last week the account of a recent meeting of the Egyptian Commission of Agricultural Commerce. Three subjects came up for discussion: wheat, *bourdi*, and sisal hemp. Regarding the first, it was pointed out that, as is the case with Indian wheat, the grain would have to be washed before shipment, owing to the presence of dirt, if it was to prove acceptable to British millers. Further comment on the wheat-growing question in Egypt is out of place here, and will be so until the war is over.

Regarding the second—namely, the utilising of *bourdi* for paper-making—I am pleased to see that Shakour Pasha has taken the matter up seriously, and is having experiments made on a big scale. Their results are not yet known, but I wish them every success, and hope the Government will facilitate the starting of an industry, if that should prove practicable. There is no earthly reason why Egypt, the home of the papyrus parchment—which is a modified form of paper (or *vice versa*)—should not again turn the Nile weeds into pulp. The idea is not a novel one, as readers of THE NEAR EAST know; and if failure rather than success

has been the lot of previous pioneers, the reason is to be sought in Government apathy and in the opposition of the wood-pulp trade, or trust. Overcome both, or link up with the latter, and there is no reason why *bourdi*, and later on perhaps sudd, should not be shipped to the great paper mills.

The third subject—namely, the cultivation of sisal hemp on a large scale in Egypt—is a matter that offers decided practical, because economic, difficulties. Between the time of the planting of sisal and its first return three years must elapse, and, in agreement with the Commission, I very much doubt whether the Egyptian farmer, who lives from crop to crop, from harvest to harvest, can be induced to grow a plant which takes three summers to grow. It is different in British and German East Africa, more particularly the latter, where settlers arrived expecting no return for their capital and labour for some years. In other words, they could afford to wait, which the Egyptian farmer cannot, except to plant sisal as a side-show. Even so, there are other crops which, to him, are more immediately remunerative.

..

After all, however, cotton will continue to be Egypt's greatest source of wealth after the war is over, just as it has been in the past. It will continue to be its great staple product and the source of its wealth. The reason is not far to seek: it is the most remunerative crop and one that thrives well, in spite of disease and worm. The demand for cotton is ever on the increase, and it will continue so for centuries to come. Even if the whole of the fertile area in Egypt and the Sudan were under cotton, the demand would still be far in excess of the supply. Besides, the long silken staple of the Egyptian (and Sudan) variety has a market of its own that can never be satisfied, and as long as this is so, the Egyptian can do no better than grow cotton and grow it profusely. There are, I know, the dangers attendant on a one-crop policy, but I think it is the Government's duty to guard against them rather than to dissuade the people from sowing cotton where cotton can be sown. However, be it clearly understood that these remarks apply to a post-bellum Egypt, and not to Egypt of to-day. The latter is, in duty to herself and to us, bound to grow as much food-stuffs as she possibly can, for human as well as for animal consumption. After the war, methinks, she will find it to her advantage to intensify more than ever her great cotton cultivation. In this the Sudan is certain to follow her lead with little, if no, delay.

..

Are we really going to move in the matter of consular reforms? So much has been written and argued on the subject within the past two years that really it is high time something was done. Now, I think, is the time. We have new men in public office, and, as heads of departments, we have some business men. We have Mr. Lloyd George as Prime Minister. Of course, it cannot be expected that any of these statesmen should undertake the task of drafting a Consular Reform Bill; they have their hands full as it is. But the Prime Minister, I am sure, is aware of two facts: first, that our Consular system is anything but what it

should be; and, second, that now is the time to reform it, so that when the war is over we can begin with some sort of a working machine. As the Special Committee of the Association of Chambers of Commerce, presided over by Sir Algernon Firth, points out, "the enormous increase in our national indebtedness will involve a corresponding increase in our annual revenue," which must "to a large extent be secured by the development of our foreign and oversea trade."

This can never be achieved unless the Consular service is reformed. I know there are many Consuls who are all that they should be, however tied their hands—and there is even more red tape leashed around the body of a Consul than around a W.O. official—by archaic regulations and prohibitions. But they are in the minority. The others—well, they are the product of a system as time-honoured as it is out of date. The system must be altered. Whilst retaining some of its staid peculiarities, it must be modified so as to compete on an equal footing with the German and American systems; it must adapt itself to modern commercial requirements, and must primordially further Britain's foreign trade. It must be emancipated from the dust of the F.O. and work in immediate touch with the Board of Trade. It must be comprehensively extended in size and generously endowed. Surely a few thousand pounds a year is not a sufficient credit for the Consular Trade Service of the Great British Empire?

In the space here at my disposal I cannot dilate more fully on this subject, however much it interests me. My experience of British Consuls covers two hemispheres and practically all European countries, and therefore I may be allowed to urge on the Government the reform of the whole system. I appeal directly to Mr. Lloyd George to get a committee of *able business men* together to study and report to him on the necessary reforms. A Bill can easily follow, but let it be a drastic one, as the times exact. Frankly speaking, the present opportunity is a glorious one: the country is in the mood for a healthy sweeping-away of cobwebs, for the introduction of virile reforms and for practical measures tending to emancipate us from the easy sloth of the past twenty-five years, during which we allowed others to forge ahead while we drifted self-complacently. I hope, however, that the Prime Minister will see that the matter is taken up without delay.

What are we to say regarding the Kaiser's impudent "peace" proposal? If it means anything at all it is that he realises that Germany is not likely to gain much from prolonging the war. On our side, we read something more into the business; namely, that the Kaiser, in his heart, has undeceived himself, and has admitted that the British soldiers' homely phrase is an accurate summing up of the situation—"We've got them beat." Very much in the soldier's vernacular, perhaps, but very graphic and very true. The Kaiser, in the past, has posed as the Attila of modern times: his latest move has led to his deposition from that somewhat distinguished, if brutal, pose: he has become merely a Pecksniff, and we know how to rate him.

COMMENTATOR.

Economic Future of Greece.

"The Interests of Germany and Greece Coincide"— An Amazing Statement.

The continued gravity of the situation in Greece, the apparent defiance of the Entente Powers by King Constantine, and the drastic measures which have been taken to blockade the country, no less than the steps which Lord Robert Cecil foreshadowed in the House of Commons on Tuesday, serve to keep Greece and all connected with her in the front rank of public interest.

Regarding the "policy" which the anti-Venizelist school in Athens have adopted, or hope to adopt—presumably under the ægis of German association—Professor K. D. Sphyras, of Athens, leaves us in no doubt. In a recent article (which was quoted extensively by "Politicon" in the *Outlook*) he makes it clear that "Greece must strictly pursue the following principal aims:—(1) It must strive for the freedom of the sea and the destruction of the absolute naval supremacy possessed by any Power or Powers in order to be able to protect the vast coasts of the country and its maritime trade. (2) It must particularly protect its maritime position in the Eastern Mediterranean. (3) It must see a question of the most vital importance in the preservation of the integrity of Austria-Hungary and of Turkey. (4) It must place its economic life on a healthy basis by firmly attaching itself to the Central European group of Powers and endeavour to obtain guarantees to secure the sale of its products within that group against all competitors. (5) It must obtain sufficient territory in the Balkan Peninsula to prevent the disturbance of the balance of power in the Balkans. (6) It must resist the occupation of the Greek sphere of influence in South Albania on the part of Italy, and prevent Italy dominating the approach to the Adriatic. . . .

"The interests of Greece and those of the German Empire coincide to such an extent that an alliance can be concluded between the two countries with closed eyes.

"Watch Italy.

"Greece's policy must watchfully follow the development of the policy of the Entente Powers and oppose their plans of conquest in the Near East. It must particularly watch the policy of Italy with the greatest attention, because that Power hedges Greece in by land and sea; and must cling to Turkey, which must be the best friend and the most faithful brother of Greece. . . .

"The differences between Austria and Italy can be completely abolished only by the formation of an Albanian Buffer State, and by the creation of a powerful Greece, the territory of which reaches beyond Valona, and which is able to resist attack from any quarter. . . .

Must Be Punished.

"After the war Italy must not again be permitted to continue playing the same game which it has played in the past. That country must be punished. It must not be permitted to give itself, like a careless prostitute, to any comer, guided solely by considerations of immediate profit. Italy's place within the Triple Alliance must be taken by some other State. That State should be Greece, for militarily, politically, and economically it may replace Italy, and serve as a counterpoise to that State. . . .

"Greece can furnish those commodities to the Central European Powers which were hitherto provided by Italy. It produces many valuable minerals exactly as Italy, especially marble, in which article Greece successfully competes with Italy. In currants, also, Greece need not fear Italy's competition. The same applies to tobacco. On the other hand, there are certain commodities which Greece and Italy can produce in vast quantities, such as wine, olive oil, etc. There are other articles of which Italy exports large quantities, and which are not produced on a considerable scale by Greece, but which might be raised—articles such as fresh fruits, dried fruits, flowers,

fresh and dried vegetables, silk, etc. In 1913 Italy exported more than £3,000,000 worth of wine, more than £1,800,000 of olive oil, nearly £14,000,000 of silk, more than £1,640,000 of flowers and vegetables, more than £6,000,000 of fresh fruit, and nearly £2,000,000 of dried fruit. Furthermore, the tourist traffic might be vastly developed by suitable arrangements. Then the through traffic between Central Europe and the Orient might, to Italy's cost, be diverted from that country towards Greece. The principal connecting route between East and West is the Suez Canal, and the great traffic between East and West, including the Indian mail, might be diverted towards Greece, to the great advantage of the whole country and especially of its harbours. Lastly, the Greek merchant marine might be vastly developed, not only by the diversion of the traffic between East and West from the Italian to the Greek route, but also by the decline of the shipping possessed by the Entente States, and by securing a preference for the Central European States in Turkey. . . .

Greek "Musts."

"The most important points which we must constantly keep before us, and which should direct the active policy of Greece, are the following:—

"1. Greece must, as far as it is able, prevent the intervention of any other State on the side of the Entente Powers.

"2. Greece must preserve a benevolent neutrality towards the Entente Powers as far as such a policy is made necessary by the exposed maritime position of the country.

"3. Greece must prevent warfare within its territories by demanding that the troops landed by the Entente Powers shall be embarked, or by warning the Governments concerned that in accordance with international law the Greek Army would have to disarm and intern troops crossing the Greek frontier when retreating from the enemy.

"4. Greece must protest most energetically against the landing of further troops if such landing cannot be prevented by force. At any rate, all possible difficulties should be raised against landing Entente troops and against transporting and provisioning them.

"5. Greece must force the Entente Powers to make certain political concessions, such as Cyprus, and certain economic concessions, which must reward the country for the violation of its neutrality by the landing of troops.

"6. Greece must in good time make use of her opportunities, and begin negotiations with the Central European Powers and their Allies, and conclude with them treaties which will secure the vital interests of the country in future circumstances as a reward for its neutrality. In such a treaty Greece should bind herself to the observation of the strictest neutrality towards the Entente Powers up to the end of the war. On the other hand, Greece should demand Germany's guarantee of territorial integrity for Greece's territories, which are less threatened by Bulgaria than by the prolonged occupation of Greek soil on the part of the troops of the Entente States. Greece should obtain Bulgaria's undertaking to waive its claims to the territories demanded, and that undertaking should be guaranteed by Germany. Greece should be guaranteed that it will retain the islands received from Turkey at the London Conference, and that it should receive the Serbian territories around Doiran and Gjev-gjeli and about Monastir, a large part of South Albania and Northern Epirus, Valona and its territory, and the islands occupied by Italy. . . .

"Although Greece may have to capitulate again and again before the demands of the Entente Powers, the country must maintain its halting 'Greek' neutrality under

all circumstances and until the end, a neutrality which will be described as unique in history."

Duplicity.

The most interesting extracts given from the pamphlet of Professor Sphyras explain clearly (says "Politicon") the policy pursued by the Greek King and his Ministers from the beginning of the war to the present day. The writer of the pamphlet was either particularly well informed about the secret aims and objects of the King and his supporters, or he was inspired by them. Either his pamphlet is a blazing indiscretion which reveals Greece's aim to the world or it is an inspired production. It is conceivable that Greece's duplicity was as much suspected in Berlin as in London and Paris, and that Professor Sphyras was instructed to publish his pamphlet in Germany in order to justify his country and to explain Greece's policy of deliberate duplicity as being pursued in the best interests of Germany and of her Allies.

TOPSY-TURVY FINANCE.

Meanwhile, the financial situation in Greece is receiving the attention in this country which the political developments render desirable.

The Budget deficit last year was some £10,000,000, making the aggregate deficits for three years £33,000,000. Only from the Entente Powers can Greece get solid financial aid, the *Economist* wrote in a recent article. But, for her foreign creditors, it is more to the purpose to consider the effect of her action on the service of her external loans. These have mostly fallen since the war began, by some 9 to 12 per cent. We may arrange them in three groups: (1) The 2½ per cent. loan of £6,000,000, guaranteed in 1898 by Great Britain, France, and Russia, after the defeat of Greece by the Turks. (2) The six loans issued from 1881 to 1893, partly in default from the latter year onwards, and of which the interest was scaled down—on one to 45 per cent., on the rest to 32 per cent. of the original amount. This is the minimum return: practically, they receive also a share in the "plus values" or excess of the receipts over a fixed sum, which are distributed to them under somewhat intricate rules. Their service was secured under the arrangement of 1898 by certain revenues assigned for the purpose, and administered by the International Financial Commission. These revenues come from the monopolies of salt, tobacco, petroleum, matches, playing cards, cigarette paper and Naxos emery, the stamp and tobacco duties, and the Piræus Customs, supplemented, if need be, by those of Laurium, Patras, Volo, and Corfu. (3) Five other loans, issued from 1902 to 1914, secured partly on the surpluses of the assigned revenue, the 1914 loan mainly on Customs receipts. This was the position at the end of 1915:—

	Capital Outstanding. £	Annual Interest. £
Guaranteed Loan, 1898	4,774,800	119,370
Loans 1881-93	18,919,220	259,448
Loans 1902-14	22,595,080	1,084,753
Total	£46,289,100	£1,463,571
	"Minimum."	

In 1914 the total receipts from the assigned revenues were over 54,000,000 drachmae, or about £2,160,000. On a rupture of diplomatic relations they would cease to be collected, and we may assume that the archives of the Commission would be confided for custody to some neutral Legation—probably that of the United States—and that the distribution of any funds available would take place from Paris or London. But war would temporarily annihilate the returns from the petroleum monopoly (£220,000 in 1914), and from the Piræus Customs (£1,150,000); while those from Naxos emery (£33,160) might be borrowed by the Venizelist Government. The service of the guaranteed loan would, of course, be carried on by the Powers; the arrears of interest on it, and on the second group, would necessarily be a charge on Greece after the conclusion of peace. What would become of the revenues appropriated to those of the third group, including the receipts of the railways, we shall not conjecture; but a Greece that had renounced its traditions and turned against its benefactors could not expect the generous assistance that it received from them in 1898.

Cotton and Textile Notes.

The Lancashire Trade—Professor Todd and the Egyptian Staple—Manchester Conference.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The general tone of the market has continued distinctly quieter. The approaching holidays have had some effect upon operators, there being no desire to enter into important negotiations at this time of the year. The increased bearish sentiment, however, in raw cotton circles has been largely responsible for the lack of animation in yarn and cloth. The fall in Liverpool and New York from the top is important, and there is not likely to be much improvement in our market until rates are steadier.

There continues much uncertainty as to the future course of values in Egyptian cotton. It cannot be said there is any particular change in the outlook for supplies. The inquiry in cloth for Egypt has been of much smaller dimensions than a few weeks ago. Shippers all along the line are showing less initiative. More attention is now being paid to deliveries as dealers abroad are in urgent need of supplies of certain goods. Occasional lines have been put through in sized cloths without the turnover being at all important.

For India fewer wires have come through than for some time past, and it is quite evident buyers both here and abroad are now disposed to adopt a waiting policy pending more settled conditions. Operations have been restricted for China, and there are no indications of any real revival of demand in the near future.

Manufacturers of cloth have had to be prepared to meet buyers in price to secure fresh business, but values are not falling to the same extent as the raw material. American yarns for home use have been purchased sparingly at irregular rates. The change of attitude on the part of buyers in this section compared with a few weeks ago is pronounced.

Only miscellaneous sales have been put through in shipping bundles for India, and in cops for Holland. On the whole, Bolton spinnings have been neglected, but late rates are well held.

PROFESSOR TODD'S LECTURE.

In a paper read before the Indian Section of the Royal Society of Arts on December 15, Professor J. A. Todd discussed the world's cotton supply and India's share in it. After referring to the adverse conditions in America in 1914 and 1915, Professor Todd said:—"Unfortunately the course of events in America was paralleled by the conditions in Egypt and in India, and probably throughout the other cotton-growing areas of the world, with perhaps the exception of Russia. The Egyptian Government early in the autumn of 1914 adopted a policy of severe legislative restriction of the 1915 area, which, in the light of subsequent events, can only be described as panic-stricken. As a matter of fact the restriction became a dead-letter, and had to be officially withdrawn early in the spring of 1915, but it at least helped to bring about the very serious reduction in the acreage in Egypt, which amounted to fully 30 per cent., the acreage being reduced from 1,755,270 feddans to 1,186,004.

"In 1916 the prospects of the Egyptian crop were early in the season described unofficially in a way which could only be characterised as unduly optimistic. The record acreage of 2,000,000 feddans and a bumper crop of 8,000,000 cantars were forecasted; but, unfortunately, these rosy estimates were speedily falsified. The official report of the acreage proved to be only 1,655,512 feddans, being 6 per cent. less than that of 1914."

Professor Todd pointed out, as a defect in the British position as regards supply, that we are almost entirely dependent on foreign sources for our supply of the "bread and butter" grades, which still form the great

bulk, though not perhaps the greatest value, of our consumption. Can we remedy this defect? he asked.

"Passing over those of our Colonial possessions whose quality places them in the three higher grades of cotton supply, we come at once to Africa and India as the only parts of the Empire which might supply this deficiency," Professor Todd continued. "The Egyptian crop is far too good in itself, and far too valuable to our fine-spinning industry, to allow of its being replaced by anything approaching American cotton. The same applies to the Sudan, which is mostly capable of growing good cotton of Egyptian type, and it would be down-right waste to put it into anything else. There are, however, certain areas in the Southern Sudan which would probably be very suitable for growing cotton of the long-stapled American type; but it is quite certain that the development of these areas will have to wait upon the completion of schemes intended to benefit the other areas, and that alone will take a good many more years than we can afford to contemplate in our present survey. It will be ten or fifteen years at least before the possibilities of the Northern Sudan, including Tokar and the Gezira scheme near Khartoum, will be anything like fully developed, and any possibility of developing the other regions in the grain-growing districts of the Southern Sudan must be postponed to that."

MANCHESTER CONFERENCE.

We take the following from the report of the proceedings of the special Conference of the Council of the British Cotton Growing Association with reports of the Lancashire cotton trade held on December 13, 1916, to discuss the cotton situation:—

The Sudan is producing good Egyptian cotton, the values ranging from about fully good fair Egyptian to 6d. "on," also high-class American cotton worth from 4d. to 6d. "on." Middling American; the present production of cotton in the Sudan is 20,000 to 30,000 bales per annum. The irrigation of the Gezira plain is a most important proposition, and has been under the consideration of the Sudan Government for a long time.

Some time before war broke out, the British Government agreed to guarantee a loan of three million pounds for the construction of the necessary irrigation works. The dam which is to be constructed in order to lift the water to save the expense of pumping, is sufficient for the irrigation of three million acres, and the preliminary canal which is nearly 100 miles in length, is sufficient to irrigate 300,000 acres, of which 100,000 acres would be cultivated with cotton, or sufficient to produce 100,000 bales annually. The work has been commenced, the Imperial Government having loaned to the Sudan Government, the sum of £500,000, and there has been no delay so far.

If the work is pushed on immediately, it can be completed in about three years' time, when we may expect an annual production of 30,000 bales. In five years the production is estimated at 100,000 bales, and there should be a continuous increase in future years, the amount of which would depend upon the population and other circumstances. There is no doubt that if the work is pushed forward, we shall obtain, sooner or later, an annual production of at least one million bales. The total amount of land available for cotton growing on the Gezira plain, as about four million acres, which is nearly as much as the whole of the Egyptian Delta. This is very important in view of the fact that the limit of acreage which can be put under cotton in Egypt has already been reached. The Gezira scheme is the only proposition, as far as the Association are aware, which offers any prospect of the production of an appreciable quantity of high-class cotton in the immediate future, and it is most important that not one moment should be lost in pushing on with the work.

CYPRUS NOTES.

Deficient Rainfall—Uneasiness Amongst Agriculturists.

(FROM OUR OWN CORRESPONDENT.)

NICOSIA, November 25.

Uneasiness continues to be felt throughout Cyprus, on account of the want of rain. Only in the west of the island a small and quite insufficient quantity has fallen. There is, however, still time; and in several recent years the needful downpour has been delayed until farmers have been almost driven to despair. The system of sowing before rain, called in Cyprus *xepvoia* (dry sowing), tends to be less practised than formerly. Government has begun to issue seed corn from its tithe stores to needy farmers, but the usual complaints are made that the quantities allowed are far too small.

On November 17 the members of the Legislative Council for the Nicosia-Kyrenia and Larnaca-Famagusta electoral divisions had an audience of the High Commissioner, and submitted urgent requests that more ample loans should be made, and that the wheat stored at one of the depôts should be reserved exclusively for the poor of the Carpass region of the Famagusta district. Also that prices should be controlled.

Agricultural Show.

An agricultural show was held at Kyrenia on November 24. The High Commissioner went over from Nicosia, and the Director of Agriculture attended. These district shows unquestionably do a certain amount of good and stimulate villagers to efforts in some directions. They do not, however, yet indicate any very general movement on a large scale.

To take an example of lethargy, village cultivators cannot yet be induced, after many years of exhortation, to take any steps in the selection of seed corn, which would undoubtedly increase the productiveness and quality of the cereal harvests. Progress is piecemeal and unsystematic. Here and there signs of more intelligent effort crop up, and leading villagers write excellent letters to the papers and encourage the circulation of the Government Agricultural Journal; but in general all the antiquated methods from seed time to harvest still prevail, and the movements towards co-operation, so foreign to the Greek mind, are feeble. The same must be said of the vine and wine-making industry.

CYPRUS TRADE RETURNS.

Imports and exports for the quarter ended September 30 last are published. The value of imports was £245,579 (£242,597 in goods and £2,974 in specie), as against £157,440 (£146,221 and £11,219) for the corresponding quarter in 1915. Exports were £230,719 (£225,917 goods, and £4,802 in specie), as against £204,883 (£202,868 and £2,015) for the corresponding period. The increase is principally due to enhanced values, and not to increase of imports and exports.

An Alexandria message of December 18 states: "The arrivals of cotton seed last week totalled 7,670 tons, and shipments amounted to 5,100 tons, leaving stocks in hand of 141,180 tons, as compared with 93,920 tons held a year ago.

DELICIOUS COFFEE.

RED WHITE & BLUE

For Breakfast & after Dinner.

Wholesale, of Hanson's, London, England.

PRODUCE REPORT.

LONDON, December 21.

Currants.

There has been a good demand for all qualities this past week, with business done at the late higher rates. The apparent depleted stocks in Liverpool induced buyers from the Midlands to come to the London market for their wants, and large quantities were purchased for those districts. Since the establishment of the blockade in Greece no shipments have been made, and none is likely to be allowed under the existing conditions; the prices, therefore, may have a further advance. The average quotations at present are, for Provincial, 68s. to 72s. per cwt., against 37s. to 40s. last year; Amalia, 76s. to 78s., against 41s. to 43s. last year; Patras, 76s. to 83s., against 42s. to 46s.; Gulf 77s. to 84s., against 44s. to 47s.; Vostizza, 79s. to 87s., against 42s. to 55s.; Lante, 75s. to 82s., against 40s. to 44s.; and Smalls, 72s. to 82s., against 38s. to 46s. of last last.

Sultanas.

With somewhat lower quotations a fair amount of business was done in new Greeks and other kinds. New Afghanistan fruit is

now arriving slowly, but the demand at present is very limited.

Figs and Dates.

Both articles are steady, but the demand is very moderate. Egyptian dates are quoted 32s. to 35s., and Persians 33s. to 39s.

Seeds.

Linseed has been steadier, and closes for London-Calcutta, spot and afloat, at 107s, December-January, 107s. 6d.; Bombay, ordinary, December-January, 108s. Rapeseed is firm, but quiet, to Hull from Cawnpore, prompt, 88s. 6d.; Ferozepore, December-January, 90s.; and Toria, January-February, 92s. Cotton seed is firm. London-Egyptian, f.a.q., loading, is quoted at £20 5s., and Sakelarides, loading, £19 15s. per ton. Rangoon beans are steady, spot, selling at £40 15s., and December-January at £41; January-February, £42; new crop, March-April, being quoted at £36.

Oils.

Linseed oil is steady. Spot pipes offered at £51 10s.; barrels, ditto, £52 10s., landed terms. Rape oil is firm. Ordinary brown, naked, spot, £54; English refined, barrels, £56 to £58. Cotton oil is firm. Crude spot pipes sold at £52 10s., and barrels, sweet, £59 to £60, as to make. Olive oil is scarce and dearer.

WINE FOR FRENCH SOLDIERS.

In their annual report on the world's grape harvest Messrs. W. and A. Gilbey state that although there has always been an intelligent interest taken in this country in the annual grape gathering of the world, it would not have been at all surprising if it had diminished in this, the third vintage of the war, when the consumption of wine with us—always very limited as compared with other nations—has still further declined, and now stands at the lowest level since the reduction of duties in 1860. On the military importance of wine, it is remarked that France has already requisitioned for her military needs the astonishing total of some 200,000,000 gallons of this year's wine (representing one-fifth of her own entire annual production), as well as more than 40,000,000 gallons from her Algerian colony, and storage has already been arranged for this enormous volume of wine, representing in value no less than £20,000,000, by the taking over of special warehouse accommodation in every department of France. So essential is the regular supply of pure wine considered for the well-being of the troops that similar exceptional precautions are being taken to safeguard the 1916 crop in Italy not only for her soldiers serving at the front but also for their sick and wounded comrades in the hospitals.

Prominent Industries of India

CONTRACTORS TO GOVERNMENT.

TREBIZOND'S NEW OIL INDUSTRY.

Extractions from the Filbert Nut.

Although Trebizond has always been considered more important agriculturally than industrially, the stern law of necessity has given rise to a new enterprise which, if carefully developed, may be a factor in the future commercial activity of this region and the beginning of an industrial life there, the local Consul of the United States wrote in a recent report.

Soon after the outbreak of the European war kerosene and olive oil advanced in price so rapidly that they proved beyond the reach of a great part of the population. Some of the natives, in looking for a substitute, tried crushing filberts, which the cutting off of export facilities had left on their hands in large quantities. This experiment, confined at first to individual homes, proved successful, and before long several of the leading inhabitants went into the business on a larger scale, taking it from the houses to small factories. The oil was used for cooking and lighting purposes, and also in the making of soap.

Cottage Factories.

Although the largest of the factories has unfortunately been destroyed by fire, there are three working at present, and the industry is also still quietly carried on in 20 or 25 private homes. A personal visit to one of the factories was of much interest. The nuts are first shelled and then usually fried or roasted, after which they are put in a heavy press. The oil is poured into a large vat, boiled slightly, and then forced through a heavy cloth, which acts as a strainer. This completes the process.

In the "home" industry the nuts are not roasted, but after being shelled are dipped in hot water and then pressed. The result is that the oil has much less taste of the nuts, and is consequently a superior quality, but as the oil is not boiled at all it cannot be kept for long periods, especially in the summer. By roasting the nuts before pressing larger quantities of oil can be obtained. The present proportion is 1 lb. of oil for 6 lbs. of nuts. The residual product is sometimes used as food for animals, but is more often sold to the peasants, who prepare it in various ways.

Prices and Output.

Filbert oil of average quality originally sold for about 7½d. a pound, but now the price is much higher. The total stock of filberts on hand in Trebizond proper is estimated at 6,820,000 lbs. Dealers will sell only in small quantities, as prices are advancing.

The industry is, of course, in an elementary stage, the total weekly capacity being only from 7,200 to 7,500 lbs. In each "shop" there are not more than 15 workmen. Except for the shellers, the machinery is quite primitive, most of it having been made by hand here in Trebizond. More up-to-date machinery might be profitably installed after the war if it is seen that the olive-oil competition can be met.

The interesting and significant fact, however, is that the initial efforts have been successful. The people are learning that industrial initiative can have profitable results.

EGYPTIAN PORTS ADMINISTRATION.

The Ports and Lights Administration at Alexandria have just issued a notice to local shipping companies and agencies announcing that henceforth the validity of permits of departure issued to ships leaving with cargo is extended to 48 hours, as practised before the issue of Circular No. 6 dated September 30, 1916. As regards ships leaving in ballast, the Customs Administration having decided to extend the validity of their "tankins" to 48 hours, the permits of departure issued to such ships will be valid only for the remaining period of the 48 hours on presentation of "tankins" to the Ports and Lights Administration. Therefore the permits will not be valid if not made use of during the period of 48 hours for loaded ships and during the period mentioned in the permit for ships leaving in ballast, unless the Ports and Lights Administration allow an extension of another period.

THE TRADE OF ADEN.

Great Increase in 1915-16 of £5,626,658.

Some interesting figures are forthcoming of the trade of Aden in 1915-1916. As will be seen from the statistics given below, the lonely outpost in the Indian Ocean has come into close commercial touch with Egypt and the Sudan owing to the war.

Aden increased its private sea-borne foreign trade in 1915-1916 to £5,626,658. In 1914-1915 the total was £5,162,470; in 1912-1913 it was £6,739,133. The private Indian trade was £1,575,256 against £1,519,155 in 1914-1915, and £1,792,817 in 1912-1913. Indian trade increased in merchandise by £123,813, but decreased in treasure by £67,712. Until 1914, Aden's imports of yarns and textile fabrics from the British Empire increased steadily. In 1911-1912 they stood at £468,223, and in the following year touched £500,093, falling to £352,320 in 1913-1914, but rising again in 1914-1915 to £397,500, and last year recovering to £493,112. Contrast similar imports from foreign countries:—1911-1912, £423,764; 1912-1913, £601,517; 1913-1914, £466,057; 1914-1915, £270,669; 1915-1916, £497,168. The exports of yarn and textile fabrics from Aden in the same successive years have been £745,403; £861,814; £661,831; £554,637; £916,769. Last year witnessed, therefore, a great recovery.

From Calcutta Aden takes coal, tea, and jute. The coal totalled 12,958 tons against 82,671 consigned from the United Kingdom. Tea increased very largely in imports from Calcutta and in exports to Suakin and Port Sudan. Prior to the war direct shipments were made from Calcutta to these ports. The tea credited to Bombay is 64,804 lbs., and to Calcutta 436,410 lbs. The previous best from Calcutta was 210,989 lbs. in 1912-1913. Ceylon sent 55,597 lbs. against 26,910 lbs. in 1911-1912. Tea imports increased in quantity by 343,121 lbs. and in value by £15,922. This large increase was due to the shipments made to Suakin and Port Sudan. There were also larger demands from Somaliland, Massowah, and Italian East Africa. Jute manufactures increased in value from £19,024 to £38,834, chiefly in jute bags from Calcutta. Aden, needless to say, is chiefly a re-exporting and distributing port, and jute manufactures exported increased from £12,347 to £37,617, due to the very large increase of gunny bags to Suakin and Port Sudan; shipments to Egypt and Djibouti also increased.

EGYPT IN 1916.

The Cairo correspondent of *The Times*, reviews the situation in Egypt during the past year, and after analyzing the political position, says:—

"Economically the situation of Egypt is even more satisfactory than it was a year ago. Trade is flourishing, and the people are in a very prosperous state, thanks to the high prices of cotton and the excellent sales of the large excess of cereals and other commodities. So well off is the country that there is a prospect of another bumper surplus at the close of the current financial year.

"From the commercial point of view also the position is healthier. Slowly but surely the German firms have been, or are being, wound up and swept out of the way. Only those who have obtained an insight into the true state of affairs in the course of the general clearing up during the past two years have any idea how wide the German octopus had spread his tentacles and how fast *Kultur* was laying its hand on Egyptian trade of every description. The danger has, it is believed, been averted before it was too late. The German trade-pirate and political intriguer has been unmasked, and has now been eliminated from the scene, never, it is hoped, to return."

NEWS FROM ALL SOURCES.

The Government of Egypt has prohibited the export of rice and beans.

Germany expects to be able to seize 1,000,000 tons of barley in Roumania.

Austria, to Germany's anger, demands the whole of the available supplies of Roumanian cereals for her own use.

The Chamber of Commerce of Wurttemberg has declared its readiness to accept the proposal of the Turkish Government that the latter shall send some 10,000 Turks between the ages of 12 and 15 years to Germany as apprentice artisans.

The Royal Mail Steam Packet Company of London have again issued their customary Pocket Diary. This year it contains four photogravures from paintings by Charles Dixon, R.I., of the company's vessels in the service of the Government from the Crimean War of 1854 to the present conflict.

The *Torgovo Promyshlennaya Gazeta* (Petrograd) writes:—"The meteorological conditions during the past summer were not altogether favourable for the oilseed crops. Drought in the south and south-west, and excess of rain in the northern and eastern Governments, and in the central agricultural regions exercised an unfavourable influence during the first half of the summer. A more favourable change set in later, visibly improving the prospects, but at harvesting time heavy rainfall again occurred and affected the quality and quantity of the crops. As a result the oilseed crops in European Russia vary considerably, though in general they may be classed as average.

The Algerian wool trade is rather perturbed as to the steps which the authorities may take with respect to the next wool season. It is well known that an important Government functionary has gone to Paris in order to arrange matters with the Intendancy, but it has not been ascertained where he has collected his information, especially as regards Algerian interests and their defence. Rain has now set in very extensively; but if the weather is not too cold it will be possible to turn the flocks and herds out to pasture. So far the sheep are in good condition, both as regards pelts and fleeces. For the moment there is nothing but waste in the wool market, and mostly it remains unsold owing to the high prices asked.—*Textile Mercury*.

An Order of the Resident General of the French Zone in Morocco, dated November 2, withdraws the general prohibition imposed in June last on the exportation or re-exportation of sheepskins from the French Zone in Morocco; and provides that, as from November 10, such skins may be exported from ports of the French Zone to French, Allied, or neutral ports, provided that a personal bond is entered into with, and accepted by, the Customs authorities, and that certificates notifying the arrival of the goods in the port of destination are produced within a period of sixty days from the date of despatch of the goods. The present Order provides, however, that stocks of sheepskins which were in merchants' hands on October 15, 1916, must be declared and offered to the "Service de l'Intendance" before their exportation can be allowed.

It is stated in Parliamentary Papers that the Government has purchased and still purchases its supplies of nitrate of soda chiefly but not wholly through one firm. This firm has for some time past practically discontinued its ordinary European trade in nitrate, confining its operations to purchases on behalf of the British and Allied Governments. It is understood that producers do not pay brokerage on sales made in Chile. It is considered that his Majesty's Government is quite justified in paying a reasonable commission to the firms who act for it. The rate of commission is in the nature of a sliding scale with a maximum of 1½ per cent. on the purchase price (in Chile), which commission covers purchasing, financing, shipping, supervising, receiving, and storing, and in general acting as the Government's buying agents, storekeepers, and distributing agents.

ENGINEERING NOTES.

Trade-War Preparations and How to Make Them.

(FROM A GREEK CORRESPONDENT.)

The latest reliable information in connection with the practical trade-war preparations abroad ought to stimulate and hasten the individual as well as the collective efforts of British manufacturers for the organization of the much-talked-of trade-campaign before it is too late. It should also serve as a warning that it is not only a strong German but also an American competition that must be faced; and the struggle will, apparently, be harder in the engineering lines. It is well known that American engineers view the future in a highly optimistic manner; they see that the history of the past conflicts points absolutely to a period of reconstruction following the present epoch of catastrophe, the extent and duration of the rebuilding being always proportionate to the losses brought about in the destruction. Shattered railways, destroyed bridges, damaged canals, twisted steelwork, ruined roads, etc., all will have to be renewed or replaced; and here the Americans see the great opportunities that the near future brings to them. They are prepared for what is to come, and believe that their trade will develop along the lines of greater export of finished products and the importation of raw materials rather than of manufactured goods.

A recent official United States bulletin calls attention to the opportunities for expansion in the trades necessary for supplying the raw materials for the engineering structures that it is hoped to send to Europe. In the Southern States great deposits of coal and iron-ore have recently been found to be very promising for the production of pig-iron, while in the West vast hydro-electric schemes are maturing for supplying the cheap power which will enable certain engineering and metallurgical industries to make big advances. Financially, the Americans hold that everything is ready for them to seize their opportunity in Europe and in other foreign markets. With such a well-prepared competition the British engineer manufacturer will have to cope.

German Organisation.

And whilst Americans are so well prepared for the trade-struggle, our slow British manufacturers are "planning" and the Germans are hard at work finally organising their campaign with the object of securing industrial supremacy, even should military supremacy be unattainable; and no stone is being left unturned to secure this supremacy. The engineering industry of Germany is typical of that country's many organised trades. According to reliable authorities, six of Germany's leading engineering institutions have combined to form an engineering and economic league, with the huge membership of 60,000, and representing the best engineering brains in the country. In this country, it is stated, there are at least 100 engineering societies, associations, and organisations, and their total membership falls far short of the 60,000 provided by the six German societies. Of this movement in Germany, we hear details which prove that everything is well and minutely organised for "prompt action." Thus, German shipping companies are already making contracts for despatching cargo by their first sailings after the end of the war; and it is asserted that there is in Germany an enormous quantity of merchandise ready to load when that time comes.

Empire Combines.

According to recent reports, an export association of the German wagon builders' industry has been formed in Düsseldorf, under direction of the Government; whilst the Westphalian Iron and Wire Works have succeeded in forming a "price convention" amongst a considerable number of the German wire works; and penalties will be strictly

enforced if members do not respect the conditions regarding minimum prices. Efforts are also being made for forming a general cement combine. It is evident, therefore, that the Germans, like the Americans, have a keen eye to the period of reconstruction which will follow the war.

Reinforced Concrete.

Reinforced concrete has been a boon to the architects and engineers, for it enables them to make their "stones" into any required shape or size, and to carry out designs in building construction which would be difficult or impossible with the ordinary building material or with concrete alone. Reinforced concrete is now employed for a great number of purposes, and in the majority of cases it has thoroughly justified its use; although in some few others, such as pillars supporting bridges and similar exposed structures, according to recent reports, it has been observed that the inserted iron or steel in reinforced concrete is often attacked chemically or electro-chemically, and when that happens corrosion of the metal takes place, the result of which is apt to be disastrous. However, such corrosion, apparently, happened in cases when the reinforced concrete was exposed to a damp salt air; but for ordinary building construction, to which these notes refer, the composition has been found quite satisfactory.

The Fire Point of View.

Its merits from the fire point of view, it may be said, have not hitherto been thoroughly understood, and on this point some very valuable information is now available, thanks to the British Fire Prevention Committee, and its recently-issued report on the great fire at the Edison Phonograph Works in New Jersey in the winter before last. The document gives a very interesting technical description of that fire, but the importance of the report, as far as architects, engineers, and building owners are concerned, lies in the fact that the Edison buildings were of reinforced concrete, and that this is the first time that a fire of great severity and wide area in a building constructed of reinforced concrete has been under careful technical observation with regard to its structural effects.

Successful Test.

The fire was not only a very serious one, but it was also very intense, and whilst all other parts of the premises and their contents became heaps of ruins, the concrete portions of the buildings remained with the exception of a comparatively small section, which was so little damaged that it could be restored in a short time. The report describes the course of the fire, gives a detailed description of the damage done, the effect of the fire on the material, the temperatures developed, the conclusions arrived at, and some notes on the reconstruction. Amongst the lessons learned is the necessity that even in this class of construction the buildings should be divided up in fire-tight compartments, and the exposure risk provided against by suitable sashes and fire-resisting glazing; it is pointed out, moreover, that, if such safeguards had been provided the outbreak would have been confined within reasonable limits. The information generally contained in the report is of particular value at present, having regard to plans under consideration for post-war building construction, in which the merits of ferro-concrete from the fire and air-raid point of view claim special attention.

British Industries Fair.

Arrangements for the holding of the British Industries Fair next year are now complete, and forms of application for space are being issued by the Board of Trade. The fair will be held from February 26 to March 9. The growth of the fair has necessitated an increase of space, with the result that the fair will be held partly, as last year, in the Victoria and Albert Museum and partly in the great hall and certain galleries in the Imperial Institute Building. The fair will be confined to the same trades as were sanctioned by the Minister of Munitions last year—toys and games, earthenware and china, glass, fancy goods, stationery and printing. An important development, however, has taken place since last year in that the Municipality of the city of Glasgow are organising a fair at Glasgow, which will take place concurrently with the Board of Trade Fair in London, and will include certain trades not comprised in the London Fair. The Glasgow Fair, which is being held with the support of the Board of Trade, will include textiles, ready-made clothing, boots and shoes, foodstuffs (prepared and preserved), and domestic chemicals. Over 20,000 invitations to each fair will be sent to overseas buyers by the Board of Trade, those to firms in non-European countries having been already despatched, and another 80,000 invitations to the fair in London will be issued to the buyers in this country before February 24.

EGYPTIAN CLOTHING CONTRACTS.

Recently, owing to lack of work, Messrs. Compton and Sons, the well-known English firm, who have set up a large manufactory for clothing in the Shubra quarter of Cairo, had, through want of employment, to dismiss 300 out of the 600 hands that they have in their service. This firm, says the *Egyptian Gazette*, has been most successful during the short time that it has existed in Egypt in taking over all the contracts that were formerly given out by the Government to the Austrian clothing manufacturers for the supply of uniforms and other kinds of clothing for officials.

A deputation of eighteen workmen a few weeks ago were received by Lord Edward Cecil, the Adviser to the Ministry of Finance, and explained their grievances to him. They declared that there were 600 men in the service of Messrs. Compton and Sons, and that these individuals had at the lowest estimate from six to seven persons dependent upon each of them. There were thus 4,000 inhabitants of Cairo drawing their livelihood directly or indirectly from the factory, and they begged the Financial Adviser, therefore, to do his utmost in order that the Government should give out all work for which the factory was built to a local firm instead of asking for tenders from abroad.

Lord Edward Cecil received the deputation in a most friendly manner and promised the members that he would do all in his power to promote their well-being.

The question at issue is of extreme local interest, adds our contemporary, and it is sincerely to be hoped that the case of these unemployed factory hands, many of whom are highly skilful workmen, will receive earnest consideration, and that the Government will do its utmost to see that all Government contracts, as far as possible, are given out to local employers of labour. It is true that a good many Government contracts fall into local hands, but the majority, especially the Egyptian Army contracts, still go to England. Now, there is not the slightest reason why this should be the case. In the present instance, the factory was started by English capital and the entire enterprise solely due to English initiative, which is thus able to take over all the huge business that formerly fell into the hands of the Austrian clothing manufacturers.

A British Chamber of Commerce having for its objects the protection of British trade interests in the Persian Gulf, the study of measures necessary for counteracting undue foreign competition, the settlement of disputes by arbitration, etc., has been formed at Busreh. Communications for the Chamber should be addressed to the chairman, Busreh British Chamber of Commerce, care of the Eastern Bank, Busreh.

RESTRICTED TRADE.

Roumania's List of Prohibited Exports

The following is a list—compiled at the Board of Trade from information received up to November 27, 1916—of articles of which the exportation from Roumania has been prohibited.

Exceptions to prohibitions of export can be obtained in special cases, each case being decided on its merits.

The transport of military stores through Roumania is prohibited; and the transit through Roumania of goods of which the exportation is prohibited is permitted only under special authorisation of the Ministry of Finance, each case being decided on its merits. The transit of articles which are the subject of State monopolies is also prohibited, but no restriction is imposed on the transit of postal parcels:—

Accessories for motor-cars, cycles, motor-cycles, and motor-lorries (tyres and the like); accessories for aeroplanes (see under Aeroplanes). Acids—sulphuric acid, and all other acids. Aeroplanes and accessories, including propellers and motors, etc., and all materials used for waterproofing wings. Ammonia, liquid, and salts of ammonia. Animals: draught animals of all kinds (horses, oxen, etc.); cattle; pigs. Antimony. Ashwood.

Bandaging materials of all descriptions, such as cotton wool, gauze, etc. Barbed wire (see under Iron). Barrels (oak). Bicycles and motor-cycles; accessories therefor (see Accessories). Boots, shoes, etc. (footwear). Bristles (pigs'), horsehair, and cattle hair.

Cables. Candles, and materials for making them. Carts, carriages, automobiles, and all other vehicles. Cattle: cattle hair. Cellulose. Cement, Portland. (NOTE.—The prohibition of the export of Portland cement applies to Customs houses on the Danube and to maritime Customs houses.) Cloths (*toiles*, *draps*) and hosiery of all kinds; articles of clothing, and small wares. Coal. Coins: gold, silver, nickel, copper, or billon. Colouring earths, and all colours, simple or prepared. Copper and wares thereof (see Metals); copper and billon coins. Copper sulphate. Cordage: string, cord, and cables of any kind. Cotton, raw, cotton yarns; cotton cloth (see Cloth); cotton rags (see Rags). Cycles (including motor-cycles); accessories therefor (see Accessories). Elm wood. "Emaillite."

Flax (see Linen). Foodstuffs (alimentary produce) of all kinds (except foodstuffs, etc., authorised for export by the Commission for Imports and Exports). Footwear. Forage (see under Hay). Furskins of all kinds.

Glucose. Glycerine. Gold coins of all descriptions (however packed). Graphite. Guts, dried and heat-dried (*ceandrea*).

Hair (horse and cattle), and bristles (pigs'). Hay and all other forage. Hemp, raw or manufactured. Hides and skins of all kinds, tanned or otherwise; leather articles; boots and shoes. Horses, oxen, and all other draught animals; horse and cattle hair and pigs' bristles.

Ink of all kinds. Instruments, surgical. Iron and wares thereof (see Metals); iron-ware, galvanised, barbed, or plain.

Lead and wares thereof (see Metals). Leather goods of all descriptions; footwear. Linen (flax) and hemp in all forms, raw or manufactured. Linseed and rapeseed oils (see under Foodstuffs).

Mats, rush. Medicines (see Pharmaceutical products). Mercury. Metals: ores of metals, whether containing sulphur or not; metals in a raw state, or rolled; scrap iron and worn-out metal in any form; sheet metal of all kinds (receptacles: cans, tins for preserves and fats, for industrial use, full or empty); and all metal wares. Motor-cars, motor-lorries, and all other vehicles; motor-cycles. Motor and cycle accessories (rubber tyres and the like). Motors and other accessories for aeroplanes (see Aeroplanes).

Oak barrels. Office requisites (ink of all kinds). Oil of sunflower, hempseed oil, and all other comestible vegetable oils (except such as are authorised for export by the Commission of Imports and Exports). Oil,

mineral (see Petroleum). Ores of metals, whether containing sulphur or not.

Paper, etc., of all descriptions (except those specified in Nos. 418, 422, 423, 424, 425, and 430a of the Roumanian Customs Tariff). (NOTE.—The articles exempted from the prohibition are as follows:—No. 418.—Mechanical pulp, of wood, straw, and other vegetable fibres. No. 422.—Concentrated lye from the manufacture of cellulose. No. 423.—Common paper, brown, for packing; common cardboard, brown, yellow, or white, neither artificially coloured, varnished, nor containing other materials than straw and mechanical wood pulp. No. 424.—Packing paper, printing paper, cardboard, neither glazed nor coloured, of cellulose or mechanical wood pulp, unbleached. No. 425.—Packing paper, printing paper, writing paper, and paper for placards, glazed on one or both sides, not coloured, containing unbleached cellulose and mechanical wood pulp. No. 430 (a).—Paper bags, tubes, and the like, made of the papers specified in No. 423.) Paraffin. Petroleum residues and benzine (petrol). Pharmaceutical products. Pickaxes and shovels. Pigs' bristles.

Radio-telegraphic and telegraphic apparatus, and telephone apparatus. Rags of all kinds of textiles. Rubber tyres for motor-cars, etc. (see Accessories).

Sacks, sacking, and material for making the same, including tarpaulins. Saline residue of potassium carbonate produced from the calcination of the saline resulting from the refining of molasses. Seeds of sunflower, hempseed, mustard seed. Shovels and pickaxes. Skins and hides of all kinds, tanned or otherwise; furskins. Soap. Soda; sodium sulphate. Stearine. Sulphate of copper. Sulphuric and all other acids. Surgical instruments.

Tanning materials. Tar. Tarpaulins. Telegraphic, radio-telegraphic, and telephone apparatus; cables. Tin and wares thereof (see Metals). Tinplates, and tins made therefrom (whether empty or full). Transport animals of all kinds (horses, oxen). Tyres (see Accessories).

Vehicles of all kinds.

Walnut wood. Waxes. Wire, galvanised, whether barbed or not. Wood: walnut wood, ashwood, elmwood; cherrywood, applewood, pearwood, and chestnut wood. Wool; woollen cloth (see Cloth); woollen rags (see Rags).

Zinc and wares thereof (see Metals).

Banned Firms.

The following additions have been made to the list of firms in foreign countries with whom trading by British subjects is prohibited:—

MOROCCO.

Maury, José; Ostermayer, Walther; Ziyani, El Mokhtar, all of Larache.

PERSIA.

Derisi, Mohammed Ali, Borasjan, Bushire; Kaikhosrow, Rustam, and Sons, Kerman; and Kazeruni, Mirza Ali, Borasjan, Bushire.

GREECE.

Baumann, Angelo (Bauman and Beckmann), Athens.

By an Order in Council, dated December 8, 1916, the following changes have been made in the statutory list of firms in foreign countries with whom trading is prohibited:—

Additions.

GREECE.

Anatoli Insurance Co., The, Athens; Coundourakis, Georges J., Candia, Crete; Margaritis, J. Piræus; and Yannakakis, Nicholas, Piræus.

PERSIA.

Meister, Lucius and Brunig.

Removals from List.

MOROCCO.

Amar, Mesod J.; Beniflah, Elias; Benros, Isaac; Bensabat, Jacob; Benshiton, Joseph; Benshiton, Moses; Cohen, Mesod; Levy, Solomon; Moryusef, Fortunate S. (Moryusef, F.S., Judah S., Sliman J.); Muiyal, Isaac and M.; Sabhag, Mokluf, and Company, all of Larache.

PERSIA.

Pascalidi Frères, Reshto.

MOROCCO.

Escalant, Antonio Lopez, Larache.

PERSIA.

Haji Gholm Ali, and Haji Mohamed Bagher; Behbehani and Sons, Bushire.

COMPANY REPORTS.

Imperial Bank of Persia.

The directors report that the gross profits for the year ended September 20, 1916, after making provision for income tax and bad and doubtful debts, amount to £122,666 Os. 5d., to which has to be added £19,107 10s. 8d. brought forward from last account, making a total of £141,773 11s. 1d. After deducting expenses of management and general charges amounting to £68,496 4s. 3d., the sum remaining amounts to £73,277 6s. 10d. From this sum, £4,000, the amount due to the Persian Government in terms of the concession, has to be deducted, leaving £69,277 6s. 10d., which the Directors propose to deal with in the following manner:—

Six months' interim dividend, at the rate of 3s. per share, paid June 12, 1916 (free of income-tax)	£15,000	0	0
Transfer to reserve account	10,000	0	0
Final dividend, at the rate of 4s. per share, to be paid on January 3, 1917 (free of income-tax)	20,000	0	0
Carry forward to new account	24,277	6	10
	£69,277	6	10

The directors record with the deepest regret the death on December 21, 1915, of Sir Thomas Jackson, their late chairman, whose loss they greatly deplore. Sir Hugh S. Barnes has accepted the chairmanship of the bank. Mr. H. E. R. Hunter has been appointed to a seat on the board. The retiring directors are Mr. W. A. Buchanan and Mr. Frederick D. Sassoon, who, being eligible, offer themselves for re-election.

The accounts have been audited by Messrs. Kemp, Sons, Sendell, and Co., chartered accountants, who offer themselves for re-appointment.

The dividend will be payable on and after January 3, 1917. Meeting, December 29, 1916.

Orient Steam Navigation.

The revenue account, after providing for depreciation, shows a credit balance of £238,215, out of which the dividend on preferred shares has to be paid. A dividend at the rate of 5 per cent. per annum, free of tax, is recommended on the deferred shares, £25,000 is transferred to repair and renewal account, and £98,614 to general reserve account, balance forward £96,986.

OIL OUTPUTS.

Maikop pipe-line, 511 tons; Black Sea Amal, 388 tons; Maikop Combine, 281 tons. British Maikop, 38 tons; Bibi Eibat, 840 tons; North Caucasian (December 12), 9,558 tons; Ural Caspian (four weeks ended December 14), 9,787 tons.

A cable received from Apsheronskaya (Maikop Combine) states: "Well four 457 ft. rig and derrick destroyed by fire."

ON 'CHANGE.

(BY OUR CITY CORRESPONDENT.)

THROGMORTEN STREET, Thursday evening.
It has been again a very inactive week, and things have been in a state of more or less suspense pending developments in the political situation here and in the Balkans.

Egypt has been doing practically nothing. Prices, however, on the whole, have kept firm, and the tendency for Egyptian securities remains a favourable one.

Agricultural Banks are a firm spot at last week's price of 5½, but National Banks, on some attempted selling on a falling market, have relaxed ½, to 13½. Land Banks are quoted 5½, ex. d., and Anglo-Egyptians are a trifle quieter at 11½. Egyptian Government stocks have been in request, Unified closing about ½ up at 78½. Egypt three and a-half per cent. preference are, however, somewhat quieter round 67. In land shares, about 3,000 Aboukirs were done round 17s. 6d., and a fair line of Behéras changed hands at 63. A small lot of Egyptian and Foreign Trusts fetched 5s. 6d., but the market in this security is very restricted, and at the moment there is only a small seller at 6s. 6d. In New Egyptian, some business has been done at 9s. 3d. Alexandria Water continue in demand, but there are no sellers. Both Egyptian Markets and Salt and Sodas are a trifle quieter at 25s. and 23s. 9d. respectively. In Khedivial Mails there has been a fair amount of business between 30s. and 32s., but the shares are weaker at the close at about 31s., in sympathy with the general setback in shipping shares and the uncertain position in connection with the Government's projected nationalisation of this industry.

In Greek stocks the market is at an absolute standstill in consequence of the blockade.

RUHN LOEB AND THE ROYAL DUTCH COMPANY.

The secretary of the Anglo-Persian Oil Company writes to *The Financial Times* as follows:—"With reference to the announcement which has recently appeared in the Press from Ruhn Loeb and Co., of New York, in connection with the purchase by them of a block of shares in the Royal Dutch Company, and the statement made therein that they and their affiliated concerns own or control extensive oilfields, pipelines, etc., in Persia (among other places), I am desired by my board to state that this announcement is inaccurate, inasmuch as neither the Royal Dutch Company nor any of their affiliated concerns own or control any oilfields, pipelines, etc., in Persia."

According to the *Kölnische Zeitung*, the Austrian Cabinet resigned because the Premier insisted on the duty free import of cattle from the Balkans, a step which was vetoed by Count Tisza in the interests of Hungarian cattle breeders.

EGYPTIAN LAND AND GENERAL TRUST, LTD., 66, Broad Street Avenue, London, E.C.

Notice is Hereby Given that the TENTH ORDINARY GENERAL MEETING of the Shareholders of the Egyptian Land and General Trust, Ltd., will be held at the Office of the Company at 66, Broad Street Avenue, in the City of London, on Friday, the 29th day of December, 1916, at 4 o'clock in the afternoon, to transact the ordinary business of the Company. The Transfer Books will be closed from the 22nd to the 29th December, 1916, both days inclusive.

Dated the 21st day of December, 1916.

By order of the Board,
G. RUTHERFORD, Secretary.

NOTES OF THE WEEK.

Egypt's satisfactory record for the year has been well maintained until the closing days of December. It is a little more than four months since the Turkish attack on the Suez Canal ended in the complete discomfiture of the enemy. As a result of that defeat there was no need to fear for the safety of the Canal, but the anomaly of the greater part of the Sinai Peninsula being in Turkish hands remained. Military activities on both sides have been restricted to patrol encounters and to air raids, in which, as might be expected, British airmen displayed marked superiority. The success of the enemy, however, in bombing Cairo in broad daylight revealed the danger of allowing him to remain in undisturbed possession of the eastern portion of the Peninsula. Air raids could not be relied upon to eliminate Turco-German machines entirely from the air, and it was evident that, if Egypt was to have immunity in the future, more drastic measures were required to cope with the menace.

The enemy's main base within the Egyptian frontier was at El Arish, a town two miles from the coast and about ninety miles east of Kantara. It was from here that the last attack on the Canal started, and to this town the routed Turks returned. Since that date the British line of defence has been steadily advanced until it reached more than a third of the way across the Peninsula, but the Turks were still protected by a stretch of desert of between forty and fifty miles. On December 21 British troops entered El Arish without opposition. The rapidity with which they negotiated the intervening distance had forestalled the arrival of Turkish reinforcements, and the garrison had evacuated the town on the night of December 19-20. Two days later mounted troops came upon the Turks at Maghdaba, twenty miles south-east of El Arish. The position was carried, and, with 1,350 prisoners taken, practically the whole force was accounted for. In the meantime a mobile column operating to the south penetrated to a point midway between the Gulf of Suez and the Gulf of Akaba, destroying the camps previously evacuated by the Turks. British aircraft are also reported to have attacked Beersheba and El Auja, forty-five miles south-east of El Arish, and to have damaged an important railway bridge, fifteen miles north of the former town.

Unless the Turks show an unexpected capacity for recovery the immediate effect of this successful advance

will be to cause them to withdraw from the whole of the Sinai Peninsula. Egypt may thus look for greater freedom, if not complete immunity, from the visits of hostile airmen. The attack on El Arish, it is obvious, represents something more than a mere raid on the enemy's base. It has been preceded by the consolidation of Egypt's defences and elaborate preparations for making Eastern Egypt, if necessary, a starting-off point for an offensive. The character of the desert for a considerable distance has been transformed by railways, light lines, roads, and trenches. Consequently the permanent occupation of El Arish, particularly if it should be linked up with the Canal railway system, opens up wide possibilities. In the first place it brings the Hejaz Railway well within the scope of attack, and persistent attack, by aircraft. It will not be forgotten that in the Hejaz the Grand Shereef of Mecca for some six months or more has been carrying on a splendid struggle for independence. The issue is between Arabs and Turks, and the Grand Shereef is carving out his own fortunes. But in their campaign against the Turks the Allies have no reason to refuse fortuitous assistance. The cutting of the Hejaz Railway will weaken the resistance of the Turks at Medina, and may react on other theatres of the war.

In Mesopotamia the British offensive steadily gains ground, and Kut is now closely invested on the south. There is much to be said in favour of a methodical advance, which will not only secure the troops against all eventualities, but will also restrict the casualty list. If co-operation among the Allies extends to this theatre, it ought to be possible to make it difficult for the Turks to send any large reinforcements from Baghdad. News from Armenia and Persia has been meagre of late. At this season of the year, in spite of the great achievements of the Russians in mid-winter last January and February, we can hardly look for much activity over ground where the opposing forces have been too evenly matched for months past to allow of any considerable change in the situation. But in western Persia there is more freedom of movement. Just as the fall of Kut last April gave the Turks superiority in strength over the Russians on the frontier between Baghdad and Kermanshah, so due co-ordination of effort between the Allies would ensure that the pressure now being applied on the Turks in Mesopotamia should react on the Russian position in Persia.

The first successful attempt to hold the German advance in Roumania is now being made along a line

stretching roughly from the Oitoz Pass in the Carpathians to a point on the Danube some thirty miles south of Braila. Here a battle has been in progress for five days, and even if our Allies have to yield further ground, this check to the enemy will have been of considerable value in enabling the evacuation of Braila to be completed and the finishing touches to be put to the Sereth line of defences. The Germans claim to have taken a considerable number of prisoners as a result of the fighting on this front. It would be too much to expect that the Russo-Roumanian force should be able to reproduce all at once the conditions of the Battle of the Marne, before it has fallen back on its prepared positions; but clearly the enemy's sweeping movement is losing its momentum, and possibly the memory of what the French and British achieved in the early days of the war will hearten the Roumanians not only to continue the struggle, but also to put into it such determination as will lead to a second "miracle" after the pattern of that of the Marne.

Any hopes that the enemy may have formed of an early collapse of Roumania's resistance as a result of the terrible ordeal she has had to endure will have been dissipated before now. Thus once more the German doctrine that a nation forced to fight for its homes and faith can be intimidated into surrender by mere frightfulness has been refuted. The Roumanian Parliament is now in session at Jassy, and on the opening day King Ferdinand in his speech from the Throne reflected the staunch resolve of the people to hold out to the end and their confidence in the future, despite the blackness of the present. "Up to now the war has imposed upon us great hardships and sacrifices. We shall bear these with courage, for we maintain absolute confidence in the final victory of our Allies, and, in spite of difficulties and sufferings, we are determined to struggle at their side with energy unto the end." A people animated with this determination is destined for great things. The sufferings of Germany and the States associated with her are not to be compared with those which Belgium, Serbia, Montenegro, and Roumania have undergone; but the Central Alliance is now calling upon Heaven and President Wilson to manœuvre an early peace for its benefit in much the same spirit as the individual German addresses his enemy behind a bayonet as "Kamerad."

The situation in Greece remains as unsatisfactory as ever. On the one hand it is reported that the Allies' demands in regard to the transfer of Greek troops from Thessaly are being carried out; on the other hand it is asserted that a fresh concentration is in progress at Larissa. There is certainly nothing in the attitude of King Constantine or of his Ministers and the Athens Press to suggest willing compliance with the Allies' requests in reparation for the outrage of December 1. On the contrary, every public utterance of the Government seems to breathe recalcitrancy and hostility. If reports from Salonika are to be believed—little credence can be placed on heavily censored messages from Athens—King Constantine has added to his previous offences by communicating to the troops of the Athens command through his Minister of War an Order of the Day, conveying "greetings and congratulations for your exemplary behaviour during the unforgettable days of December 1 and 2." The Order continues:—"Your loyal devotion to duty, your self-sacrifice and courage saved the country in danger from enemies who hoped to overthrow the public order and the dynasty."

The Allies have something else to do than to censor King Constantine's public utterances; but they can hardly afford not to take note of flagrantly provocative language which is calculated to encourage fresh collisions between Greek troops and the Allies. All the various bodies in Greece committed to King Constantine's policy are now engaged in bolstering up each other's courage by stout words. The Allies have introduced the first instalment of the pressure they propose to exercise upon

the Greek Government in order to exact reparation for the events of December 1 and 2; but they have deferred the delivery of the second Note, which is to give extra turns to the screw. This delay is far from being to the liking of the Greek Government, for the blockade is working and being felt in the meantime. In view of all the circumstances, it seems unfortunate that the Entente Governments cannot take steps to terminate what is recognised to be an untenable situation. The failure to handle the Greek problem firmly in the past has had the effect of making it much worse than it need ever have been. If it be true that King Constantine has referred in a Military Order of the Day to the Entente Powers as "enemies," no useful purpose can be served by trying to persuade him to regard them as friends. Nor is it possible for the Allies by the presence of a few officials in Athens to instil a friendly atmosphere into a hostile administration. If the safety of the Salonika army can be rendered independent of the good will of the Greek Government and army, King Constantine should be left to his own devices. If it must be dependent on the good will of Athens, then the capital, the administration, and the country must be purged of all hostile agencies. The problem, we believe, would not be found so difficult if it could be handled firmly.

A further reason for finding a solution of the situation in Athens is supplied by the fate of prominent Venizelists. The Greek Government has officially stated that between December 1 and December 20 inclusive 268 members of the Liberal Party were arrested, of whom 91 have been released for lack of evidence. This admission that at least one out of every three arrests was purely arbitrary confirms to a certain extent the earlier accounts of the mild reign of terror instituted by King Constantine's army as a result of the events of December 1. The excuse given by the Greek Government is that Venizelist agents tried to spread panic in the town by firing from the windows and balconies of several houses. An inquiry into the occurrences of those days is said to form one of the demands of the Allies in the Note which has yet to be presented. From this, if it be true, as well as from the fact that the Allied Ministers have asked to visit M. Benakis and General Corakas in prison, we may infer that the Entente Governments are prepared to examine the Greek version, and consequently do not vouch for the accuracy of the first reports. Meanwhile, a large number of Venizelists remain in prison, in spite of the undertaking given by Admiral du Fournet that they would be protected.

From the Macedonian front there has been little news during the past week. Mud has hampered operations no less than in France, but the turn of the year finds the British front being extended in both theatres. Fresh German reinforcements are reported in the neighbourhood of Monastir, and were to be expected in view of the notable shortening of the enemy's line in Roumania. Reports of an intention to drive the Allies into the sea are once more current. The year opened with them, and for a long time an attack on the Salonika defences was anticipated. It was never made, and there is little ground for supposing that the conditions are more favourable for making it now. On the other hand, weather and the situation in Greece militate against a continuation of the Allied offensive. The rôle of the fresh German troops will, therefore, be to hearten the Bulgarians by their presence and to see to the strengthening of their defences.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, November 30.

The High Commissioner.

The High Commissioner and Lady McMahon are still in Upper Egypt, but are expected back in Cairo to-morrow. His Excellency will, it is understood, then proceed to Ismailia for a short visit to the Canal zone. The Alexandria committee of the British Chamber of Commerce are entertaining Sir Henry and Lady McMahon to tea at the Savoy Palace Hotel on the 14th prox., and a garden party will be held at the Residency on the 7th prox. Both these functions will, therefore, partake of the nature of an official farewell of the communities in the two cities.

The Coming Census.

The night of March 6-7 next has been given by Ministerial *arrêté* for the taking of the decennial census, which is due next year. Simultaneously, an *arrêté* has been issued appointing all omdas and sheikhs of villages of the Bedouin tribes and all sheikhs al Hara (district sheikhs) and sarrafs (tax-collectors) as census agents, and laying down what their duties are to be. As pointed out previously in this correspondence, the work of taking this census is going to be far more arduous than that entailed by the one of 1907, owing to the difficulty of getting together a sufficient staff of responsible supervisors. Had it not been for the fact that such a step would have seriously interfered with statistical calculations and arrangements, the Egyptian Government might quite possibly have postponed taking the census until the end of the war.

The Kitchener Memorial.

The various committees constituted for the collection of funds for the "Kitchener Memorial" to be raised in Egypt are all getting to work, and most of them have held meetings and taken steps to start collecting. Each Mudiria and Governorate has its own committee, which will be entrusted with the task of collecting from the inhabitants the total sum which has been marked down against each Mudiria or Governorate on the basis of the proportion of the Land and House Taxes paid by it. A sum of £E100,000 is to be raised in this manner the first year and the balance in the second and (if necessary) the third years. To the ordinary person knowing the temperament and the present financial situation of the Egyptians it would certainly appear that the best plan would have been to raise the whole amount required straight away, instead of spreading it over a long period. However, the Central Committee, on whose shoulders rests the entire responsibility for obtaining the full amount, has, it is to be presumed, seriously taken all the factors into account, and no doubt it has its own very special reasons for not making one bite of the cherry.

The Mixed Courts.

On January 31 the mandate of the Mixed Courts expires, and the time is now at hand when negotiations will be taken up—if, indeed, they have not already been embarked upon—with the various Powers interested for a renewal of the period of service of these very necessary Courts and of the contracts of the very distinguished judges who sat in them. Previous to the war the mandate of the Mixed Courts, except in the early years of their existence, was regularly renewed in quinquennial periods, the last of which lapsed on January 31, 1915. On that occasion a renewal for one year was agreed upon, followed by a further similar renewal on January 31 this year. Why a quinquennial period was not decided upon straight away is not quite clear. It is said that the idea was that the war would not last so long, and that at any rate by the time peace was declared it would be possible to introduce the changes in the relations of the various local jurisdictions which have for some time been under discussion. To those who know the facts, however, it is perfectly obvious that

if the war were to end to-morrow, or even this time next year, no immediate change would be possible, and that the existing jurisdictions would have to continue in operation under present conditions for some time to come. Therefore, since it is manifestly outside the bounds of practical politics for the requisite reorganisation to take place within the coming twelvemonth, a renewal for merely one year would certainly seem futile, and it would appear that the wisest course to follow would be to revert to the quinquennial period or to make some arrangement with the various Powers interested for the indefinite prolongation of the Mixed Courts. After all, the existence of the "Tribunaux de la Reform" until such time as the reorganisation has been agreed upon is absolutely in the interest of each of the signatory Powers; and if approached they could certainly have no objection to return to the system formerly in vogue or to the adoption of the alternative suggestion mentioned. Some such arrangement would have the additional advantage of reducing to the minimum the negotiations which have to be conducted with thirteen Powers whenever any amendment of the Mixed Court regime is necessary, and which, however straightforward they may have been, must during the past two years, owing to the annual renewals of their mandate, have added to the work of our various Chancelleries at a time when they could well have dispensed with such an addition.

The Servant Problem.

All householders and employers of servants in Egypt must have rejoiced when they read that the Ministry of the Interior had issued an *arrêté* ordering all Egyptians in domestic and similar service to register themselves annually, and obtain a certificate to this effect from the police. Not that this will entirely solve the servant problem, which at times becomes most tiresome, to say the least of it. It will, however, do away with the traffic in *shehadas* (characters) and consequent interchange of natives, which have gone on to such an extent in the past in this country, and from which employers have suffered most severely without any chance of redress. The *arrêté* will be put into effect gradually; but once it is in full operation all over the country there will be every prospect that an improvement will manifest itself in the attitude and conduct of the servant class, especially the Berberines, who have contrived to acquire the monopoly of domestic service. Since every seeker after a place must produce his identity certificate, it will be increasingly difficult for a servant who has been dismissed for bad domestic conduct from one place to find another at once by obtaining the *shehada* of one of his friends, and passing himself off as the "paragon of all the virtues" mentioned therein. Of course, there are bound to be cases where some more ingenious Berberine will succeed in hoodwinking prospective employers. If, however, the latter will only combine and insist on the production of the police certificate, with all *shehadas* given by previous employers, and if they will not be too ready to accept all explanations of lost *shehadas* and absence in their Belad (homes up country), proffered by servants in whose records of past service as borne out by *shehadas* there appear suspicious blanks—by the by, the new law might be considerably strengthened if some provision was made for registration of the movement of servants to and from their villages or outside the centre where they have registered—and if they themselves will only be candid and truthful in the *shehadas* they give to dismissed or departing menials, the new *arrêté* should be the means of considerably improving the present, at times deplorable, state of affairs.

CAIRO, December 7.

H.H. The Sultan.

H.H. the Sultan has completely recovered from his indisposition, and returned to Abdin Palace on Saturday. He has since been busy receiving officials and notables, come to congratulate him on his recovery. His visitors have included Sir Henry McMahon, General Sir Archibald Murray, the Ministers, Lord Edward Cecil, the newly-appointed Advisers, etc. His Highness presided on Tuesday afternoon, for the first time for several

weeks, at the Council of Ministers, and this morning he left for a short river trip in Upper Egypt.

The High Commissioner.

As announced previously, Sir Henry McMahon, accompanied by Sir Archibald Murray, paid a visit to the Canal zone last week-end, returning in time to be present at the banquet, which H.H. the Sultan gave in his and Lady McMahon's honour at Abdin on Tuesday evening. The occasion was quite a gala one, and the other guests included the Sultania Princes, General Murray and his Staff, the Ministers, the British Advisers, and the Residency Staff.

On the occasion of his departure, the Sultan has conferred on Sir Henry McMahon the Grand Cordon of the Order of Mohammed Ali. This is a signal honour and a mark of his Highness's appreciation of the retiring High Commissioner's work. The Mohammed Ali Order, created in memory of the founder of the present dynasty, is the highest decoration of the kind in Egypt. It is expressly reserved for those having special merits, or having rendered very conspicuous services to the country, and, so far, the decoration has only been awarded to one or two of the Princes of the Sultan's family. At the same time, his Highness conferred on Lady McMahon the First Class of the Order of El Kemal, in recognition of the very lively interest she has taken in the education and social advancement of the women of Egypt.

Two Well Merited Honours.

It is with great pleasure that we have heard the news of the award of the C.B. to Colonels Sir George Macaulay and Sir Murdoch Macdonald. As Under-Secretary of State for Railways, the first-named has had charge of the transport of troops and supplies all over Egypt since the outbreak of war, and of the construction work that has been carried on on the east bank of the Canal during the past year; whilst Sir Murdoch Macdonald, as Under-Secretary for Public Works, has been responsible for all the inundation defences and other important works on the Canal rendered necessary by the Turkish menace to Egypt, and required for the advance eastward which is gradually taking place. In both cases the honours are well merited. In this connection it is amusing to note that the first intimation was in the form of a private congratulatory wire to one of the recipients, and that it was not until quite forty-eight hours afterwards that the nature of the honour was made known to the two fortunate officials and the general public, through Reuter's.

The Wealth of Mecca.

The Sultania Society of Political Economy, Statistics and Legislation, which under the able presidency of H.H. Prince Ahmed Fuad has contributed so usefully to the study of the various economic, scientific, legal, and literary questions that have arisen in Egypt during the past seven years, inaugurated its new premises on Friday last. M. Mirel, the Chairman of the Board of the Crédit Foncier Egyptien, and vice-president of the society, was in the chair, and quite a large gathering of members and notables put in an appearance in honour of the occasion. The subject before the meeting was "The Great Fortunes at Mecca During the First Century of the Hejira," on which the Rev. Father Henri Lammens, one of our most noted Oriental scholars, read a most interesting paper. With great lucidity and many witty touches he explained how it came about that the Mecca population had at that time acquired such a reputation for opulence; that enormous profits were derived out of the caravan traffic, wherein, to quote an old Arab text, "each *dinar* of capital produced two *dinars*"; what keen business men the Meccans were, as witness the exclamation of the Prophet, himself a good judge of men and a keen bargain-driver, that "some of them could amass a fortune even by selling the sand of the desert"; what competition existed between the millionaire commercial houses, especially the Omayyades, the chief organisers of the celebrated Badr caravan (A.D. 623-624), and the Makhzoumites; what practical patriotism these "caravan kings" showed on occasion, and what solidarity bound all classes of the Mecca population together. Finally, M. Lammens pointed out, all these men were

unconsciously contributing towards the great rôle which the Arab Empire was destined to play later on; and he concluded by warning his audience not to fall into the same error as did the Greeks and Persians, who made the mistake of their lives in looking upon the Arabs as merely a race of camel-drivers, and in failing to realise that these much despised camel-drivers or conductors of caravans were by the ever-extending scale of their commercial and financial transactions rapidly acquiring the experience, knowledge, wealth, and self-confidence leading inevitably to political ascendancy.

The Cost of Living in Egypt.

Those of your readers who have had the opportunity and, having the opportunity, have had the inclination to peruse the local Press will have remarked that of late the latter has contained numerous paragraphs complaining of the great rise in the price of many food-stuffs and articles of first necessity. The paragraphs in question are fully justified in so far as they call attention to the increase which the cost of living has undergone in Egypt since the outbreak of war; but where they err is when they express astonishment or alarm at the rise which has taken place and is still taking place. An increase in the cost of living was but to be expected as a result, first, of the shortage of cereals and other agricultural products in the world; secondly, of the diminution in shipping with its consequent effect on freights; thirdly, of the substitution invariably practised by consumers whenever they find that the articles to which they have been accustomed have risen either beyond their means or to a point where they can be usefully and economically replaced by other commodities; and finally, of the sympathetic rise which such substitution produces in the price of the articles substituted. In their last monthly bulletin the Ministries of Finance and Agriculture publish a most interesting table showing the increase in the prices of the most important articles of first necessity during October of the years 1914, 1915, and 1916, as compared with the prices ruling in July, 1914, i.e., prior to the outbreak of war. From this we see that the average this year of the rise in wholesale prices is 28 per cent. for Cairo and 26 per cent. for Alexandria, whilst the average of the retail prices is 22 per cent. and 39 per cent. respectively. Some of the commodities, such as eggs, petroleum, and native soap have risen considerably, but taken all round the rise in the cost of living is far less than anyone knowing the situation in other parts of the world would have expected. Indeed, the Egyptians may consider themselves a very fortunate people. During the first year of the war they scarcely suffered any increase in the cost of living, and at the same time derived great profit from the peculiar position in which their country found itself vis-à-vis the rest of the Empire. To-day they are still gaining considerably from that position, but it is contrary to all economic canons and to the dictates of common sense for them to expect their country indefinitely to remain unaffected by the general situation in the world's markets; and if they are now being called upon to feel the pinch of war as revealed to them in the general rise in the cost of living in Egypt they have little cause for complaint and no grounds for alarm. Indeed, so long as the war lasts they must expect prices to go on soaring upwards, and they must make up their minds to put up with abnormal prices, even after the termination of hostilities, until such time as the shortage in shipping is rectified and the world's markets and sources of supply have regained their equilibrium.

"THE SULTAN OF ARABIA."

Reuter's Cairo Correspondent reports that, according to *El Kibla*, the Arabic journal published at Mecca, the Grand Shereef was declared Sultan of Arabia on November 4. The town of Mecca was decorated, and flags were flown to celebrate the occasion. From early morning Arabs of various tribes in their thousands flocked into the town. The proclamation was read to enthusiastic and cheering crowds, after which the Sultan returned to the Palace amid the cheers of the crowds and the joyous songs of the school children.

Thereafter, taking his seat in the grand hall of the Palace, the Sultan received the high officials and ulema, giving them wise counsel on the manner in which they should conduct the affairs of the country.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, December 4.

Race Meeting.

The first race meeting of the season at Khartoum took place on the 3rd inst. Owing to indisposition, H.E. the Governor-General was unable to be present. A large number of people took part, and the events went off with great success. The most interesting race of the day was for country-breds, and this was won by a bay horse bred by Lieut.-Colonel Carr, the Director of the Veterinary Department. The sire was a horse presented to the country by Lord Kitchener, and this is the first of his breed to appear on the racecourse. The closest race of the day was that for the Kerreri Cup, for Arabs round the course, a distance of about a mile and a-quarter. Haramis, which had made all the running, was challenged by Starlight up the straight, and was headed for a moment, but just got away past the post by a short head. In the absence of Lady Wingate, the Culex Cup, for the country bred race, was presented to the winner by Mrs. S. Stack. The cup was presented by Dr. A. J. Chalmers, of the Wellcome Tropical Research Laboratory. The meeting was enlivened by the playing of the Sudanese Infantry band.

The "Remnants."

The second performance of "The Remnants" took place on Saturday, 3rd inst. With the certainty of a high standard of entertainment the public had eagerly bought up tickets, and the house was crammed to its utmost. The performance fully justified the anxiety to obtain seats, and went off with great *élan*. Local colour was supplied in a duet by Messrs. Dupuis and Toovey in a song entitled "Really? Well, I am surprised!" which was much appreciated, whilst Mr. Toovey's heartrending tragedy of murders was also enthusiastically received. But it would be invidious to select any special numbers for notice, when all were received with well-deserved applause.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

The New Archbishop.

The new Archbishop, Kyrillos Vasileou, has been duly installed; but the chapter of events which immediately followed his election has furnished the Greek Church and community with many topics of discussion, and the Press with abundant material for comment. The enthronement of the Primate was to have taken place on the day of his election, but the Holy Synod was advised, apparently through the chief Greek interpreter, Mr. D. Carageorgiades, that it would be advisable to postpone the ceremony until the High Commissioner had ratified the election. Accordingly, the Bishop of Papho formally announced the appointment in writing. Sir John Clauson, being absent in the Kyrenia District, could not reply until the evening, when, after his return to Nicosia, the Archbishop was informed that his Excellency would receive his Beatitude at 10 a.m. next day, November 25. The Primate-elect, accompanied by the Bishops of Papho and Kition, waited on H.E., and Sir John had a private conversation with the Archbishop, which lasted for an hour and a-half, Mr. Carageorgiades acting as interpreter. After this an official writ, signed by the Chief Secretary, and recognising the election, was handed to the Primate, who invited his Excellency to be present at the ceremony of enthronement. Sir John Clauson expressed his regret that he was unable personally to do so, but added that he would send the Chief Secretary to represent him.

The Bishop of Kition was anxious to know whether the writ referred to was to be regarded as taking the place of the Turkish Imperial *Berat*, which it was necessary to obtain under Ottoman rule, as a sanction

of the Porte, or whether the formalities now adopted marked a new departure to be observed under British rule. Sir John Clauson, it is said, concluded his reply by stating that he could not be basing his action upon Turkish precedent, otherwise he would be sending back the Archbishop on his own horse, whereas he could not even offer him his motor, as his chauffeur was laid up!

The enthronement took place the same day at 4 p.m., the church being densely crowded. The ceremony was short but pompous. H.E. was represented by his Acting Chief Secretary, Mr. Fenn, and Mr. Lukach. On November 26 the electors were entertained at a banquet by the Archbishop. On the following day the Primate paid a visit to Government House, by invitation, and was entertained at tea by Sir John and Lady Clauson. On November 29 an official visit was paid to his Beatitude by Mr. Fenn, on behalf of the High Commissioner. He was received by the Primate, who wore his full robes and insignia, and by the Bishops. The Venerable Archdeacon Beresford Potter also paid a visit to the Archbishop, accompanied by Canon Newham and Mr. Smale, chaplain at Nicosia, all in their robes. Many telegrams have been received and gracefully acknowledged by the Archbishop, including greetings from the Patriarch of Alexandria and the large "Cypriote Fraternity" in Egypt. The Primate is losing no time in grappling with the work that lies before him, and is already taking steps towards the establishment of a fund from which the new clergy will be paid. The election of a Bishop of Kyrenia, to fill the vacancy caused by the late Archiepiscopal election, should take place in about two months.

A Convict's Request.

A villager of the Papho District, Chrisanthos Nicosphoros, who was sentenced to death for murder at the last assizes, and who should be hanged on December 12, has petitioned the High Commissioner that he may be sent to the field of battle. His petition has been forwarded by the Commissioner of Papho for consideration. Large numbers of villagers are ready and eager to enlist, should an opportunity be given of raising a contingent in Cyprus.

Forest Fire in Papho District.

A considerable area, just within the Papho District, at a spot called Orites, near the village Kuklia, where stood the far-famed temple of Aphrodite, has been burnt. At this place an unsuccessful attempt was made some years ago to plant a colony of Jews, who were despatched to Cyprus by the agents of a British charitable fund. A "forest" in the lowlands of Cyprus does not connote a growth of trees such as we associate with the term. In this case the trees are chiefly a sparse covering of holm-oak, cypress, wild olives, and carobs, with undergrowth. But a fire of this kind blackens and disfigures the landscape, besides destroying useful trees.

High Cost of Living.

Government is now selling grain—barley, oats, and vetches—to farmers in need of seed, fifty bushels being the maximum issued to any individual. Prices vary according to the qualities at the different stores. Wheat is not yet issued. Officials with small salaries still hope for an increase, or at least a war bonus. A further rise in the price of bread is anticipated. Olive oil and other local produce is at almost prohibitive prices for the poor. Native cheese, of a kind much used, which used to cost about 10 piastres is now sold at 30 piastres the oke. Olives, which were bought for 2 or 3 piastres, now cost 12 piastres the oke. The prices of other food-stuffs have risen proportionately.

THE WORLD-FAMOUS YAGHOURT

may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.

Also LEVANT PRODUCE:
Tomato Paste, Black Olives, Locomes, Walnuts,
Sardines, &c.
Recommended by Mrs. Frank Barker.

AN APPEAL TO THE ARABS.

[The following is a translation from *Al Mokattam* of Wednesday, November 15, 1916.]

The Address of the Martyr Abd al-Ghani al-Arisi.

Abd al-Ghani al-Arisi, proprietor of the newspaper *Al-Mufid*, was one of the leaders of the Arabian Reform Society. Expelled by the military from Beyrout, he fled to Taif, and from there sent the following address to the Arabs. He subsequently fell into the clutches of the Unionist party, who hanged him, together with his patriot colleagues, as we have previously mentioned. The following is the text of his address, taken from the Argentine newspaper *Al-Hawi* :—

Sons of Yarob, offspring of Kahtan, seed of the honourable and noble, descendants of valiant conquerors who entered the world in their might and by justice held sway over it; ye of pure ideals and lofty soul and glorious traditions; haters of injustice, champions of honour, ever true to your bond; brethren who are scattered in every quarter of the world—peace be unto you all.

Standing on the brink of death, I send you this message. I am fallen a prey to the Turkish beast who devastates your land and destroys your homes, who makes your little ones orphans and your women widows, who abases your sisters and enslaves your wives; who refuses the necessities of life to your weeping children that he may satiate his own vile brood. I speak to you from the Syrian desert, from among the tents of your heroic brethren who are called to the supreme task of delivering their country and overturning the throne of injustice and tyranny and every abomination.

Ere you read these words you may hear that I am dead, for those tyrannical Turkish infidels have pronounced against me and several other men, good Syrians all; and though I have escaped out of their hands and am a free man in a land where freedom rules supreme over the brave and the fair, yet I feel it is my duty to return to Damascus. I shall set out to-morrow, having first commissioned my brother in the holy cause, al-Najdi, to convey my letter to you by whatever way he deems best. If I get through, and escape a second time, my object is accomplished; if not, I shall have had the satisfaction of serving my people and my country to my last drop of blood. I should not be the only man who dies to-day for Arab nationality. I have numerous companions, for truly the ideal we urge and pursue demands many sacrifices. The pillars of freedom rest upon the bones of true men, and can only be safeguarded at the cost of many lives. Therefore, grieve not if to-morrow you hear that hundreds of the noblest of the Arabs have been slain, for in the long procession of days the day of deliverance shall come at last, if it please God.

You shall hear—it may be you have heard already—with shuddering and horror of the atrocities committed by those descendants of Chenghiz Khan and Timur Lenk among the noble Arab people. They determined to obliterate the Syrian community, even to the children, and for months past they have subjected the country to the most rigid military control. It was their intention also to crush the people of Irak; but in Irak their power is not nearly so strong as in Syria. Syria has certainly lost two-thirds of her normal population, for most of those who escaped hanging have met their death by starvation. The few survivors are being banished to Anatolia and Roumelia, with the idea that in confinement there, among Turks, they will soon become Turks themselves and their grandchildren will have no remembrance of their noble origin. The Arabs, who themselves raised those infidels to power and fame, are now being abased and destroyed by them. Their weapons are the sword and the gallows. They deport numerous families from Syria and the Lebanon, and employ all means of destruction against them. Houses, villages, and towns are cleared of their rightful inhabitants, to make room for immigrant Kurds and Turks, who can be relied upon to commit the same outrages on the Arab community as they did among the brave Armenians.

They tried to kill our language and destroy our national aspirations. They did everything possible to Turkify us, but in vain. Now their design is to exterminate us altogether, to transport the remnant of our agricultural and labouring classes from Syria to a place where they will use their high national characteristics. This is a thing we cannot endure. The arch-spy Jemal Pasha, Commander of the Fourth Army, has undermined all our efforts. After the failure of his expedition against Egypt, by which he intended to reduce that fortunate land to slavery, he affected great solicitude for the Arabs, and declared to many influential Syrians that he was all in favour of the independence of Syria. At banquets he made frequent allusions to this theme, and urged some of the prominent men to proclaim a revolt and throw off the suzerainty of Turkey. Many of us believed in him; but others, who were not deceived, made a point of warning their friends not to be caught in his toils. By this piece of political treachery he got some of the Syrians to commit themselves, and then fell upon them with the sword. But his sword, his death sentences pronounced at courts martial, his tyrannical decrees, and all his iniquities really constituted the greatest justification of our cause and the strongest encouragement to our Holy War. No doubt they have postponed our movement; but they have stiffened our resolve and taught us vigilance, foresight, and reflection.

We are seeking life in the jaws of death; our policy is settled; and the gospel of Arab independence is being proclaimed in Syria. Salvation is bound on our spears and inscribed upon our glittering sword-blades. From the desert shall come forth deliverance, and the auspicious flame now kindled in the Hejaz shall shed blessings over all the Arab lands. Soon also Nejd will be up in arms; the lion of Irak will spring once he gains more strength, and his Syrian cub, now languishing behind iron bars, will receive new power and confidence which will enable him to burst from his prison and rend his jailer in pieces. Before autumn is ended and the storms of winter are come, our whirlwind shall be let loose and shall sweep down on the heads of these infidel monsters.

My dear brethren, whom Turkish persecution has driven into distant climes, I beseech you, in the name of that mighty nation of which we are all members, that you do not hesitate or delay to answer the call of your motherland; it is the call of freedom and sweet independence; it exhorts you to unity, co-operation, and endurance, for your own sake, for the sake of your native country, and for the deliverance of all that you hold dear, from death, destruction, and shame.

Remembering that your brothers here are laying down their lives in the national cause, you will surely not scruple to join your forces and stand together as one man. I beg you to subordinate all your parties and factions. Among us to-day there are no Christians, Moslems, Jews, Druses, or Pagans; there are only Arabs. Amongst the Arabs there are no rival parties of the Lebanon, Beyrout, Damascus, Aleppo, Homs or Hama; for the fortunes of Beyrout are bound up with those of the Lebanon and with those of Damascus, Aleppo, Palestine, Irak, Hejaz, and Yemen. I say this with the utmost confidence. Cease, then, to raise complaints and to segregate yourselves into societies and schools of opinion, and reconcile your jarring prejudices and policies. I appeal to you all, beloved brethren, wherever two or three of you are gathered together to form yourselves into societies in the name of Syria alone, to recognize one another under that name, and collectively to expend those gifts and possessions granted to you by God in the raising up of a new and independent Syria.

CREATION MYTHS AND HEBREW TRADITION.

On Monday and Thursday of last week Professor L. W. King delivered the second and third of the series of Schweich lectures on "Biblical Archaeology," the first of which has already been noticed in these columns. Monday's lecture dealt with Deluge stories, that of Thursday with myths and legends of the Creation. Professor King said that the long, narrow valley of the Nile had perhaps suggested the early Egyptian figure of a man lying prone upon his back. Such was Kem, the earth god, whose counterpart in the sky was a goddess bending over him in an arch; her feet and hands just touching the limits of the world and her curved body forming the vault of the heavens. Of still earlier date was the idea that the sky was a great cow. In no Egyptian myth was there any striking or detailed parallel to the Hebrew tradition. In Babylonia, as in Egypt, we found traces of conflicting ideas, but the Creation myth of the city of Babylon had ousted its rivals and won a dominant place in the national literature. In this legend the creation of the world was represented as the result of a conflict, order emerging out of chaos; but this underlying dualism did not appear in the primitive texts more recently recovered. The legend represented the Creation as being carried out by the three greatest of the Sumerian gods, assisted by a goddess. One Sumerian legend of the Creation was found included in a magical incantation for the cure of tooth-ache. Another represented the creating agent as laying bundles of reeds in the waste of waters, and heaping on earth beside them in the same way as an early Sumerian cultivator reclaimed his field from the flood. American discoveries had thrown some additional light on the origin and character of early myth and legend; but, at the same time, viewed from the purely literary standpoint, we remained unable to trace back to a primitive ancestry the traditions which, under a very different aspect, eventually found their way into Hebrew literature.

On the question as to what was the period and what the process by which the Hebrews became acquainted with Babylonian ideas, the lecturer said that the tendency of the purely literary school of critics had been to explain the process by the direct use of Babylonian documents during the Exilic period; but there were three pre-Exilic periods at which the Hebrews might have acquired a knowledge of Babylonian mythology. The earliest of these was the age of the patriarchs. Those who supported the Mosaic authorship of the Pentateuch might assume that Abraham heard the legends in Ur of the Chaldees. The second period was when the Hebrews settled in Canaan, and came into contact with a people who used the Babylonian language as the common means of communication in that part of the world. The third period was that of the later Judean monarchy, when, in consequence of the westward advance of Assyria, the civilization of that country was once more carried among the petty States and cities of Palestine. In this period the reigns of Ahab and Manasseh were of special interest. During the latter reign especially everything Assyrian was fashionable in Jerusalem; so that when in 586 B.C. the Jewish exiles came to Babylon they must have recognized several of the stories as akin to those they had already assimilated and now regarded as their own.

Lantern slides illustrated the lecture. One of these showed an ancient boundary-stone which was considered, said Professor King, to have marked the site of the Garden of Eden.

TERRORISM IN SYRIA.

(FROM A CORRESPONDENT.)

CAIRO, December 13.

The Arabic press in America has lately been publishing letters which the writers have been able to send out of Syria by daring spirits who were able to leave that country, and who posted them on to their destinations. These letters, which have thus escaped the eye of the Turkish censor, contain harrowing details, and bear out the previous reports of hanging, extermination by famine, and all the accompaniments of a reign of terror, such as the Turks alone know how to exercise, and which surpasses in cold-blooded cruelty all that has been committed in this war. As an example is cited the case of a woman who, pushed to the last limits of despair, publicly offered her daughter, aged seven, in exchange for two oke of pure flour; her husband being said to have died from eating bread made of flour sold by the Government and adulterated with sawdust, sand, and other noxious substances. Espionage is said to be rampant. Two or more persons seen talking together are liable to be denounced by the secret police. According to news received in Paris, from more or less reliable sources, the Anasairi Chief, Emir Mohammed el Dandashli, was hanged in Damascus. The Turkish Government is said to have undertaken, about two months ago, the digging of trenches all along the coast from Tripoli to Sour (Tyre). All the Lazarist convents in Tripoli, Beyrout, and Damascus, as well as the French hospital in Beyrout, with all that they contained, are reported to have been seized by the Turkish Government.

The inhabitants of the vilayet of Syria seem to have suffered no less than those of the Lebanon. The population of this vilayet, according to the last census (of 1910), amounted to 750,000 souls, of whom four-fifths are Moslems, while the remainder are Christians of various denominations. In the Balkan and Tripolitan wars about 20,000 men of this vilayet perished in the service of their country; and in the present war the vilayet has furnished not less than 70,000 men, to say nothing of contributions in money, material, and beasts of burden, to the Army. It is estimated that up to August 1 last not less than 20,000 of this force have been lost in killed, wounded, and sick. This generous contribution, however, has not prevented the vilayet from being treated as worse than an enemy; and its inhabitants are said to have been reduced, through famine, disease, and flight to the neighbouring Bedouin tribes, to 530,000, which proves that the devastation which the Turks have been carrying on in Syria is the outcome of an instinctive love of destruction, and not merely of a spirit of revenge for so-called "disloyalty."

Details are given of the destruction, pillage, and massacre perpetrated in the principal villages of Jebel Qalamun by a force of Turkish regulars on its way from Homs to Damascus, on the flimsy pretext that the inhabitants failed to supply them with water. The water supply of two of these villages consists of two wells; and, as all the beasts of burden had been requisitioned, the villagers, mostly women and children, could hardly meet their own requirements, far less supply such a force on short notice. After laying waste these two villages, the Turks, arriving at the third village, set about making further trouble on the same pretext; and on the head of the leading family there—which had given repeated proofs of its loyalty to the Ottoman Government—endeavouring to show them their error, they opened fire. A fight ensued, in the course of which forty women, old men and children perished. Their bodies were left unburied, until the remainder of the inhabitants, who had fled, returned to the village on the departure of the troops and performed this elementary duty of humanity.

Thus, this force throughout its march to Damascus lay waste four villages, hanging many of the inhabitants, and destroying the wells. An ever-recurring refrain in the abuse they poured on the inhabitants, whether Moslems or Christians, was the exclamation "Infidel Arabs."

Following the receipt of an anonymous letter, containing the accusation that some deserters were being sheltered in the village Ma'lula, an armed force was sent thither. The sheikhs of the village denied the existence of such deserters, and invited the officer commanding to conduct a house-to-house search. The latter, instead of doing this, let loose his men on the village, and an orgy of rapine, pillage, and murder followed. This village is a well-known summer resort for the well-to-do families of Damascus, being distant from that town about ten hours' ride, and it contains some fine modern houses built by some of the inhabitants who had emigrated to America, also two large convents, one for the Greek Orthodox and the other for the Greek Catholics. None of these was spared, and the Turkish soldiery respected none, but the most dastardly of their outrages was the hurling over a precipice the son of one of the three sheikhs.

The same fate overtook el Ma'arra, on the same false charge of hiding deserters. The inhabitants of these parts

are mostly pure Arabs, living in a primitive state, who are incapable of organizing any hostile movement against the Government. Their simplicity, indeed, is said to be such that they do not know which of their sons in the army are living or dead. Their only fault, in fact, is that they belong to the "traitor Arab race," which was never consulted on this suicidal war, and did not wish it.

In the Beka'a matters seem to be no better. One of the prosperous villages on the confines of that plain, Deir el Ahmar, was attacked and pillaged, again on the charge of hiding deserters. The Turkish Government seems to be wildly seeking men, and more men, to satisfy the never-ending demands of its insatiable "ally," Germany. The Young Turks have, unhappily, been given every chance to mobilize the Arab population, and they have fully availed themselves thereof.

In the Mutessarifat of El Karak, where distress has assumed an unusually acute form, a rebellion is said to have broken out, with what results it is not known yet. In the most sorely tried parts famine has caused a general scattering of the population in quest of food.

In Acre and Caiffa, whose chief trade was with the Hauran, business has suffered seriously from the cessation of communications with that district. As to the German colonists there, who have always had their own way, they are now the lords and masters of the place. It is said that petitions now are no more accepted in Arabic, and that they must be written in Turkish or German.

OPERATIONS ON E. EGYPTIAN FRONTIER

The War Office issued the following statement last Friday afternoon:—

On December 21 the Egyptian town of El Arish was occupied by our troops, after being two years in the hands of the enemy.

From the fact that they had constructed a very strong entrenched position at Masaid, covering El Arish, and that a large amount of work had recently been carried out there, it appeared that the enemy had every intention of offering a stubborn resistance. It would seem, however, that the rapidity with which our advance was carried out completely upset their calculations, as it forestalled the arrival of their reinforcements. They abandoned their positions on the night of December 19-20 before touch with their outposts was established, and retreated to the east and south-east. The recapture of this town from the Turks after their long occupation is a serious blow to them, both from a moral and also from a military point of view.

A further statement, issued on Saturday, added some details, as follows:—

On December 22 our aircraft carried out several successful raids in the El Arish region. At Maghdabah about a ton of high explosives was dropped on an enemy concentration, causing many casualties to personnel. Attacks were made on Beersheba and Auja, and an important railway bridge over a deep ravine at Tel-el-Sharia, 15 miles north of Beersheba, was seriously damaged. All our machines returned safely.

A statement issued on Saturday reported:—

On the afternoon of December 23 our mounted troops carried a strong enemy position at Maghdabah (20 miles S.S.E. of El Arish), after an engagement which commenced at 9 a.m. Five hundred prisoners were taken. Aircraft co-operated in the attack both with bombs and with machine-gun fire from a low altitude.

And on Monday it was announced:—

Although the full report of the action at Maghdabah on 23rd inst. is not yet to hand, the following further particulars have been received.

The total captures now amount to 1,130 prisoners, at least two guns, and a large quantity of arms and war material. The enemy's casualties in killed and wounded are considerable. Our aeroplanes are continuing to harass the enemy.

ARMENIAN RED CROSS & REFUGEE FUND

FOUNDED DECEMBER, 1914.

President, VISCOUNTESS BRYCE.

Donations are earnestly entreated for the relief of sickness and distress among 250,000 destitute Armenian refugees in the Caucasus, whose condition is "pitiable in the extreme." Relief pay is less than 4d. per head a day. Food and all necessities of life are very dear. A copy of the Report for last year will be sent to inquirers. All work in connection with this Fund is voluntary. Contributions will be thankfully received and acknowledged by the Hon. Secretary and Treasurer, Miss Emily J. Robinson, 35a, Elsham Road, Kensington, London, W. Cheques may be made payable to the Armenian Red Cross and Refugee Fund; they should be crossed "London and South Western Bank, Holland Park Branch."

LETTERS TO THE EDITOR.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

THE CONSULAR AND DIPLOMATIC SERVICE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I see "Commentator" raises again in your columns the important question of the reform and reorganization of the Consular Service. I commend to his attention what I have written thereon in my little book, "Common Sense and Foreign Policy" (1913), and in the just published "Truth About the War" (*Review of Reviews*). The only way to deal adequately with the Consular Service and the Foreign Service generally is to make the Consulates the basis of the diplomatic career. The examination to enter the Foreign Service of the Crown should be the same for all branches of the Consular Service and for Diplomacy. All diplomats should begin as Vice-Consuls—not as Attachés—and should pass up through the ranks of Consul and Consul-General into secretaryships, ministries and embassies. The Consular and the Diplomatic Services must be absolutely fused. We should attract to this profession our ablest young men, and their physical fitness for the work should also be seen to. Boards of nomination for the Foreign, Colonial, Indian, and other branches of the Public Service should be appointed by the Sovereign, and from them should proceed (and not from the Secretary of State) the requisite nomination. Following on a nomination should come the proper examination, and appointment by a Secretary of State be conferred on successful competitors.

But I very much doubt whether we shall get this and similar reforms urgently required by the country and the Empire without something like a bloodless revolution, some re-creation of the misled Liberal Party.—I am, etc.,

H. H. JOHNSTON.

TANGIER TO TEHERAN.

Apropos of the calling up of Serbian subjects in this country for medical examination, M. P. van Meurs writes to the *Daily Mail*, asking whether this is not a matter that "ought to be taken up by any really patriotic Englishman." He goes on to say:—

I happened to come across a Serbian who told me that in all there are in Great Britain at present 150 Serbians. All these will have to be sent to Paris to be medically examined at the expense of this country, as, of course, their own country could not afford this trip to Paris for its subjects. Could these Serbians not be examined here, and thereby save the nation's money? It seems absolutely terrible waste of money to me—a neutral, who, however, has the Allied cause much at heart.

I, for one, entirely agree with the writer. I am not a very clever business man, I fear; but it does seem to me that it would be much more economical to arrange for the medical examination over here, even if it were necessary to bring one or two Serbian military doctors over for the purpose. As it is, it looks as if the Mountain is to be transferred to Mohammed, so to say; which must, I imagine, be a more costly matter than moving Mohammed.

The publication last Friday of the lengthy list of honours and awards for services in connection with the operations in Mesopotamia was very welcome—I had very nearly written "a very welcome surprise"; for the publication had been looked for so long that its appearance, at last, was almost a shock. The delay, I know, caused not a little dissatisfaction among the gallant soldiers who have been going through such a trying time in that field of operations; and it is not surprising that lately there have been one or two references to the matter in the Press. However, the list is out at last, and it must have made a pleasant Christmas for a good many families. Also, incidentally, it will doubtless have an excellent effect upon our Mesopotamia Expeditionary Force as a whole. Whether the latter consideration had anything to do with its appearance at this time I cannot pretend to say; but I should not be surprised if it had. On the other hand, it may well be that our new Government really has "got a move on" with regard to Mesopotamia, as to certain other not unimportant matters. If so, we shall all rejoice, for we were getting tired of "wait and see" on the Tigris and Euphrates, as elsewhere. No doubt the period of waiting has been very necessary, and very well employed. At any rate, we may hope so. Now—well, we shall see what we shall see, and I hope that 1917, being an "odd number," will prove a "lucky" one for us.

This reminds me that, by a printer's error—and it really was a printer's error, please!—the address of the Mesopotamia Comforts Fund was wrongly given in these notes

last week. It should be 15, Aldford Street, Mayfair (not Alford Street). When I read the paragraph in print, I am afraid that I very promptly supplied the missing letter; for I pictured harassed post-ladies vainly endeavouring to find "Alford" Street in order to deliver sacks of cheques and postal orders, and ceasing not from their toil. On second thoughts I concluded that the Post Office, which does such wonders in the way of "tracing" addresses, would not find the puzzle a very hard one; and that the cheques, etc., would reach their destination in safety. But if you are sending another donation this week it would be just as well to get the name right.

The Fund, I am reminded, is for the benefit of the British troops in Mesopotamia. The Indian troops are looked after, so to say, by the Indian Soldiers' Fund, of which Sir John Hewett, G.C.S.I., is the chairman. Subscriptions for the latter fund should be sent to the Hon. Secretary, 1, Carlton House Terrace; and comforts or clothing to 11, Somerset Street, W.

Fortune-tellers in London, especially those in the West-End, have been having anything but a happy Christmas. I am glad to learn, thanks to the active measures the police have been taking against them. One hears occasionally of remarkable "successful shots" scored by these gentry. Only last week I heard of one, an Indian, in Egypt, who foretold many things that were to happen, and did afterwards actually happen, to a friend of mine, and I should certainly not like to say that it was impossible for certain individuals to foretell the future to a certain extent. In fact, I believe that it is possible, and that it is quite often done. But that it is very rarely, if ever, done for money, or as a means of earning a livelihood, I most emphatically decline to believe. The "professional" is usually a fraud; and I am glad that the London police are, at last, treating him as such; for in these times he (or she) may do incalculable harm; and one seldom hears the faintest suggestion of any good results from a visit to their "parlours."

What leads me to refer to this subject is a report of police court proceedings against a certain "professor," which I read in an evening paper last week. In this report I came across the following paragraph:—

A quantity of fortune-telling apparatus was produced in court, including two crystals, a horoscope, kismet, mirror, two phrenology heads, forty books, a cushion, crystal stand, and several incomplete packs of cards.

Now the packs of cards, the crystals, the cushions, and most of the "apparatus" I can understand. But what manner of thing is a "kismet"? With Kismet of the East I am familiar, but as a bit of apparatus I know it not. Can any reader enlighten my ignorance?

A correspondent writes:—"Private George Moffatt, of the — Rifles, a patient on the hospital ship Braemar Castle, met his death as a result of the torpedoing of that vessel in the Aegean. His body was taken to Syra on November 23 to be buried. The Mayor called a meeting of the Municipal Council, and it was decided that he should be given a public burial, a wreath placed on his coffin, and the municipal flag hoisted at half-mast during the ceremony. Citizens of Syra were asked to attend and show their sympathy at the murder of this British soldier. As a result of this resolution, the funeral was the most impressive that has taken place in Syra for many years. Many thousands of people were present at it, and it was personally attended by local authorities, members of the Municipality, and Consular representatives of the Allied nations, and of Spain. Members of the trade unions, working men's clubs and lodges, together with the principal residents, followed the hearse. This ceremony, and the resolution of sympathy passed by the Municipal Council of Hermopolis, with their protest against the torpedoing, as contrary to international law, shows clearly how strongly public opinion in the Greek islands was influenced by the sinking of the Braemar Castle and by the landing of its sick and wounded survivors. The resolution passed by the Municipal Council would appear to be a valuable indication of the discredit that Germany is drawing upon herself by this most recent crime of extending her submarine warfare to hospital ships. Needless to say, I heartily agree with the writer. But how long will it be before the neutrals take action—of some kind—in this matter?

NEAR EAST BOOKSHELF.

GERMANY'S EASTERN ASPIRATIONS.*

The English translation of M. Chéradame's striking review of the politics of the war could not appear at a more opportune moment. Events of much importance have happened since the French edition was published in the autumn, but, for the most part, they prove the accuracy of his forecasts. Moreover, the time has come, or is close at hand, when the allied nations must decide how to act in a critical position of affairs which, when the book was being written, its author considered likely to occur, but which, tomorrow if not to-day, may be the dominating feature of the situation. M. Chéradame felt certain that before long Germany would put forward more or less definite proposals of peace. His main object was to place in the hands of his countrymen, and the people of nations allied with them, such a clue to the enemy's motives as would guide them to a right understanding both of their own interests and of the moral aspect of the question. He was also anxious that in neutral countries there should be some corrective to the insidious and incessant attempts of Germany to pose as the victim of unprovoked aggression, or—for this may be the next quick-change—as ready herself to give incensed neighbours indemnity for the past and security for the future.

That in any of the allied countries there is the least disposition to perceive in the enemy's present attitude the possible basis of a satisfactory settlement may be denied with some confidence. What, however, is more doubtful is whether peace terms, such as are adumbrated by the Imperial Chancellor, would be rejected, with or without contempt, for really good and sufficient reasons. It is a matter of no small importance that we and our friends should be obviously and intelligently in the right either in having gone to war or in making peace. In the next place, public opinion must be safeguarded against the danger of accepting terms several degrees more favourable to the Allies, and at first sight more humiliating to their adversary, than any yet formulated or hinted at in Berlin. This is the danger which M. Chéradame is especially desirous of exposing. He puts it in this way:—

Let us suppose that in consequence of the victorious offensives of the Allies, Germany should declare herself disposed not only to evacuate Poland, the French department, Belgium, and Luxembourg, but also to restore Alsace-Lorraine to France, and even to give as an indemnity all the rest of the left bank of the Rhine, under the sole and tacit condition that Germany should keep her preponderant influence, direct or indirect, over Austria-Hungary, the Balkans and Turkey.

What would be then the answer of the allied nations? As to what it must be, were the Governments capable of looking ahead, and if public opinion was founded on a true perception both of Prussia's aspirations and of the historic, ethnographic, and social conditions prevalent in the areas indicated, M. Chéradame is perfectly clear. If the Allies, he maintains, are ever tempted to negotiate peace on such a basis, it would be a hollow one. The restitution of Alsace-Lorraine could be only temporary; since, with a peace like that, Germany would retain all the elements of power requisite for the recapture, after a brief respite, of all she had surrendered. What is more, she would be left with the capacity to overthrow the Allies separately or in union, to carry out the Pan-German plan in its entirety, and in the end to become master of the world.

Presented in the shape which is perhaps least likely to meet with immediate and general acceptance, such is the warning which a French publicist, exceptionally well-informed on everything that concerns the manifold problems of the Near East, seeks to impress on the intelligence and conscience of his generation. His readers are not confronted all at once with this crucial proposition. An acute and lucid exposition of the aims of Pan-Germanism makes it plain that what, almost from the commencement of his reign, the Emperor William has persistently worked for is the Germanization of all that lies between Hamburg and the Persian Gulf. The subservience of Austria-Hungary, the subordination of the Balkan States, the abject compliance of Turkey—that is, of the Young Turks—with orders from Berlin, were essential to the successful execution of the scheme. A formidable obstacle might have been erected had the Treaty of Bucharest proved durable; for it would have established in the Balkan peninsula two groups of States of which one would have been impervious to German influence and intrigue. M. Chéradame blames English statesmen for having, in the first year of the war, failed to see the unwisdom of trying to satisfy Bulgaria at all costs. But it will be, in his judgment, an even more fatal mistake not to include the termination of Germany's control over

Austria-Hungary among the objects that must be attained before the sword can be laid aside with anything like a confident hope that it will not be needed again in our days to defend the rights and liberties of nations. It is only at the bidding of the Hapsburg dynasty that Austria-Hungary is the enemy of the Allies and the Kaiser's tool and accomplice. Once secure the free development and exercise of non-German aspirations in the Dual Empire, and the support it gives to Pan-Germanic ideas will be undermined, to the manifest advantage of the world at large. There are various other points in the book which deserve careful study; but we must be content with adding that it is warmly recommended to English readers by Lord Cromer, who thoroughly agrees with the author that the creation of a Southern Slav State would be the most effective check to Prussian aggression.

PALESTINE AS AN INTERNATIONAL PARK.

The *Independent* (New York) of November 6 referred to a suggestion that "at the close of the war Palestine be set apart as a peace memorial," and comments upon it thus:—

The significance of such an international undertaking would be immeasurable. Since we have city, county, state and national parks, why not an international park? If such a plan were to be adopted no more appropriate place could be chosen than that little stretch of territory that has influenced so mightily all modern states.

What rivalries it would allay to have this Holy Land under international control and open under favourable conditions to the pilgrims and travellers of all countries and creeds! For the moiety of the price of a small war this land where the Peace Movement was born and cradled could be made a world sanctuary of natural beauty, holy memories, and inspiring ideals. Why not establish an International Palestine Peace Park to heal the wounds of war and commemorate the greatest human sacrifice for ideals the race has ever made?

The following semi-official statement has, says Reuter's correspondent in Petrograd, been issued in that city:—"The Dutch newspaper, *Nieuwe Courant*, on the authority of the semi-official Bulgarian newspaper *Narodni Prava*, recently stated that the male population of the Dobruja had been carried off by the Russians to Bessarabia, where they were supposed to have been forced to join the Russian Army. We are authorized categorically to contradict this calumny, spread abroad by the Bulgarian Press, which, in slavish obedience to the Central Powers, attempts to justify by this means Germany's treatment of the populations of Poland, Belgium, and Serbia."

Dr. Poupitis, the editor of the Greek journal *Hesperia*, published in London, writes to *The Times* expressing the opinion that the recent events in Athens, "painful as they are to the Allies, are infinitely more painful to the Greeks living in this and other Allied countries," and adds:—"May I be allowed to say that we Greeks consider the small minority of King Constantine's followers as traitors both to the Greek and the Allied cause, and that as such they ought to meet with the traitor's fate."

The *Jewish Chronicle* reports that the Turkish authorities have suspended the Hebrew organ, *Hapoel Hazeir*. Its editor, M. Kazdan, who was released some time ago, was again arrested and sentenced to imprisonment for two years and to a fine of fifty Turkish pounds. Friends of the editor are now issuing in its stead pamphlets entitled *Beshoo Zu*.

A Reuter's message from Athens, dated December 16, and delayed in transmission, states that the Greek officer who arrested Mr. Bridgeman, a Secretary of the British Legation, during the disorders of December 1, has been sentenced to forty-five days' imprisonment.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the
Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)		Moslem.	Jewish.
1916. Dec. 29 30 31	1916. Dec. 16 17 18	Friday Saturday Sunday	1335. Rebi 1 4 5 6	5677. Tebet. 4 5 6
1917. Jan. 1 2 3 4	19 20 21 22	Monday Tuesday Wednesday .. Thursday	7 8 9 10	7 8 9 10

Next Friday is the birthday of Princess Ileana of Roumania, the third daughter of King Ferdinand and Queen Marie, who was born at Bucharest on December 25, 1908 (O.S.).

Mme. Georgescu, wife of General Georgescu, who is specially attached to the British Headquarters Staff, has arrived in London from Petrograd.

The King of Serbia has conferred the Order of the White Eagle upon Major (temporary Lieutenant-Colonel) Mortimer J. Cromie, R.A.M.C.

M. Markovitch Bora, of the Serbian Legation, leaves London this week for Paris.

Sir Ismail Sirry Pasha, the Egyptian Minister of Public Works and War, is leaving Egypt for the Sudan on a long visit to the irrigation works on the White and Blue Niles. His Excellency will inspect the Gezira Canalization Works and the works for the proposed dam on the White Nile and other irrigation centres.

Referring to the evacuation of Bucharest, the *Independent* (New York) points out that "the American Minister, who is willing to stay behind and stand the chances of a siege, and to whom all of the Allied Powers have entrusted the care of their national interests in this crisis, is Mr. Vopicka, whom a few years ago certain American newspapers were making fun of because of his uncourtly ways."

Our Khartoum Correspondent writes under date of December 4:—

Sir Murdoch Macdonald visited Khartoum for a few days to consult on irrigation matters.

Mr. Browne, the Governor of Berber Province, came into Khartoum to settle various outstanding questions.

Mr. Matthew, Senior Inspector of Sennar Province, came to meet Mrs. Matthew, who had arrived from England.

Major Stigand returned from leave with Mrs. Stigand, and is on his way to take up his duties as Acting Governor of the Upper Nile Province.

Major Owen, C.M.G., is returning to Mompalla shortly. He will be accompanied by Major Hibbert, who came to Khartoum from the South for a few days.

Mrs. Owen, the daughter of the well-known American politician, is staying in Khartoum with Major and Mrs. Moir.

A marriage has been arranged, and will shortly take place, between Lieutenant-Colonel G. N. Salmon, D.S.O., Rifle Brigade, only son of the late Admiral of the Fleet Sir Nowell Salmon, V.C., G.C.B., and Lady Salmon, and Gwladys, elder daughter of Mrs. Francis Lawson, Pietà, Malta, and granddaughter of Comtesse Sant Fournier.

ORIENTAL STUDIES.

THE SCHOOL OF ORIENTAL STUDIES. London Institution, Finsbury Circus, E.C., will be OPENED on 18th JANUARY, 1917. Courses will be held in the Principal Languages of the Near, Middle, and Far East, and of Africa. Courses will also be given on Oriental Religions and Customs.

Intending Students are invited to apply at once to undersigned. E. DENISON ROSS, Director.

The marriage arranged between C. R. Skrimshire, son of the late Dr. Skrimshire and Mrs. Skrimshire, of Weston-super-Mare, and Aileen, daughter of Mr. and Mrs. James Lamb, of 47, Putney Hill, S.W., will take place quietly at St. John's Church, Putney, at two o'clock on January 2. Friends will be welcomed at the church.

At St. Martin-in-the-Fields, on Wednesday afternoon, Lieutenant Allen Michell, R.N., son of Mr. and Mrs. Roland Michell, formerly of Cyprus and now of 22, Lansdowne Crescent, London, W., was married to Miss Margaret Bennett, niece of Mrs. E. C. Carnt, of West Wood, Wootton Bridge, Isle of Wight. The bride wore a gown of rich white silk with long train of the same material and exquisite lace. The three bridesmaids were in blue. The bridegroom and his best man, Engineer-Lieutenant-Commander S. G. Wheeler, R.N., were both in undress naval uniform, and a number of officers of both Services were present, as well as a large congregation in the church. The reception of relations and intimate friends of the two families was held at the Hotel Victoria. The Palm Court was screened by a mass of tall foliage, and from arches of greenery was suspended a large bell of white foliage, beneath which Mr. and Mrs. Allen Michell stood to receive the congratulations of the guests. Late in the afternoon they left for a brief honeymoon, the bridegroom having been only on short leave.

The *Morning Post's* Malta Correspondent telegraphs that the Malta University, appreciating the great humanitarian work performed by the eminent surgeons, Messrs. Garrod, Tooth, Thorburn, and Ballance, who are now serving as Colonels with the British Red Cross, has conferred on them the *honoris causa* degree of M.D.

Captain Amery, who returned to the House of Commons last week after a long spell with the Salonika Force, has had his share of adventure. He was in the *Caledonia* when she was torpedoed by a submarine. The submarine took off Captain Blaikie, but missed Captain Amery, who took advantage of such cover as could be found in a small open boat. Captain Amery was afterwards picked up by a French hospital ship, and, in a letter to his constituents, he is warm in his praise of his treatment on board her.

Under the heading of "The Campaign in Mesopotamia" a supplement to the *London Gazette* was issued last Friday. Amongst the Distinguished Service rewards figures the name of Captain George Edward Whittall, Oxford and Bucks Light Infantry, who has been awarded the Military Cross. Captain Whittall had been mentioned in despatches three times, but up to the present, except for the Kut honours, no awards had been made to any of the men serving in the Mesopotamia campaign. We learn that Captain Whittall has now recovered from his illness and has returned to the front to rejoin his regiment.

Appealing on behalf of the Mesopotamia Comforts Fund, Mrs. Maude writes:—"My husband, General Maude, is most anxious that the supply of comforts should not fail. The many and stupendous difficulties which confront our men, now gallantly fighting in Mesopotamia, cannot be exaggerated, and those at home can give great encouragement by helping to lighten their hardships. To maintain an adequate supply of comforts for the British units out there, at least £5,000 a month is required. Much valuable work has already been done by our committee, but further funds are now urgently needed. Cheques should be made payable to 'The Mesopotamia Comforts Fund,' crossed 'Cutts and Co.,' and sent to the Hon. Secretaries, 15, Aldford Street, Mayfair."

The Lord Mayor, Sir William Dunn, makes an appeal on behalf of the National Roumanian Relief Fund, the object of which is to provide Roumania with Red Cross equipment and to ameliorate distress among the civilian poor. Donations should be sent to

the Hon. Treasurer, Lord Mayor's Appeal for the National Roumanian Relief Fund, 30, Bishopsgate.

At the Greek Church, Moscow Road, Bayswater, on Sunday, at the conclusion of the Liturgy, a Requiem Service was solemnised for the British and French subjects and Venizelists who were killed during the events of December 1 at Athens. The interior of the church was draped. The Great Archimandrite, the Very Rev. Dr. Pagonis, and the Archimandrite, the Rev. Agathangelos Moschovakis, officiated. Among the Hellenic congregation were M. Jean Gennadius, Mme. Gennadius, M. and Mme. Stavridis, M. N. Giannacopulo, M. and Mme. Scouloudi, Mme. S. Metaxas, Miss H. Schilizzi, Mme. M. G. Mavrogordato, M. P. Ralli, Miss P. Argenti, Mme. Metaxas, M. M. Rodocanachi, M. Zariffi, Mr. E. Spartali, and Mrs. Stillman. There were also present several Russian, Serbian, and English soldiers.

Mr. J. J. O'Kelly, the Nationalist member for North Roscommon, who died in London last Friday, had an adventurous career. At one time ('85) he set out for the Sudan for the purpose of "interviewing" the Mahdi on behalf of the *Daily News*; and for a time it was thought he had been killed, as nothing was heard of him, or from him, for so long. Needless to say, perhaps, he did not achieve his purpose; but he did succeed in getting near to Omdurman, and eventually returned to this country in safety.

Marvellous accounts are given of the exploits of a Greek from America, one Demetrios Pavlou from St. Louis, who joined the Foreign Legion last January, and who is said to have performed prodigies in bombing German trenches in France. He was born at Salonika, but was taken when six years old to America by his parents, who keep a restaurant at St. Louis.

Lady Victoria Buxton, of 2, Prince's Gate, S.W., formerly of Warley, Waltham Abbey, widow of Sir Thomas Fowell Buxton, and daughter of the first Earl of Gainsborough, left £16,118, of which £15,457 is net personality.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. Balfour has taken charge of the Foreign Office as from Wednesday in place of Lord Robert Cecil, who has been acting since the departure of Viscount Grey.

General Gouraud, the new French Resident-General in Morocco, has arrived at Rabat and visited the Sultan.

Our Cyprus Correspondent writes:—The Hellenic Consul, M. P. Paraskevopoulos, having been summoned by telegram to take up duties in the Foreign Office at Athens, leaves by the next mail steamer. The work of his office will be carried on by M. N. Themistocles, who has acted on several previous occasions.

Mr. McCaskie, President of the District Court of Famagusta, having returned, now acts in the Larnaca District as well as his own. Owing to the absence of two other judges, double work is still being carried out by the Presidents of Nicosia and Limassol.

Our Roumanian Correspondent reports that Mr. Charles Ramsden, Third Secretary at the Bucharest Legation, has been transferred to Petrograd, and has left to take up the duties of his new position.

The *Morning Post* announces that Ismail Khan Fanzaneli has been appointed Persian Minister in Rome.

Under date of December 23, Reuter's Athens correspondent reports:—M. L. Ciftanzoglou is leaving shortly on a special mission to London, where he will take charge of the Greek Legation. M. Ciftanzoglou is not the Minister of that name, but has had a long diplomatic career, and has already served in London as Secretary of Legation and as Chargé d'Affaires. He is a Doctor of Law and a Member of the Victorian Order.

In a message dated December 19, which has been delayed in transmission, Reuter's correspondent telegraphs from Jassy:—In well-informed circles it is stated that M. Porumbaro, the Minister of Foreign Affairs, will take the Presidency of the Senate, and M. Bratiano, the Premier, will become Minister of Foreign Affairs.

A Reuter's message from Jassy, dated December 24, says:—M. Porumbaro, the late Minister for Foreign Affairs, has been elected President of the Senate, and M. Ferekide has been re-elected President of the Chamber. M. Marzesey, Deputy and Mayor of Jassy, has been elected Vice-President of the Chamber.

Major J. J. McEnnery, Lancashire Hussars, having reported his arrival in Egypt from England, has been attached to the Egyptian Army as a Special Service Officer, granted the rank of Bimbashi, and posted to the Sudan Government as Inspector, Upper Nile Province.

Bimbashi R. F. White, Equatorial Battalion, has been posted to the 1st Battalion.

The *Egyptian Gazette* learns that "the Government has decided to appoint Sheikh Ismail El Azhari, Cadi of Blue Nile Province, as Cadi of all Darfur. The selection of Sheikh Ismail for this important post is" the *Gazette* adds, "certainly a happy one, for in addition to his personal ability and profound knowledge of Mohammedan law, he is well-known as a loyal and sincere supporter of British rule in this country, and is one of those native notables who have exercised a widespread and wholesome influence among their countrymen, particularly during the last two years of war."

OBITUARY.

GENERAL SIR H. B. TUSON, K.C.B.

General Sir Henry Brasnell Tuson, K.C.B., died at Surbiton on the 21st inst., aged 80. The son of Lieutenant James Tuson, R.N., he was born in 1836, and was educated at Christ's Hospital, and King's College, London. He entered the Royal Marine Artillery as second-lieutenant in April, 1854 and was made lieutenant in June, 1855.

He saw considerable service during the second China War, and was mentioned in despatches. He was present at the attack on the Peiho Forts and at the capture of the Taku forts in 1860. In 1879 he commanded the Royal Marine Artillery, which, with a detachment of Royal Marine Light Infantry, was sent to South Africa, and in 1880 he was promoted to the rank of lieutenant-colonel for special services in the Zulu War.

Throughout the Egyptian campaign of 1882 he served as lieutenant-colonel, in command of the R.M.A. battalion. For his services, for which he was three times mentioned in despatches, he received the C.B., the medal with clasp, the Khedive's Star, and the third class of the Mejdideh, and was rewarded with the brevet rank of colonel, and appointed an extra aide-de-camp to Queen Victoria. In 1882 he was confirmed in the rank of colonel. In 1888 he was promoted to the rank of major-general, and in August, 1893, to lieutenant-general. He succeeded Sir Howard Jones as Deputy Adjutant-General of Marines, and held this post until March, 1900.

Sir Henry married, in 1864, Ann Frances, daughter of Major J. Bates, commanding the 40th Madras Native Infantry.

Major-General W. Sholto Douglas Home, Grenadier Guards, fourth son of the eleventh Earl of Home, died last Friday at The Hirsell, Coldstream, at the age of seventy-four years. He served in the Egyptian Expedition of 1882, when he received the medal with clasp, the bronze star, and the Fourth Class of the Osmanieh.

FLIGHT COMMANDER HANS ACWORTH BUSK, R.N., missing in the Dardanelles since January 6, 1916.—Any definite information that might be obtained through relatives or prisoners of war in Turkey concerning the fate of this officer would be gratefully received by his mother, Mrs. Busk, 6, Wadham Gardens, Regent's Park, N.W.

Three years later he took part in the Sudan Expedition in command of the 3rd Battalion Grenadier Guards, receiving a clasp.

We regret to announce the death, at Mar-seilles, of Mr. Percy Smith, a partner in the firm of Messrs. C. J. Grace and Co., of Alexandria. Deceased, who was a son of the late Rev. Percy Smith, Grinton, Yorkshire, was one of the oldest Anglo-Egyptians resident in Alexandria, and was one of the most popular figures among the local mercantile community.

The death occurred at his residence, Cor-storphine, Ryde, on Sunday, of Mr. William Jarrett Lewis, late staff surgeon, R.N., at the advanced age of eighty-five. He was a Crimean veteran. He entered the Navy on September 2, 1854, and was appointed to H.M.S. Furious, sixteen gun steam frigate, serving in the Black Sea, and was present at the siege of Sevastopol. Later he served on the North America and West Indies Station. He left the Navy in 1864.

The death of Captain Edward Henry Chawner, late of Newton Manor, Alton, a Crimean veteran, has occurred at Elm Bank, Worcester, at the age of eighty-eight. He served throughout the Crimean campaign with the 77th Foot, gaining distinction at Inkerman and receiving the decoration of Knight of the Legion of Honour.

The death in action is announced of Baron Herbert de Reuter, a private in the Black Watch, and only son of the late Baron Herbert de Reuter, who was well known in Egypt, having been chairman of the Anglo-Belgian Company of Egypt, Ltd.

DOMESTIC ANNOUNCEMENTS

BIRTH.

OXBERRY.—On December 9, at Anglo-American Hospital, Cairo, the wife of W. G. Oxberry, Ministry of Education, a daughter.

MARRIAGES.

CARVER—HAINES.—On December 23, at Oatlands Church, Walton-on-Thames, Captain Thomas Drinkwater Carver, A.S.C., of Egypt, to Doris Georgina, elder daughter of Mr. and Mrs. R. G. Haines, of Beckenham.

SMITH—ANDERSON.—On Wednesday, December 6, 1916, first at His Majesty's Consulate and afterwards at St. Mark's Church, Alexandria, Captain G. T. Foster-Smith, R.A.M.C., formerly of the Anglo-Egyptian Oilfields, son of G. Foster-Smith, Esq., of the Ministry of Education, attached H.H. Coast Guard, to Edith Caroline, daughter of the late Charles Anderson, of Newry, County Down, Ireland, and of Mrs. Anderson, of Barnes, London.

DEATH.

BONOMI.—On Christmas morning, at 3, Maxilla Gardens, W., Bella Bonomi, daughter of the late Joseph Bonomi, Egyptologist, of The Camels, Wimbledon Park.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach.

Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURLY'S CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms.

Excursions to Mount Troodos.

FRIDAY, DECEMBER 29, 1916.

THE NEAR EAST IN 1916.

Whatever their achievements elsewhere—and they are by no means inconspicuous—the Allies can only view with chastened mind the course of events in the Near and the Middle East during the past year. It is true that the records of Verdun and the Somme, together with the Russian successes in Galicia and Italian progress in the Carso, dwarf anything that the enemy can lay to his credit for the same period, and that in the war as a whole the year has witnessed the Central Powers reaching the zenith of their military strength and starting with no slight momentum on their downward path; but the reverse of the shield is seen in South-eastern Europe, and it is far from being a satisfactory one. The year 1916 opened gloomily enough for the Allies. Suvla and Anzac had been evacuated, and the preparations for the final withdrawal from Gallipoli were just being completed. On January 8 the curtain was rung down on a great tragedy, in which neither the exploits of the troops nor the success attending the retirement could disguise the extent of the failure. Simultaneously, the enemy was putting the finishing strokes to the conquest of Serbia by overrunning Montenegro, while in Mesopotamia a relief force was being hurriedly equipped—too hurriedly, as the event proved—for the purpose of rescuing General Townshend from his precarious position at Kut, to which he had withdrawn on December 3, after a disastrous attempt to reach Baghdad with a wholly inadequate force. Both the Mesopotamian and the Gallipoli expeditions have become the subjects of special inquiries, and the reports of the Royal Commissions must be awaited before final judgment can be passed upon the manner in which they were planned and executed. In general terms it may be said that lack of co-ordination is written large across the efforts of the Allied Powers in 1916, in regard to both their joint enterprises and the measures they have undertaken individually. Freedom from this failing has given the enemy a strong advantage, of which he has made the fullest use. Nowhere has the driving power with which this concentration of control in German hands has provided the Central Alliance been requisitioned to better purpose than in the Near East. As a part of the system the Triple Alliance was formally reconstituted in April with Turkey in the place of Italy. Bulgaria nominally makes the alliance a quadruple one; but signs are not wanting that the Central Powers are inclined to take her adhesion as a matter of course, without according to her the position of equality in their councils nominally secured by Turkey. The unity of direction centred in Germany's hands cannot be reproduced to the same degree in the case of the Allied Powers; but the defects of the original lack of co-operation have been realised, and not the least cause for satisfaction at the end of the year is the knowledge that at last a determined attempt is being made to overcome the difficulties which have hampered the Great Alliance in the past.

GREECE.

Failure on the part of the Allies to make good in any other sphere turns in the last resort on military limitations. In Greece alone has diplomacy had a free hand, and, regretfully it has to be admitted, it has made very bad use of it. The opening of the year found an Allied force established at Salonika. There can be no doubt that King Constantine was exceedingly annoyed by its presence within his dominions; but whether fear of Germany or love for her was the deter-

mining motive it is not possible to say. Matters were brought to a head when enemy aeroplanes dropped bombs on Salonika on December 30, 1915. The Allies resolved that they could tolerate no longer the equivocal position, with the advantages it offered to enemy spies, and arrested the consular officials of Germany, Austria-Hungary, Bulgaria, and Turkey. Greece protested against this action, and against the air-raids on Salonika. At this time there was some reason to suppose that the enemy were feeling their way towards an attempt to expel the Allied troops from Macedonia. In view of this menace it was open to the Entente Governments to regularise their position at Salonika and to come to a full understanding with Greece. The feeling of indignation caused by the bombardment of the port from the air would have proved a useful lever in the negotiations. The Allies, however, appear to have been content to live from hand to mouth in all their dealings with Greece. It was found necessary to take steps from time to time to cope with a changing situation, but as explanations had to follow and could not precede the measures adopted, the cumulative effect upon Greece was inevitably bad. Quite early in the year King Constantine was pouring out his woes to journalistic ears in a way that, it would be thought, might have been avoided, if he had been approached more tactfully by the Allied Governments. By the end of May the situation had gone from bad to worse, and nothing but the most drastic action could have changed the subsequent course of events. The Central Powers had abandoned all ideas of attacking the Allied troops in Macedonia, and were more concerned with preventing them from assuming the offensive. With this end in view the Bulgarians invaded Greek territory. King Constantine and his Ministers were undoubtedly parties to this proceeding. Whether they were by that time wholly committed to Germany or whether they were content to put a spoke in the Allies' wheel by encouraging the other set of belligerents to do what the Anglo-French troops had done may remain an open question. The results were the same, and it was not long before Greece officially set herself to play Germany's game alone. By June 8 the Allies announced that they were taking certain precautionary measures: a mild form of blockade was established, to be relaxed almost immediately, when as a result of a disorderly demonstration against the Entente Legations in Athens, the Skouloudis Government resigned and M. Zaimis became Prime Minister. In spite of his goodwill towards the Allies, the latter made no real headway against the German influence which now guided Greece's policy. A régime of Pull Devil, Pull Baker began, with King Constantine indulging in bluff to his heart's content. The Allies' demand, made in June, for real and complete demobilization was never fully carried out, and by September 2 it became necessary for their executive officer, a French Admiral, to take control of the Greek posts and telegraphs, and to supervise the policing of Athens. The growing dissatisfaction in Greece with the attitude of King Constantine and his advisers found expression in Salonika, where the Greek population decided to cut themselves adrift from Athens. The reply of the military party which now dominated the King and Government was to arrange for the surrender of the Fourth Army Corps, based on Kavalla, to the Bulgarians and Germans. On September 25 M. Venizelos, whose friends had considered it necessary to provide him with a personal bodyguard for some time past, left Athens to place himself at the head of the Salonika Greeks in a National Movement for the liberation of Greek territory from the Bulgarians. The unedifying struggle between the Allies and King Constantine continued, the latter still resorting to a variety of measures, which always stopped short of the practical steps required to bring the military party into line. Towards the middle of October the Allies called upon the Greek Government to hand over the fleet; a month later they decided that the accumulation of troops and war material in Thessaly was a menace to the safety of the Salonika Force, and demanded the surrender, against financial compensation, of a quantity of war material. It was not until the refusal to comply with this request caused

the French Admiral on December 1 to land detachments of bluejackets, who were fired upon as they approached Athens, that the Allies found that it was no longer politic to use velvet gloves in dealing with Greece. A blockade of the Greek coast was established, and after a fortnight's delay demobilization was once more insisted upon: the Greek troops in Thessaly were to be transferred elsewhere, and the Allies were to resume control of the post and telegraph services. There the problem rests for the time being.

ROUMANIA.

If we seem to have laid undue stress on a matter that possesses at the moment little or no military significance, it is because the Allies' dealings with Greece are typical of the whole story of mismanagement in the Balkans, which has so seriously affected the course of the war. Where, as in the case of Roumania, Allied diplomacy has achieved happier results, these have been stultified by the course of military operations. Roumania declared war on Austria-Hungary in the last week of August. She appears to have persuaded herself that she could hope to carry out a campaign in Transylvania without being committed to a struggle with Bulgaria. So little, after two years of warfare, had the Allies appreciated the solidarity of the Central Alliance; or, if they had appreciated it, so lax were they in bringing home to the Roumanian Government a proper conception of the situation. The Roumanian army hurried almost unopposed into Transylvania, and immediately von Mackensen fell upon the Dobruja. Russian assistance, although liberally given, has failed to neutralize Roumania's mistakes. The enemy has overrun Wallachia and the Dobruja, is in possession of Bucharest, and threatens the great grain port of Braila. But the Roumanian army remains intact, the spirit of Roumania undaunted, and the Allies are at one in their confidence in the ultimate victory which is to bring for Roumania as well as for Serbia, Montenegro, and Belgium complete rehabilitation and the fulfilment of their national aspirations.

EGYPT AND ARABIA.

Among the countries which fall within the purview of these pages Egypt alone can look back upon the past year with any considerable degree of satisfaction. January saw in progress the first steps for the settlement of the unrest on the western border. Two months after the occupation of Mersa Matruh, Sollum was recaptured (March 14), and peace was restored. Further south the Sultan of Darfur had shown that he, too, had fallen a victim to Turco-German intrigue. In March a punitive expedition was despatched from the Sudan. On May 23 it routed Ali Dinar's forces twelve miles from his capital, El Fasher, which was immediately occupied. The end of the chapter was reached in November when the fugitive ex-Sultan was once more engaged, and the next day was found to have met his death. Darfur is now incorporated in the Sudan. On the eastern frontier the policy of waiting behind the Suez Canal for Turkish attacks was abandoned at the beginning of the year. Katia and Jifjaffa were occupied in April, just in time to meet a Turkish attack which achieved some measure of success. It was clear that the defences of Egypt were not yet perfect; but no time was lost in making good the defects. When the enemy launched a far more serious attack on the Canal on August 4 it was, we may infer, for the last time. He was decisively routed, and by the end of the year the tables were turned. The capture of El Arish by British troops on December 21 and the defeat of a Turkish force at Maghdaba two days later mark, we may hope, the conclusion of the Turkish occupation of the Sinai Peninsula. Politically and economically Egypt has a no less satisfactory record for the past year. German intrigue has been scotched, and the German grip on Egyptian trade has been practically eliminated. Nothing has occurred to impair the hold that Sultan Hussein has established on the affections of the people, while the resumption of the Mecca pilgrimage, which was carried out under the most favourable conditions, provided an object-lesson to the pilgrims of the advantages accruing to another

country from being rid of Turkish suzerainty. For it was only on June 9 that the Grand Shereef of Mecca raised the standard of revolt against the Turkish Government. Trouble had been brewing for several years between the Constantinople authorities and the Arabs, who seem to have entertained from the outset the gravest misgivings in regard to the intentions of the Young Turks. Early in 1916 Enver Pasha had paid a hurried visit to the Hejaz, and the fact that official accounts of the tour laid special stress on the good feeling between Turks and Arabs justifies the supposition that his purpose was to allay the fears raised by the attempts to "turkify" Arabia. A few months later the Grand Shereef felt strong enough to declare his independence. Mecca and Jeddah made short work of their Turkish garrisons, and Medina and Taif were invested. The latter has been captured, but the Turks were able to throw reinforcements into Medina and still hold the town for the Sultan.

THE MIDDLE EAST.

In the Middle East the outstanding feature of the year has been the Russian advance into Armenia. The Turks were completely taken by surprise, with the result that Erzeroum fell, after five days' fighting, on February 15, within a few weeks of the first encounter on the frontier. On March 2 Bitlis, to the south, was captured in a snowstorm, and, pressing on westwards from Erzeroum, the Russians entered Ashkala a fortnight later. In the more difficult country along the coast progress was slower, but Trebizond fell on April 18, four days after the murder of von der Goltz Pasha, the German Generalissimo in Asia Minor, supplied an earnest of what the relations between the Germans and Turks are likely to be when once the fortunes of war set irrevocably against the Central Powers and their vassals. Appreciating the need for stemming the Russian advance, the Turks, under German direction, launched a counter-attack, selecting the country south-west of Erzeroum for their main effort with a view to threatening the Russian lines of communication. Our Allies were still able to press on to Erzincan, but at this point the menace from the south demanded special attention. Early in August Mush and Bitlis were evacuated by the Russians, the former to be reoccupied eighteen days later. The latter months of the year have produced little change in the situation; the Turkish offensive soon spent itself, and the Russians have not been in a position to follow up their advantages with any general advance.

Before the Grand Duke Nicholas started his offensive from the Caucasus Turco-German intrigue had enjoyed a free hand in Persia. The ground having been carefully prepared, a Turkish force, largely composed of irregulars, crossed the frontier and occupied Kerman-shah early in January. From that point bands penetrated into the interior, necessitating wide sweeping movements on the part of the Russians when the Caucasus advance began. The Turks, however, were driven back to the frontier at Kasr-i-Shirin by May 10. On April 25, after three months spent by the Relief Expedition in a vain attempt to reach Kut, General Townshend had surrendered. The temporary collapse of the Mesopotamia Expedition enabled the Turks to strengthen the forces opposed to the Russians. At no time in any great numbers, the latter found themselves outnumbered, and began a withdrawal which ultimately extended to some distance beyond Hamadan. The arrival of General Sir Percy Sykes at Kerman on June 12, on a mission for the creation of a new gendarmerie, was a landmark in the history of Southern Persia. It failed, however, to exercise any influence on the course of events in the North, and only towards the end of the year have the Russians been able to drive the enemy slowly back towards his frontier. Although Persia may not yet be clear of Turkish marauding bands, the heyday of Turco-German intrigue has passed. An understanding has been reached between Russia, Great Britain, and the Persian Government which is of good augury for the future of the country, and success for the British arms in Mesopotamia must quickly bring about a collapse of the Turkish movement in Persia.

The Mesopotamia Expedition resumed the offensive in the second week of December, and ought shortly to be once more in Kut. Its future operations will serve a double purpose. They will re-establish British prestige in the eyes of the Arab world in Mesopotamia, and will leave Persia free to enter upon a long-delayed era of reorganization.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Prisoners of the Turk.

December 21.

Mr. J. F. HOPE informed Mr. Stewart that the Government had information that the condition of the Turkish prison camps at Kastamouni and other places where British prisoners were confined was most unsatisfactory, and that parcels sent to prisoners at Kastamouni had not reached them. The Government were making every effort, through the United States Embassy, to ameliorate the lot of the prisoners.

The Ultimatum to Greece.

Mr. LYNCH asked the Under-Secretary for Foreign Affairs whether an ultimatum had been delivered to King Constantine of Greece, or whether the communication was one of a series of Notes; and whether, if it was an ultimatum, steps would be taken, on the expiry of the allotted time, to recognise M. Venizelos and to extend his government to the whole of Greece.

Lord R. CECIL: No ultimatum has been delivered to the Greek Government beyond that accepted by them on the 14th inst.

Mr. LYNCH: Has that been followed by any definite action according to the terms of the Allied Note?

Lord R. CECIL: Yes, sir; so far as the Government are aware, the ultimatum is being carried out.

Armenian Atrocities.

Lord R. CECIL informed Mr. A. Williams that the Government had lately received information from a reliable source giving detailed evidence that systematic cruelties and outrages had been inflicted on masses of Armenians deported from their homes. The report showed that the Turkish officials had had recourse to various methods in order to exterminate these poor people by deliberate exposure to infectious disease, by famine, by forced marches of old men, women, and children, and by the massacre of labourers on charges of insubordination.

Mr. T. P. O'CONNOR: Can the noble lord say whether there have been any remonstrances from Germany against these atrocities?

Lord R. CECIL: So far as I know, there have not been remonstrances of any sort or kind by the German Government, who undoubtedly could have stopped these outrages if they had chosen.

The Situation in Greece.

December 22.

Mr. RONALD McNEILL asked whether the withdrawal of the Royalist troops from Thessaly, in accordance with the Note accepted by King Constantine, implied that the troops and authority of M. Venizelos would be allowed to extend to places now evacuated south of the neutral zone.

Lord ROBERT CECIL: No; the object of insisting on the withdrawal of troops from Thessaly and Epirus is to protect the rear and flank of the Allied Forces from the possibility of attack by such troops.

Mr. R. McNEILL: Does the decision to recognise the agents of Venizelos, announced by the Prime Minister, imply full and official recognition by the Allies of the Provisional Government of M. Venizelos at Salonika?

Lord R. CECIL: I am not quite sure what is meant by the "full and official recognition of the Provisional Government." We recognise that it is, in fact, a Government where its authority is established, and we have agreed to receive the agents of M. Venizelos and discuss with them affairs of interest to us both. At the moment I do not know what more we can do.

Mr. McNEILL: Does the noble lord mean by that that we recognise two Governments in Greece, thus continuing the policy of the Athanasian Creed?

Lord R. CECIL: I cannot compete in Biblical knowledge with my hon. friend, but as to the substance of his question, I do not think it is at all unusual to recognise two Governments in a country. For instance, in the North and South war in America there was recognition both of the North and of the South.

Mr. McNEILL: Yet the noble lord says there is only one Government in Greece.

Mr. PRINGLE: Are we to understand that the Government do not recognise that M. Venizelos is acting on behalf of the King?

Lord R. CECIL: It would be rash to recognise that he was acting on behalf of the King.

Mr. PRINGLE: Is not that what the noble lord once said?

Lord R. CECIL: No, sir.

Mr. R. McNEILL asked whether the fact that we were in diplomatic relations with M. Venizelos would make any material change in the situation in Greece.

Lord R. CECIL said he was glad the question had been asked. It was one of the advantages of the new arrangement, by which we received agents of a diplomatic character from M. Venizelos, that we should be able to discuss with them the exact position the Venizelos Government holds in Northern Greece.

Mr. LYNCH: Will the noble lord inform the House whether the dilatory and dangerous policy in Greece is moulded by dynastic reasons?

Lord R. CECIL: I have told the hon. member in the House several times that that insinuation is a very cowardly insinuation to make, and absolutely untrue.

Mr. LYNCH wished, "on a point of order," to make "a personal explanation to repel the charge of cowardice," but the Speaker ruled that he was not entitled "to make a personal explanation which repeats the offence."

Our Roumanian Allies.

Mr. KING asked the Chancellor of the Exchequer whether our Roumanian Allies were being supported in their defence of their country by the financial and material aid of this country and its other Allies; and whether he could, without prejudice to Allied interests, make a statement concerning this matter.

Mr. BONAR LAW: The answer to the first part of the question is in the affirmative. I think it would not be in the public interest to make any further statement.

Mr. HOUSTON asked the Secretary for Foreign Affairs what quantity of wheat and other cereals were purchased by our Government in Roumania, the price paid, when payment was made and in what form, and what had become of the cereals.

Lord R. CECIL: I am not prepared, in the public interests, to make an answer to the question.

Mr. HOUSTON: Is the noble lord aware that the Kaiser has declared that German troops are being fed on food bought by England?

Lord R. CECIL: I have already intimated to the hon. member that it is inadvisable that this question should be answered.

PRO-GERMANS IN ATHENS.

Reuter's Agency reports that according to telegrams received by the Anglo-Hellenic League from Salonika, the continued concentration of troops at Larissa and Pharsala is exciting much comment. At the same time M. Gounaris, the ex-Prime Minister and leader of the Germanophile party in Athens, has been delivering at Larissa very violent speeches against the Entente, and urging the population to rise in arms "in defence of King Constantine, whose life is in danger."

The Athenian papers are full of similar language, extolling the "happy victory of December the First." The *Emvros* openly declares that if the blockade continues Greece must extricate herself from her difficulties by taking arms for Germany and Bulgaria in defence of King Constantine.

Arrests continue, particular attention being paid to the learned professions, the educated classes having been naturally attracted by the ideals of M. Venizelos. A number of ladies whose husbands have succeeded in escaping from Athens have now been interned.

Among the Serbian boys in England there are several who, although very young, have taken part in the war. These are now in Great Britain only as convalescents. One of those boys died on December 3 at the St. Andrew's Hospital in South Hayling. His name was Milan Papitch. His entrance into the war and his death are worth recording. He was born in Herzegovina, and before the war attended the fifth class of the Lycee in Mostar. As soon as the war broke out, he fled to Serbia with a school-fellow and joined the Serbian Army. During the whole of the war he heroically fought against the Austrians. In the last battles fought by the Serbs in their retreat, Papitch was severely wounded. Worn out and broken down by his wound, he could not recover. He was buried on December 6 in the cemetery of South Hayling according to the Orthodox rite. The Serbian Minister, M. Jovan Jovanovitch, was present at the funeral.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Gallimard, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacam-ulli and Company, 12, Rue Sossatri; Librairie Calabotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SYRANIA. Librairie Francaise, Rue Sabri Pasha, and Vañades and Co.

ATHENS. Librairie Th. Vañades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

THE PRESS ON THE NEAR EAST.

Russia and Constantinople.

In his notes upon "Foreign Affairs" in the *New Age* (December 14) S. Verdad declares that, "no matter what Power has the Dardanelles, the Straits will be fortified; and the internationalisation theory would break down hopelessly in practice." He then proceeds to show why it is in our interest to substitute Russian control of the Straits for Turco-German. "After the war," he writes, "it may be said Russian interests may conflict with ours," and he admits that the objection is a practical one. But it is easy to answer:—

In the latter part of the last century Russia was feared because of the danger to India. But if Russia had the Dardanelles given and guaranteed to her by "literal possession"—the precise contrary of the *Nation's* recommendation—her thoughts, commerce, interests, and sentiments would inevitably flow towards Asia Minor and away from India and Persia. Further, the cynical saying of the late Lord Salisbury must be remembered, namely, that it would be to our advantage to see Russia in Constantinople, as the Germans would spend the next hundred years in trying to get her out again if she were once established there. This is plain; transparently clear since the agitation about "Central Europe." But a Russia threatened by Germany at Constantinople would necessarily be a Russia driven to depend upon England and France; and a Germany menaced by Russian influence in the Balkans, thanks to the possession of Constantinople, would be a Germany with little time to spare for renewing a campaign against the British Empire. And this bond of interest common to ourselves and to Russia would considerably assist in maintaining the Grand Alliance after the war. Above all, Russia's possession of Constantinople ensures the fulfilment of one of our own aims in the war—the destruction of German militarism through the severance of connections in war time between the Central Empires and the Baghdad Railway.

The Kaiser and Enver.

In the *Daily Telegraph's* leading article on the Armenian massacres, which we quoted last week, the subservience of the "Young Turks" to their German taskmasters, and their utter failure to do good to anybody but themselves, is well brought out. The passage, which follows immediately after the reference to the alliance between the Kaiser, Enver, and Talaat, is as follows:

The German Emperor impersonates an exaggerated ideal of military discipline, and yet he thought it right to work in harmony with Enver, a military adventurer who some two years ago was notorious for having consented to the death of his own Commander-in-Chief, Nazi Pasha. Of course, the truth is that in these and other matters the fate of Turkey has passed from the control of the Turk, and is being decided by a cabal or clique of revolutionaries and infidels, in whose hands the Sultan is a merely helpless tool. The Committee of Union and Progress, it may be remembered, was largely supported at its inception by many honest politicians, who entirely mistook its real principles and its use of certain claptrap phrases borrowed from French Jacobins and modern democratic theorists. The Committee tried to persuade the world that they were reforming the Ottoman dominions. We now know that, so far from doing anything to heal the disorders of their country, they only succeeded in aggravating them, and have done their best to bring about a reign of terror more tremendous than anything conceived by Abdul Hamid.

The *Manchester Guardian* (December 15) also dealt with the subject of the massacres in a leading article, "Turkey and Armenia." The substance of the Blue Book, it says, "is perhaps the most terrible tragedy ever set forth in a Government publication"; and the article concludes:—

Political depravity or incapacity has never had such horrible results to show. The lesson is so clear as to be outside contention. Whatever virtues the Turk may have he is absolutely unfit to govern anyone but himself. His crimes have nothing whatever to do with religion. They are the product of sheer political depravity which cannot be cured. A war for liberty which left Turkey as an Imperial Power would be a satire on itself.

It is at least satisfactory to find it acknowledged that these horrible crimes are not due to religious differences, as has been only too often stated in the past.

Progress in Egypt.

On December 19 *The Times* published an article, "Egypt Within the Empire," by its Cairo correspondent. The writer refers to the defeat of the Turks on the Suez Canal and of the Senussi in the west; and declares that the internal political position, too, is very much improved. The Sultan has united the people in

love and respect for him, and "continues to endear himself to them by many acts of charity and kindness." The article continues:—

The year has, moreover, been marked by an event of great importance to the Moslem majority, whose religious desires have been accorded full satisfaction through the carrying out of the Mecca pilgrimage, which had had to be stopped on the outbreak of the war. The decision to permit the pilgrimage this year has afforded the Moslem world a unique opportunity for contrasting the terrible state of affairs which reigned when the Turks were supreme in the Holy Places with the peaceful conditions amid which this year's pilgrimage took place.

Economically and commercially, the position is more satisfactory than a year ago, says the writer. And he concludes:—

From every standpoint, therefore, the situation of Egypt has greatly improved as compared with that which existed a year ago. The people are happy and contented, and the machinery of government is running smoothly. In such circumstances Sir Reginald Wingate, the new High Commissioner, comes to a very different Egypt from that which confronted his predecessor when he took up office in January, 1915. There lie before him, of course, many new problems of great importance requiring delicate handling; but half the battle has been won by the creation throughout the country of a feeling of contentment with the British régime.

Turkey's Fidelity.

On Wednesday the military correspondent of the *Morning Post* considered our position in Egypt from the military point of view. After reviewing the recent successful operations at El Arish and Maghdaba he went on to say:—

Unfortunately, our position in Egypt is essentially defensive, for it offers no opportunity for offensive action, except, possibly, for raids which might cause the enemy some annoyance. Also, unfortunately, it locks up a force of some magnitude, which remains in idleness so far as the greater issues are directly concerned. These, however, are drawbacks inherent in the conditions of our world-wide Empire, of which the Suez Canal—described by von Moltke as the "neck of the British Empire"—is a main line of communication. The force in Egypt occupies a strategic position not merely important, but indispensable, in relation to the war, and those who complain that it is wasted, or needlessly large, hardly grasp the full significance of the situation. And, although unfavourably placed for offensive action, its recent strokes in the neighbourhood of the Syrian frontier, which have closely followed General Maude's new move on the Tigris, are not likely to be reassuring to the Turks, who were to find in Egypt the reward for their devotion to the Germanic cause. Of the four partners in the Teutonic adventure they have prospered least, for they have to reckon big losses and no compensating gains. One wonders why the Turks should show such staunch fidelity; and, if they thought out the pros and cons of the matter, they would, perhaps, wonder themselves.

Excavations at Babylon.

Under the heading "A Day at Babylon," Mr. Lewis R. Freeman describes in the *Contemporary Review* (December) a visit he paid to the German excavations at Hilla. The following is his account of the inception of the expedition and its methods of work. It is based on what he was told by one of the excavators, Dr. Wetzel, as they went over the ruins:—

Then I learned that the mission, which owed its inception largely to the efforts of the Emperor William, had come out to Mesopotamia in 1899, Dr. Koldewey having been in charge from the first. Work was started on a large but only slightly explored series of mounds on the old channel of the Euphrates, above Hilla, from which the brick to build the latter town had been quarried, and from which, also, much of the material for a comparatively useless barrage at Hindia had been taken by the Turks. At the time nothing definite was known as to what ruins the mounds really were, but the fact that all of the quarried bricks bore the name of Nebuchadnezzar stamped upon them in archaic cuneiform had led to the belief that the heart of the most opulent of the ancient civilizations may have been at that point. Work had been prosecuted, as was explained to me at Baghdad, with the idea of revealing all that was hidden, and before many

MONTENEGRO.

Any interested in the commercial and general development of this country, together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

"Major," c/o Messrs. Stilgoes, Solicitors,
24, Essex Street, Strand, W.C.

years had gone by not only had the identity of the ruins been established beyond question, but a series of tablets was also discovered, the translation of which cleared away the mists of doubt which have always obscured many of the most striking events told of in the Old Testament, notably the Deluge. Other tablets turned out to be the "books" of a great Babylonian banking institution, others told of remarkable social and economic conditions hitherto unguessed, while others proved to be architectural records of such accuracy as to be of the greatest help in prosecuting further exploration. Now, after a dozen years of interrupted work (it had hitherto been the custom for archaeological missions in this part of the world to push operations only in the cool winter months) nearly all the salient objects of the Biblical and Grecian descriptions of Babylon stood revealed beyond a doubt, and as Dr. Wetzel led me here and there through the uncovered ruins he spoke of this and that feature of interest with the easy assurance of a Cook's guide in Rome or Paris.

The statement that other excavators worked only in the cool months is incorrect. The Americans at Nippur worked throughout the summer for several years.

From Bucharest to Jassy."

The following passages are taken from an article with the above title which appears in the *Independent* (New York) of December 4. The writer has been pointing out that the fortifications of Bucharest, though formerly considered impregnable, have been rendered untenable by the development of the big gun. He continues:—

There was, then, good reason for the removal of the Government from Bucharest to its ancient rival, Jassy. The modern Roumania owes its elbow shape to the fact that it was formed by the union of two countries, Moldavia and Wallachia. Bucharest was the capital of Wallachia, and Jassy was the capital of Moldavia. When the two were united in 1861 the National Assembly decided to make Bucharest the capital of the new nation, and voted that \$700,000 be paid to Jassy in compensation of her lost prestige. But the Roumanian Government has never been very particular about promises, and the money has never been paid. The change in capital really means that Wallachia has passed into the control of the enemy, but that there is still hope of saving Moldavia.

Russia has come to the rescue, but four months after she promised to, and four months is a long time to lose when wars are speeded up as they are now. Roumania was wary of entering the war. She held off for two years, with both sides bidding for her support. The Allies were the more generous in their offer of enemy territory, and finally Roumania agreed to join them on condition of getting Transylvania, the Banat, and the Bukovina. But she insisted upon one precaution: the Allies should promise that, simultaneously with her attack on Hungary, the Russians should attack Bulgaria from the north, and the French and British from the south. With this assurance of aid, Roumania invaded Hungary the last of August. But December is now well along, and neither the northern nor the southern frontier of Bulgaria has yet been reached by the forces of the Allies.

All in good time!

Germany's Eastern "Allies."

In a leading article, "The Allies of Germany," the *Morning Post* (December 22) remarks that the proposal to discuss terms of peace apparently emanated from Austria-Hungary, and adds: "It is also possible that Bulgaria desires peace ere worse befall." The article continues:—

The fact is that Austria-Hungary, Bulgaria, and the Ottoman Empire have to all appearance more to lose by a German victory than by a German defeat, and certainly more to lose by a German victory than by a peace secured on almost any terms. For the main object of Germany in preparing and making war was to obtain predominance in the East. Between Germany and her coveted gains lie the territories of her Allies; and unless they were reduced to a complete submission to German aims they must obstruct her path. Perceiving that contingency, Germany devised what is called the Mittel-Europa scheme, which in effect consisted of a plan to pool the resources of the Central Empires in the interests of Germany, which retained the controlling influence. The result would have been an extremely powerful combination, which would or might have conferred great material prosperity upon its members. But it would also have involved the cession to Germany by the other partners of their economic independence, and therefore in fact of their national independence. The German Empire would have virtually included Serbia, Bulgaria, Greece, Austria-Hungary, Turkey, and Roumania, and no doubt it would have been exceedingly well organized. But

there is such a thing as a spirit of national independence, and the enterprise failed. The offer was refused for the time being, though it is far from being altogether rejected. The German plan was in the nature of a compromise, and as it failed of acceptance in the event of a German victory the present Allies of Germany would still obstruct her path eastward, inasmuch as they retain their national independence and their national aspirations.

The writer says truly that "the prospects of neither Bulgaria nor Turkey seem particularly inviting, even if the German triumph were complete." And he concludes: "It seems that alliance with Germany is a costly business. The world-conqueror brooks no rivals and acknowledges no equals. If Germany is driven to ruin she will take care that her friends go down with her."

Another Macedonian Victim.

The following passage is taken from an interesting short article, "Nature Studies in Macedonia," contributed to the *Hospital* (December 16) by an officer of the R.A.M.C. The writer refers apparently to an incident—a very minor incident—in the fighting in the Struma Valley:—

During the battle of September 15 I was surprised to see two hawks of a large size and chestnut colour, with yellow beaks and a white band of feathers at the root of the tail, serenely hawking about over the crops not 400 yards behind a line on which we had several batteries in action. They took no heed at all of the report of our guns, nor of the sounds of the bursts of the shells sent in reply by the enemy. I watched them work over the same area for over an hour. I cannot name the species. Later I moved my position and passed by a heavy gun hidden in the plain. Close by it I saw a bird fluttering curiously on the ground. I went to pick it up and saw it was a crested lark, common here, and similar to, if not identical with, the English lark. It had no wing or leg broken, yet it could neither run nor fly, but fluttered and pushed with its legs along the ground rapidly on an erratic course, much as a partridge shot through the brain will flutter. Yet it appeared to be conscious, for it seemed to make progressive efforts to escape me. I caught it and examined it. I could see no injury. One of the gun team told me he thought it had been knocked over by the blast of the explosion of the gun. I think he was right.

SERBIA'S NEED.

According to the arrangements made between the Serbian Relief Fund and the Serbian Legation in London, the work of collecting funds in Great Britain for the Serbs is divided so that the Legation will administer in future the following two funds:—

1. The Fund of the Serbian Red Cross Society, which will have no other representative in Great Britain except the Legation.
2. The Fund for Serbian Distress in the War at the disposal of the Serbian Minister in London, from which help will be sent where it is the most urgently needed.

The Serbian Relief Fund (5, Cromwell Road, S.W.), which works independently of the Legation under a British Executive Committee, administers now, in addition to their former funds, a Fund for the education of Serbian boys in England, and a Fund for the Serbian orphans (St. Helen's Fund).

The donations sent to the Legation will be acknowledged by the Serbian Minister in London, who will keep his Government informed.

To avoid all misunderstanding, donors are requested to mark clearly for which of the two funds the subscription is destined, and to address envelopes to the Serbian Legation, 195, Queen's Gate, London, S.W.

The Legation will be thankful for all donations, and will be pleased to answer all inquiries with regard to the Funds.

Under date of December 27, Reuter's Amsterdam correspondent reports:—A telegram from Sofia states: "The Bulgarian Minister at Berne, M. Radeff, has been instructed to hand to-day (December 27) to the Swiss Federal Council the Bulgarian Government's reply to the Swiss Government's Note regarding peace. The reply is identical with those given by the other Powers of the Quadruple Alliance. The reply to the United States Note has been delayed because, for technical reasons, the United States Representative in Sofia has not yet communicated the Note to the Bulgarian Government."

THE COMMERCIAL INTELLIGENCE OFFICE OF EGYPT

23, Sharia Soliman Pasha, Cairo.

Commercial information supplied by arrangement to British Firms dealing with Egypt and the Near East. Correspondence invited.

CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Sir Harry Johnston, whose letter on another page in this issue will be read with interest, makes a noteworthy suggestion with regard to the British Consular Service. It is not for me to say whether he is right or wrong in his reference to one of the great political parties; but the need of reform is apparent, and so long as it is accomplished the means employed do not matter very much. Sir Harry's suggestion that "all diplomats should begin as vice-consuls—not as attachés" opens up a new vision of two very distinguished services of the Crown. It would be interesting to know what their members think about it.

That was a very interesting lecture which Father Lammens delivered recently at a meeting of the Sultanieh Political Economy Society in Cairo, on the subject of the past glories of the land of Arabia—the lecture is referred to by our Cairo Correspondent in his letter this week. In the past we have paid very little attention to Arabia, past or present; but if I mistake not we shall do better in that respect in the future. The war has not been without its influence on the country. The Mecca movement provides a vision of a new future, and a greater one, as we all hope, while further away at the tip of the Persian Gulf the Arabs will not be long before they begin to appreciate the utility of British justice and institutions, to put it on no higher level. Trade and commerce are the great possibilities of a not distant future for Arabia and Irak, and, purged of Turkish corruption, developments should be rapid.

I am pleased to see that the British Industries Fair is again to be held next year, under the auspices of the Board of Trade—the tentative programme was published in *THE NEAR EAST* last week. The Fair last year, limited as it was to certain trades, was a success which, if improved in the coming show, should establish it as a permanent annual trade event. The 1917 Fair is to be held partly at the Victoria and Albert Museum, and, owing to the increased demand for exhibiting space, partly in the galleries of the Imperial Institute, from February 26 to March 9. Concurrently, Scotland is to have its fair at Glasgow—an innovation that hardly commends itself, for reasons obvious to anyone. If Scotland must have hers, let her choose a date in the autumn. Thus, spring travellers to this country from abroad would have the advantage of

the London Fair, and autumn travellers one in Glasgow. After all, however, I doubt whether either of these fairs—or any held in this country—will be as helpful to a noticeable increase in our foreign trade as local permanent samples of British articles exhibited abroad. Admittedly, the time has not yet arrived for the organisation of these exhibits, but we ought already to be considering their prospects and to be taking the necessary steps to prepare for them. Which, by the way, is a matter to which I shall have to revert again.

The *Times* Cairo correspondent reviews the economic situation in Egypt in a most optimistic vein, and his two salient statements are noteworthy—namely, that the country is more prosperous than it was last year, and that the German element is being completely wiped out. The latter, above all, is of transcendent significance, and that the Egyptian Government has succeeded in eradicating the evil influence of the Hun "trade pirate and political intriguer" speaks volumes for its energy and determination, and is in striking contrast to the lukewarm indifference displayed here at home, in the heart of the Empire, to all matters pertaining to the liquidation (which has been anything but prompt) of enemy firms. Our Government could easily take a leaf out of Egypt's book: we should all welcome it.

A correspondent writes:—"Where there is smoke there is generally fire. Assuming this to be so, we must admit that in Germany's peace proposals there is something, at least, which is sincere, and I should not be at all surprised that it has to do with Near Eastern matters, and more particularly with the growing greediness of Germany as regards food-supplies, to the detriment of her Allies. In other words, our blockade is beginning to tell, and the Austro-Turkish pinch of last year is beginning to reach Germany. Naturally, the Germans looked to their successes in Wallachia to appease their hunger, when up spoke Austria and claimed her share. Now, the Roumanian stocks would not suffice to still the Boche belly, let alone that of his Vienna confederate. Friction between the two countries—latent as yet, perhaps—is the outcome, and Fritz at last begins to see a danger ahead. So he throws out peace feelers."

Almost simultaneously with the peace proposals, Herr v. Batocki visits Vienna, and the Austrian Cabinet falls. A pro-Tiza combine—in other words, a Prussian-cum-Hungarian Government—is appointed. And we can see the way the wind blows. Von Körber, the retiring Premier, was an Austrian above all things, and, in his country's meat plight, he wished to import Balkan cattle duty-free. Such an action would have deprived Germany of considerable supplies for her own use, and so Batocki influenced Tiza to veto it in the interest of Hungarian cattle-breeders. So the Cabinet fell, and the Balkan cattle proceeds to Prussia. All of which points to the beginning of the end, and blesses the world with Germany's

altruistic peace proposals. Austria, in dire plight, agrees to them, and so does Turkey, sick of the whole war and anxious to come to terms with the Allies before Constantinople is lost.

Austria, I think, stakes practically everything on the success of Germany's scheme, and it is in Austria that the first effects will be seen of our refusal to meet the Kaiser's wishes. If rumour be correct, she is already more than half willing (or is she forced thereto?) to buy Italian friendship, the price being Trieste. She is also considering the advisability of creating a Yugo-Slav State—Agram, I take it, to be the capital—so as to placate the Croats in the eleventh hour; and she is being driven to the wall by Prussia in Poland, and by Bulgaria in Serbia and Macedonia. Much further she cannot be pushed, and food she must have—more so than Germany. Economically she is ruined, and in Turkey she has no friend. Let Trieste go, says the wily Turk, if I can thereby retain Constantinople.

The situation, therefore, is anything but a hopeless one. Leaving aside the military aspect of the question and the glorious burst of valour of our Allies at Verdun, it would seem that, thanks to our blockade, the end of the war will be produced owing to economic difficulties—as always upheld in these columns—in the Middle East and to the refusal on the part of Germany to succour her enfeebled Ally. On the contrary, her Prussian lord seems intent on driving her to the wall, and her spoliation by the Hun would come as a surprise to no one acquainted with the Waumann theory. Let it be so. For it would do our principal enemy no good. So, ahead with the blockade, and down with the peace proposals. The enemy is worse off, economically, than we are.

We need not bother about peace: it is war that matters, and we have to proceed with the war at the very top of our energy. Roumania, Serbia, Belgium and France have to be restored to their complete integrity not as an act of grace of the greatest brigand in history, but as the result of his complete defeat by the Entente. If a nation, or its sovereign, is to be permitted to run amok at its pleasure, and to stop doing so at its pleasure, without punishment of any sort, the world will be an unsafe place to live and work in. Peace will come: we may rely upon that; but it will not be established when the German Emperor wills; it will be imposed upon him when he is defeated. It is satisfactory to note that neutrals are no more impressed by the German peace trick than are the Allies of the Entente. They understand German bluff too thoroughly for that.

The Sudan and Its Economic Advance.

No. 1.—The Bahr-El-Ghazal.

By Percy F. Martin, F.R.G.S.

The second largest of the fifteen political divisions into which the Anglo-Egyptian Sudan is now divided, the Bahr-el-Ghazal has also in its time proved one of the most troublesome. It is inhabited by natives who, like all other bush people, are indifferent fighters except among themselves, and then, apart from their religious feuds, war mainly for loot and women. The section of the Dinkas found here have been described in anything but complimentary terms by Schweinfurth; but he seems to have known them before the blessings of good government were offered to them by their present rulers, and although the latter, if asked for their opinion of their charges, might be inclined to cite the famous cartoon in *Punch* on the Thibet question—the inhabitants of which country, it may be remembered, “did not want the benefits of civilisation but had to have them”—the people of the Bahr-el-Ghazal are not without some recommendation.

Major B. C. Carter, a former Acting-Governor of the province, once declared that “the inhabitants are for the most part savages.” Some decade ago a large amount of slave traffic went on in the north-west corner of the Bahr-el-Ghazal, slaves, both male and female, being brought across the frontier from the French Congo, and imported into Kordofan and Darfur. An improvement in the condition of things followed upon the establishment of posts, in 1903, by Major Ravenscroft.

The Bahr-el-Ghazal became famous in history in 1898 in connection with the Marchand Expedition, while it was not until 1901 that the territory was definitely occupied by the troops of the Sudan Government. Its immense area of 126,290 square miles, with its population of 810,000—the largest of any of the Sudan provinces—makes it of very considerable importance from a future economic point of view. Within its extensive boundaries are to be found rubber of the best, ivory of the finest, forest woods of almost all descriptions and of a highly marketable value, such as African mahogany—*Homoptera Khaya Senegalensis*—the most beautiful timber known to commerce. Iron and other minerals, beeswax and honey, salt, and a remarkably productive soil, when properly cultivated, will all spell much in favour of the province when once its development is taken seriously and systematically in hand.

There are fourteen governmental divisions, or *manurias*, as against thirteen in Mongalla, and eight in the Upper Nile. None of the other provinces have more than seven *manurias*. For administrative purposes the Bahr-el-Ghazal has been divided into three separate districts—the “Eastern,” with the headquarters at Rumbek; the “Central,” headquarters at Wau, also the seat of the Governor, and the “Western,” with headquarters at Dem Zubeir. Early in the taking-over of the province, the Government established a line of posts from east to west as follows:—Shambe on the Nile, Rumbek, Tonj, Wau, Chamamui, Dem Zubeir, and Telgona. In December of 1905 the Southern Bahr-el-Ghazal was re-occupied by the Government troops, posts being formed at Rikta, Yambio, and Zungumbia. In those days there was constant friction between the British and Belgian troops stationed at Manga and Moiwawa, and only the great tact and good nature exhibited upon the part of our officers and those of the Belgians in charge saved a serious encounter from breaking out between the truculent warriors concentrated on the frontiers. It was the good feeling between Captain Channer, on one side, and Commandant Gilson, on the other, that served to keep the peace.

“Rivers,” declared Pascal, “are roads that move and carry us whither we wish to go.” Certainly in regard to rivers the Province of the Bahr-el-Ghazal is well provided. It is bounded on the south and west by the Congo-Nile watershed, on the north by the Bahr-el-Arab and Bahr-el-Ghazal, and on the east by the Bahr-el-Jebel. But notwithstanding all these waterways, the country is greatly dependent upon seasonal rains for its small amount of agriculture. The rivers of the Sudan, moreover, cannot always be relied upon for inland communication, for they are subject to rapid falls and just as rapid rises at certain times of the year; when the Jur, for instance, is as low as it was in 1905, the greatest difficulty is experienced in maintaining inland communications. One day the Government may be able to overcome some, if not all, of such drawbacks by opening-up these and other waterways, several schemes of that character now being under consideration.

The principal trade of the province has always been in ivory, and in 1905 the amount collected produced a revenue of £4,700, but in view of the uncertainty of the market in this article—the trade for 1915-16, like that of the two previous years, owing doubtless to the war, had fallen off very greatly—something more stable will have to take its place if the Bahr-el-Ghazal is to become one of the Sudan's remunerative provinces. Rubber cultivation has been tried, but the climatic conditions made almost impossible for Europeans without a great risk to health, and that the Government has no wish to encourage. Nevertheless, a rubber factory was established several years ago at Limbo, near Wau, by the Vines and General Rubber Trust, under the auspices of the Kordofan Trading Co., and, notwithstanding labour troubles, it had not done badly. Then Egyptian cotton cultivation has been essayed, but with little success. The experiments undertaken, however, have not been final, and something more encouraging may yet be gained. On the other hand, excellent results have been secured in pineapple-growing, the only problem being that of transporting the fruit in good condition to Khartoum. The experimental rice-crop grown about 10 years ago at Meridi turned out so well that high hopes of future progress in this direction were entertained. A sample of the produce was sent home by the Governor, (at that time Major, now Colonel) R. M. Feilden—to the Imperial Institute, and a very satisfactory report obtained. Other attempts were made at Wau and Lau, the neighbouring Sultans being much interested. *Dura* is likewise grown, and the area of cultivation is continually extending. From time to time small exports of *dura* have been made from the Eastern and Central districts, in addition to the usual requisitions supplied annually to the Army.

The inhabitants are beginning to realise the advantages of trade. The stores established at Meridi, Yambio and Tembura, the first of their kind, proved instantaneously successful, and there is no doubt that the province, now that means of communication are being gradually improved, may become revenue producing upon an advancing scale in a few years. The minerals that are known to exist there, but which have never been properly prospected, may also have an important bearing upon its future prosperity.
